The New Atlantic Mail Service Contract.

The Postmaster General announced in the House of Commons, Apr. 7, that a contract had been entered into for the carriage of mails between Great Britain and Canada. He stated that up to the present, the Atlantic mail service had been performed by practically four steamships, on a weekly basis. Some other lines had received small amounts in connection with the service, but in the past, a great part of the mail had been carried via New York. During the past six years, the Dominion had been paying about $185,000 a year for its mails going to Great Britain by way of New York. The Canadian service had been performed by the steamships Victorian and Virginian of the Allan Line, and the Empress of Britain and Empress of Ireland of the C.P.R. Under the new contract there will be a mail service three times a week in the summer and twice a week in the winter, instead of once a week as under the former contract, and instead of four vessels engaged, there will be 12. The contract includes four companies, viz.: Allan Line Steamship Co., C.P.R., Canadian Northern Steamships, and White Star-Dominion Line. During the summer the Allan Line will employ the steamships Victorian, Virginian, Corsican and Tunisian, and, until the Alsatian and Calgarian are ready for service, the Grampian and Hesperian will also be used; the C.P.R. will use the Empress of Britain and Empress of Ireland; the Canadian Northern Steamships, Ltd., the Royal Edward and Royal George, and the White Star-Dominion Line, the Laurentic and Megantic. In the winter service, the Alsatian, Calgarian, Victorian, Virginian, Empress of Britain, Empress of Ireland, Royal Edward, and Royal George will be employed, while the White Star s.s. Teutonic will act as an extra vessel both summer and winter, to take the place of any of the others that may be laid up.

The summer sailings will be on Tuesdays, Thursdays and Saturdays, from any port that the companies may please, provided they are Canadian ports, the ones named being, Montreal and Quebec in summer, and Halifax and St. John in winter. The annual subsidy to be paid for the service, both ways, is $1,000,000. The landing ports in Great Britain are also at the option of the companies, either Liverpool, or Bristol, but the Hesperian and Grampian, which will only be in service for a short period, will continue to make Glasgow their port, until the Alsatian and Calgarian are ready. For the purposes of apportionment of the amount of the subsidy, the total is to be divided into weekly portions, and then divided among the vessels engaged, on a basis to be agreed upon, thus while the total amount paid for the winter service is the same each week, as in the summer, the amount for each vessel will be greater, owing to the lesser number engaged, and the increased difficulties of the service. The White Star-Dominion Line vessels will not carry mails during the winter as their winter port is at Portland, Me., but the Teutonic will be at the call of the Dominion Government, in case of accident to any of the other vessels.

The keel of the first vessel to be built by the Coquitlam Shipbuilding Co., was reported to have been laid down at the yards at Pitt River, recently. The vessel will be steam driven, using liquid oil as fuel, and she will measure 236 ft. over all, with 187 ft. keel and 43 ft. beam, and will have capacity for about 1,500,000 ft. of lumber.

Report of the Commission on the St. Lawrence Pilotage.

The report of the commission appointed by the Dominion Government to enquire into the St. Lawrence pilotage system was presented to the Minister of Marine, April 10. The commisisoners, Commander Lindsay, Dominion Wreck Commissioner; T. Robb, Manager Shipping Federation of Canada, and A. Lachance, Chairman of Pilots, Quebec, agreed on the report, with the exception of the recommendation for the abolition of the Quebec Corporation of Pilots, to which Mr. Lachance did not agree, and in a minority report gave his reasons for his dissent. Following are the recommendations made:—

That the Corporation of Pilots for and below the harbor of Quebec be abolished and the charter cancelled.

That the pension fund should be taken over and managed by the Minister of Marine and Fisheries.

That the Government should appoint a superintendent of seagoing experience in full charge of the district to organize and administer its affairs and be directly responsible to the Minister. That he should not have been a pilot of the district at any time, and qualified assistants should be appointed as may be found necessary.

That a change should be made in the present apprenticeship system. That the indentures should be made to the Minister. That public notice should be given when there are vacancies for apprenticeship. That examinations of candidates should be carefully conducted under proper supervision, either in English or in French, each candidate having previously passed the physical and eyesight tests.

That branch pilots should not be allowed to take work outside of their pilotage district, or be employed in any other occupation than pilots within that district.

That the eyesight test should be on a standard basis and should not be left altogether to the theories of the examining oculist, and that one standard should apply to all.

That the number of branch pilots be reduced, the maximum to be 70 and the minimum 60.

That the age of retirement for branch pilots should be 65 years, with a limited yearly extension to men who can pass the semi-annual examinations and that retirement be compulsory at the age of 70.

That an improved pilot tender be provided at Father Point. That a pilot launch be provided at Quebec.

That a chart of the Saguenay River be immediately prepared and made available to navigators, showing lights, buoys and dredged channel near Chicoutimi and that additional aids to navigation as recommended in the evidence be installed in the river.

The report states that the evidence in regard to the Montreal pilotage district is [illegible] of a favorable nature, the shipping companies being [illegible] in favor of being allowed to select their men. The advantages of [illegible] were found to be in good condition, the discipline well maintained and the change to the authority of the Minister of Marine had been a complete success.

The official in charge of the Quebec office appears to the commission to be thoroughly incompetent to fill this responsible position, and an immediate remedy is suggested if the working of the system is not [illegible]. It is suggested that the number of selected apprentices be restricted to four and that the number of entrants for apprentices be limited to meet [illegible] requirements, [illegible] the vacancies for apprentices should be notified by public advertisement; that the length of service of an apprentice should be reduced to six years in place of seven, two years of which should be at sea on a vessel employed in the Canadian trade to the St. Lawrence; that either English or French be used for examination purposes; that permission should be given to liner pilots to work for more than one firm; that the tariff be increased; and that certain exemptions for the Montreal district be allowed.

The commission recommends that the superintendent at Quebec have control of both Montreal and Quebec pilotage. The opinion is expressed that the pilotage tariff at Quebec is too high, having been fixed in the days of the sailing ships, when trips to Quebec sometimes occupied several days. The lowest rate prevailing is in advance of the Montreal rate, although the responsibilities of the latter are much more severe.

In regard to Quebec pilotage the report says that the whole system is loose and unsatisfactory. The superintendent appointed by the Government has generally superintended nothing, but got all the information from the secretaries of the corporations who submitted it to the department as coming from themselves. The commission recommends the appointment of a pilotage commission, with functions partly executive and partly administrative. The executive functions would deal with the making of orders, the constitution, the regulation of pilotage at ports and the passing of bylaws, all subject to the approval of the Minister.

Mr. Lachance, in his minority report, differs from the other commissioners mainly in reference to the suggested abolition of the Corporation of Pilots at Quebec. He suggests that some restrictions be made, to oblige small craft to keep out of the narrow channel when there is sufficient water elsewhere; that their lights should not be all around the horizon, and that vessels from the lakes should be forced to submit to the rule of the road when navigating the St. Lawrence River. He also suggests an increased tariff on ocean steamers, believing that the Montreal tariff is very low. He believes, in conclusion, that the Corporation of Pilots for and below the harbor of Quebec should be maintained with all its rights, especially in relation with the sharing of the earnings.

The pilotage earnings of the Montreal district in 1911 were $87,928.55, and of the Quebec district $143.741.87.

Montreal Harbor Improvements for 1913.

The improvement programme which the Montreal Harbor Commissioners have outlined for the current season involves the expenditure of approximately $2.000.000, and marks the commencement of the second stage of the plan adopted three years ago, and which will be spread over 12 years. The chief work for the season covers the decreasing of the velocity of the St. Marys channel current to within the safety margin for vessels navigating the harbor, and which will probably reduce the necessity for the semaphore signalling system which has been under consideration. In dealing with the current, dredging will be undertaken at the guard pier to the south of St. Helens Island, and the artificial works at Moffat Island. The east quay wall embankment on the south of the guard pier will also be extended, thus [illegible]ing the volume of water below the Victoria pier across the channel towards Moffat Island. The construction of the artificial embankment will also be continued, and tracks laid thereon, and on completion the whole will form a part of the harbor railway terminal system. Extensions to the Alexandra, King Edward and Jacques Cartier piers are also contemplated, but it is said that such work cannot well be undertaken until the completion of the dredging operations at the guard pier, and the alteration of the entrance to the Lachine Canal. A 15 ton electric hoist, capable of taking full teams to the second floor of the Allan and White Star Lines' sheds, is to be erected at once. The addition of 1,500,000 bush. capacity to elevator no. 1 has already been announced; elevator no. 2 is to have its conveyor galleries completed, leading from the elevator to shed 1, on the Victoria pier. The high level tracks between Victoria and Racine piers are to be ballasted, trimmed and made permanent, and a 500 ft. wharf is to be built at Point aux Trembles. Other work will comprise the levelling up of the dry dock site, so that the erection of the machine shops, etc., in connection with the dry dock and shipbuilding plant can be proceeded with.

Dominion Government Fisheries Patrol Steamboat for Lake Winnipeg.

The Dominion Government is considering tenders for the construction, equipment, dismantling, re-erection and delivery of a first class twin screw, steel, wood sheathed fisheries patrol steamboat, for Lake Winnipeg, to be delivered at Selkirk, Man. Following are the principal dimensions:—Length between perpendiculars, 140 ft.; breadth, moulded, 26½ ft.; breath, extreme, 27 ft. 9¾ ins.; depth moulded, 13½ ft.; load draught level keel to bottom sheathing, in fresh water, 7½ ft.; deadweight on above draught, 60 tons; indicated horse power, 900; complement, officers and men, 15.

The vessel is to be of steel throughout, except where otherwise specified, and to be built and engined in accordance with the specifications, under Government survey, and to be classed 100 A1 at Lloyd's for lake service, under their special surveys. She is to be fitted with water ballast, and full equipment to the Board of Trade or Canadian Steamboat Regulations, with five main transverse water tight bulkheads. A water tight flat at bow and stern, with the bulkheads adjoining, will form the trimming tanks. The general construction outline will be with straight stem, cruiser stern and two decks, the main deck being continuous, and the lower deck extending from the stem to the forward boiler room bulkhead. It is specified that the steel and all material, equipment, auxiliaries, stores, etc., shall be of Canadian or British manufacture throughout. The engines are to be of the twin screw, triple expansion, jet condensing type supplied with steam by two Scotch boilers working under forced draught, and for a working pressure of 180 lbs. a square inch. Complete electric light installation, with steam driven turbo generator is to be supplied, and all auxiliary pumps, steam windlass, steam capstan, steam steering gear, etc.

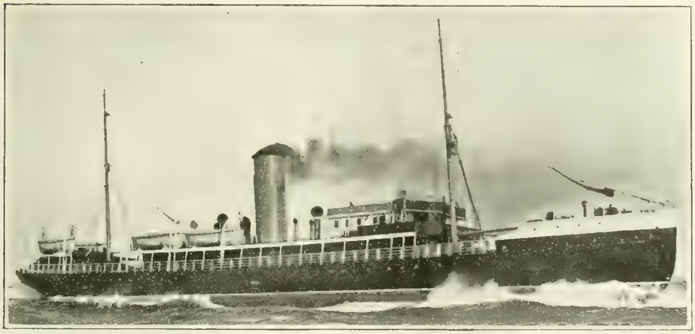
The vessel is to be erected, dismantled and the various parts painted and numbered, and together with the engines, boilers, auxiliaries, equipment, etc., packed ready for shipment to Selkirk, Man., eight months after the awarding of the contract, and then forwarded to Selkirk, where the final assembling, erection, launching, completion and trials will be made.

The Reid Newfoundland Company's s.s. Lintrose.

The mail steamship Lintrose, which has been built at Newcastle on Tyne, Eng., for the Reid Newfoundland Co., to run between Port aux Basques, Nfld., and North Sydney, N.S., made her trial trips early in March, the President, W. D. Reid, representing the owners, and shortly afterwards she left for Newfoundland, arriving towards the end of March, when she was immediately placed on her route with the s.s. Bruce. The accompanying illustration is from a photograph taken during one of the trial runs.

The Lintrose is exceptionally strongly constructed for running through the ice which she will frequently find on her route, and is very finely modelled. She has accommodation for over 30 1st class passengers, including three special rooms for one passenger each, and a ladies' room holding 10. There is a fine smoking room on the promenade deck and a dining saloon, and a ladies' room on the shelter deck; all the 1st class passenger accommodation is amidships. Accommodation for 150 2nd class passengers is provided in the after part. Both the promenade deck and the shelter deck form spacious promenades for passengers.

The Lintrose is 255 ft. long, by 37 ft. beam, and in addition to the usual installations, of electric light, steam heating, etc., wireless telegraph is fitted. The propelling machinery consists of single screw triple expansion engines, supplied with steam by four large boilers working under forced draught. On the trial trips the machinery worked without the slightest hitch, giving satisfaction to all concerned. A maximum speed of nearly 16 knots was attained. (Mar., pg. 145.)



The Reid Newfoundland Co.'s Steamship Lintrose.

The Canadian Pacific Railway's Pacific Steamship Service.

The C.P.R.'s new steamship Empress of Russia sailed from Liverpool, Eng., April 1, via the Mediterranean, Suez Canal, Colombo, Singapore, for Hong Kong, China, to take her place on the Pacific service between British Columbia, Japan and China, and she is expected to reach Vancouver, June 7. She carried a considerable number of passengers.

The second of the company's new vessels, the Empress of Asia, will leave Liverpool, June 14, and will proceed via Maderia, Cape Town, Durban, Colombo, and Singapore.

When the Empress of Russia and the Empress of Asia commence their regular runs on the Pacific, cabin fares on the Empress of India and the Empress of Japan will be reduced, and special rates will be charged with the privilege of travelling by one of the new Empresses, one way, on a round trip.

Steam Car Ferry for National Trancontinental Railway at Quebec.

The N.T.R. Commission has let a contract for building a steam car ferry to Cammell, Laird and Co., Birkenhead, Eng., to be used near the City of Quebec for the transportation of trains across the St. Lawrence River, pending the completion of the Quebec bridge.

The principal dimensions, etc., will be as follows:—Length on 15 ft. water line, 304 ft.; length over fenders, about 326 ft.; breadth, extreme, about 66 ft. 9½ins.; depth moulded, 23 ft.; mean draught with train load of 1,285 tons (gross), 15 ft.; speed, with train load of 550 tons (gross), 15 statute miles per hour.

The vessel will be of the twin screw type, with a third ice breaking propeller fitted at the fore end, for the carrying of passenger and freight trains at all seasons of the year, these trains being of standard type and composed as follows:—Standard passenger train: 1 locomotive, 70 ft.; 3 express and baggage cars, 67 ft. each; 3 passenger cars, 80 ft. each; 3 sleeping cars, 80 ft. each; or, standard freight train: 18 loaded freight cars, 45 ft. each.

The trains will be supported on three lengths of track carried on a tidal deck, the length of each track being about 272 ft. The tidal deck will be supported on columns, and is to be manipulated by means of screw shafting, so that it may be raised or lowered at the rate of 1 ft. a minute when fully loaded, the total range being 18 ft. At each end of the tidal deck, an adjustable hinged gangway, 28 ft. long, is to be fitted, suitable for the conveyance of the trains to and from the land tracks. The tidal deck will be raised or lowered by vertical screws hanging in suspension, and working on ball bearings, engine of the high pressure type, cylinder, 15 ins. dia., and 21 ins. stroke.

Above the highest position of the cars on the tidal deck will be a promenade 4 ft. wide to be arranged all round the vessel. Accommodation will be arranged on the platform deck below the upper deck forward on port side for captain, mate, chief engineer, 2nd engineer, 4 deck hands and 6 firemen, with galley, mess room and cook's room on starboard side.

The vessel is to be built under special survey, in accordance with the requirements of Lloyd's Register, and to be classed 100 A1. She will be specially strengthened for crossing the St. Lawrence in winter and for breaking ice at the landing berth. She is to be well heated and ventilated, fitted with hot and cold water service and lighted throughout by electricity.

The main propelling machinery will consist of two sets of triple expansion surface condensing engines, exhausting into one condenser, and eight single ended cylindrical boilers of the return tube type worked under natural draught. The main engine will have cylinders of the following sizes:—Diameter of high pressure cylinder, 23 ins.; diameter of intermediate cylinder, 35 ins.; diameter of low pressure cylinder, 55 ins.; stroke, 33 ins. The machinery for the forward ice propeller will be one set of direct acting, inverted, compound surface condensing engines. Reversing gear to be combined hand and steam, working pressure 165 lbs. per square inch. Cylinders: diameter of high pressure, 15 ins.; diameter of low pressure, 32 ins.; length of stroke, 21 ins.

Delivery of the vessel is to be made at Quebec Harbor on or before May 15, 1914.

Richelieu and Ontario Navigation Company's Appointments.

The following appointments, which cover the vessels of the Niagara-Toronto Division, and of Inland Lines, Ltd., have been made, in addition to those mentioned in our last issue:—

E. E. HORSEY, heretofore General Manager, Lake Ontario and Bay of Quinte Steamboat Co., Kingston, Ont., has been appointed Assistant to the Manager, Western Lines, R. & O. N. Co. Office, Kingston, Ont.

JOHN BELL, heretofore General Agent, Inland Lines, Ltd., has been appointed Superintendent of Terminals, Toronto, and in charge of operation of all vessels.

W. B. HINES has been appointed Wharfinger, Yonge St. Dock, Toronto, in charge of all traffic going over the terminal.

T. E. COLEMAN has been appointed Wharfinger, Bay St. Dock, Toronto, in charge of all traffic going over the terminal.

DR. J. E. ELLIOTT has been appointed Surgeon for the companies, at Toronto, and all officers and employes, ashore or afloat, will in case of accidents or sickness, communicate with him. In the event of his not being able to be found, and the matter is urgent, the nearest physician should be sent for.

J. J. HENNIGAR has been appointed General Agent in charge of freight and passenger traffic, cartage service, coal company and terminals, at Hamilton and Burlington Beach, Ont. Office, Hamilton, Ont.

J. A. VILLENEUVE, who was Comptroller and Treasurer, R. & O.N. Co., at Montreal, until the reorganization of the staff recently, retires on a pension from May 1.

The Prudential Trust Co. has been appointed transfer agent for the company, and the Royal Trust Company has been appointed registrar.

To mark the opening of the 1913 season of lake navigation, a spectacular sailing of grain laden vessels was arranged to take place from Thunder Bay, when 60 of the largest grain vessels engaged in the Canadian trade, left the harbors of Fort William and Port Arthur, with about 12,250,000 bush. of grain. The sailing has been recorded by cinematograph, and will be reproduced throughout the world. Prior to the vessels leaving the ports, the captains were entertained to dinner by the Fort William Board of Trade.

Atlantic and Pacific Ocean Marine.

The Quebec Steamship Co. has declared a dividend of 4% for 1912, payable May 1. This makes the 66th dividend paid.

The C.P.R. has opened large waiting rooms, with a creche to accommodate 20 children, at Liverpool, for its third class Atlantic passengers.

The C.P.R. has had its Atlantic Empress steamships fitted with electric radiators in all outside first class staterooms, the library and the first class smoking room.

The Donaldson Line s.s. Cassandra was driven on to the dock wall, at Glasgow, Scotland, Mar. 30, during a high wind, and her bows were considerably damaged.

Donaldson Bros., Ltd., owning and operating the Donaldson Line of steamships between Canada and Scotland, has been registered in Great Britain with a capital of £200,000 in £1 shares. The directors are, W. C., C., W. B., and N. P. Donaldson.

The Union Steamship Co. of New Zealand's s.s. Niagara, recently built at Glasgow, Scotland, for the service between Australia and Canada, sailed from Great Britain about the middle of March for Australia.

The Cunard Co.'s s.s. Aquitania, the largest steamship built in Great Britain, was launched at Glasgow, Scotland, Apr. 21. She is built with a double hull, and has lifeboat accommodation for the full complement of passengers and crew.

The Royal Mail Steam Packet Co. is reported to be making arrangements for a considerable extension of its service, by building a number of vessels to operate between Great Britain, Spain, Cuba, Jamaica, through the Panama Canal, to Vancouver, B.C., and calling at one or more U. S. Pacific coast ports.

H. Milburne, who has been acting as Marine Superintendent, Canadian Northern Steamships, Ltd., at Halifax, during the winter, since the appointment of Capt. F. J. Thompson to the command of the s.s. Royal George, will continue to act in that capacity at Montreal, during the coming season.

Elder Dempster and Co.'s s.s. Sokoto opened the navigation season on the St. Lawrence, Apr. 21. being the first vessel to arrive in Montreal harbor on that date. The captain was awarded the usual gold headed cane presented by the Harbor Commissioners to the captain of the first vessel arriving in each season.

A press report from Montreal, Apr. 21, stated that the appeal of Capt. Harrison, late commander of the Canadian Northern Steamships, s.s. Royal George, from the judgment of the Dominion Wreck Commissioner, in the matter of the wreck of the vessel near Quebec, in Nov., 1912, when his certificate was suspended for a year, has been allowed.

The s.s. Harley has been transferred from the British to the Canadian register, in the name of C. W. Harrison, London, Eng., as managing owner. She was built at Hartlepool, Eng., in 1906, and is screw driven with engine of 336 n.h.p. Her dimensions being: length 359.8 ft., breadth 50.2 ft., depth 26.4 ft.; tonnage, 4,171 gross, 2,707 register.

The C.P.R. commenced its Austro-Canadian steamship service towards the end of March, by the sailing of the s.s. Ruthenia, formerly Lake Champlain, from Trieste, Austria, for Halifax and St. John. This was followed four weeks later by the s.s. Tyrolia, formerly Lake Erie, sailing for Quebec and Montreal, to which latter ports all sailings will be made during the St. Lawrence navigation season.

The Montreal Harbor Commissioners have allotted berths for ocean going vessels using the port, as last year, with the exceptions, that the C.P.R. will, in addition to the berths occupied last year, have no. 15, which was formerly used by the Canada Line; the Canada Line and the Austro-Americana Line have been allocated to berth 16, and La Cie. Generale Transatlantique to berth 10, which it will share with Canadian Northern Steamships, Ltd.

In regard to a number of press reports respecting the proposed Government subsidy for the operation of an improved steamship service between Canada and the West Indies, in which it has been repeatedly stated that arrangements have been made with the C.P.R., and Pickford and Black, respectively, for such service, the acting Minister of Trade and Commerce stated in the House of Commons, recently, that the reports were incorrect, that the matter was still under consideration and had not been decided.

The Ocean Freight Line, Ltd., of Toronto, has acquired the s.s. Moldegaard, which was built at Bergen, Norway, in 1906, and overhauled at Brooklyn, N.Y., in 1912. She is screw driven by engine of 270 n.h.p., and is of the following dimensions: length 321.1 ft., breadth 45.2 ft., depth 20.6 ft.; tonnage, 2,864 gross, 1,660 register. We are informed that this company intends operating the vessel from New York in the sea going trade. The Canadian office is located at 16 King St. West, Toronto. The President, T. K. Seward, has his office in New York.

J. I. Hobson,
Comptroller and Treasurer, Richelieu and Ontario Navigation Co.

The Newfoundland Marine Court has decided that the loss of the Furness Line s.s. Florence, Dec. 20, 1912, while running between Halifax, N.S., and St. John's, Nfld., was due to neglect in not taking soundings when approaching the Newfoundland coast. The master knew that he was approaching Cape Pine, and a lookout was kept, but as no observations could be taken on account of the weather, it is difficult to understand why soundings were not taken. No blame was attached to J. H. Hedley, the second officer, who was one of those saved, as everything that occurred during his watch was reported to the captain, who was also on the bridge less than an hour before the vessel ran ashore.

The appeal of the White Star Line in England, against the decision of the Admiralty Court, in the case of the collision between the s.s. Olympic and H.M.S. Hawke off the Isle of Wight, Sept. 2, 1911, has been dismissed, and the decision of the lower court sustained, that the Olympic was responsible for the collision, which could have been avoided almost up to the last moment. This was the case which aroused so much interest in the matter of the effect of suction, caused by the passage of a large vessel in the near vicinity of a smaller one. At the time of the collision, the Olympic was in charge of Capt. Smith, who was later transferred to the s.s. Titanic, which was lost on her maiden trip, Apr. 12, 1912.

Maritime Provinces and Newfoundland.

The name of the steamboat Neptune, registered at St. John, N.B., has been changed by order in council to Excudit.

Capt. C. T. Dakin, a native of Digby, N.S., who had been connected with coast navigation for a number of years, and formerly commanded the Dominion Government s.s. Lansdowne, died at Rednerville, Ont., Mar. 27, aged 80.

The s.s. Westport III, while running between St. John, N.B., and Digby, N.S., was discovered to be on fire, recently. The crew kept the fire under, and the vessel was eventually beached, the damage being chiefly confined to the cargo.

The Crystal Stream Steamship Co. is reported to be negotiating for the purchase of the old Star Steamship Co.'s wharf at Fredericton, N.B. The price asked by the St. John River Steamboat Co., the present owner, is given as between $8,000 and $9,000.

The Fredericton Steamship Co. is applying for incorporation under the New Brunswick Companies Act, with $5,000 capital, and office at Fredericton, to purchase the steamboat Hampstead, to acquire other vessels, and to carry on a general navigation business on the St. John River and its tributaries. The incorporators are: E. G. Hoben, W. G. Clark, F. W. Porter, H. Rogers, Fredericton; and F. D. Swim, Blissfield, N.B. The Hampstead is owned by the St. John River Steamship Co., South Bay, N.B., and was built at Hampton, N. B., in 1893. She is screw driven by engine of 20 n.h.p., and is of the following dimensions: length 94 ft., breadth 17.7 ft., depth 7 ft.; tonnage, 235 gross, 159 register. It is reported that she is to be renovated and operated between Fredericton and Gagetown this season.

Province of Quebec Marine.

Capt. H. Kjerland has been appointed Superintendent of the Quebec Salvage and Wrecking Co., Quebec, vice G. T. Davie, resigned. He assumed his duties on the opening of navigation on the St. Lawrence River.

The Quebec Harbor Commission is extending shed 25 on the west end of the breakwater, by 300 ft., to cover the whole of the breakwater to the public entrance, and provide an additional berth for steamship accommodation.

The Montreal Harbor Commissioners returned, Apr. 1, from a tour of inspection of various U. S. ports. It is said that they have decided that, owing to physical conditions, the port must be developed along lines closely following those adopted at European ports, rather than such as have been followed in the U. S.

Navigation in Montreal harbor was officially opened Apr. 11, thus establishing a record for the shortness of the closed season, which dated from Jan. 3. The latest date on which navigation has been closed, prior to the one mentioned, was Jan. 1, 1912, and the previous earliest date for the opening was Mar. 30, in 1879.

The Minister of Marine introduced a bill in the House of Commons, Mar. 31, as an amendment to the Quebec Harbor Commissioners Act of 1889, to remove any doubt as to the right of the Commission to perform shunting operations at the harbor. The bill is similar to that enacted for the Montreal Harbor Commission in 1909.

The Postmaster General recently announced that a contract had been awarded for the construction in Glasgow, Scotland, of a powerful ice breaking car ferry steamboat, to connect the sections of the National Transcontinental Ry., on the north and south shores of the St. Lawrence, until the completion of the Quebec Bridge. The contract price is stated to be $558,000. Full particulars of the vessel are given on another page of this issue.

The Sincennes-McNaughton Line's steam tug Adolphe V. Roy was launched at Sorel, Apr. 5. Her dimensions are: length 105 ft., breadth 21 ft., depth 9 ft., with 6½ ft. draught, when loaded. She is equipped with fore and aft compound engines, with cylinders 13 and 26 ins. diar., by 18 ins. stroke, giving her a speed of about 12 knots an hour.

The River Lievre Navigation Co., Ltd., has been incorporated under the Dominion Companies Act, with $50,000 capital, and office at Buckingham, Que., to own and operate steam and other vessels, and to conduct a general navigation and land transport business. The incorporators are G. Bothwell, G. N. Bothwell, A. MacLaren, A. O. Anderson and R. MacL. Kenny, Buckingham, Que.

The bill which the Minister of Marine has introduced into the House of Commons, as an amendment to the Quebec Harbor Commissioners Act, repeals par. c., subsection 2, sec. 22, of the 1899 Act, and more clearly defines the Commission's powers as to the operating of railway tracks in the harbor, by it, and especially regarding the operation of switching locomotives. A similar amendment was made to the Montreal Harbor Commissioners Act in 1909.

In the House of Commons, Apr. 7, the acting Minister of Trade and Commerce stated that the Government has a contract with the Campbellton and Gaspe Steamship Co. of Fraserville, extending to the close of navigation 1915, for a service between Campbellton, N.B., and Gaspe, Que., for which an annual subsidy of $20,000 is paid. The contract provides for the Government control of rates for passengers and freight. The s.s. Canada performs the service.

The Minister of Marine recently introduced into the House of Commons, a bill providing that the Government may from time to time make advances, not exceeding $3,500,000 in the aggregate, to the Quebec Harbor Commission, for the construction of such terminal facilities as are necessary for the proper equipment of the port. Provision is also made for the deposit of the city debentures to the value of the advances made, repayable in 25 years with interest at 3½%.

The Montreal Transportation Co.'s electrically propelled vessel Tynemount, the first seagoing vessel of this type, was launched at Middlesbrough, Eng., recently. She is 250 ft. long, 42½ ft. wide, and 19 ft. deep, and about 2,400 tons. The propeller is driven by electric motor, power for which is obtained from two Diesel type engines. A full description of this vessel and its arrangement of machinery was given in Canadian Railway and Marine World for Nov., 1912.

The Cabotia Steamship Co., Ltd., has been incorporated under the Dominion Companies Act, with $50,000 capital, and office at Montreal, to own and operate steam and other vessels, and to carry on a general navigation, warehousing and transportation business. The incorporators are: C. A. Pope, G. Barclay, W. B. Scott, R. E. Moyse and A. A. Wanklyn, Montreal. The s.s. Hiawatha has recently been acquired from the Receivers of the Gilchrist Transportation Co., Cleveland, Ohio, and she has been transferred to the Canadian register under the name of Cabotia. She was built in 1880, and is equipped with fore and aft compound engines of 700 i.h.p., supplied with steam by a Scotch boiler 12 by 12½ ft. at a pressure of 125 lbs. Her dimensions are: length 234 ft., breadth 36 ft., depth 20 ft., tonnage, 1,398 gross, 1,159 register.

Ontario and the Great Lakes.

The Welland Canal was officially opened for traffic for the season, Apr. 15.

The Governor General in Council has approved the regulations for the ferry across the Niagara River between Queenston, Ont., and Lewiston, N.Y.

The name of the steamboat Robert Girdwood Allan Weaver, registered at Toronto, has been changed by order in council to R. G. A. Weaver.

Forwarders, Ltd., Kingston, which owns the steamboat Port Colborne, is adding another vessel to its service, which it is hoped to have ready for June, and which will be named W. H. Dwyer.

Dredging was commenced in Hamilton Bay, Apr. 12. This is a portion of the general improvement works there which the Government has undertaken, and for which appropriations have been made.

The Toronto Harbor Commission will shortly issue bonds amounting to $1,000,000, guaranteed by the city, for reclamation work at Ashbridges Bay and the general improvement of the factory district. The Commission has power to issue bonds for $12,000,000.

A press dispatch from Kenora, Apr. 13, stated that the Dominion Government had decided to comply with the request of that town for the construction of a lock and dam at Ash Rapids. It is said that a survey will be made as soon as possible, and estimates submitted.

The Lake Carriers' Association, the U.S. organization controlling vessels on the Great Lakes, has decided to continue the wage scale in force in 1912, and to adopt the three watch system for firemen on all vessels owned by members. This system was in vogue on some of the vessels last season and proved a success.

The Northern Navigation Co.'s new vessel is to be launched at Port Arthur, May 24. Though the name has not been definitely decided on, it is probable that it will be Noronic, a combination of the chief letters of the names, Northern Navigation Co., Richelieu and Ontario Navigation Co., and Inland Co.

The Imperial Oil Co., Sarnia, Ont., has transferred its steamships Imperial and Iocoma, from the British to the Canadian register. They were built at Willington Quay, Eng., and Dundee, Scotland, in 1898 and 1912, respectively, the former being 796 gross tons, and the latter, 1,669 gross tons.

Canadian owners of vessels on the Great Lakes have secured more favorable rates for marine insurance, owing to the Canadian Lake Protective Association's efforts. The underwriters have agreed on a 4¾% rate for the upper lakes, 5¾% to Ogdensburg, N.Y., and 6¾% to Montreal for fleets with approved records.

Canada Interlake Line, Ltd., which recently acquired the steamships Kenora, Regina and Tagona, from the Canadian Lakes Transportation Co., has transferred them from the British register to the Canadian register. The three are sister vessels, and were built at Dumbarton, Scotland, the first two in 1907, and the last, in 1908.

Navigation opened on Lake Ontario, Apr. 1, when the Richelieu and Ontario Navigation Co.'s s.s Macassa left Toronto for Hamilton. The first vessel to enter Toronto harbor, from an outside port, the captain thus winning the silk hat awarded by the harbor master, was the Niagara, St. Catharines and Toronto Navigation Co.'s s.s Dalhousie City, which arrived Apr. 2.

The Toronto Harbor Commission announced recently that contracts will be awarded during May, for the construction of a breakwater in connection with the general scheme of waterfront improvements. A. C. Lewis, Secretary, is reported to have stated that plans were well under way, and it was anticipated that a considerable portion of the work would be done this season.

It is reported that Jas. Whalen, Port Arthur, has acquired the ice breaking steamboat St. Ignace, from U.S. owners. This vessel has been in use in Lake Michigan for some years, and has been successfully used for ice breaking purposes. She has been taken to Sault Ste. Marie, and equipped with wireless telegraphy, and will be employed in Thunder Bay during the winter months.

The steamboat Jessie Bain, owned by the Richelieu and Ontario Navigation Co., and recently acquired in the taking over of the Thousand Island Steamboat Co., has been sold to Capts. Hanelin and Brunelle, Champlain, Que. She was built at Clayton, N. Y., in 1888, and is screw driven by engine of 14 n.h.p. Her dimensions are: length 70.8 ft., breadth 14.8 ft., depth 5 ft.; tonnage, 67 gross, 41 register.

The steamships Saturn and Uranus, recently bought from the receivers of the Gilchrist Transportation Co., Cleveland, O., by the Algoma Central Steamship Line, as mentioned in a previous issue, have been transferred to the Canadian register and renamed Frater and Franz, after the Vice President of the company, J. Frater Taylor, and the Vice President and General Manager, W. C. Franz, respectively.

The Ojibway and Detroit Ferry Co., Ltd., has been incorporated under the Dominion Companies Act, with $500,000 capital, and office at Sandwich, Ont., to operate a ferry between Sandwich, Ont., and Detroit, Mich., and in connection therewith, to own and operate steam and other vessels, wharves, docks, piers, etc. The incorporators are: R. J. McRae, L. H. Coombes, A. U. Gulliford, T. H. Kilgore and M. Gordon, Toronto.

[illegible] the collision between the s.s. Curry, owned by W. A. and A. H. Hawgood, [illegible] Ohio, and the Meaford Transportation Co.'s s.s. Bothnia, [illegible] 23, 1912, in which the Bothnia was sunk in the St. Clair River, just above Star Island, judgment was delivered in the U.S. Court, Detroit, Mich., Apr. 8, when the sole responsibility for the casualty was placed on the S. S. Curry. The Meaford Transportation Co. sued for $28,000 for the loss of the vessel, the cargo and the crew's belongings.

The U.S. Lake Survey reports the levels of the Great Lakes, in feet above tidewater, for March, as follows:—Superior, 601.54; Michigan and Huron, 580.16; Erie, 572.44; Ontario, 246.71. Compared with the average March levels for the past ten years, Superior was 0.16 ft. below; Michigan and Huron, 0.03 ft. above; Erie, 0.66 ft. above, and Ontario, 0.91 ft. above. It was anticipated that Superior would remain stationary during April, and that Michigan and Huron would rise about 0.3 ft., and Erie and Ontario about 0.6 ft.

The Richelieu and Ontario Nacigation Co. has taken over the Lake Ontario and Bay of Quinte Steamboat Co., which owns the steamboats Caspian and North King, operating from the Bay of Quinte to Thousand Islands and Rochester, N.Y., and a local service in the Bay of Quinte, between Kingston and Belleville. The Caspian was built at Kingston in 1846, and is a paddle wheel steamboat, with engine of [illegible] n.h.p., her dimensions being: length 177.6 ft., breadth 43.4 ft., depth 6.7 ft.; tonnage, 957 gross, 543 register. The North King was built at Montreal in 1868, and remodelled at Kingston, in 1891, and is paddle wheel driven by engine of 500 n.h.p., her dimensions being: length 175 ft., breadth 43 ft., depth 10 ft.; tonnage, 873 gross, 499 register. E. E. Horsey, heretofore General Manager, has been appointed Assistant to the Manager, Western Lines, Richelieu and Ontario Navigation Co., with office at Kingston.

The Peoples' Steamboat Co.'s s.s. Frontier was sold, Apr. 19, at Toronto, by order of the Admiralty Court. This vessel has had a chequered career. At one time known as Empress of India, she was built at Mill Point, Ont., in 1876, and was owned by the Lake Ontario Navigation Co. of Picton, Ont. She was partially rebuilt at Picton in 1899, and her name changed to Argyle. The Lake Ontario Navigation Co. was wound up in 1908, and the vessel, which was practically the company's only asset, was sold under an order of the court. The Argyle Steamship Co., Ltd., was formed later at Toronto, to operate her, and after some difficulties, was also wound up, and The Peoples' Steamboat Co., Ltd., was incorporated in 1912, under the Ontario Companies Act, with $150,000 capital and office at Toronto, to take over the business, with the intention of running the vessel on the Niagara route, between Toronto and Lewiston, N.Y. This was done for the latter portion of the season, and just before the close, she was towed to Port Dalhousie in almost a waterlogged [illegible] The company has been suing the owners of the dock at Port Dalhousie for damages, alleging neglect on [illegible] the outcome of this action. During the portion of 1912 that the vessel was oper[illegible] length 151 ft., breadth 26 ft., depth 9.7 ft.; tonnage, [illegible] with engine of 274 i.h.p., driving paddle [illegible]

Manitoba, Saskatchewan and Alberta.

The Hyland Navigation and Trading Co.'s steamboat Bonnitoba was reported to have broken from her moorings in the Red River, and to be drifting down the river in an ice jam, and to have partly sunk, Apr. 10.

The Dominion Department of Marine and Fisheries received tenders to Apr. 25, for the construction of a steel wood sheathed twin screw steamboat to act as a patrol vessel, and of the following dimensions, length between perpendiculars 140 ft., breadth moulded 26½ ft., breadth extreme 27 ft. 0¾ in., depth moulded 13½ ft., with engines of 900 i.h.p. She is to be delivered at Selkirk, Man.

British Columbia and Pacific Coast Marine.

The C.P.R. s.s. Princess Sophia struck a rock at Sentinel Island, Apr. 13, tearing a large hole in the bow. She proceeded to Vancouver under her own steam.

The fishing vessel Bonita, owned in Tacoma, Wash., and seized by the Dominion Government for poaching in B.C. waters in July, 1912, has been ordered forfeited to the Government.

The work of removing the Parthia shoal, off Brockton Point, Vancouver, which has been in progress for some time, has been completed, and a depth of 30 ft. at low tide is now reported over the spot.

It is announced that the C.P.R., which was to have had its s.s. Princess Mary lengthened by 40 ft., for the present season, has abandoned the idea until the autumn, owing to the necessity of having the vessel in service for the summer trade.

Twohy Bros., contractors for the construction of a portion of the Canadian Northern Pacific Ry., to the north of Kamloops, will during the season operate three steamboats on the North Thompson to facilitate the transportation of men and supplies.

The Minister of Marine in the House of Commons, Apr. 8, moved a resolution to incorporate the Vancouver Harbor Commission, vesting in it the control of all lands situated within the harbor limits, heretofore vested in the Government, and the revenues received therefrom.

The C.P.R. coast steamship Princess Sophia has been converted from a coal to an oil burner, making seven of the company's vessels using oil fuel. She is now running between Vancouver and Victoria in place of the s.s. Princess Alice, and during the summer will run on the Alaska route.

Contracts are reported let in the United States for the steel work in connection with the dry dock for the G.T. Pacific Ry. terminals at Prince Rupert, and also for the reinforced concrete power house and for the superstructure of other buildings to the Wineland Building and Engineering Co., Vancouver.

C. Gardner Johnson and Co. have been appointed agents for the Hamburg-American and East Asiatic Steamship Cos., at Vancouver. These companies are utilizing the Johnson Wharf Co.'s dock and warehouses, at present, and we are officially advised that there is no truth in the recent reports that either of the steamship companies, nor the Johnson Co., is negotiating for waterfront properties at Vancouver or Victoria.

Forager Transportation Co., Ltd., has been incorporated under the British Columbia Companies Act, with $10,000 capital and office at Victoria, to acquire the steamboat Forager, and to own and operate other vessels and conduct a general transportation business. The Forager was formerly owned by Steamer Forager, Ltd., Victoria, and is a screw driven vessel with engine of 13 n.h.p., her dimensions being, length 84ft., breadth 18.8 ft., depth 6.6 ft.; tonnage, 90 gross, 57 register.

A recent press dispatch from Victoria stated that D'Arcy Tate, Vice President, Pacific Great Eastern Ry., has announced that as soon as the company is able to operate trains from Newport easterly, it is intended to establish a direct steamship service connecting the mainland with the Vancouver Island, and that in the near future it is intended to operate a daily steamship service calling at Vancouver, Victoria and Seattle, ultimately extending to Tacoma, Puget Sound ports and San Francisco.

The American Yukon Navigation Co. has recently been incorporated in West Virginia to operate steamboats on the Yukon River between Dawson, Yukon and Fairbanks, Alaska, in conection with the British Yukon Navigation Co.'s steamboats, both lines forming portions of the White Pass and Yukon Route. Two steamboats are in course of construction at Seattle, Wash., to be named Alaska and Yukon respectively. These will be dismantled at Seattle and shipped to White Horse, Yukon, where they will be assembled and made ready for service by about June 1. They will be the most up to date boats on the Yukon. The U.S. Government recently declared Fairbanks to be a subport of entry for Canadian bottoms, and this will allow the British Yukon Navigation Co. to run its vessels between Dawson and Fairbanks should the trade warrant it.

Canadian Notices to Mariners.

The Department of Marine has issued the following:—

60. Mar. 18. British Columbia, Vancouver channel, Channel Rocks, gas and eastern channel, Channel Rocks, gas and whistling buoy to be established.

61. Mar. 18. British Columbia, chart of Arthur and Telegraph Passages issued.

62. Mar. 18. British Columbia, Chatham Sound, Holland Island, fog alarm established.

63. Mar. 18. British Columbia, Queen Charlotte Islands, Hecate Strait, Skidegate Inlet, eastward of Deadtree Point, amended characteristic of gas buoy light, off Lawn Point, change in position and color of gas and bell buoy, spar buoy to be established.

64. Mar. 18. United States of America, Strait of Georgia, Haro Strait, Patos Islands light station, Alden Point, fog signal to be temporarily discontinued.

65. Mar. 19. New Brunswick, south coast, Bay of Fundy, Chignecto Channel, Cape Enrage, bell buoy to be established off Long Reef.

66. Mar. 19. Quebec, River St. Lawrence, Rimouski, hand fog horn at light station.

67. Mar. 19. Quebec, River St. Lawrence, Quebec, permanent back range light.

68. Mar. 19. Quebec, River St. Lawrence, ship channel between Quebec and Montreal, Roche a l'Ocean, gas buoy established.

69. Mar. 22. Quebec, River St. Lawrence, mouth of Saguenay River, Prince Shoal lightship No. 17 to be replaced by lightship No. 7.

70. Mar. 22. Quebec, River St. Lawrence below Quebec, Traverse of St. Roche, lower end, lightship No. 7 to be replaced by lightship No. 19.

71. Mar. 31. Ontario, Lake Ontario, Kingston harbor, rearrangement of buoys marking Carruthers shoal and Frederick shoal.

Canadian Railway and Marine World.

June, 1913.

Canadian Northern Railway Dynamometer Car.

One of the best investments made by the Canadian Northern Ry.'s mechanical department is a dynamometer car built in its Winnipeg shops early last year for testing the motive power on its western lines.

The exterior of the car is shown in fig. 1, and the floor layout and interior arrangement in fig. 2. It is a converted passenger car of the older type, the interior arranged for the convenience of the operator, and as a business car for the mechanical department. The designs were all prepared under the supervision of S. J. Hungerford, Superintendent of Rolling Stock, from whom the following information was obtained.

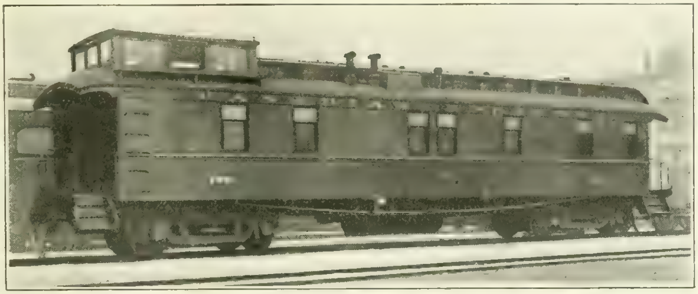

Fig. 1.—Canadian Northern Railway Dynamometer Car.

The dynamometer draft gear is shown in fig. 3. The body of the old car has been reinforced by building into the underframe two 15 by 6 in. I beams, extending the car length, to which the draft gear at both ends is attached. These beams are spaced 26 ins. apart between the webs, as shown in fig. 3. Between the web is attached a section of ¾ in. plate, 44⅛ ins. long, the edges of which are flanged, and secured to the webs of the large I beam by twenty two ⅞ in. rivets on each flange. To the under side of this plate is secured the dynamometer draft rigging, nesting between two 12 in. channels, the backs of which are 14¼ ins. apart. Three under brackets across between the lower flanges of the large I beams support the channels from the bottom, forming a rigid box construction.

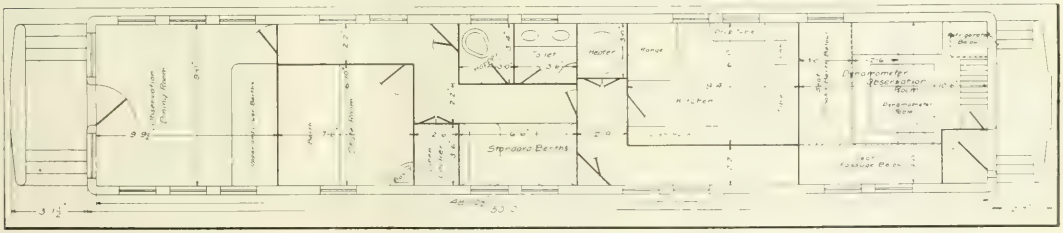

Fig. 2.—Floor Plan and Interior Arrangement of Dynamometer Car.

The coupler and yoke are of the usual type, carrying two spring plates, between which are the usual nested coiled springs. All this portion is of standard construction. Along the sides of the coupler yoke are the two arms of a heavy U connector piece, inward lugs on the latter forming bearings against which the spring plates bear, carrying the pull or push from the coupler into the U connector, all as shown in the plan view, fig. 3.

Through the base of the U, passes a piston rod, secured to the U by a block on the inside, through which passes a tapered key pin, securing the U connector to the piston rod. The location of the cylinder is shown in this same view, and the construction in fig. 4. The construction allows for cylinder flanges, by which means the cylinder is attached to the webs of the body I beams.

The cylinder is an iron casting, bored to a 16½ in. diameter, with a central 15 in. portion 16 in. diameter, in which the piston fits. The piston is 12 ins. long, containing six ¼ by ¼ in. annular grooves around the outside for fluid packing. The cylinder and piston are ground into each other, making a snug working fit, the fluid packing proving ample, with the long contact surface and snug fit. The fit is such that the friction is small.

The piston rod from the U connector is 4 in. diam., and at the front end of the cylinder, 2½ ins. Both ends pass through the heads in packed bushings, 9 ins. long, the heads being secured to the cylinder ends by twenty 1¼ in. studs.

Friction throughout the draft rigging is eliminated as much as possible. Under both legs of the U connector are two 8 in. rollers, each pair being carried on a shaft in bearings on the under side of the side channels, the weight of the yoke, coupler and spring plates being carried by the same means.

In the plan view of fig. 3 it will be noticed that there are side lugs attached to the inner face of the side channels, near the ends of the normal position of the U connector; these lugs are shown in section. When the dynamometer is not in use, double pins are placed between the ends of the U connector and these lugs, holding the U connector in its normal central position, the pull or push being taken up by the springs inside the yoke in the usual manner, the dynamometer cylinder arrangement being made dead. When the dynamometer is in operation the springs in the yoke are useful in taking up sudden shocks, relieving the cylinder, but in no way affecting the readings.

From the ends of the oil cylinder there are pipe connections to the dynamometer room in the car. On the floor of the car there is located a pump for pumping the cylinders full of oil, with a by pass between the cylinder ends, connected to the pump, by means of which the oil can be shifted from one end to the other, when after a long run, the leakage around the piston has been found to be sufficient to bring the piston too near one end. The customary practice in centering the piston, when leakage has shifted its position, is to open the by pass, and have the locomotive pull or push on the drawbar, shifting the piston back to normal, the by pass being then closed. In summer the oil used is dynamo oil, and in winter equal parts of dynamo and signal oils.

The dynamometer observation room, as shown in figs. 1 and 2, is in an elevated position at the dynamometer draft gear end of the car, similar to the cupola of a caboose, the floor of the room being at as high an elevation as the clearance limits of the car will permit, there being just standing room, with a close clearance for outside obstructions over the top of the cupola. All four sides have observation windows for outside inspection. The room is reached by a short tier of steps at the end of the car.

In the centre of the room is the dynamometer table, shown in fig. 5, the top of which is shown in fig. 6. On the top of the table is the dynamometer recording apparatus, the main part of which is shown in fig. 7. It will be observed that integral

In a solid cast frame there are two small cylinders, bored to a diameter of 0.796 in., giving an area of ½ sq. in. These cylinders connect through the pipe connections mentioned to the ends of the dynamometer cylinder. Both cylinders are single ended, opening towards each other.

Between the two cylinder bores is an aluminium piston rod, the ends of which are turned, and brass piston sleeves fitted thereon. These sleeves are turned with four packing grooves, 1-64 in. deep. At the centre of the piston rod there is a type of crosshead, connected to it by a wrist pin, the outer ends of the cross head attaching to connecting rods which pass alongside each cylinder to cross heads at the rear of each cylinder. Between each crosshead and the cylinder head are calibrated indicator springs, so that the distance of piston displacement due to oil pressure is a measure of that pressure to a scale dependent on the calibration of the springs.

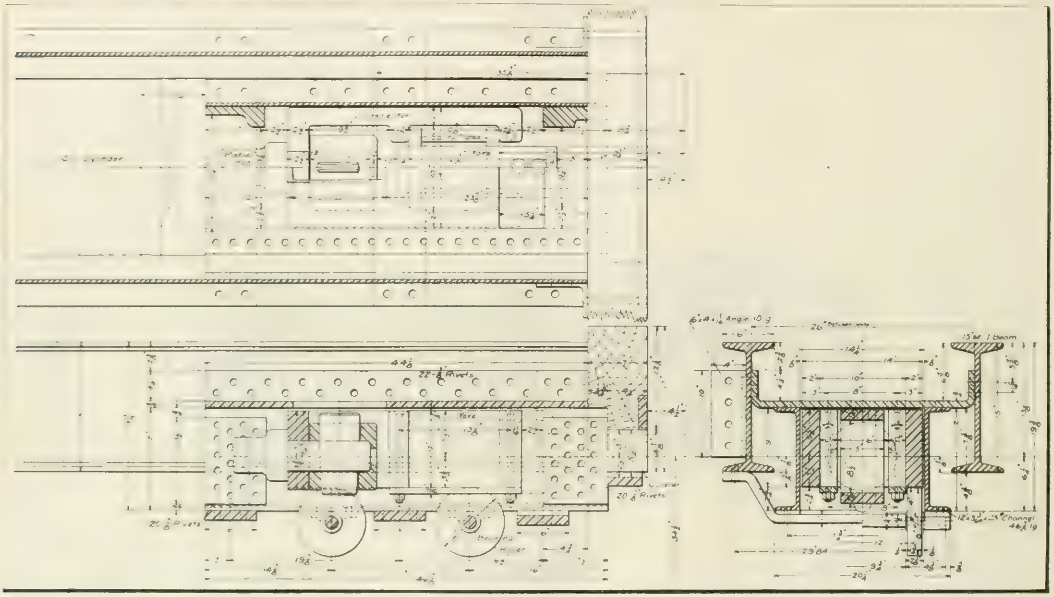

Fig. 3.—End Construction and Draft Rigging of Dynamometer Car.

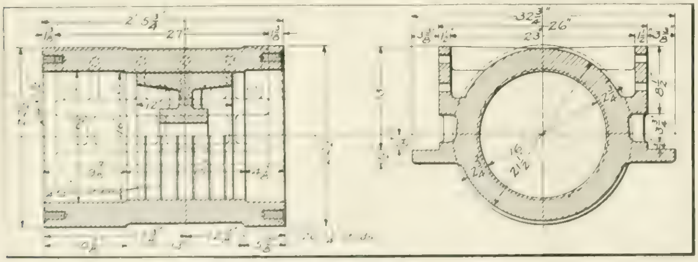

Fig. 4.—Oil Draft Cylinder of Dynamometer Car.

The springs at each end only operate one at a time, depending on the end of the dynamometer cylinder in compression. Through a pantograph movement a stylograph pen on the outer end of an arm multiplies the extent of the piston displacement, marking the same on a sheet of paper that passes continuously over the top of the recording table.

As mentioned, a sheet of paper can be put in continuous motion over the face of the table under the recording pen. The mechanism that moves this paper is shown in fig. 5. On one of the axles of the four wheel truck there is mounted a 4 groove rope pulley, with a corresponding wheel mounted on a shaft on the frame of the recording table. Four spring belts pass around both wheels, passing up through a box opening in both main and dynamometer room floors. The motion of this frame wheel is in consequence dependent directly on the speed of the car.

The carrying shaft is connected by a universal joint to a short worm shaft, the end furthest from the universal joint being carried in a bearing that can be moved through a small arc, and clamped in any of its positions by a clamp lock. By this means it can be brought in or out of engagement, with a worm wheel directly beneath it, a pinion on the same shaft as the latter meshing with another gear on a lower shaft, this latter shaft carrying between the frames a recording paper roll. On the rear part of the table frame is another paper roll, carried on a shaft on bearings on the rear legs. A friction brake regulates the movement of this roll, and prevents it from unrolling too rapidly. From this roll the paper passes up over a roller, the top of which is flush with the table top, thence forward on the table, and over a similar roller, and down on the front paper roll, on which it is wound by the worm mechanism, which can be thrown in and out at will.

The paper passing over the table is to be seen in fig. 6, all the recording apparatus being shown there also. On the pantograph arm is the pressure recording pencil. To the rear is an indicating pressure gauge, connected in with that end of the pressure recording cylinder, the dynamometer cylinder pressure being there indicated for that end of the cylinder. At the near end, under the table, is another gauge, for indicating the pressures on the other end of the cylinder. The opposite end, being that most used, is placed on the table in a conspicuous place, and can be read in conjunction with the paper records.

In front of the rear gauge there will be noted an electrical ticker, similar to a telegraph instrument, consisting of a double electromagnet, in front of which is a hinged flapper, the lower end of which is also hinged to a rod running across the table, to which two pens are attached, in adjustable positions, for marking two datum lines on the moving paper.

In the front of this rod is another cross rod connecting a gauge in the foreground with the black box in the left background. The latter is a speed recorder, connected through a long spring belt with a pulley on the truck axle. A flexible cord in the speedometer connects with this front cross rod, the near end of the cross rod connecting with the gauge in the foreground, this gauge indicating the speeds on the dial face. The speeds are also recorded graphically by a stylograph pen attached to the cross rod.

The pens on the rear cross rod are so adjusted as to give datums for the pull on the far side of the paper, and for the speed on the near side of the paper. The electrical attachment on the far end of this rod is connected with a push button on each side of the cab, so that the observer at the car side, on approaching a mile post, presses the button, the hinge of the electrical apparatus flapping, drawing the datum pencils towards it momentarily, a spring forcing them back to normal position on the release of the button, the jog in the datum thus made forming the mile post indication.

Both speed and pull are recorded on the paper to a known scale, but in operation, as a double check, it is the practice to mark the pressure and speed indicated on the indicating gauges on the paper at the same time that the number of the mile post is marked opposite the datum jog. Intermediate points are also pencilled down on the paper, where the table observer notes any points in the traced curves that he wishes to record. Memoranda can also be written down in the margin at the same time. For this purpose, and to observe the paper as it passes over the table for the greatest period of time, there is a glass plate let into the table face near the front edge, under which the paper passes. The pressure, as given by the indicating pressure gauge, is in lbs. per sq. in., and in order to interpolate into the drawbar pull, this must be multiplied by the area of the dynamometer cylinder, which, for the forward end, is 188 sq. ins.

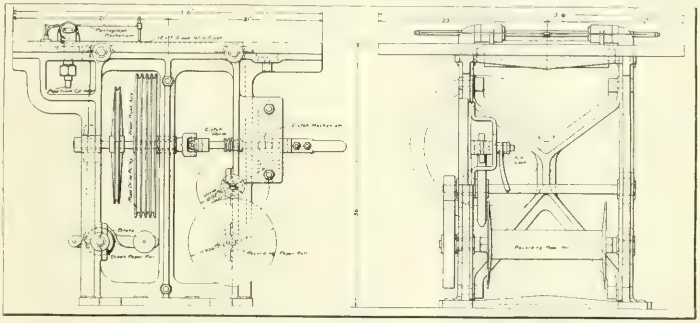

Fig. 5.—Dynamometer Table with Throw In Apparatus.

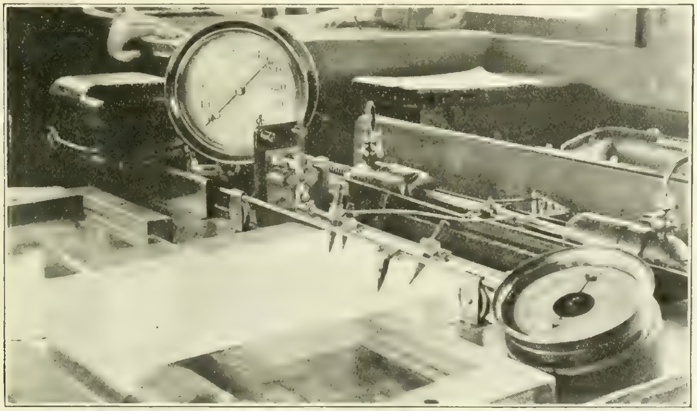

Fig. 6.—Top of Dynamometer Table, with Indicating Apparatus.

The wisdom in constructing such a car was soon demonstrated by a few trial runs over different divisions of the system. The tonnage rating of nearly all the locomotives was found to be far too low, and with the information gleaned from the observations made, the loading was increased in a great many instances. Practically every one of the many C.N.R. lines through the west have been gone over with the different locomotives used on the division, and the maximum rating over each section, for each of the different locomotives, determined. This information on each of the divisions is placed in the hands of the locomotive foreman, so that he now knows exactly what loading each locomotive can be given to obtain its maximum efficiency, when an order for a locomotive is given him by the operating department.

One advantage of steel interior finish on steel passenger cars, is that the finish can be made up in special shops and rapidly assembled in the car, instead of the slow method of cutting and fitting as followed for wooden interior finish.

Victoria Rolling Stock and Realty Co. of Ontario, Ltd.

The annual report for the year ended Feb. 15 says that during the year the company did not issue any new debentures, and outstanding debentures against leases were reduced by $160,000. All payments maturing during the year were promptly met. The profit on the year's business after charging up directors' fees and expense account, was $31,386.45, out of which a dividend of 6% per annum on the paid up capital stock was paid, amounting to $14,400, leaving $16,986.45 carried forward to profit and loss account, which now stands at $67,486.56.

ASSETS.

Obligations on leases	$ 906,741.66
Debentures held by company and accrued interest	24,536.13
Cash in bank	104,208.77
Call loans	240,000.00
	$1,275,486.56

LIABILITIES.

Capital stock subscribed..$600,000.00	
Capital stock paid up	$ 240,000.00
Debentures outstanding	960,000.00
Interest accrued on same	8,000.00
Balance at credit of profit and loss	67,486.56
	$1,275,486.56

PROFIT AND LOSS ACCOUNT.

Balance at credit of profit and loss account, Feb 15, 1912	$ 50,500.11
Rents received and accrued on leases and interest on advances and debentures held by company	77,312.52
	$127,812.63
Interest paid and accrued on debentures	$ 43,756.57
Expense account	869.50
Directors' fees last year	1,300.00
Dividend account	14,400.00
Balance carried forward	67,486.56
	$127,812.63
Original cost of rolling stock held under existing leases	$2,939,370.00
Amount paid in on account by railway companies in addition to interest	1,979,370.00
	$ 960,000.00
Total amount of the company's debentures outstanding	$ 960,000.00

The directors for the current year are:—Sir Edmund B. Osler, President; W. D. Matthews, Vice President; D. Coulson. Hon. J. S. Hendrie, F. G. Osler, D. R. Wilkie.

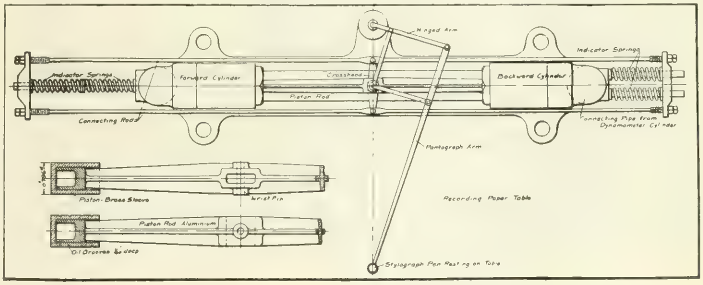

Fig. 7.—Indicating Oil Cylinders with Pantograph Mechanism.

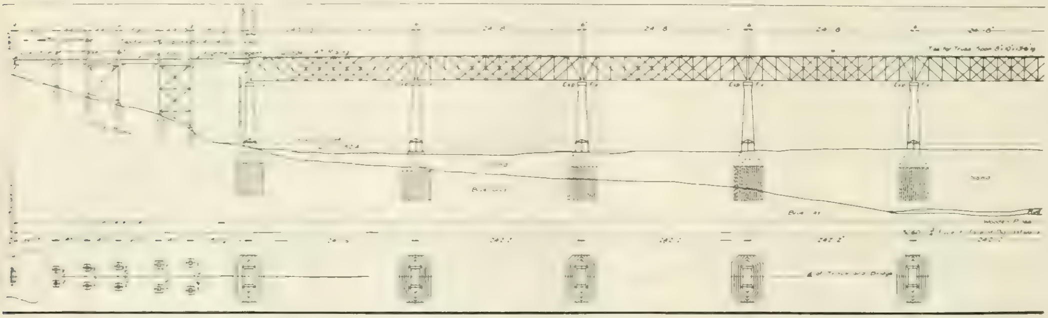
The theory of the collapsible vestibule is that in the event of a collision the closing up of the car bodies through the depth of of the vestibule gives the cars that much extra shock-absorbing space, amounting to approximately 8 ft. between each pair of cars, removing to a large degree the shock and resulting damage to the car body and the human load.

Canadian Pacific Railway Bridge at Outlook, Sask.

Early this year the bridge across the South Saskatchewan River, near Outlook, Sask., on the C.P.R.'s Moose Jaw northwest line, was opened to traffic. The bridge in its several stages of completion is shown in the accompanying illustrations.

The prairie on both sides of the river at this point is nearly at the same level, at an elevation above the river of over 100 ft. It was, in consequence, decided to build a high level viaduct across the river, at the level of the prairie, instead of making cuts on either side to bring the track level down nearer the river. This latter course would have necessitated heavy approaches in either direction, and it is questionable whether the heavy cutting required would have been any more economical from the standpoint of initial cost, apart from a consideration of the cost of operating trains over such a dip. The prairie level on both sides was such as to provide for a bridge with a maximum 0.4% rising grade from the west.

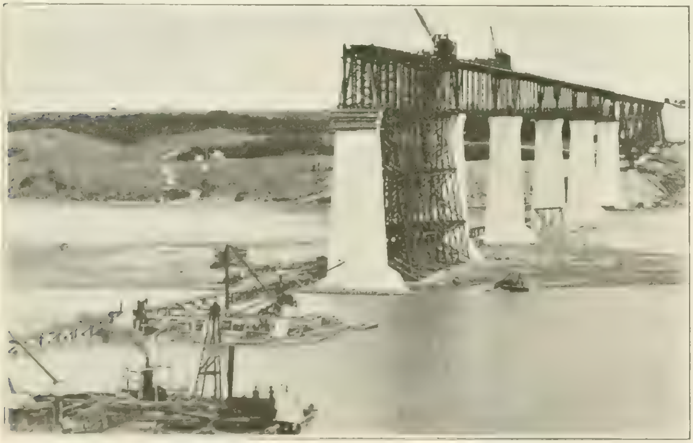
The central portion of the bridge consists of eight 240 ft. spans, on high concrete piers, with 45, 60 and 80 ft. shore spans, carried on bents. The concrete river piers are of a particularly heavy construction, and of a total height from the base of 125 ft. These were carried down to a sufficient depth to be free from frost and scour. The construction of these piers is shown in the accompanying illustrations.



C.P.R. Bridge Across the South Saskatchewan River at Outlook, Sask. (Continued on next page.)

All the river piers are carried on wooden piles, driven at a close spacing in the sand and clay of the river bed. The nature of the ground was such as to require extraordinary means in order to obtain a good foundation.

The river spans are all 240 ft. long, of the link pin construction, considerably lighter in design than is usual in present day work. This is accounted for by the fact that these eight spans are all from the company's old bridge across the St. Lawrence at Lachine, near Montreal. The new bridge at this latter point was rebuilt and double tracked last year, a description of the work appearing in Canadian Railway and Marine World for April, 1912. The old bridge was still in excellent condition, and did not require renewing, except for the fact that the line out of Montreal carries the heaviest rolling stock on the system, and the traffic is quite dense, requiring a double track bridge. So while the old bridge was not considered suitable for its former service it was quite adapted for a branch line. It has therefore been moved to its new location in the bridge under description.



Completed C.P.R. Bridge Across the South Saskatchewan River.

All the shore spans, save the three 80 ft. plate girders, one at the west and the other two at the east end of the bridge, are new, and have been designed to the latest main line specifications. The 80 ft. spans, like the longer river spans, come from the St. Lawrence bridge. The shore spans are carried on steel bents, resting on concrete foundations. The latter are carried on concrete piles, instead of wood piles as used in the river construction. Two lengths of new shore spans have been employed, 45 and 60 ft., the latter size bridging between the steel towers. The bents are of varying length to conform to the shore foundation.

At the east end of the bridge the elevation is 1,729.65, and at the east end, 1,717.63. The normal water level is 1,582.4. Thus the maximum elevation above the river at the west end is 147.25 ft., making the bridge one of the highest in Canada. With the total length of 3,004 ft., it is a bridge of considerable proportions.

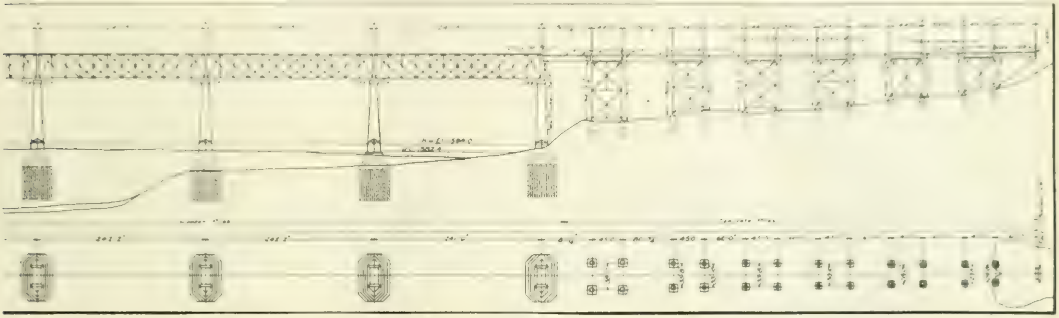
Work was carried on through the winter of 1911-12. The river foundations were sunk by means of caissons, and it was in the use of the latter that some difficulty was experienced. The caisson in the deepest part of the river was completely washed away by spring freshets, occasioning some delay. On the piles sunk in the caisson, the concrete was built up in moulds. The lower part occasioned no difficulty, but with the upper section it was necessary to construct high elevators to raise the concrete to the elevated forms. The work was not delayed by the winter weather, as the concrete moulds were encased with an outer wooden wall, with an intervening air space between the two walls. In this space were run steam pipes to keep the mould warm for the proper setting of the concrete in the extreme weather encountered in that northern latitude. The methods of conducting the work in warm weather are shown in the illustrations, as is also the system of false work for erecting the main link spans.

The designs for the bridge were made in the office of P. B. Motley, M. Can. Soc. C.E., Bridge Engineer, Montreal, and the constructional work was performed under the supervision of J. G. Sullivan, M. Can. Soc. C. E., Chief Engineer, Western Lines, Winnipeg.

A new axle train lighting system has been tried on the Santa Fe system, involving a number of radical departures. The inherent characteristic of the generator is that it gives the same polarity for either direction of rotation, eliminating the necessity for any pole changer. The variation in voltage is reduced to narrow limits and no lamp regulator is required. The system adjusts itself automatically to different conditions of load produced by variations of schedule or by change of season, so that no manual adjustment is required to meet these different service conditions. At the same time useless overcharge of the battery is eliminated, thus establishing conditions favorable to long battery life.

The Grand Trunk Railway's New Locomotive House at St. Lambert.

The locomotive house which the G.T.R. is building at St. Lambert, near Montreal, and which is nearing completion, will house 27 of the largest locomotives and will have adequate repairing facilities. The structure, which as a whole comprises round house, machine shop, boiler house, fan house, office and stores, castings store and sundry accessories, is built of concrete,



C.P.R. Bridge Across the South Saskatchewan River at Outlook, Sask. (Continued from last page.)

steel, brick, and timber, the whole on concrete foundations $2\frac{1}{4}$ ft. thick, carried down to solid rock, which is found about $2\frac{1}{2}$ ft. below natural ground line.

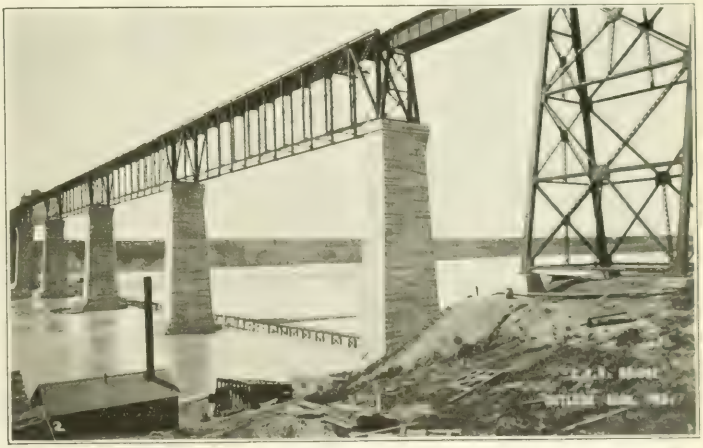
In addition to the main buildings, there are, of course, the necessary coaling station (a gravity fed plant of 500 tons capacity), sand house, drying plant, water col-

High Concrete Piers on New C.P.R. Bridge.

umns, etc. There are many incidental appliances auxiliary to the locomotive house, some of which are of quite new design, and in other cases the erstwhile standard patterns have been improved and brought up to date, including water columns, concrete pits for same, hot wells, and a model sanitary system and lavatory accommodation for employes.

The difficulties presenting themselves during the course of construction have been many and varied, particularly in the flux of water, both on and below the surface, in addition to which practically the whole site has been raised 7 ft. by means of a fill, to suit the grade of the St. Lambert yard. All the buildings were designed in the Chief Engineer's office, and the work was carried out under the supervision of J. C. Seyfriend, structural engineer, F. M. McGuigan Jr., being responsible for the layout and grading.

The St. Lambert freight yard when complete will be one of the largest on the G.T.R., and will accommodate 2,100 cars, the present accommodation being only 1,240. The yard is double ended, the tracks being duplicated on both sides of the main line, so that each branch gives room for



Construction Work on the New C.P.R. Bridge at Outlook, Sask.

60 cars.

Each of the 27 stalls of the locomotive house is furnished with a concrete pit, 66 ft. long, the walls being of sufficient thickness to allow for jacking, and in 4 stalls are furnished drop pits for driving and truck wheels.

Daylight is obtained from large windows, 14 ft. high by 11 ft. wide in series of 3 for each stall, and in the roof is fixed a continuous lantern light 5 ft. high, made to open in sections for ventilation. Fitted [illegible] a telescopic smoke jack, the hood of which can be [illegible] and lowered to fit the smoke stack of the locomotive, thus [illegible] the smoke and fumes being [illegible] to the open air.

At the centre of the radius of the round house is an 85 ft. diameter standard turn table, built by the Dominion Bridge Co., the concrete pit, etc., for same being constructed by the contractors. The turntable is operated by compressed air from the main air compressor.

The [illegible] of the main buildings are heated by air drawn through steam coils and heated and forced through ducts by a rotary fan which is installed in the fan house. The fan is about 12 ft. in diameter.

Entered through no. 1 stall is the machine shop and boiler room, about 155 ft. by 50 ft. of similar construction to the locomotive house, with a track the full length of the shop. A large concrete repair pit is also installed.

In the machine shop the motive power will be both electricity and compressed air, and it will be replete with machinery for speedy handling of overhauls and repairs. The castings store built in conjunction with the building will stock all the requisite parts, etc.

Along the entire length of the machine shop runs a concrete pit in which all the various ducts, pipes, etc., will be placed, with portable covers, thus giving easy access to the pipes.

The boiler room is equipped with two

200 h.p. vertical water tube boilers, which supply the steam for heating, also for operating the various auxiliary engines.

Coal is supplied by an inclined runway for the coal trucks, from which it is hoppered into chutes and gravity fed to the bunkers in the boiler room. The breeching, which is of brick and steel, is carried from the boilers through the end wall to a reinforced chimney stack 125 ft. high. The ashes are automatically hoppered by gravity to ash doors, from which they are conveyed by small trucks and a compressed air hoist, and sent up to the surface.

The water supply is derived direct from the St. Lawrence River, which is some 2½ miles away. On the river shore adjacent to the Victoria Jubilee Bridge is the pump house, which is of concrete and brick. The pumping plant comprises a duplicate set consisting of 1,500 gallons a minute double stage turbine pumps, each driven by a 40 h.p. squirrel cage motor.

The whole of the apparatus is to work automatically so as to require no attendance. The entire plant is installed by Allis-Chalmers-Bullock Co., of Montreal.

The main intake, which is a 10 in. flexible jointed pipe, is carried out to about 1,000 ft. from the river bank, where the suction valve is situated. From the pump house to the locomotive house site is laid a 10 inch cast iron heavy water main, which, together with its various branches, makes up about 3 miles of pipe.

The general contractors for the buildings, etc., are the John S. Metcalf Co., Ltd., Montreal.

Steel Passenger Car Construction.

By H. H. Vaughan, M. Can. Soc. C.E., M. Am. Soc. M. E., Assistant to Vice President, Canadian Pacific Railway.

The American Society of Mechanical Engineers devoted the evening of April 8 to the reading of papers and discussion on steel passenger cars, the arrangements being made by the Society's sub committee on railways. The introductory paper was contributed by Mr. Vaughan, who is a member of the society, as follows:

The advent of the steel passenger car has brought with it many new problems and an opportunity for more diverse opinions than any other change that has taken place in car equipment. The construction of the wooden passenger car developed along fairly uniform lines. The varieties of framing were few and the differences unimportant, while the introduction of steel platforms, wide and narrow vestibules, reinforced end and sill construction and similar improvements occurred gradually, and with practically similar designs on all railways. The change from wood to steel in freight car construction resulted in the abandonment of designs that had almost become standardized and the introduction of many new types, but in this case the principal problem, other than that of obtaining satisfactory designs, has been the extent to which it was advisable to use composite or all-steel construction.

In the case of the passenger car, the types to be employed will probably not be changed by the substitution of steel for wood. The increase in capacity that has taken place in freight equipment cannot be duplicated in passenger cars, and there appears to be no tendency at present toward any increase in length or carrying capacity. The questions that now confront us relate rather to the design and construction of cars of the present type and of the materials that may be advantageously employed in place of the wood which has been used for so long. They are complicated by the necessity of providing for greater safety for the passengers than was secured in the wooden car, with an equal degree of comfort and the difficulty of anticipating the behaviour of this new equipment in case of accident. Certain difficulties such as the best systems for heating, lighting and ventilation, are common to both steel and wood construction, and improvements in these matters pertain to general progress rather than the use of steel construction. The following list, while probably incomplete, outlines in a brief way the important variations that must be considered in deciding on the preferable construction of steel passenger equipment:

Framing	Steel underframe	
	All steel frame	Centre girder Side girder
Outside finish	Plated. Sheathed.	
Roof construction...	Clerestory. Circular.	
Inside finish	Steel. Wood	
End construction....	Design and strength.	
Floor	Design and material	
Insulation	Material.	

No doubt questions of equal importance have been omitted, and in many cases those mentioned require careful consideration with regard to degree, as for instance, the strength of the framing or the thickness of the insulation. The list illustrates, however, the diversity of possible solutions of the preferable steel passenger car, and the following personal opinions are presented for the purpose of opening the discussion:—

The steel underframe does not appear to be a satisfactory or permanent development. There is but little saving either in weight or cost over the all steel construction, and it is difficult to see how the same strength in case of accident can be obtained. Experience will show whether the wood superstructure can be secured in such a way as to prevent working as the car gets old, but as it cannot be arranged to carry any weight this appears questionable. It can hardly be regarded except as an intermediate step between all wood and all steel construction.

In all steel construction the side girder car presents advantages, but as in freight construction, both types will probably persist. The side girder construction obtains greater strength in the side framing without superfluous weight, and it is possible that greater framing strength may prove necessary. With equal strength of side framing the side girder car may be made lighter than the centre girder type, and the weight of steel passenger cars is one of the most serious problems to be faced by any railway not having a level line. American passenger equipment was already excessively heavy per passenger carried with wood construction, and the use of steel has increased this weight from 10 to 20%, which is a most serious matter. Apparently side girder cars as so far constructed have a decided advantage over the centre girder type in their light weight and greater strength in case of accident tending to crush in the side of the car. This will probably lead to the use of this type on roads on which weight is of importance.

In spite of the many advantages of the sheathed car in case of construction and maintenance, it appears that the cost and weight of the additional metal will prevent its extensive use. This question is chiefly one of appearance and convenience, and is of minor importance.

The circular roof has been extensively introduced on steel passenger cars on account of its lightness and simplicity of construction. It has the objection that deck sash ventilation cannot be employed. The Pullman Co., while using the clerestory roof has, however, discontinued the use of deck sash ventilation, so that evidently in its opinion this objection is not important. The deck sash is, however, of value in a standing car, and when properly screened is certainly advisable in hot weather, especially when the road is dusty. The C.P.R. has compromised on this question and is using a roof of approximately circular form with deck sash. The strength and simplicity of the circular roof is retained, with the ventilating qualities of the clerestory type.

The preferable material for inside finish is a matter for future decision. With the ample protection afforded by a steel car against accident, there does not appear to be any objection to wood inside finish, on the ground of safety. It is more ornamental than steel and a better insulator. Probably on no question in passenger car design is opinion so divided amongst both railway and carbuilders. There is today very little difference in cost, and it certainly appears probable that in the future the tendency will be to adopt steel interior finish if not entirely, at any rate to a great extent.

The construction of the ends of the cars has received considerable attention, and the strength now usually employed is enormously greater than anything attempted in wood construction. Several excellent designs have been devised, which will probably be referred to in another paper.

The floor construction in steel cars is entirely different from that in wooden cars, and is usually of metal covered with a flexible cement. In constructing a sample car for the C.P.R. the writer used in addition an underfloor covered with insulating material, and covered the cement with ½ in. of cork. This car was also exceptionally well insulated at the sides, 2 ins. of cork being used next the outside plating. Tests during the past winter have shown that this car is actually warmer than the ordinary wooden car, the same amount of heating surface being used in both types. The floor was tested by taking the temperature of water standing in cans on the floor, there being no practical difference between the results in the wood and steel cars. The question of insulation is an important one, both in hot and cold weather, and while other insulation might no doubt be equally effective, it is interesting to be able to advise that with proper insulation there is no question of the steel car being satisfactory.

Other papers were read as follows:—Problems of steel passenger car design, roof structure for steel cars, suspension of steel cars, six wheel trucks for passenger cars, steel interior finish for steel passenger cars, painting of steel passenger cars, provisions for electric lighting in steel passenger cars, provision for electrical equipment on steel motor cars, air brakes for heavy steel passenger cars, cast steel double body bolsters, platforms and end frames for steel cars, underframes for steel passenger cars, special ends for steel passenger cars.

Argentina had 19,240 miles of railway at the end of 1912.

Railway Mechanical Methods and Devices.

Air Operated Bulldozer at the Grand Trunk Railway Port Huron Shops.

At the G.T.R. car shops at Port Huron, Mich., air operated bulldozers are in use, satisfactorily substituting power driven machines of larger proportions on certain classes of work, principally that of a lighter nature, although the size of some of the pieces handled is rather surprising.

One of the machines in the Port Huron shops is shown in the accompanying two illustrations. A cast iron base frame carries at the rear three passenger car air cylinders, ranged side by side with the attaching surface, secured to a corresponding face of the supporting frame. On the front end of the frame there is attached a large surface plate of cast iron, on which the bulldozer tools are guided. The bulldozer head has a guiding lug on each side, which passes down under the side of the table top for guiding laterally. The three air plungers are all attached to the rear of this head and act simultaneously, causing a uniform pressure to be exerted across the width of the table. This distribution of pressure makes a lighter construction of head possible. The machine is operated through the vertical lever to the rear, to which is attached an extension rod for the convenience of the operator when in front of the machine.

Fig. 1 shows the machine set up for making car steps. The male part of the die is attached to the table as usual, and the female part to the bulldozer head, the red hot bar when placed between the two being bent around the form of the male die. When in this position, as shown in fig. 2, the sides of the partially completed step are secured in position on each side by the vertical tongs, over the handles of which are slipped retaining rings. An operator on each side, with a U ended tool, seizes the projecting ends and twists them down through a quarter circle (a little further down than the position shown). These tools being then removed, the ends are hammered down flat on the table, producing the standard car step familiar to all. This process of making the steps is unique, but shows the scope and possibilities of the machine.

This particular machine is used for all sizes of work, including such heavy and awkward pieces as coupler pockets, which it can easily bend around to shape. It is also used with a special jig for upsetting the ends of brake rods, which were formerly made by welding a section of larger stock on the end of the rod. The law prohibiting this practice, it was found possible to make a good upsetting job on this machine.

Smaller sizes of bulldozers, using two instead of three cylinders, are also made up, the cylinders in this case being smaller, handling the lighter class of work, leaving the heavy for the larger machine. Both kinds make a very satisfactory substitute for mechanically driven bulldozers.

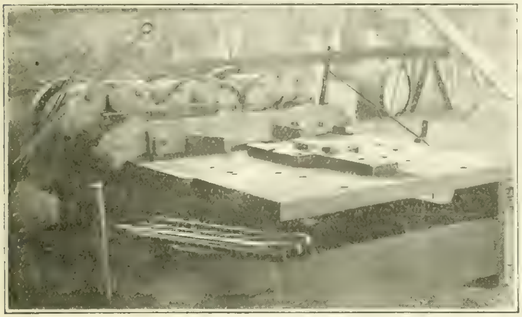


Fig. 1.—Air Operated Bulldozer of Powerful Design.

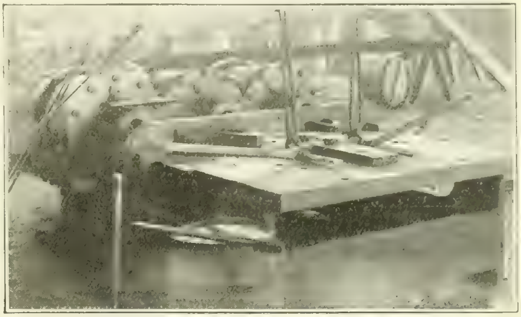

Fig. 2.—Bulldozer Forming a Car Step.

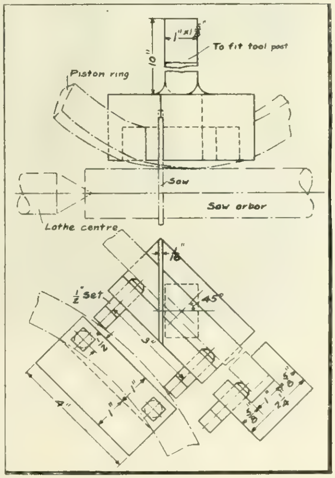
Cutting Piston Rings at the Grand Trunk Railway Stratford Shops.

The practice of making piston rings out of cast iron rings slightly larger than the bore of the cylinder into which they are to fit, and cutting out a small diagonal piece so that the ring might compress to give the required diameter, and the ring be thus given the necessary spring to keep it at all times snugly sprung out against the cylinder wall, is familiar to all who are in touch with steam engine practice. Ordinarily, this small section removed to give the spring is cut out with a hacksaw, the ring being held for the purpose in a bench vise.



Jig for Cutting the Spring Gap in Piston Rings

At the G.T.R. locomotive shops at Stratford, Ont., another method of cutting the rings is employed, and is illustrated herewith. The ring to be cut is held at an angle by a special clamp, in the lathe tool post, and the ring forced across the carriage ways against a thin milling saw.

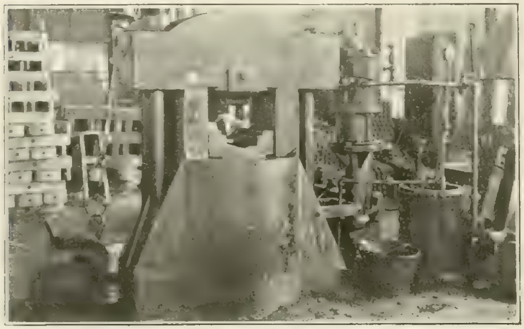
The attachment used in these shops consists of a block of steel, 4 ins. long by 2¼ ins. wide and 2 ins. thick, welded to the outer end of a 10 in. bar of 1 x 1⅝ in. bar, to which it is set at an angle of 45 degs., the angle of the required cross cut in the ring. In the outer face of the block there is a channel 1 x 1 in., into which the ring is slipped, the outside to the front, and held in position by two ½ in. set screws through the lower side. Vertically through the front face there is a 1-16 in. slot, extending in beyond the bottom of the face channel.

The cutting saw is mounted on an arbor between the lathe centres, and the work forced up to it, quickly cutting through the ring. The second cut for the removal of the spring piece is made in the same manner, first moving the ring around the required amount.

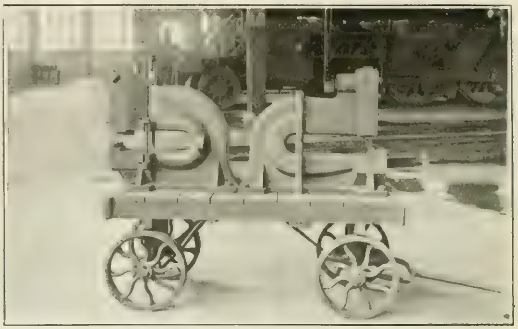
Coupler Stripping Press at Canadian Pacific Railway Winnipeg Shops.

In stripping the wrought iron coupler yoke from the cast coupler, when either one is broken and requires renewing, the usual practice is to cut off one head of each of the uniting rivets, this being done in the time honored sledge and chisel manner. This practice still exists in the majority of shops. In the C.P.R. Winnipeg blacksmith shop this operation is performed in a simple manner in a hydraulic press. This press, with its auxiliary apparatus, is shown in the accompanying illustration. It is a very heavy structure, the lower part consisting of a cylinder casting, with upwardly projecting side arms, on the top of which is attached a head casting, the whole held together by 4 large bolts. The plunger operates upward from the cylinder casting below. The head of the plunger is so formed as to support a united coupler and yoke on the edges of the latter, leaving the central or coupler portion unsupported from below. On the under face of the press head there is mounted a block of the width of the coupler shank, so that, as will be seen from the explanation preceding, the block on the plunger head will fit over the stationary block. The couple and yoke are placed in the press, resting on the yoke edges. The plunger pressure from below is on the yoke edges, while the retarding force from above is on the central coupler shank, the result being that the rivets are seated on both sides on the joining faces. The operation of the press is very quick and effective.

The operating fluid is fuel oil, forced in by an air operated oil pump adjoining, the air end being a locomotive compressor unit, with a small hydraulic pump lower end. The oil reservoir is a partially buried steel tank.



Coupler and Yoke Stripping Press.



Portable Locomotive House Punch and Shears.

The press is provided with an air hoist from above, with handy clamps for lifting the coupler. Different sizes of dies are provided for the various sizes of couplers operated on.

Small Air Drill at Canadian Northern Railway Shops.

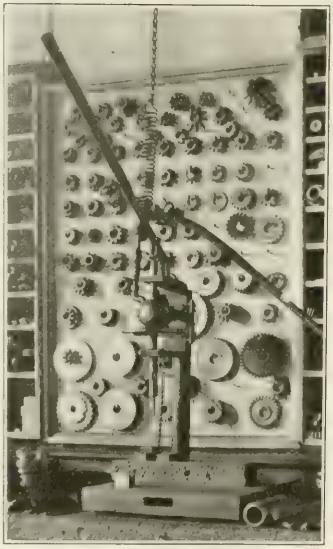
In the tool room of the Canadian Northern Ry. Winnipeg shops, a small portable air drill has been converted into a stationary bench drill, as shown in the accompanying illustration. The air drill is of the earlier type of portable drills, consisting of a single cylinder, with a reciprocating motion, the connecting rod attaching to a crank right on the drill spindle, the motion being kept uniform by a comparatively heavy flywheel.

This motor has been mounted in vertical bearings on a support attached to the side of a surface plate, which is set on the tool room bench. To the top of the vertical stand there is fulcrumed an operating lever, the upper end of the drill spindle connecting thereto. This is attached to a spring from above, normally holding the spindle in its highest position. By the fulcrumed lever the drill can be brought down on the work. While not very powerful, it is useful for a lot of the small drilling found in a tool room.

Portable Punch and Shears in Michigan Central Railroad Windsor Locomotive House.

Locomotive house repairs are quite varied in their character, but are never of such a nature that they cannot be handled with simple tools, as the instant the repairs required assume heavy proportions the locomotive is sent to the back shop—or at least should be. Anything that will simplify the repair work in the locomotive house, and get it back into service with the least delay, is of considerable worth.

In the M.C.R. locomotive house at Windsor, Ont., a useful appliance in the form of a small punch and shear has been added to the equipment, as shown in the accompanying illustration. The two are mounted back to back in their usual relation to each other, on a small truck, on which they can be moved to the work, dispensing with the necessity of bringing the work to the machine. For light work they are very useful, one of the particular fields of usefulness in the locomotive house being that of putting smoke box netting in shape, and the punching and trimming of boiler lagging.



Small Air Motor for Bench Work.

Additional Dominion Legislation.

The following additional acts affecting transportation interests have been passed by the Dominion Parliament:—

Algoma Eastern Ry.—Extending time for construction.

Athabaska Northern Ry.—Extending time for construction.

Calgary, Edmonton and Fort McMurray Ry.—Incorporation.

Canadian Northern Ry.—Extending time for construction of certain lines and authorizing construction of additional branch lines.

Canadian Northern Ry.—Extending time for building certain lines.

Canadian Western Ry.—Extending time for construction.

Caribou, Barkerville and Willow River Ry. Extending time for construction and authorizing building of additional lines.

Dominion North Western Ry.—Incorporation.

Guelph and Goderich Ry.—Extending time for construction.

Huron and Ontario Ry.—Extending time for construction and changing title to Toronto and North Western Ry.

Kettle Valley Ry. Extending time for construction.

Manitou Ontario Ry.—Incorporation.

New Orleans and Grand Isle Traction Light and Power Co.—Changing name to New Orleans and Grand Isle Ry., Light and Power Co.

Niagara, St. Catharines and Toronto Ry. —Extending time for construction.

Pacific and Hudson Bay Ry.—Extending time for construction.

Quebec, Portland and International Short Line Ry.—Incorporation.

Shuswap and Okanagan Ry.—Extending time for construction.

Southern Central Pacific Ry.—Extending time for construction.

Intercolonial Railway Finances

In the House of Commons, Mar. 31, the Minister of Railways said:—"The estimated surplus of the past year's operation of the Intercolonial Ry. is between $900,000 and $1,000,000. It has been a pretty successful year, the revenue being the largest in the history of the road. The estimated revenue is $12,000,000. In comparison with the last three years the results show up remarkably well. The revenue of the last three years was as follows:—1911-12, $10,593,785; 1910-11, $9,863,783; 1909-10, $9,268,234. The following amounts have been taken out during the year and charged to working expenditure:—Rail renewals, $60,000; fire renewals, $60,000; equipment renewals, $300,000. The average price of coal was 12c. a ton higher than in the previous year, and this year the increase will be 25c. a ton. The amount paid in wages for handling the business is about $350,000 in excess of the previous year.

Contracts have been let for rolling stock during the current fiscal year amounting to over $3,000,000. A large quantity of rolling stock has also been ordered at the Moncton shops. With the exception of $1,000,000 which was included in the current estimates, the rolling stock ordered will be paid for out of the revenue of the last two and the current years.

A more elastic paint is required for the finish of steel cars, as the linear expansion of steel is about double that of wood.

The Economics of Railway Location.

The presidential address, read before the Canadian Society of Civil Engineers at its last annual meeting by the retiring President, W. F. Tye, was published in full in Canadian Railway and Marine World for March. Engineering Record, of New York, made the following comments on the address:

"Mr. Tye puts just emphasis on the necessity of balancing the available traffic, the cost of construction and the expense of operating the completed line. The engineer sometimes forgets the real purpose of the railway that of getting business and handling it economically.

"Two parts of the paper are somewhat misleading. Mr. Tye states that the greater the proportion of ruling grade on a division, the lighter the train loads must be. Many elements enter into the determination of the economical train load for a division, and the effect of the profile cannot be dismissed so briefly. Ignoring the time allowable for getting a train over the division, it might be possible to run heavier trains over a division having 60% of ruling grade and well-spaced level places for engines and firemen to rest, than over a division with its 20% of ruling grade concentrated and continuous. In this case there would still be the question as to whether the low speed on the ruling grade would be permissible. If not, the train loads would have to be reduced, and the profile with only 20% of ruling grade, and with the chance of higher speed on the remaining 80%, might have the advantage.

"In stating that the introduction of 100 10 deg. curves in the route of the 18 hour trains from New York to Chicago would add only 80 minutes to the running time, Mr. Tye overlooks the fact that in order to average 49 miles per hour over the entire distance, in spite of stops and slow orders through cities and at other points, this train must go much faster than 49 miles an hour on a large part of the route, and that to get up to such speed usually requires a distance of several miles. With a 10 deg. curve every 10 miles this train could maintain its present necessary speed only for short stretches, and it may be doubted whether it could maintain a schedule of 24 hours for the distance. Adding to this the danger involved in a failure to slow down, it can hardly be considered good practice to introduce sharp curves on high speed lines where they can possibly be avoided. One of the railways running these fast trains is in fact spending large sums to get rid of the few remaining 7 deg. curves.

"Other points, however, brought out by Mr. Tye deserve hearty endorsement. An important end served by the use of trestles instead of embankments, he points out, is the determination of the proper openings for waterways where records are not available. By the time the trestle has to be replaced, sufficient data should be at hand.

"A point made by Mr. Tye that is worthy of much emphasis in the building of a pioneer road which is at all likely to become anything more than an unimportant branch line is the desirability of working from the ideal alignment and profile, and considering the economics of putting in temporary detours and heavy grades that can be rectified individually as desired. Such a line may be more expensive to operate than one built on a uniformly lower standard. The first cost will be less, however, and if there is little business in sight, and hence little to be handled, the increased operating expenses will not be serious when taken in conjunction with the fixed charges. The pioneer railroad builders of the United States could hardly have foreseen the demands that the future would make on their lines. Canada, however, has the benefit of the experience of the U.S., and if she profits by it she will not find it necessary 20 or 40 years hence to rebuild her roads in 100 mile sections, as has been done in the U.S., in order to enable them to handle their business."

Comments by H. K. Wicksteed, B.A.Sc., M. Can. Soc. C.E.

In response to a request, Mr. Wicksteed, Chief Engineer of Surveys, Mackenzie, Mann & Co., Ltd., has favored us with the following comments, which will doubtless be read with much interest:

"I have been much gratified by Mr. Tye's able address before the Canadian Society of Civil Engineers, and, in spite of my having had little spare time, would probably have acceded to your request for comment before had it not been that he had covered the ground so completely and, to my mind, so satisfactorily. The criticism in the Engineering Record is thoughtful, but I am not at all sure that it has made much of a point in connection with the exception it takes to Mr. Tye's statement that 'the greater the proportion of ruling grade on a division the lighter the train loads must be.' I think it will be generally conceded that given a 100 mile division, with a certain amount of rise and fall and a specified ruling grade, it will not ordinarily make much difference whether we use this maximum sparingly or liberally, but the question of endurance comes in as well as that of adhesion; endurance, not only on the part of the fireman, but of the locomotive itself, and I think Mr. Tye is, in the main, quite correct, that even with a fixed maximum there is a distinct gain to be made in reducing the length of that maximum as much as possible. I have always been less timid than most people about introducing curvature into a road and have been much criticized in consequence. It is therefore a keen satisfaction to me to find so high an authority as Mr. Tye willing to go even further than I do.

"I think, however, that in referring to the 18 hour trains between New York and Chicago, he merely wished to take an extreme case as an illustration, and would not in his own practice recommend 10 deg. on a first class road, except under the most severe provocation. But taking his proposition as it stands, it is more than probable in actual practice that many of these 10 deg. curves would be 'bunched' in one locality, and that the one slow down would cover several of them at once, so that the Engineering Record's argument as to the amount of time lost in getting up speed again is much weakened. This practice of 'bunching' sharp curvature is, I think, a thoroughly good one for this reason alone. The first curve being put in to avoid some prohibitively expensive piece of work, we may introduce several more of the same radius on either side of it, for the sake of a comparatively small saving and do little harm thereby.

"Mr. Tye's address was, I think, intended to cover the ordinary conditions obtaining in Canada today, and in nine out of ten of the new roads being built, the question of high speeds is not that which concerns us most, but rather the construction of the cheapest road possible consistent with moderate economy of operation, and that which can with the least expenditure be subsequently developed and improved into one of the highest class. If this principle be accepted we have in [illegible] the strongest argument perhaps that can be advanced for curvature as opposed to steep grades as a means of reducing cost. A rise of 100 ft. with a 1% grade between two long stretches of level, which we wish to take out and improve to 0.5%, means the complete abandonment not merely of the two miles of heavy grade, but of two miles of the level as well, and generally the acquisition of new right of way. The taking out, or flattening, of a few curves on a steep side hill, is generally a trifling matter in comparison, and the existence of the road alongside, actually in operation, is a help in the construction work. I can heartily endorse the policy of studying out and even in some cases laying down on the ground the ideal location and building diversions from it to avoid the present expense of the heavier portions. I can remember a case not long ago where a 50 ft. cut in hard rock was avoided by 5 curves of 10 deg., 'bunched' together, and giving very light work in comparison, and another where a circuit involving 2 miles extra distance was made to avoid a tunnel. The line in each case was so adjusted that there would be the least possible abandonment of work when the final line was put through. Temporary sags in the grade over long fills have of late been much used to the same end, and of course, in this case, there is practically no abandonment of original work, as the alignment remains unchanged. Deep sags, however, with the necessary accompaniment of abrupt changes in grade, are very objectionable things on a busy road, especially if very long trains are handled, and the lifting of the track itself, by successive increments to the fill, is not only, under the same circumstances, very embarrassing and troublesome to the traffic, but dangerous as well. Other things being equal, I prefer a crooked line as a temporary expedient.

"Mr. Tye's point as to the use of temporary trestles is especially interesting, in view of the fact that timber trestles have of late fallen into disfavor. This is, no doubt, largely a reaction from the excessive freedom with which they were used 25 years ago. The C.P.R. was, probably, among the first to revolt against the raising of grades to avoid rock cutting, and to trestle all the resulting fills, whether they contained streams or not. The road was low in first cost, although not pre-eminently so, but the maintenance and renewal charges were high and the danger of fire enormous. In the latter days of the first construction, the grades were lowered until cut and fill nearly balanced in ordinary work, even in rock. When a really heavy fill was met with it was boldly trestled. Under this system, not only were small trestles almost eliminated, but in most cases the rock filling was sufficiently porous to take the transverse drainage, and obviate, for a time at any rate, the necessity for expensive culverts which would have been necessary in the case of earth filling. A point in connection with capital saving expedients introduced liberally on portions of the C.P.R. is the substitution of stream tunnels for masonry culverts. In some cases the opportunities were so great that the location was modified in order to take advantage of them.

"Perhaps the most striking feature of Mr. Tye's address is the limits to which he is prepared to go. Twenty years ago, when a paper of similar tenor was read before the same society, the author was 'jumped on' for proposing 10 deg. as the standard for a development road. He has seen no reason to change his views since, and the criticism, it is only fair to state, came from men who

New Hopper Bottom Box Car on the Grand Trunk Railway.

Something over a year ago, a hopper bottom box car was built to the designs of J. Coleman, Superintendent of Car Department, G.T.R., which has been patented by him in both Canada and the United States. Since the date of its construction, it has been in almost constant service in the grain trade between Midland, Ont., and Portland, Me., trying the car and gathering data with a view to remedying any defects in the construction that may develop while in service conditions.

The body of the car is of the outside steel frame construction, built about a steel centre sill. This type of outside steel frame work car is familiar to all railway men, so needs no further description. It is in the interior construction and addition of special hoppers that the car is unique. The accompanying two illustrations show the outside and interior construction.

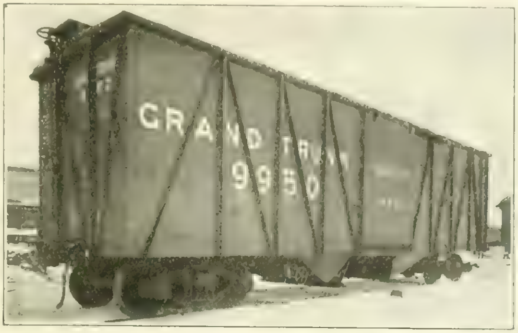
The nearest construction to which the hopper bottoms can be compared, is that of the large steel gondolas for handling coal, and which dump through the bottom through drop doors, the interior construction being such that the coal slides towards the open doors. As the interior view sets forth, the steel centre sill down the length of the car, alters this comparison considerably, making the construction decidedly original.

At the centre of the car are four hoppers, of steel construction, located in pairs, one each side of the centre sill, centrally about the doors, the pairs uniting in a ridge at this point. The slope of the walls of the hoppers is at an angle of about 35 degrees, both walls being the same. The hopper doors all open inward toward the centre of the car, the door portion forming the lower half of the sloping wall of the hopper. These doors are united in adjacent pairs, the lower edges being connected together by a piece of angle the width of the double hopper, the operating mechanism connecting to this cross angle.

The hinged edge of the door is so constructed that when the door is closed, the meeting edges along the hinge are in close contact, forming a tight, grain proof door. A special feature of the hopper arrangement is the manner in which the doors are sealed so as to be proof against the leakage of the smallest grains. Around the three closing edges of the hopper opening are rivetted two angles, the outer one by the inner face of the angle to the outside of the box, and the inner angle by the outer face to the inner face of the hopper, the two inwardly projecting edges being set apart the thickness of the angle flange, plus a little clearance. The closing edges of the door are also constructed with a double angle. On closing, the webs of the angles on the door and hopper mesh into each other, so that the grain to escape must pass along the face of the angle webs, four times. The fit is such that it would be practically impossible for the grain to follow such a course. In service, this seal has been found most effective.

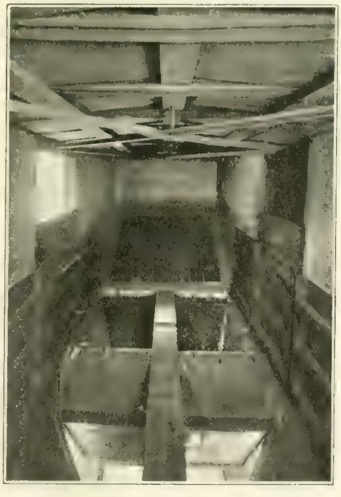
The closing link for the doors is attached to the cross angle of the latter under the car centre sill, the link running backward, connecting to the rear of the hopper with a pin on a horizontal worm gear, which is secured to the under side of the steel centre sill. This worm gear is operated by a worm on the inner end of the shaft to the left of the near hopper in the outer view of the car. The worm shaft has a hand wheel at the outside of the car, as shown. When closed by the worm gear mechanism, the doors are locked in position on their outer edges by the hook arrangement to be seen on the outer edge of the door.

In the car shown in the illustration, two types of unloading doors have been applied to the hopper. The far hopper has a sliding arrangement of door, operated by the hand wheel shown. This arrangement has not proved as satisfactory as the hopper door arrangement, and will not be introduced in future cars.



Hopper Bottom Grain Car on the Grand Trunk Ry.

The location of the hoppers each side of the centre sill necessitated a rearrangement of the piping and brake rigging under the car. The brake cylinder and reservoir are located between the hoppers under the centre of the car, with the brake rods running back to the trucks between the pairs of the hoppers under the centre sill. The train pipe line comes out around the side of the car.



Interior Arrangement of G.T.R. Grain Car.

The interior arrangement of the car is very different from the standard grain car. From the hopper openings to the end of the car, the floor is sloped at an angle of about 30 degrees, which will chute out all the grain without assistance. This sloped flooring is of sheet metal construction, ribbed lengthwise for strength. These ribways consist of depressions in the sheet about 4 ins. wide and 1 in. deep, in which are fitted oak strips to present a smooth sloping surface.

In order that the car may be employed as an ordinary box car as required, it is provided with three doors on each side which drop down over the hopper openings meeting at the centre over the centre sill. These lowering doors are of ribbed sheet steel construction similar to the end slope. These six doors are all of the same size, which is the width of the side door. The drop doors each side of the side door, fit back into recesses in the car side. The central drop door, swings up as a grain dor for the side door opening. A narrow board is provided for an upper section to the grain door. When these six doors are lowered, the inner surface of the car is level as in a standard box car, save for the sloping ends.

One of the peculiar advantages of the hopper botbottom car is its adaptability to carrying all kinds of bulk loads. For this reason, it is especially well adapted to carrying coal. Throughout the Northwest coal cars are seldom to be seen, nearly all the coal being handled in box cars, these travelling east with a load of grain, and returning westward with coal. The balance of traffic is thus more evenly maintained. The handling of coal is simplified by such a hopper bottom arrangement as this.

A detailed comparison between the carrying capacities and earnings of the G.T.R. hopper bottom grain car and a standard grain car, is given in the following table:—

Particulars.	Hopper Car.	Standard Car.
Carrying capacity, bushels . .	1,833	1,100
Tare, lbs.	48,000	37,000
Load, lbs.	110,000	66,000
Total weight, lbs	158,000	103,000
Ratio, carrying capacity to tare	2.29	1.78
Midland to Portland—		
Distance, miles	697	697
Ton-miles, tare	16,728	12,894
" " load	38,335	23,001
" " total	55,063	35,895
Rate per bushel, cents	5	5
Rate per ton, of grain .	$1.66½	$1.66½
Rate per ton-mile, load, mills	2.39	2.39
Rate per ton-mile, load and tare, mills	1.66	1.53
Earnings on car of grain...	$91.65	$55.00
Portland to Island Pond—		
Earnings on car of coal ...	$54.02	.....
Total earnings on grain and coal	$145.67	$55.00
Cost of carrying car of grain from Midland to Portland at rate of 2 mills per ton-mile of load, although the average for all classes of freight is 4 mills .	$76.67	$46.00
Cost of carrying car of coal from Portland to Island Pond at 3 mills per ton-mile of load, although the average for all classes of freight is 3 mills	$24.67	...
Total cost of carrying grain and coal	$101.34	$46.00
Earnings on 1,200 ton train, including grain and tare, Midland to Bortland ..	$1,388.42	$1,281.36
Earnings on 7 trips, Midland to Montreal, 3 trips Midland to Portland, and 2 trips, Portland to Island Pond	$1,207.84	[illegible]

In the tests of the car from Midland to Portland, experiments along the line of handling coal on part of the return trip have been made as indicated above. The grain was carried from Midland to Port-

receipts per passenger per mile, 2.06 cents; passenger service train revenue per mile of road, $2,252.38; passenger service train revenue per train mile, $1.42. Average number of passengers per car mile, 9.10; average number of passengers per train mile, 9.48; average number of passenger cars per train mile, 4.96.

FREIGHT TRAFFIC.—Total freight carried, 562,734 tons; freight originating on road, 326,608 tons; freight received from foreign roads, 236,126 tons; freight carried northbound, 308,777 tons; freight carried southbound, 253,957 tons; tons carried one mile, 69,469,914; tons carried one mile as per mile of road, 234,695; average distance haul of one ton, 123.45 miles; amount received for each ton of freight, $1.65; average amount received per ton mile, 1.33 cents; freight revenue per mile of road, $3,095.75; freight revenue per train mile, $2.10. Average number of freight cars per train mile, 14.50; average number of loaded cars per train mile, 8.97; average number of empty cars per train mile, 4.80; average number of tons of freight per train mile, 156.30; average number of tons of freight per loaded car mile, 17.42.

EQUIPMENT.—Locomotives, 44; passenger cars, 50; box cars, 147; stock cars, 10; vans, 19; flat cars, 469; maintenance of way and structure equipment, 261.

THE PROFIT AND LOSS ACCOUNT showed $316,252.72, brought forward from Oct. 31, 1911; $77,831.57 received from townsites, and $454,201.74 from revenue account, making a total of $848,286.03. From this $510,000 has been paid to the Treasurer of Ontario, leaving a balance carried forward of $338,286.03.

Quebec Central Railway Not Under Dominion Control.

Chief Commissioner Drayton, of the Board of Railway Commissioners, has given the following judgment:

Complaints have been made to the Board as to the operation and practices of the Quebec Central Ry. Co., and the question as to whether or not that railway is subject to the Board's jurisdiction, was heard at Ottawa on Mar. 15.

The Quebec Central Ry. is a provincial company incorporated under the statutes of the Province of Quebec. The railway has, however, been acquired by the Canadian Pacific Ry. Co. under lease dated Oct. 2, 1912. This lease seems to give absolute control of the railway and its operations to the C.P.R. Under it, not only the railway now constructed, but also all extensions, branches, and additions that the lessor—that is, the Q.C.R. Co.—may hereafter be authorized to construct by the Dominion Parliament of Canada, by the Quebec Legislature, or by the Board of Railway Commissioners under the provisions of the Railway Act and amendments, with all appurtenances, are leased to the lessee, the C.P.R. Co.—for 999 years.

The lessor's corporate acts are subject to contract with the lessee, the lessor agreeing not to issue any additional capital stock, bonds, or other financial obligations, without the lessee's consent; and at the same time, agreeing to sell all or any part of the existing capital stock within its control, and use its best endeavors to obtain power to create, and thereafter create and issue, additional capital stock, if the lessee so desires. On the same request the lessor must issue bonds or debenture stock to such amount or amounts and at such rate of interest, not exceeding 4 per cent., as the lessee fixes. The lessor is to apply the proceeds of such bonds or debenture stock in such proportions and in such manner towards the construction or permanent improvement of the railway as the lessee may direct; or, at the option of the lessee, the lessor is to pay over the whole or any part of such proceeds to the lessee, in order that the lessee may itself, according to its own discretion, apply the same as aforesaid. The lessee also has the right to exercise all the franchises and powers of the lessor in operating the railway, in building branches under the Railway Act or under any act of the Quebec Legislature, and has the right to use the lessor's name. The officers of the lessor are required, on the demand of the lessee, to append their signatures and affix the lessor's seal to any document useful in the exercise of the lessor's rights and franchises. The lessee, of course, can do what it likes in connection with the running of the trains, may make such rules, regulations, and bylaws touching the railway as it deems advisable, and is to make the tariff of tolls.

The only matters left to the lessor, to warrant its continued corporate existence, seems to be the issue of further stock, bonds, and debentures, and the receipt of rent. The rent takes the form of the payment of interest on the company's bonded or debenture stock indebtedness, and a dividend upon the capital stock of the lessor for the time being issued and outstanding at 4 per cent. for the first four years of the term and afterwards at 5 per cent. It would appear that this collection is in its turn probably a matter of form, in so far as the lessor is concerned, and that the lessee probably, through some official of its own, who may have the added dignity of an official name in the lessor company, will make these payments direct to the shareholders and to the bond and debenture stock holders. On the other hand, it should be pointed out that the lessee covenants to do everything, during the term of the lease, necessary for the preservation of the property and franchises of the lessor, and for keeping alive its incorporation for all the purposes mentioned in its acts of incorporation; and that the lease contains provisions for surrender at the end of the term, and for re-entry for non payment of rent.

The probable reasons for the continuance of the corporate functions of the lessor would seem to be—first, the maintenance of the defined interests of the shareholders in the company, as represented by their stock certificates, unchanged, thus obviating difficulty in determining their interests, and making their compensation easy of adjustment in the form of the dividend secured; secondly, the issue of securities by the lessor for the purposes of the road, enabling the C.P.Ry. to construct new lines under provincial acts, if they are found favorable, and to operate said lines without interference from the Board of Railway Commissioners.

The lease was submitted to the Board for its approval under sec. 361 of the Act; and a consideration of the provisions of [illegible] [illegible] deals with the sale or lease of a company's railway and undertaking by one company to another, either in whole or in part, or for amalgamation. Under the section the agreement must be submitted, to the Board, upon application for its recommendation to the Governor in Council for sanction, the duty of the Board being, in the proper case, to recommend to the Governor in Council the sanctioning of the agreement.

Under sec. 362, companies agreeing to amalgamation are deemed to be amalgamated and to form one company, in the name and upon the terms and conditions which the agreement provides; and the amalgamated company is to possess and be vested with—all the powers, rights, and franchises . . . belonging to, possessed by, or vested in the companies parties to the agreement. The interpretation of "railway" (sec. 2, ss. 21), shows that the word includes any railway which the company has the authority to construct or operate.

Sec. 362, however, has no application. Absolute as is the acquisition by the C. P. R. Co. of the railway in question, there is nothing in the agreement providing one way or the other for amalgamation, a matter necessary for the operation of this section.

Ordinarily speaking, sec. 361 of the Act would have no application, under the decision of the late Chief Commissioner Mabee, on the application of the Montreal St. Ry. Co. for approval of amalgamation agreements with the Montreal Terminal Ry. and the Montreal Park & Island Ry. Companies. In that instance, the local company, the Montreal St. Ry. Co., absorbed two Dominion incorporations,—the Montreal Terminal Ry. and the Montreal Park & Island Ry. Companies. Chief Commissioner Mabee held that sec. 361 deals only with federal companies and not with two provincial companies, nor with a federal and a provincial company; and that, therefore, the section had no application to the sale of a federal railway and its assets and facilities to a provincially incorporated company. This judgment would apply in the present case, if it were not for the act obtained by the C.P.R. Co. (2 Geo. V., chap. 78, s. 14), which provides that, subject to the provisions of secs. 361, 362, and 363 of the Railway Act, the company may, for any of the purposes specified in sec. 361, enter into an agreement with the Quebec Central Ry. Co., and may lease that company's railway and undertaking.

The Board recommended the agreement in question for the sanction of the Governor in Council on Nov. 25, 1912, and that sanction was granted. The Quebec Central Ry. is now operated by the C.P.R. Co. Is it a "railway" within the definition of the Railway Act? Mr. Beatty, Chief Solicitor, C.P.R., claims that its operation by the C.P.R. Co. is not under the provisions of the Railway Act, but under the special act of 1912, claiming that before the C.P.R. Co. could operate a provincial line under a provincial charter, special authority had to be obtained from the Dominion Parliament; and that the railway operated under the section of the interpretation clause already referred to, means a railway subject to the provisions of the Railway Act,—in other words, a railway either incorporated by the Dominion Parliament, or specially declared by that parliament to be a work for the general advantage of Canada.

In the case of the Preston & Berlin St. Ry. Co. v. the Grand Trunk Ry. Co., an application was made by the street railway for an order of the Board permitting it to use a small portion of the G.T.R.Co.'s land for the purposes of its street railway.

[illegible] think it also apparent that the mere act of a Dominion company, such as the purchase of a provincial line, cannot of itself oust provincial jurisdiction. This is not a [illegible] a provincial line under the Railway Act, which may or may not be possible. The Board is not to be understood as determining that under no circumstances can it have jurisdiction over a company as such, enabling it to regulate operation apart from [illegible] industrial branch lines or the enlargement of the track facilities of the railway it[illegible] granted to the Dominion company by a special act of the Dominion Parliament.

[illegible] Dominion company, in so far as its major operations are concerned, should be subject [illegible] Board is concerned, entirely free from con[illegible] line operated, because of certain legal distinction which cannot appeal to the shipper or passenger, or in any way affect the exigencies of traffic. An undivided control in operation is probably more important than construction. Uniformity of railway practice, a most important essential, would [illegible] however incorporated, should, when operated by any of the large Dominion systems, [illegible]

Ninety Per Cent of Rail Failures, [illegible] which constitute 40%. The cause of the [illegible] chemical structure in the ingot. For the [illegible] base, and suggests as a cure better mechanical rolling.

The Pennsylvania Rd. has an oven big [illegible]

Immigration and Colonization in their Relation to the Traffic Departments.

By J. E. Forslund, Western Colonization Agent C.P.R. Immigration Office.

It is a matter of common knowledge that railway construction in Canada, and more particularly in the west, at this period is quite a different matter from what it was [illegible]ties cry for railway facilities, and it is even said that politics are responsible for [illegible] of one railway company to share in the traffic from certain well favored locations. Then western Canada was almost a wilderness, if we are to judge from early reports. It must have seemed a foolhardy venture to plan a railway like the Canadian Pacific, and it was no wonder that men of finance shook their heads and stood aloof. The subsequent history of the construction and completion of this railway is too well known to refer to. Suffice it to say that the C.P.R. has reached the very conspicuous position of being the foremost transportation company in the world, a fact that all Canadians are proud of.

In the building up of this tremendous concern the land department, through its immigration work, has played a conspicuous part, and you will have to bear with a short resume of the same in order to get a full understanding of the relation of the department mentioned to the traffic departments. You will also understand that it will be necessary to deal entirely with the C.P.R., as the writer has spent all his time in this country in this company's service.

When the line was finally completed it connected widely separated communities which had sprung up during the years of construction, but intermediate parts of the wide land were empty. In these empty portions the railway company possessed large land areas which had to be administered and thus necessitated the creation of a land department with a view of selling the land. Looking at this feature now, it seems that it should not have been difficult to sell land, all of which was selected as fit for settlement, and of which a large percentage was really first class farming land. I presume that some of you are not aware of the fact that the C.P.R. at one time tried to dispose of its land grant for $25,000,000 or $1 an acre, without finding a purchaser. One of the chief reasons of slow sales was the vast area of free home[illegible] get them absorbed, because when the even [illegible] the company's, would have to be bought if the newcomer wished to locate in a settled district. Therefore settlers must be brought in, and an immigration department [illegible] products [illegible] employment to the expectant traffic departments, both freight and passenger.

[illegible] settlers, who had located in the Red River valley, moved out into the Dakotas, wherefrom they now, by the way, are returning in great numbers, and here was planted a [illegible] districts which have since become well developed, populous and rich.

[illegible] Germans, French, Scandinavians and Finns, [illegible] they would find suitable conditions for increasing their number, by calling on friends in their old home to come and join them. Of these the two first named did not prosper, the Jew as a rule not being a farmer and the crofter being a fisherman. The other nationalities increased slowly, so that the areas covered by them did not materially extend.

In the meantime another very interesting movement had taken place. A number of German speaking Russians and Austrians living in Winnipeg made application to the Land Commissioner for aid and had been promised assistance in the shape of cattle and implements. Their delegates had selected three townships south of Dunmore, near Medicine Hat, and they were assisted to settle there, the company providing free carriage of all persons, goods and chattels. The settlement did not prosper, however, and two years later they were moved, except four families, one portion to the Edmonton district in Alberta, and one portion to Grenfell, then in the provincial district of Assiniboia, in which districts, after the hard years in the early nineties, they not only prospered but attracted a great number of friends, so that they now form considerable colonies, the members of which are well to do.

The company then turned its attention to western Ontario and took up some 150 families, chiefly from the Parry Sound district, who almost all settled in the Beaver hills, east of Edmonton. They were provided with transportation, the cost of which was paid by notes, which, with very few exceptions were paid off as soon as the settlers got on their feet.

There was never much difficulty in directing people to the open lands, the hard question was to build colonies in the wooded parts and the company undertook to do this by assisting settlers in buying them cattle and implements, the cost of which was to be paid gradually. Lord Mount Stephen applied this principle in starting the Hungarians in Esterhazy and Kaposvar. The company followed suit by placing a number of German speaking families at Balgonie, and a few Scandinavians and Finns north of Whitewood.

Money was also advanced to deserving settlers to enable them to bring out relatives and friends from their former homes and a goodly number of excellent settlers was the result.

While all this was done under the direct supervision of the immigration office, the Mennonites commenced to find their hive too full and prepared to swarm. They applied for facilities to send delegates to spy out suitable locations, and free transportation—this was before the railway commission was called into existence—was granted. Their delegates were sent out and selected the Rosthern district, the success of which is so well known. Again the hive swarmed, this time to Swift Current, where the open level land pleased them. This district, until recently looked upon as a desert or fit only for cattle raising, has, through the move of these people become the centre of a splendid grain district, and Swift Current has for two years enjoyed the distinction of being the greatest wheat shipping centre.

The crop results obtained by the Mennonites and others who had followed them led later arrivals to try their luck further west, through the so called dry belt, with the result that almost all the land is now occupied. Reference was made a moment ago to the attempt to start the German colony at Dunmore. The few families who remained on their locations continued to prosper and they induced a great many friends from Europe and the United States to join them so that gradually a large settlement has been formed in the abandoned and adjoining townships.

In connection with this I will remember the stupendous undertaking commenced by the company, the irrigation works in the from Calgary. Enthusiasts who dreamt of seeing this tract—which offered a traveller a monotonous vista of brown grey desolate prairie—dotted with lakes, thriving towns and happy farm homes, have commenced to obtain realization of their dreams. Although not fully completed the irrigation system has already worked wondrous changes. In order to sell the lands benefited by this noble work, an extensive world wide agency force has been created by J. S. Dennis, the promoter of this undertaking, who is Assistant to the President and head of the Natural Resources Department.

In order to stimulate immigration from the British Isles, the company, in conjunc-who is Assistant to the Vice President and augurated the policy of sending return men, successful western farmers, who spent the winters in their respective old homes, returning in the spring accompanied by new settlers.

The popular Christmas excursions to eastern Canada were really started with the view of getting the people of the older provinces of the Dominion contaminated with the western fever and we all know the great success which attended the same. It later on led to the establishment of similar excursions to the United States.

While all this took place another movement, partly fathered by the company's European Manager, began. The Ruthenian, or the sheepskin clad Galician, started to arrive. They were sent in thousands into the Edmonton district and our Canadian Northern Ry. friends no doubt appreciate their industrious travel and the tonnage arising out of their farming operations. These people, whose town habits are rather boisterous, are industrious farmers, and it is unnecessary to point out their value as laborers, chiefly in construction and maintenance work. They are, however, getting too busy and well to do at home to look for work outside.

The company had in the meantime turned its attention to the possibilities of obtaining settlers from the United States, and in conjunction with the Dominion government an active campaign was started, the results of which have been and continue very gratifying. Great numbers of delegates were transported free of charge into all parts of western Canada—this also before the advent of the railway commission. They came, they saw and were conquered, returning home only to prepare to move to Canada. Seldom, if ever, has bread cast upon the waters returned in such generous measure.

The immigration work had the desired result in disposing of the homesteads within the railway belt, and stimulated the sales of land so that out of 25,000,000 acres now only some 7,000,000 acres remain to be disposed of. Some years ago the company sold some tracts to speculators, or colonization companies as they like to call themselves, but this practice has been discontinued and the company is endeavoring to reach the buyers themselves, men who will start to improve the land. This new policy embraces the ready made farm scheme in which the company's President, Sir Thomas Shaughnessy, takes such a deep interest, and also a loan policy, under which the company will advance desirable settlers about $2,000 to assist them in improving their purchase.

The ready made farms are in groups, which tend to highly develop certain areas and make them specially productive from the traffic man's point of view. As a matter of fact it may safely be said that at present the Natural Resources Department under Mr. Dennis' able management, which department deals with lands, coal, timber, irrigation, mines, cattle industry, encouragement of colonization and subsequent development of towns, is working solely for the benefit of the traffic men. By judicious and elaborate advertising people become interested, decide to go and look over lands and opportunities offered, which all gives the passenger department something to look after. The settlers moving in bring their effects and cattle, and after settlement they need a multitude of things which the freight man has to forward. It is possible that the traffic men do not look upon the low rates which are held out as inducements, with particular pleasure, but the end in this case surely justifies the means.

The best immigration agent is after all the satisfied settler and on the traffic department falls a great share of making him contented, and close attention to his wants will bring this about. The tourist, while he pays handsomely, may never return, while the settler will always be obliged to fall back on the railways for his very existence. The interest of the departments referred to may therefore be said to be interwoven and this fact should find a lodging place in the memories of the coming superintendents, general passenger agents and traffic managers.

The foregoing paper was read before the Western Canada Railway Club recently.

Rates on Shingles from British Columbia to Rochester, N. Y.

The Interstate Commerce Commission (U. S. A.) gave the following decision Mar. 5, in the case of C. C. Follmer & Co., vs. Canadian Pacific Ry. Co., et al.

Complainant is engaged in wholesale lumber business at Grand Rapids, Mich. It alleges that unreasonable charges were collected by defendants for the transportation of a consignment of shingles from Abbotsford, B.C., to Rochester, N.Y., and asks reparation.

Feb. 13, 1908, complainant shipped a carload of shingles weighing 40,800 lbs. from Abbotsford consigned to itself at Menasha, Wis. The shipment moved via C.P.R. and Minneapolis, St. Paul & Sault Ste. Marie Ry., hereinafter called the Soo line. It was loaded in a C.P. 36 ft. car, but before reaching Menasha was reloaded by the Soo line into two smaller cars.. Upon arrival at Menasha, and in accordance with a letter of instructions from the shipper to the agent of the Soo line at that point, the shingles were reconsigned as one shipment to Rochester, N.Y., and were carried forward in the two cars via the Soo line to Manitowoc, Wis., and thence via Pere Marquette Rd. and the New York Central & Hudson River Rd. to destination. From Abbotsford to Manitowoc charges were assessed on the actual weight of the shipment, but from Manitowoc to destination they were assessed on a weight of 27,300 lbs. for the first car and on a minimum weight of 24,000 lbs. for the second car. The total charges amounted to $388.20. Complainant contends that the charges were unreasonable to the extent that they exceeded a through rate of 80c. per 100 lbs. from Abbotsford to Rochester, based on the actual weight of the shipment. There was no joint through rate applicable to the traffic via the route of movement. There were intermediate rates as follows: A joint rate of 70c. from Abbotsford to Menasha, applying also to Maintowoc, and a joint rate of 18½c. from Manitowoc to Rochester. The local rate from Menasha to Manitowoc was 6c. From point of origin to Manitowoc the 70c. group rate was applied, and beyond the latter point a rate of 20c. was charged for which there does not appear to have been tariff authority.

The shipment was received by the Soo line from the C.P.R. as a carload shipment, and for the transfer from one to two cars the Soo line seems to have been wholly responsible. The record affords no justification of that act. It was said that the western carriers declined to allow their equipment to go east of Minneapolis Transfer, but the C.P.R. asserts that it has no such rule and prefers that its cars containing shipments from the west be sent on east. Nor is it shown why the transfer, if necessary at all, might not have been made to a car large enough to have accommodated the entire shipment. This defendant appears to have recognized its mistake and endeavored to make amends for it by reconsigning the shingles from Menasha as one shipment, and by protecting the 70c. rate on the actual weight for the extended haul over its own lines. There was no tariff authority, however, for reconsigning at Menasha on basis of the joint rate to Manitowoc. The through rate legally applicable was 94½c. per 100 lbs., made up of the 70c. rate from point of origin to Menasha and the rates of 6 and 18½c. beyond. Had the shipment continued as a one car movement to final destination the charges at the lawful rate would have amounted to $385.56, or $2.64 less than the amount collected. The lines east of Manitowoc were entitled to charges at their rate of 18½c. per 100 lbs., but they applied a rate of 20c.

We find that the charges collected were excessive and unreasonable to the extent that they exceeded charges that would have accrued at the combination through rate of 94½c. per 100 lbs., based on the actual weight of 40,800 lbs. There was an overcharge for the movement east of Manitowoc of 1½c. per 100 lbs., amounting to $7.70. For the movement up to Manitowoc there was an undercharge of 6c. per 100 lbs., amounting to $24.48, against which should be offset $19.42, the extra charges east of Manitowoc due to the unauthorized transfer of the shipment by the Soo line from one to two cars.

We further find that complainant made the shipment in accordance with the above statement of facts, and paid charges thereon in the amount herein found unreasonable; that complainant has been damaged to the extent of the difference between the amount paid and the amount it would have paid if the lawful rates had been applied on the actual weight of the shipment, and is therefore entitled to an award of reparation against the Pere Marquette Rd. and the New York Central & Hudson River Rd. in the sum of $7.70, with interest from April 9, 1908. An order will be entered accordingly. No order for the future is necessary, as the basis of the claim is in the nature of an overcharge, any recurrence of which should be avoided under existing tariffs.

Aerial Railway at Niagara Falls.—Arrangements are in progress whereby a Spanish company is obtaining a concession to construct an aerial railway across the whirlpool at Niagara Falls, from shore to shore on the Canadian side, forming a cut off over the deep bend in the river. It is to be used for tourist purposes exclusively. A. Balzola, the representative of the company, is in Toronto completing the preliminary negotiations. The company has had similar experience with aerial lines that it operates in Spain.

Intercolonial Railway Terminals at Halifax.

In presenting the estimates to the House of Commons, recently, the Premier, discussing the proposal for the new and enlarged terminals at Halifax for the I.R.C., said the matter had been under discussion for a long time and had been considered by several engineers, including F. P. Gutelius, formerly Assistant Chief Engineer of the C.P.R., and F. H. Cowie, Chief Engineer of the Montreal Harbor Commission. The general conclusions of the tDepartmen [illegible]

The proposed terminal will consist of a bulkhead pier or seawall about 2,000 ft. long at which three of the largest ocean vessels can dock in safety without tug assistance; a wharf building the whole length of the bulkhead pier; the first floor of which will be for freight and the second floor for passengers and immigration quarters, and a union passenger station of suitable architectural design and of capacity for the increased business which is expected to come with the necessary tracks and facilities usual at terminal stations of this character. This scheme of development provides for the construction of six freight piers 300 ft. wide and 1,250 ft. long which will be equipped with necessary wharf freight sheds and railway tracks; the necessary yards for the storage and shunting of cars; the construction of an elevator which will permit of grain being loaded into ships at each of the 32 berths; a locomotive house for the care of passenger locomotives and switch engines, and a breakwater from Point Pleasant Park to the Reid rock buoy.

It will be reached by a double track railway about five miles long which will leave the main line at Three Mile House, pass through the low divide between Bedford Basin and the Northwest Arm, skirt the Northwest Arm and reach the new terminals through a deep cutting under the lower end of Young Avenue.

It is proposed that the first unit will consist of a bulkhead pier, the freight and [illegible] passenger station, steamship and one freight pier equipped with sheds and tracks together with the necessary accessories, which will provide accommodation for eight of the largest ocean steamships. As soon as business warrants it, two more piers will be constructed, giving an additional capacity for eight such steamships; and in five or six years, or sooner if necessary, upon the opening of the Quebec bridge, provision will be made for a further accommodation of eight such steamships. As [illegible] the demands of trade necessitate, the two southerly piers will be constructed, thus completing the scheme.

The Government having approved of this general plan, ordered the engineers to proceed with the preparation of detail plans which are not yet complete. It also purchased such properties as could be procured cheaply and is now committed to an expenditure on this account of between $400,000 and $500,000. It is proposed to proceed with the purchase of the remaining right of way and water frontage the plans for which were filed recently.

[illegible]

It is proposed during the coming season to proceed with the construction of the quay walls and of the railway and with the rock and earth filling, the construction of the necessary overhead bridges and such other works as may be found economically convenient in connection therewith, for all of which it is estimated $2,500,000 will be required during the approaching fiscal year. These proposals the Government is proceeding to carry out, with the sanction of Parliament, in the hope that they will provide the accommodation required by the increasing trade of the port.

Birthdays of Transportation Men in June.

Many happy returns of the day to:

[illegible] Manager, Sandwich, Windsor and Amherstburg Ry., Windsor, Ont., born at Ayr, Ont., June 20, 1851.

W. C. Bowles, General Freight Agent, Western Lines, C.P.R., Winnipeg, born at Montreal, June 3, 1875.

J. H. Boyle, Superintendent, District 3, Lake Superior Division, C.P.R., Schreiber, Ont. born at Waterloo, Que., June 26, 1869.

F. P. Brady, Member, Government Railways Managing Board, and General Superintendent, Government Railways, Moncton, N.B., born at Haverhill, N.H., June 22, 1853.

H. W. Brodie, General Passenger Agent, Lines West of Revelstoke, C.P.R., Vancouver, B.C., born at Fredericton, N.B., June 8, 1874.

A. H. N. Bruce, M. Can. Soc. C.E., Chief Engineer, Quebec and Saguenay Ry., Quebec Ry., Light, Heat and Power Co., etc., Quebec, Que., born at Ballyscullion, Ireland, June 18, 1854.

L. K. Jones, I.S.O., Assistant Deputy Minister and Secretary, Department of Railways and Canals, Ottawa, born at Port Hope, Ont., June 9, 1849.

A. C. Lytle, Assistant Superintendent of Construction, Montreal Tramways Co., Montreal, born at [illegible]

R. S. McCormick, M. Am. Soc. C.E., Chief Engineer, Algoma Central and Hudson Bay Ry. and Algoma Eastern Ry., Sault Ste. Marie, Ont., born at Quaker City, Ohio, June 22, 1873.

D. McDonald, General Manager, Montreal Tramways Co., born at St. Thomas, [illegible] June 17, [illegible]

S. J. McLean, Dominion Railway Commissioner, Ottawa, born at Quebec, June 14, 1871.

J. V. McNab, Resident Engineer, C.P.R., Saskatoon, Sask., born at Ayr, Ont., June 11, 1884.

C. E. McPherson, Assistant Passenger Traffic Manager, Western Lines, C.P.R., Winnipeg, born at Chatham, Ont., June 7, 1861.

W. R. MacInnes, Freight Traffic Manager, C.P.R., Montreal, born at Hamilton, Ont., June 7, 1867.

H. [illegible] Maguire, District Baggage Agent, Pacific Division and B.C. and Pacific Coast Service, C.P.R., Vancouver, B.C., born at Toronto, June 16, 1881.

G. Manson, Assistant to Vice President C.P.R., Winnipeg, born at Thurso, Scotland, June 8, 1863.

J. D. Morton, Assistant Comptroller, Canadian Northern Ry., Toronto, born at London, Ont., June 15, 1857.

L. Mulkern, District Freight Agent, C.P.R., London, Ont., born there, June 18, 1871.

H. A. Pepler, District Master Mechanic, C.P.R., Farnham, Que., born at Richmond, Que., June 25, 1873.

J. E. Pinault, Superintendent, Canada and Gulf Terminal Ry., St. Flavie, Que., born at Rimouski, Que., June 24, 1884.

M. J. Power, General Storekeeper, Angus Shops, C.P.R., Montreal, born there, June 19, 1877.

F. Price, Superintendent Passenger Service, G.T.R., Montreal, born there, June 11, 1864.

Allan Purvis, Manager Interurban Lines, British Columbia Electric Ry., New Westminster, B.C., born at Batavia, Java, June 29, 1864.

A. T. Tomlinson, M. Can. Soc. C.E., Chief Engineer, North Ry., Montreal, born at Grand Falls, N.B., June 22, 1869.

W. Webber, General Agent, Passenger Department, Atlantic Steamship Service, C.P.R., Montreal, born at Liverpool, Eng., June 10, 1872.

Walter White, Trainmaster, G.T.R., Palmerston, Ont., born at Toronto, June 4, 1866.

Tie Preservation Experiments.—The U.S. Forest Service, in conjunction with various railways, has been conducting experiments on ties on eight test tracks. On the oldest of these, on the Santa Fe in Texas, 5,547 ties of 13 kinds of wood were laid in 1902 to determine the relative durability of the several kinds of wood, and the efficiency of some eight preservative processes. From this test the conclusions are drawn: 1st, that zinc chloride is an effective preservative for ties subjected to the severe conditions under which they were laid; 2nd, that a fairly heavy impregnation of zinc chloride is advantageous; 3rd, that a light injection of creosote apparently adds to the effectiveness of zinc chloride treatments; 4th, that treatments with preservatives will not yield good results unless the ties are sound in the first place, and the treating properly done; 5th, that the great variation in durability of the different species in nearly all of the treatments indicates that some of the species were not properly treated; and 6th, that species which, when untreated, decay most rapidly, appear to give the greatest relative increase in service when treated.

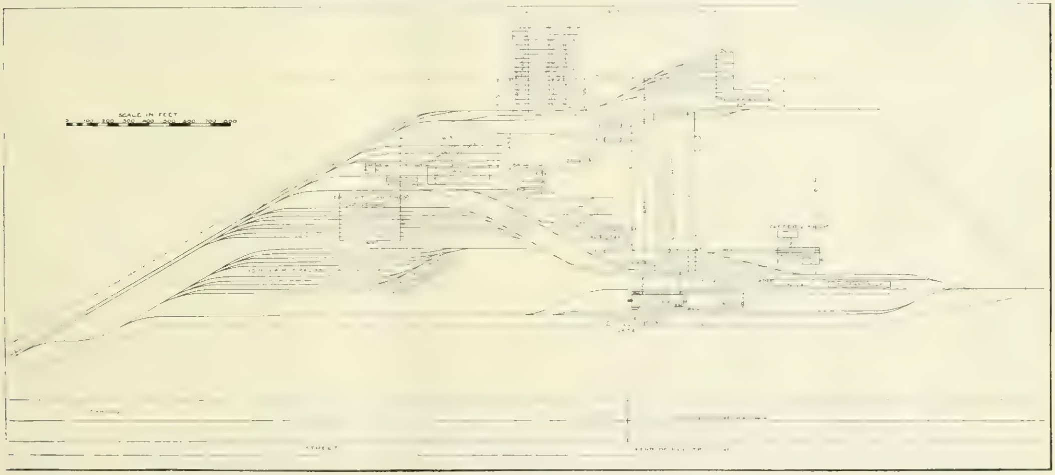
It is announced that the C.P.R. has decided to increase the wages of locomotive drivers on lines east of Port Arthur by 10% from January last and by 5% for those employed on lines between Cartier and Fort William. An increase of 10% on the then existing schedule was made in Aug. 1910.

Since the relocation of the Panama Rd., surveys are in progress for its operation by electricity. It is proposed to transmit from the hydro electric plant at Gatun for this purpose and for lighting the canal and operating the various machine shops.

The Canadian Pacific Railway's Ogden Shops.

The C.P.R. has recently put in operation near Calgary, Alta., a large shop plant of more than ordinary interest by reason of its size, its complete and modern character, and the speed with which it was created. The shop location is at Ogden (named after the company's Vice President, I. G. Ogden), 4.6 miles east of Calgary and 2,246.7 miles from Montreal. A preliminary description of the plant appeared in Canadian Railway and Marine World for Feb., 1912.

Its distance from those sections of the country where the greater part of the construction materials, machinery and equipment were produced, constituted the first and one of the most important problems. A second important problem arose on account of the construction season being extremely short, owing to the high latitude, frost remaining in the ground until about April 1, and returning with snow as early as Oct. 1. A third very important problem was the comparative scarcity of labor in the Canadian Northwest, this condition being greatly aggravated during the late summer months when harvesting begins and all labor markets are practically drained of men. Plans had, therefore, to be drawn, materials ordered, deliveries made and complete field organization perfected so that the shops could be closed in between April 1 and Dec. 1, and sufficiently heated so that inside work could be continued after cold weather had set in. How this was done will be seen by the progress diagram on page 267.



General Location Plan, C.P.R. Ogden Shops.

The shops consist in general of main locomotive shop (including erecting, machine, blacksmith and boiler shops); tender and wheel shop; pattern shop and pattern storage; foundry; storehouse and office building; material platforms and scrap dock; oil house; coach repair and paint shop; freight car repair shop; planing mill; boiler and compressor house; 1,260 ft. yard crane; miscellaneous structures, including transfer table and pit for coach shop, mess hall, driven wells and water tower, all service system, such as drainage, sewage, fire protection, water supply, etc.

THE MAIN LOCOMOTIVE SHOP is designed to contain the erecting shop, machine shop, blacksmith shop, and boiler shop.

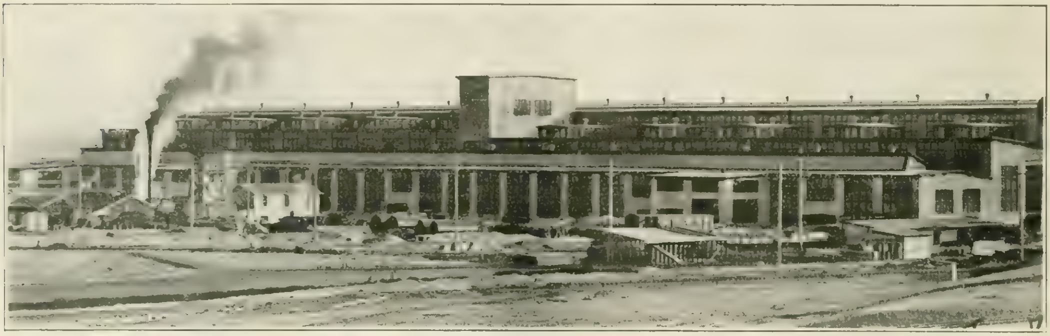
The erecting shop is of the transverse lift over type, contains 35 bays, each 22 ft. between centres, and is 778 by 75 ft. The entire area is served by two travelling electric cranes, carried on two levels. A 120 ton crane, furnished with two 60 ton trolleys, is carried on the upper level, and is used for transferring, wheeling and unwheeling locomotives and handling parts. One of the trolleys on this crane is equipped with a 10 ton auxiliary hoist for handling light material at a high hoisting speed. Another 10 ton travelling electric crane operates at high speed and serves the entire area of the erecting shop, for handling material in that shop and transferring same to the blacksmith shop and machine shop. The machine shop and the boiler shop are located in adjacent bays on either side of the erecting shop.

Provision is made on the crane columns in the erecting shop for attaching portable jib cranes for use in dismantling and erecting material on the front ends of locomotives. These cranes are placed where desired by means of the overhead travelling electric cranes. Entrance for locomotives to the erecting shop is provided through four doors, located in the west side of the shop, two of these doors being located at either end. For providing additional means for entrance of locomotives, six door openings are provided in the east wall of the machine shop, two of these being at the north end and four at the south end. All of these entrance tracks are connected up with the erecting pits of the several stalls where they enter the building, to permit of the locomotives moving into and out of the shop through these entrances should this movement become desirable or necessary.

The machine shop to contain heavy machine tools is located parallel with and adjoining the erecting shop on one side, and is 60¾ ft. wide, and the same length as the erecting shop.' A high speed travelling crane of 10 ton capacity covers the entire area of this shop. Material can be brought into the shop through a door provided in the end of the building, the material being brought up to the end of the machine shop by the travelling electric yard crane which travels across the end and outside of the locomotive shop. Space for the lighter machine tools is provided in a shop 60¾ ft. wide parallel with and alongside of the heavy machine shop and of the same length as that shop. An overhead trolley beam is provided on the bottom board of the roof truss to permit of using a travelling electric trolley for handling material longitudinally in this shop. Provision has been made for a foreman's office elevated above the floor and having liberal glass surface in the walls so as to give the best possible view of the shop.

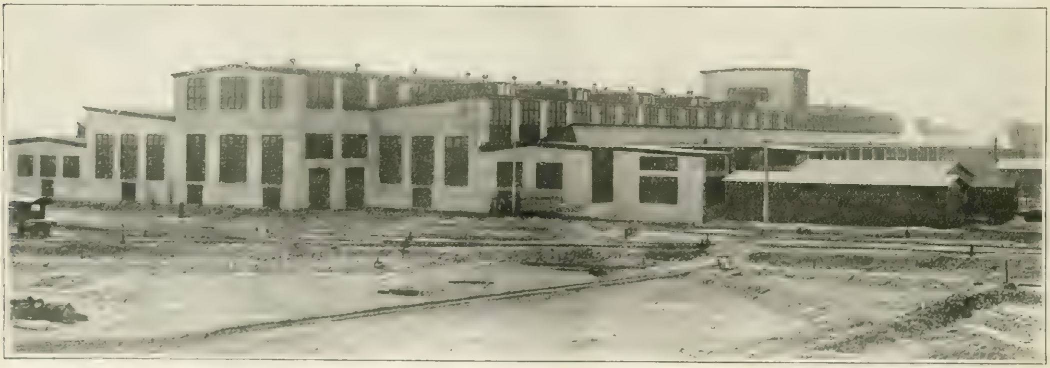
The blacksmith shop is located alongside of and parallel with the erecting shop on the opposite side from the machine shop. This building consists of two bays each 332 ft. long, 60¾ and 50 ft. wide, respectively. Space is provided for heavy forging work, steam hammers, etc., in the building immediately adjoining the erecting shop. The blacksmith shop will not be served by a travelling crane, but provision has been made for jib cranes to handle the material from steam hammers, forgings, etc. In a building of lower cross section alongside are located the furnaces, bolt headers and other blacksmith shop machinery. This portion of the shop is served by a trolley its full length, to facilitate the longitudinal movement of material through the shop.

The space for the boiler shop is provided in a two bay building, alongside of and parallel with the erecting shop at the end of the blacksmith shop, 352 ft. long and the same width as the latter shop. The part of the boiler shop immediately adjoining the erecting shop is provided with a 40 ton travelling electric crane, equipped with two 20 ton trolleys, serving the entire area of the boiler shop, for handling the boilers and other material. The riveting tower is located between two of the roof trusses in the end of the boiler shop, with a 25 ton crane for serving the hydraulic riveter. In the outer of the two bays of the boiler shop, space is provided for a flue shop and boiler shop tools. The entire length of this space is served by a 3 ton overhead travelling trolley for handling material through the shop. Space for a flue rattler is pro-which immediately outside of and adjacent to the low bay of the boiler shop. An entrance track is provided through the outside wall of the boiler shop, on which boilers or other equipment going to this department can be delivered on cars under the travelling crane, for unloading, or may be loaded out for shipment in the same way. This facilitates the handling of boilers from steam shovels, pile drivers, lidgerwoods, etc. Jib cranes are provided for serving the individual machines in the boiler shop where such service may be necessary.



Locomotive, Erecting and Machine Shop, Showing Blacksmith and Boiler Shop Bays, Viewed from the West.

The heating throughout is done by indirect fan system. For distributing the heated air, underground concrete and tile ducts are used. The general illumination consists of Cooper-Hewitt lamps, with circuit and plug boxes for extension loop cords. Provision has also been made for incandescent lighting circuits for individual lighting at machine tools where required, and for outlet boxes for connecting extension lamp cords to provide lighting for the interior of the locomotive boilers on the erecting floor. Toilets, lavatories, and metal lockers are provided in the various departments of this shop. A suitable system of piping is provided for distributing live steam, compressed air, fuel oil and water for fire protection, drinking and hydraulic pressure. Outlets for compressed air are provided in duplicate in the sides of each of the engine pits to supply compressed air for operating pneumatic tools.



Locomotive Erecting and Machine Shop, Showing Roof Arrangement, with Special Reference to Lighting, Viewed from the Northwest.

In the main locomotive shop the electrical feeders from the power company transmission lines are carried in underground ducts, bringing the current at the voltage delivered by the power company, viz., 2,200 volts, to a sub station located adjacent to and immediately outside of the low machine bay, the transformers for stepping down to 440 volts being located in the sub station in which are also two motor generator sets for supplying direct current. The switchboard is also located in this sub station for controlling the power and lighting circuits in the machine shop, and for the tender shop and foundry. As far as possible distributing feeders are carried in conduit beneath the shop floor, thereby minimizing the amount of exposed wiring in the shops.

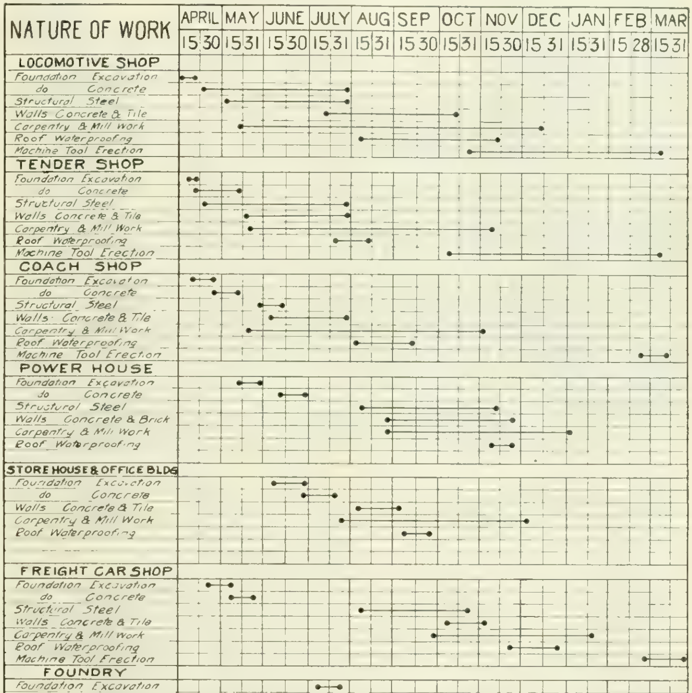
The building containing all of the above departments of the locomotive shop is constructed with structural steel frame carried on concrete foundations. The exterior walls up to the window sill line are of concrete, above the window sills of hollow tile plastered. Ample window area is provided in the side walls and in roof monitors and skylights, so as to give sufficient natural lighting. Good ventilation is obtained through ventilators in the monitors and skylights, and by the use of swinging sash in the vertical walls. With the exception of the blacksmith shop and a portion of the boiler shop the floor throughout is constructed with a 1½ in. asphalt mastic wearing surface which is underlaid with a rough concrete slab about 6 ins. thick. In the blacksmith shop and a portion of the boiler shop the floor is of cinders. The roof sheathing is constructed of 2 x 4's, surfaced on one side and one edge, and spiked together on edge, thus affording good fire resistance qualities and materially reducing the heat losses. The roof water proofing is four ply tarred felt, pitch and gravel, with copper flashing. Suitable drain leaders are provided and connected into underground tiled drains to carry off the water from the roof. The large skylight on the erecting shop bay is of steel bars lead covered with ribbed wired glass.

THE TENDER AND WHEEL SHOP is constructed with structural steel frame and with steel roof trusses, otherwise the general construction of the building is similar to that described for the main locomotive shop. It is an L shaped structure 263 by 80 ft., with L 180 by 80 ft., and affords space for making repairs to locomotive tenders, steam shovels and maintenance of way equipment. The portion of the shop intended to receive the equipment to be repaired is spanned over its entire area by a 20 ton high speed travelling electric crane equipped with two 10 ton trolleys. Longitudinal tracks on 20 foot centres extend to the doors in the building wall. A car puller is installed for moving the equipment into and out of the shop. A sufficient number of tracks extend through the rear wall of the building to facilitate the movement of material into the shop. In the L portion of the building, of lower cross section, space is provided for steel tire wheel lathes, wheel and axle machinery and such other tools as are required. A depressed track carried along the ends of the wheel storage tracks outside facilitates unloading and loading of wheels and axles. The heating, lighting, and service equipment is similar to that described for the main locomotive shop.

PATTERN SHOP AND PATTERN Storage.—Space for the pattern shop and pattern storage is provided in a separate building located adjacent to the foundry, a fire wall separating the pattern shop from the pattern storage. The general construction of the building is the same as that of the other buildings—the roof of slow burning mill construction. The structure is 162 by 31 ft. wide, is heated by the direct system and lighted with keyless socket marine type incandescent lamps. A sprinkler system is provided for fire protection.

THE GREY IRON FOUNDRY building is 203 by 80 ft. wide, constructed with two bays. The frame is of structural steel carried on concrete footings. The general construction is the same as that described for the other buildings, except that the floor is of the usual clay type used in foundries and the roof over the cupola room is of corrugated asbestos. The bay of higher cross section is served over its entire length by a 10 ton high speed travelling electric crane. Jib cranes, attached to building columns, are provided. These cranes are so arranged that they may be removed from one location to another if desired, being handled by the travelling electric crane. In the side bay of lower cross section, space is provided for core making and shop moulding floor. The charging floor for the cupola is located in the centre of the lower bay. Heating is by the indirect fan system, with underground tile and concrete hot air ducts. For general illumination, flaming arcs are used in the high bay and ordinary arcs in the low bay, with outlet boxes for extension lamp cords. Toilets, lavatories, and conveniences for the men are provided; also steam, air and water service, for fire protection and drinking purposes. The location of this building alongside of and parallel with the travelling electric yard crane enables the unloading of scrap and pig iron to be taken care of by the yard crane. This close proximity of the foundry to the yard crane also reduces to a minimum the handling of the castings from the foundry to storage, to the main shop, or in loading for shipment.

STOREHOUSE AND OFFICE BUILDing.—This building is 252½ by 60 ft. One end of the building for a length of 40 ft. is carried up three stories, and contains offices on the second and third floors and a fire proof vault. The remainder of the building, for storehouse purposes, is two stories high and contains electric elevator, platform scales, material bins and shelving. The walls are of hollow tile blocks on concrete foundations. The framing is of heavy timbers, with roof sheathing of 2 by 4's surfaced on one side and one edge, and spiked together on edge. The foundations are carried up to bring the floor of the storeroom to car door height. The necessary toilet and lavatory facilities are provided. The offices are heated by direct radiation, the remainder of the building being heated by the indirect system. The lighting is by incandescent lamps. Fire protection is by automatic sprinklers. The ground floor of the storehouse has a 1½ in. asphalt mastic wearing surface. The other floors throughout the building are of wood. The window arrangement is such as to best accommodate the material bins and shelves without interference with good lighting. The storehouse is located parallel with the main locomotive shop. The space between these two buildings is spanned by a high speed travelling crane which can be utilized to handle all heavy material to and from the cars from the storage space that is provided between the storehouse and the erecting shop. The use of this crane practically eliminates manual handling of heavy material, and permits of handling numerous small parts in quantities when contained in suitable receptacles.

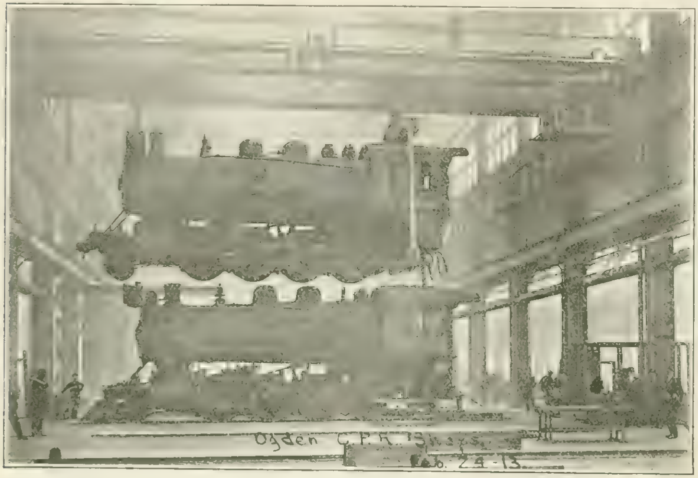


Progress Diagram for the Different Units of the Plant.

MATERIAL PLATFORMS AND SCRAP Docks.—A material platform 90 by 350 ft. abuts one end of the storehouse. This platform is also carried along either side of the storehouse, where it is 15 ft. wide. It is constructed of concrete retaining walls filled in with earth and a top dressing of cinders covers the fill except alongside of storehouse, where plank covering is laid. The platform extends to and along the sides of the oil house.

OIL HOUSE.—For storing and distributing oil a separate building is provided convenient to, but located far enough away from the storehouse and other buildings, to eliminate the fire risk. It is constructed with tile walls (plastered on the exterior) on concrete foundations, with a concrete basement at one end, for the tanks which contain the oil for local distribution. The roof is of reinforced concrete slab, as is also the floor of the pump room over the basement. The part of the building used for storing oil in barrels has a cinder floor. The pump room is partitioned off with a brick wall carried up to make a fire wall. Ten oil tanks with measuring pumps are installed and provision is made for conveniently emptying the oil from barrels into the tanks in the basement. The oil house basement is heated by the direct system to the high temperature necessary to render the oil fluid during extreme cold weather; the direct system being also used to heat the rest of the building. The lighting of the building is with keyless socket marine type incandescent lamps. Fire protection, including sprinklers, is installed.

COACH REPAIR AND PAINT SHOP.—The building containing these departments is 362 by 146 ft., having 15 tracks on 24 ft. centres. It is constructed with hollow building tile carried on concrete foundation. Heavy timber posts support the roof, which is of slow burning mill construction. Otherwise, the construction is the same as that described for the main shop building. Space is provided along one si[illegible] building for varnish room upholstering, office, sub store, paint storage, heating plant and air brake repairs. When necessity arises for increased shop capacity in this department it is proposed to obtain such increase by the erection of another shop on the opposite side of the transfer table. Heating is by the indirect fan system, with underground concrete and tile ducts. Lighting is by incandescent lamps. Compressed air, steam and water service, including fire protection and automatic sprinklers are provided. Toilets, lavatories, and conveniences for the men are also supplied in this shop.



Interior of Locomotive Shops, Showing 120 Ton Locomotive Crane.

THE FREIGHT CAR REPAIR SHOP is 231 by 303 ft. and contains eight repair tracks, spaced in pairs, with industrial track between each pair of repair tracks. A tile wall partitions off the shop, 50 ft. wide along one side, which will contain the blacksmith forges, tools, heating plant, foreman's office, toilets, and lavatories. The building is of structural steel frame with tile walls, plastered on the outside, with saw-tooth roof construction. The general construction of the building otherwise is the same as that of the other shop buildings. An overhead trolley beam is provided to permit of handling timbers with a trolley into the shop. Compressed air, steam and water service piping, and fire protection, including automatic sprinklers are supplied. Heating is with the indirect fan system, with underground concrete and tile ducts. Lighting is by 100 watt tungsten lamps. The location of this building alongside of the lumber yard permits of handling lumber so that it can be passed through into the shop without rehandling.

Passenger Car Repair Shops, C.P.R. Ogden Shops.

THE PLANING MILL is 303 by 80 ft. and contains the wood working machinery. The frame is of structural steel carried on concrete footings. The general construction of the building is the same as that of other shop buildings. A track extends through the building longitudinally, to permit of movement of material in at one end to the various machines and out through the opposite end with the minimum amount of handling. The building is located so as to be convenient to the passenger car shop and the freight car shop. The lumber yard is located back of and at one end of the planing mill. Suitable piping has been provided for distributing compressed air and water. The fire protection system includes automatic sprinklers. Provision is made for toilets, lavatories, and metal lockers for the men employed in this department. Heating is by the indirect fan system with galvanized iron heating ducts. Lighting is by mercury vapor lamps.

THE BOILER HOUSE contains sufficient space for 2100 h.p. water tube boilers, to provide steam for heating the shops and for other purposes for which steam is required throughout the shops. The building is constructed with brick walls, carried on concrete foundations, with steel roof trusses and supports for coal bunkers. The chimney is of reinforced concrete, 200 ft. high, with a minimum diameter of 9 ft. The overhead coal bunker for each boiler is divided by a reinforced concrete partition into two compartments to provide for storing and burning two kinds of coal. An overhead storage bin for ashes is provided, from which bin the cinders can be discharged by gravity into cars alongside of the building. A concrete dumping hopper is provided outside for dumping coal from cars. A pivot steel elevator raises and discharges the coal into the overhead bunker. A skip bucket, with electric hoist handles the ashes into the ash bin. The boiler units are 350 h.p. rating and are set in three batteries of two each. Five of the boilers are equipped with chain gratestokers. The sixth boiler has the shaking grates to burn shavings and other planing mill refuse. Space is also provided for three electrically driven air compressors each of a capacity of 1500 cu. ft. of free air per minute. Only two of these compressors are so far installed. Transformers and distributing panel are located in this building for transforming and distributing light and power current to the shop yard, freight car shop, planing mill, and coach repair shop. There is no direct current apparatus in this station. Provision has been made for two incoming 2200 volt lines, one of 2000 k.w. and the second of 1000 k.w. capacity for breakdown service. The steam required for the steam hammers and other shop purposes during the summer can be supplied by one boiler. The boiler capacity provided will afford one spare boiler during the extreme weather conditions when the maximum steam demand occurs.

A YARD CRANE runway, 1260 ft. long, extends from the west line of the locomotive shop and carries a 10 ton high speed traveling electric crane with 80 ft. span, serving the material yard and a portion of the storehouse platform and scrap dock. One of the storehouse tracks extends through under this crane, resulting in giving ample space for the storage of material alongside of the storehouse, foundry and locomotive shop. By this arrangement heavy material can be unloaded, stored, and rehandled to the shop or loaded out again by the crane for shipment, practically eliminating manual labor in the handling of all heavy material.

MISCELLANEOUS STRUCTURES.—The

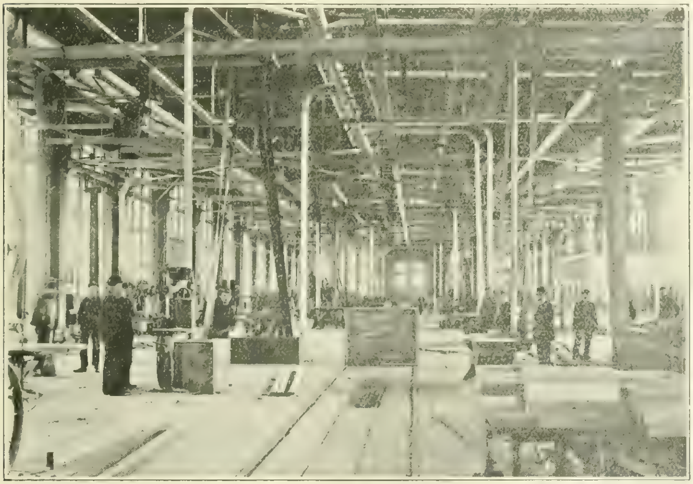
transfer table for serving the coach shop is 75 ft. long, of 150 tons capacity, equipped with electric motor, with concrete transfer table pit 400 ft. long, extending out far enough at either end of the building, for providing entrance and egress at both ends.

The mess building is 269½ ft. by 31 ft. 10 ins., of wooden frame construction, covered outside with sheathing, building paper and siding and sealed on the inside with metal sheathing. It has a concrete floor, and contains a dining room and lunch room for the workmen, and a dining room for the officials, together with kitchen and pantry. Sixty feet of the length of the building is carried up two stories to provide an apprentice schoolroom and quarters for the help. Heating is by the direct system and lighting with incandescent lamps.

There are also two small buildings located near the freight repair tracks for blacksmith shops and workmen tools, and in one of them is a small toilet and office. Dry kiln, material bins, plate and iron racks, coal and coke sheds, are also provided.

For obtaining water for shop purposes there have been put down two 8 in. wells equipped with electrically operated pumps. To supplement this supply and to provide a main source of supply for fire protection the City of Calgary has laid into the shop site, to a point midway the length of the main shop building on the west side, a 10 in. cast iron water main. The shop service and fire lines are connected on to this main and into a steel tank of 125,000 galls. capacity, which is erected on a 70-ft. steel tower, principally for use in connection with automatic sprinklers in the various buildings where these are installed. A complete fire protection system has been put in, with hydrants distributed about the shop yard.

The sewage system in the shop yard may be divided into the sanitary and storm sewers. The City of Calgary is furnishing the main sanitary sewer, beginning at the east line of the freight car shop and extending to the eastern boundary of the shop property. All the sanitary sewage lines from the various buildings are connected into this sewer. Storm sewers are provided, where necessary to carry off the roof water from the buildings where the roof construction is such that this cannot be discharged on to the ground.



Interior of Planing Mill.

The location of the shops is practically on the open prairie and on the beginning of construction arrangements had to be made to house and board on the shop property a considerable quantity of labor. To this end, frame bunk houses were built, with two tiers of bunks on each side of the building, eight bunks long, each house having a capacity of 32 men. Stoves were placed in the centre aisle, and benches along the sides of the lower tier of bunks. On the coming of summer, and as the labor forces were increased, some of the men were housed in standard 12 by 14 wall tents, which accommodated four men each. A large mess room and kitchen and storeroom space was also fitted up with a capacity of feeding about 400 men at one time. Great care was exercised throughout the work, in keeping the camp in a sanitary condition. This work was largely under the direction of doctors, who visited the camp each day to take care of possible sickness, and an arrangement was also made whereby those who were employed on the work voluntarily contributed a small amount from their wages for the services of these doctors. This amount also included hospital service when necessary. Due to this care there was very little sickness on the job.

As there were no accommodations for men with families near the shops the C.P.R. put into temporary service a train to carry the men back and forth from Calgary and several hundred men used this train each day. This arrangement helped the situation considerably, especially as the season advanced and all kinds of skilled and unskilled labor became more difficult to obtain. A standing order was placed through several labor agencies in Calgary to send men daily to the job. As the work neared completion the bunk houses and mess houses previously mentioned were turned over to the railway company to take care of its own men who were at that time living in cars on the property. This, of course, released the cars and permitted their use at other points.

The progress schedule will show the prosecution of the work, but it should be pointed out that it was not possible to break ground until April 1, 1912, and by Mar. 17, 1913, the locomotive shop was in full operation. When the magnitude of the work is considered, as also its distance from larger centres, it will be appreciated that a record for prompt performance has been established.

The work was designed and built in its entirety by Westinghouse, Church, Kerr & Co., consulting and constructing engineers, of New York and Montreal, working under the direction of J. G. Sullivan, M. Can. Soc. C.E., Chief Engineer, Western Lines C.P.R., and N. E. Brooks, M. Can. Soc. C.E., then Division Engineer, Calgary, now Engineer Maintenance of Way, Western Lines, C.P.R., Winnipeg.

Construction Work on the Canadian Northern Railway Eastern Lines.

The tremendous amount of railway construction which has been carried on west of Lake Superior for many years past has possibly made many oblivious to the fact that there has also been a lot of work done east of Port Arthur. Only recently we have been given an opportunity of looking into the amount of work done on the Canadian Northern lines in Ontario during 1912.

At the commencement of work in 1912 there was a force of nearly 5,000 men and over 600 horses, which was gradually increased until July, when it reached an average of about 19,500 men and about 1,500 horses. From July to the end of the year the force gradually fell to an average of about 6,500 men and a little over 800 horses, or an average for the 12 months of nearly 7,500 men and over 1,000 horses. It was expected to keep the force up to an average of 8,500 men, but the Balkan war prevented this. The work in Eastern Ontario suffered more from the labor condition than any other part, this being particularly noticeable on the Ottawa-Sydenham line, which at no time was fully manned. The total outlay in wages was nearly $6,000,000, or close on to $500,000 a week.

The grading and trainfilling statistics show the following averages per mile in cubic yards:—Montreal-Hawkesbury line, 26,000; Ottawa-Capreol line, 26,081; Sudbury-Port Arthur line, 26,473, an average of 25,305 for all lines under construction. The heaviest district on the Montreal-Port Arthur line is between Pembroke and Capreol, which runs about 28,130 cu. yds. per mile. There were over 11,500,000 cu. yds. moved during the year, equivalent to about 447 miles of completed grade, or 1.5 miles of completed grade for every working day in the year.

Up to the end of the year the following grading had been done:—Montreal to Hawkesbury, 30%; Ottawa to Pembroke, 32½%; Pembroke to Capreol, 34%; Sudbury and Port Arthur, 62½%, or 50% of the whole line between Montreal and Port Arthur. The estimated amount of grading to complete the line between Montreal and Port Arthur is about 11,500,000 cu. yds. or a little less than was moved in 1912 on all the Quebec and Ontario lines. With ordinary labor conditions the grading of this line should be completed this year west of Capreol, but at the commencement of the present season's work there was considerably more grading and trainfilling to be done on the Pembroke-Capreol district than any other, and it may not be possible to complete it this year. There is probably over 4,000,000 cu. yards to move, of which over 800,000 is solid rock, this being about double what was moved in 1912.

During 1912 there was used on the eastern lines 6,250,000 ft. of pine lumber, 32,500 ft. of cedar, 36,909 cu. yds. of concrete and 4,290 tons of steel for bridges. There were 246 miles of main line track laid, equal to 0.82 miles per working day.

Orders by Board of Railway Commissioners.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the orders took place, and not those on which the orders were issued. In many cases orders are not issued for a considerable time after the dates assigned to them.

19097. Apr. 21.—Approving location of G.T. Pacific Ry. station at Hinton, Alta., mileage 977.4 west of Winnipeg.

19098. Apr. 22.—Authorizing C.P.R. to cross G.T. Pacific Ry. Biggar Calgary Branch with its Wilkie-Anglia Branch, at mileage 42.89 from Wilkie, Sask.

19099. Apr. 21.—Authorizing Canadian Northern Branch Lines Co. to build its Sturgis to Hudson Bay Jct. line across 11 highways in Saskatchewan.

19100, 19101. Apr. 22.—Authorizing Toronto, Hamilton and Buffalo Ry. to build second track across 3 highways at grade in Thorold Tp., and across River Road, Crowland Tp., Ont.

19102. Apr. 22.—Relieving Vancouver, Victoria and Eastern Ry. and Navigation Co. (G.N.R.) from erecting fences along its right of way between Keremeos and Princeton, B.C., until land on either side, or in vicinity, becomes settled.

19103. Apr. 19.—Authorizing C.P.R. to build extension of spur for Rileys, Ltd., Calgary, Alta.

19104. Apr. 21.—Amending order 18943, Apr. 1, re location of G.T. Pacific Ry. station at Kwinitsa, B.C.

19105. Apr. 22.—Approving G.T.R. plans showing proposed structures over Peter, Mill, Ontario and Barrett Sts., Port Hope, Ont.

19106. Apr. 23.—Ordering G.T.R. to stop trains 22 and 27 at Les Cedres, Que., on flag on Sundays, to take effect Apr. 27; and approving location of station there.

19107. Apr. 22.—Authorizing C.P.R. to build road diversion at Elm Creek, Man., and to close existing crossing there.

19108. Apr. 23.—Authorizing C.P.R. to build additional track north of its main line across 20 highways from mileage 70 to 93, Moose Jaw Subdivision, Sask.

19109. Apr. 22.—Authorizing C.P.R. to build spur for Kelowna Farmers Exchange, Ltd., Armstrong, B.C.

19110. Apr. 22.—Ordering C.P.R., Canadian Northern Ry. and G.T. Pacific Ry. to allow inspection by Dominion Government counsel, or representative, J. P. Muller, of all books, returns, statements and documents required for verifying, amplifying or checking any information furnished or ordered furnished to Government counsel.

19112. Apr. 23.—Approving character of proposed drainage works relating to Toronto, Hamilton and Buffalo Ry. tracks and lands in Townsend and Oakland Tps., Ont.

19113. Apr. 23.—Authorizing C.P.R. to connect with Calgary Power Co.'s spur at Seebe, Alta.

19114. Apr. 21.—Authorizing C.P.R. to build spur for Fernie-Fort Steele Brewing Co., Fernie, B.C.

19115. Apr. 23.—Approving Campbellton, Lake Ontario and Western Ry. (C.P.R.) plans showing proposed structures over Elgin and Prospect Sts., Bowmanville, Ont.

19116. Apr. 24.—Approving location of C.P.R. Swift Current Northwesterly Branch from mileage 111.9 to junction with Calgary and Edmonton Ry. Lacombe Easterly Branch in Sec. 18-36-10, w. 4 m., Alta., excepting between mileage 169 and 175; and authorizing the building across 93 highways.

19117. Apr. 24.—Authorizing C.P.R. to build extension to Standard Sanitary Mfg. Co.'s siding in Toronto.

19118. Apr. 23.—Rescinding orders 17552 and 17781, Sept. 21 and Oct. 16, 1912, re rates on pressed brick from Bradford, Pa., to Windsor, Ont.

19119. Apr. 23.—Dismissing complaint of Blind River Board of Trade and London Rolling Mill Co. alleging that G.T.R. and C.P.R. discriminate against Blind River and other points on north shore of Lake Huron, in favor of Sault Ste. Marie, Port Arthur and Fort William in rate on bar iron in carloads from Toronto, Hamilton and London.

19120. Apr. 26.—Authorizing Canadian Northern Ry. to build cutoff in Winnipeg from its yards, southeasterly along north side of River Park to east side of Pembina St., and rescinding order 17968, Oct. 2, 1912, which authorized connection of its Fort Rouge and eastern yards.

[illegible]—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build bridge across Burnham St., Cobourg, Ont., mileage 120.74 from Glen Tay.

19122. Apr. 25.—Authorizing C.P.R. to build across road allowance at grade at Rosyth, Sask.

19123. Apr. 23.—Authorizing C.P.R. to build spur for Massey-Harris Co. in Swift Current, Sask.

19124. Apr. 26.—Authorizing C.P.R. to build temporary track, for one year from date, on its Bergen Northeasterly Branch across West Kildonan Road and Winnipeg Electric Ry., in Kildonan Municipality, Man.; trains of both companies to stop before making crossing.

19125. Apr. 23.—Authorizing C.P.R. to build road diversion at Neidpath, Alta., and close existing crossing there.

19126. Apr. 23.—Authorizing Saskatchewan Government to build highway across C.P.R. in s.e. ¼ Sec. 12-33-21, w. 2 m.

19127. Apr. 25.—Authorizing G.T.R. to build sidings for International Harvester Co. of Canada, Ltd., Hamilton, Ont.

19128. Apr. 25.—Approving Grand Valley Ry. Standard Freight Tariff, C.R.C. 3,

19129. Apr. 26.—Amending order 19074, Apr. 17, re diversion of Canadian Northern Ry. Oak Point Branch at Rosser, Man.

19130. Apr. 28.—Amending order 18954, Mar. 31, re building of C.P.R. main line to Golden townsite, B.C.

19131. Apr. 28.—Approving location of C.P.R. station at Kandahar, Sask.

19132. Apr. 28.—Authorizing C.P.R. to operate bridges 96.2 and 100.6, Sherbrooke Subdivision, Que.

19133. Apr. 28.—Authorizing G.T.R. to rebuild bridge 143, District 2, Montreal Division, to carry its line over White River, about 1 mile east of Upton, Que.

19134. Apr. 28.—Authorizing G.T. Pacific Branch Lines Co. to build Third St. and Souris Ave. across its Regina Boundary Branch at Frobisher, mileage 134.9 and 135.5 respectively, Cannington District, Sask.

19135. Apr. 28.—Amending order 18987, Apr. 7, by changing Engelheld to Engelfeld, re operation of station there by Canadian Northern Ry.

19136. Apr. 28.—Authorizing C.N. Ontario Ry. to build across channel between two islands in Riviere des Prairies, Que., at mileage 39.8 from Hawkesbury.

19137. Apr. 28.—Authorizing G.T.R. to use bridge 186 over Becancour River, near Lyster, Que.

19138 to 19141. Apr. 29.—Authorizing C.P.R. to build extension to spurs on Bureau Wharf, Three Rivers, Que.; to build spurs for Jewell Lumber Co., Hanbury, B.C.; City Cold Storage Co. and National Manufacturing Co., Regina, Sask.; and J. P. Marion, Montreal.

19142. Apr. 30.—Authorizing C.P.R. to build bridges 144.8, Portal Subdivision, Sask.; 14.3, 17.7, and 9.6, Brandon Subdivision, Man.

19143. Apr. 30.—Authorizing Canadian Northern Ry. to build its Delisle Branch across 29 highways.

19144. Apr. 29.—Authorizing G.T.R. to build siding for Gurney Foundry Co., Toronto.

19145. Apr. 26.—Authorizing Saskatchewan Government to build highway crossing over C.P.R. in s.e. ¼ Sec. 34-18-33, and close and convey to C.P.R. portion of regular road allowance between Secs. 34 and 27-18-33, w.p.m., temporary crossing about 600 ft. to south to be closed by C.P.R.

19146. Apr. 28.—Ordering Campbellford, Lake Ontario and Western Ry. (C.P.R.) to provide suitable farm bridge crossings for A. D. Colwill, J. Rickard and T. Penfound, and undercrossing for R. R. Stevens, Darlington Tp., Ont.

19147. Apr. 26.—Approving revised location of G.T. Pacific Branch Lines Co.'s Brandon Branch, mileage 11.55 to 13.88, Brandon District, Man.

19148. Apr. 25.—Authorizing Esquimalt and Nanaimo Ry. to build branch from main line between Victoria and Wellington, mileage 1.31, to Newton and Greer Co.'s premises, Esquimalt, B.C.

19149. Apr. 26.—Authorizing C.P.R. to use bridges at Ninth Ave. subway at 179.1, Calgary Subdivision; and 7.7 and 7.8, Laggan Subdivision, Alta.

19150. Apr. 30.—Approving revised location of C.P.R. Gleichen-Shepard Branch from mileage 15.63 to 27.90 from Gleichen, and authorizing the building across 13 highways.

19151 to 19153. Apr. 28, 29.—Approving change in location of C.P.R. station at Warner, Alta.; and location of stations at Ernfold, Dilkie and Sovereign, Sask.

19154. Apr. 28.—Amending order 18898, Mar. 20, re location of C.N. Ontario Ry. station at Janes.

19155. Apr. 30.—Authorizing C.N. Saskatchewan Ry. to build its Wroxton Westerly Branch across C.P.R. Minnedosa-Saskatoon Section, in s.w. ¼ Sec. 9-26-4, w. 2 m.

19156. Apr. 30.—Amending order 17923, Nov. 5, 1912, re building of G.T. Pacific Branch Lines Co.'s Regina-Moose Jaw Branch under Lake View Ave., Moose Jaw, Sask.

19157. Apr. 30.—Authorizing G.T.R. to build siding and spur for Maple Sand and Gravel Co., Vaughan Tp., Ont.

19158. May 2.—Approving location of C.P.R. station at Rokeby, Sask.

19159. May 2.—Authorizing Hull Electric Co. to build spur from its main line between Hull and Aylmer for Connaught Park Jockey Club of Ottawa, South Hull Tp., Que.

19160. May 2.—Approving plan of Mar. 14, showing Edmonton, Dunvegan and British Columbia Ry. Co.'s standard high wooden trestle frame bents.

19161. May 3.—Approving location of G.T. Pacific Ry. station at Yates, Alta., mileage 917 west of Winnipeg.

19162. May 2.—Amending order 18999, April 5, re location of C.P.R. and Kettle Valley Ry. joint station at Grand Forks, B.C.

19163. May 2.—Approving location of Esquimalt and Nanaimo Ry. station at mileage 2.7, Evans Road Crossing, Cowichan Lake Branch, Vancouver Island, B.C.

19164. Apr. 30.—Authorizing C.N. Ontario Ry. to build across two highways in Fraser Tp.

19165. Apr. 30.—Authorizing Canadian Northern Ry. to build its Delisle Branch across public road between Secs. 30 and 29-25-6, w. 3 m.

19166. May 3.—Authorizing C.P.R. to build bridges 21.9, London Subdivision, Ont., and 144.6, Portal Subdivision, Sask.

19167. Apr. 30.—Authorizing C.P.R. to build spur for General Supplies, Ltd., Calgary, Alta.

19168. May 2.—Approving location of C.P.R station at Penzance, Sask.

19169. Apr. 30.—Amending order 19053, Apr. 10, re location of C.P.R. Bassano Easterly Branch.

19170. May 3.—Authorizing Hamilton Cataract Power, Light and Traction Co. to erect power line over Toronto, Hamilton and Buffalo Ry., Saltfleet Tp., Ont.

19171. May 5.—Authorizing Toronto Suburban Ry. to build across C.P.R. into Prison Farm, Guelph Tp., Ont.

19172. May 3.—Ordering Canadian Northern Ry. to build fourth class station at Kendal, Sask., extend platform to 260 ft., and lay walk across station grounds to connect with sidewalk across the main street; work to be completed by October 1.

19173. May 5.—Authorizing C.N. Ontario Ry. to build bridge over Missinaibi River, Algoma District, mileage 222.5 from Sudbury Jct.

19174. May 5.—Ordering Canadian Northern Ry. to fence right of way at certain points east and west of Ochre River, to be completed by June 15.

19175. May 3.—Authorizing C.N. Ontario Ry. to build across 8 highways in Alice Tp., Ont.

19176. May 3.—Authorizing Canadian Northern Ry. to build spur for Tees and Percee Co., Edmonton, Alta.

19177. May 5.—Authorizing G.T.R. to rebuild bridge 265 at mileage 46.80, District 13, Hamilton Division, Ont.

19178. May 3.—Ordering that speed of trains over crossing east of Hanover station, Ont., be limited to 10 miles an hour.

19179. May 5.—Relieving G.T.R. from providing further protection at crossing two miles west of Drumbo, Ont.

19180. May 5.—Amending order 18941, Apr. 1, re Campbellford, Lake Ontario and Western Ry. (C.P.R.) connection with G.T.R. at mileage 93.2 from Glen Tay, Ont., by changing it to mileage 93.94.

19181. May 3.—Authorizing C.P.R. to build extension to spur for Northern Sand and Gravel Co., Milner, Man.

19182. May 5.—Authorizing C.P.R. to build bridges 4.9, near Norwood and Ardendale stations, Ont.

19183. May 5.—Authorizing C.P.R. to build road diversion and close existing crossing at mileage 13.20, Wilkie-Anglia Branch, Sask.

19184. May 3.—Authorizing C.P.R. to build extension to spur for Coquitlam Terminal Co., Vancouver, B.C.

19185. May 5.—Authorizing C.P.R. to build passing track and portion of Y at grade across road allowance at Roche Percee, Sask.

19186. May 3.—Approving location of C.P.R. stations at Stranraer, Czar, Rockhaven, Bounty and Cadogen, Sask.

19187. May 5.—Authorizing Hull Electric Co. to build spurs for R. and T. Ritchie Co., Aylmer and South Hull, Que.

19188. May 5.—Amending order 19098, Apr. 22, re crossing of G.T. Pacific Ry. Biggar-Calgary Branch by C.P.R. by G.T. Pacific Branch Lines Co. for G.T. Pacific Ry.

19189. May 5.—Authorizing J. R. Pole, Appin, Ont., to build farm crossing over G.T.R., Ekfrid Tp., Ont.

19190. May 6.—Extending to May 30 time for installation of interlocking plant at crossing by C.N. Ontario Ry. of C.P.R. and G.T.R., near Ottawa.

10191. May 5.—Approving locations of G.T. Pacific Ry. stations at Dandurand and Medicine Lodge, Alta.

19192. May 6.—Approving location of G.T.P. Branch Lines Co. station at Delacour, Alta.

19193. May 6.—Approving location of G.T. Pacific Ry. station at Duffield, Alta.

19194. May 5.—Authorizing Canadian Northern Ry. to build spur and Y's through Lots 7 and 9, Fort Saskatchewan Settlement, Alta.; work to be completed within three months from date.

19195. May 6.—Authorizing Esquimalt and Nanaimo Ry. to build bridge 24.04 across Cook's Creek (South Fork), Comox Extension, B.C.

19196. May 5.—Approving revised location of Campbellford, Lake Ontario and Western Ry. (C.P.R.) from mileage 0 at Glen Tay to mileage 38.5.

19197. May 5.—Amending order 19120, Apr.

[illegible] Canadian Northern Ry. [illegible] St., Winnipeg.

19198. May [illegible].—Authorizing C.P.R. to build spur for W[illegible] Gravel [illegible] Supply Co., Edmonton, Alta., [illegible] completed [illegible].

19199. May [illegible].—Authorizing C.P.R. to build across [illegible] ways in Edmonton, Alta.

19200. May [illegible].—Approving location of G.T. Pacific Ry. station at Skeena City, mileage [illegible], Prince Rupert East, B.C.

19201. May 3.—Ordering Canadian Northern Ry. forthwith to rebuild shelter at Wroxton, Sask., to afford accommodation equal to standard fourth class station; and to appoint agent by May 15.

19202. May [illegible].—Approving location of C.P.R. station at Herschel, Sask.

19203. May 7.—Approving location Canadian Northern Ry. station grounds at Hanna, Alta.

19204. May 7.—Approving location of G.T. Pacific Ry. stations at Galloway, Roundcroft and Hargrave, Alta.

19205. May [illegible].—Amending order [illegible], Nov. 6, 1912, re removal of hill near Gerrie's crossing by Toronto, Hamilton and Buffalo Ry.

19206. May 6.—Approving location and portion of revised location of C.N. Ontario Ry. through Pembroke, Stafford and Alice Tps., mileage 82.62 to 88.85 from Ottawa, excluding spur running into station grounds on Mary St., Pembroke.

19207. May 7.—Authorizing C.P.R. to build at grade additional main line track across road allowance at mileage 81.5 from Broadview, Sask., to divert road allowance and close existing crossing.

19208. May 7.—Authorizing C.P.R. to build extension to siding for Canadian Carbonate Co., Montreal.

19209. May 7.—Authorizing C.P.R. to build spur for Canadian Northern Ontario Ry. on Lot [illegible], Con. [illegible], and unsurveyed land in Nipigon Tp., Ont.

19210. May 7.—Authorizing C.P.R. to build at grade additional main line track across road allowance at mileage 71.2 from Broadview, Sask.; to divert road allowance and close existing crossing.

19211, 19212. May 5, 6.—Authorizing Toronto, Hamilton and Buffalo Ry. to build spur for Furnivall-New, Ltd., Henry New Estate, and Sawyer-Massey Co., Hamilton, Ont.

19213. May 7.—Authorizing C.P.R. to build spurs for Birds Hill Sand Co., Winnipeg, from existing spur.

19214. May 3.—Authorizing Toronto and Niagara Power Co. to erect wires across Toronto, Hamilton and Buffalo Ry in Saltfleet, Tp., and rescinding order 18898, Mar. 19, giving similar authorization.

19215. May 6.—Ordering G.T.R. to build a 30 ft. subway, with 14 ft. headroom, at crossing of Thompson Road, Bertie Tp., Ont., 20% (not to exceed $5,000) of cost to be paid out of railway grade crossing fund, 15% of remainder by Pere Marquette Rd., 30% by M.C.R., 47½% by G.T.R., and 7½% by Bertie Tp.; plans to be submitted within 30 days from date for approval, and work to be commenced within 30 days after approval, and completed within four months.

19216. May 7.—Amending order 191[illegible], Apr. 21, re C.P.R. spur for Fernie-Fort Steele Brewing Co., at Fernie, B.C.

19217. May 7.—Approving plans and location of G.T.R. station at Jordan, Ont.

19218. May 8.—Rescinding order 18862, Mar. 7, that unless Canadian Northern Ry. withdraw portion of its location plan within 20 days it shall take steps to acquire certain lots at Regina, Sask.

19219. May 7.—Ordering G.T. Pacific Ry. to erect a no. 2 B.R.C. flag station at Cooking Lake, Alta., plans to be submitted by June 1, and work to be completed by Aug. 1.

19220. May 8.—Approving location of G.T. Pacific Ry. station at mileage [illegible], Prince Rupert East, B.C.

19221, 19222. May 8, 7.—Authorizing G.T.R. to build sidings for A. Tessier, Penetanguishene, and Borden Milk Co., Norwich Tp., Ont.

19223. May 7.—Authorizing Canadian Northern Ry. to build spur across 3 highways in Alberta.

19224. May 8.—Authorizing C.P.R. to build spurs for Crown Grain Co., Winnipeg.

19225. May 5.—Ordering G.T.R. and C.N. Ontario Ry. to erect fences and cattle guards at farm crossing on Lot 17, Con. 3, Trafalgar Tp., at expense of J. Mason and Son, Oakville, Ont.

19226, 19227. May 9.—Authorizing Lake Erie and Northern Ry. to build across Concession, Walnut, Bruce and Main Sts., Galt, and to divert Grand Valley Ry. between station [illegible] and 937+69, North Dumfries Tp., Ont.

19228. May 9.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build across Kingston Road at mileage 74.70 from Glen Tay, Ont.

19229. May 10.—Ordering C.P.R. to install gates, to be operated day and night, at Osler Ave., North Toronto: work to be completed within 2 months from date, 20% to be paid by the railway grade crossing fund, and remainder, with entire cost of operation and maintenance to be paid by the City and company equally.

19231. May 9.—Authorizing C.P.R. to build spur for East Kootenay Lumber Co., Ltd., of Jaffray, B.C., at mileage 2.4, Fort Steele Subdivision, Alberta Division, near Colvalli.

19232. May 9.—Ordering that crossings of King and John Sts., Weston, Ont., be protected by two sets of gates, operated day and night from tower placed to enable watchmen to see highway: cost to be paid,—1-5 by the railway grade crossing fund, and 1-3 of remainder by Weston Village, G.T.R. and C.P.R. together; cost of, with maintenance, by the last three equally.

19233. May 9.—Authorizing Central Ontario Ry. to build spur for Ontario Marble Quarries Co., Dungannon Tp., Ont.

19234. May 9.—Approving location of G.T. Pacific Ry. stations at Ansell, Obed, and Bickerdike, Alta.

19235. May 8.—Authorizing G.T.R. to build siding for Hinde and Dauch Paper Co. of Canada, Ltd., Toronto.

19236. May 10.—Ordering Campbellford, Lake Ontario and Western Ry. (C.P.R.) and Canadian Northern Ry. to build overhead crossing on farm of John Pearse, Cedar Grove, Scarborough Tp., Ont.

19237. Apr. 29.—Ordering that wages of watchman, appointed at Sunnyside crossing, Mimico, Ont., be paid equally by City of Toronto, G.T.R. and Toronto and York Radial Ry.

19238. May 10.—Ordering that when City of Hamilton, Ont., has provided underground conduits the G.N.W. Telegraph Co., C.P.R. Telegraphs and Bell Telephone Co. remove poles, wires and cables from portions of certain streets.

19239. May 9.—Ordering G.T.R. to protect crossing of King St., Cobourg, Ont., by a flagman, 20% to be paid by Town of Cobourg.

19240. May 12.—Amending order 18915, Apr. 14, re location of C.P.R. station at Vanguard, Sask.

19241, 19242. May 12.—Authorizing C.P.R. to build bridges, 28.6, near Hornby, Ont.; 22.2, Streetsville Jct., Ont.; 42.5, near Cardigan station, N.B.; 32.4 and 5.9, Brandon Subdivision, Man.; and 46.37, Broadview Subdivision, Manitoba Division, over Boss Hill Creek, Sask.

19243. May 8.—Authorizing C.P.R. to build road diversion and grade crossing in Sec. 12-20-17, w. 4 m.; and close that portion to be diverted within its right of way.

19244, 19245. May 12.—Authorizing Lake Erie and Northern Ry. to build under G.T.R. at Paris, Ont., and at grade across G.T.R. at station [illegible]+72.9.

The Canadian Pacific Railway to Expend $100,000,000 in Construction, Betterments, Etc., This Year.

Sir Thomas Shaughnessy, President, C.P.R., is reported as having cabled from London to Montreal, recently, as follows: "Since my arrival in England my attention has been drawn to a recently published cable message to the effect that the C.P.R. Co. contemplated an expenditure of $50,000,000 this year in Canada in laying double tracks, constructing branch lines and putting a tunnel through the Rocky Mountains, which will provide an alternative route with a much easier grade than now exists, and will enable the railway through the tunnel to be worked by electricity if required.

"That report can only refer to western Canada, for, as a matter of fact, our contemplated expenditure over the whole system during the near future will be more like $100,000,000, exclusive of new rolling stock.

"This will not involve another appeal to the London money market for fresh capital, because all our financial arrangements have been already made a long way ahead."

Railway Lands Patented.—Letters patent were issued during March, in respect of Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres
Calgary and Edmonton Ry.	1,[illegible]
Canadian Northern Ry.	[illegible]
Canadian Pacific Ry. grants	2.15
Canadian Pacific Ry. roadbed and station grounds	[illegible]
Grand Trunk Pacific Ry.	44.80
Qu'Appelle, Long Lake and Saskatchewan Rd. and Steamboat Co.	623.50
Total	[illegible]

Traffic Orders by Board of Railway Commissioners.

[illegible]

C.N.R. Standard Freight Mileage Tariff.

19000. April 9.—Re application of Canadian Northern Ry., under sec. 327 of the Railway Act, for approval of its Standard Freight Mileage Tariff, C.R.C. no. E. 212, for use on its lines east of Port Arthur, superseding the Standard Freight Mileage Tariffs of the Canadian Northern Ontario, Canadian Northern Quebec, Niagara, St. Catharines & Toronto, Bay of Quinte, Central Ontario, Quebec & Lake St. John, and Irondale, Bancroft & Ottawa Railway Companies, it is ordered that the said tariff be approved.

Examination of Railway Companies' Records.

19110. April 22. The rates for carriage of freight traffic upon railway lines operating in Canada, west of Port Arthur. Upon the application of counsel for the Dominion Government, under sec. 26 of the Railway Act—it is ordered that the C.P.R., the Canadian Northern, and the G.T. Pacific Railway Companies, do allow inspection by counsel retained by the Dominion Government or their representative, J. P. Muller, of all books, returns, statements, and documents required by him for verifying, amplifying, or checking any of the information furnished or ordered to be furnished to counsel for the Government.

Rates From Bradford, Pa., to Windsor, Ont.

19118. April 23. Re order 17552, Sept. 21, 1912, made upon the application of the Cadwell Sand & Gravel Co., Ltd., and directing that the proportion, viz., 88c per ton, accruing to the G.T.R. as its percentage division of the joint rate of $1.60 a ton charged from Bradford, Pa., to Windsor, prior to April 20, 1912, be restored by the G.T.R. within 45 days from the date of the order; and order 17781, Oct. 16, 1912, postponing the effective date of such order until a rehearing of the matter should be had: Upon the rehearing at Ottawa, Jan. 21, 1913, it is ordered that the said orders 17552 and 17781, be rescinded, and that the application of the Cadwell Sand & Gravel Co. be refused.

Bar Iron Rates to Blind River.

19119. April 23. Re complaint of Blind River Board of Trade and London Rolling Mill Co., Ltd., alleging that the G.T.R. and the C.P.R. unjustly discriminate against Blind River and other points on the north shore of Lake Huron and in favor of Sault Ste. Marie, Port Arthur, and Fort William, in the rate charged on shipments of bar iron, in carloads, from Toronto, Hamilton, and London to Blind River and points, Sault Ste. Marie, Port Arthur, and Fort William; it is ordered that the complaint be dismissed.

Protection of Level Crossings by Signals.—The Board of Railway Commissioners is impressed with the large number of accidents occurring at level railway crossings (crossings of one railway by another) which are not protected by signal system, with or without derails approved by the Board; and has asked railway companies to show cause why an order should not issue requiring them to install, within three years, an interlocking system to be approved of by the Board for the protection of all level crossings which are not so protected, between tracks of steam railways, and between tracks of steam and electric railways.

Changes in the Government Railways Management.

The Government Railways Managing Board, established May 1, 1909, has been abolished, and F. P. Gutelius, M. Can. Soc. C.E., has been appointed General Manager of Government Railways, with jurisdiction over the Intercolonial and Prince Edward Island Railways. Following is the report of a committee of the Privy Council approved May 5:—

"On a memorandum from the Minister of Railways and Canals, representing that as the result of close and careful consideration of the existing system under which the operation of the Government Railways is immediately controlled, he is strongly impressed with the desirability of a change in the present system. The Minister represents that by an order in council of April 20, 1909, based on the statutory authority of the Government Railways Act, which empowered the Governor in Council, from time to time, to make regulations, inter alia, for the management, proper use and protection of the Government Railways, the then existing position of General Manager of Government Railways was abolished and a board was constituted, under the name of the Government Railways Managing Board, to supervise and direct all departments of the railways owned or operated by the Dominion Government. This arrangement came into effect on April 1, 1909, and has been continued up to the present time.

"The Minister, considering it expedient, recommends that, in pursuance of the above cited statutory authority, the following be fixed as the organization to be in force on and after May 1, 1913, for the Government Railways—the Intercolonial Ry. and the Prince Edward Island Ry.—as at present constituted, and as the same may hereafter be extended or modified; together with their respective branches; such organiation to be in supercession of the existing organization:—1. The Government Railways Managing Board to be abolished; 2. The position of General Manager of Government Railways to be substituted therefor; 3. F. P. Gutelius, of Montreal, to be appointed to the management of the said Government Railways, under the title of 'General Manager of Government Railways'; 4. The said General Manager to supervise and direct all departments of the said Government Railways; 5. The duties and power of the said General Manager to be as hereunder defined, viz.:—He shall have the powers usually vested in the executive of railway corporations; he shall prepare or modify, subject to the Government Railways Act and the Provident Fund Act, and, with the approval thereto of the Governor in Council first obtained, carry out rules and regulations, as follows: For the organization of the staff and officials of the said railways; for the conditions of employment of the railway service; for the purchasing of supplies and the sale of materials; for the ascertaining and collection of the railway tolls, dues and revenues; those to be observed by the conductors, engine drivers and other officers and servants, and by all companies and persons using such railways; those relating to the rolling stock to be used in the trains on such railways; 6. He shall make to the Minister of Railways and Canals a special and comprehensive report at the end of each fiscal year on the expenditures and receipts of the railways under his control, and on all occurrences and transactions of importance; and shall further furnish such reports as may from time to time be required of him by the Minister. The Minister further recommends that the said F. P. Gutelius shall hold office for a definite period of two years, and, thereafter, during the pleasure of the Minister, at a salary of $20,000 a year.

"The committee concur in the foregoing and submit the same for approval."

The members of the Government Railways Management Board, which has been abolished, were, A. W. Campbell, M. Can. Soc. C.E., Deputy Minister of Railways and Canals, Chairman; D. Pottinger, I.S.O., Assistant Chairman; E. Tiffin, General Traffic Manager; F. P. Brady, General Superintendent; and J. B. T. Caron, General Solicitor. Mr. Campbell will henceforth give his entire time to the department's work in Ottawa, which is increasing rapidly; Mr. Pottinger, who has served the country faithfully for a very long period, and who is 69 years of age, will be superannuated; Messrs. Tiffin and Brady are being retained in their respective positions as General Traffic Manager and General Superintendent for the present, and Mr. Caron's position, which was created Dec. 29, 1910, is being abolished.

F. P. Gutelius, M. Can. Soc. C.E., General Manager, Canadian Government Railways.

FREDERICK PASSMORE GUTELIUS, M. Can. Soc. C.E., was born at Mifflinburg, Pa., Dec. 21, 1864, and graduated from Lafayette College as civil engineer in 1887. He entered railway service in 1888, since when he has been, to 1892, Assistant Engineer and Assistant Supervisor, Pennsylvania Rd., Pittsburg, Pa.; 1885 to 1898, General Superintendent, Columbia and Western Ry.; 1898 to 1900, Superintendent, C.P.R., Nelson, B.C.; 1900 to 1902, in various positions in C.P.R. Engineering Department; 1902 to Mar., 1906, Engineer of Maintenance of Way, C.P.R., Montreal; Mar., 1906, to Sept. 15, 1908, Assistant Chief Engineer, Eastern Lines, C.P.R., Montreal; Sept. 15, 1908, to Dec. 30, 1910, General Superintendent, Lake Superior Division, C.P.R., North Bay, Ont.; Dec. 30, 1910, to Jan., 1912, General Superintendent, Eastern Division, C.P.R., Montreal; Jan., 1912, to April 30, 1913, one of the commissioners to investigate expenditure and other matters in connection with the construction of the National Transcontinental Ry.

DAVID POTTINGER, I.S.O., was born at Pictou, N.S., Oct. 7, 1843, and entered railway service, July, 1863, since when he has been, to May, 1871, clerk in freight office, Nova Scotia Ry., Halifax; May, 1871, to Nov., 1872, cashier, same road; Nov., 1871, to Aug., 1874, station master, Intercolonial Ry., Halifax, N.S.; Aug., 1874, to Feb., 1879, General Storekeeper, same road; Feb., 1879, to Nov., 1892, Chief Superintendent, same road; Nov., 1892, to Apr., 1, 1909, General Manager, Intercolonial Ry. and Prince Edward Island Ry., Moncton, N.B.; Apr. 20, 1909, to April 30, 1913, Member, Government Railways Managing Board, and in charge of the general office work and accounting department, and from Feb., 1910, to Apr. 30, 1913, also Deputy Chairman, Government Railways Managing Board. He also acted for the Board, as Chairman of the Provident Fund Board, and of the Insurance Association.

Canadian Pacific Railway Passenger Department Bulletins.

The C.P.R. Passenger Department has for some time past been issuing monthly bulletins to the departmental officials, including ticket agents, etc., which are unique and in advance of anything we have seen got out for a similar purpose. They are attractively printed on tinted, toned paper, 8 by 11 inches, and contain a vast amount of information that materially assists officials in keeping thoroughly posted, and aids them in securing business.

As an example, the April bulletin, which is before us, contains 8 pages of matter, under 23 headings, as follows:—C.P.R. track service, with details of changes in service all over the system; changes in station names; C.P.R. hotels, with particulars of opening dates for the summer houses; Edmonton bridge, progress of work and brief description; automatic block signalling system; equipment, list of orders placed; C.P.R. steamships, descriptive matter of the two new Pacific liners; Canadian Australian Royal Mail Line, description of s.s. Niagara; British Columbia coast steamships, illustrated description; C.P.R. forestry protection and development, ticket steering passengers to the Orient or Australia; minor children unaccompanied must not be ticketed via Canadiaan-Australian line; printed destination tickets; refunds; baggage arrangements; new tariffs; local tariff book; homeseekers excursions; conventions; Brockville-Morristown ferry; connecting steamer lines; Canadian progress, with special relation to Toronto's development; Canadian West, development notes, containing a lot of information showing the progress of western communities. Excellent illustrations are given of the dining saloons of the new Pacific steamships and of the B. C. coast fleet.

The bulletins are issued by G. C. Wells, Assistant to Passenger Traffic Manager, Montreal, who is performing through them a service that cannot fail to stimulate the department's various officials and to equip them more thoroughly for the development of increased passenger travel.

* * *

A press report, purporting to have been received from Ottawa, dated Apr. 28, and published in the daily press recently, stated that the Dominion Government had awarded a contract to F. H. Hopkins and Co., Montreal, for machinery for dredges at the proposed Hudson Bay Ry. terminal, and the amount of the contract was given as $13,500. We are advised by the firm mentioned that they know nothing of such a contract having been awarded them.

April Copies of Canadian Railway and Marine World Wanted.

Through an unfortunate oversight in our office, no copies of Canadian Railway and Marine World were filed, and this was not discovered until the supply of the edition had been exhausted.

We are particularly anxious to get fifteen copies at least, and should be very much indebted to any subscribers who have April copies on hand, and who do not bind them in an annual volume, as many do, if they will mail them to us.

Prizes for Flower Gardens on the Canadian Pacific Railway.

The C.P.R., as in past years, is offering prizes for the best flower gardens on each general superintendent's division, as follows:—

General superintendent's grand prize for best station garden on whole division, $25.

Locomotive foreman's prize for best flower garden at locomotive house, 1st, $10; 2nd, $5.

Section foreman's prize for best flower garden surrounding section house, 1st, $10; 2nd, $5.

For best station flower garden on each superintendent's division. 1st, $10; 2nd $5.

Each man can only secure one prize, that is to say, if a station agent secures the general superintendent's grand prize, he cannot obtain the superintendent's prize.

Railway Route Maps Approved.

The Minister of Railways and Canals has approved route maps covering the following lines,—

Canadian Pacific Ry., Apr. 16, from Kipp, Alta., northeasterly, 40 miles;

Apr. 16, from Suffield to Blackie, Alta., about 90 miles;

Canadian Northern Ry., Apr. 16, revision of Regina-Red Deer line, 20.18 miles;

Apr. 19, from Deer Lake to Callendar, 68 miles.

Conductors' Wages on the Canadian Northern Railway.

It is said that an arrangement is being made between the Canadian Northern Ry. and its conductors, which will effect a settlement of the differences as to wages which has been the subject of investigation under the Industrial Disputes Investigation Act, 1907. The Board of Conciliation consisted of Mr. Justice Haggart, of the Manitoba High Court, chairman; W. Cross, Winnipeg, representing the company, and H. Holt, representing the men. The investigation was brought about owing to the company declining to grant a demand of the conductors for various changes in the existing schedule of rules and wages, including an increase of wages and a reduction in working hours from nine to eight a day. The board began its sittings Mar. 31, and its report was submitted to the Minister of Labor, April 25. The report, which is signed by the Chairman and H. Hall, recommends the adoption on July 1 of a new schedule providing for the payment to passenger conductors of an average wage of $165 a month, conductors on mixed and way freight trains to receive 4.80c per mile, and conductors on through freight and working trains 4.25c per mile. These rates involve increases over the schedule at present in force. The board also recommends that eight hours work per day "should be considered sufficient except in extreme cases." Mr. Hall, however, adds a statement in which he claims that the increases given in some of the mileage rates were inadequate, and that the new schedule should have been made effective from Jan. 6, instead of being set forward to July 1. A minority report was submitted by Mr. Cross, in which he claimed that the minimum guaranteed wages of the company's conductors compared favorably with the salaries of professional men, and had been increased over 40% since 1896, when the schedule was agreed upon, which schedule was 10% higher than the wages which were paid in 1896. He also claimed that the new schedule in some matters violated certain well known union principles.

Since the publication of the report the parties have been endeavoring to get together, with the result that an understanding has now practically been reached.

Canadian Railway Club's Annual Meeting.

The report presented at the annual meeting in Montreal, May 13, shows a membership of 800, with receipts for the year ended April 30 of $4,229.85, and a balance on hand of $3,626.93. The retiring President, Jas. Coleman, Superintendent, Car Department, G.T.R., was given a past president's jewel. The following are the officers, etc., for the current year:—

President, R. W. Burnett, General Master Car Builder, C.P.R.; 1st Vice President, W. McNab, Principal Assistant Engineer, G.T.R.; 2nd Vice President, C. Murphy, General Superintendent of Transportation, C.P.R.;

Executive Committee.—D. Crombie, General Superintendent of Transportation, G.T.R.; R. M. Hannaford, Assistant Chief Engineer, Montreal Tramways Co.; Prof. H. O. Keay, McGill University; E. C. Lloyd, Assistant Auditor of Stores and Mechanical Accounts, C.P.R.; J. Hendry, Master Car Builder, G.T.R.; L. C. Ord, General Car Inspector, C.P.R.

Audit Committee.—E. B. Tilt, Engineer of Tests, C.P.R.; W. H. Robb, Canuck Supply Co.; C. Manning, Secretary to Superintendent of Motive Power, G.T.R.

Secretary.—Jas. Powell, Chief Draughtsman, G.T.R.; Treasurer, W. H. Stewart, Assistant Superintendent, C.P.R.

All of the officers, etc., elected are residents of Montreal, except W. H. Stewart, of Ottawa. The meeting was followed by a smoking concert.

Dominion Government Railway to Hudson Bay

A short train made the first trip across the bridge over the Saskatchewan River at Pas, Man., May 15. This marks the completion of the first stage of the work, and gives direct railway connection with the construction work now in progress to Port Nelson. Tracklaying is in progress, and it is expected to have the first 85 miles completed this season. The tracklaying and ballasting is being done by Boyd and McArthur, and the building of stations, etc., by McMillan Bros., Winnipeg. Forty carloads of material for the general contractors were delivered at Pas, May 5, and are being taken in to the grading camps beyond mileage 85. (May, pg. 225.)

In order to prevent the crowding out of paying passengers on its trains, the Chicago and Alton Rd. has issued instructions to its employes to take places in smoking cars, whenever necessary, when travelling on the company's service.

Mainly About Transportation People.

Mrs. Flock, wife of J. H. FLOCK, K.C., London, Ont., Honorary Counsel, Canadian Ticket Agents' Association, died May 16.

Miss Helen McNicoll, daughter of D. McNicoll, Vice President, C.P.R., has been elected a member of the Royal Society of British Artists.

D. McNICOLL, Vice President, C.P.R., returned to Montreal, May 1, via Victoria, Vancouver and Winnipeg, after a short holiday in California.

R. BLACK, Trainmaster, Pere Marquette Rd., St. Thomas, Ont., was reported, May 7, to be recovering from an attack of typhoid fever.

Mrs. Phippen, wife of F. H. PHIPPEN, General Counsel, Canadian Northern Ry., Toronto, was presented at court in London, Eng., recently.

J. QUINLAN, District Passenger Agent, G.T.R., Montreal, who has not been in good health recently, left early in May for Hot Springs, Ark., for treatment.

J. QUINLAN, District Passenger Agent, G.T.R., Montreal, who has not been well for some little time, went to Hot Springs, Ark., early in May, for treatment.

A. BRITTAIN, for many years [illegible] general [illegible] Montreal, died there May 7. His father was a well known railway contracting engineer in the east of England.

A. KNIGHT, foundry foreman, was presented with a [illegible] by the employes of the Canadian Northern Ry. car shops at Winnipeg, May 1, on retiring from the company's service.

M. G. MURPHY, District Passenger Agent, C.P.R., Toronto, left for Mount Clemens, Mich., May 1, to recuperate after an attack of inflammatory rheumatism. He returned to duty May 19.

A. D. SWAN has resigned his position as assistant engineer to the Montreal Harbor Commission, and will leave shortly to take charge of some harbor construction work in Chile, South America.

M. T. MALONEY, an employe of the Allan Steamship Line, and well known in marine circles at Montreal, Halifax, N.S.; St. John, N.B., and Boston, Mass., died at Montreal, May 15.

The Canadian Ticket Agents' Association has admitted the following as members: H. G. Letch, B. of Q. R., Tamworth, Ont.; R. Harvey, G.T.R., Parkhill, Ont.; C. E. Jenney, G.T.R., Toronto.

H. M. PRICE, who died at Quebec, April 29, was a [illegible] of the Quebec Bridge Co., and up to the time of his death was a director of the Lake Superior Corporation.

H. WILLIAMS was presented with a mahogany [illegible] by the staff of the G.T.R. pay office, Montreal, recently, on his retiring from the position of Paymaster.

H. P. TIMMERMAN, Industrial Commissioner, C.P.R. Eastern Lines, and Mrs. Timmerman, [illegible] for the summer at Duck Cove, near St. John, N.B.

W. RICHARDSON, [illegible] Richardson, Ltd., Newcastle-on-Tyne, Eng., [illegible] visit.

F. M. RATTENBURY, who designed the C.P.R. hotel at Victoria, B.C., and who is Reeve of Oak Bay, near that city, has presented [illegible] for park purposes.

D. C. COLEMAN, General Superintendent, C.P.R., Manitoba Division, gave an address on "The Human Side of a Great Corporation," before the Winnipeg Advertising Club, May 9.

D. HOGAN, formerly Foreman, C.P.R. Bridge and Building department at Windsor, Ont., was presented with a sum of money by the employes of the department, May 5, on retiring after 28 years service.

W. E. DUPEROW, General Agent, Passenger Department, Grand Trunk Pacific Ry., Vancouver, visited his office, May 1, after having been absent for some time on account of illness.

SIR THOS. G. SHAUGHNESSY, Lady Shaughnessy and the Misses Shaughnessy, have returned to Montreal, being passengers on the Empress of Ireland, which reached Quebec from Liverpool, May 23.

F. P. GUTELIUS was the principal guest at a dinner given by the Halifax Board of Trade, May 16, on his first visit to the city as General Manager of the Government Railways.

G. T. Bell,
Passenger Traffic Manager, Grand Trunk Ry. and G.T. Pacific Ry.

M. E. DUNCAN, Vice President and General Manager, Canadian Car and Foundry Co., Montreal, is recovering from the effects of a recent operation at Johns Hopkins Hospital, Baltimore, Md.

J. A. TELFER was presented with a purse of gold by the G.T.R. passenger staff, Toronto, May 19, on retiring from the position of city ticket agent there. He has retired from railway work on superannuation, after about 50 years service.

T. BELL, who recently retired from the C.P.R. advertising department, Montreal, has received the compliment of gifts from the staff, for himself, wife and children, recently, prior to his leaving to take up his residence in Winnipeg.

A. L. Smith, a gentleman cadet at the Royal Military College, Kingston, Ont., aged 17, and son of the late CECIL B. SMITH, [illegible] of Toronto, was drowned near Kingston, May 2, with another cadet while canoeing.

W. DOWNIE, General Superintendent, Atlantic Division, C.P.R., St. John, N.B., has been granted leave of absence for a year. He will pay a short visit to the Pacific coast and spend the remainder of his holiday in Europe.

T. BOWES, who has for some years been in charge of the Intercolonial Ry. freight sheds at Halifax, N.S., retired May 1, after a continuous service of 50 years with the I.R.C. and its predecessors. He was presented with an address and a purse of gold.

R. WAUGH was presented with a quantity of cut glass, recently, by a number of business friends, on the occasion of his retirement from the position of G.T.R. agent at Stratford, Ont., to take a new position in the transportation department at Hamilton.

Z. A. LASH, K.C., director and Senior Counsel, Canadian Northern Ry., Toronto, has been appointed to represent the Dominion Government on the special commission to adjust the differences between the Dominion and British Columbia Governments, regarding subsidies.

W. J. GRANT, District Freight Agent, C.P.R., Hamilton, Ont., and Mrs. Grant, sailed from Montreal, May 15, by the s.s. Tyrolea, for Trieste, Austria, for a trip through Austria, Germany, Belgium, Holland and England, expecting to return to Hamilton about Aug. 1.

J. L. WELLER, Chief Engineer, Welland Canal, who recently returned from the Panama Canal, where he had been to study various matters in connection with canal construction, has had one eye removed. His eyesight has troubled him for some time, and the removal of one eye was decided on in the hope of saving the sight of the other.

C. MURPHY, General Superintendent of Transportation, C.P.R. Eastern Lines, became suddenly ill at Toronto, May 15, and was taken to the Western Hospital, where he was found to be suffering from appendicitis. He was, however, much better the following day, and subsequently returned to Montreal, where he rapidly improved.

D. M. McINTYRE, K.C., Chairman, Ontario Railway and Municipal Board, was presented with an oil portrait of himself, and a tie pin, by citizens of Kingston, Ont., May 1, in recognition of his services as Mayor and City Solicitor there. He handed over the portrait to the Mayor to be placed in the city hall with portraits of other former mayors.

G. E. McGLADE, C.P.R. city ticket agent, agent C.P.R. telegraphs, and agent Dominion Express Co., Brockville, Ont., has resigned these positions to become secretary of the reorganized Grimsby Beach Co., Grimsby, Ont. On May 9, he was presented with an address and $500 in gold by the citizens of Brockville, on leaving to take over his new position.

COLLINGWOOD SCHREIBER, C.M.G., General Consulting Engineer to Dominion Government, arrived in Vancouver, B.C., from Ottawa, May 17, on his way to the Hazleton district to make an inspection of construction on the Grand Trunk Pacific Ry. He was accompanied on part of the trip by Mrs. Schreiber and Miss Grace Ritchie.

J. R. BOOTH, who was the builder and practically the owner of the Canada Atlantic Ry. (now part of the G.T.R.), had a narrow escape from drowning, May 6, owing to the bursting of a dam on the Ottawa River, at one of the lumber plants which he operates. He is over 80 years of age and was superintending the work at the yard at the time of the accident.

SIR WM. MACKENZIE, Lady Mackenzie

and A. D. Davidson, Land Commissioner, Canadian Northern Ry., arrived at Quebec by the s.s. Royal Edward May 5, after spending some weeks in Europe. Sir William is reported to have stated that he had secured ample funds for some time to come, which would be applied largely to the extension of the main transcontinental line and other lines already in course of construction.

E. H. McHENRY, formerly Chief Engineer, C.P.R., who recently resigned the vice presidency of the New York, New Haven & Hartford Rd., has formed a partnership with W. S. Murray, the Chief Electrical Engineer of the company, who has also resigned. The firm, to be known as McHenry & Murray, engineers, have opened an office in New Haven, Conn., as railway engineers, and will take over practically the entire electrical engineering force of the New Haven Rd. and will direct all the new electrification work of that company as consulting and constructing engineers.

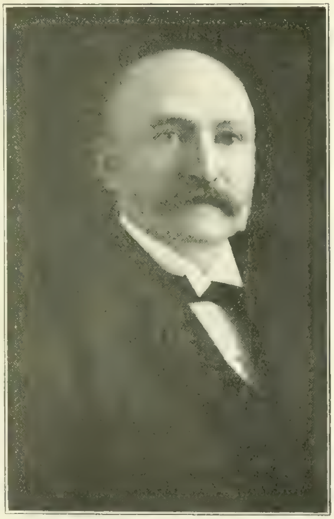
J. A. CHARTERS, whose appointment as Agent, Sleeping and Dining and Parlor Cars and News Department, C.P.R., Vancouver, B.C., was announced in our last issue, was born at Moncton, N.B., Sept. 3, 1884, and entered railway service Mar. 12, 1906, since when he has been, to Sept., 1906, stenographer, General Manager's office, Intercolonial Ry., Moncton, N.B.; Sept., 1906, to Mar., 1907, stenographer, Sleeping, Dining and Parlor Car Department, C.P.R., Montreal; Mar. to Aug., 1907, stenographer, Engineering Department, G. T. Pacific Ry., Winnipeg; Aug., 1907, to Dec., 1908, chief clerk, Sleeping, Dining and Parlor Cars and News Department, C.P.R., Winnipeg; Dec., 1908, to Feb., 1913, chief clerk, same department, C.P.R., Vancouver, B.C.

MALCOLM C. MACFARLANE, who has been appointed acting District Engineer, District F, National Transcontinental Ry., was born at Almonte, Ont., Apr. 23, 1855, and commenced railway service in 1881, since when he has been, to 1885, Resident Engineer, Kingston and Pembroke Ry., between Mississippi station and Renfrew, Ont.; 1889 to 1890, Assistant Engineer in connection with sewerage plans at Brockville, Ont.; 1891 to 1895, Assistant State Engineer in Wyoming; 1895 to 1898, in U.S. Government service in Wyoming, Kansas and Oklahoma; 1898 to 1905, Location and Construction Engineer, Canadian Northern Ry., in Ontario, Manitoba, Saskatchewan and Alberta; 1905 to Apr., 1913 Division Engineer, Division F, National Transcontinental Ry. in Ontario.

G. T. BELL, who has been appointed Passenger Traffic Manager, G.T.R. and G.T. Pacific Ry., Montreal, was born there Sept. 7, 1861, and entered railway service in 1878, since when he has been consecutively, to Nov., 1880, clerk, car mileage office, Great Western Ry.; Nov., 1880, to Nov., 1882, stenographer, General Passenger Agent and Rate Clerk's Office, same road; Nov., 1882, to Jan. 1, 1884, Chief Clerk, Assistant Passenger Agent's Office, G.T.R.; Jan. 1, 1884, to Apr. 25, 1892, Chief Clerk, General Passenger Agent's Office, same road; Apr. 25, 1892, to Apr., 1896, Assistant General Passenger Agent, same road, Montreal; Apr., 1896, to Aug., 1899, Assistant General Passenger and Ticket Agent, same road, Montreal; Aug., 1899, to May, 1900, First Assistant General Passenger and Ticket Agent, same road, Chicago, Ill.; May, 1900, to Aug., 1908, General Passenger and Ticket Agent, same road, Montreal; Aug., 1908, to Apr., 1909, General Passenger and Ticket Agent, G.T.R., and G.T.P.R., Montreal; Apr., 1909, to May, 1913, Assistant Passenger Traffic Manager, G.T.R. and G.T.P.R., Montreal.

Death of W. E. Davis, Passenger Traffic Manager, Grand Trunk Railway.

The death took place at Ashleigh, Ste. Anne de Bellevue, Que., somewhat suddenly, May 15, of W. E. Davis, one of the best known railway traffic officials on the continent. He was at his office on May 13, but was taken ill on the following day, and died as stated. He had been suffering for some time of cirrhosis of the liver. The funeral took place May 17, when a large number of representatives of Canadian and U. S. railways attended. A special train left Bonaventure station, conveying a large party to Ste. Anne de Bellevue, where a portion of the service was conducted. The coffin was subsequently placed on the official car Muskoka, the special train returned to Montreal, and the funeral service was completed at Mount Royal cemetery. While this was in progress, flags on all G.T.R. buildings from the Atlantic to the Pacific were half-masted, and the city ticket offices in the larger cities were closed for half an hour. He was a member of the Isleway Club of Ste. Anne de Bellevue, and the Canadian Club of Montreal, and was also Vice President of the Northern Navigation Co., one of the constituent companies of the Richelieu and Ontario Navigation Co.



The Late W. E. Davis.

He was born at Wilson, N.Y., Aug. 2, 1850, and entered railway service in 1868, as office boy on the Hannibal and St. Joseph Rd., now a part of the Burlington Rd. In Aug., 1877, he was appointed Passenger Agent, Chicago and Lake Huron Rd., Chicago, Ill., which later included the Detroit, Grand Haven and Milwaukee Ry., Toledo, Saginaw and Muskegon Ry., and Cincinnati, Saginaw and Mackinaw Ry., remaining in that capacity until the consolidation of these G.T.R. subsidiary companies under the new management, Apr. 1, 1896, since when he has been, to May 1, 1900, General Passenger Agent, G.T.R., Montreal; May 1, 1900, to May 15, 1913, Passenger Traffic Manager, G.T.R., and from Sept., 1908, also Passenger Traffic Manager, G.T. Pacific Ry., Montreal. He was also a director and one of the Vice Presidents of the Northern Navigation Co., one of the constituent companies of the Richelieu and Ontario Navigation Co.

The higher officials of the company have given expression to their appreciation of the late Mr. Davis' work, and of his unassuming and kindly nature, which is evidenced by his large circle of friends of all classes. On account of his great liking for the French Canadian people, arrangements were made whereby he was buried near the grave of the late Dr. Drummond, the habitant poet. The late Mr. Davis was one of the earliest subscribers to Canadian Railway and Marine World, being on the subscription list continuously from its inception in 1898.

The Grand Trunk Railway Semi Annual Meeting.

The report for the half year ended Dec. 31, 1912 was considered at the semi annual meeting in London, Eng., recently. The revenue account shows gross receipts, £4,612,758 11s. 0d.; working expenses, £3,334,682 4s. 10d.; net receipts, £1,278,076 6s. 2d.; less balance from rentals, outside operations and car mileage, £87,084 13s. 9d., leaving a total net revenue £1,190,991 12s. 5d.; to which are added amounts received from controlled companies and general interest account, £192,055 15s. 6d., making total net revenue receipts of £1,383,047 7s. 11d., an increase of £197,992 as compared with the same period in 1911.

The Chairman of the Board, A. W. Smithers, in moving the adoption of the report, referred to the death of Sir William H. White, and the appointment of W. Molson Macpherson as his successor as a director. In analyzing the report he alluded to the largely increased item for car rentals, due to having to release G.T. Pacific Ry. cars, which had been used on the G.T.R., causing the company to use cars of other roads, and intimated that power will shortly be asked for the incorporation of the Canada Atlantic Ry. as an integral portion of the system, so that the finances may be rearranged and fresh capital introduced, which will be necessary on account of expected increased traffic due to the operation of the G.T. Pacific Ry. The Detroit, Grand Haven and Milwaukee Ry. finances will also be reorganized shortly. In dealing with the G.T. Pacific Ry. he stated that track had been laid for 1,124 miles west of Winnipeg and 195 miles east of Prince Rupert, leaving about 427 miles to complete, which it is anticipated will be completed by the fall.

Reference was also made to the difficulties experienced during the past year, due to the unexpected death of the then President, C. M. Hays, and a difficult money market, the latter caused by the Balkan war and possible European complications. A number of new works were postponed or stopped, in order to continue work on the G.T.P.R. main line, and generally speaking, the difficulties had been surmounted. He eulogized the President, E. J. Chamberlin, considering his record to date highly satisfactory, judged by the test of the state of traffic.

The report was adopted, and the following dividends for the half year declared: 2% on the 4% guaranteed stock; 2½% on the first preference stock; 2½% on the second preference stock, and 2% on the third preference stock. The Grand Trunk Act, 1913, and the Grand Trunk Pacific Act, 1913, were adopted, and the retiring directors, Sir Henry M. Jackson, Sir Felix O. Schuster, Lord Welby, and E. J. Chamberlin, were re-elected; as were also the auditors, H. C. Newton, for England, and B. H. Brown, for Canada.

Railway Rolling Stock Notes.

The Intercolonial Ry. has ordered 500 steel frame box cars, 30 tons capacity, from the Nova Scotia Car Works.

The Duluth, Winnipeg and Pacific Ry. (C.N.R.) has ordered 200 steel underframe flat cars, and has received 100 box cars from the Mount Vernon Car Mfg. Co.

The C.P.R., between Apr. 12 and May 14, ordered the following rolling stock:—14 vans, 3 freight refrigerator cars, 8 stock cars, and 1 stores supply car, from its Angus Shops, and 500 steel frame box cars from the Canadian Car and Foundry Co.

The Intercolonial Ry. has received the following additions to rolling stock,—140 box cars, 60,000 lbs. capacity, and 32 box cars, 80,000 lbs. capacity, from Canadian Car and Foundry Co.; 9 box cars, 60,000 lbs. capacity, from Nova Scotia Car Works; 4 switching locomotives from Canadian Locomotive Co., and 1 freight locomotive from Canada Foundry Co.

The Grand Trunk Ry. has ordered 2,000 box cars from the Canadian Car and Foundry Co.; 2,000 box cars from the Eastern Car Co.; 50 Mikado locomotives from the Montreal Locomotive Works; 3,000 box cars from the Western Steel Car Co.; 1,000 gondola cars from the Pressed Steel Car Co.; and 25 Mikado locomotives from the Baldwin Locomotive Works.

The Canadian Copper Co., Copper Cliff, Ont., has ordered 25 Otis all steel ore cars, from Hart-Otis Car Co. These cars will be built by Canadian Car and Foundry Co. Following are the chief dimensions:—

[illegible]

The Canadian Northern Ry., between Apr. 14 and May 14, received the following additions to rolling stock:—6 first class cars, 5 baggage cars, 200 box cars, from Canadian Car and Foundry Co.; 3 second class cars, 100 flat cars, from Crossen Car Co.; 80 Hart cars, from Hart-Otis Car Co.; 2 combination cars, from Preston Car and Coach Co.; 10 light and 15 heavy ten wheel locomotives from Montreal Locomotive Works; [illegible] locomotives from Canadian Locomotive Co.

The C.P.R., between Apr. 12 and May 14, received the following additions to rolling stock:—[illegible] tourist cars, 5 sleeping cars, 10 suburban cars, 6 box baggage cars, 12 baggage and express cars, 6 class G2 locomotives and 2 class E3 locomotives, from its Angus shops; 567 steel frame box cars, 423 steel frame flat cars, 1 ballast car; 3 tourist cars, from Canadian Car and Foundry Co.; 284 steel frame [illegible] steel frame box cars from Nova Scotia Car Works; [illegible] from Canadian Allis-Chalmers, Ltd.; 2 Jordan ballast [illegible] locomotives from Montreal Locomotive Works; [illegible] Smith Co.; 16 air dump cars from Western Wheeled Scraper Co.; 10 sleeping cars from Pullman Co.

[illegible] tons capacity, to C.P.R.; 2 slag cars, for its [illegible] car, to F. H. Hopkins and Co.; 104 steel frame box cars, 30 tons capacity, 161 steel frame box cars and 19 wooden ballast cars, 40 tons capacity, to Intercolonial Ry.; 3 steel street car bodies, to Montreal Tramways Co.; 100 wooden ballast cars, to J. D. McArthur Co.; 10 steel underframe flat cars and 8 wooden ballast cars, 40 tons capacity, to Toronto, Hamilton and Buffalo Ry.; 8 steel underframe flat cars, 40 tons capacity, to Windsor, Essex and Lake Shore Road Ry.

Reports as to large orders for rolling stock to be placed by the Canadian Northern Ry. and the G.T. Pacific Ry. are running their course through the daily press, and have even been reproduced as authentic by some technical papers. The value placed on these phantom orders is $85,000,000, of which the C.N.R. is credited with $50,000,000 worth, and the G.T.P.R. with the balance. So far as one of the companies is concerned, we have been officially advised that there is no truth in the report, and its author can scarcely be considered responsible, and probably the same can be said of the report as to the other company. The information as to rolling stock ordered and received by the various companies, as published by Canadian Railway and Marine World, is gathered from official sources, and great care is exercised to have it as complete and up to date as possible, so that no one interested in such matters need go beyond our pages for such information as he may require on the subject.

Railway Finance, Meetings, Etc.

Canadian Pacific Ry.—The directors have declared a dividend of 2½% on the common stock, for the quarter ended Mar. 21, being at the rate of 7% per annum, from revenue, and 3% per annum from interest on the proceeds of land sales and from other extraneous assets, payable June 30, to shareholders of record May 31.

Grand Trunk Pacific Ry.—There has been filed with the Secretary of State at Ottawa certificates showing that the G.T.P. Ry. Act of 1913 had been assented to and accepted by the holders of debentures issued under chap. 100 of the statutes of 1906, and by the shareholders.

Grand Trunk Ry.—There has been filed with the Secretary of State at Ottawa, certificate of the chairman of the general meeting of shareholders held in London, Eng., April 10, at which the G.T.R. Act of 1913 was assented to and accepted.

Kettle Valley Ry.—A special meeting of shareholders will be held at 45 King St. West, Toronto, June 2, to approve of a lease of the company's lines to the C.P.R. Co., and to authorize an issue of bonds to defray the cost of construction of the line.

Lake Erie and Detroit River Ry.—The annual meeting was held May 6. Following are the directors for the current year:—S. M. Felton, E. N. Weller, Detroit, Mich.; A. [illegible], H. L. McDowell and J. A. McDougall, Walkerville, Ont.

Napierville Jct. Ry.—The Delaware and Hudson Co.'s report for 1912 shows an increase in N.J.R. operating revenue over 1911 of $12,400.11, and in operating expenses an increase of $11,089.12. The net income was $10,416.44, or 3.23% on the capital stock outstanding. The reasons given for the increase in operating expenses were severe weather conditions in the early part of the year and extensive repairs to locomotives. There was also an increase in claims for personal injuries of $5,000.

Ottawa and New York Ry.-New York and Ottawa Ry.—These two lines, which extend from Ottawa, Ont., to Tupper Lake, N.Y., the International boundary, being the end of each, are owned by the New York Central and Hudson River Rd. In order to bring about a simplification of accounting the N.Y.C. and H.R. Rd. has absorbed the N.Y. and O. Rd., which has ceased to exist. There will be no change in the management or operation of the Ottawa and New York Ry., the Canadian line, which crosses the International boundary by the bridge across the St. Lawrence River at Cornwall, Ont.

Quebec, Montreal and Southern Ry.—The Delaware and Hudson Co.'s report for 1912 shows an increase in Q.M. & S.R. operating revenue of $224,466.20 over 1911. The operating expenses increased $16,109.96, and the net income, independent of interest charges due to the parent company, were $156,378.98, an increase of $19,599.18.

Rutland Rd.—There has been deposited with the Secretary of State at Ottawa, an agreement between G. T. Jarvis, D. W. Pardee and E. L. Rossiter, vendors; the Guaranty Trust Co., of New York, as trustees, and the Rutland Rd., and also a lease to the Rutland Rd., the Guaranty Trust Co. being trustee, dated April 1. These documents refer to the Rutland and Noyan Ry., which the Rutland Rd. owns in Canada.

Temiscouata Ry.—Net earnings for Feb., $5,420. Aggregate net earnings for eight months ended Feb. 28, $39,982.

Grand Trunk Railway Betterments, Construction, Etc.

Southern New England Ry.—The President and other officers of the G.T.R. and the subsidiary lines interested had a conference at Providence, R.I., May 1, as to the situation of the Southern New England Ry. projects, but nothing was given out, or has since transpired as to the results of the conference.

Owen Sound-Meaford Line.—The question of the building of a line from Owen Sound to Meaford, Ont., is again being discussed. The people of Owen Sound have expressed their readiness to guarantee bonds for $200,000 if the G.T.R. will renew the offer made a few years ago. C. Eaton is reported to be in communication with the G.T.R. on the matter.

Holmdale Switch.—The Brantford, Ont., City Council decided, April 29, to repudiate the agreement it had made with the G.T.R. as to the construction of a switch into the Holmdale district.

Windsor Yards Electrification.—In connection with the prosecution of the G.T.R. at Windsor, Ont., for a violation of the smoke bylaw, May 6, the company's officials present said if the experiments being made to reduce the smoke did not prove satisfactory to the court, the company would consider the question of electrifying the yards between Windsor and Walkerville.

Locomotive House at Liskeard.—Press reports state that the company has purchased land in Liskeard, Ont., on which a locomotive house is to be built. The G.T.R. is operating over the Timiskaming and Northern Ontario Ry., using its own rolling stock, but has at present no locomotive house, except at Nipissing Jct., the point of junction. At Cochrane the T. and N.O. Ry. connects with the National Transcontinental Ry., which is to be operated by the Grand Trunk Pacific Ry. Liskeard would therefore form a divisional point between the two points of junction with the G.T.R. lines. (May, pg. 227.)

Canadian Northern Railway, Construction, Betterments, Etc.

Montreal-Ottawa-Port Arthur Line.—D. R. Hanna, Third Vice President, is reported to have stated in a recent interview that it is expected to have the track laid on this line by the fall, with the exception of the section between Ottawa and Capreol, Ont., on which there is considerable heavy construction.

The Montreal-Hawkesbury portion of the line is well advanced, the principal work necessary to its completion being the bridges at the Bank River. The Hawkesbury-Ottawa line is completed and in operation. In connection with this part of the line, the company asked the Dominion Parliament to confirm the sale to it of a portion of the property of the Carillon and Grenville Ry. As this sale is a matter of dispute with the Central Ry. of Canada, and is now before the courts, the application was withdrawn.

The line is under construction from Ottawa westwards to Capreol, where connection will be made with the Toronto-Sudbury line. Eastward from Port Arthur the line is well advanced to completion, and this will be completed to Ruel, the point to which the line has been built from Sudbury.

Canadian Northern Ontario Ry.—The last section of the Toronto-Ottawa line to be completed is that between the Jack River and Smiths Falls, Ont. The ballasting and final completion of the line will take several months.

Sir Donald Mann, Vice President, had an interview with the Mayor of Hamilton, May 12, in reference to the route of the line there, the location of passenger and freight terminals, and other matters.

We are officially advised that the company has a route surveyed for a line from north of Parry Sound to Callendar, Ont., but it is not likely that the line will be built this year. The proposed line leaves the Toronto-Sudbury line at mileage 170 north of Toronto, and runs northeasterly through the villages of Whitestone, Golden Valley, Restoule and Nipissing to a junction with the company's transcontinental line near Callendar. The standard of curvature will be six degrees, although there will be one or two which will be temporarily sharper. The line will cross the Whitestone, Maganatawan, Pickerel, Commanda Creek, and Wistiwasing streams. The crossings of the Maganatawan and South Rivers are the only crossings of any moment—the former comprising a deck span of 100 ft. and some 300 ft. of trestle approach, 45 ft. above the water; and the latter 300 ft. long and 25 ft. high. There is a very large quantity of timber to be brought out from the townships of Mackenzie, Mills and Patterson, the estimate is from 350 to 400 million feet, 100 million feet being pine. Aside from running through this area of timber, the line traverses for over half the distance a very fair agricultural country, which has been settled since the early days of the lumber industry.

Canadian Northern Ry.—The big fill on the cut off at Rainy Lake, Ont., which has been under construction for several years, and which has cost about $3,000,000, was completed May 12. The work was fully described in our issue of Aug., 1912.

Application is being made to the Board of Railway Commissioners for a recommendation to the Governor-in-Council to sanction the amalgamation of the C.N.R. and the C.N. Branch Lines Co.; under which charter a number of branch lines in Saskatchewan and Alberta have been built.

Canadian Northern Pacific Ry.—A special train conveying members of the British Columbia Government ran over the line from New Westminster to the end of steel at Yale, May 14. Reports of the progress of construction show that a distance of about 60 miles separates the grading gangs which are working east and west, and this gap is expected to be nearly closed up by the end of the year. The bridge work is also being rapidly pushed.

Construction on the branch from Kamloops to Vernon, etc., is, we are advised, suspended at present. There is said to be no intention on the part of the company to electrify it at present, as stated in the daily press. (May, pg. 227.)

Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those for 1911-12, from July 1, 1912:—

	Gross Earnings	Expenses	Net Earnings	Increase
July	$1,829,700	$1,335,100	$494,600	$133,000
Aug	1,745,800	1,375,000	270,800	56,100
Sept.	1,671,500	1,248,000	423,500	4,100
Oct.	2,351,200	1,645,900	705,300	24,000
Nov	2,509,700	1,631,900	877,800	212,600
Dec.	2,132,000	1,551,000	581,000	77,200
Jan	1,513,400	1,243,200	270,200	46,500
Feb.	1,398,700	1,130,200	268,500	30,900
Mar	1,685,900	1,254,400	431,500	4,700
	$16,837,900	$12,414,700	$4,423,200	$590,000
Incr	$2,429,000	$1,839,000	$590,000	

Mileage in operation during the foregoing period, 4,927, against 3,981 in the previous year.

Approximate earnings for April, $1,745,300, against $1,608,100 for April, 1912.

Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases or decreases, compared with those for 1911-12, from July 1, 1912:—

	Gross Earnings	Expenses	Net Earnings	Increase
July	$12,052,398.58	$7,604,221.68	$4,448,176.90	$745,148.57
Aug	12,251,715.87	7,533,790.21	4,717,925.66	642,354.65
Sept	11,579,733.98	7,329,430.13	4,250,303.85	332,857.05
Oct	13,060,397.80	7,999,510.61	5,060,887.19	379,782.44
Nov	12,362,669.42	8,104,527.38	4,258,142.04	270,772.75
Dec	12,219,278.72	7,823,559.21	4,395,719.51	289,989.25
Jan	9,679,607.39	8,017,233.61	1,662,373.78	579,516.08
Feb	9,747,685.55	7,227,616.21	2,520,069.34	136,202.67
Mar	11,111,892.78	7,256,475.89	3,855,416.89	137,015.78
	$104,065,377.09	$68,896,364.93	$35,169,012.16	$3,513,639.04
Inc.	$14,719,003.33	$11,205,364.29	$3,513,639.04	

Approximate earnings for April, $11,476,000, against $11,028,000 for April, 1912.

Grand Trunk Railway Earnings, Etc.

The following figures show the earnings and expenses of the G.T.R., C.A.R., G.T. Western Ry. and D.G.H. & M.R. for four months ended Apr. 30, as compared with those for same period in 1912:—

	1913	1912	Increase
G.T.R.	$13,352,824	$11,500,188	$1,852,636
C.A.R.	740,411	639,027	101,384
G.T.W.R.	2,369,509	2,118,952	250,557
D G.H & M R	724,666	650,598	74,068
Totals	$17,187,410	$14,908,765	$2,278,645

Grand Trunk Pacific Railway Earnings.

The earnings of the Prairie Section and Lake Superior Branch for April, were $502,706, and the aggregate for four months ended Apr. 30, $1,670,011.

At the annual convention of the Master Car and Locomotive Painters' Association of U.S. and Canada, which will be held at Ottawa, Sept. 9 to 12, papers will be read on railway paint shop supplies, finishing steel car equipment, safety first as regards the paint shop, economy in locomotive painting, paint protection for steel equipment, silvering mirrors, removing old paint from equipment and brushes.

National Transcontinental Railway Construction.

The contractors for the building of the terminals for this railway at Quebec—M. P. and J. T. Davis—started work April 30 at Cap Rouge, and along the river frontage from the site of the Quebec Bridge to the Champlain Market. The steel work for the superstructure of the bridge is being delivered.

The locomotive shed to be built at O'Brien, Que., will have accommodation for 12 locomotives, and will have boiler and engine rooms attached. The foundation will be of concrete, and will be carried up to 3 ft. 11¼ in. above base of rail, the remainder of the wall to be of brick. The roof, of tar and gravel, will be supported on wooden columns, girders and beams, in the roundhouse part, and on steel trusses in the boiler and engine room part. The stalls will be 91 ft. long; the engine room will be 43 ft. by 48 ft. 2 in., and the boiler room 29 ft. 3 in. by 43 ft.

Owing to the small amount of work necessary to complete the line on Districts D and E, T. S. Armstrong, District Engineer, took over the work of the two districts May 1, the engagement of H. M. Balkam, of District D, being terminated April 30. (May, pg. 226.)

Grand Trunk Pacific Railway Construction.

J. E. Dalrymple, Vice President, returned to Montreal, May 13, after having completed a trip of inspection over the line. He stated that a regular passenger and freight service will be put in operation from Montreal and Toronto, to Edmonton, June 7. The train service will be to Sarnia, thence by the Northern Navigation Co.'s vessels to Fort William. From this point a train service will be operated over the G.T.P.R. Lake Superior branch to the junction with the National Transcontinental Ry,; thence over that line to Winnipeg, then over the G.T.P. Ry. to Edmonton. The section of the N.T.R. between Lake Superior Jct. and Cochrane, Ont., is expected to be open for traffic by the end of August, when a regular train service will be put on from Toronto to Cochrane, Ont., by G.T.R. to Nipissing Jct., thence over the Timiskaming and Northern Ontario Ry. to Cochrane. On the G.T.P.R. line west of Winnipeg, Mr. Dalrymple stated that construction is being pushed west of Tete Jaune Cache, by 10,000 men. There is 425 miles between the ends of steel being pushed west and that coming east from Prince Rupert. At the Pacific Coast terminal it is proposed to build an elevator with a capacity of 10,000,000 bush.

Collingwood Schreiber, C.M.G., Dominion Government General Consulting Engineer, is on a trip of inspection over the line. J. W. Stewart, of Foley, Welch and Stewart, left Vancouver, May 12, for Prince Rupert and Hazelton, B.C., where he had arranged to meet Mr. Schreiber.

Tracklaying has been completed on the Regina-International boundary branch, and connection has been made with the Great Northern Ry. branch from Neche, N.D.

The site of the N.W.M.P. barracks at Calgary, Alta., was taken over by the G.T.P. Ry. May 11, and work will be started on an early date on laying it out for terminal purposes. (May, pg. 226.)

The Minister of Railways and Canals has given notice of a resolution in the House of Commons, providing for an increase in the salary of the Chief Railway Commissioner, from $10,000 to $12,500 a year.

Canadian Pacific Railway Construction, Betterments, Etc.

Atlantic Division.—W. Downie, General [illegible] N.B., May [illegible] Mr. Downie is reported to have said the C.P.R., while taking over the line, did not [illegible] until after the completion of the Frederic[illegible] line.

Eastern Division.—Work was resumed May 1, on the second track, which has been [illegible] between Farnham and St. Johns is expected [illegible] of the year.

We are officially advised that it is not [illegible] this year on the extension of the Northern Colonization Ry. from Mount Laurier to a junction with the Ottawa, Northern and Western Ry. at Maniwaki, Que.

Ontario Division.—A [illegible] at North Toronto has been so far completed that a start was made in operating trains over it May 12. There is a great deal of filling yet to be done.

The second track being constructed from the end of the present track, west of Islington, to Guelph Jct., will be laid south of the present track, 13 ft. centre to centre. There will be no change of gradients or alignment. There will, however, be some sidings put in at different points, to facilitate traffic. The work is expected to be completed by the fall. Johnston and Girouard are the contractors, and a good deal of local labor is being employed. F. W. Morrison, Dixie, Ont.; G. Raynor, Streetsville, Ont., and W. Maharg, Guelph Jct., are the resident engineers in charge; with H. Wellwood as District Engineer, the whole work coming under C. W. P. Ramsay, Engineer of Construction, Montreal.

Pacific Division.—The second track work [illegible] ranged for in the way of reducing gradients. The new work will reduce the summit by 533 ft. The terminal, which will be built under the Selkirks, will be 28,000 ft. [illegible] sheds and 2,260 ft. of steel bridges. Tenders for the bridge are under consideration. Press reports state that the company propose to build a tunnel of considerable length in order to bring about the lowering of the gradients of the line through Kicking Horse Pass, but we are officially advised that nothing of the kind is contemplated at present.

Numerous tenders are reported to have been received May 10 for the following second track construction:—From Revelstoke, mileage 0 to 23, Shuswap subdivision; Kamloops East, mileage 104 to 129, Shuswap subdivision; Kamloops West, mileage 0 to 9, Thompson subdivision.

The double track [illegible] from Vancouver to Hammond, 24.1 miles, [illegible] expected to be completed between Hammond and Mission Jct., early in June, and from Mission Jct. to Ruby Creek, early in September. Ruby Creek is 81.1 miles east of Vancouver.

The C.P.R. has filed plans with the city of Vancouver showing a proposed tunnel under the city. The tunnel as proposed will be 4,000 ft. long, with practically level gradients. It is designed to carry a single track, and will enter under the city at the intersection of Thurlow St. with the C.P.R. south boundary of the front yard on Burrard Inlet. It will then run under Pender St. to the crossing of Hamilton St., curving south, and will end approximately at the intersection of Georgia St. with the C.P.R. boundary in the False Creek yards. It is expected to find the sandstone and hard pan, usually met with in foundation work in Vancouver, in the construction of the tunnel. (May, pg. 223.)

Railway Development

Projected Lines, Surveys, Construction, Betterments, Etc.

Atlin Ry.—Application is being made to the Dominion Parliament for the incorporation of a company with this title to build a railway from Atlin Lake, southerly to the Taku River on the International boundary, and a branch to Telsin Lake, B.C. Smith and Johnston, Ottawa, are solicitors for applicants.

Esquimalt and Nanaimo Ry.—The line into the Cowichan Lake [illegible] branches off from the Port Alberni line at Duncans, B.C., has been completed, and is expected to be opened for traffic early in June.

We are officially advised that the locomotive house, machine shops, boiler house [illegible] C.P.R. standard plans. The machinery for these shops will be transferred from the present shops at Wellington. The plans for the lay out of the yard and station buildings have not been completed. (May, pg. 219.)

Kettle Valley Lines.—[illegible] 3, when several hundred men left the camps. [illegible] railway labor is very scarce at present. [illegible] sections under construction by the end of the year.

An agreement has been made between the company and the Great Northern Ry. for the joint use of the section of the line from the summit of the Hope Mountains down the Coquihalla Valley to Hope, 57 miles. The K.V. Ry. will build the line, at an estimated cost of $75,000 a mile, and the G.N. Ry. will pay a percentage on this cost as an annual rental. On a large portion of this mileage the construction will be very heavy, as it will include 12 tunnels, one over half a mile long, and much rock cutting. Tenders will be asked for [illegible] (May, pg. 219.)

Lake Erie and Northern Ry.—The Board of Railway Commissioners has approved in [illegible] the city of Brantford, Ont., and the de[illegible] by the engineers.

[illegible] by the general contractors, Johnson Bros., Port Hope. Sub contracts have been let to Scriven and White for grading from Blue Lake towards Paris, and to Davis and Martin for grading from Paris towards [illegible] P. H. Secord and Sons with the concrete abutments for the bridge at Jubilee Terrace, Brantford. It is expected that work will be started at an early date south of Brantford towards Port Dover, but the principal efforts of the contractors are to be devoted to completing the Brantford [illegible]

North Ry.—Arrangements are reported to have been completed for placing four engineering parties in the field to locate the route for this projected railway. A. T. Tomlinson, Chief Engineer, will have charge of the work. No. 1 party will work from Mount Laurier, Que., northerly; No. 2 party will work southerly from the same point; No. 3 party will start from Lachute, Argenteuil county, and work north, while No. 4 party will work south from the Bell River crossing of the National Transcontinental Railway. F. H. Clergue, who represents the syndicate which owns the charter, is reported to have stated recently that it is proposed to start construction at four points, Montreal, north and south from the Bell River crossing of the National Transcontinental Railway, and south from James Bay. It is expected to send out a steamboat with a party of engineers and supplies to James Bay in July. The four survey parties already referred to will cover the first section of the line from Montreal to Bell River. This section of the line, a press report states, is expected to be completed at the same time as the National Transcontinental Railway, so as to give that line a direct connection with Montreal. (May, pg. 220.)

Pacific Great Eastern Ry.—Track laying was reported to have been started, April 28, at the point where the line starts off from the Howe Sound and Northern Ry. Grading camps extend northerly for about 20 miles from Newport, B.C., and a wagon road has been cut out for 20 miles, and is being extended to the summit of the coast range. Arrangements are reported to have been completed for the building of a wagon road southerly from Pemberton Meadows to the summit of the coast range, where it will connect with the road being built northerly. Supplies are being sent into the various grading camps on the section between Newport and Lillooet. Engineering parties started out, April 30, to make the final location for the line from Lillooet to Fort George, and the general contractor, P. Welch, is preparing to sublet this portion of the work.

Negotiations are still in progress for the right of way from North Vancouver to Newport, the starting point of the Howe Sound and Northern Ry., which has been incorporated with the P.G.E. Ry. If certain lands are sold to the company for the right of way the company has offered to start construction in June and to have the line completed to Point Atkinson within six months, operating an electric service thereon. A considerable number of property owners signified their willingness at a meeting held May 6 to accept the terms offered, and it was expected that a complete agreement would be reached by May 30.

The Provincial Minister of Railways has approved the company's plans for standard bridges on the line as follows: 60 ft. deck and through truss spans; 100 ft. through [illegible] 125 ft. through spans; 150 ft. through and deck spans. (April, pg. 169.)

Quebec and Saguenay Ry.—Press reports state that the financial affairs of this company have been adjusted, and that construction will be resumed at an early date. It is said the line will be completed to [illegible] the work between that point and Murray Bay [illegible] matter of future arrangement.

Transportation Appointments Throughout Canada.

The information under this head, which is almost entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Allan Line Steamship Co.—C. A. LEWTHWAITE has been appointed Travelling Passenger Agent, vice J. F. Pratt. Headquarters, Winnipeg.

Canadian Freight Association.—R. G. McCRAW, heretofore Travelling Freight Agent, Minneapolis, St. Paul and Sault Ste. Marie Ry., Toronto, has been appointed Travelling Transit Inspector, C.F.A. Headquarters, Toronto.

Canadian Government Railways.—F. P GUTELIUS, M. Can. Soc. C.E., has been appointed General Manager, Canadian Government Railways, vice the Government Railways Managing Board, abolished. Office, Moncton, N.B. Full particulars of the change in management are given in this issue, on another page.

Canadian Northern Quebec Ry.—H. H. SMITH, heretofore chief clerk to General Manager, has been appointed Car Service Agent. Office, Moreau St. Station, Hochelaga, Montreal.

Canadian Northern Ry.—W. J. WHITESIDE, heretofore Advertising Agent, having been transferred to the Publicity Department, which is in charge of R. CROASDELL, the position of Advertising Agent has been abolished, and the advertising work has been placed under R. L. FAIRBAIRN, General Passenger Agent, Eastern Lines, Toronto.

ARTHUR PENNY, heretofore in the General Advertising Agent's office, G.T.R., Montreal, has been appointed on Mr. Fairbairn's staff.

A. E. KNIGHT, heretofore chief linen clerk, Sleeping, Dining and Parlor Car, Hotel and News Department, Winnipeg, has been appointed Platform Inspector, Sleeping and Dining Cars, vice A. H. Murphy, resigned. Headquarters, Winnipeg.

J. DONAHUE has been appointed chief linen clerk, Sleeping, Dining and Parlor Car, Hotel and News Department, Winnipeg, vice A. E. Knight, promoted.

C. N. JONES, heretofore storekeeper, Sleeping, Dining and Parlor Car, Hotel and News Department, Prince Albert, Sask., has been appointed Sleeping and Dining Car Agent at Saskatoon, Sask., vice C. Oliver, resigned.

A. PATRICK has been appointed storekeeper, Sleeping, Dining and Parlor Car, Hotel and News Department, Prince Albert, Sask., vice C. N. Jones, promoted.

W. C. TURNER has been appointed acting Trainmaster at North Battleford, Sask., vice F. W. Ross on sick leave.

A. L. JOHNSTON has been appointed Agent at Minneapolis, Minn. Office, 311 Nicollet Ave.

Canadian Pacific Ry.—H. C. GROUT, heretofore Assistant General Superintendent, Atlantic Division, St. John, N.B., has been appointed acting General Superintendent, while W. Downie is on leave of absence for a year. No appointment will be made as Assistant General Superintendent, at least for the present.

D. NESBITT, heretofore chief carpenter, Kingston and Pembroke Ry., Kingston, Ont., has been appointed Foreman of Bridges and Buildings, Kingston Subdivision, C.P.R., Kingston, Ont.

W. H. POLLEY, heretofore ticket agent, King Edward Hotel, Toronto, has been appointed Travelling Passenger Agent. Headquarters, Toronto.

F. H. HETHERINGTON has been appointed Locomotive Foreman at White River, Ont., vice —. Johnson.

A city ticket office has been opened at 404 Victoria Ave., Fort William, Ont., A. J. BOREHAM, City Passenger Agent.

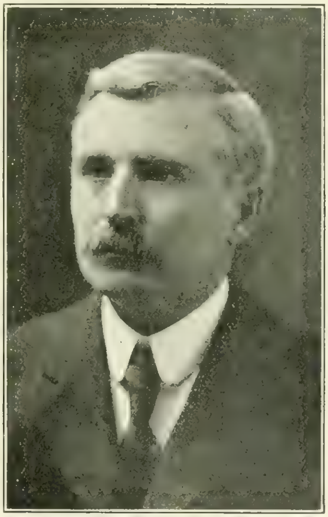
H. J. REED, heretofore Night Locomotive Foreman at Winnipeg, has been appointed Locomotive Foreman at Ignace, Ont., vice W. Bryce, transferred.

J. MORTON has been appointed Night Locomotive Foreman at Winnipeg, vice H. J. Reed, transferred.

V. G. MELSTED, heretofore Resident Engineer, Brandon, Man., has been appointed Engineer of Water Service, Winnipeg.

E. LANDORTH has been appointed Resident Engineer, Brandon, Man., vice V. G. Melsted, assigned to other duties.

R. ARMSTRONG, heretofore Superintendent, District 3, Saskatchewan Division, Saskatoon, has been appointed Superintendent, District 4, Manitoba Division, vice E. W. DuVal, transferred. Office, Souris.



R. Armstrong,
Superintendent, District 4, Manitoba Division, Canadian Pacific Railway.

E. W. DUVAL, heretofore Superintendent, District 4, Manitoba Division, Souris, has been appointed Superintendent, District 3, Saskatchewan Division, vice R. Armstrong, transferred. Office, Saskatoon.

G. BELL has been appointed Locomotive Foreman at Wilkie, Sask., temporarily.

F. W. ALEXANDER, A.M. Can. Soc. C.E., heretofore Assistant Division Engineer, Calgary, Alta., has been appointed Division Engineer, vice N. E. Brooks, promoted. Office, Calgary, Alta.

K. A. DUNPHY has been appointed Resident Engineer, District 2, Alberta Division, vice J. Robertson. Office, Calgary.

A city ticket office has been opened at 215 Eighth Avenue West, Calgary, Alta., in charge of F. J. HURKETT.

W. G. MACPHERSON has been appointed Locomotive Foreman at Alyth, Alta., vice R. S. Teague, transferred.

R. S. TEAGUE, heretofore Locomotive Foreman at Alyth, Alta., has been appointed Locomotive Foreman at West Calgary, Alta., vice W. J. Coleman, transferred.

C. H. SEWELL, heretofore yardman, has been appointed Yardmaster, Nelson Terminal, B.C., vice F. Young, resigned.

J. ARCHIBALD, heretofore Shop Foreman at Vancouver, B.C., has been appointed Locomotive Foreman at Coquitlam, B.C.

W. MORGAN, heretofore leading hand at Vancouver, has been appointed Car Foreman at Coquitlam, B.C.

A. STURROCK, heretofore Shop Foreman at Fort William, Ont., has been appointed Shop Foreman at Vancouver, B.C., vice J. Archibald, transferred.

C. J. BRASOR, heretofore Assistant Import Freight Agent, Chicago, Ill., has been appointed Agent, Foreign Freight Department, New York, vice L. D. Cole, resigned. Office, 1 Broadway.

J. J. MORTON, heretofore in the Import Freight Agent's office, Chicago, Ill., has been appointed acting Assistant Import Freight Agent there, vice C. J. Brasor, transferred to New York.

W. McLEOD has been appointed Assistant Chief of the Department of Investigation, Western Line, vice F. J. Andrews, assigned to other duties.

Grand Trunk Pacific Ry.—G. T. BELL, heretofore Assistant Passenger Traffic Manager, G.T.R., and G.T.P.R., has been appointed Passenger Traffic Manager, G.T.R. and G.T.P.R., vice W. E. Davis, deceased. Office, Montreal.

The following agents have been appointed:—Landis, Sask., A. G. Jamieson; Ebenezer, Sask., W. J. Pelland; Wabamun, Alta., L. A. Fadden; Edson, Alta., R. H. Christie; Pocohontas, Alta., B. B. Holland; Coalspur, Alta., W. L. Dobie.

Grand Trunk Ry.—G. T. BELL, heretofore Assistant Passenger Traffic Manager, G.T.R., and G.T.P.R., has been appointed Passenger Traffic Manager, G.T.R. and G.T.P.R., vice W. E. Davis, deceased. Office, Montreal.

H. WILLIAMS, Paymaster, Montreal, has been superannuated under the pension rules.

C. H. MASSIAH, heretofore in Treasurer's office, has been appointed Paymaster, vice H. Williams, superannuated. Office, Montreal.

W. M. TISDALE, heretofore of Woodstock, Ont., has been appointed Chief Special Agent, Eastern Lines, Montreal, vice James Hodge, transferred to Toronto.

V. G. SNELL, heretofore Soliciting Freight Agent, Montreal, has been appointed City Freight Agent there. This is a new position.

R. A. BECKER has been appointed Supervisor of Signals, Eastern Lines, with charge of interlocking plants, automatic signals, electric crossing bells, etc. Office, Montreal.

JAS. EDWARD, heretofore Commercial Agent, Moncton, N.B., has been appointed Division Freight Agent, Ottawa, Ont., vice A. D. Huff, resigned.

G. PEPALL, Assistant Foreign Freight Agent, Toronto, heretofore in charge of the export traffic only, west of Belleville, Ont., to the Detroit and St. Clair Rivers, has been given charge of the import freight traffic also.

E. R. THORNE, heretofore Soliciting Freight Agent, has been appointed City Freight Agent, Toronto.

F. R. CLARK, heretofore Travelling Freight Agent, Toronto, has been appointed Soliciting Import Agent there.

F. G. GOULD, heretofore Soliciting Freight Agent, Toronto, has been appointed Travelling Freight Agent there, vice F. R. Clark, transferred.

G. S. DONALDSON, heretofore rate clerk, has been appointed Soliciting Freight Agent, Toronto, vice F. G. Gould, promoted.

E. R. THORPE, heretofore Soliciting Freight Agent, Toronto, has been appoint-

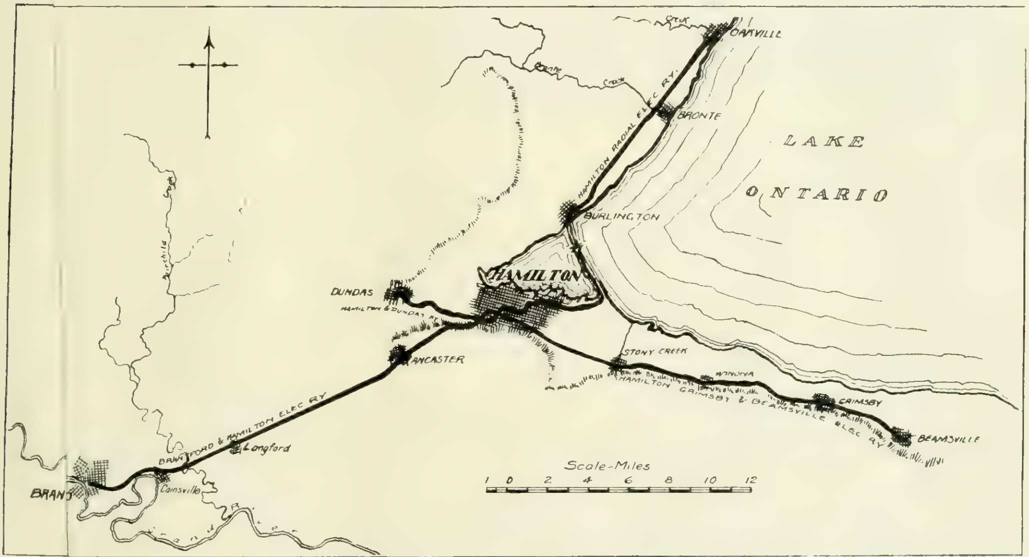
Trade and Supply Notes

[illegible]

Electric Railway Department.

The Dominion Power and Transmission Co.'s Railway System.

Tominion Power and Transmission Co. or controls the whole electric railwayation in and around Hamilton, Ont.e several companies operating electilway lines, and certain of the electower and transmission companies had.t 1900, been taken over by a holdcompany called the Hamilton ElecLight and Cataract Power Co. This any was expanded in its scope by the ibration of the Hamilton Cataract, Powght and Traction Co., under an Ontaarter, Feb. 5, 1903, the new company rbing all the interests of the otherpany with its several subsidiary compa



Radial Lines of the Dominion Power and Transmission Co.

The Dnion Power and Transmission Co. was rporated by Dominion charter, Jan. 22, 7, to absorb the Hamilton Cataract, wer, Light and Traction Co., a move ma necessary by the urgent demands fon increase in the financial capacity the latter company, which had become iequate to meet the expansion in the cony's business, and contemplated extenss. As four fifths of the old company's ock was taken over, the new company in every way a successor to the form one, only on a much larger scale. T electric railway and related companies en over from the Cataract Co. in this ger, included the Hamilton Radial Elric Ry. Co., Hamilton Street Ry. Co., Hilton and Dundas Street Ry. Co., Hamil Electric Light and Power Co., and the Loln Electric Light and Power Co. In adon, the company acquired the direct owneip of the Brantford and Hamilton Electi Ry. Co., and the Hamilton Terminal C both of which were then building, a the control of the Hamilton, Grimsby a Beamsville Electric Ry. Co., giving compe control of the electric railway situation in Hamilton and vicinity. The completion of the Hamilton terminal building shortly after the incorporation of the new company, enabled the several subsidiary companies to move their offices to this central point, and while the original companies are still retained in their initial form, the holding company acts as the administrative company for them all.

The Hamilton Street Ry. operates on all the electric railway lines in the city on which a purely local business is conducted, and is a unit apart from the radial lines, which, while operating over the lines of the street railway company in the centre of the city, have for the most part their own lines, acquired in the early days before the present amalgamation. The routing of the several city lines, of which there are six, is shown in the accompanying map of the city. The six lines are as follows:—G.T.R. and James South, James North and King West, King East and Barton, Wentworth St., Incline Ry., and York St. The G.T.R. and James South line, leaving the G.T.R. station, runs south on James St., west on Herkimer St., and around via King West to James St., and thence back to the station, a total round trip distance of 4¼ miles. The James North and King West line might be termed the reverse of the last mentioned route, following James St. south from the boat wharf, along King West, and around the loop via Herkimer St. to James and back to the wharf, a total distance of 5 miles. The King East and Barton line follows a U route, along King East from Sherman St. to James, and thence north to Barton St., travelling east to the other terminus at Ottawa St. The total round trip distance is 10½ miles, the longest route of any of the city car lines. The remaining three lines are stubs. The Incline Ry. line runs up to the foot of the mountain on James South, returning as far north as the crossover just north of King St., a total return distance of 1½ miles. From the same crossover, the Wentworth St. line runs along King East and up Wentworth St., the latter a single track line to the foot of the east end incline railway, a return distance of 3¼ miles. The remaining line is that on York St., which crosses over at the corner of James St., running out York to Dundurn Park, a round trip distance of 2¾ miles. These are all the purely local lines owned by the street railway company, but over the radial line the King East and Barton line operates alternate cars from the point where the radial line crosses Barton St., out through the industrial area, to the large plants of the newer industries that have been established in Hamilton of recent years. This line is called the Deering section of the King East and Barton line, on account of the fact that the Deering plant of the International Harvester Co. is the largest plant served on the division.

The traffic on the street railway lines is particularly heavy, as Hamilton is so laid out along the foot of the mountain as to make the distances from east to west considerable. From the fact that the city depends for the most part on its industries, the street car traffic fluctuates from very light during factory hours, to heavy rushes through short periods before and after factory hours. The heaviest rush hour traffic is from the Deering section of the King East and Barton line, where the bulk of the factories are located. For this rush hour service on this section, it is possible for the company to use the poorest of its equipment, for the bulk of the traffic transported from that section is of the [illegible] During 1912 [illegible] street railway lines moved a total of 14,100,000 people. To acommodate this [illegible] lines consists of 36 cars, which is increased [illegible]. In addition there are held in reserve some 25 for heavy rush hour service, particularly over the Deering line.

[illegible] of 95 passenger cars, 44 of which are double truck. The latest types of both single and double truck cars used on the lines are [illegible] illustrations. The equipment has been considerably in[illegible] by the addition of quite a number of these two types of cars, which are of the very latest type of construction. The additional equipment consists of three sweepers and a sand car.

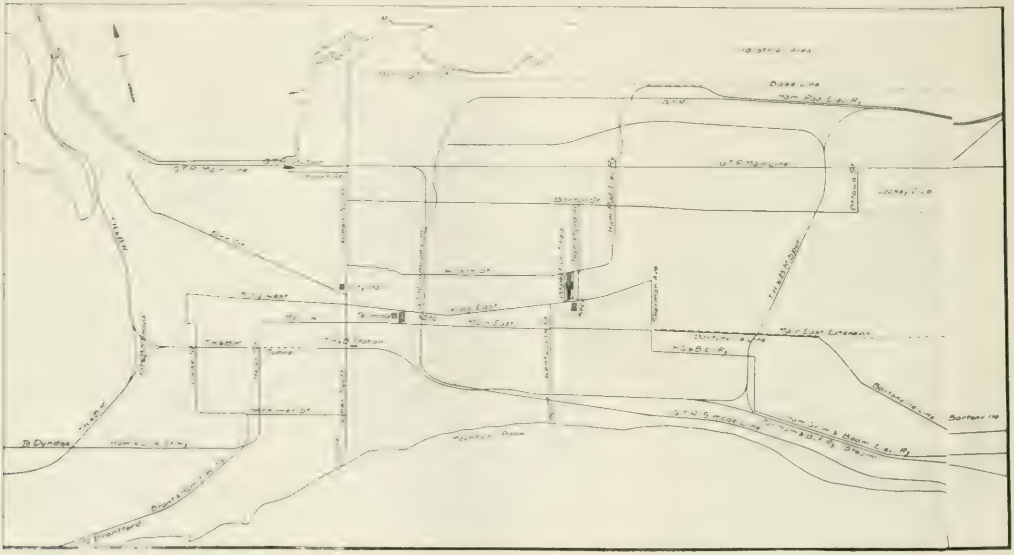
For several years, no extensions have been made to the city system, as the lines as then existing covered such a wide territory that additional mileage would not have proved profitable. This year, several [illegible] is at present under way. This latter, the main one of the additions, is to be a double track line from James North, near the waterfront, along Burlington St. and the base line, paralleling the radial line in the industrial area to Kenilworth Ave., the terminus of the extension. It is also proposed to extend the Barton St. line from its present terminus at Ottawa St., along in front of the Jockey Club, also to Kenilworth Ave., and similarly with the King [illegible] Ave., along Main East to Kenilworth Ave. [illegible] by a connecting line from the base line [illegible] in the sections of the city that are growing most rapidly, the development in the [illegible]

[illegible] across the street, on the north side, is the [illegible] housing summer cars in winter, and vice versa. All the daily movements are from the other barn. The inspection shed is shown herewith. It is a brick building, with reinforced concrete column and roof construction, 160 ft. long, and 4 tracks wide. Along the east side are separate rooms, a central one containing the heating apparatus, consisting essentially of a 60 h.p. boiler for heating the shop by the vacuum system. The four through tracks have pits in the shop section, the east pit having 4 drops in addition, for the removal of motors and wheels. Covered storage space for cars in daily service is not deemed necessary. To the rear of the inspection shed, the 4 tracks extend to Wilson St., this space to the rear being used for storage purposes. In addition to these four through tracks, there are three additional ones on the west side, and one on the east side, one on each side being a through track. The side rooms of the inspection building contain carmen's room and local repair room for light running repairs. A small building to the west of the main building contains the fender making and repairing department. From King East, the cars enter the shed and yard from a single [illegible] track from King East, and can be drawn from the storage yard along the single service track along Wilson Ave. to the rear of the yard. This line leads along to the street railway operating office at the corner of James North and Gore St. There is also another single track service line from the rear of the yards on Sanford Ave. to Barton St., which serves as a cut off in running the cars into the industrial area from the car sheds in the rush hours, and means a saving of considerable dead mileage.

The repair shop, across from the inspection shed, is an old building, containing two through tracks from King East, terminating in a turntable at the rear, over which the cars can be turned out into Sanford St. or into the paint shed, which [illegible] to the rear and west of the main shop. The main shop has two pits [illegible] the two through tracks. Along the side of this erecting portion of the shop is the machine shop. Over the [illegible] the machine shop is the winding ro[illegible] reached by an elevator, where repairs to armature and field coils are atten[illegible]. On the other side of the erecting [illegible] over the top, is the woodworking [illegible]ment. While the whole shop is very [illegible]gested, and the equipment small, the [illegible] turned out is unusual. In these shops many of the older cars have been co[illegible]ly remodelled, and heavy repairs are [illegible]tantly being put through. A complete new car has even been constructed. [illegible]resent understanding is that the shop [illegible] be in service for any great length [illegible] ne for its present work, as a complete new shop is projected, the details of whi[illegible] not as yet been developed.

The radial lines emanating [illegible] Hamilton are four in number, cover[illegible] principal districts around the city. [illegible]ach of the separate companies maint[illegible] its own separate existence financially, in all other respects there is no disti[illegible] among the several lines operated by Dominion Power and Transmission [illegible] Two of the companies operate und[illegible] Dominion charters, and the other two [illegible] Ontario charters, which introduces a [illegible]uliar element into the operation of [illegible] lines, as each pair comes under diff[illegible] railway jurisdiction.

For the purposes of furthe[illegible] the usefulness of the consolidation the different lines, a central terminal [illegible]ation was built immediately after the [illegible]mation of the new company, owned an[illegible]perated by the Hamilton Terminal Co., subsidiary company, in which are loc[illegible] all the officials of the main comp[illegible], and the offices for the lighting and p[illegible]er business conducted by the company i[illegible] conjunction with its railway interests. [illegible] is a large four story and basement stru[illegible]re of considerable architectural beauty [illegible]nd was described in Canadian Railwa[illegible]nd Marine World at the time of constru[illegible]on. It occupies a central position on K[illegible] East, not far from the Gore at the [illegible]er of King and James. On the east si[illegible] of the terminal building are four tra[illegible] extending through from King East to [illegible]n East, the



Street, Radial, and Steam Railway Lines in Hamilton.

[illegible] street to the south. This latter street is the main artery for general entrance of the lines branching off from the single track line [illegible]. The main floor of the terminal building contains a commodious waiting room with ticket office and other facilities such as would be found in any well appointed steam railway station. The cars for the several companies run into the tracks at the rear of the station. The company owns the Temple Theatre, a vaudeville house to one side of the terminal station, which is a very productive traffic drawing project.

All the several lines house their equipment in the yards mentioned earlier, where all the repairs to the cars are made as well [illegible]

Typical Double Truck City Car.

Typical Single Truck City Car.

Each line owns a certain proportion of the radial rolling stock, although the cars owned by the different companies may not be operating on the lines of that particular company, the separation of the cars being merely for convenience in car accounting, the distribution of the cars over the lines following the exigencies of the service.

The Hamilton Terminal Co. owns 6 passenger cars, 1 freight car, and 1 combination snow plough and freight car. These cars are used as a surplus supply of rolling stock to relieve the line requiring the additional equipment for any particular emergency. All the passenger cars owned by the several radial lines, as well as the terminal company, are of the heavy interurban type, double truck, and of a very solid construction throughout. Several different designs are in service, but in general details they are very much alike. They are all equipped with straight air. The freight motor cars are all equipped with the automatic air brake system for service in handling steam line freight cars in trains over the system and in interchange work.

THE HAMILTON AND DUNDAS Street Ry. is one of the principal lines running out of Hamilton. It has an Ontario charter. On leaving the terminal station it follows Main St. to James South, and thence along Herkimer St. to the country highways, which it follows into Dundas. The traffic handled is almost exclusively passenger, and, in consequence, the equipment only includes three double truck passenger cars. The total passenger traffic last year was 707,500. A large number of people employed in Hamilton live in Dundas, giving heavy morning and evening loads. Apart from this heavy through traffic, there is a great deal of local traffic picked up, as the line passes through suburbs of the city not as closely served by the city lines. The H. & D. line also passes through a growing settlement between the two termini, called the West Hamilton survey, which also augments the local traffic. The line runs 18 cars a day each way. The total length of the line between termini is 7 miles, with 5 principal intermediate stops. As there are no important self contained settlements intervening, no stations along the line are required, but at the Dundas end there is a complete station with agent and some station facilities. The line follows the highway throughout its full length.

THE HAMILTON RADIAL ELECTRIC Ry. covers the lake shore territory [illegible] of the earliest [illegible] lines [illegible] operating under a Dominion charter. For a number of years it was operated as far as Burlington, and about 1905 was extended to Oakville. The rolling stock consists of 7 double truck passenger cars and a freight car. The traffic over this line is almost exclusively passenger, particularly in the summer when Burlington Beach is in full swing. Leaving the terminal station and travelling east along King St., the cars turn north on Sanford Ave. at the car shops, and finally on their own right of way to the base line on a double track line. It is proposed in connection with the new local line now under construction along the base line that there be a central boulevard along the street on which there will be four tracks, two each for local and radial lines. Leaving the city limits on the base line, the line continues on a double track, following its own right of way as far as the southern approach to the Beach, when it again goes on the highway. Passing the full length of the Beach, it crosses the canal on the highway bridge, and then on to Burlington, this latter portion from the bridge being single track line, as that is the end of the heavy summer beach traffic. From Burlington, the line follows its own right of way through a prosperous farming community, and through the village of Bronte to Oakville, the eastern terminus. The single track portion of the line at the time of construction was graded all the way, for the subsequent addition of a second track. Up to the present, the traffic has not warranted this addition. Between termini, there are 9 main stops, with numerous intermediate flag stops. The Oakville terminal is a complete station, with agent.

The total length of the line is 21½ miles, over which there are operated during the winter 18 cars a day each way. During the summer the heavy beach traffic creates [illegible] addition of a special [illegible] traffic is carried. [illegible] sets of 4 and 5, running on very [illegible] along the line.

THE HAMILTON, GRIMSBY AND BEAMSVILLE ELECTRIC Ry. [illegible] It extends from Hamilton to Beamsville, 22 miles, through the populous fruit district of the Niagara peninsula. This territory includes the towns of Stoney Creek, Winona and Grimsby, as well as the summer resort at Grimsby Beach, the line touching all these points. The original line was built before the day of separate rights of way for electric lines, and in consequence operates along the highways. The speeds of operation possible on the other lines is not possible here, as the highways along which the line passes contain many curves and sharp turns.

Inspection Shed and Storage Yard.

The company owns 6 passenger and 5 freight cars, and during the past year carried 687,500 passengers. But it is not for the passenger traffic alone that this line is particularly valuable, great as it is, but more especially for the heavy freight traffic that is developed. The fruit traffic during the summer, from June on through into the winter, is particularly heavy. In addition, in the early spring, the shipments of nursery stock from off the line are considerable, and the volume of traffic is such as to keep the company's freight motors in constant service.

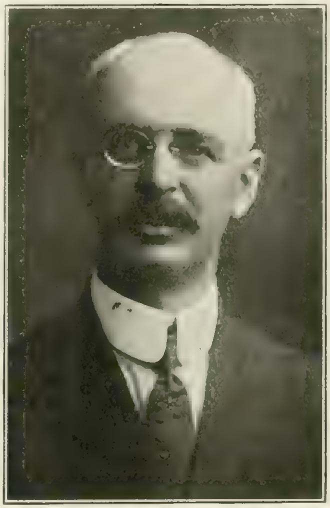
This line has a direct connection with the C.P.R. and T.H. & B.R. at Kinnear, in East Hamilton. The principal outside connection for freight originating on the line is with the G.T.R. at Winona, where the latter company has put in comparatively extensive yards for the handling of the interchange freight.

Between the two termini there are 12 passenger stops and [illegible] along the line. Stoney Creek, Winona, Grimsby and Beamsville, there are agents. There are numerous intermediate flag points. 18 cars per day are operated each way, exclusive of the excursion traffic to Grimsby Beach, a distance of 20 miles from Hamilton, which is heavy in the summer.

THE BRANTFORD AND HAMILTON Electric Ry. is the newest of the radial lines running out of Hamilton, extending from that city to Brantford, 23 miles. This line leaves Hamilton from the terminal station, going along Main and Hess Sts., and out of the city on its own right of way, which it follows to Brantford, going into that city along the canal in the lower part of the town. The route followed is very hilly, the height of land between the two towns having to be crossed. No places of importance, outside of Ancaster, where an agent is stationed, are passed through. The development along this line has been rather marked, considering the newness of the project. On account of the frequency of the service, a large through traffic between the cities has been developed. This, in addition to the local traffic picked up along the line for both cities, brought the number of passengers carried up to 490,500 last year. The fact that both ends of the line are in prospering cities has been a most important factor in booming the road But little freight traffic is handled.

Power for all the companies lines, and for distribution in its capacity of power transmitter, is generated at DeCew Falls, near St. Catharines. This plant has a very high head, and with large storage areas under the company's control, a plant of very high efficiency has been developed. Its total capacity is 43,600 k.w., produced in 10 generators, ranging in capacity from 2,500 to 4,600 k.w. each, with 500 k.w. exciter unit. Power is developed at 2,400 volts, 3 phase, and 66 cycles. The original installation use 66 cycles, an odd frequency for modern installations, and in consequence, subsequent installations have had to be the same. Sixty cycle equipment can be used on the system by speeding up.

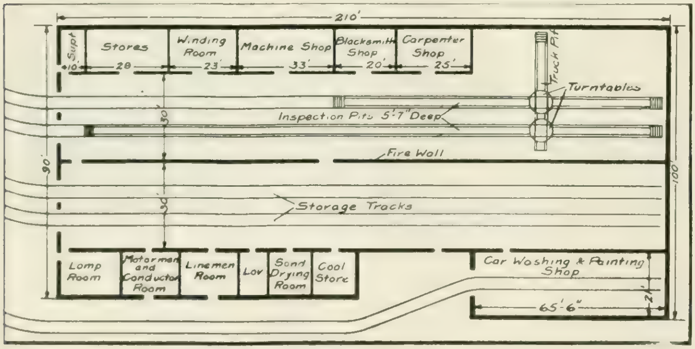
At the power plant, the pressure is stepped up to 40,000 volts, for transmission to the different points on the line, and for power purposes, the company having about 200 miles of transmission lines. Only the lines for railway purposes will be considered. Between DeCew Falls and Hamilton, there are three distinct transmission lines, two on the height of land, and the third along the lower land. These all come to an open air switching station in Hamilton. At different points along the line the pressure is stepped down and changed to d.c. in motor generator sets. In Hamilton, there are three substations, two [illegible] station at each [illegible] equipment, a 2000 k.w. d.c. set. On the Oakville line, there is a 450 k.w. d.c. set at Burlington, and a 250 k.w. d.c. set at Oakville. On the Brantford line is a 600 k.w. d.c. set at Brantford, and two intermediate sets of similar capacity en route. The Beamsville line has a 600 k.w. d.c. set at Grimsby, and a 300 k.w. d.c. set at Stoney Creek. There are other stations at points along the line for the supply of power for local municipalities and industries.



E. P. Coleman.
General Manager Dominion Power and Transmission Co., Ltd.

The officials of the company are as follows:—J. R. Moodie, President; W. C. Hawkins, Managing Director; E. P. Coleman, General Manager; G. E. Waller, Gen. Supt. of Railways; W. G. Angus, Gen. Supt. of Light and Power; D. N. Miller, Supt. Street Ry.; F. B. Griffith, Superintendent Interurban Railway Division and Claims Agent; C. K. Green, Superintendent of Construction; J. B. Griffith, Purchasing Agent; and J. O. Binkley, Shop Superintendent.

The switchboard which the Bell Telephone Co. recently installed in the tower of the new C.P.R. Windsor St. Station, Montreal, has a capacity for 1,200 lines.



London and Lake Erie Railway and Transportation Co.'s Car Shed and Shop.

New Car Shed and Shop for London and Lake Erie Ry. and Transportation Co.

A plan of this company's new car shed and shop at St. Thomas, Ont., mentioned some time ago in these columns, is shown in the accompanying illustration. The line operates between London and Port Stanley, a resort on Lake Erie, a distance of 22 miles, passing through St. Thomas, 14 miles from London. The principal normal service is between these two cities, but in the summer a heavy traffic is carried from both these cities to the lake. The method of conducting this traffic by the aid of double truck trailers was described in these columns in Oct., 1912. For general operation, St. Thomas is the most central point, and the shops and transformer station have been located there since the construction of the line.

The shed shown has recently been completed. It is a brick structure 210 by 90 ft., with four full length tracks, giving sufficient accommodation for the company's full rolling stock equipment of sixteen 50 ft. cars. This, however, is never required, as several are always located at the London terminal.

The main part of the building is divided into two sections by a central fire wall. The east, or repair shop section, contains two pits, one the full length of the building, and the other half the length, running forward from the rear of the building, both 5 ft. 7 ins. deep, a normal pit depth. Near the rear of the shop is a cross pit, on which the trucks for cars over the inspection pits may be removed by means of intersecting turntables. The rear section of the shop adjoining this cross pit is for truck repairs.

The several shops are located in rooms along the east wall, and comprise a carpenter, blacksmith, machine and winding shop. In front of these is the store room, with the superintendent's office at the front end, opening both to the shop and street. The shop is equipped with overhead travelling crane.

The west portion of the building contains two plain storage tracks, separated from the repair shop by the fire wall. Along the west wall, outside this section, are the auxiliary rooms, in a long leanto building.

A car washing and painting shop is provided to the rear of these rooms, entered from the outside, and completely separated from the main building by a fire wall, a necessary precaution for a paint shop. This shop is 65½ ft. long, and will conveniently accommodate one car.

The shops are located on the south side of Talbot St., the main street of St. Thomas, at the west end of the city, at the point where the line leaves the city streets northbound on its own right of way. The new transformer station is located alongside to the west. This latter building also contains the local ticket office and waiting room. To the rear is the company's local freight shed.

The Illinois Traction Co., an electric traction system, doing steam railway work, under a steam railway charter, carried 40,000 passengers during the past year in its electric sleeping cars, and has ordered new cars of this type to meet the demands of an increased traffic.

The Sandwich, Windsor and Amherstburg Ry. gave an increase to its conductors and motormen on May 1. The old wages were from 20 to 22½c. an hour, the new ones are from 23c to 25c. The men will receive an increase of ½c. an hour every 6 months until they reach the maximum of 25 cents.

British Columbia Electric Ry. Construction, Betterments, Etc.

The company has authorized plans for the erection of three car barns, these being extensions of its present buildings of this class in Vancouver, New Westminster and North Vancouver. The Vancouver car barns will be 400 ft. by 52 ft., to accommodate 40 cars on four tracks. The location is along the Lulu Island Ry. line, and the barn will serve both its interurban system and several branches of the Vancouver city lines. Tracks will be laid from the Kitsilano line, and also from the 4th Avenue line, entering the barns from opposite sides. The building will have a concrete foundation and will be built of wooden frame covered with corrugated iron. At present a small barn is located at the point, which is equipped with shops for emergency repairs. The plans call for a duplication of the new barn on a location immediately to the east in the near future. The new barns at New Westminster will be on 12th Street, and will be 240 by 104 ft. Eight tracks will be provided into these barns, which will accommodate the cars of the New Westminster city line and the interurban branches of the company's service. This structure will also have a concrete foundation, with building of corrugated iron. The North Vancouver barn will have a concrete foundation and steel frame, covered with corrugated iron. It will not be as large as the Vancouver or New Westminster barns, but will amply provide for the accommodation of the North Vancouver cars for some time to come.

J. R. Freeman, the engineer who is representing the Dominion Government in connection with the erection of the great dam at the outlet of Lake Coquitlam by the B. C. Electric Ry. Co., recently made an inspection of the work and addressed a public meeting at New Westminster. Press reports quote him as saying that G. R. G. Conway, Chief Engineer, B. C. E. Ry. Co., had co-operated with him concerning the construction of the dam in every possible way and, as a result, it will be one of the safest in the world. The water supply of New Westminster is taken from Lake Coquitlam, and Mr. Freeman said that the provisions made by the company to preserve the purity of this supply entailed an expenditure of nearly $1,000,000, this covering clearing about the lake, erection of new water works intake, etc. The dam will probably be completed in June, this being in advance of expectations. It will be 98 ft. high and 600 ft. wide at the base, and 850 ft. long and 40 ft. wide on the crest. In the construction 1,055,000 cu. yds. of material will be handled. The storage capacity will be 7,404,000,000 cu. ft., giving a reserve supply during the dry season of over 53,700,000 k.w.h. of electric energy.

The company has offered to construct a four mile line across West Vancouver Municipality, as an extension of the North Vancouver lines. West Vancouver was recently created as a separate district, and the company has rights in the section by reason of a franchise covering the old municipality at North Vancouver. As West Vancouver is but sparsely settled, the offer to build the line requires that a guarantee be given as to operating expenses other than interest on invested capital. The annual cost of operating an hourly service over the line is estimated at $10,000 a year. The question is under negotiation between the company and the municipal authorities.

The electors of Burnaby Municipality recently granted the franchise covering tram transportation for 36½ years, the vote being 743 for and 290 against. This gives a good majority over the required three-fifths. The principal conditions of the franchise are that the company shall build a line of two-miles on Hastings St. East, this being an extension of its Vancouver line. Another line one mile long, is to be built on the North Road, as soon as arrangements are made for the high level bridge over the Brunette River, this line being an extension of the New Westminster lines.

The company has decided to build a large repair shop on D.L. 118, Burnaby Municipality, just outside the city of Vancouver. Westinghouse, Church, Kerr and Co. have been engaged as consulting engineers for this plant and their staff is preparing plans. It is the company's intention to make these shops up to date in every particular, the idea being that this plant shall do all the heavier repair work for all lines operating on the southern mainland of British Columbia. The shops will be called the Horne-Payne repair shops, in honor of the Chairman of the Board of Directors, R. M. Horne-Payne, of London, Eng.

Wages on Regina Municipal Railway.

The Regina Municipal Railway has recently advanced the pay of conductors and motormen, a comparison of the old and new rates per hour being given below:

	Old.	New.
First 6 months	25c	27½c
Second 6 months	28c	30c
Second year	30c	35c
Third year and thereafter ..	32c	37½c

The above is on a basis of 10 hours per day. Men without experience are not paid until proficient.

Proposed Electric Ry. for Medicine Hat.

The City Council of Medicine Hat, Alta., has entered into a preliminary agreement with the Montreal Engineering Co., for the building of an electric railway in the city, and will submit a bylaw approving of the same to a vote of the ratepayers. The company is given an exclusive franchise for 20 years within the present city boundaries, or any extended boundaries. Construction is to be started within three months, and three miles of line are to be put in operation within nine months; an additional three miles within 12 months, and a further three miles within 20 months after the final signing of the agreement. The location of these nine miles is to be fixed by the council, and further extensions are to be located as the population warrants. The company is to pay taxes on lands used for its purposes until the population reaches 40,000; after which it is to pay taxes and 5% of its gross earnings until the city has a population of 100,000, when 10% of the gross earnings in addition to taxes is to become payable. The city has full power over the streets on which the lines are to be built, and is to decide the style of construction, and to control the schedule on which the cars are to be operated. The city may take over the franchise at the expiration of the 20 years, at valuation plus 15%. This price is not to include land, or anything for the franchise. The company is to accept the city's 5% bonds in payment. If the city does not take over the line at the end of 20 years the franchise is to be extended for five years, at the end of which time the city may take over the line at valuation. The company has the right to transfer the present agreement to a company to be incorporated under the name of the Medicine Hat Electric Ry. Co., Ltd., or to any other [illegible] company [illegible] with the consent of the city. The route of the lines is outlined in the agreement. Starting from the City Hall, the lines will reach the exhibition grounds, the [illegible] Cement Co.'s plant, and the Maple Leaf Milling Co.'s plant. The city is to supply current [illegible] cents per 1,000 ft. [illegible] cent per k.w. hour, for the operation of the cars. (Dec., 1912, pg. 622.)

Toronto and York Radial Railway Legislation.

The Ontario Legislature, at its recent session, passed an Act respecting the T. & Y. R. Ry. Co., giving it the power to lay a second track on a portion of Yonge St., Toronto, to build lines to connect its present Toronto termini and to operate its Metropolitan Division from Toronto to Lake Simcoe on Sundays, the latter right having previously been confined to its Scarboro and Mimico Divisions. The principal provisions are as follows:—

The company may, subject to the provisions of The Municipal Franchises Act, construct, equip and maintain double tracks upon Yonge St., in the city of Toronto, from the point where the company's rails leave Yonge St., near Woodlawn Ave., to the northerly limits of the city, and may operate upon the double tracks, subject to an agreement to be entered into with the city.

The Ontario Statutes, 1898, chap. 66, sec. 21, sub. sec. 16, which provided that the issue of bonds, debentures or other securities authorized should not exceed $20,000 for each mile of street railway track constructed or under contract for construction, has been amended by limiting the issue of bonds, etc., to $30,000 for each mile of single railway track.

The company may operate its cars upon its Metropolitan Division, or upon any part thereof, upon Sunday for the carrying of passengers only, except as provided for in subsec. 2, sec. 136, chap. 209, Revised Statutes of Ontario, 1897, subject to regulations to be imposed by the Ontario Railway and Municipal Board. The subsection referred to allows cars to be run into the city on Sundays up to 10 a.m., for the transportation of milk, and out of the city after 5 p.m.

The company may, subject to the provisions of The Municipal Franchises Act, survey, construct, equip and maintain railways, extensions and branches between and to connect the present Toronto termini of its Scarboro, its Metropolitan and its Mimico Divisions, either upon, across, over or under such highways within the city of Toronto as the city may agree to, and upon such highways as may be agreed upon by the other municipalities having the respective control thereof, and the company, or upon private right of way, or upon both such highways and such private right of way.

The company's extensions and branches authorized by that and previous Acts are to be commenced within two years and completed within five years of the passing of the Act.

L. A. Rivet, K.C., has been nominated by the Attorney General of Quebec, to oppose the contentions of the Montreal Tramways Co. before the Court of Appeals. These proceedings involve the jurisdiction of the Public Utilities Commission to intervene in the matters in regard to which the M. T. Co., and the Montreal City Council differ.

Electric Railway Projects, Construction, Betterments, Etc.

Brandon Municipal Ry.—The first car was [illegible] May [illegible]

British Columbia Electric Ry.—The site [illegible] terminal facilities at the corner of Pandora Ave. and Douglas St., Victoria. The tracks to connect the different city lines with the terminals are being laid. (May, pg. 235.)

Additional information will be found [illegible] Ry. Co. [illegible]

Buffalo and Fort Erie Ferry and Ry. Co.—The Ontario Legislature has authorized the company to increase its capital stock, first mortgage and refunding bonds, for the purpose of electrifying the present line between Fort Erie Ferry and Fort Erie Beach, Ont. It is reported that the line will be extended at an early date to Bridgeport and Port Colborne. (April, pg. 185.)

Burrard-Westminster Boundary Ry. and Navigation Co.—We are officially advised that it is the intention of the British [illegible] an expenditure of $200,000 on the preliminary work on the projected bridge across the Pitt River at Coquitlam this year. This bridge is to be built in connection with a railway from Vancouver to Mission City. The estimated total cost of the bridge is $500,000. The line in connection with which the bridge is to be built is a section of the [illegible] by the B.-W.B. Ry. and Navigation Co., which is owned by the Western Canada Power Co. [illegible] of the W. C. P. Co. was held in Ottawa, April 28. Following are the officers and directors for the cur-[illegible] President, [illegible]; Vice President, T. J. Drummond; other directors:—A. R. Doble, W. McNeill, C. [illegible] A. H. B. [illegible], R. F. Hayward, D. F. Hicks; Secretary-Treasurer, O. B. McCallum; Assistant Secretary-Treasurer, C. H. [illegible]. The company is supplying 40,000 h.p. of current to the British Columbia Electric Ry., and has contracts for the supply of 65,000 h.p. The company [illegible] (April, pg. 185.)

The Canadian Resources Development Co., which owns a considerable area of property in the vicinity of Port Arthur, Ont., has, for the purpose of opening it up, built an electric railway, 1.5 miles, from Fort William Road, westerly along Central Ave., to the golf links road. The company has one double end car on the line, 101 B. 2 Westinghouse motor. W. W. Lock, Port Arthur, [illegible]

Cape Breton Electric Co.—At a special meeting of the Sydney, N.S., City Council, May 5, it was decided to permit the building of some additional lines in the vicinity of the car barns, and a siding on Prince St., on condition that an improved service be given to the pier and that material be [illegible] the engineer. The Council urged the com- [illegible]

Dominion Power and Transmission Co.—Ex-Mayor Patterson of Galt, Ont., is re- [illegible] Dominion Power and Transmission Co., for the statement that construc- [illegible] electric railway line to connect Hamilton [illegible] off from the company's Brantford and Hamilton Ry., and is expected to run via Lynden and Troy to a point west of Sheffield, and then paralled to the Stone Road, entering Galt at East Main St., with the idea of [illegible] a union terminal with the Lake Erie & Northern Ry. (Jan., pg. 30.)

Dunnville, Wellandport and Beamsville Electric Ry.—The Dunnville, Ont., Town Council has granted the company an extension of a year within which to build its line in that town. The grading of the line between Dunnville and St. Anns is nearly completed, the bridges are built, and ties have been laid for some distance. The line will connect at St. Anns with the Toronto, Hamilton and Buffalo Ry., and it is expected to have this section in operation by the fall. A bylaw granting the company a franchise for a system of lines in the town has been prepared and will be submitted to the ratepayers at an early date. J. A. Ross, Wellandport, Ont., is President, and M. R. Campbell, Wellandport, is Secretary. (Oct., 1912, pg. 520.)

Forest Hill Electric Ry.—The Ontario Legislature has incorporated a company with this title to build the lines described on pg. 141 of our March issue. (April, pg. 185.)

The Frontier Electric Ry. announces that work will be begun shortly on its line to connect Niagara Falls, Buffalo, Tonawanda and North Tonawanda, N.Y.

Guelph Radial Ry.—Press reports state that the Guelph, Ont., City Council will relay 3,000 ft. of track with 80 lb. rails during the summer. (Mar., pg. 141.)

Hamilton Incline Ry.—The plans for the proposed new incline railway from Wentworth St., Hamilton, Ont., to the top of the Mountain were discussed by the Board of Control, May 8, but no decision was reached. The company is ready to start construction as soon as the plans are approved by the City Council. G. F. Webb, Hamilton, is interested. (April, pg. 185.)

Hamilton Mountain Electric Ry.—The Ontario Legislature has incorporated a company with this title to build a line from the Horning Mountain west to Mount Albion. (April, pg. 185.)

Hamilton St. Ry.—Grading is in progress on the base line east of Irondale, Hamilton, Ont., for the extension of the street railway. This part of the work is being done by the City Council. It is expected to have the extension from Kenilworth Ave. to Irondale open for traffic early in July. (April, pg. 185.)

Lethbridge Municipal Ry.—The Lethbridge, Alta., City Council is asking the ratepayers for authority to raise $31,000 by debentures for the purpose of building some extensions in North Lethbridge. (May, pg. 235.)

London St. Ry.—We are officially advised that the company is not considering the installation of any new engines or generators, as stated in recent press reports. The company, however, has under consideration the question of installing some new boilers, but no decision has been reached. (Nov., 1912, pg. 573.)

Montreal and Southern Counties Ry.—[illegible] of the Montreal City Council, which has been investigating the com- [illegible] recommended the Council not to grant the application. (May, pg. 235.)

Montreal Tramways Co.—We are officially advised that appropriations amounting to about $1,000,000 for track and electric construction and renewals have been passed. The question of a large expenditure for increased power is under consideration.

At a sitting of the Quebec Utilities Commission, April 30, it was decided to hold over any further enquiry into the company's affairs until the question of jurisdiction has been settled by the courts.

No further action has been taken in the matter of the several reports on the condition of the street railway service, and it was not expected that there would be any conference between the Council and the company before the end of May. (May, pg. 237, and April, pg. 185.)

Niagara, Welland and Lake Erie Ry.—We are officially advised that it is expected to start construction almost immediately on a branch up north Main St. to Parkway Heights, Welland, Ont. This will be about a mile long and will involve the construction of a pile trestle over the Welland River. It is also proposed to build a branch along East Main St. to Rosedale, and an extension from the Michigan Central Rd., on South Main St., to the Dain Mfg. Co.'s plant at Dainville. These lines will involve the crossing of the G.T.R. in the one case and of the M.C. Rd. in the other. An interlocking plant will be installed at the G.T.R., but it has not yet been decided whether the M.C. Rd. will be crossed at grade, or by a subway. The company has power to extend its lines to Niagara Falls, and Port Colborne, thence along the Lake Shore to Fort Erie, altogether about 45 miles. T. R. Cumming, Welland, Ont., is Chief Engineer. (May, pg. 235.)

Nipissing Central Ry.—A deputation from Liskeard and vicinity waited on the Ontario Government, May 9, to urge the extension of the line from Liskeard to North Timiskaming, Ont. (Jan., pg. 39.)

Ottawa and St. Lawrence Electric Ry.—The Ontario Legislature has authorized the company to increase its capital stock to $5,000,000; to issue bonds for $30,000 a mile; has extended the time for construction, and allowed it to acquire the North Lanark Ry. shares, etc.

A meeting of the shareholders will be held at Ottawa, June 3, to approve of an agreement with the Ottawa and St. Lawrence Construction Co. for the building and equipment of the line. It is also proposed to change the head office from Ottawa to Toronto. F. Iveson, Toronto, is Secretary. (Mar., pg. 141.)

Portage Radial Ry. and Canal Co.—W. Richardson returned to Portage la Prairie, Man., May 8, and is reported to have stated that the directors had received two applications for the franchise to build the line, and that the applicants had been given to the end of the month to look into the project. The principal question was as to the amount of power for which customers could be obtained. (April, pg. 169.)

Quebec Ry., Light and Power Co.—We are officially advised that the company has under consideration a two mile extension over the Drouin bascule bridge across the St. Charles River into Limoilou, Que., but nothing definite has been decided. (May, pg. 2325.)

Regina Municipal Ry.—A Regina, Sask., correspondent writes:—"The construction of the extensions to the street railway system is being gone ahead with just as rapidly as material and workmen can be had. Over 200 men are now employed, and it is expected that over 400 will soon be at work. The double tracking of Dewdney

St. from Albert St. to Pasqua St. is being rushed, and as soon as this is completed the street will be paved. The Albert St. north line is nearing completion, and an effort is being made to complete the double tracking of Thirteenth Ave. during June. It will probably be well on in the summer before construction is started on the lines to the north eastern section of the city. As soon as the Broad St. subway is completed a car line will be laid from South Railway St. to Dewdney St. via the subway, which will give all sections of the city direct connection with the warehouse section. (May. pg. 235.)

St. John Suburban Ry.—Press reports state that this newly incorporated company has started surveys for its projected electric railway at St. John, N.B. J. A. Jones, St. John, is engineer in charge. (May., pg. 235.)

Saskatoon Municipal Ry.—We are officially advised that the contract for the building of the electric railway from Saskatoon to Sutherland, Sask., has been let to Lonergan and Hansford, Saskatoon. It will be approximately three miles long, and will be built under the direct supervision of E. Hanson, City Electrical Engineer. The line is being built by private interests, and on completion will be handed over to the city for operation. The Sutherland Town Council, May 8, passed a resolution offering to grant a franchise for the operation of an electric railway on certain streets if the proposed line were extended. A joint committee has been appointed to arrange the details.

The Saskatoon City Council has been approached by a real estate company with an offer of $5,000 towards the cost of an extension of the city car line to Tuxedo Park and vicinity.

The ratepayers are being asked to vote, May 16, on a bylaw to raise $100,000 for extensions of the street railway. (May, pg. 236.)

Swift Current, Sask.—Application has been made to the City Council for a franchise for an electric railway. The proposition is to build about six miles of line at a cost of about $150,000. The promoters have acquired two half sections of land in North Swift Current, on one of which a power house and car barns will, it is said, be built if the franchise is granted. F. H. Cooper, Chicago, Ill., is the principal promoter.

Toronto and York Radial Ry.—The Ontario Legislature has authorized the company to build a second track on certain parts of Yonge St., subject to conditions to be named by the Ontario Railway and Municipal Board, if the company and the Toronto City Council cannot agree. The Act also grants an extension of time within which the company may build certain lines authorized. (May. pg. 236.)

Toronto Eastern Ry.—The Scarboro, Ont., Township Council, May 12, approved of the route of this line to Scarboro Village. Construction is in progress between Bowmanville and Pickering, but is not being proceeded with at a rapid rate. While it is possible that this section will be finished this year, it is not likely that any further mileage will be put under contract at present. (May, pg. 236.)

Toronto Suburban Ry.—Work is in progress along this line from the west bank of the Humber River to near Guelph, Ont., by forces of local men working under the general contractor, Ewen Mackenzie. No contract, we have been informed, for the building of any part of the line beyond Guelph has been let. It is expected to have the greater part of the Toronto-Guelph line in operation by the fall. (May. pg. 236.)

Vancouver Island Hydro-Electric and Tramway Co.—Press reports state that all arrangements have been completed by a company with this title to build an electric railway at Ladysmith, Vancouver Island, B.C. The town has granted a franchise, and the company proposes to build extensions to Chemainus, Duncans, Nanoose and Nanaimo. It is stated that construction would be started at once and that 50 miles of track will be laid within the next twelve months. Montague Yates, Victoria, is interested in the company. (May, pg. 236.

Winnipeg Electric Ry.—It is expected that the extension to Stonewall will be completed, so far as tracklaying, by July, and that the ballasting and overhead work will be finished so as to permit of the operation of traffic early in the fall. The grading from Middlechurch to Stoney Mountain was practically completed last year, and work has been started on the remaining section of the line. (April, pg. 186.)

Halifax Electric Tramways Legislation.

The Nova Scotia Legislature, May 9, by a vote of 17 to 12, threw out the application for the incorporation of the Halifax Tramways and Power Co., and also threw out the Halifax City Council's application for authority to acquire the property and franchise of the H.E.T. Co. Summaries of these bills were given on pg. 237 of our May issue. Subsequently the Legislature took up the consideration of an application of the H.E.T. Co. for amendments to its act of incorporation and amending acts. The measure met with considerable opposition, but was passed May 13. It contains two sections, the first providing that the capital be increased from $1,500,000 to $2,000,000 by the issue of an additional 5,000 shares. The second section repeals the whole of chap. 78 of the statutes of 1912, which provided for an extension of the present franchise, which expires in 1910, for 21 years, on the present terms; the division of the net profits as follows:—a payment of a dividend of 8% on the common stock; an amount equal to 4% on the common stock to be set aside for extensions and improvements on the property; and the balance to be equally divided between the city and the company. This part of the act was only to come into operation by proclamation. The second part of the act, which came into force on passing, and was to remain in force for a year, prohibited any increase of the company's capital stock or borrowing powers, or the leasing or sale of the company to any other similar company. The object of the city in obtaining the passing of this act was to enable it to continue negotiations for the purchase of the property.

The Legislature has also passed an act amending the Public Utilities Act in several details. Arising out of the discussions on the affairs of the H.E.T. Co., the following amendment to the original bill was introduced May 10, and became part of the act as passed May 13:—"The powers, rights, and privileges secured to any public utility by virtue of any statute, or by any contract or agreement ratified by statute, shall not be altered, diminished or enlarged by the Board, but the Board may at any time enquire into any rights, powers, privileges, or limitations, enjoyed by or imposed upon any contract ratified by the Legislature, in so far as the exercise of the same affects the public interest and may make such recommendations to the Legislature in connection therewith as may seem right and just."

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry.—Gross earnings for March, $571,163; operating expenses, $374,079; net operating earnings, $197,084; renewal funds, $51,620; net earnings, $145,464; approximate income from investments, $35,000; net income, $180,464, against $491,782 gross earnings; $307,958 operating expenses; $183,824 net operating earnings; $37,935 renewal funds; $145,889 net earnings; $25,000 approximate income from investments; $170,889 net income for March, 1912. Aggregate gross earnings for nine months ended Mar. 31, $5,137,701; net earnings, $1,751,543, against $4,283,459 aggregate gross earnings, and $1,510,420 net earnings for the same period 1911-12.

Cape Breton Electric Co.—A press report says that while the complete annual report is not available, it is known this company has passed through its best year. Announcement has been made that the directors have decided to increase the dividend rate from 5 to 6%, the new rate going into effect for the present quarterly declaration.

Cape Breton Electric Co.—Gross earnings for March, $28,099.37; operating expenses and taxes $15,965.83; net earnings $12,133.54; interest charges, sinking and improvement funds $5,081.66; net income $6,051.88, against $24,409.89 gross earnings: $15,856.32 operating expenses and taxes; $8,553.57 net earnings; $5,635.84 interest charges, sinking and improvement funds; $2,917.73 net income for Mar. 1912. Construction charges during March $6,387.69.

London St. Ry.—Gross earnings for April, $25,077.87; expenses, $19,668.40; net earnings, $5,409.47; deductions, $2,371.25; net income, $3,038.22; aggregate gross earnings for four months ended Apr. 30, $101,767.46; expenses, $73,035.06; net earnings, $28,713.50; deductions, $9,511.10; net income, $19,220.40.

St. Thomas St. Ry.—Cash fares and ticket sales for April, $1,430.70, against $1,113.79 for April, 1912. Passengers carried, 38,257, against 31,302 in April, 1912.

Saskatoon Municipal Ry.—Traffic receipts for April, $13,914.80; operating expenses, including interest on capital expenditure, and sinking fund, etc., $14,597.25. Average traffic receipts per car mile, $25.93; average number of passengers per car mile, 5.41; operating expenses per car mile, $27.20.

Sherbrooke Ry. and Power Co.—Press reports state that at a special meeting of shareholders on May 5, it was announced that the gross earnings were running about 50% higher than a year ago, and that the net results were showing a gain of over 25%. The prospects of the year were said to be excellent, particularly in the power department.

Toronto Ry., Toronto and York Radial Ry., and Allied Companies.—Gross earnings for March, $772,491; operating expenses, maintenance, etc., $405,788; net earnings, $336,703, against $668,194 gross earnings; $333,371 operating expenses, maintenance, etc.; $334,823 net earnings for March, 1912. Aggregate gross earnings for three months ended Mar. 31, $2 267,732; net earnings, $1,083,306, against $1,954,550 aggregate gross earnings; $984,099 net earnings for same period 1912.

Winnipeg Electric Ry.—Gross earnings for March, $329,016; operating expenses, $189,950; net earnings, $139,066, against $298,838 gross earnings; $161,826 operating expenses; $137,013 net earnings for March, 1912. Aggregate gross earnings for three months ended Mar. 31, $1,000,945; net earnings, $433,570, against $917,510 aggregate gross earnings, $415,338 net earnings for same period 1912.

Edmonton Radial Railway Co.'s Double Track Work.

Canadian Railway and Marine World for May gave some particulars as to the permanent track work decided on for this year. We have since been officially advised that contracts have been let for the following work:—

Street	From	To	Feet
Jasper	[illegible] St.	116th St.	1900
Namayo	Jasper	High Level Br.	5200
[illegible] West	Whyte		2080
Main	First St.	6th St. Scott	2080
[illegible]	24th St.	42nd St.	3600
Alberta Ave.	Kinistino	C.N.R. Tracks	6062
Namayo	First	Kinistino	1480
Jasper East	[illegible] Br.	Exhibition Grounds	[illegible]
[illegible]	First St.	24th St.	4240
[illegible]	Spruce	Oak	1180
Spruce	Kinistino	Agnes	[illegible]
Twenty-fourth	Short	Alberta	7120
Fifth East	Whyte	7th Ave. North	2300
Saskatchewan	9th St.	Curry St.	796
Curry	Saskatchewan	McDougall	1365
Twenty-fourth	Jasper	Stovel Place	1778
First	C N R Tracks	Norwood	4250
Whyte	4th St. West	7th St. West	600
Syndicate	Ross	Norwood	1700
Kinistino	Norwood	Alberta	3407
Whyte	7th St. East	Mill Creek	1000
Fifth East	7th St. West	11th St. North	1400

The contracts have been divided among the City Construction Co., Brown and Hargraves, Crown Paving Co., Worswick Co., Manders and Gregory, Bitulithic Co. and National Paving Co.

Sunday Operation by London and Lake Erie Ry. and Transportation Company.

At the Toronto Assizes in June, 1912, the Chancellor heard the case of W. Kerley, of St. Thomas, Ont., against the L. & L.E.R. & T. Co., claiming three penalties of $400 each for operating the line on three Sundays in Dec., 1911, or, as an alternative, an order to restrain the railway from operating on Sundays, the case having been entered with the Ontario Railway and Municipal Board's consent. The Chancellor gave judgment for the plaintiff, for $1,200 and costs of action, $600 to go to plaintiff, who has since died, and $600 to the city of London.

The case was appealed, and on May 5, Sir William Meredith, Chief Justice of Ontario, delivered the judgment of the Appellate Division, allowing the appeal with costs, and dismissing the original action with costs.

The company has started a Sunday service over the whole line between London and Port Stanley, leaving London and Port Stanley at 9.30 a.m., St. Thomas south at 8.40 a.m., and north at 9.15 a.m., and hourly thereafter, until the last car leaves London for Port Stanley at 8.30 p.m., Port Stanley for London at 9.30 p.m., and for St. Thomas at 10.30 p.m.

The Ontario and West Shore Railway Muddle.—Canadian Railway and Marine World for April and May contained full particulars of a report on the condition of this partly built line by H. W. Middlemiss, A.M.I.C.E., Toronto, and also other references to the history of the undertaking, and its apparent abandonment by its principal promoter, J. W. Moyes, of Toronto. In order to protect the municipalities which guaranteed the bonds, the Ontario Legislature has passed an act vesting the company's franchise and all property, rights and privileges in [illegible] of Dungannon, in trust for the municipalities, but subject to the rights of the company's creditors, and the bondholders and trustees for bondholders. The Ontario Railway and Municipal Board fixed May 20 as the date for hearing the various parties interested, with a view to arriving at [illegible] of the whole matter.

Personal Paragraphs.

PATRICK DUBEE, Secretary and Treasurer, Montreal Tramways Co., and President, Canadian Street Railway Association, has returned from England.

W. G. MURRIN has been appointed Mechanical Superintendent of the British Columbia Electric Ry. He comes from London, Eng., where he was connected in an executive capacity with the London United Ry.'s staff.

W. H. FRASER, of the British Columbia Electric Ry.'s staff, has been appointed Electrical Superintendent, vice D. M. Kennedy, resigned. Mr. Kennedy will spend the next few weeks travelling through Canada and the United States, inspecting electrical plants.

W. F. GRAVES, heretofore Superintendent of Tracks, Chicago City Railway, Chicago, Ill., has been appointed Chief Engineer and Superintendent of Construction, Montreal Tramways Co., vice J. D. Evans, resigned to enter another company's service.

This gem is from the Toronto Mail and Empire:—"Galt, May 18.—On Saturday former Mayor Thomas Patterson announced that he had authority from Monsignor W. J. Coleman, of the Dominion Power and Transmission Co. of Hamilton, for the statement that construction would start in the near future on a radial electric line from Hamilton to Galt."

H. H. HUMESTON has been appointed Superintendent of Transportation in charge of the operation of the cars, London St. Ry., London, Ont., vice J. A. Young, resigned. He was an employe of the company about ten years ago, and has since been in Detroit United Ry. service. The report that C. Johns, of St. Thomas, Ont., another former employe of the company, had been appointed, is incorrect.

Electric Railway Notes.

The Montreal Tramways Co. has received three steel street car bodies from Canadian Car and Foundry Co.

Three cars arrived at Brandon, Man., May 8, for the new municipal electric railway.

The American Electric Railway Association's annual convention will be held at Atlantic City, Oct. 13 to 17.

The Manitoba Commission of Public Utilities is considering the question of the interruption of the street car traffic by processions in Winnipeg.

The Edmonton Radial Ry. management is not, we are officially advised, contemplating the purchase of any more cars, as stated in press reports.

The Windsor, Essex and Lake Shore Rapid Ry. has received eight steel underframe flat cars, 40 tons capacity, from Canadian Car and Foundry Co.

The Aberdeen (Scotland) Tramways were the first in Europe to adopt p.a.y.e. cars, a converted car having been in use since Dec., 1912. Ten new double deck p.a.y.e. cars have been put in service recently.

The Brantford St. Ry. employes, it is reported, are organizing a union, to be affiliated with one of the larger organizations, in order to make a demand for increased pay and shorter hours. The present maximum rate is reported to be 16c. an hour.

The Guelph Radial Ry. is adding a double ended car of the p-a-y-e type, to its rolling stock. It is equipped with Westinghouse 101B2 motors, K28 controllers, Consolidated Car Heating Co.'s heating system, longitudinal seats, sanitary hand straps, etc., and is built by the Preston Car and Coach Co.

The Sunday operating of cars over the Toronto civic car line to East Toronto, was commenced, May 11, the authority necessary for such operation having been recently granted by the Ontario Legislature in an act promoted for various civic purposes.

The petitions for the rule nisi against E. A. Robert, President Montreal Tramways Co., and H. R. Mallison, Secretary of the Imperial Trust Co., in connection with their refusal to produce the original copy of the deed between the Corporation Agencies in the Superior Court, in the case of Vipond against Lovett, were dismissed May 12.

The Toronto and York Radial Ry., under authority of an act passed by the Ontario Legislature recently, commenced Sunday operation of its cars over the whole of its Metropolitan Division, May 18, on the same schedule as is in force on week days, which provides for cars between Toronto and Newmarket hourly, and from eight to ten cars through to Sutton during the day. Over 16,000 people were carried on the opening Sunday.

The motormen and conductors of the Port Arthur and Fort William Electric Ry. struck work, May 11, on their demands for a revised schedule being refused. The schedule under which they had been working has some time yet to run before expiry, and local opinion generally confirms the stand taken by the joint commission operating the line. A number of other men were engaged, and the service was recommenced, with some reductions.

The Hydro Electric Railway Act, providing for the construction and operation of electric railways throughout Ontario, by the Hydro Electric Commission, or by corporations under agreements with the Commission, and which was given in full in Canadian Railway and Marine World for May, passed its third reading in the Ontario Legislature, Apr. 21, with but two trifling verbal amendments, which do not in any sense alter the bill.

The Supreme Court of Canada has dismissed the appeal of the British Columbia Electric Ry. Co. vs. Vancouver, Victoria and Eastern Ry. and Navigation Co. This was an appeal by the B.C.E.R. Co. from a decision of the Board of Railway Commissioners, authorizing the V.V. & E.R. & N. Co. to construct Hastings, Pender, Keefer and Harris streets, Vancouver, across its tracks by overhead bridges, the B.C.E.R. Co. being ordered to pay 20% of the cost of constructing Harris Street and Hastings Street Bridges, the cost of depressing the V.V. & E.R. & N. Co.'s tracks to be included in the cost of the work. Two of the judges dissented from the judgment.

The Toronto Board of Control decided, May 19, to engage experts to value the Toronto Ry. and Toronto Electric Light Co.'s properties, the acquirement of which it is proposed to submit to the ratepayers in the near future, under legislation passed at the recent session of the Ontario Legislature, and which was fully dealt with in our last issue. B. J. Arnold, of the Arnold Co., Chicago, and J. W. Moyes, of Toronto, were mentioned as those likely to be appointed. In connection with the proposed acquirement of these properties, Sir William Mackenzie, President, stated on his return from Europe, that the two would have to be taken over together, as they could not be separated. Negotiations are proceeding between him and Mayor Hocken

Marine Department.

The Dominion Canal Statistics for the Season of 1912.

Following are the principal portions of the report on canal statistics for 1912, as issued by the Department of Railways and Canals:—

The total volume of traffic was as follows:—

	Tons.	Increase.	Decrease.
Sault Ste. Marie	39,669,655	8,717,946	.....
Welland	2,851,915	314,286	.....
St. Lawrence	3,477,188	371,480	.....
Chambly	618,415	18,586	.....
St. Peter's	74,809	.....	489
Murray	170,081	6,624	.....
Ottawa	392,350	72,279	.....
Rideau	160,133	.....	12,094
Trent	77,150	19,860	.....
St. Andrews	95,549	48,414	.....
Total	47,587,245	9,569,475	12,583

The increment for the year 1912, as compared with 1911, was 9,556,892 tons, equal to 25.1%.

It must not be assumed that the net business of the canals amounted to 47,587,245 tons. There is duplication to the extent of several million tons, and unavoidably so. For example, all traffic between Fort William and Montreal is first credited to the canal at Sault Ste. Marie, then to the Welland Canal, and finally to the St. Lawrence Canals. In the same way, freight shipped from Ottawa to New York finds a place first in the returns of the Ottawa River Canals, next the Lachine Canal, and lastly in the Chambly Canal. This situation is not essentially different from that which arises with regard to railway traffic, and is inseparable from the statistical system which has long been in vogue. In dealing with the question of the average freight rate on the inland waters further on the actual net tonnage will be indicated.

The following statement shows the growth of traffic through the canals during the past decade:—

1903	9,203,817	Tons
1904	8,256,236	"
1905	9,371,744	"
1906	10,523,185	"
1907	20,543,639	"
1908	17,502,820	"
1909	33,720,748	"
1910	42,990,608	"
1911	38,030,353	"
1912	47,587,245	"

The expansion for the ten year period between 1903 and 1912 was 417%.

The following comparative statement of traffic shows on what canals the growth has taken place during the past four years:—

	1909.	1910.	1911.	1912.
Sault Ste. Marie	27,861,245	36,395,687	30,951,709	39,669,655
Welland	2,025,951	2,326,290	2,537,629	2,851,915
St. Lawrence	2,410,629	2,760,752	3,105,708	3,477,188
Chambly	752,117	669,299	599,829	618,415
St. Peter's	70,850	85,951	75,298	74,809
Murray	102,201	180,911	163,457	170,081
Ottawa	336,939	385,261	320,071	392,350
Rideau	91,774	131,881	172,227	160,133
Trent	50,952	46,293	57,290	77,150
St. Andrew's	.....	8,283	47,135	95,549

Comparing the years 1911 and 1912, following was the tonnage by classes and canals:—

	Agricultural Products. Tons.	Animal Products Tons.	Manufactures. Tons.	Products of Forest. Tons.	Products of Mines. Tons.	Total. Tons.
1911						
Sault Ste. Marie	3,219,929	978	854,516	56,853	26,819,433	30,951,709
Welland	1,089,605	574	539,865	250,423	657,162	2,537,629
St. Lawrence	1,003,090	9,943	557,992	551,155	983,528	3,105,708
Chambly	41,903	315	25,370	396,704	135,537	599,829
St. Peter's	16,538	2,153	11,828	7,120	37,659	75,298
Murray	1,109	113	143,390	1,631	17,214	163,457
Ottawa	9,779	2,167	65,452	202,797	39,576	320,071
Rideau	6,084	2,684	114,937	34,350	14,172	172,227
Trent	951	307	12,551	31,342	12,040	57,290
St. Andrew's	82		33,153	13,773	127	47,135
Total	5,389,070	19,624	2,359,063	1,546,139	28,716,457	38,030,353
1912.						
Sault Ste. Marie	4,530,792	372	975,303	34,114	34,129,074	39,669,655
Welland	1,205,912	678	625,569	227,684	792,072	2,851,915
St. Lawrence	1,119,567	9,375	464,091	578,760	1,305,395	3,477,188
Chambly	19,706	338	11,600	425,313	161,458	618,415
St. Peter's	15,427	2,996	7,583	11,161	37,642	74,809
Murray	448	37	101,511	706	67,379	170,081
Ottawa	5,278	2,880	20,958	226,600	136,634	392,350
Rideau	3,995	3,151	18,814	28,642	105,531	160,133
Trent	2,514	361	3,459	67,489	3,327	77,150
St. Andrew's	37	...	60	14,153	81,299	95,549
Total	6,903,676	20,188	2,228,948	1,634,622	36,799,811	47,587,245

The ratio which each of the foregoing classes bore to the total volume of traffic during the past three years is shown in the following statement:—

	1910. Per cent	1911 Per cent	1912 Per cent
Agricultural products	10.2	14.2	14.51
Animal products	1.2	.1	.04
Manufactures	5.2	6.2	4.68
Produce of forests	3.9	4.0	3.43
Produce of mines	79.5	75.5	77.34

Until 1908 a separation was not made as between Canadian and United States traffic. Since that date a record has been kept of the country of origin, as far as the canals of Canada are concerned. The facts with respect to vessel tonnage and freight tonnage during the past five years are given in the following table:

	Canadian Vessels.		U.S. Vessels.		Freight Tonnage.		
Year.	No.	Tonnage.	No.	Tonnage.	Canadian.	United States.	Total.
1908 ...	29,040	6,780,789	7,489	4,835,320	5,012,147	12,490,673	17,502,820
1909 ...	22,507	7,811,578	9,996	16,459,322	7,378,057	26,342,691	33,720,748
1910 ...	25,337	8,931,790	11,462	21,777,297	7,883,614	35,106,994	42,990,608
1911 ...	25,585	9,172,192	10,370	18,231,622	7,792,907	30,237,446	38,030,353
1912 ...	27,371	10,237,335	11,785	24,636,190	9,376,529	38,210,716	47,587,245

The proportions of freight tonnage originating in Canada and the United States during the five years for which the facts are available, have been as follows:—

Year.	Canadian per cent.	U.S. per cent.
1908	28.7	71.3
1909	21.8	78.2
1910	18.3	81.7
1911	20.5	79.5
1912	19.7	80.3

The large and growing difference between the traffic of Canada and the traffic of the United States through Canadian canals, arises almost wholly at Sault Ste. Marie. For example, in 1912 the proportion of strictly Canadian traffic which passed through the Canadian canal at Sault Ste. Marie was 10.3, and the traffic of that canal represented 83% of the total for the whole Dominion. Of the traffic which passed through the Canadian canal at Sault Ste. Marie in 1912, iron ore constituted over 87%. In other words, out of 35,579,293 tons of U.S. traffic at Sault Ste. Marie, 31,141,063 tons was made up of iron ore.

The situation changes at the Welland. In 1912, out of a total of 2,851,915 tons, Canadian traffic aggregated 1,553,116 tons, or 54%. The St. Lawrence canals during the same period showed 2,340,143 tons of Canadian business, out of a total of 3,477,188, or 67%. The proportions with regard to vessel tonnage in 1912 were: Canadian, 29.36%; United States, 70.64%.

The rapid settlement of the Western provinces has created a steadily deepening interest in the movement of Canadian wheat. From 1895 down to 1909 a separation of Canadian and U.S. products was not made in canal statistics; but since the latter year a careful record has been made of the facts in that regard. The following shows the volume of Canadian wheat brought down through the Canadian canal at Sault Ste. Marie:

	Bushels.
1895	4,518,334
1896	19,314,234
1897	17,925,834
1898	9,746,600
1899	12,759,634
1900	9,292,034
1901	9,639,534
1902	27,912,500
1903	32,233,934
1904	29,794,100
1905	25,983,100
1906	34,389,300
1907	49,399,967
1908	58,574,034
1909	*48,047,833
1910	51,774,833
1911	63,641,000
1912	83,743,034

*For the first time represents Canadian wheat only. The figures of preceding years include U.S. wheat which passed through the Canadian canal.

The foregoing figures do not represent the total volume of Canadian wheat which came down from the Northwest in 1912. They have reference wholly to the number of bushels which passed through the Canadian canal at Sault Ste. Marie. There came through the U.S. canal at that point 23,020,833 bush. It was ascertained from the Customs Department that 10,724,498 bush. of Canadian wheat went out from Duluth in 1912 in bond. Of this latter quantity 7,646,634 bush. had been accounted for in the totals of the two canals at Sault Ste. Marie, leaving 3,078,264 to be added to the figures just given. The total quantity of Canadian wheat moved by water in 1912 would therefore be 109,842,031 bush., as compared with 65,622,481 in 1911.

Without reference to which of the two canals was used at Sault Ste. Marie, the

[illegible] sure the conditions which have operated [illegible]

[illegible] for the ascertaining of the average rate per [illegible] plans involved the recording of the freight rate in each ship's report filed at the various canal offices. As an alternative those operators who wished to do so were per[illegible] Ottawa of tonnage, mileage and gross [illegible] required to send in at the close of the sea[illegible] total ton mileage of loaded vessels, gross [illegible] having regard to the difficulties which are inseparable from the inauguration of new undertakings of that character, the results [illegible] net Canadian tonnage of 6,942,278, definite information was received with regard to the mileage and freight earnings on 6,292,661 tons. St. Peters and St. Andrews canals were left out of the scheme for 1912, and they accounted for 170,358 tons; so that the actual net Canadian tonnage affected was 6,771,920. Returns were thus received in relation to 93% of Canadian [illegible] of traffic, and it might reasonably be assumed that had every ton been accounted for, the result would not have been altered.

The Canadian returns applied to 6,292,661 tons of freight, to 3,286,187,160 ton miles, and to gross freight earnings amounting to $6,378,893.43. From U.S. shipping companies reports were received covering 26,030,661 tons, out of a total net tonnage of 36,840,812. These reports had reference to all classes of commodities, and were thoroughly typical of the whole business on Canadian inland waters. It may be confidently asserted that absolutely complete returns would not have materially affected the final calculation of the average rate per ton per mile. The number of ton miles ac[illegible] the gross earnings on U.S. freight to $14,[illegible]

Using the factors which have been indi[illegible] ings from freight the results are as fol[illegible]

Canadian traffic:—
Average rate per ton .... 91. 04 cents.
[illegible]

U.S. traffic:—
Average rate per ton .... 56. 62 cents.
[illegible]

Without an explanation, the difference [illegible]

[illegible]

134,251 tons, or nearly 85%, consisted of [illegible] Upbound coal accounted for a further 2,945,441 tons, or 8%. In fact, if iron and coal were eliminated from the total account, the volume of Canadian traf[illegible] the U.S. The transportation of iron ore and coal is a special feature of the trade of the Great Lakes. Most of the ore is carried by the vessels of the Pittsburg Steamship Co., and the rate in 1912 was 55c per ton from the head of Lake Superior to ports on Lake Erie. These vessels are owned and operated by the iron interests of Pittsburg, and do not carry other commodities than ore and coal—ore down and coal up. For this upbound coal, without regard to ownership of the vessels, the rate last year was 30c. per ton. Thus, while wheat was being carried to Buffalo at as high a rate as 2.616c per ton per mile, iron ore was passing over the [illegible] Coal was being moved upward at the still lower rate of .046 per ton per mile. In a word, any analysis of freight rates on Canadian inland waters would be misleading which failed to recognize, and to separate for special treatment, this overwhelming movement of ore and coal under the conditions indicated.

To measure the conditions which influenced the movement of Canadian wheat to Montreal or Buffalo, it is necessary to know the freight rate on wheat from Buffalo to the Atlantic seaboard during 1912. It was officially ascertained from the Buffalo Chamber of Commerce on Feb. 14, 1913, that these rates per bushel were:—May to end of Sept., on lake wheat for export, 4½c.; in October, 5½c.; after Nov. 15, 6c. Thus, the all water rate from Fort William to Montreal in May was 5.444c. per bushel, and the combined water and rail rate from Fort William to the U.S. seaboard (say New York) was 7.219c. In November, the water rate from Fort William to Montreal was 7.129c. per bushel, and the combined water and rail rate from Fort William to the U.S. seaboard, via Buffalo, was 8.616c. The apparent difference in favor of Montreal was 1.765c. per bushel in May, and 1.487c. in November, so far as the rates of freight were concerned.

There remains to be presented the facts with respect to traffic by way of Fort William and Georgian Bay ports. The average rate for the season was [illegible] per bushel. It was officially ascertained that the rail rates from Georgian Bay to Montreal were as follows:—

C.P.R.	[illegible] per bushel
[illegible]	[illegible]
[illegible]	[illegible]
[illegible]	[illegible]

The movement of Canadian wheat dur[illegible] division of this report. There remains the matter of the freight rate on it. Special care was taken during the year to ascertain with accuracy the rates which were charged on waterborne wheat. The facts in that [illegible]

[illegible]	
[illegible]	[illegible]
[illegible]	[illegible]
Fort William to Georgian Bay:—	
[illegible]	[illegible]
[illegible]	[illegible]
Fort William to other Canadian ports:—	
Per ton per mile	.115 "
[illegible]	[illegible]
[illegible]	
[illegible]	[illegible]
Per bushel	5.774 "

[illegible] the highest [illegible]. The [illegible] per ton per mile and per bushel [illegible] as follows:—

Fort William to [illegible]
[illegible]

These show that any vessel [illegible] from Fort William to Montreal [illegible]. The average [illegible] Fort William [illegible] Montreal [illegible] per ton per mile and [illegible] per bushel [illegible] from Fort William to Buffalo [illegible] per ton per mile [illegible] per bushel. The [illegible] Fort William and Montreal [illegible].

Speaking broadly, it might be assumed that the combined [illegible] and rail rate is governed by [illegible].

In the grain situation in 1911 the [illegible] of Canadian grain from Canada to U.S. channels, despite the lower transportation cost between Fort William and Montreal, were discussed. Among these were:—The [illegible] of ocean tonnage at New York, [illegible] at foreign ports, and [illegible] in 1912.

The question is frequently, and quite naturally, asked—How do freight rates by water compare with freight rates by rail? It has always seemed to the writer, as the officer of this Department in charge of transportation statistics, that data should be available which would permit such a comparison to be fairly made. But the question will never be fully and satisfactorily answered until [illegible] for the first time, [illegible] information has been obtained with regard to the average rate per ton per mile on the [illegible] of the Great Lakes. That rate, so far as Canadian business was concerned, was found to be [illegible] cent. It is pointed out, however, that this rate does not take account of the special conditions under which traffic on the inland waters of Canada is conducted, and the contribution of the Government should be taken into the reckoning. [illegible] in such a connection. It would seem, at all events, to be proper to include the interest charge on the capital cost of the canals and the annual outlay by Government for operation. The facts in that regard are definitely known. [illegible] which might be included [illegible] the matter is [illegible] being the amount of [illegible] is not definitely known. The capital cost of the canals concerned with Canadian inland waters was, up to Mar. 31, 1912, [illegible]. The interest on this capital cost, at [illegible], would be [illegible]. The cost of maintenance of the Canadian canal system for the year ended Mar. 31, 1912, was [illegible]. These items added together give a total of [illegible]. [illegible]

[illegible]

[illegible]	[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]	[illegible]

[illegible]

[illegible] from Fort William to Montreal [illegible] a ton [illegible] a ton. [illegible] Fort William and Montreal would be equal to [illegible] a ton. [illegible]

The average rate per ton per mile of all Canadian railways for the year ended June 30, 1912, was [illegible] cent. [illegible] in 1912. [illegible] traffic in any particular channel.

For the season of 1913 the insurance rates in force on Canadian inland waters were as follows:—[illegible] the hull, covering all risks from the head of the lakes [illegible]. An additional [illegible] was charged [illegible] and a further [illegible] was payable from [illegible] to Montreal. Thus the rate on a vessel running from Fort William to Montreal was [illegible]. A still further charge of [illegible] of the [illegible] Association of [illegible] to the Canadian Lake [illegible] Association.

The Richelieu and Ontario Navigation Company's Schedule for 1913.

Following on the [illegible] of the R. & O. N. Co., a complete revision of the sailing schedule for the passenger steamers has been arranged as follows:—

TORONTO—CHARLOTTE—MONTREAL LINE.—[illegible] Kingston [illegible]

MONTREAL—QUEBEC LINE.—[illegible] Montreal [illegible] Quebec.

[illegible] LINE.—[illegible]

[illegible] LINE.—[illegible]

[illegible] TORONTO—HAMILTON LINE.—[illegible] Chicora.

Vessels and Officers for 1913, of Inland Lines, Limited.

[illegible]

[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]

The [illegible]

The Reid Newfoundland Company's s.s. Kyle.

The R.M.S. Kyle has been built recently at Newcastle on Tyne, Eng., for the Reid Newfoundland Co., for its coastal service between St. John's, Nfld., and Cape Chidleigh, on the coast of Labrador, a service occupying a fortnight for the round trip, and often having to be carried on through ice.

The vessel is finely modelled, 220 ft. long by 32 ft. beam, and has passenger accommodation for 68 first class and for 141 second class. The accommodation generally is of the most up to date and comfortable description, being well lighted electrically, heated by steam and thoroughly ventilated. The first class passengers will be berthed amidships. They will have a fine promenade deck, and in a house on that deck there is a comfortable smoking room, the walls being of oak, slightly fumed, with corresponding furniture upholstered in green leather. In the same house are the captain's room, the chief officer's room, and the wheelhouse. Below this, on the upper deck, are the ladies' room and the first class dining saloon. The ladies' room has walls of sycamore, satinwood furniture upholstered in old rose moquette, and the whole effect is very charming. Aft of the ladies' room is the entrance to the first class dining saloon, which is a fine room with walls and furniture of polished mahogany, the latter being upholstered with blue leather. This room is divided from the entrance by a very effective screen of polished mahogany, filled in with stained glass. The entrance hall and staircase connect the smoking room, dining saloon and first class staterooms, etc., and are panelled with polished mahogany, whilst the floor is of indiarubber tiling. There are 15 first class staterooms on the main deck below the dining saloon, with accommodation for 68 persons, one room being for ladies, with 10 berths. These are all enamelled white, with mahogany furniture and upholstered with rose colored moquette. The second class passengers will be berthed in the after part of the vessel. On the main deck there is a compartment for 102 men, and aft of this another for 39 women. Above, on the upper deck, right aft, there are two hospitals, one for men, the other for women, together with rooms for doctors, baths, etc. The officers and engineers have rooms on the main deck at the sides of the engine casing, and the galley is placed on the upper deck forward of the engine casing, conveniently near the dining saloon.

The vessel is fitted with an installation of wireless telegraphy, a complete installation of electric light, including a search light, and an efficient arrangement of steam heating suitable for the climate. She is propelled by a set of single screw triple expansion engines, having cylinders, 18½, 30½ and 50 ins. dia. by 36 ins. stroke, supplied with steam from two single ended boilers, 13¾ ft. dia. by 11½ ft., fitted with six corrugated furnaces, and working under forced draught at a pressure of 180 lbs. per sq. in., the main condenser being of the latest "Uniflux" type. On the trial trip off the Tyne, a speed of 13¾ knots an hour was attained. Amongst the auxiliary machinery in the engine room may be mentioned steam and hydraulic reversing engines, a pair of feed pumps with direct contact feed heater, a centrifugal circulating pump, a feed water filter, auxiliary condenser, two steam ash hoists, an indicator fitted on bridge to indicate the movement of the main engines, circulators to the boilers, etc.

The trial trip was made on May 5, when the owners were represented by R. G. Reid, General Superintendent.

Reid Newfoundland Co.'s R.M.S. Kyle.

New Steamboat for Canadian Pacific Ry. Kootenay Lakes Service.

The steamboat Nasookin, which was built at Port Arthur, Ont., and shipped to Nelson, B.C., where she was reassembled was launched at Nelson, Apr. 30. Her dimensions are, length between perpendiculars, 200 ft., length over all 236 ft., beam 40 ft., draught 5 ft. She will be driven by a stern wheel, 24 ft. diar., and the propelling machinery will consist of tandem compound jet condensing engines with cylinders 16⅝ and 35⅝ ins. diar. by 96 ins. stroke, supplied with steam at 200 lbs. by a locomotive boiler. The hull is entirely of steel, and her total displacement will be about 600 tons. Passenger accommodation for over 200 is arranged on three decks, the whole being of the most modern type, the furnishing being chiefly in cedar panelling finished in white enamel. A complete electric lighting plant is being installed by the Canadian General Electric Co., and the fire apparatus and life saving appliances are most complete. The construction is being carried out under the general supervision of J. C. Gore, Superintendent of the B.C. Lake and River Service.

The new harbor at Rotterdam, Holland, will, it is said, be the largest artificial harbor in the world, the water having covered 766 acres. It will be 28 ft. deep.

Transfer of the Jaques Steamboats.

Inland Lines Ltd., which is owned by the Richelieu and Ontario Navigation Co., has acquired the Montreal and Great Lakes Steamship Co.'s steamboat Bickerdike, and the Jaques Transportation Co.'s steamboat C. A. Jaques, and will operate them in connection with its other vessels, as it will also the steamboats City of Hamilton and City of Ottawa, owned by the Montreal and Lake Erie Steamship Co. Following are the chief particulars of the vessels mentioned.—City of Hamilton, built at Buffalo, N.Y., 1871, former name, Japan, length 220 ft., breadth 32.5 ft., depth 14 ft.; tonnage, 1,574 gross, 869 register, screw driven by engine of 80 n.h.p.; City of Ottawa, built at Buffalo, N.Y., 1871, former name, India, length 220 ft., breadth 32.5 ft., depth 14 ft.; tonnage, 1,529 gross, 838 register, screw driven with engine of 80 n.h.p.; Bickerdike, built at Buffalo, N.Y., 1873, former name, Arabia, length 233 ft., breadth 34.5 ft., depth 14.2 ft., tonnage, 1,515 gross, 864 register, screw driven with engine of 124 n.h.p.; C. A. Jaques, built at Dumbarton, Scotland, 1909, length 249 ft., breadth 43 ft., depth 22.7 ft., tonnage 2,105 gross, 1,590 register, screw driven with engine of 212 n.h.p. This last mentioned vessel is on the British register.

We are officially advised that captains and chief engineers have been appointed, as follows,—Bickerdike, captain, D. Charland, chief engineer, J. Melville; City of Hamilton, captain, J. L. Baxter, chief engineer, J. White; City of Ottawa, captain, A. Mackay, chief engineer, P. Lefaive.

New Steamship Princess Maquinna for Canadian Pacific Railway British Columbia Coast Service.

The C.P.R. s.s. Princess Maquinna, which is stated to be the largest vessel to have been built at Esquimalt, B.C., will shortly be ready to undergo her steam trials. She is intended for service on the west coast of Vancouver Island. She has been specially designed for this somewhat rough service, all the decks, with the exception of the boat deck, being enclosed by the steel sides of the vessel, and the usual housing above the awning deck has been eliminated.

She is built of steel throughout, in accordance with Lloyd's rules for class 100 A1. There is a double bottom and she is fitted with five tanks, the third, situated under the cross bunker, being reserved for the storage of oil fuel. There is passenger accommodation for 104 first and about 30 second class, the first class staterooms all being located on the awning deck. On the main deck, aft, is the dining saloon, with accommodation for 90 passengers. The walls are panelled in mahogany, with cornices and pilaster finishing. The smoking room is located on the boat deck, aft, and is finished in hard wood. On completion she will be equipped with eight metal seamless lifeboats, each 22 ft. long, and there will be a complete fire service. The propelling machinery consists of triple inverted direct acting surface condensing engines, with cylinders 20, 34 and 53 ins. diar., by 36 ins. stroke, suppled with steam at 180 lbs. by two boilers, each 13½ by 12 ft.

Two derricks will be placed aft, two forward, and two for the main hatch. The speed of the vessel provided for in the contract is 13½ knots an hour, but it is anticipated that she will exceed this in her trials.

Compulsory Use of Radiotelegraphy on Canadian Vessels.

The bill to provide for the compulsory use of radiotelegraphy on Canadian vessels, after having passed through the House of Commons, recently received its first and second readings in the Senate. Since the bill was originally introduced some amendments have been made, chiefly at the instance of the Dominion Marine Association, a number of the member companies of which contended that the principal provisions created a considerable hardship on them. The amended portion of the bill, provides that from July 1, 1913, vessels trading from any Canadian port, whether registered in Canada or not, carrying 50 or more persons and plying between ports more than 200 miles apart; or carrying 250 or more persons and plying between ports more than 90 miles apart; or carrying 500 or more persons and plying between ports more than 20 miles apart, must be equipped with radiotelegraph apparatus capable of receiving and transmitting messages at least 100 miles. Vessels operating on the rivers of Canada, including the St. Lawrence as far seaward as Father Point, or on the lakes of Canada, except Ontario, Erie, Huron and Superior, are exempt from the provisions of the bill, as are also vessels operating in the Bay of Quinte, and on the Toronto-Hamilton route in Lake Ontario, and in the Georgian Bay in Lake Huron.

The Dominion Marine Association and C. J. Smith, then General Manager, Richelieu and Ontario Navigation, and subsequently, H. H. Gildersleeve, Manager, Western Lines, R. & O. N. Co., failed to have the vessels plying between Toronto and the Niagara River exempted, but on the motion for the third reading of the bill in the Senate, May 15, it was referred to a committee so that the company might make representations on the subject, with a view to further amendment.

Since the bill left the House of Commons Marine and Fisheries Committee, and prior to its passage through the lower house, the date when it is to become effective was changed from July 1, 1913, to Jan. 1, 1914, and the provision in sec. 7, for a penalty of $500 and costs and 6 months imprisonment for infringement was altered to read, $500 and costs or 6 months imprisonment.

The New Welland Ship Canal.

Rapid progress is being made in the preparation of the plans for the new Welland Canal, by the canal engineers, and it is expected that they will shortly be approved by the Dominion Government.

Connecting Lakes Erie and Ontario, this projected canal will be the third one to be built, the present one being commonly called the new canal, and the original one the old canal. The projected canal will here be referred to as the new canal, and not the existing one as at present.

The route of the canal on entering from the south, at Port Colborne, is the same as that of the present canal as far as Thorold, from which point the new canal will follow an almost straight line through Merritton to Lake Ontario, coming out into the latter at the mouth of Ten Mile Creek, about 3 miles east of the present outlet at Port Dalhousie. The present canal at Thorold swings off to the east in a wide sweep, and then back in a northwesterly direction. The new route, following an almost due northerly route, will cross the present canal at Merritton. The section of the existing canal between Thorold and Merritton is to be abandoned, but the portion of the present canal from Merritton to Port Dalhousie will be retained as an accessory to the new canal. The territory at present covered will thus be practically unchanged as regards the presence of a canal service.

The existing canal has 25 locks, 270 by 45 ft., with a depth of 14 ft. of water over the sills. The total drop from the highest stretch of canal level, which is 568 ft., the mean level of Lake Erie, is 325.5 ft., to the Lake Ontario normal water level of 242.5 ft. The length of this canal is 26.75 miles.

The new canal is to have 7 locks of which nos. 4, 5 and 6 from Lake Ontario will be in flight, each 800 by 80 ft., with a lift of 46.5 ft., with 30 ft. of water over the sills. The levels of the present and new canals at Merritton will be the same, making possible their joining there. The main gates of the new canal are to be of the single leaf type, with mitre gates for places of minor importance. While the depth of the locks is to be 30 ft., the intermediate distances are only to be enlarged to a 25 ft. depth at present, pending future requirements. The total length will be 25 miles.

The time of lockage of the present canal is from 11 to 20 mins. per lock. In the new canal, on account of the increased size of the locks, it is expected that this time will average about 20 mins. As there will be 18 fewer locks, the saving in locking time will be in the neighborhood of 3 hours.

The plans for the canal have been developed under the direction of J. L. Weller, M. Can. Soc. C.E., Engineer in Charge, St. Catharines, and Alfred Noble, of New York, has been retained as a consultant in connection with the work.

During April, 33 steam vessels, with a total net tonnage of 1,221, and 24 sailing vessels, with a total net tonnage of 2,482, were removed from the Canadian register.

The Richelieu and Ontario Navigation Co. has abolished the position of Naval Architect, formerly held by A. Angstrom.

The Dominion Wreck Commissioner's Judgment in the Royal George Wreck.

The British Board of Trade has allowed the appeal of Capt. Harrison, who was master, Canadian Northern Steamships s.s. Royal George, which ran ashore in the St. Lawrence River last fall, and has restored his certificate. The full report of the judgment, giving the grounds on which the Dominion Wreck Commissioner's judgment was reversed, had not been received up to the time of going to press, but Capt. Harrison is reported to have said that he can claim command of the vessel and his salary from the time of the stranding. Enquiry at the Canadian Northern headquarters in Toronto elicits the information that Capt. Harrison will not be reappointed to the company's service.

Until the complete judgment is received, comment is reserved, but as there is some misapprehension on the matter, it may be mentioned that Capt. Harrison holds a British Board of Trade certificate, and in the Shipping Casualties Act regarding such investigations, it is provided where a certificate issued by the Board of Trade has been cancelled or suspended, it shall be forwarded, with the report and evidence, to the Board of Trade in London.

The Journal of Commerce, Liverpool, Eng., in commenting on the result of the appeal, recently said:—"Apparently, when an accident befalls a ship in Canadian waters the Government regards the investigation which follows as a sort of prosecution, the unhappy officers being subjected to a close and searching cross examination on every detail, the obvious aim of the Government being to convict the unfortunate mariner of culpable negligence or recklessness. It has been suggested that this line has been taken in order to divert attention from the manifest, and, in many cases, preventable difficulties of the St. Lawrence navigation, captains and officers generally, in spite of the efforts of the Dominion Government being still of the same mind as underwriters, that much yet remains to be done before the passage of a vessel through this waterway can be regarded as a normal and ordinary journey."

The writer of the article above quoted from the Journal of Commerce is either lamentably ignorant of the facts, and therefore incompetent to express an opinion, or else he is blinded by insular prejudice or some other cause. His charge as to the way in which marine investigations are conducted in Canada is utterly without [illegible] vessels get into trouble are closely and searchingly examined in order to bring out the facts, but they have every opportunity to defend themselves and can be represented by counsel. The charge that the Government's aim is to convict captains of culpable negligence, or recklessness, is absolutely false and mendacious, and the suggestion that this is done to divert attention from alleged difficulties of the route is equally foundationless. Further comment is reserved until the full text of the Board of Trade's decision is received. In the meantime it may, however, be pointed out that representatives of that body, who probably have never seen the St. Lawrence and know nothing about it, are hardly likely to be accepted, at least in Canada, as any better authorities than Canadian officials who thoroughly know the route.

The Richelieu and Ontario Navigation Company's Provincial Advisory Boards.

Canadian Railway and Marine World for March contained a list of the R. & O.N. Co.'s directors, with the statement that two advisory boards would be appointed, to act respectively for the company in Ontario and Quebec. We have been officially advised that the following have been appointed:

QUEBEC ADVISORY BOARD. W. Molson Macpherson, Chairman; P. Galibert, F. Carrell, Sir George Garneau.

ONTARIO ADVISORY BOARD.—Sir Henry M. Pellatt, Chairman; J. P. Steedman, T. P. Phelan, A. E. Dyment.

Following are the directors of two of the subsidiary companies:

NORTHERN NAVIGATION CO.—President, Jas. Playfair; Vice Presidents, J. R. Binning and W. E. Davis (since deceased); other directors, Jas. Carruthers, J. E. Dalrymple, H. B. Smith, F. Pardee, W. J. Shepherd, E. Bristol, M.P.; F. A. Magee, H. H. Gildersleeve and H. W. Richardson; Manager, P. Paton; Secretary, F. A. Magee; Treasurer, C. A. Macdonald, formerly Assistant Manager, which position has been abolished.

NIAGARA NAVIGATION CO.—President, Sir Henry M. Pellatt; Vice President, Jas. Carruthers; other directors, Jas. Playfair, J. R. Binning, J. P. Steedman, H. B. Smith and W. D. Matthews; Comptroller and Treasurer, J. I. Hobson; Secretary, F. P. Smith.

The Cunard Steamship Co. has declared a dividend of 10% for 1912, as against 7½% for 1911, and 5% for 1910.

Atlantic and Pacific Ocean Marine.

The wireless telegraph station at Cape Race, was destroyed by fire, May 5. The loss is estimated at $10,000.

C. A. Lewthwaite has been appointed Travelling Passenger Agent for the Allan Line Steamship Co., with headquarters at Winnipeg, vice J. F. Pratt.

The Hamburg-American Line s.s. Sithonia arrived at Vancouver, May 5, from Europe, via the Suez Canal, inaugurating a new service with the Pacific coast.

The Dominion Lighthouse Board is considering the question of adopting, on the suggestion of the Shipping Federation of Canada, a new lighting of the ship channel in the St. Lawrence, having red lights on one side and white lights on the other

Shipping reports from the Pacific coast, state that for the year ended Mar. 31, 11,407 vessels, with a registered tonnage of 9,046,115, berthed at Victoria, B.C., showing an increase of 1,700 vessels and 2,000,000 tons over the previous year.

The enquiry into the recent collision of Furness, Withy and Co.'s s.s. Chiltern Range with an iceberg, was opened at Montreal, May 14. It was decided that as the vessel had sustained no material damage, and for other reasons of policy, to adjourn the enquiry indefinitely

On the introduction of the bill, in the House of Commons recently, for the incorporation of the Vancouver Harbor Commissioners, it was stated that 8 monthly ocean steamship services, 1 bi-monthly, 1 tri-weekly, 2 bi-weekly, and 1 weekly, are being operated out of Vancouver.

A Montreal press dispatch states that the Italia Co., and the Navigazione Generale Italiana, will inaugurate a double steamship service between Italy and Canada during this season, the former company making Halifax and Boston its ports, and the latter Quebec and Montreal. Both companies are allied with the Hamburg-American Line.

The operation of a steamship service between Victoria, Vancouver and Salina Cruz, Mexico, which has been undertaken intermittently by various companies, has again been started. The first vessel on the new service arrived at B.C. ports recently, from Salina Cruz. The line is under the management of W. R. Grace and Co., who have chartered the Norwegian s.s. Thode Fagelund, and who anticipate putting on a regular monthly service.

Referring to the published statements that the new Atlantic mail service agree-

[illegible] formerly, Denver.

ment with the Dominion Government provided for the construction of ships capable of being used as mail steamships in peace and armed cruisers in war, Sir Thomas Shaughnessy is reported to have said recently in England: "This is all mere speculation or an attempt at intelligent anticipation of some possible future scheme. As this contract is for one year only, it must be obvious that nothing so costly and comprehensive as a fleet of mail steamships armored and equipped for use as war cruisers and forming a part of a scheme of Imperial naval defence for the North Atlantic, can be embraced within that agreement. It is only a mail contract."

Maritime Provinces and Newfoundland.

The Fredericton Steamship Co., Ltd., application for the incorporation of which was announced in our last issue, has been incorporated, with $5,000 capital, and office at Fredericton, N.B.

Permission has been granted to change the names of the following steamboats:—W. G. Small, no. 133,753, registered at St. John, N.B., to Pluvia; and Charles F. Dunbar, no. 131,010, registered at St. John, N.B., to Betty D.

The British s.s. Glace Bay, under charter to the Dominion Iron and Steel Co., ran ashore during a fog, near Cape Race, May 3, while on her way in ballast, from Sydney, N.S., to Wabana, Nfld., for ore, and became a total loss.

E. Fleming has been appointed agent for the Eastern Steamship Co., at St. John, N.B. He was in the company's service for several years at Boston, Mass., but latterly has been in the steamship business at St. John, where his father is harbor master.

The steam tug G. S. Mayes was launched recently at St. John, N.B. Her dimensions are, length 92 ft., depth 22 ft., depth 11 ft. She is to be equipped with machinery taken from the steam tug Dirigo, which is also owned by G. S. Mayes, St. John.

The Crystal Stream Steamship Co., St. John, N.B., has appointed F. S. Mabee and J. Williams, as captain and chief engineer, respectively, of its steamboat D. J. Purdy; and B. Dykeman and G. Blewett, as captain and chief engineer, respectively, of its steamboat Majestic, for this season.

Burton Stewart, Manager for Norton Griffiths and Co., St. John, N.B., is visiting London, Eng., to confer with the head officials with regard to the season's plans for work in Canada. It is reported that a Canadian board will be appointed for the company. The chief work in hand is the Courtenay Bay development in St. John harbor.

The Department of Marine has awarded the contract for the construction of a first class single screw steel steam lightship to be delivered at Halifax, N.S., to Bow McLachlan and Co., Paisley, Scotland, for $127,384. The chief dimensions will be:—Length between perpendiculars, 114 ft.; breadth, moulded, 29 ft.; depth, moulded, 14 ft. 8 ins.

The Nova Scotia Steel and Coal Co., New Glasgow, N.S., has chartered, for 10 years, the steamships Wagama and Wascana, just built on the Tyne, Eng. They are built on the cantilever principle with clear holds, free from beams, pillars and other obstructions, and have five very large hatches for the rapid loading and discharge and the minimizing of any trimming of coal or ore cargoes. Their dimensions are, approximately:—Length, 380 ft.; beam, 52¼ ft.; moulded depth, 30 ft.; deadweight capacity, 8,000 tons. The Wagama will be operated between Wabana, Nfld., and North Sydney, N.S., and between North Sydney and Montreal in the ore and coal trades respectively. The Wascana is expected to arrive on this side July 1 for similar purposes.

At a public meeting at St. John, N.B., recently, to consider the question of urging the more rapid development and improvement of the harbor facilities at Sand Point, W. Downie, General Superintendent, Atlantic Division, C.P.R., representing the steamship companies, stated that whereas there had been ample accommodation during the first part of the season, considerable congestion had occurred towards the close. If the present rate of increase were maintained, the exports and imports at St. John would be doubled in the next five years, and he suggested the erection of grain conveyors by those owning the piers, the Government, or by the city, and if by the city, then a charge sufficient to meet interest and sinking fund requirements should be made.

Province of Quebec Marine.

An order in council has been issued amending the rules and regulations for the management and working of the Levis dry dock.

Dredging is in progress at the mouth of the St. Charles River, Quebec, and it is anticipated that sufficient will have been accomplished by the end of the season to allow of the building of 1,000 ft. of the pier wall.

The establishment of a ferry service between Maisonneuve and Longueuil near Montreal is being discussed by the Maisonneuve council, and it is expected that a contract for its operation for 10 years, will be made with the Quebec and Levis Ferry Co.

The Montreal-Valleyfield and Soulanges Navigation Co., Ltd., has been incorporated under the Dominion Companies Act, with $20,000 capital, and office at Lachine, Que., with power to acquire and operate steam and other vessels and conduct a general transportation business in passengers and freight.

The St. Johns and St. Lawrence Co., Ltd., has been incorporated under the Dominion Companies Act, with $20,000 capital and office at St. Johns, Que., to carry on the general business of transportation, except railroading, to carry on a general towing business, and in connection therewith to own and operate steam and other vessels, and build docks, dry docks, harbors, warehouses, etc. The incorporators are, E. Langlois, J. Cartier, J. C. Harbeck, St. Johns, Que.; G. Guillet and A. Thuot, Iberville, Que.

The Lake Champlain and St. Lawrence Ship Canal Co. is applying to the Dominion Parliament to revive its corporate powers, and to extend the time for the building of a canal from the St. Lawrence River, in Chambly County, Que., to the Chambly Canal, or the Richelieu River, of such dimensions as to make it a navigable channel of not less than 80 ft. wide at the bottom, and not less than 9 ft. deep, and the building of railway lines alongside, and wharves, docks, etc., in connection therewith.

During the committee stage of the Quebec Harbor bill, which authorizes the expenditure of over $3,000,000 on harbor improvements, the Minister of Marine stated, recently, that it is expected to have the grain elevator completed by the spring of 1914, and that the proposed terminal facilities will be ready within two years. The elevator will have 1,000,000 bush. capacity. [illegible] dredging plant.

Ontario and the Great Lakes.

The Ontario Car Ferry Co.'s car ferry Ontario No. 1 [illegible] Iron Works, Toronto, recently, for the fitting of [illegible] ing of her engines.

The Quebec Transportation and Forwarding Co.'s steam tug Florence ran aground near Cardinal, in the St. Lawrence River, May 11, and was reported to be on her side and partially filled with water.

The Cleveland and Buffalo Transit Co. announces that it will operate its vessel City of Ohio, which was run between Cleveland and Buffalo last year, between Cleveland and Port Stanley during this season. She is being overhauled and refitted.

Permission has been given for changes of names of the following steamboats, acquired from foreign owners:—Mars, to Martian; Hero, to Hero No. 1; Pioneer, to Natironco; Saturn, to J. Frater Taylor, and Uranus, to W. C. Franz.

The Northern Navigation Co.'s s.s. Noronic, now under construction at Port Arthur, will be launched June 2. She is 385 ft. long with 52 ft. beam, and will have accommodation for 600 passengers. She will be ready for service on the opening of navigation in 1914.

The ice breaking steamboat J. T. Horne was launched at Port Arthur May 9. She is built after the same model as the ice breaker James Whalen, her dimensions being:—Length, 125 ft.; breadth, 28 ft.; depth, 16 ft.; and is owned by James Whalen.

Dredging has been recommenced in Fort William harbor, the season's work comprising the removal of 25 acres of solid earth on the Kaministikwia River, for a turning basin, the deepening and widening of the channel of the Mission and McKellar Rivers, the building of additional slips, etc.

The Cleveland and Buffalo Transit Co.'s s.s. City of Ohio will be placed in service between Port Stanley, Ont., and Cleveland, Ohio, June 19, leaving Port Stanley on Tuesdays, Thursdays and Saturdays at midnight, and Mondays at 1 p.m., in connection with the London and Lake Erie Ry. and Transportation Co.'s electric car service between London, St. Thomas and Port Stanley.

It is announced that a contract has been placed at Port Arthur, by a Montreal transportation company, for the construction of what is termed the largest exclusive bulk freighter ever built in the British Empire. The dimensions given are:—Length, 625 ft. over all, 605 ft. keel, 59 ft. beam, and 32 ft. depth. It is stated that she will be built on the Isherwood system, and will be equipped with triple expansion engines.

With reference to recent press reports to the effect that the Lake Erie and Northern Ry. intends operating a car ferry service between Port Dover, Ont., and Erie, Pa., we are officially advised that the company will come to no decision until it is definitely ascertained what steps the Government will take to make the necessary improvements to the harbor at Port Dover.

H. J. Lamb, of the Public Works Department, is reported to have stated in London, Ont., May 7, that the Government intends to carry out the proposals for the improvement of the harbor at Port Stanley. The work covers the building of a breakwater along the east side of the harbor, about 1,000 ft., and the deepening of the harbor to allow of the admission of vessels drawing 18½ ft.

The s.s. Turret Crown, while down bound with 105,000 bush. of grain, collided with the s.s. William H. Mack, near Whitefish Point during a fog, May 4. She was considerably damaged, [illegible] house to the starboard, but proceeded to Sault Ste Marie, where she was anchored, resting on the bottom in 12 ft. of water, while some temporary repairs were undertaken. She was subsequently lightered of her cargo and proceeded to Collingwood for general repairs.

The Pembroke Transportation Co., Ltd., has been incorporated under the Dominion Companies Act, with $40,000 capital, and office at Pembroke, Ont., to own and operate steam and other vessels for purposes of general transportation, and to carry on the business of general carrier. The incorporators are:—W. L. Hunter, J. C. Hunter, J. W. Smith, W. H. Bromley, E. A. Dunlop, Pembroke; C. L. McCool, Sheen Tp., Que.; M. F. Johnston, C. A. McCool, Ottawa, and T. B. Marion, Des Joachims, Que.

It is announced from Buffalo, N.Y., that the Canadian and Fort Erie Ferry Co., and the American and Canadian Ferry Co., have been formed to operate the ferry service between Buffalo and Fort Erie, in connection with which considerable trouble has been experienced in the past. The Buffalo and Fort Erie Co.'s vessels will, it is said, be taken over and operated. The outcome is more or less a matter of agreement between the Buffalo and Fort Erie Co., the Independent Ferry Co., and the Dominion Minister of Marine, by whom the old license to operate the ferry was revoked.

The Montreal and Lake Erie Steamship Co.'s steamboat City of Montreal, which was recently damaged by fire at Montreal, has been sold to J. H. Hall, Ottawa. She is being thoroughly overhauled and repaired, and will be operated between Montreal and Lake Superior ports, during this season. A. Lefebvre has been appointed captain, and F. E. Hamelin, chief engineer. The City of Montreal was built at Buffalo, N.Y., in 1871, her name then being, China. Her dimensions are, length 220 ft., breadth 32.5 ft., depth 14 ft., tonnage 1,554 gross, 868 register, and she is screw driven, with engine of 80 n.h.p.

A number of reports are current in Montreal and Toronto, as to further absorptions of other large navigation companies by the Richelieu and Ontario Navigation Co. In previous issues of Canadian Railway and Marine World, we have given various details of the general reorganization of the company, its financial and general interests, and connections with the Furness, Withy and Co.'s interests, and the British Maritime Trust Co., from which some idea of its aims with regard to the development of the navigation of Canadian inland waters, may be gathered. Many of the reports are founded on mere conjecture as to what might take place, and others are anticipating events which might follow in the natural course of development.

The St. Lawrence and Chicago Steam Navigation Co.'s s.s. James Carruthers was launched at Collingwood, May 22. Her dimensions are, length over all, 550 ft. 8 ins.; length between perpendiculars, 529 ft.; beam, 58 ft.; moulded depth, 31 ft.; estimated carrying capacity, 15,000 tons, thus making her the largest cargo carrying vessel on the Canadian lakes. She is equipped with triple expansion engines with cylinders 24, 40 and 66 ins. diar., by 42 ins. stroke, supplied with steam by three Scotch boilers, each 13 ft. diar. by 11 ft. long, at 185 lbs. The furnaces, which will be fitted with forced draught, will have a grate area of 45 sq. ft. to each boiler. She is built with side tanks, six compartments, and there are 31 hatches, spaced 12 ft. centres. Miss L. C. Wright, daughter of A. A. Wright, General Manager, St. Lawrence and Chicago Steam Navigation Co., performed the christening ceremony.

British Columbia and Pacific Coast Marine.

The C.P.R. s.s. Princess Victoria resumed her service May 7 after completing her machinery overhaul at Victoria.

The C.P.R. s.s. Tees, which grounded on the mud in Franklin Creek, near Victoria, recently, was released with no damage May 4 and continued on her route.

A press report from Vancouver states that C. H. Nicholson, Manager, G.T. Pacific Coast Steamship Co., is visiting Winnipeg to confer with the management regarding plans for a vessel to be built in readiness for traffic in 1914.

Marine Express, Ltd., has been incorporated under the British Columbia Companies Act, with $100,000 capital, and office at Vancouver, to own and operate steam and other vessels for the transportation of passengers and merchandise.

N. Hardie, heretofore local manager for Dodwell and Co., agents for the Blue Funnel Line, Victoria, B.C., has been appointed in a similar capacity at Vancouver, and has been succeeded at Victoria by H. B. Davenport, heretofore at Tacoma, Wash.

The Lincoln Steamship Co.'s s.s. Ophir was destroyed by fire on the Fraser River, near Ladner, May 9, and six of the crew lost their lives. She was a wooden vessel of about 200 tons deadweight capacity, and was valued at about $24,000.

The Canadian Yukon Navigation Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $50,000, and office at Dawson, Yukon, to own and operate steam and other vessels for the conveyance of passengers and merchandise, and to carry on other incidental business. The incorporators include H. Fisher and L. P. Sherwood, barristers, Ottawa.

George Bury, Vice President, C.P.R., is reported to have stated at Vancouver, May 10, that contracts had been placed for the construction of two modern vessels for the coast service. J. W. Troup, Manager, B.C. Coast Service, is in Great Britain dealing with the matter. It is stated that the vessels will be about 5,000 tons, and altogether a distinct advance on any of the present vessels in service on the coast.

The British Columbia Fisheries Co., Prince Rupert, has appointed the following captains and chief engineers for its vessels for this season:—Canada, captain, L. Anderson; chief engineer, E. R. Seater. Gryme, Captain, J. Haans; chief engineer, J. McCubbins. Triumph, captain, J. Marrison; chief engineer, W. Vicars. The s.s. Imbricaria, which has been built in Great Britain for the company, will be put into service as soon as she arrives on the coast.

Sault Ste. Marie Canals Traffic.

[illegible] passed through the Sault Ste. Marie Canals during April 1913.

The Ontario and Quebec Navigation Company Changes Hands.

This company has been acquired by Aemilius Jarvis and Co., Toronto. The company was originally incorporated in 1905, with R. B. Hepburn as General Manager, and J. deC. Hepburn as General Freight and Passenger Agent, and with offices at Picton, Ont. Following are the officers and directors of the new company:—President, Albert Oakley; other directors, Aemilius Jarvis, A. D. Morrow, Morgan Jellett, W. J. Chalmers, Toronto, and B. R. Hepburn, M.P., Picton, Ont. Secretary, C. D. Henderson, Toronto.

The vessels which have been taken over are, the steamboats Aberdeen, Alexandria, Aletha, Brockville, Geronia, Lloyd S. Porter, Varuna, and Water Lily; and the barges Isabel Reed and Rob Roy. They will be operated on the same routes and schedules as last year, and J. deC. Hepburn, who has been General Manager of the old company, will continue in that capacity. It would not be at all surprising if the recent transfer of ownership turned out to be a preliminary step to the acquirement of the line by the Richelieu and Ontario Navigation Co.

Canadian Notices to Mariners.

The Department of Marine has issued the following:—

72. Mar. 31. Ontario, Detroit River, Limekiln Crossing channel, south light vessel withdrawn, fog bell discontinued.

73. Mar. 31. United States of America, Detroit River, changes in Grosse Isle south channel range lights.

74. Mar. 31. United States of America, Detroit River, change in Ecorse back range light.

75. Apr. 3. New Brunswick, south coast, Bay of Fundy, off north end of Alum Island, bell buoy to be established.

76. Apr. 3. Nova Scotia, south coast, off entrance to Port Medway, southwest breaker, whistling buoy to be established.

77. Apr. 3. Nova Scotia, south coast, Green Island, intended change in character of light.

78. Apr. 3. Prince Edward Island, south coast, Northumberland Strait, Tryon Shoal, whistling buoy re-established.

79. Apr. 5. Ontario, Detroit River, gas buoy at junction of Ballard Reef and Livingstone Channels, change of light, additional light.

80. Apr. 5. Ontario, River St. Mary, Sault Ste. Marie Canal, channel at lower entrance, gas buoy established.

81. Apr. 12. North Atlantic Ocean, Transatlantic steamship routes, ice patrol service.

82. Apr. 14. Ontario, Lake Ontario, Newcastle harbor, outer portion of east pier together with the lighthouse carried away by a storm, hydrographic notes.

83. Apr. 14. Ontario, Lake Erie, Pelee Passage, southeast shoal lightship, main mast and red ball removed, change in character of light.

84. Apr. 14. United States of America, Niagara River, Tonawanda Channel, Strawberry Island cut, intended changes in buoyage.

85. Apr. 14. United States of America, Detroit River, Bar Point channels, intended changes in buoyage.

86. United States of America, Lake Huron, Sturgeon Point light, characteristic to be changed.

87. Apr. 15. British Columbia, Vancouver Island, west coast, Barkley Sound, eastern channel, Kelp Bay, unchartered rock.

88. Apr. 15. British Columbia, Vancouver Island, east coast, Saanich Inlet, Senanus Island, gas lighted beacon established.

89. Apr. 15. British Columbia, Strait of Georgia, sandheads of Fraser River, new lightship.

90. Apr. 15. British Columbia, Burrard Inlet, Vancouver harbor, Parthia Shoal, dredging completed.

91. Apr. 15. Ontario, Georgian Bay, east side, approach to Parry Sound, Black Rock day beacon blown down, Cameron Island day beacon blown down.

92. Apr. 15. United States of America, Lake Erie, Ashtabula, light established on inner breakwater.

93. Apr. 15. United States of America, St. Clair River, St. Clair Flats canal lower light, change in color of light.

94. Apr. 16. New Brunswick, south coast, Bay of Fundy, Great Salmon River, light established.

95. Apr. 16. Nova Scotia, west coast, Trinity Ledge, bell buoy to be replaced by gas and whistling buoy.

96. Apr. 16. Quebec, Gulf of St. Lawrence, Magdalen Islands, Amherst Island, Pleasant Bay, Amherst wharf, hand fog horn at light station.

97. Apr. 16. Quebec, Gulf of St. Lawrence, Moisie River, change in positions of range lights.

98. Apr. 17. North Atlantic Ocean, ice warnings.

99. Apr. 17. North Atlantic Ocean, caution with regard to ice.

100. Apr. 17. Newfoundland, south coast, Fortune Bay, Garnish, change in character of light.

101. Apr. 17. Newfoundland, south coast, Fortune Bay, Long Harbor Point, lighthouse established.

102. Apr. 19. British Columbia, Canadian list of lights and fog signals, new edition.

103. Apr. 19. British Columbia, Queen Charlotte Islands, Hecate Strait, Skidegate Inlet, off Lawn Point, change in position of gas and whistling buoy, correction.

104. Apr. 22. Nova Scotia, Minas Basin, Avon River, Mitchener Point, light improved.

105. Apr. 22. Nova Scotia, south coast, West Ironbound Island, character of light corrected.

106. Apr. 22. Nova Scotia, south coast, Mahone Bay, Quaker Island, light improved.

107. Apr. 22. Nova Scotia, south coast, Halifax harbor, Herring Cove, light improved.

108. Apr. 22. Nova Scotia, Strait of Northumberland, Pictou harbor, Pictou bar, light improved.

109. Apr. 22. Chart of anchorages in Hudson Strait issued.

110. Apr. 22. Hudson Bay, James Bay, chart of Rupert Bay.

111. Apr. 24. Nova Scotia, Annapolis Basin, Digby pier, intended change in character of light.

112. Apr. 24. Nova Scotia, south coast, Halifax harbor, George Island, intended change in character of light.

113. Apr. 24. Nova Scotia, south coast, Halifax approach, Devil Island, westerly light improved.

114. Apr. 24. Nova Scotia, south coast, Jeddore Rock, intended change in character of light.

115. Apr. 24. Nova Scotia, south coast, Nixonmate shoal bell buoy, change in position.

116. Apr. 24. Nova Scotia, north coast, Northumberland Strait, entrance to Pictou, Skinner Reef, gas buoy replaced by gas and bell buoy.

117. Apr. 26. Quebec, River St. Lawrence below Quebec, Traverse of St. Roch, lower end, position of lightship no. 20.

118. Apr. 26. Quebec, River St. Lawrence below Quebec, Traverse of St. Roch, gas buoy to be established.

119. Apr. 26. Quebec, River St. Lawrence, Channel Patch, change in position of gas and bell buoy.

120. Apr. 29. Ontario, Canadian list of lights and fog signals, new edition.

121. Apr. 29. Ontario, River St. Lawrence, Gananoque, dredging, buoys established.

122. Apr. 29. Ontario, Lake Ontario, Presqu'ile Bay, gas buoy to be established, Salt Reef light to be discontinued.

123. Apr. 29. Ontario, Georgian Bay, French River, front range lighthouse blown down, temporary light.

124. May 2. Nova Scotia, south coast, Lockeport, Laurier Rock, bell buoy to be replaced by gas and bell buoy.

125. May 2. Prince Edward Island, south coast, Northumberland Strait, Hillsborough Bay, Prim Reefs gas and whistling buoy, amended position.

126. May 2. Prince Edward Island, south coast, Northumberland Strait, Bedeque Bay, Summerside, dredging, front range light removed.

127. May 2. Quebec, Gulf of St. Lawrence, off Fame Point, experimental submarine bell buoy withdrawn.

128. May 2. Quebec, River St. Lawrence, Manikuagan Shoal, whistling buoy replaced by gas and bell buoy.

129. May 2. England, south coast, Plymouth Sound, dredging in progress.

130. May 2. Ontario, Lake Huron, north channel, Little Current, bridge under construction, temporary light.

131. May 6. British Columbia, Vancouver Island, Quatsino Sound, Bergh Cove, buoy established.

132. May 6. British Columbia, Burrard Inlet, English Bay, False Creek, change in position of lights.

133. May 6. Japan, Sanuki Province, Shodo-shima, Okadobana, lighthouse established.

134. May 7. Nova Scotia, south coast, La Have gas and bell buoy to be replaced with gas and whistling buoy.

135. May 7. Nova Scotia, south coast, entrance to Halifax harbor, Sambro Outer Bank, lightship removed, gas and whistling buoy replaced in position.

136. May 7. Nova Scotia, south coast, Halifax approach, change in color of Devil Island westerly lighthouse.

137. May 7. Prince Edward Island, north coast, Malpeque harbor, Fish Island main light, illuminating apparatus.

The Richelieu and Ontario Navigation Co.'s New Incorporation.

Full particulars of the charter obtained by the Richelieu and Ontario Navigation Co., Ltd., were given in our last issue. The following circular, explaining the change, was sent to the shareholders of the original company, the Richelieu and Ontario Navigation Co., over the signature of the President, Jas. Carruthers:—

"Your directors have for some time past had under consideration the advisability of putting the company on the same footing and on a line with the other large navigation, transportation and commercial corporations carrying on business in Canada, by adopting their common charter and securing for the company the general privileges and advantages enjoyed by companies incorporated under ordinary letters patent of the Dominion. The charter under which the company has conducted its operations since its organization in 1857 was long ago found altogether inadequate to meet the company's growing requirements, with the result that the company has very frequently of late years been put to the trouble, delay and expense of applying to Parliament for further powers. With a view to avoiding these difficulties in the future, your directors have decided, upon the advice of eminent counsel, that the time has come when the company should be put under the general law of the country, and have entered into an agreement with the Richelieu and Ontario Navigation Co., Ltd., for the union, amalgamation and consolidation of the stock, franchises and undertaking of the company with the stock, franchises and undertaking of the Richelieu and Ontario Navigation Co., Ltd., a company incorporated under letters patent of the Dominion, with an authorized capital of $15,000,000 divided into shares of $100 each. The issued and outstanding capital of your company now amounts to $10,000,000, and a like amount of capital will be at once issued by the new company, and the consolidation effected by an exchange of shares, share for share, the balance of the authorized capital remaining in the treasury for future requirements. The new company will take over the assets and liabilities of your company as a going concern, and your directors are convinced that this consolidation is in the best interests of the company."

Furness, Withy & Co.'s Interests in Canada

A prospectus which was issued some little time ago in England by the British Marine Trust, Limited, offering shares and debentures for subscription contains some interesting information as to the company's operations in Canada, which is extracted as follows:—

The company was originally established in 1888 to carry on such business as is ordinarily transacted by a trust and mortgage company. In 1896 Furness, Withy & Co., Ltd., acquired a controlling interest in the undertaking, and in the following year the name was changed from the British Maritime Mortgage Trust, Ltd., to the British Maritime Trust, Ltd.

As the vast developments in Canada have led to a large demand for capital, the board has been directing its attention for some time past to the Dominion as a promising field for extending the business of the Trust. Through its association with Furness Withy & Co., the Trust commands an excellent Canadian organization of long-standing in touch with projected enterprises of every kind, and in a position to gain at first hand all essential information relating thereto, thereby ensuring prudent selections for investment. As a further aid in dealing with proposals from the Dominion, the directors have retained the services of a Canadian adviser who has taken up residence in London. With so many projects being thrust upon the market, they realize the need for great care in the selection of companies and properties for investment purposes, and this has led them to adopt the precaution of placing reliable expert advisers permanently [illegible] closely examining into the nature, scope and prospects of such enterprises as are submitted to them from time to time. The soundness of an undertaking and the responsibility of [illegible] considerations in regard both to the security of capital and its earning capacity.

The directors of the Trust are nominees of Furness, Withy & Co., who hold the controlling interest in the undertaking.

The directors have conducted an important series of investigations and negotiations into a number of highly promising companies, among which are the following:—

A substantial holding in the old established business of the Richelieu and Ontario Navigation Co., representing approximately 12,000 shares of $100 each. It is paying quarterly dividends at the rate of 8% per annum. Besides owning a fleet of steamboats its properties comprise offices, shipyards, workshops, warehouses, docks, sheds, wharves, pontoons, hotels, cottages, etc., covering about 150 acres in all, and situate at Montreal, Sorel, Three Rivers, Quebec, Murray Bay, Tadousac, [illegible], etc. In this already large undertaking there has now been merged the Northern Navigation Co., with its fleet and valuable properties at Collingwood, Sault Ste. Marie, [illegible] the Inland Lines, Limited, with its steamers, and other related interests. The entire [illegible] recent acquisitions includes the Niagara [illegible] steamers, by far the most extensive trans-[illegible]

Valuable freehold properties in the best business and commercial districts of Mont-[illegible] valuable asset in connection with the shipping development of that port consequent upon the opening of the Panama Canal, but which, if acquired on the terms proposed, should represent a considerable increment of value as real estate.

Vessels Removed From Register.

The following vessels were removed from the register, between Jan. 1 and Mar. 31, for the reasons assigned:—

Steam:—Archie, Vancouver, B.C., 11 tons, broken up; Beaver, Vancouver, B.C., 2 tons, broken up; Brant, Vancouver, B.C., 13 tons, broken up; Ella Ross, Deseronto, Ont., 125 tons, burnt; Empress, Vancouver, B.C., 2 tons, broken up; Gertrude M., Yarmouth, N.S., 25 tons, burnt and condemned; Nereid, St. John, N.B., 20 tons, broken up; Nidge, Vancouver, B.C., 39 tons, wrecked; Oscar, Victoria, B.C., 61 tons, burnt; Swastika, Kingston, Ont., 6 tons, sold to foreigners; Uncle Tom, Port Stanley, Ont., 3 tons, broken up.

SAILING:—A.L.B., Lunenburg, N.S., 22 tons, broken up; Aldine, Lunenburg, N.S., 99 tons, stranded; Alexander, Sydney, N.S., 78 tons, broken up; Alexander Black, Dorchester, N.B., 575 tons, abandoned at sea; Amateur, Victoria, B.C., 18 tons, sunk; Arthur H. Wright, Lunenburg, N.S., 99 tons, transferred to Newfoundland; Bess, Digby, N.S., 24 tons, wrecked; Cape Beale, Victoria, B.C., 13 tons, wrecked; Carrie A., Sydney, N.S., 73 tons, wrecked; Chachee-[illegible], B.C., 10 tons, wrecked; Clayola, Windsor, N.S., 123 tons, lost; Cluaran Beag, Sydney, N.S., 18 tons, broken up; Columbia, Yarmouth, N.S., 22 tons, sold to foreigners; Coup d'Etat, Yarmouth, N.S., 12 tons, broken up; Echo, Victoria, B.C., 24 tons, abandoned; Florence E. Getson, Lunenburg, N.S., 99 tons, foundered; Forest, Flower, Yarmouth, N.S., 26 tons, burnt; Frank Newton, Sydney, N.S., 40 tons, broken up; Freddie M., Yarmouth, N.S., 10 tons, broken up; G. P. Taylor, Yarmouth, N.S., 13 tons, lost; George Killam, Digby, N.S., 30 tons, sunk in collision; Henry G. Ives, Pictou, N.S., 88 tons broken up; Hustler, Barrington, N.S., 39 tons, wrecked; Lady Bourque, Yarmouth, N.S., 11 tons, broken up; Lila D. Young, Lunenburg, N.S., 10 tons, transferred to Newfoundland; Lila B. Hirtle, Lunenburg, N.S., 99 tons, transferred to Newfoundland; Lilly Dale, Yarmouth, N.S., 11 tons, broken up; Lorena Jane, Windsor, N.S., 11 tons, broken up; Lottie, Yarmouth, N.S., 12 tons, lost; M. T. Williams, Sydney, N.S., 16 tons, transferred to Newfoundland; Maggie Bell, Barrington, N.S., 46 tons, dismantled; Martha Ella, Yarmouth, N.S., 13 tons, broken up; Mary H., Yarmouth, N.S., 28 tons, broken up; Muriel M. Richard, Lunenburg, N.S., 97 tons, foundered; Nellie H. Ham, Barrington, N.S., 26 tons, broken up; Nellie Myrtle, Digby, N.S., 11 tons, broken up; Nita M. Conrad, Lunenburg, N.S., 91 tons, transferred to New foundland; Nokomis, Yarmouth, N.S., 67 tons, lost; P. B. Locke, Toronto, 305 tons, lost; Primrose, Yarmouth, N.S., 34 tons, broken up; Prince, Yarmouth, N.S., 10 tons, broken up; S. A. Crowell, Yarmouth, N.S., 23 tons, broken up; S. C. Hood, Yarmouth, N.S., 12 tons, broken up; St. Croix, Windsor, N.S., 653 tons, sold to foreigners; Ste. Anne, Barrington, N.S., 11 tons, wrecked; Ste. Celestine, Quebec, Que., 53 tons, lost; Sea Slipper, Charlottetown, P.E.I., 41 tons, sank; Sigefroi, Yarmouth, N.S., 41 tons, wrecked; Stella Maud, St. John, N.B., 99 tons, wrecked; Theresa, Victoria, B.C., 63 tons, sold to foreigners; Thrush, Yarmouth, N.S., 13 tons, broken up; Togo, Winnipeg, 58 tons, burnt; True Blue, Yarmouth, N.S., 8 tons, broken up; Ungava, Lunenburg, N.S., 88 tons, transferred to Newfoundland; Unity, Pictou, N. S., 246 tons, transferred to Barbados; Yamaska, Lunenburg, N.S., 98 tons, transferred to Newfoundland.

The Canada-West Indies Steamship Service.

On the third reading of the bill dealing with the reciprocal trade agreement with the British West Indies, in the House of Commons, recently, the acting Minister of Trade and Commerce stated that in response to advertisements for tenders published some time ago, for a service between Canadian ports and the West Indies, several tenders were received, but they were all unsatisfactory. The Royal Mail Steamship Co. tendered for a fortnightly service in return for a subsidy of $200,000 a year, with the stipulation that it could discontinue at the end of a year if the results were not satisfactory. The Canada West Indies Co. offered to provide a service for 15 years, for a subsidy of $300,000, and an additional $130,000 a year from the West Indies and British Guiana. The company also made it a condition that its vessels call at Boston, Mass., but as exception was taken to this, it was withdrawn.

This latter company is not, as reported, a subsidiary of the C.P.R., though there are some C.P.R. people connected with it. Under these circumstances the Government had entered into a contract for one year, to June 30, 1914, with Pickford and Black, Halifax, N.S., for a 12 day service with the West Indies. The contractors have undertaken to join with other people in the contract, and one of the firm had left for Great Britain to make the necessary arrangements. Four boats are to be utilized, two of which are in the present service, for which a subsidy of $50,000 a year will be paid, and two new vessels of 4,500 gross tons are to be supplied, for which a subsidy of $150,000 a year will be paid. These vessels are to be capable to giving a 12 knot service, and will have accommodation for 50 first class, 40 second class and 200 third class passengers. It is reported from England that no vessels have been chartered from the Royal Mail Steam Packet Co.

Richelieu and Ontario Navigation Co.'s Shareholders

The largest holder of R. and O. N. Co.'s stock is the British Maritime Trust Co., London, Eng., which has 11,891 shares. The following are among the other prominent holders with their respective number of shares:—Jas. Carruthers, Montreal, 600; F. A. Magee, Hamilton, Ont., 310; J. W. McConnell, Montreal, 1,675; Sir Henry M. Pellatt, Toronto, 528; T. P. Phelan, Toronto, 1,000; Jas. Playfair, Midland, Ont., 2,728; J. S. Playfair, Toronto, 500; H. Richardson, Kingston, Ont., 1,502; A. H. Sims, Montreal, 1,000; H. B. Smith, Owen Sound, Ont., 400; W. Southam, Hamilton, Ont., 290; Southam Ltd., Hamilton, Ont., 1,139; J. P. Steedman, Hamilton, Ont., 1,053; W. Wainwright, Montreal, 256; Walton and Magee, Hamilton, Ont., 1,150. Banks, trust companies and brokers who have stock standing in their names are not included in this list, as such stock is in almost all cases held as collateral against advances.

The Department of Railways and Canals received tenders Apr. 16, for the construction of a steel tug boat, to be delivered at either Quebec, Montreal, St. John, Halifax or Sydney, by Sept. 1.

Canadian Railway and Marine World.

July, 1913.

The June Railway Mechanical Conventions at Atlantic City.

The two great railway conventions of the year, the American Railway Master Mechanics' Association, and the Master Car Builders' Association, were held at Atlantic City, N.J., the former on June 11 to 13, and the latter on June 16 to 18. The most important features of these annual conventions are the reports of the standing and special committees and the individual papers presented, the principal ones of which are given on this and following pages, either in full or in abstract.

Individual Paper on Tests of Superheater Locomotives.

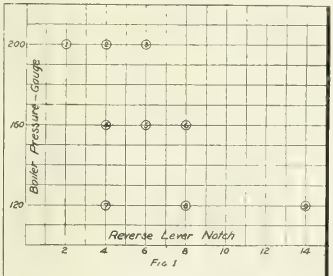
By C. H. Benjamin, Dean of Purdue University, Lafayette, Ind.

The work done by the author reported to the Association in 1911, showed a comparison of locomotive performance under different degrees of superheated steam. The Schmidt superheater was the last one which was installed. The work this year is a continuation of that accomplished upon the Schmidt superheater and shows the increased power of the superheater locomotive over the ordinary locomotive when both are using the same amount of coal. Last year a brief statement of the progress of the work was made, but no definite results were given. It was stated at that time that plans were under way to get a larger set of cylinders for the Purdue locomotive. This, however, was not done, and so the report this year only gives the increased power produced by superheating with the same sized cylinder. The work as outlined for the use of large cylinders remains yet to be carried out at a future time.

EQUIPMENT.—The locomotive known as Schenectady no. 2, for the saturated tests, and no. 3, for the superheated tests, was used in all the work. When used with saturated steam the locomotive was in normal condition. When the Schmidt superheater was installed the number of small 2 inch flues was reduced from 200 to 107, and 21 large 5 inch flues were installed. The original water-heating surface in Schenectady no. 2 was 1,322 sq. ft. The change in the flues made necessary by the installation of the Schmidt superheater reduced the water-heating surface to 1,080 sq. ft. The heating surface of the Schmidt superheater is 324 sq. ft., making a total water and superheating surface of 1,404 sq. ft. for Schenectady no. 3 after it was equipped with the Schmidt superheater. The nominal dimensions of Schenectady no. 3 as used in the tests with the Schmidt superheater installed are as follows:—

Type	4-4-0
Total weight (lbs.), about	109,000
Weight on four drives (lbs.), about	61,000
Driving-axle journals:	
Diameter (inches)	7½
Length (inches)	8½
Drivers, diameter (inches)	68.99
Valves (type, Richardson balanced):	
Maximum travel (inches)	6
Outside lap (inches)	1⅛
Inside lap (inches)	0
Ports:	
Length (inches)	12
Width of steam port (inches)	1.5
Width of exhaust port (inches)	3
Total wheel base (feet)	23
Rigid wheel base (feet)	8.5
Cylinders:	
Diameter (inches)	16
Stroke (inches)	24
Boiler (style, extended wagon top):	
Diameter of front end (inches)	52
Number of 2 inch flues	107
Number of 5 inch flues	21
Length of flues (feet)	11.5
Heating surface in flues (sq. ft.)	956.5
Heating surface in fire box (sq. ft.)	123.5
Total water heating surface (sq. ft.)	1080.0
Length of fire box (inches)	72.06
Width of fire box (inches)	34.25
Depth of fire box (inches)	79
Grate area (sq. ft.)	17
Thickness of crown sheet (inches)	7-16
Thickness of tube sheet (inches)	9-16
Thickness of side and back sheet (inches)	⅜
Diameter of stay bolts (inches)	1
Diameter of radial stays (inches)	1⅛

The Schmidt superheater, as used in these experiments, has the following dimensions:—



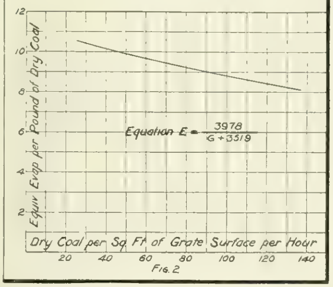


Fig. 1.—Conditions of Pressure and Cutoff for Saturated Steam Locomotive.

Fig. 2.—Relation Between Equivalent Evaporation per Pound of Dry Coal, and Dry Coal per sq. ft. of Grate Surface per Hour for Saturated Steam Locomotive.

Outside diameter of superheater tube (inches)	1⅜
Number of double return loops	21
Average length of the pipes in the double return loops. (ft.)	42.88
Total superheating surface, based on the outside surface of the tubes in sq. ft	324

The fuel used in all these tests, both superheated and saturated, was Youghiogheny lump. Repeated analyses of this coal show it to have a very uniform heat value.

Tests Using Saturated Steam.

THE TESTS INVOLVING SATURATED Steam, which were used in this report, were taken directly from tables IV. and V. in the report of Dean Goss to the Association in 1909. All the tests were run at a speed of 30 miles an hour, and steam pressures of 200, 160 and 120 lbs. The conditions of pressure and cut off under which the tests were run are shown diagrammatically in fig. 1. The cut off is determined by the position of the reverse lever in notches. Each circle represents a test, and the number within the circle refers to the laboratory number by which the tests are identified. The results of the tests involving saturated steam are shown in tables I. and II.

PERFORMANCE OF THE BOILER. In the 1909 report of Dean Goss, the relation between the equivalent evaporation per pound of dry coal and the equivalent evaporation per square foot of heating surface per hour for the locomotive using saturated steam is shown by the equation $E = 11.305 = .221 H$, in which E is the equivalent evaporation per pound of dry coal and H is the equivalent evaporation per square foot of heating surface per hour. This equation is assumed to represent the evaporative efficiency of the boiler when operated under saturated steam. In order to obtain the relation between the equivalent evaporation per pound of dry coal and the rate of firing, an equation was obtained in the following manner: Letting G equal the dry coal per square foot of grate surface per hour, 1,322 is the number of square feet of water-heating surface, 17 the number of square feet of grate surface, and H and E the same as above mentioned. Now, from the above values, the following equation is true: $1{,}322 H = 17 E G$, or $H = \dfrac{17 E G}{1{,}322}$

Substituting this value of H in the equation $E = 11.305 - .221 H$, we obtain the equation $E = \dfrac{3{,}978}{G + 351.9}$

This equation gives the relation between equivalent evaporation per pound of dry coal and the dry coal per square foot of grate surface per hour when using saturated steam. The graphical representation of this equation is shown in fig 2.

PERFORMANCE OF ORIGINAL LOCOMOTIVE assuming irregularities to have been eliminated. Table II. shows the performance of the locomotive, assuming irregularities due to boiler performance to to have been eliminated. The results in this table were obtained as follows:

Column XV., which gives equivalent steam supplied to locomotive per hour with feed-water at 60° F., equals pounds of steam supplied to locomotive per hour from original log multiplied by (B. t. u. taken up by each pound of steam minus [60 minus feed-water temperature]) divided by 970.4 (latent heat of evaporation).

Column XVI., which gives the equivalent evaporation per pound of dry coal corrected by equation, was obtained by substituting the values in column VI., table 1, for H in the equation $E = 11,305 — .221 H$.

Column XVII., which gives dry coal fired per hour corrected by equation, equals column XV. divided by column XVI.

Column XVIII., which gives dry coal per square foot of grate surface per hour, equals column XVII. divided by 17 (the number of square feet of grate surface).

Column XIX., which gives dry coal per indicated horse-power per hour, equals column XVII. divided by column X. in table I.

Column XXIV., which gives dynamometer horse-power, equals column X. in table I. minus column XXII. in table II.

Column XXV., which gives the drawbar pull, equals column XXIV. divided by .000547 multiplied by the revolutions per minute, in which .000547 is the tractive horse-power constant of the locomotive.

Column XXVI., which gives the coal per dynamometer horse-power per hour, equals column XVII. divided by column XXIV.

Column XXVII., which gives the equivalent steam per dynamometer horse-power per hour, equals column XV. divided by column XXIV.

Column XX., which gives the equivalent steam per indicated horse-power per hour, equals column XV. divided by column X. in table I.

Column XXI., which gives the machine friction in terms of mean effective pressure, was taken from fig. 13, page 158, of the 1909 report of Dean Goss.

Column XXII., which gives the machine friction in horse-power, is obtained by using the values of m. e. p. of column XXI. and the speed in revolutions per minute of the individual test, together with the in[illegible] of the locomotive.

Column XXIII., which gives the machine friction in per cent. of indicated horse-power, equals column XXII. divided by column X. in table I. and multiplied by 100.

Tests Using Superheated Steam.

THE TESTS INVOLVING SUPERheated Steam, as run on Schenectady no. 3. were at a speed of 30 miles an hour, at the same pressures as were used on the original locomotive—that is, 200, 160 and 120 lbs. The conditions of pressure and cut off under which the tests were run are shown diagrammatically in fig. 3, in which the cut off is determined by the position of the reverse lever notch. Each circle represents a test, and the number written in the circle represents the laboratory number by which the tests are identified. The results of tests under superheated steam are shown in tables III. and IV. It will be seen that the reverse lever was carried to a higher notch than with

the saturated steam.

PERFORMANCE OF THE BOILER.—The equivalent evaporation per square foot of water and superheating surface per hour and the equivalent evaporation per pound of dry coal, columns VI. and VII. in table III., were plotted as shown in fig. 4. There were 16 different tests run under superheated steam, and, as shown, each point represents one test. The equation for the line as shown which most nearly approximates all the points is E = 12.443 — .319 H, where E = the equivalent evaporation per pound of dry coal and H is the equivalent evaporation per square foot of water and superheating surface per hour. The area of the heating surface is based upon the interior surface of the fire box and the exterior surface of the boiler and superheating tubes. This equation was derived from all tests at all pressures and therefore fairly represents the average performance of the boiler at any pressure when operated under superheated steam. It is a noteworthy fact that this equation is practically the same as that obtained from the lower rates of firing reported to the Association in 1911. The equation for the nine points as obtained that year was E = 12.450 — .318 H. In the same manner as used in the original locomotive, G equals the dry coal per sq. ft. of grate surface per hour, 1,404 the number of sq. ft. of water and superheating surface, 17 the number of sq. ft. of grate surface and H and E the same as before mentioned, the following formula is true: 1,404 H = 17 E G, or

$$H = \frac{17\ E\ G}{1,404}$$

Substituting this value of H in the equation E = 12.443 — .319 H, we obtain

[illegible]

the equation $E = \frac{[illegible]}{G + [illegible]}$, which represents the relation between the equivalent evaporation per pound of dry coal and the dry coal per sq. ft. of grate surface per hour when using superheated steam. The graphical representation of this equation is shown in fig. 5.

PERFORMANCE OF THE SUPERHEATER Locomotive assuming irregularities to have been eliminated. Table IV. gives the performance of the locomotive when using superheated steam, assuming irregularities to have been eliminated. The results in this table were obtained in exactly the same manner as those from the locomotive when using saturated steam, as shown in table II., and may be compared with them.

The Increase of Power of the Superheater Locomotive.

Having now obtained the values of steam in tables II. and IV. for the two types of locomotives, the curves as shown in figs. 6 to 9 were plotted. By the use of the equations of the curves in figs. 2 and 5, the equivalent pounds of steam per pound of coal can be determined for any rate of firing of either locomotive. Also, from figs. 6 and 7, the equivalent pounds of steam per i. h. p. per hour can be determined for any cut off, and from the lines shown in figs. 8 and 9 the mean effective pressure for any cut off can be ascertained. Now, assuming that the curves as shown in these figures fairly represent the performance of each locomotive, it is possible to obtain the performance of each locomotive at the same rate of firing—that is, burning the same number of pounds of coal per sq. ft. of grate area per hour. Table V. shows this comparison of the two locomotives while burning 110, 120 and 130 lbs. of coal per square foot of grate.

Column I. of this table shows the rate of firing per sq. ft. of grate per hour.

Column II. gives the steam pressure, the comparisons being made at three pressures, namely, 200, 160 and 120.

Column III. gives the equivalent evaporation per pound of dry coal for the original locomotive, and was obtained by substituting the values in col. I for G in the equation

$$E = \frac{3,978}{G + 351.9}$$

Column IV. gives the equivalent evaporation per pound of dry coal for the superheater locomotive, and was obtained by substituting the values in column I for G in the equation

$$E = \frac{3,221}{G + 258.9}$$

Column V. gives the equivalent pounds of steam per hour for the ordinary locomotive, and was obtained by multiplying the values in column I. by those in column III. and then by 17.

Column VI. gives the equivalent pounds of steam per hour for the superheater locomotive, and was obtained by multiplying the values in column I. by those in column IV. and then by the grate area, which is 17 square feet.

Columns VII. to XIV. were obtained [illegible] the method, which is shown by the following example: When using 110 lbs. of coal per square foot of grate area and a steam pressure of 200 lbs., we get [illegible] cut off.

From the curve in fig. 7, 24.9 lbs. of steam per i. h. p. per hour;

From the line in fig. 9, 92.2 lbs. mean effective pressure.

$$\text{Thus, i. h. p.} = \frac{16325.1}{24.9} = 655.6.$$

Also, i. h. p. = 4 (92.2) (.012144) (146.2) = 654.6.

At 48.2% cut off we obtain from the curves in fig. 7 24.9 pounds of steam per i. h. p. per hour, which gives i. h. p. = 655.6. and from the curves in fig. 9 92.7 mean effective pressure, which gives i. h. p. = 658.2.

By looking at the above sets of values, it can be seen that at 48% cut off the i. h. p. figured from the basis of lbs. of steam per i. h. p. is greater than that figured from the basis of the m. e. p., and at 48.2% cut off just the reverse is true Therefore, the proper values must lie somewhere between 48 and 48.2% cut off.

The proper value of 48.1% cut off was found to give the same i. h. p. figured from the pounds of steam per i. h. p. per hour as figured from m. e. p.; that is, with 48.1% cut off, the steam per i. h. p. per hour is 24.9 as obtained from the curve and gives an i. h. p. of 655.6. The m. e. p. at this cut off is 92.4, and gives an i. h. p. of 656.0. These are so near the same that the 655.8 value was taken as the i. h. p. developed while burning 110 lbs. of coal per sq. ft. of grate. The four values mentioned above were used in the tables. The same process was used in determining the values for each line of table V.

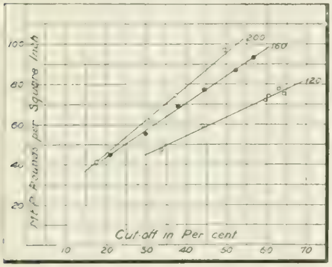

Fig 9.—Relation Between m.e.p. and Cutoff for Superheated Steam Locomotive.

Column XV. of table V., which gives the per cent increase in indicated horse power of the superheater locomotive over the other locomotive, when using the same amount of coal equals column XIV. minus column XIII. divided by column XIII. and multiplied by 100.

Discussion of Results.

INCREASED POWER DUE TO SUPERheating.—It can be seen from column XV., table V., that the increase in power due to superheating when burning from 110 to 130 lbs. of coal per sq. ft. of grate surface per hour, varies from 22.6 to 13.0%. Also from the values in this column it can be seen that for any steam pressure the per cent increase of power decreases as the [illegible]

EFFECT OF INCREASING SIZE of Cylinder for Maximum Power.—By comparing the values of equivalent pounds of steam per i. h. p. per hour it will be seen that they are considerably larger than the best performance of the locomotive as obtained at a lower cut off; that is, the cut off of maximum efficiency for 160 lbs. steam pressure is approximately 37%, while the cut off as obtained under 120 lbs. of coal per hour is 55.5%. The relative steam consumption for these two values of cut off is 25.2 and 26.7 lbs. per i. h. p. per hour, respectively. It will be seen that the increase in power to be accomplished by having the cut off at the proper point to give maximum efficiency is about 5.6% as is shown in column VIII. That is, $\frac{26.7 - 25.2}{26.7} \times 100 = 5.6\%$. In order to show this more clearly, the values in table VI. have been worked out.

Columns I., II., III. and IV. were taken from columns II., VIII., X. and XII., respectively, in table V., at 120 lbs. of dry coal per sq. ft. of grate surface per hour. The values in column V., which give the cut off at maximum efficiency, were taken at the lowest points of the curves in fig. 7. The values in column VI., which give the equivalent pounds of steam per i. h. p. per hour at maximum efficiency, were taken from the curves in fig. 7 at the points of cut off shown in column V. The values in column VII., which give the m. e. p. at maximum efficiency, were taken from the curves in fig. 9 at the points of cut off shown in column V. The values of column VIII., which give the per cent. increase in indicated horse power, equals column III., minus column VI., divided by column III. and multiplied by 100. The values in column IX., which give the diameter by cylinders necessary to obtain maximum efficiency, equal 16 times the square root of values given in column IV., divided by the square root of values given in column VII. The following sample calculation will show this more clearly. The diameter of the cylinders at present is 16 ins. The ratio of this to the new diameter required to give the same indicated horse power must be inversely proportioned to the roots of the mean effective pressures. For 200 lbs. pressure

$$\frac{X}{16} = \frac{\sqrt{96.0}}{\sqrt{70.0}} = \frac{9.86}{8.38}$$

$$X = 18.82$$

where X. is the new diameter of cylinder.

The average of the three values in column IX. is about 18¾ ins. Now, if the locomotive were equipped with 18¾ in. cylinders, when using 120 lbs. of coal per square foot of grate, the cut off could be at the most efficient point to obtain maximum power.

Under these conditions there would be an increase in power as shown in table VII., or, in other words, the increase in power of the superheater locomotive over the other for the 160 and 200 lbs. pressures would be about 25% if the size of the cylinders were increased to 18¾ ins., whereas at present the increase is about 20%.

Table VII., showing the increase of power of the superheater locomotive over the other when using 120 lbs. of coal per sq. ft. of grate per hour if the cylinders were increased to 18¾ ins., is given below.

Steam Pressure	I. H. P. Sat.	I. H. P. Sup.	Per Cent In. in I. H. P.
200	567.8	217.0	26.3
160	553.1	689.0	24.5
120	487.2	636.0	30.0

Report of Committee on Car Construction.

The Master Car Builders' committee, W F. Kiesel, Jr., Assistant Mechanical Engineer, Pennsylvania Rd., chairman, reported as follows:—

The following letter from D. F. Crawford, General Superintendent Motive Power, Pennsylvania Rd., gives the reason for this investigation:—

Prior to the 1911 M.C.B. Code all steel underframe and all steel cars were subjected to the same combinations and the same delivering lines' defects as wooden underframe, composite underframe and all wooden cars were. The consequences were that in interchange defect cards were being requested for damage which in no event would be repaired. In order to correct this situation rule 43 was introduced. The interpretation of this rule is, in effect, that a steel underframe car or an all steel car will not be damaged in fair usage; consequently, the combinations should not apply, and the handling company was made responsible for all damage which necessitated repair, except such damage as might occur through corrosion and weakening of the parts.

"I have been advised that in some of the new all steel and steel underframe equipment which has been constructed recently, that in some instances the centre sill section has been reduced to such an extent that the steel and steel underframe cars are no stronger, if as strong, as the wooden cars, and under rule 43 the owner will receive the same protection as he would if the car had been of proper strength.

"It would seem desirable for the M.C.B. Association to set some minimum strength for steel cars which would adequately protect the handling line, specifying such cross sectional area of centre sill as may be felt to be proper and fair, and cars which have less than this cross sectional area will be considered the same as wooden underframes or composite underframe cars in so far as combination defects are concerned. I would suggest that this may be made one of the subjects for committee work next year, as I do not consider it proper that the burden of maintaining weak cars should be put on the handling line."

The subject has been divided into two parts:—(a) Centre sills for existing cars. (b) Centre sills for new cars.

The only precedent we have is that of wooden cars. The experience with steel and steel underframe cars extends over about 15 years. This experience covers a large number of car types, showing great variations in end strain resisting qualities.

It was agreed that the relative values of steel and wood used in car construction for direct tension or compression should be based on the elastic limits of these materials, and that the committee use a ratio of four for the elastic limit of steel to that of oak or yellow pine.

Compared with a wooden car having two 4 in. by 8 in. centre sills, an equivalent steel car must have an effective centre sill area of not less than 16 sq. ins. between the points where end strain takes effect. The strains in car underframes due to lading do not add greatly to the stresses from end shocks. As a rule, a loaded car is less liable to damage from end strains than an empty car, for which reason it will not be necessary to introduce load strains, but base the minimum area and end resisting strength on end strains only.

Modern steel cars have the centre line of draft at varying distances below (seldom above the horizontal neutral axis of the centre sills, and draft stops located in the centre sills. The distance between the neutral axis of any member of the car and the centre line of strain acts as a lever arm, through which bending effect is added to direct tension or compression. Strains which do not act in line with the neutral axis of car members will be designated "eccentric strains." The ratio of stress to strain is $\frac{1}{A}$ plus $\frac{X}{SM}$, in which

A represents area, in square inches.

X represents lever arm, in inches.

SM represents section modulus of section.

Centre sills which are not properly tied together at rear draft stops, located at some distance from bolster, are subject to eccentric strains, which has a tendency to deflect them outward or away from the centre line of car between draft stops and bolster.

Compression strains acting on car through draft gear, or car ends, as the case may be, create strut action in the members of the car framing. Long struts are liable to buckle under compression, for which reason it is customary to set limits for ratio of length to radius of gyration of struts, in order to restrict the excess stress caused by this buckling tendency. The members or parts of members of car framing which require consideration are generally flanges of channels or I beams, and plates. Their cross sections are rectangular, or sufficiently close to rectangular to be so considered in order to avoid theoretical computations.

Your committee recommends the adoption of a ratio of 70 for length to radius of gyration, which corresponds closely with a ratio of 20 for length to depth d of a rectangular section. This depth must be measured in the direction in which buckling may take place. To fulfill the restrictions just given, the length of a member should not be greater than 20 d., or the member must be securely anchored at intervals not exceeding 20 d.

The [illegible] of centre sills may be [illegible] in various ways, the most [illegible] methods being by means of cover plates, or diagonal braces. The value of such braces increases the value of the centre sills. Cover plates add direct value, and diagonal braces add partial value, depending on their [illegible]. Braces at right angles to centre sills add no value to the centre sill area, unless specifically designed as horizontal girders of sufficient strength to transfer all of the end strains from the draft to the side framing, in which case the side framing must perform [illegible]

[illegible] should be added to the centre sill area, taking [illegible]

RECOMMENDATIONS.—[illegible] strength than that specified below, should be classified with wooden cars, and subject to the same rules for combining defects:—Area of centre sills not less than 16 square inches. Ratio of stress to end strain not more than 0.09. The [illegible]

of draft sill members, or part of member between braces, to be not more than 20 d, where d is the depth of the member measured in the direction in which buckling might take place.

For new cars to be built after 1913 a greater strength should be required. Transportation requirements have increased greatly in the past ten years. Heavy freight locomotives, including Mallet road locomotives, greater efforts to pass cars through yards quickly, and rougher handling of cars, have increased the strains to and the end shock at least 50 per cent. Manufacturers of couplers, draft gears, draft attachments, etc., are all busy increasing the strength of their specialties, and are generally aiming to obtain double the original strength.

Recommendations for new cars.—Area of centre sills, not less than 24 sq. ins. Ratio of stress to end strain, not more than 0.06. The length of centre draft sill members, or part of member between braces, to be not more than 20 d, where d is the depth of the member, measured in the direction in which buckling might take place.

Box Car End Design and Strength.

F. F. Gaines suggested to the M.C.B. Association that designs of end framing of box cars, to prevent damage to car by shifting load, be submitted.

An investigation of box car repairs leads to a realization of the ever increasing damage to box car ends and consequent expense of repairs. Wooden ends without metal reinforcement no longer meet transportation requirements; therefore, metal ends and metal reinforcements have been applied, tested, and found much superior to wooden ends. Metal ends can be used either with or without wood lining. When using metal ends without wood lining, the inside surface of the plate must have no projections, such as bolt or rivet heads. B. W. Dunn, on Mar. 21, 1913, advised as follows:—"Par. 1662 (f), I.C.C. Regulations, prescribes that in a freight car to carry dangerous explosives, special car must be taken 'to have no projecting nails or bolts or exposed pieces of metal which may work loose or produce holes in packages of explosives during transit.' It is hoped, therefore, that you will be able to arrange the design so that the rivet heads will not project. If there is to be no interior wooden lining, and projection of the rivets cannot be avoided, it would seem that the federal regulations would require a special wooden lining to be placed in the end of a car of this kind at least as high as the lading of explosive packages. I do not interpret the federal regulations to forbid

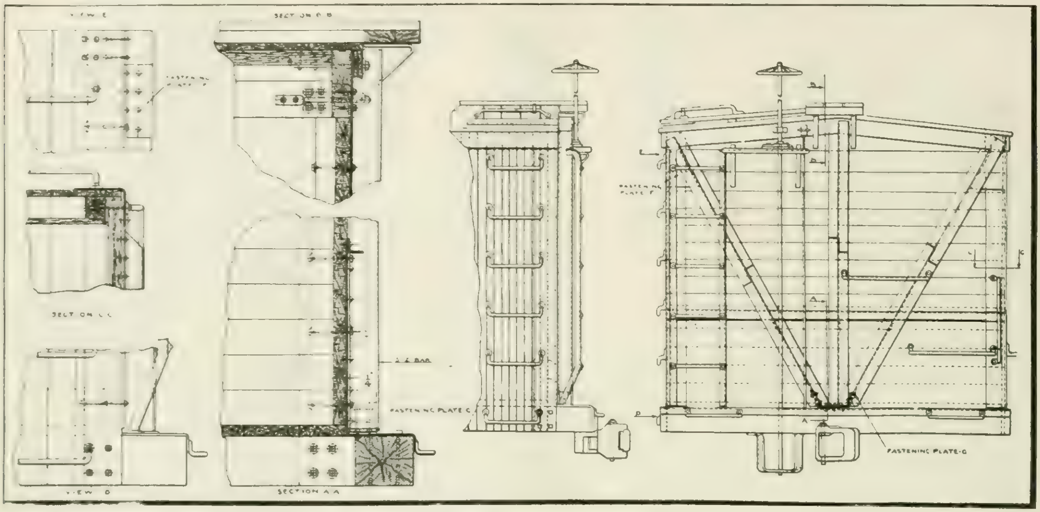

Fig. 3.—Reinforcement for New Cars.

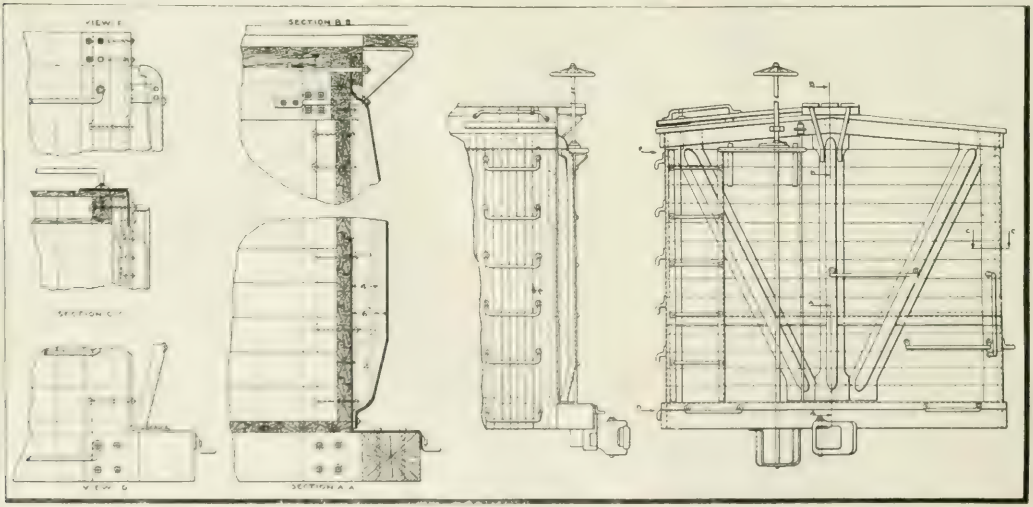

Fig. 4.—Reinforcement for New Cars.

the presence of flat metal surfaces, such as this reinforcing plate would be, if the rivet heads did not project."

RECOMMENDATIONS. — Wooden cars with standard M.C.B. lining should have the ends reinforced with metal construction in accord with fig. 1, or its equivalent.

Steel underframe cars with end lining 1½ ins. thick and over should be equipped with outside braces, shown on fig. 1, but the inside plate may be omitted. In applying outside braces, due regard must be given to compliance with U.S. Safety Appliance Rules for coupler and end ladder clearances.

Cars with wood superstructure, requiring complete renewal of ends, should have steel ends applied, in accord with fig. 2, or its equivalent.

New cars should be equipped with ends of the type shown on figs. 3 and 4. The section modulus of the posts and braces, 2 ft. above floor line, not including corner posts or flat end plate, should not be less than 15. The Murphy or Van Dorn steel ends can be used instead of those shown on figs. 1, 2, 3 and 4.

Each end must be attached to the longitudinal car members, either directly or through other members, by fastenings sufficient in strength to develop the full strength of the end.

The constructions shown in the diagrams are equally applicable to outside or inside end sill cars by modifying the attachment at bottom to suit depth of end sill.

Seal Records of Box Car End Doors.

G. A. Hancock, General Superintendent Motive Power, St. Louis and San Francisco Rd., wrote a member of the committee as follows:—

"I have received a communication from the local freight agents of the Eastern Division on a subject which I think merits the attention of the committee of standards. Their communication reads as follows:—'Much difficulty is experienced in having yard clerks obtain accurate seal records of end doors, on account of inconvenient location and risk of personal injury. Claims are now being paid on account of no end door seal record, and cars are being pilfered by theft through end doors, which can be entered with the least chance for detection. Is an end door in a standard box car essential? If so, could it not be placed near the side of car where seals could be read from the side ladder?'

"It brought out the discussion that an end door is desirable for loading certain classes of lumber, and that in a shipment of lumber there sometimes are specially designed pieces that are too long to go into the side door, and that have to go in at the end door, so the agents have referred the matter to this office with request that we advise: If it is essential to have end doors in box cars; if end doors are necessary, if they cannot be located where the seals can be read with less danger of personal injury than at present; if some standard location cannot be adopted so that all will be alike; if the vertical height of the end door could not be made standard and door so designed that it could not be entered by a person intent on robbing the car, even though door was not sealed.

"As we are not putting end doors in our modern box cars, but as they are being placed in cars built by other companies, I believe that this is a matter that should be handled by the committee on standards and recommended practices, in connection with reports they made in 1912 on the height of seals on side doors."

Both kinds of cars, those with and those without end doors, used for the purpose of loading lumber, have been common in years past, but each year fewer new cars with end doors are built, because the end doors are valuable only on roads handling long lumber directly from the lumber regions as an important feature of traffic. Roads which formerly equipped all box cars with end doors have eliminated them from new cars, and are permanently fastening them in place on some of their old cars, leaving the end doors operative only on short box cars. This indicates that with the advent of the 40 ft. box car the end doors will gradually become obsolete.

RECOMMENDATIONS.—End doors used for loading lumber in box cars are essential only on roads having a large lumber hauling in box cars as an essential feature of traffic. End doors must be so constructed that when closed, they be automatically by means of a lock, accessible only from the inside of the car, thus avoiding the necessity of taking seal records. Seal appliances now in use, and not accessible from ground or from end ladders, should be revised so as to be accessible from ground or end ladders, to promote the safety of employes.

Report of Standing Committee on Mechanical Stokers.

The Master Mechanics' Committee, A. Kearney, Assistant Superintendent of Motive Power, Norfolk and Western Ry., Roanoke, Va., chairman, and of which G. S. Hodgins, of the National Transcontinental Ry. Commission's Staff at Ottawa, Ont., is a member, reported as follows:—

The development of the locomotive stoker has been watched by many of us with more than ordinary interest and patience, it being another instance where skill and genius, by the application of mechanics, bids fair to materially reduce physical labor. The utilization of machinery to perform what hitherto was accomplished by manual labor has been achieved in much larger as well as smaller problems, but few have been more welcomed than the automatic or semi automatic apparatus by which the larger locomotive is successfully supplied with fuel at a rate and in such a manner as to produce efficiency in the operation of the locomotive, with a reduction in physical work on the part of the fireman.

Curiously enough, few stoker devices differing materially in principle have been launched since the earlier work of developing the locomotive stoker was begun. This subject has been presented to this convention each successive year since 1905, when we listened with much interest to the original paper presented by Mr. Garstang, Superintendent Motive Power, C.C.C. & St. L. Ry. Each year's report has dwelt at length upon the progress made in the continued development of the stoker, and to-day we have results bespeaking marvelous achievements; at the same time the advancement made during the past year, or a little more, has been much greater than heretofore accomplished. While the machine, like many other devices, including the locomotive itself, is susceptible of further improvement, it is receiving benefit as the result of service and study, and probably much will be done before perfection is attained. It is also fair to say that the stoker has undoubtedly reached a commercial stage of development.

Persistent energy in the perfection of the stoker is being rewarded, but it must be conceded that few, if any, devices applicable to the locomotive, having for their purpose the accomplishment of equal efficiency, have carried the difficulties surrounding the successful performance of the stoker, not so much on account of the operation to be performed, but the absence of choice as to arrangement, the absolute limitations in space, and conditions under which the machine must operate.

Within the past few years marked advancement has been made and there is no longer any question that the stoker is of practical value and a perfectly feasible proposition. Pioneers in the work evidently received but passing encouragement in their efforts, doubtless on account of there being probably less real necessity for anything of the kind in average locomotive service than now exists, and for the further reason that any increase in power by such means was not given particular consideration. More recent history very strongly points to the inevitable conclusion that the success of the stoker is not exclusively of mechanical interest, but an operating question as well, and much has been due to the continued solicitude from the viewpoint of capacity, relative consumption, efficiency and operation.

In all work and experimentation with the various schemes suggested, two distinct methods or principles for stoking a locomotive still characterize the stage of development. In one the coal is delivered to the fire box over the bed of the fire, not unlike hand firing, which is generally termed the "scatter" system; while the other delivers the coal up through the bed of the fire from underneath and is designated as the "underfeed" stoker. Both methods have their advocates and strong points of defence. Consequently, having before us the results both types have accomplished, it would be unsafe to conjecture which school will ultimately survive. Probably both will continue to advance, but time only can foretell their fate, and which will in the end prove more economical.

Your committee is therefore unprepared to even venture an opinion as to which type of stoker is better, as both have their points of advantage. There seems to have been a larger number of designs of stokers attempted which have had the "scatter" system for their basic principle than those endeavoring to develop the "underfeed" machine, and probably because the inventors have hoped to reproduce hand firing conditions. Many more types have been worked out than now seem to occupy the field, but those that have lived are constructed upon either the one or the other principle, although they may have differed materially in detail from those that now remain on the market, or have possibly reached the commercial stage of development.

Time seems to have resulted in eliminating many stoker designs, reducing the number mainly to the most prominent, namely, the Crawford, typifying the underfeed; and the Street, representing the "scatter" type. There are, however, two other stokers undergoing development, namely, the Gee and the Hanna, both of the scatter design; and possibly there are many other prospective designs or types which have not yet been presented to the railroads. The stokers which have undergone some development, and may for that matter still be considered (as it is possible their designers are giving them further study with a view of further improvement, etc.), are the Strouse, Barnum, Hayden, Brewster, Harvey, Dickinson, Erie, Hanna, Gee, Crawford and Street. The stoker situation, as well as your committee has been able to ascertain, is as follows:—

STROUSE STOKER.—Seventy-six Strouse stokers have been built to date and ap

TABLE 1.—RAILWAYS REPORTING HAVING STOKERS IN OPERATION, TYPES OF STOKERS AND ENGINES TO WHICH THEY WERE APPLIED

plied to engines on 16 different roads, but on April 1, 1913, none were still in service, so far as known. This design of stoker interferes with the operation of the fire door when it becomes necessary to resort to hand firing. It is one where all of the coal must be shoveled from the tank into a hopper.

BARNUM STOKER. Seven Barnum or C.B. & Q. stokers have been built to date by the Burlington; 1 being applied to a switch engine, 1 to a Prairie type road engine, 5 to Santa Fe decapod engines. All of the latter stokers, we are advised, have been taken out of service on account of difficulties experienced in connection with the driving mechanism used with the taper screws in the stoker trough, also on account of the unsatisfactory distribution of fuel where the lower grades of coal were handled.

HAYDEN, HAYDEN MODIFIED, BREWster, Harvey, Dickinson and Erie Stokers.—Nothing has been done during the past year with the above stokers. That is to say, none of them have passed from the experimental to the commercial stage. The experimental machines which were applied did not wholly meet the requirements of a stoker as viewed by your committee, in that several materially obstructed the fire door, which would interfere with hand firing should such a course become necessary, and the others have not been sufficiently developed.

HANNA STOKER. Eighteen or twenty stokers were applied to Mallet, consolidation and Pacific type locomotives on the Queen & Crescent Rd., but it is our information they have all been taken out of service, in addition to the single stokers which were put on several different roads. The exception to the above is the one machine on the Carolina, Clinchfield & Ohio Rd., which is still in service. The one on the latter road, we understand, continues to do good work, and the manufacturers promise to bring out another within a very short time possessing still further improvements.

THE GEE STOKER is being developed on the Pennsylvania Rd. Only one of this design has been built to date. It is in service on one of their H-6 consolidation locomotives, and is reported as giving very good results.

CRAWFORD STOKER. There have been 153 locomotives on the Pennsylvania Lines West equipped with the Crawford double underfeed stoker. There are 140 locomotives on order which will be equipped with this stoker. The report is that it is probable that larger power built in future will be equipped with this type of stoker. The Vandalia Rd. reports 4 Crawford stokers in operation, and the Pennsylvania Rd. also has 2 in service, making a total of 159 Crawford stokers in service and 140 on order, grand total of 299.

STREET STOKER.—In May, 1909, a locomotive on the L.S. & M.S. Ry. was equipped with the first experimental stoker of the Street design. In 1910 five more stokers were put in service, 3 of which were placed on the L.S. & M.S., where the first experimental stoker was operated. In the year 1911 seven locomotives on four different railways were equipped. All of the last seven, with but one exception, were provided with coal crushers carried on the tank, and handled run of mine coal. All of the machines, we are told, are still in regular service.

In the year 1912 165 machines of the screw-conveyor type were placed in service, 70 on one railway, 50 on another, 40 on another, and 5 on another. Since Jan., 1913, seven additional machines were put in service, besides orders were placed for

50 more by one of the above roads, and an additional order was placed for 120 by another road. Thus we find that there have been 189 Street stokers applied to locomotives in service and 173 on order, making a grand total of 362.

It is particularly interesting to note that the Crawford and Street stokers, while representing two distinct types, are developing at about an equal rate judging from the number of machines which have been applied. The Street stoker has been placed on a larger number of roads, while the Crawford stoker, with the exception of 2, has been confined to the Pennsylvania System. The 2 stokers referred to have been applied, 1 each, to two different railways.

Of the 38 roads replying to the circular of inquiry issued by your committee, 7 report stokers in operation, ranging in number from 1 to 153, there being a total of 326 stokers reported in operation, of which number we find 159 are of the "underfeed" Crawford stoker; and the remainder, 167 of the "overfeed" or "scatter" type; 2 Hanna, and the rest Street stokers.

In Table 1 is shown a list of railways which report using stokers, furnishing at the same time the number and type of each machine and the principal dimensions of the engines to which applied. An expression was invited concerning any further application of stokers, which was replied to as shown. Checking the number of stokers reported as being in service, we find they include about 189 of the Street pattern. This figure was secured from the Locomotive Stoker Co., and as but 165 are shown by the reports from the different roads, we conclude there are some roads using the stoker who have not replied to the circular.

Your committee has been able to secure but very little information concerning the actual and detailed operation of stokers from roads where they have been installed in any considerable number; however, the reports we have been able to secure have been put together, as shown in tabulated form. While the information is quite limited, it will no doubt be of some interest.

Table 2. Performance of Crawford double underfeed stoker on Pennsylvania Lines West of Pittsburgh, including all trips of all stokers from the experimental installation to Feb. 28, 1913.

Coal fired by stoker in per cent of total Coal fired	No. of trips	Per cent. trips Total Number of trips
100	19,475	61.0
99	280	0.9
98	416	1.3
95–98	1,530	4.8
90–95	1,847	5.8
85–90	680	2.1
80–85	903	2.8
75–80	1,209	3.8
70–75	379	1.2
Below 70	5,191	16.3
Total	31,910	100.0

Table 2 gives a rather comprehensive idea of the success with which the Crawford underfeed stokers have been operated on the Penna. Rd. The tabulation covers the performance of the stokers with respect to handling fuel. Up to Feb. 28, 1913, the stoker-fired engines had made 31,910 trips. Of this total number of trips, 19,475, or 61% were 100% trips; that is to say, trips on which the stoker handled practically all of the coal which was placed in the fire box. In comparison with this, we find that only 16.3% of the total number of trips were below 70%., stoker fired. The table also shows the number of trips which were partially successfully stoker fired, which

[illegible] performance. This information, while serving to show the operation of the stoker satisfactorily, does not give the cost of maintenance and the character of its failures.

Table 3 has been prepared to show the performance of the Street stoker on Mallet engines on the Norfolk & Western and Chesapeake & Ohio Railways. The Norfolk & Western Ry., upon the receipt of 40 Mallet locomotives, all equipped with the Street stoker, instituted a systematic record for [illegible] performance, their failures and responsibility, and cost of repairs separated for labor and material, both for the stoker as well as the brick arch with which the engines were also equipped. This table also shows the total number of engine days, or days the engines have been in and out of service.

Taking the average performance of the Mallet engines on the Norfolk & Western Ry. up to Feb. 1, 1913, it will be observed that the average number of failures per month was [illegible], and the average mileage per stoker failure was 11.679 miles. The average for failures other than those attributed to the stoker was 3.527 miles. The record shows 23.2% of the total failures were attributed to the stokers.

Another item of interest to which attention might be directed is the cost of stoker and brick arch repairs per 1,000 miles, which, as will be noted, averages $5.34. The Chesapeake & Ohio Ry. furnish data showing the performance of 54 stoker fired engines, covering three months, namely, Nov. and Dec., 1912, and Jan., 1913. The average mileage per stoker failure is found to be 4.474 miles, which is lower than the reports received from the Norfolk & Western Ry. It will also be noted that the average cost for repairs per 1,000 miles is higher than indicated in the report from the Norfolk & Western, which might be a natural consequence, since the stoker failures were greater in number per miles service.

Your committee sought to establish some data to show the relative fuel consumption in hand firing as compared with the operation of the stoker, but there seems to have been very little reliable information so far obtained. The St. Louis & San Francisco Rd. has furnished a comparison of the coal consumption of the Mallet locomotive hand fired versus stoker fired, the runs being made over a district of 119 miles. The report shows that there were a number of [illegible] might to some extent affect the figures.

The information as presented indicates higher economy with hand fired locomotives. They show an average evaporation of 9.13 lbs. of water per pound of coal for four trips, while the stoker fired engine gave an equivalent average evaporation of 7.88 lbs. of water per pound of coal for the trips. No information is given bearing upon the quality, character or heat value of the fuel [illegible]

[illegible] there is still some uncertainty as to any saving [illegible] the stoker has the advantage; then there [illegible] off in coal consumption.

[illegible]

burns a better fire, with the scatter type running from 4 to 6 ins. in depth, as against 18 or 20 ins. hand fired. Furthermore, with the stoker the fire door is kept closed and the combustion must necessarily be more complete.

A saving in fuel, it would seem, can be expected, not only in quantity but in the grade it is possible to use with the stoker. Generally speaking, the best results seem to be obtained with the smaller sizes of fuel; in fact, with the scatter type machine, slack or crushed coal is necessary, and probably it can be used equally well with the underfeed machines, but the report is that the Crawford stoker has to date been giving good results with small lump coal. With improved combustion, coals lower in heat value (consequently cheaper in price) can be utilized, adding still further to economy conceded the stoker. It has also been observed that when starting out steam can be got up quickly, and probably with advantage as compared with hand firing.

It seems to be admitted by even expert firemen who have had some years experience hand firing, that they have derived valuable information in hand firing after handling the stoker and closely watching its operation. With a more perfect combustion there is naturally some reduction in the emission of smoke, or unconsumed carbon, and it is also reported that where the stoker is properly handled it becomes necessary to use the fire hook but very little, if any, on the road, all of which should mean something in the direction of economy.

With reference to the character of coal used on stoker fired locomotives, we find quite a variety of grades have been reported. In order to compare the different grades table 4 has been prepared, but comments seem quite unnecessary, as a glance at the information is sufficient to show that the successful operation of the locomotive stoker as reported does not seem to be confined to any particular grade or character of fuel.

It is unfortunate that it has been impossible so far to secure definite data for the relative consumption of fuel with the stoker as compared with hand firing. There are, however, some very elaborate tests under way, but they have not progressed sufficiently to justify reliable conclusions.

Table 4.

RAILWAY	Kind of coal used	Per cent of ash	Difference in coal used on stoker fired and hand fired locomotives
[illegible]	Bituminous, coking.	7 to 8	Same used in each case
Vandalia	Indiana semi-coking. Illinois coal of [illegible]	8 to 12 ..	Same coal when Indiana coal is used. No Illinois coal used on stoker fired engine.
[illegible]	[illegible] and slack coal some coking and some non coking	12 to 15 .	Same coal used in crusher type stokers. Picked, special coal used in conveyor type.
[illegible]	[illegible]	10	Non-coking coal used in stokers and coking coal used in hand fired engines.
[illegible]	Non coking bituminous from Indiana, Illinois, Pennsylvania and Ohio...	6 to 16	Same coal used in each case.
[illegible]	[illegible]	9 to 11	Nut and a mixture of nut and slack sometimes very fine slack, for stokers. Run of mine used for hand fired engines.
[illegible]	[illegible]		Same coal used in each case.
[illegible]	[illegible]	7 to 10	The run of mine coal is screened, fine slack used on stokers, lump on hand fired engines.

[illegible]

The Carolina, Clinchfield & Ohio Ry. reports heavier trains hauled, but does not say to what extent.

The Vandalia Rd. reports their stoker fired engines consume about the same time on the division, but that a more uniform steam pressure is maintained.

The B. & O. Rd. reports that it is possible to haul heavier trains with the stoker engines.

The Pennsylvania Lines West of Pittsburgh reports 15% more tonnage hauled with stoker fired engines on slow freight and on long, heavy grades.

The Buffalo, Rochester & Pittsburgh has not observed any difference between hand firing and stoker operation.

The St. Louis & San Francisco Rd. reports better performance with stoker fired engines, stating that some firemen are not able to keep up steam on heavy trains on the long runs.

The Norfolk & Western Ry. has not recognized any difference in tonnage rating between hand fired and stoker fired engines, since with but one exception all of their stokers are applied to one type of locomotive. It has been observed, however, that with the stoker operated properly the locomotive can be worked to its maximum capacity without any marked effect upon the steam pressure, which is a distinct advantage.

The Virginian Ry. reports some improvement in steaming capacity and tonnage hauled, but does not give amounts.

A review of the reports clearly indicate that while all concede the stoker is capable of handling heavier tonnage, no road is ready to name the amount. Probably if such information had been secured, it might have proven to be widely different on the several roads on account of the existence of widely different operating conditions. The stoker, it is generally believed, is capable of firing a larger amount of fuel and still retain uniformity in its work, from which it follows that higher boiler power is reasonably sure, unless there is a failure from some other cause, but this increased capacity would not be shown in the starting of the locomotive. On the contrary, higher steam pressure maintained would result in higher tonnage, speed if desired, or more work performed by the locomotive.

On some roads where peculiar physical characteristics prevail with respect to ruling grades, etc., it might mean that an engine could be safely given a larger tonnage than had previously been handled, where the ability to start the train from the usual stopping points had not been a controlling factor in determining the tonnage rating.

Therefore, the question resolves itself to one where each road is better able to work out for itself the question of using the stoker with any return after taking into consideration the physical characteristics of the road, size of engines, tonnage now being hauled, and what advantages might accrue. The question is rather one where it must be decided, first, if a more uniform rate of steaming is needed, and what expenditure might be warranted to secure such a condition.

Since with the scatter type of machine the arch brick is regarded as essential, and possibly of equal advantage in other types in the ratio of an engine with or without an arch hand fired, it would seem its use may be a prime consideration, since it would seem to have a specific value.

A superheater can be introduced, carrying with it some 10 to 15% improvement in fuel or steaming capacity; and if still further advantage is desirable and the quality and quantity of fuel to be fired becomes a factor, the use of the stoker will be felt in the production of a uniform steam pressure, with possibly some saving in fuel where the conditions are equal, or higher steaming capacity with higher speed.

Where it is possible to keep the fire door closed, it must follow that the temperature in the fire box is more uniformly maintained, which in turn must result in better service conditions for the fire box, flue sheet and seams, otherwise our theories fall flat. As a matter of fact, observations, though limited, seem to indicate that the life of the flue is being increased, and equal results must necessarily be in store for the flue sheet and the fire box generally, but some allowance should be made for what is accomplished by the arch brick.

Very successful results can be obtained in the operation of the stoker, but some intelligence is necessary to make sure that it is allowed to work efficiently, and one of the most important features to be observed is to prevent the engine from continually popping off, wasting steam and fuel; but even this can be controlled, simply by the manipulation of apparatus requiring no other energy than ordinary attention. No particular effort, as a rule, is required to keep the stoker properly adjusted, working regularly, and free from clogging or disturbance to the uniform supply of fuel to the fire box. In the event of a failure of the stoker mechanism, the fireman, as a rule, can do but very little, except to resort to hand firing, bringing the engine into terminal, where repairs can be made.

In handling stoker locomotives at terminals, or at ash pits along the road, there is some time to be saved, as the thinner fire can be knocked out or cleaned within 10 or 15 minutes time, as against probably twice the delay in handling a locomotive which has been hand fired.

There is no doubt that the maintenance of the stoker, by reason of its increased amount of machinery and working parts, is going to represent an item of repairs; and even if it has been rather low, as has been shown, some alteration in the figures is likely to take place as the stokers become older. It is also true that as the machines are improved and more substantial parts are applied, and greater proficiency in their manipulation is attained, there should be a corresponding improvement in the cost of maintenance. However, such items, including the time required to turn, repair, and otherwise put engines in shape for further service, should receive due consideration in summing up the net advantages derived by the stoker in service.

Reflecting for a moment upon the apparent work and interest manifested in the locomotive stoker, it is believed we must necessarily conclude that although the stoker has not been developed to a state of perfection, it has not only proven to be practical, but has demonstrated by service and endurance tests that it is of value, and that there is a growing field for its use.

In concluding, your committee wishes to show as a feature of this report what they conclude are [illegible] which should, [illegible] in the satisfactory locomotive stoker:—1. It should convey coal [illegible] to the fire box with the minimum of physical work on the part of the fireman. 2. It should maintain a maximum steam pressure on the locomotive, and have a margin for additional feeding capacity. 3. It should leave the fire box door, and deck as much as practicable, unobstructed. 4. It should maintain an ideal fire for economic fuel consumption. 5. It should distribute fuel in the fire box in such a manner as to reduce to a minimum any necessity for disturbing the fire by means of the hook.

Report of Committee on Overhead Inspection of Box Cars.

The Master Car Builders' Committee, A. Kearney, Assistant Superintendent of Motive Power, Norfolk & Western Ry., reported as follows:—

Your committee on rules for loading materials, to whom was last year assigned the formulation of rules for the overhead inspection of box cars for loading, was forced to present a report of progress at the last convention on account of its inability to satisfactorily cover the field a subject of so much importance seemed to warrant. With the assistance of the American Railway Association, the General Managers' Association of the Southeast, and others, a great deal of data showing in a general way what was taking place, and what claims were resulting from damaged and defective equipment, were secured; however, the statistics submitted at that time and those subsequently obtained seem to be much the same, except perhaps in quantity, rate of increase and losses sustained. In our previous report many of the various causes apparently responsible for damage to shipments were given in detail, covering no small space in the paper, hence such statistical information is regarded as needless at this time and has been omitted.

On account of the many damage claims presented, with the attendant difficulties in adjustment, often by reason of uncertainty in some instances as to the proportion of the claim that might belong to the condition of the car at the initial point of loading, and how much originated on the line of the road, its treatment, etc., it would seem proper to mention at the outset that the solution of the problem evidently narrows itself down to the important factor of inspection, selection and proper preparation of the car at the loading station.

As was alluded to last year, it is the obvious precaution with which such an undertaking must be approached that further time was asked for, and, as anticipated, we find ourselves confronted with innumerable difficulties and objections offered by railways explaining that latitude must be allowed on account of possible unwarranted interference to movement where unnecessary time might be consumed selecting and preparing equipment, especially where the supply and opportunity to obtain equipment is of considerable moment. It is still further argued that such a procedure might result in embarrassment if any specific and more stringent rules are established for the crating and inspection of equipment, even though the work be confined to cars for shipment of only certain commodities readily damaged by water, or leakage losses. At all events, it seems to be the general opinion, at least in certain localities, that steps might be profitably taken working to the standardization of rules and requirements for the selection and inspection of equipment required for certain shipments, and it is the opinion of your committee that if it is going to be possible to secure improved conditions along this line, they are most likely to be obtained by confining our attention to shipments readily damaged by moisture, eliminating for the present the consideration of other commodities, at least until some systematic rule can be established and gotten under way.

It was with the idea that the best progress might be obtained by pursuing the lines of least resistance, your committee reached the conclusion that if it could, with the assistance of the American Railway and Master Car Builders' Associations, secure a complete list of the roads throughout the country using certificate of inspection cards, and obtain from them not only facsimiles of such cards used by them, but instructions going therewith, it might be possible to reduce the several forms to a composite card acceptable to all now using cards, and we would then have a card they would possibly be satisfied in the interest of uniformity to adopt, in lieu of any standard they might now be using. It has been the idea of your committee that this would seem to be the most profitable direction for their energies, and that a composite card acceptable to the roads now following the practice of securing certificate of inspection cards will be the first solid ground we might hope to reach towards working to a uniform practice. Furthermore, if the interest of such roads can be secured in this direction, the proposition will be readily given the necessary impetus to carry it as far as it can be employed with profit, and without danger of being used beyond the point of economy. Working to this end, therefore, and setting aside for the present any consideration of the shipment of products other than those readily damaged by moisture, your committee has secured, and show herewith, what is supposed to be a complete list of roads using certificate of inspection cards for the purpose above mentioned. They appear to be confined to the roads running out of Chicago, Minneapolis and St. Louis. The roads using such cards are as follows: Great Northern Ry., Chicago, Burlington & Qunicy Rd., Chicago Great Western Rd., Chicago, Milwaukee & St. Paul Ry., Minneapolis, St. Paul & Sault Ste. Marie Ry., Illinois Central Rd., Atchison, Topeka & Santa Fe Ry., St. Louis & San Francisco Rd.

As a matter of information, and to show how deductions made by your committee have been reached, they present herewith facsimiles of cards used by the above roads, with instructions covering their use.

The Great Northern, Chicago Great Western, and Chicago, Milwaukee & St. Paul use only one form of card, and the card used by each road is practically the same. This being the case, we are showing below only a facsimile of the card used by the C. M. & St. P.:—

C. M. & St. P. Ry.
This car
No................ Initial.................
FOR FLOUR.
Inspected by ....
Date ....

There have been no special instructions issued by these roads as to the inspection to be made, a specially trained man being selected for the work.

The C. B. & Q. uses four different forms of inspection cards. A facsimile of the cards used is shown herewith:—

(1.) C. B. & Q. R. R.
This car
No.................. Initial..................
Is O. K. for
FLOUR, CEMENT, GRAIN, ROUGH FREIGHT.
Inspected by .... At ....
Date ....

(2.) C. B. & Q. R. R.
This car
No.................. Initial..................
O. K. FOR FLOUR.
Inspected by ....
Date ....

(3.) C. B. & Q. R. R.
FIT FOR GRAIN.
No.................. Initial..................
Inspected by ....
Date ....191..

(4.) C. B. & Q. R. R.
NOT FIT FOR GRAIN.
No................. Initial.................
Inspected by ....
Date ....191..

There are no specific instructions for inspection issued. The master mechanics are instructed to have the empty cars inspected and carded according to their condition and the requirements of traffic.

The M. St. P. & S. S. M. is using two inspection cards, one for cars suitable for flour loading, and one for cars not suitable for flour, grain or merchandise. A facsimile of the cards used is shown herewith:

M. St. P. & S. S. M. Ry. Co.
This car
O. K. FOR FLOUR.
Date ....191.. ...

M. St. P. & S. S. M. Ry. Co.
This car must not be loaded with flour, grain or merchandise.

The instructions relative to the use of these cards are that the cars are to be given a special interior and exterior inspection, to see that sheathing, lining, flooring, roofing, doors and fastenings are in good condition; any small holes found in the floor are to be cleated over, care being taken to bevel the edges of the cleats to prvent damage to flour sacks. Cars with a bad odor, due to carrying hides, oil, etc., are not to be used for flour. Cars otherwise O.K.'d, with the exception of having small oil spots on the floor, are to be painted over with quick-drying paint. All projecting nails, spikes or bolts to be removed or driven in to prevent damage to flour sacks, and all cars are to be swept out thoroughly clean. Cars fit for flour loading are to be carded O.K., and the numbers and initial of such cars are to be turned in to the agent.

The Santa Fe is using two inspection cards, one for flour and one for grain loading. There is no difference in the make-up of the cards, except one is printed in red and the other in green. A facsimile of the cards used is given herewith:

SANTA FE.
FLOUR.
Inspected and placed in condition for flour loading.
Inspector..............................
Date.................. Station..............
Car No.................. Initial..............

SANTA FE.
GRAIN.
Inspected and placed in condition for grain loading.
Inspector..............................
Date................. Station..............
Car No.................. Initial.............. ....

The Santa Fe instructions relative to the use of the inspection cards are as follows:—"Where car inspectors are located, cards will be furnished the inspectors, and at stations where there are no car inspectors, the local agents, or their representatives, will inspect all cars for grain and flour loading. If after proper inspection cars are found to be in suitable condition for grain and flour loading, a card is to be attached to the car door, three feet from the bottom of the door. Switchmen or local crews should be prohibited from placing at loading docks, platforms, or elevators, an empty car which does not have one of these cards attached. When a car has been inspected and card placed thereon and placed at loading dock, and when shipper or his representative has inspected the car and accepted same for loading, the card will be detached and returned to the representative of the company, and shall be attached to and filed by the agent with duplicate bill of lading or shipping instructions. Shippers must be notified when a car is made empty at their plant that the car must not be loaded until it has been inspected and necessary card attached."

The Santa Fe is now contemplating the use of another form of inspection card, which is made up in manifest form so that shippers can have a copy for their use. Following is a facsimile of this card:—

SANTA FE.
THIS CAR O. K. FOR GRAIN LOADING.
Car No............ Initial...........
Date.............191... Inspector.............
At. ....

The Frisco Lines are using three forms of inspection cards. A facsimile of cards used and the instructions to inspectors are given herewith:—

FLOUR SHIPMENTS AND OTHER MILL PRODUCTS.

"Form 255 standard, facsimile of which you will find below, must be properly filled out and applied to each car inspected by agents or car inspectors, which will indicate that car is suitable for loading of flour and other mill products. Agents or their representatives must not sign bills of lading unless form 255 standard is turned in by shipper, attached to the duplicate bill of lading or shipping receipt, and these forms must be retained in the office files for future reference.

FRISCO LINES.
FLOUR FEED AND OTHER MILL PRODUCTS.
Inspected and placed in condition for flour loading.
Inspector..............................
Station ....
Car No............ Initial...........

"The roofs must be carefully inspected to ascertain if waterproof, the doors to see that they fit tight, and are in good condition. The interior must be inspected carefully to see that the floor is free from oil stains, and other substances that would result in damage. The doors should be pulled shut and inspected for leakage. All nails and other projections that might cause damage must be removed, driven in or covered up.

"The doors of all cars loaded on Frisco rails and on foreign line rails for movement via Frisco, must be wedged, papered and stripped in the following manner: Drive one wedge between each door shoe and the door, which will force the door up against side of car. After the wedges have been applied, [illegible] of [illegible] asphalt paper, 11 inches wide, must be applied over the openings of the car door, that is, one strip on each side of the door and one on the top of the door, the paper to be held in place with narrow wooden strips.

CEMENT AND PLASTER SHIPMENTS.

"Form [illegible] standard, facsimile of which you will find below, must be properly filled out and applied to each car inspected by agents or car inspector, which will indicate car is suitable for loading. Agents or their representatives must sign bills of lading unless this form is presented by shipper, attached to the duplicate bill of lading or shipping receipt, and these forms must be retained in office files for future reference.

FRISCO LINES.
CEMENT OR PLASTER.
Inspected and placed in condition for cement or plaster loading.
Inspector..............................
Date .... Station ....
Car No. .... Initial ....

"Great care must be exercised in selecting cars for this loading. Roofs must be in first class condition, so as not to admit water, and all nails or other projections that will damage the product removed. The doors must be wedged by driving two wedges between each door shoe and the door, which will force the door tight against the side of the car.

GRAIN SHIPMENTS.

"Form 256 standard, facsimile of which you will find below, must be properly filled out and applied to each car inspected by agent or inspector, which will indicate that car is suitable for grain loading, and has been properly coopered and burlapped. Agents or their authorized representatives must not sign bills of lading unless form 256 standard is presented by the shipper, attached to the duplicate bill of lading or shipping order, and these forms must be retained in the office files for future reference.

FRISCO LINES.
GRAIN.
Inspected and placed in condition for grain loading.
Inspector..............................
Date .... Station.................
Car No............ Initial...........

"A standard grain door section is 7 ft. long and 20 ins. wide. Usually three or more sections are used for each door. They should be placed in position and nailed to the door posts with 8 penny nails. Large nails or spikes must not be used. Care should be exercised to see that the doors fit closely, and that there are no holes in them. Nails protruding from door posts must be pulled out so that the grain doors will fit closely. Grain doors made of light material must not be used for the bottom or middle section, account pressure being greater on these sections. Doors made of good strong lumber should be used.

"Burlap will be furnished by the store department upon receipt of proper requisition, cut in strips 8 ft. long and 40 ins. wide for the doors, and 3 ft. long and 40 ins. wide to cover the draft bolts. Two strips 8 ft. long should be used to cover the grain doors. This leaves 6 ins. over each end of the grain door for tacking to the side of the car.

"The lower strip should be allowed to lap on the car floor 8 to 10 ins. in order to make a leak proof joint. It must not be tacked to the car floor. The top strip should lap over the lower strip from 4 to 6 ins., and should not be tacked to the grain door. Wooden strips will be furnished with the burlap to tack the ends of the burlap to the side of the car, so that the grain will not leak through between the end of the grain doors and door posts.

"The short pieces of burlap are to be tacked over the draft bolts and held in place by short strips of wood tacked around the edges. Burlap should be applied loosely and not stretched tight across the boards, so that it can give anl not tear from the bulging of the doors.

"In addition to using burlap over the grain doors and draft bolts, it should also be used wherever necessary to prevent the leakage of grain."

As the result of an endeavor to fit together the cards now in use, your committee wishes to direct attention to some of the differences in their style; however, in the main they seem to have been designed for one and the same purpose. While the general practice seems to be to use cards bearing printing in large letters showing a specific commodity, or in some cases one or two products, we do not seem to be able to readily get away from a card on which provisions will be made for the designation of the shipment for which the car is inspected and made suitable without introducing more than one card, which was not wanted unless it can not be avoided. A sample of such a card, representing the result of a combination of all cards, with their instructions, would seem to be as follows:—

A. B. & C. Ry.
This car
No................ Initial................
O. K. FOR SHIPMENT OF COMMODITIES.
Under.........................Classification.
Inspected by ....
Date..............191... Station..............
(Size of card, 6 by 8 inches.)

Your committee wishes to point to the three apparent classifications of lading for which the box car is on some roads and in some localities receiving special attention before loading. The three classifications, as will hereinafter be referred to, would seem to cover the situation, at least until improvement can be suggested and worked out. The idea contemplates:—

Classification A.—Flour and sugar.

Classification B.—Bulk grain.

Classification C.—Lime, cement, plaster; boxed, sack and crated packages of seeds, coffee and merchandise; hay, dry goods and notions; high grades of finished lumber; tobacco, furniture, household goods and certain grades of tin and galvanized iron.

In the arrangement of the above classification, the items shown under A, viz., flour and sugar, have been grouped together in order to secure cars which might be necessary for such shipments, i.e., those free from soiled floors and interiors carrying odors liable to damage the goods; whereas cars selected for classification B, intended for bulk grain, clearly indicate by their character what might be suitable for their safe transportation; likewise classification C, covering the commodities mentioned, could be safely transported in a car which, while it should be tight, need not necessarily be as carefully selected as to other conditions as a car for classification A, intended for flour and sugar.

On back of cards, inspection instructions should be printed as follows:—

INSPECT FOR.

Classification "A"	Classification "B"	Classification "C"
Leaky roof.	Leaky roofs.	Leaky roof.
Loose siding.	Loose siding.	Loose siding.
Loose roof boards.	Loose roof boards.	Loose roof boards.
Shifted roof sheets.	Shifted roof sheets.	Shifted roof sheets.
Broken Door stops.	Broken door stops.	Broken door stops.
Leaky doors, tops and sides.	Leaky doors, tops and sides.	Leaky doors, tops and sides.
Broken end posts.	Broken end posts.	Broken end posts.
Broken or loose door posts.	Broken or loose door posts.	Broken or loose door posts.
Protruding nails in floor and lining.	Holes in floor and around center plates and draft bolts.	Protruding nails in floor and lining
Floors soiled by oil, grease or any material carrying odors likely to damage lading.		

METHOD OF INSPECTION BEFORE LOADING.

Inspection to be made at point of loading whenever practicable.

At point of distribution from which car is forwarded to loading station, and again by agent.

Cars received and unloaded at station where no inspecteors are located, should be inspected by the agent.

Aside from the master car builders' inspection of car, including roof, running boards, air brakes, safety appliances, and running gear, as well as the external inspection of sides, ends, doors, ventilators and windows, an internal inspection must be made of the roof and siding, with doors, ventilators and windows in closed position.

Search for light indicating openings and cracks which might produce leaks.

For loose, damaged and broken boards, loose knots, knot holes, bad joints, etc.

For all nails and bolts extending above surface of floor and lining and nails protruding through roofing.

For water stains indicating cracks and air spaces.

For cracks sufficient to admit storm water beating through opening, also for openings and bad joints around window and doors.

For metal sheets out of position along edge of subcarlins or down from edge of ridge pole.

For small holes in metal roofs due to rust or small openings in roof from other causes.

Doors must open and close properly.

The floors should be clean, dry and free from defects sufficient to admit moisture, and any fouling by previous shipments, such as fertilizer, oils, and other freight which would damage more perishable commodities. If the centrepin is uncovered, it might be necessary to cover it with a piece of board, depending entirely upon the character of freight to be loaded.

Inspect closely for defects in framing which might, by reason of their weakness, allow the sheathing to be readily broken or damaged.

After a car is thoroughly inspected and known to be in good condition and suitable for the transportation of the commodities in classification A, B or C, as the case may be, the inspector or agent, as provided for, making such inspection or able to certify to the condition of the car, must make out the prescribed certificate of inspection card and tack it to the car just under car number.

After the car is placed and accepted for loading, the certificate of inspection card must be detached from car and delivered to the agent before bill of lading is issued. The card must finally be attached to the agent's office copy of bill of lading or shipping ticket, for future reference in case of question arising as to the condition of car before loading.

Inspection of car bodies, doors, and the placarding of bad roofs, etc., as well as making notation of the extent of damage, is at present given attention; but it is also true that the general results seem to indicate that improvements can be made and higher efficiency obtained, since it seems to be generally accepted that any observation, inspection, and amount of prevention can be more economically directed at the time of selection and preparation of the car than through repeated repairs and attention to cars en route, only to find car arriving at destination offering opportunities for criticism and possibly heavy damage claims. Hence the fact remains that the successful launching of any systematic and uniform practice hinges upon a closer inspection of equipment as to the physical condition of the superstructure for the loading of certain commodities, and such inspection should be made in the best possible manner, to meet local conditions.

Hoping that the committee has at least approximately succeeded in working out a composite certificate of inspection card which will be acceptable to the roads now employing such a practice of inspection, your committee would recommend that such roads be asked to use the card, or designate what might be done to make it acceptable, keeping in mind the desirability of reaching a uniform card. If this can be successfully obtained, it will give the association a standard card, and with the information gathered from them, other roads will be able to consider the card, and use it if they so elect.

While it is very clearly understood that several roads, as above indicated, have used the certificate of inspection card with profit, and have succeeded in very materially reducing the damage to shipments and claims therefrom, other roads have indicated their lack of particular interest in any such move on account of either a vast difference in the variety of commodities handled, or on account of the proportion of shipments not requiring such a careful inspection predominating, hence it would seem to remain with each road to work out and decide for itself what such a plan of inspection might net them. It is certain, however, that the most earnest and sincere cooperation on the part of the railways is absolutely necessary, otherwise the maximum benefit is not to be obtained for the amount of money thus expended.

Your committee believes it perfectly feasible for all roads interested in the proposition to enter into the work of inspection along the line of that referred to, following for many the prescribed certificate of inspection card, but the instructions covering its use; and it is their belief that if the composite card, with instructions covering its use, is not satisfactory in all its details and in shape to be used on the roads now making use of such cards, very little would remain to make it uniform and satisfactory.

Supplementary Report from Committee.

When the report was sent to the Secretary for printing, a copy was also forwarded to the eight railways now using a certificate of inspection card, inviting from them criticism and suggestions as to what might be further offered in the committee's report. The real object, as explained to them, was to obtain their views upon the conclusions reached by the committee, and to further ascertain if in their judgment a uniform plan and the uniform card, as suggested by the committee, will meet the requirements; furthermore, if they would be willing in the interest of uniformity to use it in lieu of what might now be their practice. The following is a synopsis of the replies received:

Great Northern Ry.: Is satisfied with present system of inspection, using a single card for flour lading.

Chicago, Burlington & Quincy Rd.: Considers it would be a good idea, if possible, to use the one card, but apprehends some difficulty in actual practice getting switchmen and trainmen to take time to read the card and handle the equipment accordingly, citing a somewhat similar situation surrounding the use of C. B. & Q. card 1, shown in the report. The use of this latter card contemplated scratching out all items except the one for which the car was suitable for loading. The objection was met by changing to special cards, printing them in different colors.

Chicago Great Western Ry.: Is very much in favor of a uniform system governing the inspection of cars for the different commodities, and regards the proposed card submitted by the committee as fulfilling the requirements.

Chicago, Milwaukee & St. Paul Ry.: Reports that the uniform card as suggested by the committee would seem to satisfactorily meet the requirements, but considers shippers would object to attaching the card to the bill of lading. This road is taken as acquiescing in the proposition, since it was not the intention that the card be attached to the bill of lading.

Minneapolis, St. Paul & Sault Ste. Marie Ry.: Accepts the card as a satisfactory solution, but suggests the addition of another classification to cover rough freight. But in this connection, as has been explained, your committee started out this year with the idea of avoiding any reference to rough freight, preferring to confine their time to methods necessary for the handling of commodities readily damaged by moisture, etc.

Illinois Central Rd.: Advises they see no reason why a uniform card covering the overhead inspection of box cars cannot be agreed upon for all railways, and express themselves as being very glad to modify the cards they now have in use, in the interest of uniformity.

Atchison, Topeka & Santa Fe Ry.: Answers by stating they consider there is a great deal of unnecessary switching and cross hauling of empty cars which might be overcome by such an inspection, etc., and would be satisfied to make a trial of the card recommended in the committee's report.

St. Louis & San Francisco Rd.: The position is taken that better results have been obtained by using a distinctive card for the different commodities. They are not in favor of using one card, as proposed

[illegible]

Individual Paper on Maintenance of Electrical Equipment.

By [illegible], [illegible] of Electrical Equipment, New York Central and Hudson River Rd.

[illegible]

[illegible] in all probability it would [illegible] job.

The volt is defined as "the practical unit of electromotive force which will cause unit current to be established in a circuit of unit resistance," but for all practical purposes may be considered as the unit for expressing the pressure or tension of an electric current, just as the pound is the unit used in expressing boiler pressure.

[illegible]

of 2,400, instead of wishing we had learned something of electricity when we were younger, we understand they are considering the use of an operating current having a voltage or pressure four times that which is usual.

The ampere is defined as "the practical unit of current, and represents that value of current which will cause the electrolytic deposition of silver at the rate of .001118 grams per second." For everyday use, we may think of the ampere as the unit for measuring the quantity of electricity used or available, just as we speak of pounds of steam, or gallons of water, and will know at once that an electric motor using 200 amperes of 600 volt current has twice the power of one using 100 amperes of current at the same voltage, or half the power of a motor using 400 amperes and a voltage of 600.

The watt is the unit of electric power and, for all practical purposes, is the product of the pressure, or voltage, by the quantity or amperes. For instance, the power of a current of 600 volts and 250 amperes is 600 × 250 = 150,000 watts. The watt in electric power matters is used in the same way that the term horse power is in connection with steam power. It is reasonable to believe that anyone who can understandingly use the word horse power in speaking of steam motive power can become accustomed to the intelligent use of the term watt, and when he learns that 746 watts are equal to a horse power, can, with a little practice, compare the rated power of an electric motor or generator and a steam engine.

A kilowatt is simply a thousand watts and the term is used only for convenience. In the preceding paragraph mention was made of an electric current having a power of 150,000 watts. This is usually referred to as a current of 150 kilowatts, or simply 150 k.w. From what has been said, it is evident a kilowatt is almost exactly equivalent to one and one third horse power and a 150 k.w. current equals practically 200 h.p.

The terms watt hour and kilowatt hour are used in connection with electricity just as horse power is used in steam motive power discussions and means electric power of a watt or k.w. used, or available, for an hour.

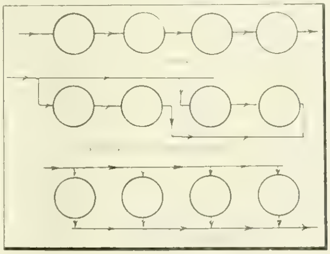
The ohm is the unit expressing the resistance of a conductor to the flow of electric current and "represents the resistance of a column of pure mercury 106.3 centimeters long, of uniform cross-section and weighing 14.451 grams, at a temperature of zero degrees, centigrade."

It will take but little practice to understand the statement that a conductor having a resistance of 5 ohms will carry twice the current that a circuit having 10 ohms resistance will, or half the current a circuit having 2½ ohms resistance will carry, assuming that the voltage is the same in each case.

I have previously stated that "some knowledge of electricity . . . is certainly necessary, but is very elementary and simple, preferably practical rather than theoretical." In this connection it should not be forgotten that this paper relates to the maintenance and is not concerned with the design of electric equipment. Experience has shown that the graduate in an electrical course, who is employed in maintaining electric apparatus, is apt to require wiring diagrams and blue prints showing the circuits and relations of the apparatus, while the inspector whose training has been wholly practical soon learns by precept and practice that a given symptom is caused by a given defect and does not find it necessary to trace the intermediate steps, but goes at once to the seat of the trouble [illegible] power when the motors are operated in series parallel, after having operated satisfactorily in series, the embryo electrical engineer is prone to waste time in hunting up wiring diagrams and tracing circuits, while the inspector whose knowledge has been acquired by practical experience knows that either a certain fuse has blown, because of an overload, or a certain contactor has failed to operate properly and at once applies the necessary remedy.

It would be unwise to assume from the foregoing that an elementary knowledge of electricity and the ability to read wiring diagram blue prints are undesirable or unnecessary to anyone employed in the maintenance of electric equipment. Such knowledge is both desirable and necessary, just as much as for steam equipment, but no more. The point is that the average mechanic, without previous electrical experience, does not require any great amount of electrical knowledge in order to successfully compete with an electrician in maintaining electric motive power.

The average nontechnical reader has no doubt been mystified by the terms "series" and "series parallel" and figuratively thrown up his hands. If to these is added "full parallel" he is probably down and out, but for one who is willing to try, their meaning is as plain and easy to understand as the terms "simple" and "compound" or "mallet" applied to steam locomotives.



Most electric locomotives have as many as four motors. When the electric current passes through these motors one after another, as shown in the accompanying diagram, the motors are said to operate in series, the circles representing the motors, the lines with arrow points representing the path of the electric current.

When the circuits are arranged so that the current passes through two groups of motors, each group consisting of two motors, they are said to be operating in series parallel, or series multiple; that is, two motors are operating in series in each of the two groups, while the two groups of motors are operating in parallel, or multiple; the current supplied to one group of motors flowing parallel to the current supplied to the other group.

If now each of the four motors receives its supply of electricity direct, that is, without flowing through any other motor, the motors are said to operate in full parallel, or simply in parallel, the current to and through each motor flowing parallel to that of each of the other motors.

It will not be surprising if some reader is unable to understand the diagrams representing the different groupings of motors. They will probably be readily understood if the circles are supposed to represent water motors—water turbines for instance—and the lines with arrow points are assumed to be a diagram of the water pipes, the arrows indicating the direction of flow.

This brings to mind the fact that the [illegible] showing the distribution and connections of water pipes. The analogy can be carried farther; the water pressure stands for [illegible] of a water turbine are the equivalent of the kilowatt hours or horse power hours of an [illegible]

It is not the intention to write an elementary treatise on electricity or electric apparatus nor promote a dictionary of electrical terms with nontechnical definitions, but simply to give assurance to the average motive power man that his experience, together with a very elementary electrical knowledge, qualifies him for the maintenance of electric equipment. In addition, it is hoped the bugaboo of imaginary mystery surrounding electrical matters will lose most of its terrors.

In addition to the cloud of mystery, there is quite generally an exaggerated fear of electricity in the minds of the uninitiated—a fear of personal injury—that prevents them seriously considering the advantages and wider opportunities in the electric equipment department. That there are advantages and wider opportunities there is little room for doubt. This fear is doubtless in part due to the fact that lighting is generally known to be of electrical origin and to the further fact that electricity cannot be seen, as steam and fire can. A child is not encouraged to play with matches or fire in any form, nor anyone without experience to assume responsibility for steam apparatus. The same precautions used in connection with electric matters will assure as small a percentage of injuries and fatal accidents. Life insurance companies charge no higher premiums for men working about electric equipment than those employed in ordinary repair shops for steam equipment. The fact is, if simple and inexpensive precautions are taken, there is no greater danger in working about electric than steam equipment. No one with ordinary sense and experience would think of putting his bare hand on the unprotected steam pipe of an injector, even though he cannot see the steam flowing through it. There is no greater danger in connection with electric circuits if the same common sense is used. This refers to 600 volt direct current and would possibly have to be modified for materially higher voltage, nor to high tension lines where the hazard is undoubtedly greater.

The statement is occasionally made that an electric is a simpler machine than a steam locomotive. If this refers to ease of handling and operating or matters requiring the attention of the engine crew, such as injectors, steam pressure and water level, there is no possible doubt the statement is correct, but if it refers to the mechanical simplicity or number of adjustable or moving parts that must be inspected and kept in proper relation, the steam locomotive is very much the simpler. There is, however, this fundamental difference favoring the electric machine; that the moving parts of the control are of very light weight, easily accessible for inspection and repairs and not subjected to nearly as great wear as are the corresponding parts of a steam locomotive.

It will no doubt interest motive power men to know that the shop arrangement and tools for maintaining electric equipment are not essentially different from those they are accustomed to in repairing steam locomotives, except, of course, the electric locomotive has no boiler or tender and it is necessary to provide facilities for rewinding armatures and field coils.

The steam motive power man will no doubt be much surprised when told the electric locomotive requires no shopping for a general overhauling, except for a general painting. This is made possible by having a stock of spare parts, permitting the removal of a defective part from a locomotive, the substitution of a repaired part and releasing the engine, the defective apparatus being repaired at leisure. For instance, a set of driving wheels needing tire turning are replaced by an extra set in good condition, this operation requiring not more than five hours, with adequate drop pit facilities. Air compressors, controllers and contactors can be handled in the same way. The steam locomotive cannot be maintained on this plan, as the boring of cylinders and resetting flues make it necessary to shop the engine, withdrawing it from service for a considerable length of time.

It is quite possible the foregoing statements of personal experience and opinions will not prove as convincing as the records made by an electric equipment maintenance department organized by and largely consisting of men whose earlier experience and training were obtained in the motive power department of steam railways. It seems reasonable common sense will conclude there can be no particular mystery or unusual danger in maintaining electric locomotives when the records for the year 1912, after five years service, show a cost of less than 4 cents per mile and an average of 48,271 miles per train detention due to electrical apparatus, with a banner record of 249,423 miles (equivalent to ten times around the world), without a train detention due to the electrical equipment.

Report of Committee on Capacity Marking of Freight Cars.

The Master Car Builders' Committee, C. E. Fuller, Assistant General Manager, Union Pacific Rd., reported as follows:—

Your committee sent out to the members the following circular of inquiry:—"Your committee, appointed to look into and report on the subject of capacity marking of freight cars, having summarized the replies to M. C. B. circular 25, Capacity Marking of Freight Cars, notes under heading (d) five replies, 209,153 cars, against stenciling cars with their light weight and maximum weight, for the reason that it has not been demonstrated that this practice might not be applied to cars the body or trucks of which are structurally weak and which are at present stenciled to carry the maximum load to which they should be subjected.

"In view of the above, we believe it urgent for each individual car owner belonging to the Association to investigate and advise on the following four questions. (These questions are repeated with the answers below.)

To this circular the committee received 35 replies, representing 924 votes. A careful analysis of these replies is as follows:—

"1. Whether your company now owns or operates, or whether you know of any equipment the body or trucks of which are structurally weak. If so, give number and class of cars."

In answer to this question 16 lines, representing 322 votes, report owning or knowing of weak cars or cars that would prove structurally weak if loaded to full axle capacity. These cars are for the most part wooden cars in coal trade, which would not permit the maximum capacity stenciling.

Fourteen lines, representing 349 votes, do not own or know of any cars that are structurally weak. Five roads did not vote directly on this question.

"2. Whether your company owns or operates any cars the body or trucks of which are strong enough under the present stenciled capacity, but which would not be strong enough under the proposed light weight and maximum weight stenciling. If so, give number and class of such cars."

The majority of the roads vote in the affirmative in answer to this question. Out of the 924 votes, 662 report owning certain cars that are not strong enough and to which it would not be advisable to apply the maximum capacity plan of stenciling. While there does not seem to be any doubt, as a rule, regarding the structural strength of the modern car, and its ability to carry the increased load permitted by the maximum capacity plan of stenciling, 23 roads report certain types of structurally weak cars, such as flat, gondola, and wooden underframe cars, which would develop higher stresses under the maximum loading than would be proper or permissible.

"3. Whether there can be any objection in applying the rule of light weight and maximum weight stenciling so far as it is applicable, consistent with strength of body or trucks which are not structurally weak, thereby restricting the stenciling of cars where the body or trucks may be structurally weak to the present light weight nominal capacity."

Twenty seven lines of the 35 who voted, or 75 per cent. of the total cars represented by the votes, are in favor of stenciling the maximum weight capacity on cars whose strength will permit it. Two companies did not vote on this question, and the other 6 are opposed to it on the grounds of the confusion to shippers, etc.

While the majority of the votes cast are in favor of limiting the proposed stenciling to cars that are strong enough, the question has naturally arisen as to what cars are strong enough, and how this strength should be calculated—that is, by the individual car owner or by a standard adopted by the Association.

"4. Whether or not it would be more advisable to apply the rule of light weight and maximum weight stenciling to steel and steel underframe cars exclusively, and moreover to such cars of this class as have a factor of safety sufficient to carry the maximum load; also, in the opinion of the members, what the minimum factor of safety should be for maximum loading stenciling."

Of the 924 votes represented, 443 (12 roads) are in favor of confining the maximum weight method of stenciling to steel and steel underframe cars, 2 lines did not vote directly on the question, and 463 votes (21 roads) do not approve of this plan; some on the grounds that it should apply to all classes of cars whose strength would permit it, others on the ground of confusion to shippers, etc.

Relative to minimum factor of safety, only 11 companies expressed an opinion:—

Four companies suggest a maximum fibre stress of 16,000 lbs. per sq. in. in body structure.

One company suggests a maximum fibre stress of 12,500 lbs. per sq. in. in body structure with a partially distributed load, and for a buffing shock of 300,000 lbs. when car is empty or loaded.

One company suggests that the factor of safety should be at least 8 in any portion of the arch bars.

One company suggests on trucks a factor of safety of 15 on parts in compression, a factor of safety of 10 on parts in tension, and a factor of safety of not less than 5 in the rest of the structure of car.

Two roads recommend a factor of safety of 3 for steel and steel underframe cars.

One road is in favor of a factor of safety of 5, and one road suggests that the factor of safety should be variable for different classes of equipment.

In line with the limited views expressed as to factors of safety, we feel that the light weight and maximum load stenciling should be confined to cars of steel or having steel underframes that have a factor of safety of 3 or better in the body structure, when figured for the maximum load, and with respect to trucks under such cars, the rule should be applied to all trucks having arch bars of M.C.B. dimensions or better, and to all trucks having cast steel side frames, and to the various forms of special trucks such as pedestal type trucks of the box and other varieties, where the strength of factor of safety is equal to or greater than the equivalent M.C.B. arch bar.

On new cars the committee feels that the rule should be applied in its entirety, owing to the fact that practically all new cars are steel or steel underframe construction, and will in all probability be built to meet the proposed requirements of 24 in. minimum cross sectional area of centre sills, recently proposed by the Committee on Car Construction, to take care of buffing shocks, which imposes a construction which we feel will result in a high factor of safety on underframes from a load standpoint. With relation to trucks under new cars, the rule should be applied only when such trucks meet M.C.B. requirements or better as to arch bar construction, or have steel side frames, or have pedestal type trucks where the factor of safety is equal to or greater than the equivalent M.C.B. arch bar.

Pending further investigation on the part of the committee, we would endorse the recommendation of a member that the subject of stenciling the light weight and maximum load be referred to the American Railway Association in order to ascertain whether there are operating or traffic conditions with which the proposed method of stenciling would interfere.

Report of Committee on Steel Tires.

The Master Mechanics' Committee, Lacey R. Johnson, General Superintendent, Angus Shops District, C.P.R., Montreal, chairman, reported as follows:—

Your committee has held meetings during the year to further revise the report submitted at the last convention. After comparing all the information received from the members and manufacturers during the year, we are unable to suggest any change in the specification presented last year, except to add a new sub-clause: (d) The elasticity shall be at least 50% of the tensile strength.

We have discussed the question of using alloy steels, such as chrome, vanadium, etc., but do not feel ourselves in a position to express an opinion.

We are again presenting the report for your consideration, and would suggest the advisability of appointing a standing committee on steel tires.

SPECIFICATION FOR STEEL TIRES.

1. MATERIAL.—Stock for tires shall be made by the open-hearth or crucible process.

2. CLASSES.—There will be three classes of tires for the different classes of service, as follows:—

Class 1. Driving tires for passenger engines.

Class 2. Driving tires for freight engines.

Class 3. Driving tires for switching engines, and tires for engine truck, tender truck, trailer and car wheels.

3. CHEMICAL COMPOSITION.

Class 1. Carbon, not less than 50 or over 70%. Phosphorus, not over 05%. Manganese, between 60 and 80%. Sulphur, not over 05%.

Class 2. Carbon, not less than 60 or over 80%. Phosphorus, not over 05%. Manganese, between 60 and 80%. Sulphur, not over 05%.

Class 3. Carbon, not less than 70 or over 85%. Phosphorus, not over 05%. Manganese, between 60 and 80%. Sulphur, not over 05%.

4. FINISH.—The tires must be free from defects of any kind, and finished tires must be accurately machined to the prescribed dimensions of the master mechanics' standard, and tire weights must not be outside the limits of the attached prints.

5. BRANDING.—The tires shall be distinctly stamped when hot with such brands as the purchaser may require, and in such a manner that those marks shall be legible when the tires are worn out.

6. SAMPLES FOR CHEMICAL ANALYSIS.—Drillings from a small test ingot cast with the heat, or turnings from a tensile specimen, or turnings from a tire (where tires are machined at the works of the manufacturer) shall be used to determine whether the chemical composition of the heat is within the limits specified in paragraph 3. When required, the purchaser or his representative shall be furnished an analysis of each heat from which tires are made.

7. PHYSICAL PROPERTIES.—The steel for the different classes of service shall meet the following minimum physical requirements:

Class	Tensile Strength, lbs. per sq. in.	[illegible]
1	105,000	[illegible] 1,350,000 [illegible]
2	115,000	[illegible] 1,300,000 [illegible]
3	125,000	[illegible] 1,150,000 [illegible] by the tensile strength

2. [illegible] tensile strength

8. FALLING WEIGHT TEST.—Should the contract call for a falling weight test, a test tire from each heat represented shall be selected by the purchaser or his representative and furnished at his expense, provided it meets the requirements.

8a. The test tire shall be placed vertically under the drop in a running position on a spring foundation with an anvil of at least 10 tons weight, and shall be subjected to successive blows from a tup weighing 2,000 lbs. falling from heights of 5, 10, 15 and 30 ft. and upwards, until the required deflection is obtained as specified in paragraph 8b.

8b. The test tire shall stand the drop test described in paragraph 8a without breaking or cracking and shall show a minimum deflection equal to X in the following table:

Internal diameter of tire	Class No. 1 Tensile strength [illegible] 105,000 lbs.	Class No. 2 Tensile strength [illegible] 115,000 lbs.	Class No. 3 Tensile strength [illegible] 125,000 lbs.
[illegible] diameter and over	[illegible]	[illegible]	[illegible]
Under 3 ft. diameter	[illegible]	[illegible]	[illegible]

8c. A specimen for the tensile test is to be taken from a tire that has been subjected to a falling weight test, and it shall be cut cold from the tested tire at the point least affected by the falling weight test. The tensile test specimen when cut from a tire that had been subjected to a falling weight test shall be only [illegible] to the tension and [illegible] of the test.

8d. Should the test tire fail to meet these requirements in any particular, two more test tires shall be selected from the same heat by the manufacturer [illegible] and at his expense. Should these two test tires fulfill the requirements, the heat shall be accepted.

9. INSPECTION.—The inspector representing the purchaser shall have free entry to the works of the manufacturer at all times while the contract is being executed. All reasonable facilities shall be afforded to the inspector by the manufacturer to satisfy him that the tires are being furnished in accordance with the specifications. All tests and inspections shall be made at the place of manufacture prior to shipment, and shall be conducted so as not to interfere unnecessarily with the operations of the mill.

Tires must be rolled in accordance with the best practice, sufficient metal being discarded to insure sound tires. The tire taken from the bottom of the ingot must be stamped with the letter A, before the tire number, the next above B and so on up the ingot.

Tensile test specimens, one from each heat, must be forwarded to the engineer of tests of the railway company, together with a copy of the chemical analysis of each heat, showing the tire numbers rolled from each heat; also destination of each tire, together with the railway company's purchasing agent's order number. If, however, the manufacturer is rolling tires right along for the railway company, and their inspector is at their plant, the test specimens from heats ready at that time may be pulled at the manufacturer's plant by the inspector and the broken test pieces sent in for analysis, in which case the above information must be furnished the inspector.

An analysis of the test piece made by the railway company's test bureau must agree with that furnished by the manufacturer, and with an analysis made from turnings from the tires after received; a failure to agree within reasonable limits will be cause for rejection.

In addition to the above tests, the railway company reserves the right to [illegible] a repetition of any [illegible] and all material found not up to the [illegible] of all of these requirements will be rejected.

[illegible] will be [illegible] longer than [illegible] from date of [illegible]. If at the end of that period [illegible] the material [illegible] the [illegible] will be returned to [illegible] paying freight both ways.

Freight Car Truck Sides and Freight Car Truck Bolsters.

The Master Car Builders' Committee, E. C. Schmidt, University of Illinois, chairman, reported as follows:

The committee on specifications for truck sides and truck bolsters was appointed by the executive committee in 1911. In its first report, presented at the 1912 convention, [illegible] chemical properties, physical properties, and inspection of truck sides and bolsters. By subsequent action these specifications have been added to the recommended practice of the Association.

In its first report the committee also proposed [illegible] of truck sides and bolsters. It recommended that if the committee were continued, funds be provided for making tests, in order to develop information which could form the basis for final specifications for testing truck sides and bolsters. The executive committee has not found it feasible to provide funds for this work during the past year and the committee has, therefore, been unable to make progress along the lines originally laid down. In the expectation that during the coming year funds may be [illegible], we recommend that the committee be continued.

Railway Supply Exhibits at the Atlantic City Conventions.

The larger portion of the space on the million dollar pier was, as usual, devoted to exhibits of railway supplies, machinery, etc., there being 88,222 sq. ft. of space occupied, against 83,507 in 1912. Among the principal exhibitors were the following:

American Brake Shoe & Foundry Co., Mahwah, N.J.—Brake shoes and brake heads.

American Locomotive Company, New York, N.Y.—Reception booth.

American Vanadium Co., Pittsburgh, Pa.—Reception booth.

Anchor Packing Co., Philadelphia, Pa.—Air pump packing; throttle packing; air pump gaskets; Tauril; high pressure gauge glasses; superheat valve discs; specialties in packing.

Bowser & Co., Inc., S.F., Ft. Wayne, Ind., [illegible] oil storage equipment [illegible] distance and first floor self-measuring pumps and storage tanks; "Red Sentry" enclosed long distance pump with electric lamp attachment; complete oil filtering system; self-registering pipe line measures.

Buffalo Brake Beam Co., New York, N.Y.—Buffalo passenger brake beams for all classes of service including P. C. and L. N. equipment, with adjustable, automatically adjustable, and rigid heads; Buffalo freight brake beams for all classes and capacity of equipment, including E. & L. Beams for all classes and capacity of tenders and electrical equipment, for standard, broad and narrow gauge.

Carborundum Co., The, Niagara Falls, N.Y.—Carborundum and Aloxite wheels; Carborundum brand garnet paper; Aloxite cloth.

Chicago Railway Equipment Co., Chicago, Ill.—Brake beams of the PC Creco, EL Creco, Diamond Special, Diamond, Drexel, National, Hollow, Kewanee, Reliance, Ster[illegible] and special types; [illegible] bearings; brake slack adjuster; automatically adjustable brake head; semi-adjustable brake head; removable leg brake head; Creco sliding third point support and safety device; reversible and duplex brake beam struts.

Commercial Acetylene Railway Light & Signal Co., New York, N.Y.—Equipments for acetylene railroad signaling; acetylene headlights, car lighting, boat lighting, marine lighting and acetylene welding.

Consolidated Car-Heating Co., Albany, N.Y.—Packless steam specialties; sylphon diaphragms; single and twin vapor traps;

[illegible]

The Modified Zinc Chloride Process of Treating Railway Ties.

In an article in the May issue of this paper, dealing with the creosoting process for treating ties, it was pointed out that the art of preserving organic growth was known to the ancients, and that they practiced the art to a considerable extent, as evidenced by the excellent preservation of old mummies. It was also pointed out that an analogy has been discovered between the causes of decay in plant growth and in organic substances, both being due to the presence of certain germs, which cause the destruction of the substance if the conditions be favorable. The principle is to anticipate this decay by the introduction of such antiseptics as will not only destroy any existing germs, but will also retain their strength to such a degree as to prevent decay occurring at any future time. As the article above referred to emphasized, of all the many antiseptics that have been tried in preserving wood from decay, but two seem to have remained with any degree of security for future business. Of the creosoting process considerable was said at that time concerning the method of treating and the possibilities for future development with the present outlook for creosote oil supplies.

Zinc chloride, as a preservative of wood, has been in use for upwards of 100 years, but the first patent of the process taken out was by Sir Wm. Burnett in 1837, from which it was given the name of the Burnettizing process. That zinc chloride had great antiseptic powers was beyond question, but the great trouble with the use of wood treated with it was the difficulty of keeping it in the wood while in use, its great solubility in water being a decided drawback. Each rainstorm would dissolve out a certain amount from the fibres of the wood, and in time, all would have left the wood. Thus, while zinc chloride as a preservative was an excellent medium, this trouble of leaching placed it in disrepute.

Many ways of overcrowding this tendency of the absorbed salts to leach out were tried, the principle followed in the majority of instances being to immerse the water, and in consequence, when forced into the tie, the salts have a tendency to filter out, remaining in the outer fibres of the wood, the core wood receiving a very diluted solution of the liquid, the major portion remaining near the outside.

The most recently developed process employing zinc chloride is claimed to overcome all the above-mentioned difficulties. This is the Bruening-Marmetschke process (commonly called the B. M. process), and is the one almost universally employed where zinc chloride is the antiseptic medium. In this process, to the zinc chloride solution there is added aluminium sulphate, the relation of the zinc chloride to the aluminium sulphate being 2 to 1.

As mentioned, zinc cholride forms an imperfect solution in water, and the resultant solution is more or less clouded from the presence of the suspended salts. Even

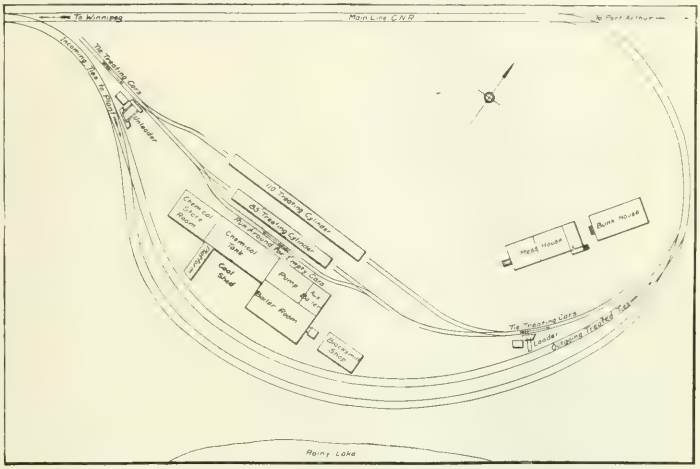

Fig. 1.—Layout of Buildings and Yard of a Modified Zinc Chloride Tie Treating Plant.

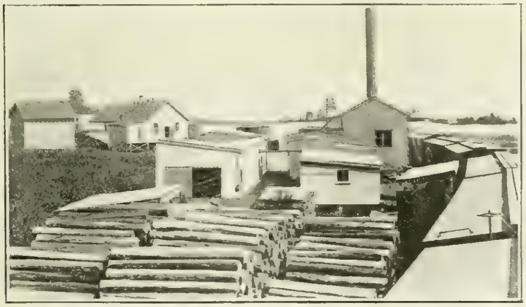

Fig. 2.—Treating Plant, from the West.

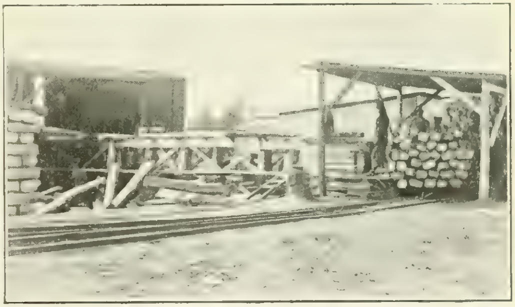

Fig. 3.—Unloading Ties from Box Cars.

treated wood in some special substances that would add a waterproof coating to the surface of wood, and thus make the interior free from the attacks of water. These various methods have all been used with more or less success, but have the objection that any mechanical abrasion of the surface leaves the tie unprotected from the leaching that is sure to result.

Another very decided objection to the ordinary zinc chloride process is the fact that the zinc chloride salt is in a rather imperfect state of solution in the treating with a very weak solution this is true. It is a matter of chemical knowledge that if a small amount of aluminium sulphate be present in the solution, the whole of the zinc sulphate is dissolved; in other words, the solution is no longer in a state of equilibrium, but is a clear liquid. The resultant combined solution will not filter in, being forced through the pores of the wood into the core. From the clearness of the liquid, lower temperatures of impregnation are possible, obviating the danger of the heat breaking up the dissolved substances into their component parts.

The use of aluminium sulphate in conjunction with zinc chloride creates a phenomenon, the reasons for which have not been discovered. Portions of the zinc chloride and aluminium sulphate remain fixed in the wood substances, the aluminium sulphate forming a coagulant of some of the substances in the wood that form food for decay. It may exist in the wood in a colloidal form, united chemically to the wood substance. At any rate, the zinc chloride, as added to the wood with the aluminium sulphate, seems to be free from leaching, as proved by experiments conducted by different authorities.

A valuable feature about zinc chloride treated wood is that it is fireproof, and will only char slowly when subjected to flame. Wood so treated is affected very slightly from an electrical standpoint. Shortly after treatment, the dissolved salts increase the conductivity of the tie to such a degree as to make necessary the cutting down of signalling track circuits about 50%, but after seeing service for some months, the conductivity decreases to that normal for untreated wood. In the B. M. process, as opposed to the plain zinc chloride treatment, the strength of the wood is not affected. In the older treatment, on account of the heat of impregnation being rather high, the fibres of the wood were more or less disintegrated, weakening the wood structure.

In Alex. Bruce and Co.'s plant at Fort Frances, Ont., of which B. Blastorah is [illegible] the B. M. process of treat[illegible] [illegible]. The plant shown in [illegible] was erected in 1911 as the [illegible] Canadian Northern Ry. for treating ties. The treating company [illegible] plants at various points throughout the [illegible] to be erected in Canada. Other plants are contemplated for Edmonton, Alta., and Victoria, B.C. [illegible] of which the contract calls for enough to keep the plant operating at full capacity for upwards of two years to come. As mentioned in the description of the creosoting process, the [illegible] ties treated by that process, it being the intention to test both methods thoroughly.

The plant under consideration is about four miles east of Fort Frances, on the north shore of Rainy Lake, adjoining the C.N.R. main line from Port Arthur to Winnipeg, [illegible] by a loop, passing through the plant from the west, and back on the main line at the east end, all as shown in figs. 1 and 2. Ties are delivered by the C.N.R. to the plant as required, so that but little storage space is provided for. The ties enter the grounds from the west to the position marked by the unloader in the plan, fig. 1. The treat[illegible] solution, makes unnecessary the piling of [illegible] received in the plant. All the storage space as yet required is that to the north [illegible] direction.

Referring to fig. 3, on the left, the ties [illegible] there is a travelling [illegible] will [illegible] ing [illegible] from the travelling table. As each car is [illegible] has been added, as in the plan fig. 1.

The [illegible] former instance, are drawn into the cylinder by a steam winch and cable. The two cylinders are located side by side, the older one being 85 ft. long, and the new one 110 ft. A third cylinder is in prospect, similar to the last one installed. The construction of the cylinders is so similar to ones described in the creosoting process that the reader is referred to that article for this information. After the cylinder has been charged with timber and the doors [illegible] in the cylinder, and maintained for at least half an hour, in order to draw out as much of the moisture in the wood as possible, and open the pores of the wood for the reception of the solution.

Following the vacuum, the solution is drawn into the cylinder, and the pressure is raised to about 160 lbs. by very high pressure pumps. After the pressure has been raised and maintained for a certain time, the temperature of the liquid is gradually raised to about 165 degrees Fahr., at the same time raising the pressure in the cylinder to [illegible] half a pound of the combined salts per cubic inch of timber. This combination of temperature and pressure has been found to give the best penetration, coagulating the colloidial and albuminous matter in the wood cells, and permanently combining sufficient of the antiseptic salts in the wood

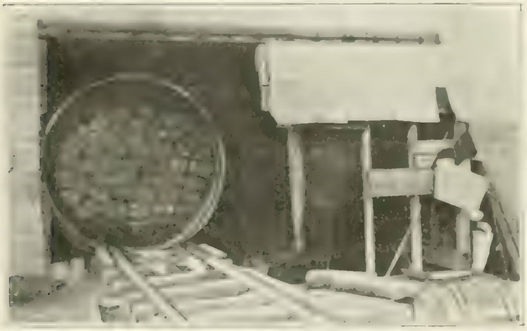

Fig. 4.—Treated Ties Leaving Cylinder

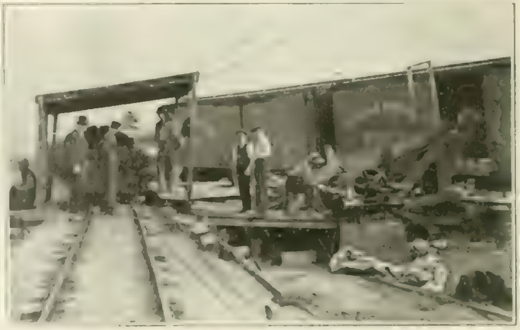

Fig. 5.—Loading Treated Ties into Box Cars

fibre to insure protection against decay, both the zinc chloride and aluminium sulphate being antiseptics. The gradual raising of temperature and pressure takes upwards of an hour, the total impregnation being carried out in about three hours, depending on the nature and dryness of the wood to be treated.

The supply tank, from which the cylinders are filled, is located in a large buried vat, under the floor of the building across the service track to the south of the cylinders. The main floor of this building [illegible] centrated form, and is the mixing room for [illegible] the vat, approximately in the proportion of 3 parts of zinc chloride and 1½ parts of [illegible] In the buildings adjoining this tank room [illegible] ating gauges, and back of the [illegible]

[illegible] cylinder, are shown in fig. 4. From that [illegible] service track by the capstan, to the loading [illegible] convenient level at the door of a box car, where attendants carry them and pile them in the cars for delivery around the loop to the main line. The use of the same box cars that have just been emptied from the incoming ties, at a point a little further along the line, is a most important consideration in their shipment. It will be remembered that, with the creosoted ties, box cars cannot be used for shipping the ties away from the plant, on account of the damage to the interior of the car in the event of grain or other matter being carried. The B. M. treated tie looks but slightly different from an untreated one, and will not soil the interior of the car.

The plant is so isolated from settled communities that provision for the accommodation of the men employed is made in the bunk house and mess house to the east of the plant.

The B. M. process has many points in its favor. As compared with creosoting, on account of the cheapness of the materials employed, the cost is just about a third. The supply of raw material is practically unlimited. Both processes have much to be said in their favor, and both must be considered on their respective merits in deciding which is the better for the conditions of operation. The results on the C.N.R. in the use of the two processes will be awaited with interest, but as they have been employed such a short time, it will be some years before satisfactory data on the life of the ties in this country will be forthcoming. Observations elsewhere show that both processes increase the life of the tie many times. Creosoting, being the older process, can cite more examples. There are [illegible] 30 years ago and still sound and serviceable. Time will probably demonstrate the same thing of the B. M. process, for in instances where B. M. treated timber has been used in severe condition such as in damp mines, it has stood up well.

Statistics collected by the United States Government show that while the number of ties treated with zinc chloride in the U. S. [illegible] which figures are available, the number treated with creosote has increased rapidly, [illegible]

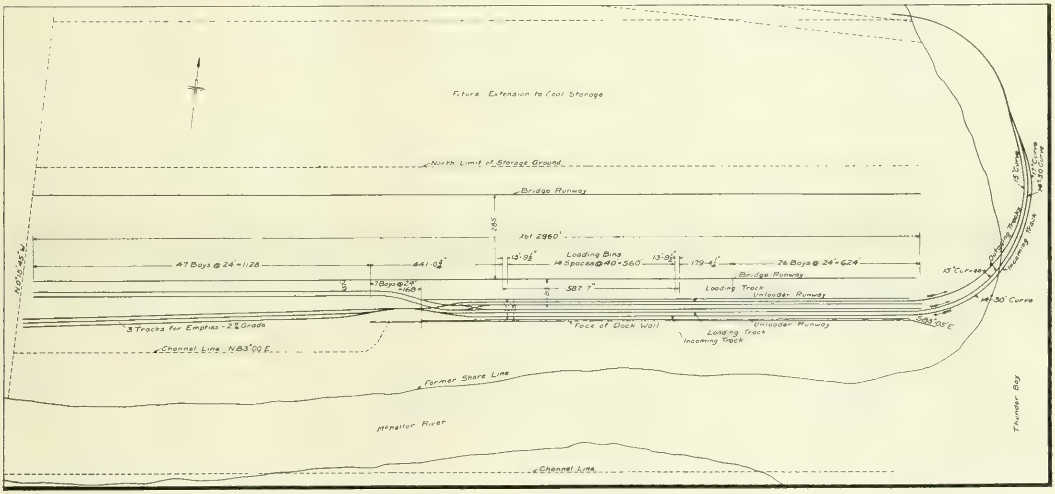
	Zinc chloride	Creosote
[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]

These figures might be looked upon as an [illegible] "Which is the better of the two"? But after careful investigation it appears that the question cannot be [illegible] and [illegible] on both sides will be presented in an early issue of this paper, the subject being of the [illegible] importance.

The Canadian Pacific Railway's Coal Handling Plant at Fort William.

A complete description of the coal handling plant that the C.P.R. is having constructed for its own coal at Fort William, was given in the Canadian Railway and Marine World for Feb., 1912. That article covered the construction and operating details of the machine itself. The layout of the plant, with a view to continuous operation without pauses while waiting for the shunting in of cars, is rather ingenious, as an examination of the accompanying plan will show.

The plant consists of two unloaders, which lift the coal in 8 ton buckets from the vessel's hold, and carry it back either to a temporary storage pile beyond the north rail of the runway, or to 35 ton scale cars on double tracks between the unloader tracks. From a temporary storage pile, the coal is picked up by a 9 ton bucket, on a 520 ft. cantilever bridge, which bridges the main storage pile to the north of the temporary storage.



Plan of C.P.R. Coal Handling Plant at Fort William, Showing Arrangement of Tracks for Continuous Movement of Cars Being Loaded.

There are 30 car loading bins located in a double row, as indicated on the plan, and under the scale cars, by which they are filled. The scale cars drop the exact amount of coal, corresponding to the capacity of the freight car, to be loaded into each of the bins, and from the latter the coal descends into box car loaders, which fill the box cars on the two loading tracks shown.

The ingenious feature of the layout is the planning of these loading and entering tracks. From the east, along the edge of the dock wall, runs the incoming track, which enters from the east, where the trackage comes from the adjacent yards, all the tracks coming in on a sharp curve from the rear of the storage pile. Proceeding west along the dock wall, to the south of the loading bins, the three tracks through the plant converge—that is, the two loading tracks and the incoming track. Beyond this converging track are three parallel tracks, rising on a 2% gradient, the tracks terminating at the west end of the plant. These three tracks are for the temporary storage of the empties on their passage through the plant.

In operation, a switcher brings in a string of empties from the yard, running along the incoming tracks under the unloader, leaving the string on one of the three temporary storage tracks. From these tracks, the string can be run down into the plant, as required, by gravity, this being the object of the 2% ramp. Thus, 15 cars can be run in on either of the loading tracks. The box car loaders proceed along one string of cars, filling them up, then back along the other string. While one is being filled up, the other set of loaded cars is drawn further along through the plant by a car haulage system at the east end, and a set of empties run down by gravity to take their place. The loaded cars are drawn off from the east end of the plant by the switcher, which is kept busy bringing empties, and drawing away the loaded cars. By the use of this third incoming track, and the graded empty yard, the movement of the cars through the plant is continuous.

It is of interest to note that the dock was sunk in the solid ground, and after completion, the ground outside was dredged out. At this section of Island no. 1, on which the plant stands, the ground was very low, so that the discharge from the hydraulic dredges working on improvements to the McKellar River channel were usefully employed in bringing the level of the ground to the proper height.

Canadian Ticket Agents' Association.—At a meeting of the executive committee at London, Ont., June 13, J. P. Hanley, C.P. & T.A., Grand Trunk Ry., Kingston, Ont., and W. Fulton, C.P.A., Canadian Pacific Ry., London, were appointed on the committee, vice C. E. Horning, now D.P.A., Grand Trunk Ry., and J. F. Dolan, who has been appointed D.P.A., Richelieu and Ontario Navigation Co., at Boston, Mass. J. A. McKenzie, C.P.A., Grand Trunk Ry., Woodstock, Ont., and 3rd Vice President of the Association, was appointed in place of Mr. Horning, as representative to the G.P. & T.A. convention to be held at Philadelphia, Oct. 14 and 15.

Proposd Railway From Quebec to Labrador.

The Newfoundland Legislature has been giving consideration to a measure providing a subsidy of 6,000 acres of land a mile, with a free right of way, exemption from taxation and some lesser privileges, towards the building of a railway in the Newfoundland Labrador. It is proposed that a contract shall be entered into with the Canadian Atlantic Corporation, the directors of which include Thomas Skinner and J. Foster, London, Eng. This corporation proposes to build a railway from Quebec to Cape Charles, or between that point and Bradore Bay; to operate a train ferry between the Labrador coast and Newfoundland, and a line from the ferry to the Reid Newfoundland Ry. near Bonne Bay. The present proposal covers only the proposed line on the Labrador coast, which would form part of a continuous line from Quebec to the coast. The corporation represents that it has made a provisional agreement to take a 99 year lease of running powers over the Quebec and Saguenay Ry. and its connections, between Quebec and Murray Bay, 86 miles; and has also acquired charter rights to build a railway from Murray Bay to Seven Islands, 380 miles, for which the Canadian Government has already granted a subsidy. Nothing has been arranged as to the route from Seven Islands to the Quebec-Labrador boundary. The company agrees to begin construction in four years, and to have the line completed in 10 years.

Railway Lands Patented.—Letters patent were issued during April, covering Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres.
Calgary and Edmonton Ry.	[illegible]
Canadian Northern Alberta Ry.	86.86
Canadian Northern Ry.	1,456.63
Canadian Pacific Ry.	[illegible]
Grand Trunk Pacific Branch Lines Co.	6.50
Grand Trunk Pacific Ry.	55.40
Qu'Appelle, Long Lake and Saskatchewan Rd. and Steamboat Co.	1,146.50
Total	[illegible]

Orders by Board of Railway Commissioners.

[illegible] tion of [illegible]

[illegible]

G.T.R. conditions of today, should, under agreement, be borne by it; in event of Supreme Court advising that C.P.R. is not, under agreement, [illegible] G.T.R. shall pay [illegible] C.P.R.

[illegible] May [illegible]—Dismissing C.P.R. applica- [illegible] southerly side of London St., between Caton Ave. [illegible]

19300 to 19302. May 9.—Approving inter- [illegible] C.P.R. [illegible] Ottawa Subdivision, at [illegible] Que.

[illegible] Campbellford, Lake Ontario and Western Ry. (C.P.R.) to take certain lands for diversion of Kingston Road and various intersecting highways in Murray and Brighton Tps., between mileage 91 and 95; and amending order 18447, Dec. 30, 1912, in similar connection.

[illegible] Lake Erie and Northern Ry. to build at grade across Brantford St. Ry. at Brantford, Ont.

19305. May 15.—Approving location and detail plans of C.N. Quebec Ry. station at Maisonneuve.

19306. May 15.—Dismissing applications of [illegible] Ry. (G.T.R.) and C.N. Ontario Ry. for order cancelling approval of C.P.R. plan showing bridge [illegible] Que., authorized by order 17931.

19307. May 15.—Authorizing G.T.R. to take certain lands for new freight shed and tracks in connection with extension of terminal facilities at Pembroke, Ont.

19308. May 16.—Ordering G.T.R. and C.P.R. to install pair of gates at crossing of Lake Shore Rd., Vaudreuil, Que., gates to be independent of each other and operated by separate watchmen; work to be completed by June 30, cost to be [illegible] railway grade crossing fund, remainder by G.T.R. [illegible] in each case, and remainder by G.T.R. and C.P.R.

[illegible] May [illegible]—Authorizing G.T.R. to take certain lands for additional station facilities at St. Agapit, Que.

19310. May 16.—Authorizing G.T.R. to re- [illegible]

19311. May 17.—Relieving G.T.R. from providing further protection at crossing of Court St., Coaticook, Que.

[illegible] May [illegible] from July 25, time within which G.T.R. shall complete spur authorized by order 19127, Apr. 25, for International Harvester Co. of Canada, Ltd., Hamilton, Ont.

19313. May 17.—Approving location of G.T. Pacific Ry. stations at Miette Hot Springs, Parkgate, and Interlachen, Alta.

19314. May 15.—Ordering that Campbellford, Lake Ontario and Western Ry. (C.P.R.) pay cost of filling highway crossings between Lots [illegible] Con., Clarke Tp., Ont., between its tracks and G.T.R. [illegible] of drainage work on its property, if rendered necessary by said fillings.

[illegible] location of C.P.R. stations at Denzil, Froude, [illegible], and Plunkett, Sask.

19316. May 16.—Authorizing C.P.R. to open for traffic portion of its double track between Parkbeg and Walker, 8.8 miles, Swift Current Subdivision, Sask.

[illegible]

19319. May 15.—Authorizing City of Fort William, Ont., to build its street railway across Canadian Northern Ry. at intersections of Vic- [illegible] and C.N.R.

[illegible] ern Ry. and Northern Pacific Ry. issue regular [illegible] such points.

[illegible] Paris, Ont., and to divert and build [illegible]

[illegible] build [illegible]

[illegible] Ry. [illegible]

[illegible] first public highway [illegible]

19328. May 10.—Authorizing C.P.R. to build its coal mine spur at grade across road allowance between Secs. 10 and 9, Tp. 1, R. 6, W. 2 m., at Bienfait, Sask.

19329. May 19.—Extending to July 15, time within which C.P.R. shall install bell at La Croix St., Chatham, Ont.

19330. May 17.—Ordering G.T.R. to move crank stand at crossing of Strachan Ave., West Toronto, Ont., to north and as near as possible to its south track and erect signal cabin over same; C.P.R. to pay 1/3 of cost.

19331. May 19.—Relieving G.T.R. from operating trains between Powassan and Trout Creek, Ont., at less speed than 15 miles an hour.

19332. May 17.—Approving Hull Electric Co. Standard Mileage Freight Tariff, C.R.C., F.1, for distances up to 15 miles.

19333. Jan. 31.—Authorizing C.N. Ontario Ry. to build subway between Cons. B and 2, Westmeath Tp., Ont.; to have 14 ft. headroom, and to be 20 ft. wide for travelled portion of highway.

19334. May 16.—Ordering that cost of subway under C.P.R. at Dundas St., Woodstock, Ont., required by order 16986, July 8, 1912, be paid, 20% out of the railway grade crossing fund, 70% of remainder by C.P.R., and 30% by City of Woodstock; provided city's contribution shall not exceed $7,000; C.P.R. to pay cost of maintenance, city to maintain the roadway.

19335. May 16.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to divert Kingston road, Bowmanville, Ont., to carry diversion across its line overhead at mileage 149.5 from Glen Tay, to continue diversion northeasterly to connect with Kingston Road, to divert road allowance between Lots 14 and 15, to connect with forementioned diversion, and to carry road between Lots 14 and 15 across its line overhead, bridge and approaches on Kingston Road to be 25 ft. wide, and bridge and approaches on side road to be 20 ft. wide.

19336. Apr. 29.—Authorizing C.P.R. to build spur for International Malleable Iron Co., Guelph, Ont.

19337. May 20.—Authorizing C.P.R. to use bridges 44.7, Shuswap Subdivision; 37.3, 127.2, Mountain Subdivision; 108.6, 89.4, 90.6, 102.6, 95.2, and 110.1, Cascade Subdivision, B.C.

19338. May 10.—Authorizing C.P.R. to open for traffic portion of its double track between Pense and Belle Plaine, Sask., mileage 109.6 to 117.3.

19339. May 20.—Authorizing C.P.R. to build bridges 14.9, near Cooksville, and 36.6, near Christie, Ont.

19340. May 20.—Extending to Aug. 31, time within which C.P.R. shall complete spurs for Ontario National Brick Co., Toronto Tp., as authorized by order 18723, Feb. 17.

19341. May 19.—Authorizing C.P.R. to divert Current River at Port Arthur, Ont., and to build bridge 126.5.

19342. May 19.—Authorizing C.P.R. to build spur for City of Medicine Hat, Alta.

19343. May 19.—Authorizing C.P.R. to build Vanguard ballast pit spur on its Swift Current Southeasterly Branch, across highways at mileage 0.22, 1.54, 3.82 and 4.3.

19344. May 20.—Approving G.T. Pacific Ry. stations at Pedley and Jasper House, Alta.

19345. May 10.—Authorizing G.T.R. to build siding for Dominion Canners, Simcoe, Ont.

19346. May 19.—Authorizing Sandwich, Windsor and Amherstburg Ry. to cross Essex Terminal Ry. on east side of Wellington Ave., Sandwich East Tp., and Canada Southern Ry. spur to Postum Cereal Co., Windsor, Ont.

19347. May 14.—Ordering G.T. Pacific Ry. to erect station 3,000 ft. east of eastern boundary of Fort George townsite; and rescinding order 18902, Mar. 20, in that connection.

19348. May 16.—Ordering C.N. Ontario Ry. to build cattle passes for J. Fletcher and J. Wilson, Ross Tp., Ont.

19349. May 19.—Authorizing C.P.R. to use bridges 94.8, 104.9, Moose Jaw Subdivision, Sask., and 46.37, Broadview Subdivision, Man.

19350. May 19.—Authorizing C.P.R. to build bridges 12.2 over Palletts Creek, 19.9 over Credit River, and 28.4, London Subdivision, Ont.

19351. May 22.—Ordering that interlocking plant required to be installed at G. T. Pacific Ry. crossing of Port Arthur and Fort William Electric Ry., at Syndicate Ave., Fort William, by order 17657, be installed by July 31, and authorizing G.T. Pacific Ry., pending completion, to operate over same; trains to stop on each side of crossing; watchmen provided by G.T.P.R. to flag trains and cars.

19352. May 22.—Authorizing G.T. Pacific Ry., pending installation of interlocking plant, to operate trains over crossing of Canadian Northern Ry. at Empire Ave., Fort William, Ont.; interlocking plant to be installed by July 31; G.T.P.R. trains to stop on each side of crossing, and watchmen, appointed by C.N.R. and paid by G.T.P.R., to be placed there.

19353. May 22.—Authorizing G.T. Pacific Ry. to build extension in Empire Ave., across Syndicate Ave. and Vickers St. to connection with C.P.R., Fort William, Ont.

19354. May 22.—Authorizing G.T. Pacific Ry. to build spurs from its Lake Superior Branch in Empire Ave., Fort William, Ont., for Jas. Murphy and Copp Foundry Co.

19355. May 23.—Ordering that Campbellford, Lake Ontario and Western Ry. (C.P.R.) may close portions of road allowances to be diverted in Brighton and Murray Tps., Ont., as [illegible].

19356. May [illegible].—Extending express collection and delivery limits in Winnipeg to include portion of Elmwood, [illegible] Chalmers and Watt Sts., along Watt St. to Union Ave., and thence on Union Ave. to C.P.R.

19357. May 23.—Approving Campbellford, Lake Ontario and Western Ry. (C.P.R.) plan [illegible], Apr. 22, [illegible].

19358. May [illegible].—Approving location of C.P.R. station at Wolverton, Ont.

19359. May 23.—Ordering Campbellford, Lake Ontario and Western Ry. (C.P.R.) to provide two grade crossings for W. S. [illegible], Kingston, Ont.

19360. May 22.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build across forced road in Lot 14, Con. 7, Richmond Tp., at mileage 54.99, overhead; and dismissing application for grade crossing.

19361. May 22.—Approving location of C.P.R. station at [illegible], Ont.

19362, 19363. May [illegible], 23.—Authorizing C.P.R. to build bridges 119.2, Boundary Subdivision, B.C., and 91.48, over Deadfall Creek, Cartier Subdivision, Ont.

19364. May 21.—Authorizing C.P.R. to build its Forsyth St. Branch at grade across St. Leonard Road, Longue Pointe, Montreal, at mileage 3.83.

19365. May 21.—Authorizing G.T.R. to build siding for St. Mary's Portland Cement Co., Blanshard Tp., Ont.

19366. May 22.—Approving location of G.T. Pacific Branch Lines Co. station at Ardley, Alta.

19367. May 20.—Authorizing G.T.R. to build siding and spur for Brown's Copper and Brass Rolling Mills, New Toronto, Ont.

19368. May 20.—Approving revised location of Niagara, St. Catharines and Toronto Ry. from boundary between Niagara Tp. and Niagara-on-the-Lake, Ont., along King St., mileage 11.1 to 12.14; and authorizing it to build across Cottage, Pafford, John, Castlereagh, Platoff and Picton Sts.

19369. May 21.—Approving Kettle Valley Ry. revised location from Hydraulic Summit to Penticton, mileage 50 to 58.12, B.C.

19370. May 17.—Recommending to Governor in Council for sanction, amalgamation agreement of Canadian Northern Ry. and Winnipeg and Northern Ry.

19371. May 23.—Authorizing C.P.R. to build (for double tracking) bridges 28.11, near Hornby, and 37.0, near Christie, Ont.

19372. May 23.—Authorizing C.P.R. to use bridges 17.4, Ottawa Subdivision, and 6, on Sherbrooke Section, Orford Mountain Branch.

19373. May 23.—Authorizing C.P.R. to cross and divert road on its Kerrobert Northeasterly Branch at mileage 34.05 from Kerrobert, Sask.

19374. May 26.—Approving location of C.P.R. station at Odell, Ont.

19375. May 23.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build ballast pit spur at grade across highway between Cons. Broken Front and 1, Clarke Tp., Ont.

19376. May 26.—Approving location of G.T. Pacific Branch Lines Co. station at Rossman, Sask.

19377. May 26.—Approving location of G.T. Pacific Ry. stations at Crest, Empire Ave., Horne, Linko and Dawson Road, Lake Superior Branch, Thunder Bay District, Ont.

19378. May 26.—Authorizing G.T.R. to build additional track across Woodbine Ave., Toronto.

19523. June 7.—Authorizing C.P.R. to build extension to siding across road diversion in Lot 21, Con. 13, Medonte Tp., mileage 74.87, at grade.

19524, 19525. June 9.—Authorizing C.P.R. to build spurs for Regina Trading Co. and Rumely Products Co. Inc., Regina, Sask.

19526. June 9.—Authorizing Esquimalt and Nanaimo Ry. to build bridge over Rosewell Creek, Comox extension, B.C.

19527. June 9.—Amending order 19319, May 15, re crossing of Canadian Northern Ry. by municipal electric railway at Fort William, Ont.

19528. June 9.—Ordering G.T.R. to install improved type of illuminated electric bell at crossing at Fort Erie and Port Colborne Road, east of Sherkston Station; 20% to be paid out of railway grade crossing fund.

19529. June 9.—Ordering that cost of subway under C.P.R. at Hunter and Bexley Sts., Woodstock, Ont., authorized by order 16086, July 8, 1912, be paid, 20% out of the railway grade crossing fund and the remainder by C.P.R.

19530 to 19534. June 9.—Establishing express collection and delivery limits in London Ont.; Taber, Alta.; Sault Ste. Marie, portion of Steelton, Ont.; Windsor, Ont.; and Walkerville, Ont., and rescinding order 15300, Oct. 24, 1911.

19535. June 4.—Authorizing G.T.R. to build sidings and tracks, or yard extensions for Canadian Furnace Co., Port Colborne, Ont.

19536. June 10.—Ordering C.P.R. to operate two first class trains, each way, per day, on week days, between Ottawa and Prescott: time of run to be not more than 2 hours; effective July 1; and restraining company from hauling freight cars on said trains.

19537, 19538. June 9.—Establishing express collection and delivery limits in St. Thomas and Haileybury, Ont.

19539. June 9.—Extending eastern and southern limits of area within which railway companies undertake cartage of freight in London, Ont.

19540. June 10.—Dismissing application of Dominion Townlots, Ltd., for authority to build a highway across C.P.R. at Broadway, Sask.

19541. June 10.—Authorizing Esquimalt and Nanaimo Ry. to divert Comox wagon road to connect with public road crossing its line at mileage 13.0, Comox Extension, B.C.; and rescinding order 9843, Mar. 10, 1910.

19542. June 10.—Authorizing G.T.R. to rebuild bridge 134 at mileage 222.32, District 2, over St. Francis River, near Richmond, Que.

19543. June 10.—Authorizing C.P.R. to build bridge 10.8 over South Spitler Creek, near Ostrander Station, Ont.

19544. June 10.—Ordering Canadian Northern Ry. to build culvert under its tracks on Winchester Ave., Fort Garry, Man.

19545. June 10.—Ordering Canadian Northern Ry. and C.P.R. to deepen culverts by 3 ft., and ditches across their rights of way, except portion of C.P.R. right of way which provides roadway to station buildings at Maryfield, Sask., where culvert is to be lowered 1 ft.; ditch to and from right of way to be lowered by Maryfield Village, work to be completed by Aug. 15.

19546. June 10.—Authorizing Hamilton St. Ry. to build two tracks at grade across Toronto, Hamilton and Buffalo Ry. at intersection of Main and Trolley Sts., Hamilton, Ont.

19547. June 10.—Authorizing C.N. Ontario Ry. to build overhead across public road between Pembroke and Stafford Tps.

19548. June 10.—Authorizing Canadian Northern Ry. to build across 6 highways in Saskatchewan.

19549. June 10.—Extending to June 30, time within which G.T.R. shall install bell at crossing, 150 ft. west of St. Hilaire Station, Que.

19550. June 7.—Authorizing G.T.R. to build siding for J. B. Mustard, Stanley Tp., Ont.

19551. June 10.—Authorizing C.P.R. to cross, temporarily, with its Bergen North Easterly cutoff, Canadian Northern Ry. Oak Point Branch; crossing to be protected by watchman paid by C.P.R.

19552. June 10.—Authorizing C.P.R. to build spur for R. MacFarlane and Co., Montreal.

19553. June 12.—Dismissing application of H. Simpson and others, Niverville, Man., for order directing C.P.R. to stop express trains there.

19554. June 10.—Ordering Canadian Northern Ry. to place station agent at D'Arcy, Sask., by Aug. 1.

19555. June 11.—Ordering that Canadian Northern Ry. crossings at Central Ave. and First Ave. East, Prince Albert, Sask., be protected by watchmen between 7 a.m. and 6 p.m. daily, except Sunday; to be paid, 2-3 by C.N.R., 1-3 by city; payment be made monthly or quarterly as parties may agree; any dispute to be settled by the Board.

19556. June 10.—Authorizing C.P.R. to build diversion of roadway in Lot 6616, Kootenay District, B.C., mileage 46.7 from Colvalli, and to cross diversion at grade.

19557, 19558. June 11.—Authorizing C.P.R. to build road diversion at mileage 38.44 from Swift Current, Sask., on its Swift Current Northwesterly Branch; and cross same at grade, and to divert and cross by a bridge, road allowance in Sec. 26-19-19, w. 3 m., on same branch.

General Order 105. May 22.—Amending Regulations for Transportation of Explosives by Railway Companies, operating in Canada, to provide that companies, subject to Board's jurisdiction, but only on such lines, or portions of lines, on which solid freight trains are not operated, be permitted to carry explosives, the carriage of which is not forbidden by General Order 100, and in accordance with regulations therein contained, in quantities not exceeding 500 lbs., in any mixed train; explosives to be contained in but one car, car to be so placed in train that not less than 5 freight cars are between it and the passenger coach, or coaches.

Birthdays of Transportation Men in July.

Many happy returns of the day to:

J. H. Black, ex-Superintendent, Timiskaming and Northern Ontario Ry.; now at Cobalt, Ont., born near Smiths Falls, Ont., July 8, 1874.

M. S. Blaiklock, Engineer Maintenance of Way, G.T.R., Montreal, born at Quebec, July 19, 1859.

D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co., born at St. Thomas de Montmagny, Que., July 25, 1877.

H. F. Bradley, Passenger Manager, Allan Line Steamship Co., Montreal, born at Waterville, Que., July 20, 1876.

D. C. Coleman, General Superintendent, Manitoba Division, C.P.R., Winnipeg, born at Carleton Place, Ont., July 9, 1879.

Geo. Collins, General Manager, Central Ontario Ry., Trenton, Ont., born at Kingston, Ont., July 20, 1860.

G. C. Conn, Vice President, Pere Marquette Rd., Detroit, Mich., born at Woburn, Mass., July 1, 1867.

D. D'E. Cooper, Canadian Freight Agent, Lehigh Valley Rd., Toronto, born at Buffalo, N.Y., July 8, 1862.

John Corbett, ex-General Foreign Freight Agent, C.P.R., Montreal, born in Lanarkshire, Scotland, July 19, 1863.

S. E. Dewey, Commercial Agent, G.T.R., Pittsburgh, Pa., born at Beckenham, Kent, Eng., July 4, 1879.

F. C. Foy, Canadian Passenger Agent, New York Central Lines, Toronto, born there, July 5, 1881.

J. B. Gray, Superintendent, Sleeping, Dining and Parlor Cars and News Service, Eastern Lines, C.P.R., Montreal, born July, 1876.

J. H. Hanna, ex-Division Freight Agent, G.T.R., at Hamilton, Ont., now at Calgary, Alta., born at London, Ont., July 27, 1867.

A. D. Huff, ex Division Freight Agent, G.T.R., Ottawa, now Traffic Manager, Laurentide Co., Montreal, born at Chatham, Ont., July 17, 1866.

C. A. Jaques, ex Steamship Owner, Montreal, born there July 15, 1849.

J. P. Kavanagh, Local Manager, Ogdensburg Coal and Towing Co., Montreal, born at Plattsburg, N.Y., July 17, 1862.

R. G. McNeillie, District Passenger Agent, C.P.R., Calgary, Alta., born at Lindsay, Ont., July 1, 1883.

J. M. Macrae, District Freight Agent, Canadian Northern Ry., Saskatoon, Sask., born at Stornoway, Scotland, July 31, 1884.

T. J. Maguire, Accountant, Quebec Central Ry., Sherbrooke, Que., born at Quebec, July 31, 1860.

E. L. Pease, Assistant General Freight Agent and Chief of Tariff Bureau, Intercolonial Ry., Moncton, born at [illegible], Ont., July 5, 1876.

E. Preston, Master Mechanic, Manitoba Division, C.P.R., Winnipeg, born at Toronto, July 28, 1863.

J. L. Quinn, General Baggage Agent, G.T.R. and G.T.P.R., Toronto, born at Richmond, Ontario Co., N.Y., July 10, 1851.

G. G. Ruel, Chief Solicitor, Canadian Northern Ry., Toronto, born at St. John, N.B., July 5, 1866.

P. E. Ryan, Secretary, National Transcontinental Railway Commission, Ottawa, born there July 26, 1876.

Geo. Stephen, General Freight Agent, Canadian Northern Ry., Winnipeg, born at Montreal, July 5, 1870.

G. A. Stokes, Terminal Superintendent, G.T.R., Toronto, born in Nassagawaya Tp., Ont., July 23, 1879.

R. F. Struthers, Chief Inspector of Time Service, C.P.R., Winnipeg, born at Stratford, Ont., July 31, 1879.

Sir Thos. Tait, President, Fredericton and Grand Lake Ry. and Coal Co., born at Melbourne, Que., July 24, 1864.

H. T. Wilgress, Agent, C.P.R. Pacific Steamship Service, Yokohama, Japan, born at Lachine, Quebec, July 29, 1857.

Prince Edward Island Car Ferry Terminals.

We are officially advised that contracts for the construction of terminals for the Prince Edward Island car ferry service have been awarded as follows:—At Cape Tormentine, N.B., to A. T. Mackie, Toronto; at Carleton Point, P.E.I., to Halifax Dredging Co., Halifax, N.S.

The work to be done at Carleton Point includes the construction of a car ferry landing slip; a pier protection to the same; a rubble mound breakwater; a rubble mound approach to the landing pier; the dredging of berths or trenches for cribs of pier to 20 ft. below low water mark; the filling of cribs, etc.; the excavation to 25 ft. below low water of all the area between the car ferry landing and breakwater, and between the 600 ft. entrance and certain other points shown on plans. The landing slip is to consist of 335 ft. of double row fender work, and the protection work of nine cribs. These will include reinforced concrete and stone work, with timber facings, etc.

The work at Cape Tormentine is of a similar character, except that the landing slip is to consist of 330 ft. of double row pile fender work; and the protection work is to cinsist of 12 timber cribs of close faced crib work. The present pier is to be widened by the construction of widening cribs. The work at both places is to be completed by Dec. 31, 1914.

The Quebec Transportation Club's annual meeting was held at Kent House, Montmorency Falls, June 3, when the following officers were elected for the current year:—Hon. President, H. G. Matthews, General Manager, Quebec Ry., Light, Heat and Power Co.; Hon. Vice President, E. O. Grundy, General Freight and Passenger Agent, Quebec Central Ry.; Hon. Second Vice President, W. M. Macpherson; President, J. S. Thom, Manager, Quebec Transportation Co.; First Vice President, M. P. Connolly, General Agent, Richelieu and Ontario Navigation Co.; Second Vice President, G. J. P. Moore, City Passenger Agent, C.P.R.; Hon. Secretary-Treasurer, J. S. Blanchet; Committee—W. Langford, W. J. Thompson, J. T. Cassels, A. T. Dion and J. A. Everell.

Mainly About Transportation People.

LADY MANN and her son have returned to Toronto, after spending the winter in Europe.

GRANT HALL, General Manager, Western Lines, C.P.R., Winnipeg, is reported to be seriously ill.

C. E. E. USSHER, Passenger Traffic Manager, C.P.R., and his wife and family are visiting California.

J. E. MUHLFELD, formerly Superintendent of Motive Power, Intercolonial Ry., is now located in New York, engaged in special and consulting work.

T. W. LOWE, General Boiler Inspector, Western Lines, C.P.R., Winnipeg, has been elected President, Master Boiler Makers' Association, for the current year.

A. DENNY, of Denny and Sons, Shipbuilders, Greenock, Scotland, who has been made a Baronet, was formerly a director of the Dominion Atlantic Ry.

P. DOYLE, of the G.T.R. Bridge and Building Department, Montreal, was presented with a purse of gold by the staff, Jan. 22, on the occasion of his marriage.

G. CHAPMAN, for 30 years G.T.R. station agent at Courtland, Ont., was found dead in bed at St. Thomas, May 28. He retired from active service a few years ago.

W. W. ASHALD, Superintendent of Telegraphs, G.T.R., died suddenly of heart failure, at his home, Montreal, a few hours after he returned from his office, June 17, aged 57.

F. E. SKINNER, Auditor of C.P.R. Stores and Mechanical Accounts, Winnipeg, was presented with a cabinet of silver by the staff, June 20, on the occasion of his marriage.

LADY AND THE MISSES SHAUGHnessy left Montreal, June 22, for their summer home, Fort Tipperary, St. Andrews, N.B., where Mrs. Beauclerk will join them later.

[illegible] Mass., June 9, was at one time in the In[illegible] Superintendents.

ROBERT HOBSON, Vice President and General Manager, Steel Company of Canada, and Mrs. Hobson, left Hamilton, Ont., [illegible]

[illegible] from England and will spend the summer on the Pacific Coast.

R. W. LEONARD, Commissioner, National Transcontinental Ry., has offered to erect a tower and supply a peal of bells for Grace Church, Brantford, Ont., with which he was formerly connected.

E. H. HILEY, heretofore Divisional Goods Manager, North Eastern Ry., of England, has been appointed General Manager of the New Zealand State Railways, comprising about 2,800 miles of line.

Mrs. Stitt, wife of W. STITT, General Passenger Agent, C.P.R., Eastern Lines, Montreal, accompanied by Miss M. Macfarlane, visited friends in Winnipeg, June 2, on her way to Vancouver, and Australia.

SIR W. M. AIKEN, M.P., who is interested in the company to which a franchise has been granted for the building of an electric railway in Medicine Hat, Alta., arrived in Montreal, from London, Eng., June 9.

FRANCIS KING, Counsel, Dominion Marine Association, Kingston, Ont., has gone to England in connection with a case before the Imperial Privy Council and is expected to return about the middle of August.

A. T. Tomlinson, M. Can. Soc. C.E.,
[illegible]

J. W. TROUP, Manager, British Columbia Coast Service, C.P.R., returned to Canada, [illegible] Great Britain, where he had been in connection with the placing of orders for the construction of two vessels for the service.

A. J. TAYLOR, Canadian Freight and Passenger Agent, Chicago, Milwaukee and St. Paul Ry., Toronto, who recently underwent an operation [illegible] and is expected to return to business during July.

J. A. ROSS, C.P.R. city ticket agent and agent Dominion Express Co., was presented with a silver mounted umbrella by the company's staff at St. Thomas, Ont., on [illegible] position at Chatham, Ont., June 16.

F. H. PHIPPEN, General Counsel, Canadian Northern Ry., and Mrs. Phippen, are staying at the King Edward Hotel, Toronto, for part of the summer, but later will go to their new house on Etobicoke River, near the new Toronto Golf Club.

Mrs. Kelly, Winthrop, Mass., who was killed in an accident on the New York, New Haven and Hartford Rd., at Stamford, Conn., June 12, was the wife of E. J. KELLY, who is spoken of in press dispatches as local land agent, C.P.R.

WM. WAINWRIGHT, Vice President, G.T.R. and G.T.P.R., has gone to England. Miss Marguerite Wainwright is going to Cushing's Island, Me. Miss Gladys Wainwright will spend the summer at Tadousac, Que., with her sister, Mrs. A. R. Chipman.

W. F. TYE, M. Can. Soc. C.E., left Toronto early in June for Europe, intending to return to Canada in the autumn and to then again take up his residence in Montreal. He has resigned the presidency of Sterling Coal Co., Ltd., of which, however, he remains a director.

MISS W. SAUNDERS, who has retired from the Secretary-Treasurership of the St. Thomas, Ont., St. Ry., was presented with a silver tea set and tray by the city hall officials, and with a drawing room clock by the street railway employes, June 22.

W. E. DUPEROW, General Agent, Passenger Department, Grand Trunk Pacific Ry., Vancouver, B.C., has been appointed chairman for the meeting of the North Pacific Coast Terminal Line Passenger Agents' Association, which will be held at Vancouver, Aug. 5.

C. H. MASSIAH, whose appointment as Paymaster, G.T.R., Montreal, was announced in our last issue, was born at Quebec, Que., May 1, 1883, and entered G.T.R. service Nov. 19, 1904, since when he has been, to Apr. 1, 1913, in the Treasurer's office at Montreal.

J. E. QUICK, General Baggage Agent, G.T.R., and G.T. Pacific Ry., Toronto, was elected Secretary and Treasurer of the American Association of General Baggage Agents, for the thirtieth successive year, at the recent annual convention at Colorado Springs.

FRANK A. FLEMING, eldest son of Sir Sandford Fleming, Hon. M. Can. Soc. C.E., died in Toronto, June 4, aged 58. He accompanied his father in a trip over the then projected route of the C.P.R. from Winnipeg to the Pacific Coast in the early seventies.

This is how the Toronto Globe referred recently to F. H. PHIPPEN, General Counsel, Canadian Northern Ry.:—"Hon. F. H. Phippen, an ex-judge of the United States, and chief counsel of the Canadian Northern, was the first witness for the defence."—"An ex-judge of the United States" is a gem.

Mrs. Reynolds, wife of M. M. REYNOLDS, Vice President, G.T.R. and G.T. Pacific Ry., died at Rochester, Minn., June 1, after an illness, which though lasting for some time, was not considered serious. Mr. Reynolds was on the way to take her back to Montreal when the news reached him. She was buried at St. Albans, Vt.

A. S. SWAN, on recently leaving Montreal, where he had been Assistant Engineer to the Harbor Commission, was the guest at a dinner given by the staff, and the recipient of a number of gifts. He left Montreal, for Valparaiso, Chile, June 6, where he will be engaged in dock construction work for the British firm of which Sir John Jackson is head.

J. J. HOWARD, for a number of years foreman with the James McDiarmid Co., Winnipeg, was presented with a purse of money on leaving the firm's employ, to become Managing Director of the Fort Garry Construction Co. The James McDiarmid Co. has been engaged for some years in carrying out contracts for station and other buildings on the C.P.R. west of Winnipeg.

EINER L. LANDORPH, who has been appointed Resident Engineer, C.P.R., Brandon, Man., was born at Copenhagen, Denmark, Sept. 9, 1888, and graduated as a civil engineer from the University of Copenhagen, Jan., 1911. He entered C.P.R. service, June 24, 1912, since when he has been, to Nov. 6, 1912, draughtsman, Winnipeg; Nov. 7, 1912, to Apr. 30, 1913, transitman at Brandon, Man.

A. S. MUNRO, whose appointment as Commercial Agent, G.T.R., London, Ont., was announced in our last issue, was born at Hamilton, Ont., Nov. 10, 1880, and entered G.T.R. service, Jan. 1, 1900, since when he has been, to Aug., 1905, yard and billing clerk, and secretary to General Agent, Hamilton; Apr., 1906, to May, 1913, Travelling Freight Agent, Middle and Southern Divisions, London, Ont.

H. W. WALKER, for many years General Auditor, G.T.R., Montreal, died in Winnipeg, June 10, aged 75. He entered the G. Western Ry. service in 1854; four years later he went with the Detroit and Milwaukee Ry., going to the G.T.R. in 1862, as chief bookkeeper. His subsequent appointments were: accountant, 1878; chief accountant, 1893; general auditor, 1896. He retired from the service Jan. 1, 1907.

J. HARVIE, who was conductor of the first train which operated on the old Northern Ry. out of Toronto in 1853, and was afterwards Traffic Superintendent, and W. Downie, General Superintendent, C.P.R., St. John, N.B., met recently at Vancouver, B.C., where both have been spending a holiday with their wives. Mr. Harvie is 81 years of age, and Mr. Downie received the first twelve years of his training under him.

JAS. BALKWILL, who has been appointed Assistant Trainmaster, M.C. Rd., St. Thomas, Ont., was born in Southwold Tp., Ont., Mar. 8, 1870, and entered M.C.R. service, Mar. 18, 1888, since when he has been, to Aug. 1, 1900, relief operator and agent at various points; Aug. 1, 1900, to Dec. 1, 1903, agent at Dutton, Ont.; Dec. 1, 1903, to Mar. 8, 1904, dispatcher, St. Thomas, Ont.; Mar. 8, 1904, to June 1, 1913, chief clerk to Division Superintendent, St. Thomas, Ont.

W. MACKLAIER, who has been appointed Chief Inspector of Weighing and Refrigeration, Eastern Lines, C.P.R., Montreal, entered C.P.R. service in 1896, as clerk in the Car Accountant's office, and was transferred to Vancouver, B.C., as chief clerk, in 1903, returning east as car tracer on foreign roads, and was subsequently appointed chief clerk, Car Service Department, which position he held to May 15, 1913, the date of his present appointment.

R. A. BECKER, whose appointment as Supervisor of Signals, Eastern Lines, G.T.R., Montreal, was announced in our last issue, was born at Washington, D.C., and entered railway service in 1892 with the Signal Contracting Co., and has since been constantly engaged on signal and construction work on various railways in the eastern U.S., and for the past four years was Assistant and Construction Engineer, Signal Engineering Department, New York Central Ry.

J. PATERSON, who died at Winnipeg, June 5, aged 84, had been a resident of Manitoba since 1879. He went west to look after the water supply on what is now the C.P.R., and remained with that company in the same capacity when it took over the lines from the Dominion Government. On leaving the C.P.R. service he was appointed caretaker of the Parliament buildings at Winnipeg, from which position he retired some years ago, after over 20 years service.

R. F. McNAUGHTON, who was recently appointed Travelling Passenger Agent, Canadian Northern Ry., Saskatoon, Sask., was born at Petrolea, Ont., June 23, 1889, and entered railway service, Oct., 1908, since when he has been, to Oct., 1910, telegraph operator and ticket agent, G.T.R., at various points; Oct., 1910, to Dec., 1911, assistant rate clerk, Canadian Northern Ry., Winnipeg; Jan. to Nov., 1912, ticket stock clerk, same road, Winnipeg; Nov., 1912, to Mar. 31, 1913, chief clerk District Passenger Agent's office, same road, Saskatoon, Sask.

HENRY CLARKE, Storekeeper, G.T.R., Montreal, who retired under the provisions of the pension rules, May 31, was born at Sunningwell, Berks, Eng., Aug. 8, 1843, and entered G.T.R. service, Jan., 1872, since when he has been, to Mar. 28, 1872, brakeman, Montreal; Mar. 28, 1872, to Sept. 14, 1880, shipper, Montreal; he left the service, Sept. 14, 1880, on account of ill health, and returned, July 4, 1882, since when he has been, to May 31, 1884, storeman; June 1, 1884, to July 31, 1896, chief storeman, and Aug. 31, 1896, to May 31, 1913, Storekeeper, at Montreal.

W. McLeod,
Assistant Chief of the Department of Investigation, Western Lines, Canadian Pacific Railway.

JOHN S. PLAYFAIR, who died at Toronto, June 2, aged 87, was born at Glasgow, Scotland. He was one of the founders of the Muskoka Navigation Co., of which he was President for several years. One of his sons, Jas. Playfair, Vice President and Managing Director, Richelieu and Ontario Navigation Co., who was a passenger on the company's s.s. Hamonic, bound for Port Arthur, for the launching of the s.s. Noronic, was recalled by wireless telegraph, transferring from the Hamonic to one of the R. & O.N. Co. freighters, in mid lake, about 80 miles from Sault Ste. Marie, and arriving in Toronto by special train.

JOHN ARCHIBALD, whose appointment as Locomotive Foreman, C.P.R., Coquitlam, B.C., was announced in our last issue, was born at Edinburgh, Scotland, Mar. 13, 1872, and entered railway service in 1889, since when he has been, to 1894, apprentice [illegible], C.P.R., Winnipeg; 1894 to 1899, [illegible], Manitoba and North Western Ry., Portage la Prairie, Man.; 1899 to 1900, [illegible], C.P.R., Medicine Hat, Alta.; 1900 to 1906, leading hand, C.P.R., Calgary, Alta.; 1906 to 1907, Locomotive Foreman, C.P.R., Medicine Hat, Alta.; 1907 to 1908, Locomotive Foreman, C.P.R., Field, B.C.; 1908 to May, 1913, Shop Foreman, C.P.R., Vancouver, B.C.

H. H. SMITH, whose appointment as Car Service Agent, Canadian Northern Quebec Ry., Montreal, was announced in our last issue, was born at Quebec, Que., June 14, 1872, and entered railway service Oct. 14, 1890, since when he has been, to 1891, stenographer, Lower Laurentian Ry., Quebec; 1891 to 1895, accountant, same road, Quebec; 1895 to 1908, secretary to General Manager, Quebec and Lake St. John Ry., and Great Northern Ry. of Canada, Quebec; 1909 to May, 1913, chief clerk to General Manager, C.N.Q.R., Q. & L. St. J. R., Halifax and South Western Ry., and Inverness Ry. and Coal Co., Quebec, and since 1911 at Montreal.

H. N. MERRIAM, who was recently appointed Division Engineer, Pacific Great Eastern Ry., Lillooet, B.C., was born at Waupun, Wis., June 19, 1874, and entered railway service in June, 1898, since when he has been, to Aug., 1899, rodman, C.P.R., in British Columbia; Aug., 1899, to May, 1900, topographer, Great Northern Ry., in Montana and Washington; May to Dec., 1900, draughtsman, C.P.R.; Mar., 1901, to Mar., 1902, instrument man, Chicago Division, Chicago and North Western Ry.; Mar., 1902, to Mar., 1906, Resident Engineer on Construction, Western Lines, C.P.R.; Mar., 1906, to Apr., 1913, Assistant Engineer on Construction, Western Lines, C.P.R., his work covering different branches, including the building the spiral tunnel at Field, B.C., and double track work.

C. B. FOSTER, who has been appointed Assistant Passenger Traffic Manager, Eastern Lines, C.P.R., Montreal, and whose portrait appears in this issue, was born at Kingston, N.B., Sept. 30, 1871, and entered C.P.R. service in Apr., 1891, since when he has been, to Oct., 1892, stenographer in Passenger Department, St. John, N.B.; Oct., 1892, to Sept., 1893, senior clerk, Passenger Department, St. John, N.B.; Sept., 1893, to July, 1899, Travelling Passenger Agent, St. John, N.B.; July, 1899, to Feb. 8, 1902, chief clerk, Passenger Department, St. John, N.B.; Feb. 8, 1902, to Nov. 22, 1904, District Passenger Agent, St. John, N.B.; Nov. 22, 1904, to Sept. 8, 1908, District Passenger Agent, Toronto; Sept. 8, 1908, to Oct. 31, 1910, Assistant General Passenger Agent, Vancouver, B.C.; Oct. 31, 1910, to June 17, 1913, General Passenger Agent, Western Lines, Revelstoke, B.C., and east, Winnipeg.

FRANK E. WARD, who died at Chicago, Ill., June 6, was born July 29, 1867, and was educated at McGill Model School, Montreal. He entered railway service, Sept., 1881, and was, to Nov., 1885, apprentice clerk and stenographer in the Mechanical Department, G.T.R., Montreal; Jan., 1886, to Dec., 1887, secretary to Second Vice President, St. Paul, Minneapolis and Manitoba Ry., St. Paul, Minn.; Jan., 1888, to Nov., 1890, secretary and chief clerk to President and General Manager, Eastern Ry. of Minnesota; Jan., 1891, to July, 1894, secretary to President, Great Northern Ry.; July, 1894, to Feb., 1898, Assistant to President, same road; Mar. to Oct., 1898, General Superintendent, Montana Central Ry.; Nov., 1898, to 1903, General Superintendent, Great Northern Ry.; 1903 to Oct., 1907, General Manager, Great Northern Ry.; Oct., 1907, to Aug., 1912, General Manager, Chicago, Bur-

[illegible] he resigned on account of ill health.

SIR STEPHEN W. FURNESS, M.P., [illegible] Furness, Withy and Co., and a nephew of the late Lord Furness, who was Hon. President of the Richelieu and Ontario Navigation Co.

JOHN L. WELLER, M. Can. Soc. C.E., Engineer in Charge, Welland Ship Canal, St. Catharines, Ont., whose portrait appears elsewhere in this issue, was born at Cobourg, Ont., Feb. 13, 1862. He entered Dominion Government service in 1882 as Assistant Engineer, Trent Canal, Peterboro, Ont., and was, from 1885 to 1888, Assistant Engineer, Murray Canal, Brighton, Ont.; 1888 to 1900, Resident Engineer, St. Lawrence Canals, Cornwall, Ont.; 1900 to 1912, Superintending Engineer, Welland Canal, St. Catharines, Ont.

F. J. HURKETT, who was recently appointed City Passenger Agent, C.P.R., Calgary, Alta., was born at London, Ont., Dec. 10, 1879, and entered C.P.R. service, Sept., 1897, since when he has been, to June, 1899, city ticket clerk, London, Ont.; June, 1899, to May, 1901, station ticket clerk, London, Ont.; May, 1901, to Nov., 1903, telegraph operator, London, Ont.; Nov., 1903, to Nov., 1904, chief clerk (freight), London, Ont.; Nov., 1904, to May, 1907, not in railway service; May, 1907, to July, 1909, joint ticket agent, C.P.R. and C.N.R., Regina, Sask.; July, 1909, to May, 1912, chief clerk, District Passenger Agent, C.P.R., Brandon, Man.; May, 1912, to Mar., 1913, ticket agent, C.P.R., Calgary, Alta.

V. J. MELSTED, whose appointment as Engineer of Water Service, Western Lines, C.P.R., Winnipeg, was announced in our last issue, was born at Gardar, N.D., Feb. 26, 1887, and entered transportation service, Apr., 1909, since when he has been, to Oct., 1909, instrument man, Great Northern Ry.; Oct., 1909, to Apr., 1910, investigating [illegible] of Manitoba on behalf of a U.S. syndicate; Apr., 1910, to Feb., 1911, instrument man, C.P.R., Winnipeg; Feb., 1911, to Apr., 1913, Resident Engineer, Maintenance of Way, C.P.R., Brandon, Man. Prior to entering transportation service he was, from March to Oct., [illegible] Portland Cement Co., Concrete, N.D.; May, 1907, to Nov., 1908, on the staff of the North Dakota Geological Survey, investigating natural resources of the State; Nov., 1908, to Apr., 1909, engaged [illegible]

H. B. DIBLEE, A.M. Can. Soc. C.E., who has been appointed Superintendent in charge of operation and maintenance of way and structures of the National Transcontinental Ry., between Moncton and Edmundston, N.B., [illegible]

[illegible] entered railway service in 1890, in the Union Pacific Rd. Car Department, Denver, Col., subsequently transferring to the Pennsylvania Rd. service as Car Inspector at Chicago, Ill.; he was from Aug., 1892, to July, 1899 foreman, and General Foreman, consecutively, Car Department, Lake Shore and Michigan Southern Ry., Chicago, Ill.; 1900, General Foreman, Car Department, Long Island Rd.; 1900 to 1904 General Foreman, Car Department, Central Rd. of New Jersey, Elizabethport, N.J.; 1904 to Jan., 1907, Assistant Master Car Builder and Master Car Builder, consecutively, Erie Rd., Meadville, Pa.; Jan., 1907, to July, 1909, Assistant Master Car Builder, C.P.R., Montreal; and in July, 1909, on the retirement of W. E. Fowler, on account of ill health, he was appointed acting General Car Builder, being later confirmed in that position.

E. W. BEATTY, who has been appointed General Counsel, C.P.R., Montreal, was born at Thorold, Ont., in 1877, and moved to Toronto, with his parents in 1887. He was educated with the Model School, Harbord Collegiate, and Toronto University, graduating in 1898. He served his articles with the late D'Alton McCarthy, of the firm of McCarthy, Osler, Hoskin and Creelman, and was admitted to the bar in 1901. On the appointment of A. R. Creelman, K.C., as Chief Solicitor, C.P.R., in 1891, he accompanied him to Montreal, and later succeeded him in that position, as General Solicitor. He is a son of H. Beatty, of the C.P.R. Steamship Office, Toronto, and a brother of Dr. Beatty, Chief Surgeon, Ontario Division, C.P.R., Toronto.

JAMES McLERIE, who died at Dundas, Ont., recently, was born at Kilbarchan, Scotland, Nov. 6, 1850, and entered railway service, March, 1867, since when he was, to 1869, car number taker, Great Western Ry. (now part of G.T.R.), Hamilton, Ont.; 1869 to 1872, yard clerk, same road, London, Ont.; 1872 to 1873, clerk same road, Hamilton, Ont.; 1873 to 1877, cashier, same road, Ingersoll, Ont.; 1877 to 1878, agent, same road, Stratford, Ont.; 1879 to 1880, agent, same road, Tillsonburg, Ont.; 1880 to 1882, special freight agent, Manitoba business, with Traffic Manager, same road, Hamilton, Ont.; 1882 to 1895, Local Freight Agent, G.T.R., Hamilton, Ont.; 1895 to 1897, Contracting Freight Agent, Toronto, Hamilton and Buffalo Ry., Hamilton, Ont.; 1897 to 1904, Contracting Freight Agent, C.P.R., Hamilton, Ont.; Apr., 1904, to Dec., 1908, Northwest Agent, Montreal and Lake Superior Line, Winnipeg. Towards the end of 1908, his health broke down, and he subsequently returned to Ontario, remaining at Dundas, until his death.

F. W. ALEXANDER, A. M. Can. Soc. C.E., whose appointment as Division Engineer, C.P.R., Calgary, Alta., was announced in our last issue, was born at [illegible], N.B., Nov. 22, 1878, and entered railway service, June, 1897, since when he has been, to May, 1898, office boy, Chief Engineer's office, Bangor and Aroostook Ry., Houlton, [illegible] River Ry., Ashland, Me.; Feb., [illegible] vision Engineer, same road, Calgary, Alta.

JAMES BAIN, whose appointment as General Superintendent, Halifax and South Western Ry., Halifax, N.S., together with his portrait, was given in our last issue, was born at Pictou, N.S., May 24, 1860, and entered railway service, May, 1875, since when he has been, to Mar., 1876, operator, Intercolonial Ry., Truro, N.S.; Mar., 1876, to June, 1879, operator and ticket agent, same road Stellarton, N.S.; June, 1879, to Nov., 1881, operator, same road, Truro, N.S.; Nov., 1881, to June, 1882, chief operator Western Union staff, Direct U.S. Cable Co., Tor Bay, N.S.; June, 1882, to Apr., 1886, dispatcher, Intercolonial Ry., at New Glasgow and Truro, N.S., and Moncton, N.B.; Apr. to Oct., 1886, dispatcher, Missouri Pacific Ry., St. Louis, Mo.; Oct., 1886, to May, 1892, Chief Dispatcher, Quebec and Lake St. John Ry., Quebec, Que.; May, 1892, to Nov., 1899, Manager's Assistant, same road; Nov., 1899, to Dec., 1907, Superintendent, Q. & L. St. J.R., Lower Laurentian Ry., and construction of Great Northern Ry. of Canada, Quebec, Que.; Dec., 1907, to May, 1913, Superintendent, Halifax and South Western Ry., Bridgewater, N.S.

A. T. TOMLINSON, M. Can. Soc. C.E., M. Am. Soc. C.E., whose appointment as Chief Engineer, North Ry., Montreal, was announced in our last issue, was born at Grand Falls, N.B., June 22, 1859, and graduated from the Royal Military College, June, 1882, with honors in civil engineering. He was, from July, 1882, to June, 1883, with the Toronto Bridge Co., Toronto; Aug., 1883, to June, 1884, section engineer, Lake Superior Division, C.P.R.; 1886, Engineer of Maintenance, Burlington and Missouri River Rd., Omaha, Neb.; Feb., 1887 to 1890, Assistant Engineer, Denver and Rio Grande Rd., Pueblo and Leadville, Col.; 1891 to 1893, Assistant Engineer, Brooklyn Elevated Ry., Brooklyn, N.Y.; 1894 to 1897, Assistant Chief Engineer, Northwestern Union and Lake St. Elevated Railways, Chicago, Ill.; 1898 to 1902, Consulting Engineer, Boston Elevated Rd., Boston, Mass.; 1902 to 1905, Civil Engineer, J. G. White and Co., New York; 1905 to 1908, Civil Engineer, Canadian White Co., Montreal; 1909 to 1912, District Engineer, G.T. Pacific Ry., Cochrane, Ont. He is also a member of the American Railway Engineering Association. During 1885 he served in the Midland Battalion, in the North West Rebellion.

C. A. HAYES, who has been appointed General Traffic Manager, Canadian Government Railways, was born at West Springfield, Mass., Mar. 10, 1865, and entered railway service in 1882, since when he has been, to 1884, clerk, Freight Auditor's office, Connecticut River Rd., now Boston and Maine Rd.; 1884 to Oct., 1887, similar position, Boston and Lowell Ry., Boston, Mass.; Oct., 1887 to Nov., 1890, clerk, General Freight Agent's Office, Boston and Lowell Ry., and its successor, Boston and Maine Ry., Nov., 1890 to June, 1892, General Freight and Passenger Agent, Central New England and Western Ry., Poughkeepsie, N.Y.; June to Oct., 1892, Division Freight Agent, Philadelphia and Reading Rd., while it had control of the C.N.E. & W.R., Hartford, Conn.; Oct., 1892 to June, 1896, New England Agent, National Despatch Line, Boston, Mass.; June, 1896 to July, 1899, New England Agent and acting General Manager, National Despatch Line, Boston, Mass.; July, 1899 to May, 1903, Manager, National Despatch Great Eastern Line, Buffalo, N.Y.; May, 1903 to Apr., 1908, Assistant General Freight Agent, G.T.R., Chicago, Ill.; Apr., 1908 to Oct., 16, 1911, General Freight Agent, G.T.R., Montreal, Oct. 16, 1911, to June, 1913, Freight Traffic Manager, G.T.R., Montreal.

Transportation Appointments Throughout Canada.

The information under this head, which is almost entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canadian Government Railways.—It is unofficially announced that C. A. HAYES, Freight Traffic Manager, G.T.R., Montreal, will become General Traffic Manager, Government Railways, July 1, and that E. TIFFIN, the present General Traffic Manager, will be transferred to Toronto as General Agent.

H. H. MELANSON, heretofore Assistant General Passenger Agent, has been appointed acting General Passenger Agent, vice J. M. Lyons, superannuated. Office, Moncton, N.B.

C. B. BROWN, A.M. Can. Soc. C.E., heretofore Principal Assistant Engineer, Eastern Lines, C.P.R., Montreal, is reported to have been appointed Chief Engineer, Canadian Government Railways. Office, Moncton, N.B.

Canadian Northern Ry.—W. BRYCE, heretofore Locomotive Foreman, C.P.R., Ignace, Ont., has been appointed Assistant Locomotive Foreman, C.N.R., Rainy River, Ont., vice L. H. Boerger, transferred to Duluth, Winnipeg and Pacific Ry. service.

L. DAVIDSON, heretofore moulder, has been appointed foundry foreman, Winnipeg Shops, vice A. Knight, resigned.

Canadian Pacific Ry.—E. W. BEATTY, heretofore General Solicitor, has been appointed General Counsel, vice A. R. CREELMAN, K.C., resigned. Office, Montreal.

A. R. CREELMAN, K.C., General Counsel, having asked to be relieved of his duties that he may enjoy a well earned rest and recreation, the Board of Directors and Executive Officers in acceding to his wish, and accepting his resignation, desire to express their hearty appreciation of his advice and co-operation during the company's most progressive years. He continues his connection with the company as a director, and will act on occasion as Special Counsel.

B. W. ROBERTS, heretofore Commissary Agent, Winnipeg, has been appointed Assistant Chief Commissary Agent. Office, Montreal.

C. B. FOSTER, heretofore General Passenger Agent, Western Lines, lines Revelstoke, B.C., and east, Winnipeg, has been appointed Assistant Passenger Traffic Manager, Eastern Lines. Office, Montreal.

W. MACKLAIER, heretofore chief clerk, Car Service Department, has been appointed Chief Inspector of Weighing and Refrigeration, Eastern Lines. Weighing, refrigeration and heating reports heretofore sent to the Superintendent of Car Service, are now addressed to the Chief Inspector. Office, Montreal.

L. J. ROONEY has been appointed Assistant Commissary Agent at Quebec, Que., vice T. M. McKeown, promoted.

A. E. STEWART, heretofore District Master Mechanic, District 1, Ontario Division, Toronto, has been appointed Master Mechanic on construction, Campbellford, Lake Ontario and Western Ry. (C.P.R.).

A. BINNS has been appointed acting District Master Mechanic, District 1, Ontario Division, Toronto, vice A. E. Stewart, transferred to Campbellford, Lake Ontario and Western Ry. (C.P.R.) construction.

E. J. MURPHY, heretofore Assistant Foreman, West Toronto, has been appointed Locomotive Foreman there, vice F. Ronaldson, transferred.

F. RONALDSON, heretofore Locomotive Foreman, West Toronto, has been appointed Roundhouse Foreman at Lambton, Ont.

R. McLAUGHLIN, heretofore Assistant Foreman, West Toronto, has been appointed Night Roundhouse Foreman at Lambton, Ont.

G. BROWN, heretofore fitter, West Toronto, has been appointed Assistant Night Roundhouse Foreman at Lambton, Ont.

T. G. M. JAMIESON, heretofore chief clerk, city ticket office, Peterboro, Ont., has been appointed city ticket agent, agent, C.P.R. Telegraphs, and Dominion Express Co., at St. Thomas, Ont., vice J. A. Ross, transferred.

J. A. ROSS, heretofore city ticket agent, C.P.R., agent C.P.R. Telegraphs, and Dominion Ex. Co., St. Thomas, Ont., has been appointed to similar positions at Chatham, Ont., vice E. Fremlin, transferred.

A. WILLIAMS, Assistant Superintendent, District 1, Lake Superior Division, has had his office moved from North Bay to Sudbury, Ont.

W. McMULLEN, Trainmaster, Sudbury, Ont., having resigned, the position has been abolished.

C. B. Foster,
Assistant Passenger Traffic Manager, Eastern Lines, Canadian Pacific Railway

F. J. BAIRD has been appointed back shop foreman, Fort William, Ont., vice A. Sturrock, transferred to Vancouver, B.C., as announced in our last issue.

W. W. WEBSTER, heretofore Locomotive Foreman, Winnipeg, has been appointed acting District Master Mechanic, Kenora, Ont., vice A. West, on leave of absence.

J. MORTON, heretofore Night Locomotive Foreman, has been appointed acting Locomotive Foreman, Winnipeg, vice W. W. Webster, promoted.

W. J. ANDREWS has been appointed acting Night Locomotive Foreman, Winnipeg, vice J. Morton, promoted.

J. MORTON, heretofore Locomotive Foreman, Winnipeg, has been appointed Night Locomotive Foreman there.

A. PEERS, heretofore Locomotive Foreman, Brandon, Man., has been appointed Locomotive Foreman, Winnipeg, vice J. Morton, transferred.

D. FORBES, heretofore night coachyard foreman, has been appointed coachyard foreman at Winnipeg, vice H. W. Andrew, resigned.

H. THORNE, heretofore assistant coachyard foreman, has been appointed night coachyard foreman, Winnipeg, vice D. Forbes, promoted.

I. LINDSAY has been appointed assistant coachyard foreman at Winnipeg, vice H. Thorne, promoted.

T. M. McKEOWN, heretofore Assistant Commissary Agent at Quebec, Que., has been appointed Commissary Agent at Winnipeg, vice B. W. Roberts, promoted.

E. L. LANDORPH, heretofore transitman, has been appointed Resident Engineer, Brandon, Man., vice V. J. Melsted, assigned to other duties. Owing to a misprint in our last issue, the name was given as E. Landorth.

G. TWIST has been appointed Locomotive Foreman, Brandon, Man., vice A. Peers, transferred.

W. J. COLEMAN, heretofore Locomotive Foreman at West Roundhouse, Calgary, Alta., has been appointed Locomotive Inspector at Ogden, Alta.

J. G. RUTHERFORD, V.S., Superintendent of Animal Husbandry, Department of Natural Resources, is reported to have also been appointed Superintendent of Agriculture. Office, Calgary, Alta.

Duluth, South Shore and Atlantic Ry., Mineral Range Rd.—E. R. LEWIS, Assistant to the General Manager, is dealing with all matters pertaining to engineering, bridges and buildings, V. D. Simar, Chief Engineer, having resigned. Office, Duluth, Minn.

Duluth, Winnipeg and Pacific Ry.—L. H. BOERGER, heretofore Assistant Locomotive Foreman, Canadian Northern Ry., Rainy River, Ont., has been appointed Locomotive Foreman, D.W. & P.R., at Virginia, Minn.

Grand Trunk Pacific Ry.—A. J. ROBERTS has been appointed Locomotive Foreman at Redditt, Ont., vice J. R. Morton, transferred.

J. R. MORTON, heretofore Locomotive Foreman, Redditt, Ont., has been appointed Locomotive Foreman, Melville, Sask., vice A. McTavish, transferred.

A. McTAVISH, heretofore Locomotive Foreman, Melville, Sask., has been appointed Locomotive Foreman, McBride, B.C., with temporary headquarters at Tete Jaune, B.C.

H. DARLING has been appointed acting Locomotive Foreman, Nicholl, B.C., vice J. Lambie, assigned to other duties.

The following agents have been appointed:—Elie, Man., E. R. Bierwith; Quinton, Sask., J. A. Babin; Landis, Sask., C. J. Leslie; Lebret, Sask., F. Z. Landry; Cudworth, Sask., C. Taylor; Holden, Alta., A. G. Jamieson; Wabamun, Alta., R. E. Kirkpatrick; Dandurand, Alta., J. L. Syrong; Bashaw, Alta., F. S. Benyon.

Grand Trunk Ry.—E. J. McVEIGH, heretofore Storekeeper, Ottawa, has been appointed General Storekeeper. Office, Montreal.

W. J. P. McGREGOR, heretofore in Vice President's office (traffic), Montreal, has been appointed Commercial Agent, Moncton, N.B., vice James Edward, whose appointment as Division Freight Agent, Ottawa, was announced in our last issue.

[illegible]

THE FIELD ENGINEER'S HAND BOOK—By G. Carveth Wells, A.C.G.I., [illegible] Railways, late of the Grand Trunk Pacific Ry., and A. S. Clay, B. Sc., A.C.G.I.; [illegible] Eng., Edward Arnold.

We submitted this book to H. K. Wick- [illegible]

It has always seemed to the writer that a field book should be one containing only the essentials for field work, the tables and formulae for which it is not safe to [illegible] them line or level, while he studies out the reasons for doing things in a certain way [illegible] hours.

[illegible] ally, and in [illegible]

E. W. Beatty,
General Counsel, Canadian Pacific Railway.

unit of length for land surveying 66 ft. (Gunter's chain) cannot be excelled." We are rather unfortunately compelled, on account of old records, to use Gunter's chain at times, but in modern work the foot is the almost universal standard on this continent, except where the metric system is employed, and as to convenience, while the 66 ft. chain may be handier and lighter than the 100 ft. chain, the modern metal band is so much lighter than the chain that the 100 ft. standard is entirely unobjectionable and almost universal in railway work.

A chapter is devoted to the railway transition curve and at the very outset the authors make the following very extraordinary statement: "In order that the coach should not leave the track it is plain that the resultant of these two forces (gravity and centrifugal), must act between the rails and if possible be perpendicular to the cross section (plane) of the track, so that there may be no side thrust on the rails." The idea that centrifugal force is the only one producing a "side thrust on the rails," and that mere elevation is capable of obviating the latter, is so old and has been so long disproved and abandoned that it is rather a shock to find it being put forward with such evident claims to scientific knowledge as these.

The chapters on astronomy, and on finding of azimuth and position, are well worth reading, as is the whole book by the student of elementary problems, but it is a pity that the errors and misconceptions referred to should have been incorporated and that the writers should not have been more familiar with Canadian practice and ideas.

Delaware and Hudson Co.'s Report for 1912.

The annual report of the D. & H. Co for the year 1912 has been issued. The coal mining department shows a net revenue of $469,326.88, and the railway [illegible] for the year 1913, payable quarterly.

The company owns the Quebec, Montreal and Southern Ry. and the Napierville Junction Ry. in Canada. The accounts of these companies are included in the general statement, but the directors say in regard to them as follows:—The Quebec, Montreal and Southern Ry. shows an increase in operating revenues of $25,466.20 for 1912, as compared with the previous year. The operating expenses increased $16,169.96. The net income, independent of interest [illegible] 378.98, an increase of $19,559.18. The Napierville Junction Ry. shows an increase in operating revenues for 1912 of $12,400.11 [illegible] or 3.23% on the capital stock outstanding. The operating expenses increased by reason of the severe weather conditions in the early part of the year; also by extensive repairs to locomotives. Personal injury [illegible]

[illegible] $1,000,000 common stock of the Quebec, Montreal and Southern Ry. and [illegible] stock of the Napierville Junction Ry.

A Clumsy Theft of Canadian Northern Railway Information.

In May a prominent official of the Canadian Northern Ry. system, in response to our request, supplied us with some official information in regard to the Toronto-Ottawa section of the Canadian Northern Ontario Ry. and also with reference to the projected line from north of Parry Sound to Callendar. This was published in Canadian Railway and Marine World as follows:—

"Canadian Northern Ontario Ry.—The last section of the Toronto-Ottawa line to be completed is that between the Jack River and Smiths Falls, Ont. The ballasting and final completion of the line will take several months.

"We are officially advised that the company has a route surveyed for a line from north of Parry Sound to Callendar, Ont., but it is not likely that the line will be built this year. The proposed line leaves the Toronto-Sudbury line at mileage 170 north of Toronto, and runs northeasterly through the villages of Whitestone, Golden Valley, Restoule and Nipissing to a junction with the company's transcontinental line near Callendar. The standard of curvature will be six degrees, although there will be one or two which will be temporarily sharper. The line will cross the Whitestone, Maganatawan, Pickerel, Commanda Creek, and Wistiwasing streams. The crossings of the Maganatawan and South Rivers are the only crossings of any moment—the former comprising a deck span of 100 ft. and some 300 ft. of trestle approach, 45 ft. above the water; and the latter 300 ft. long and 25 ft. high. There is a very large quantity of timber to be brought out from the townships of Mackenzie, Mills and Patterson, the estimate is from 350 to 400 million feet, 100 million feet being pine. Aside from running through this area of timber, the line traverses for over half the distance a very fair agricultural country, which has been settled since the early days of the lumber industry."

The Theft Exposed.

Canadian Machinery, published in Toronto, appropriated the above matter and reproduced it in its issue of June 12, without giving any credit to Canadian Railway and Marine World, for which it was specially written. But the scissors and paste editor did his work clumsily, as Canadian Pacific Ry. was substituted for Canadian Northern Ry. This is how he reproduced our article:—

"The last section of the Toronto-Ottawa line of the C.P.R. to be completed is that between the Jack River and Smiths Falls. The ballasting and final completion of the line will take several months. It is officially announced by the **C.P.R.** that the company has a route surveyed for a line from north of Parry Sound to Callendar, Ont., but it is not likely that the line will be built this year. The proposed line leaves the Toronto-Sudbury line at mileage 170 north of Toronto, and runs northeasterly through the villages of Whitestone, Golden Valley, Restoule and Nipissing to a junction with the company's transcontinental line near Callendar. The standard of curvature will be six degrees, although there will be one or two which will be temporarily sharper. The line will cross the Whitestone, Maganatawan, Pickerel, Commanda Creek and Wistiwasing streams. The Maganatawan and South Rivers are the only crossings of any moment—the former comprising a deck span of 100 feet and some 300 feet of trestle approach, 45 feet above the water; and the latter 300 feet long and 25 feet high. There is a very large quantity of timber to be brought out from the townships of Mackenzie, Mills and Patterson, the estimate being from 350 to 400 million feet, 100 million feet of which is pine. Aside from running through this area of timber, the line traverses for over half the distance a very fair agricultural country, which has been settled since the early days of the lumber industry."

C.P.R. officials will be rather amazed to read that they are building a line between Toronto and Ottawa and that they have surveyed a line from north of Parry Sound to Callendar.

MORAL.—Don't steal, but if you do, it is advisable to conceal your tracks.

A Railway Company's Liability for Loss of Baggage.

Canadian Railway and Marine World for June contained on pg. 258 the full judgment of County Court Judge Denton, of Toronto, awarding Harriet E. Spencer $340.50, in a case in which she claimed $500 damages from the C.P.R. for breach of contract in carrying a trunk from St. Thomas to Toronto, or for conversion. The C.P.R. appealed the case and on June 16 the Appellate Division of the High Court of Judicature of Ontario gave the following judgment:—

In the absence of a special contract the defendant company as a common carrier became liable generally for the safe delivery of the trunk. The onus therefore is on it to show assent, actual or constructive, on Mrs. Spencer's part to the condition pleaded in modification of the contract implied by law. Whether there has been any such assent is a question of fact. Here the findings of the trial judge are in substance to the effect that no notice was given to the plaintiff or to the taxicab driver of the condition on the check, that the plaintiff supposed the check to be a mere receipt for the trunk, and that obviously she in no way expressly or impliedly assented to any contract except such as grew out of the delivery of the trunk to the defendant company (common carrier) and its acceptance by the company for carriage. Appeal dismissed with costs.

Gas Electric Car on Quebec and Lake S. John Railway.

The gas electric car for the Quebec and Lake St. John Ry., described in Canadian Railway and Marine World for April and May, 1912, operated from May 1 to Oct. 1, 1912, very successfully, running between Quebec and Lake St. Joseph, 22 miles, making 4 round trips daily, a total daily distance of 175 miles. The actual operating cost was about 16c a mile, exclusive of general repairs.

The car was placed in service to provide a more frequent service and encourage suburban traffic. A considerable increase in traffic was experienced, and as last year's operation was in the nature of an experiment, it is anticipated that this year will see a much greater proportionate increase in the suburban traffic handled. The absence of smoke and cinders in its operation makes it conducive to the development of tourist traffic.

This car is self propelled by electric motors on the forward truck, receiving their energy direct from a 375 h.p. generator in the forward compartment of the car, direct connected to a 6 cylinder gas engine. The car is 54 ft. long, with a seating capacity of 76, and is capable of attaining a speed of 55 miles an hour.

Railway Development

Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta Interurban Ry.—The Dominion Parliament has confirmed the appointment of the directors as made at a meeting held April 16, 1912, and has validated their subsequent acts (April, pg. 168.)

Algoma Eastern Ry.—A train service was put in operation on the line from Sudbury to Espanola, Ont., 40 miles, June 2. Construction on the line from Espanola to Little Current, Manitoulin Island, has been completed, and it is expected that the train service will be extended to the latter point early in July. (May, pg. 219.)

Athabasca and Grande Prairies Ry.—The Dominion Parliament has incorporated a company with this title to build a railway from the junction of the Athabasca and Solomon Rivers northwesterly to the junction of the Smoky and Muskeg Rivers, thence through the Grande Prairies country west of Beaver Lake, to Dunvegan, Alta. (Feb., pg. 83.)

Blomidon Ry.—The Nova Scotia Legislature has extended the time within which the company may build the lines authorized by chap. 111 of the statutes of 1911. (Oct., 1911, pg. 935.)

British Columbia and White River Ry.—The Dominion Parliament has extended the time within which the company may build the lines authorized by chap. 45 of the Statutes of 1911. (Jan., pg. 20.)

Buctouche Ry. and Transportation Co.—The Dominion Paliament has authorized the company to change its name to the Moncton and Northumberland Strait Ry., and has extended the time for the building of the extensions authorized. (Jan., pg. 20.)

Calgary and Fernie Ry.—The subsidy voted by the Dominion Parliament in 1912, for the building of a line from between Michel and Sporwood, northerly by the headquarters of the Elk River, and Kananaskis Pass, to Calgary, Alta., 100 miles, has been renewed. The Minister of Railways said under the original subsidy the line was to have started at Calgary, now it is to start from near Fernie. The directorate includes G. A. Fraser and S. S. Mahon. (May, 1912, pg. 238.)

Canadian Central and Labrador Ry.—The Dominion Parliament has incorporated a company with this title to build a railway from near Cochrane, Ont., to the Atlantic coast of Quebec Labrador. (Feb., pg. 83.)

Canadian Northwestern Ry.—The Dominion Parliament has incorporated a company with this title to build the line already described. The provisional directors are:—Lord Howard de Walden, Lord Clinton, Lord Montagu of Beaulieu, England; W. F. Morgan, Jr., Paris, France; H. E. Brittain, F. W. Barker, London, England. (April, pg. 167.)

Cape Breton Coal, Iron and Ry. Co.—A Sydney, N.S., press report states that negotiations are in progress with the Sydney and Louisburg Ry. to secure running powers over that line to Louisburg.

The Nova Scotia Legislature has extended the time within which the company may build the lines authorized by chap. 110 of the statutes of 1895 and acts amending the same.

We are officially advised that work has been carried on all winter on the extension of the line to Mira, and the company is waiting for the Dominion Government to proceed with the construction of the breakwater to continue the building of the railway. H. Mayhew, Broughton, N.S., is Managing Director. (Dec., 1912, pg. 604.)

Central Ry. of Canada.—The Railway Committee of the House of Commons rejected the company's application for an extension of time, and other powers, recently. Following this the bill was introduced into the Senate and passed, but when it came before the House of Commons for consideration, June 2, a resolution was passed directing it to be dropped from the order paper. (May, pg. 219.)

Esquimalt and Nanaimo Ry.—The Board of Railway Commissioners has authorized the opening for traffic of the Cowichan Lake Branch from Hayward Jct. to Cowichan Lake, B.C., 18 miles.

The reconstruction of the original line from Victoria to Wellington, which has been in progress ever since the C.P.R. obtained control, is almost completed. The work laid out for this year includes the replacing of the last 12 wooden bridges with steel spans.

The improvements proposed to be made on the line during this year will involve the expenditure of $1,000,000, according to a recent statement of R. Marpole, Vice President. (May, pg. 219.)

Fredericton and Grand Lake Coal and Ry. Co.—Work has been started on the completion of the main line from near Fredericton to Minto, N.B., and on the branch from Fredericton to Marysville by the general contractors, A. E. Trites and Son, who have sublet the concrete work on the branch line to G. F. Baird, Fredericton. (May, pg. 219.)

Glengarry and Stormont Ry.—The Dominion Parliament has incorporated a company with this title. (May, pg. 219.)

Great Eastern Ry. of Montreal.—A company with this title, Robert Sevart, President, has been registered as doing business in Montreal, but we have been unable to locate it or to ascertain anything about it. No company with this title appears to have been incorporated either by the Dominion Parliament or the Quebec Legislature.

Hudson Bay, Peace River and Pacific Ry.—The Dominion Parliament has extended the time within which this projected railway may be built. (Feb., pg. 83.)

Intermarine Ry. and Navigation Co.—Press reports state that the projected route of this line is from near the head of Lake Winnipeg, north easterly for 122 miles, to a junction with the Dominion Government railway to Hudson Bay, at mileage 191 from Pas, Man.; that both steam and electricity will be used for motive power, and that it is expected to let contracts for the building of the line in the spring of 1914. W. S. Boyd, 715 Somerset Block, Winnipeg, is acting secretary of the provisional directorate. (April, pg. 169.)

Kettle Valley Lines.—The Dominion Parliament has revoted the subsidies granted in 1910 for the building of the following lines:—From Merrit to Penticton Wharf, 135 miles; from a point on above line to Midway, 136 miles; from a point on first-mentioned line 23 miles south of Merrit to near Hope Station on the Fraser River, 55 miles. The Minister of Railways stated recently that $353,709 had been paid on account of these subsidies, representing 18% on the first and 34% on the second. The company has 101 miles of the line in operation and 43 under construction.

A contract under the act granting aid to certain railways was entered into with the company, April 2, for the building of a line from near Coldwater to the Fraser River, B.C., 50 miles, but has only just been formally signed. (May, pg. 278.)

Lake Erie and Northern Ry.—The contractors are reported to be making rapid progress with the grading on this line from Port Dover to Galt, Ont. The rails and ties are being delivered. A contract has been let for the removal of houses on the right of way in Brantford. It is expected that track laying will be started early in July. (May, pg. 220.)

Lake Huron and Northern Ry.—We are officially advised that the line built by the old Bruce Mines and Algoma Ry., 17 miles, is somewhat out of repair, but it is expected to put it in proper condition this summer, and to make a start on the projected extension northerly. The permanent board of directors of the reorganized company has not been elected, the acting officers of the company being:—President, G. P. McCallum; Vice President, H. Appleton. The offices are at Sault Ste. Marie, Ont.—(See Bruce Mines and Algoma Ry., May, pg. 219.)

Little Nation Ry.—The Dominion Parliament has renewed the subsidy voted in 1910 for the building of a railway from the C.P.R., between Thurso and Montebello, Que., northerly for 30 miles. No construction has been done. (Dec., 1912, pg. 615.)

Lotbiniere and Megantic Ry.—The Dominion Parliament has revoked the subsidy granted in 1910 for the building of a railway from Lyster to Lune Ridge, Que., 60 miles. The Minister of Railways said recently that the company has built from St. Jean des Chaillons toward Glenroy to Lyster. There has been $96,000 paid on account of the line already built. (Jan., 1912, pg. 22.)

Margaree Coal and Ry. Co.—The Dominion Parliament has granted a subsidy, not to exceed $6,400 a mile, for the following lines in lieu of the subsidy voted in 1911:—From the Intercolonial Ry., near Orangedale, to St. Rose, N.S., 46 miles, and from the Intercolonial Ry., near McIntyre Lake, to Caribou Cove, Port Malcolm, N.S., four miles. The Minister of Railways informed the House of Commons, June 3, that no construction had been done on the line, but the applicants stated that financial arrangements had been made for immediate construction. The applicants were A. W. Chisholm, C. E. Sherman, J. D. Taylor, T. S. Courtenay. (May, 1911, pg. 411.)

Michigan Central Rd.—We are officially advised that construction has been started on the new 13-stall locomotive house at St. Thomas, Ont. The contractors are the Arnold Construction Co., Chicago, Ill., who also prepared the plans. (May, pg. 220.)

Mid Provincial and Nechaco Ry.—The British Columbia Government has granted the company an extension of time to Dec. 31, to complete surveys and file plans, etc. (April, 1911, pg. 321.)

Naas Valley and Northern Ry.—The Dominion Parliament is being asked to incorporate a company with this title to build a railway from the mouth of the Naas River to the Stikeen River, B.C.; thence northerly along the Teslin Lake to the junction with Yukon Territory. Smith and Johnston, Ottawa, are solicitors for applicants. The bill had not been passed through all its stages when Parliament prorogued.

New Brunswick Coal and Ry. Co.—Press reports state that the C.P.R. has made an appropriation of $117,000 for the betterments of this line, which is to be taken over from the New Brunswick Government, and operated in connection with the Fredericton and Grand Lakes Ry. and Coal Co.'s line, now nearly completed. The principal work to be done will be the putting in of permanent concrete piers for the bridges, and the general improvement of the roadbed. The work will be started during the summer. (June, 1912, pg. 301.)

Newfoundland Labrador.—The Newfoundland Legislature has authorized the Canadian North Atlantic Corporation to build a railway from the eastern boundary of Canadian Labrador, through Newfoundland Labrador, to Cape St. Charles, or such other point as may be approved by the Government, as part of a line which is projected to run from Quebec City. The company is granted 6,000 acres of land a mile in aid of construction. On completion of this line the company is authorized to build a branch line to a point between Bradore Bay and Cape St. Charles, to operate a car ferry therefrom to the Newfoundland coast, at Bonne Bay, and to build a railway thence to connect with the Newfoundland system. Under certain conditions the Government may build this latter piece of line. Plans for the line through the Newfoundland Labrador have to be filed within two years.

Sir Thos. Skinner, Bart., of London, Eng., who is a director of the C.P.R., advises us that he is not interested in the Canadian North Atlantic Corporation, as reported, and that he knows nothing of it.

North Ry.—We are officially advised that the names and addresses of the engineers in charge of locating parties on this projected railway are as follows:—Alex. McLellan, Rivington, Que.; W. S. Robertson, Bell River, Que., via Cochrane, Ont.; H. B. Tourigny, River Desert, Que., via Maniwaki, Que.; J. F. Rose, Duhamel, Que.; A. W. Whitney, Cochrane, Ont. June, pg. 278.)

Northern New Brunswick and Seaboard Ry.—A subsidy not to exceed $6,400 a mile, upon the usual conditions, has been granted for the building of the following line in lieu of that voted in 1912:—From Drummond Mines at Austen Brook to the Intercolonial Ry., where it intersects the branch line from Bathurst Station to Bathurst Harbor, N.B., 16.9 miles. This line is already built to the Intercolonial Ry. rather less than 16 miles, and it is to be extended to Bathurst Harbor, which is being dredged. The Minister of Railways stated recently that the original subsidy was for 26 miles, but it had been found that better harbor accommodation could be obtained by dredging out Bathurst harbor than by going further on. (Oct., 1912, pg. 502.)

Northern Pacific Ry.—J. M. Hannaford, Second Vice President, accompanied by a number of officials paid a visit to Vancouver recently. In an interview he is reported to have stated that the company will be running its trains into the city within a year, over the Great Northern Ry. tracks from Cloverdale. The section of the old New Westminster Southern Ry. from Sumas to Cloverdale will be rebuilt to make this connection, and the Great Northern Ry. passenger station will be used, but the N.P. Ry. will provide its own freight terminals.

It was reported recently that the company was negotiating for the purchase of the Kitsilano Indian Reserve, which adjoins the False Creek area, which is being laid out by the Great Northern Ry. and the Canadian Northern Ry. for their terminals. (April, pg. 169.)

Pacific and Peace River Ry.—The Dominion Parliament has extended the time within which the lines authorized by chap. 127 of the statutes of 1911 may be built. (Feb., pg. 84.)

Pacific Great Eastern Ry.—A survey party has started work at Soda Creek and Quesnel, locating the line between Lillooet and Fort George, B.C. Construction between Newport and Lillooet is being rapidly pushed and some clearing is being done beyond Lillooet. It is expected that the section from North Vancouver to Newport on Howe Sound will shortly be put under construction. (June, pg. 278.)

Pere Marquette Rd.—Press reports state that the company is expending a considerable sum upon the improvement of its terminal facilities at Rondeau, Ont., which is on the company's own line, to which point it has been gradually diverting the business at one time carried to Port Stanley, the terminal of the London and Port Stanley Ry. The latter line is being operated by the P.M. Rd., under a lease which is near its expiration.

Pointe aux Trembles Terminal Ry.—The Dominion Parliament has incorporated a company with this title to build a terminal railway and other facilities at Pointe aux Trembles, Que. (April, pg. 169.)

Prince Edward Island Ry.—The Dominion Parliament has voted the following sums on account of this line, in addition to those already mentioned in these columns:—To increase accommodation and facilities along the line, $5,000; to provide car ferry and make necessary alterations incidental thereto, including change from narrow gauge to standard gauge, $1,000,000. The Minister of Railways stated recently that the contract for the car ferry had been let to Sir W. G. Armstrong Whitworth and Co. for $138,000; that for the pier at Cape Tormentine to A. P. Mackie for $571,590; and that at Carleton Point to the Halifax Dredging Co. for $199,493. These amounts it was estimated would complete the piers and ferry ready for service. It is not intended to do anything on the way of altering the gauge of the railway this year, and nothing has been decided as to how this is to be done. Engineers have been working on the matter, and the question of laying down a third rail is being considered. The Halifax Dredging Co. has twice thrown up the contract for the Carleton Point terminals, and new tenders have been invited. (April, pg. 169.)

The Halifax Dredging Co. has abandoned the contract for the building of the car ferry slip at Carleton Point, P.E.I. The company desired to use P.E.I. sandstone in the work, but as its durability is questioned the Government refused to sanction it. The estimated cost of the work is $700,000. New tenders have been invited, to be submitted by July 2.

Reid Newfoundland Co.—Press reports state that the company has ordered 6,000 tons of steel rails. Construction has been resumed on the Trepassey branch line, the construction headquarters having been moved to Stag's Head, Nfld. It is expected to have this branch completed in August. Rapid progress is reported to have been made with the building of the Trinity spur line. (April, pg. 169.)

The Newfoundland Legislature has authorized the company to build a line from near Broad Cove to Heart's Content, and a branch line from Carbonear, extending along the north shore of Conception Bay to Grate's Cove, instead of the line from Broad Cove to Heart's Content and Gnates Cove, mentioned in the act of 1910. The subsidy granted in 1910 is made applicable to the relocated line.

St. John and Quebec Ry.—Track laying was started at Fredericton, N.B., May 27, on the first section of the line. Connection is made with the C.P.R. near Victoria Mills, by a switch, over which the steel is being taken on to the grade. (April, pg. 170.)

The Dominion Parliament has voted $6,400 a mile upon the usual conditions, in lieu of the subsidy of 1912, for the building of a line from Andover to St. John, N.B., 200 miles. This subsidy covers all the bridges on the line except those across the St. John River at Mistake, and across the Kennebecasis River at Perry Point.

The Minister of Railways, in reply to questions June 3, said there was no settled policy that the line would be built to Grand Falls. This would necessitate the building of an expensive bridge, and before the Government would subsidize the building of the additional 25 miles more information would have to be obtained as to the prospects than was at present available. The C. P. R. had offered to give the line running powers over its line from Andover to Grand Falls. (Feb., pg. 84.)

Scotstown or Megantic, to International Boundary.- The Dominion Parliament has renewed the subsidy voted in 1907, to aid in the building of a railway from the C.P.R., at Scotstown or Megantic, Que., to the International boundary, 35 miles.

Southampton Ry.—In 1911 the New Brunswick Legislature granted aid towards the building of a railway, from Mellville to Pokiok Bridge, N.B., 13 miles. At the last session it increased the total amount of aid given by way of a guarantee of bonds, from $130,000 to $156,000, the first instalment of $50,000 to be issued on the completion of five miles of line, the second instalment of $50,000 on the completion of ten miles of line, and the balance on the completion of the line to the St. John River. The line has been practically completed, and it will be operated by the C.P.R. (Feb., pg. 84.)

The Minister of Railways informed the House of Commons recently that a subsidy contract had been signed with the company under the terms of the act granting aid to certain railways. The line was to be 13 miles long, and $48,442.88 has been paid on account of the subsidy.

By Dominion legislation the company is authorized to dispose of its line to the C.P.R.

Taber Transit Co.—Press reports state that it is hoped to be able to let a contract at an early date for the building of a line northerly from Taber, Alta., to the coal mines at Retlaw and Bow City. The work will be light, mostly earthwork, with about 20,000 cubic yards of rock, the approximate cut averaging about 5,000 cubic yards a mile, and the fill about 7,000 cubic yards a mile. The maximum gradient will be 1.9% and the maximum curvature 10 degrees. There will be eight short pile trestles, one steel bridge 420 ft. long, four stations, 12 freight sheds, and other necessary buildings. A coal and grain traffic is to be catered for. The company has power to use electricity as a motive power. J. V. Kramer is President, and V. O. Eastland is Chief Engineer. (Apr., pg. 170.)

Timiskaming and Northern Ontario Ry.—We are officially advised that it is expected to increase the capacity of the repair shops at North Bay, Ont., during this year, but that the plans have not been definitely settled. Press reports stated that plans had been prepared for new shops and increased terminal yards to cost $350,000, and that it was probable that a contract for the work would be let to Sherwood and Sherwood, North Bay. (May, pg. 220.)

The Dominion Parliament has authorized the payment to the Province of Ontario of a subsidy of $6,400 a mile for the following lines which have been built, and are being operated by the T. & N.O.R. Commissioners. From North Bay to Cochrane, Ont., 252.8 miles; branch from Englehart to Charlton, 7.8 miles; branch from Cobalt to Kerr Lake, 3.9 miles; branch from Iroquois Falls to Timmins, 33.2 miles; branch from Earlton to Elk Lake City, 28.5 miles; branch from Iroquois Falls Jct. to Iroquois Falls, 7.25 miles. (May, pg. 220.)

Tobique and Campbellton Ry.—The Dominion Parliament has voted a subsidy at the usual rate and upon the ordinary conditions, for the building of a line from Plaster Rock, along the Tobique River valley, to Riley Brook, N.S., 28 miles. This is in lieu of the subsidy voted in 1910. The Minister of Railways said recently that he had received an assurance from the company that it was ready to go ahead with construction. The directors include D. Fraser, A. Fraser, H. N. Murchie. This line is an extension of the Tobique Valley Ry. now terminating at Plaster Rock, and operated as a C.P.R. branch. (May, pg. 220.)

Toronto, Hamilton and Buffalo Ry.—An alternative plan for the removal of grade crossings in Hamilton, Ont., has been submitted to the Board of Railway Commissioners. The company proposed a system of track elevation, but the citizens objected on the ground of its expense, and secured the advice of an engineer, who prepared plans showing depressed tracks, the cost of carrying out which he claimed would be considerably less than the $2,900,000 which the company estimated the track elevation would cost. The estimate was not made public, but it was arranged that the whole matter would be gone into at a conference of engineers.

We are officially advised that grading for a second track between Welland and Fenwick is in progress, and all passing sidings between Hamilton and Welland are being extended to accommodate 90 cars. New passing sidings are also being established at some additional stations between these points. The second track is being built alongside the present track, and there are no diversions. No changes are being made in the grades, as the line is practically level from Vinemount east to Welland. The grading is very light and will not average over 2,500 cubic yards to the mile. The line will be laid with 100 lb. steel. The contractor is J. L. Boyd, Toronto, and the work is being carried out under the supervision of R. L. Latham, Chief Engineer. (May, pg. 220.)

Van Buren Bridge Co.—The Dominion Parliament has vested in the V.B.R. Co. the charter rights of the Restigouche and Western Ry. (now known as the International Ry. of New Brunswick), to build a railway bridge across the St. John River at St. Leonards, N.B. (May, pg. 220.)

Western Dominion Ry.—Press reports state that Great Northern Ry. interests have acquired the charter rights of the W.D. Ry. O. E. Culbert, Ottawa, the company's solicitor, was in Calgary, Alta., June 8, in connection with the company's interests, but refused to make any statement. (Feb., pg. 84.)

White Pass and Yukon Route.—O. L. Dickeson, arrived in Vancouver, B.C., June 3, and proceeded to Skagway and Dawson City, to inspect the line, and to give consideration to plans for its extension. In an interview at Vancouver he is reported to have stated that if the Canadian and United States Governments would grant subsidies the company would extend its line from White Horse down the Yukon River to Dawson, Yukon, and Fairbanks, Alaska.

Railway Rolling Stock Notes.

The Quebec Central Ry. has received a 10 wheel locomotive from Canadian Locomotive Co.

The Duluth, Winnipeg and Pacific Ry. has received 300 box cars from Mount Vernon Car Mfg. Co.

The Algoma Central and Hudson Bay Ry. has ordered a baggage car from Canadian Car and Foundry Co.

The St. Lawrence Bridge Co. has ordered 4 steel underframe flat cars, 40 tons capacity, and 4 pairs of trucks, 50 tons capacity, from Canadian Car and Foundry Co.

The C.P.R., between May 14 and June 12, ordered the following rolling stock:—6 refrigerator freight cars, 16 vans, 7 stock cars, 1 box baggage car and 10 class U3 locomotives, from its Angus Shops; and 11 Bucyrus ploughs and 3 Western spreaders, from Mussens Limited.

The Mond Nickel Co. has ordered 12 Otis all steel ore cars from Hart-Otis Car Co. Following are chief dimensions:

Length over end sills	21 ft. 0½ ins.
Length inside	19 ft. 0 ins.
Width over all	9 ft. 11¼ ins.
Width inside	9 ft. 6 ins.
Height inside	4 ft 6 ins.
Height from rail	8 ft. 10 13-16 ins.
Number of doors on each side	4
Capacity	100,000 lbs.

In response to questions in the House of Commons recently, the Minister of Railways and Canals, in referring to the appropriation of $1,000,000 for rolling stock for the Intercolonial Ry., stated that on account of that sum, 400 steel frame cars and 20 freight locomotives had been ordered. The cost of the locomotives was $470,000, and of the freight cars $484,000, while inspection, etc., made up the balance.

The Canadian Northern Ry., between May 15 and June 13, received the following additions to rolling stock:—7 consolidation locomotives, from Canadian Locomotive Co.; 15 heavy ten wheel locomotives, from Montreal Locomotive Works; 6 first class cars, 5 baggage cars, and 50 box cars, from Canadian Car and Foundry Co.; 2 combination cars, from Preston Car and Coach Co.; 5 second class cars and 100 flat cars, 60,000 lbs. capacity (a further 41 have since been delivered), from Crossen Car Co.; 170 Hart cars, from Hart-Otis Car Co.

The Canadian Car and Foundry Co., between May 15 and June 15, delivered the following rolling stock:—to Canadian Northern Ry., 165 wooden ballast cars 40 tons capacity, 5 first class cars, 3 wooden baggage cars and 97 wooden box cars 30 tons capacity; to C.P.R., 553 box cars 40 tons capacity, 10 steel underframe flat cars 40 tons capacity, 200 ballast cars 50 tons capacity, 78 steel underframe stone cars 40 tons capacity, 6 plough cars and 7 wooden tourist cars; to Dominion Iron and Steel Co., 39 quarry cars; Hart-Otis Car Co., 3 plough cars; International Ry., 89 steel frame box cars 40 tons capacity, 4 steel frame box cars 30 tons capacity, 81 Hart ballast cars 40 tons capacity; Toronto, Hamilton and Buffalo Ry., 42 wooden ballast cars 40 tons capacity; Montreal Tramways Co., 3 steel street car bodies.

The C.P.R., between May 14 and June 12, received the following additions to rolling stock:—174 freight refrigerator cars, 45 stock cars, 8 horse cars, 9 suburban cars, 5 dining cars, 5 box baggage cars, 10 sleeping cars, 16 baggage and express cars, 8 class E3 and 1 class U3 locomotives, from its Angus Shops; 474 steel frame box cars, 19 steel flat cars, 177 ballast cars, 59 stone cars, and 4 tourist cars, from Canadian Car and Foundry Co.; 276 steel frame box cars, from National Steel Car Co.; 157 steel frame box cars, from Nova Scotia Car Works; 4 Lidgerwood unloaders, from Canadian Allis-Chalmers Ltd.; 3 Jordan ballast spreaders, 2 Industrial wrecking cranes and 3 Rodger ploughs, from F. H. Hopkins and Co.; 1 Bucyrus steam shovel, 10 Bucyrus ploughs and 3 Western spreaders, from Mussens Limited; 20 class G2 locomotives, from Montreal Locomotive Works; 10 sleeping cars, from Pullman Co.; 54 air dump cars, from Western Wheeled Scraper Co.; and 240 steel frame box cars, from Barney and Smith Car Co.

Railway Finance, Meetings, Etc.

Algoma Central and Hudson Bay Ry.—A special meeting of shareholders was called to be held at Sault Ste. Marie, Ont., June 16, to pass bylaws as to the number of directors, and the quorum necessary for a meeting.

Canadian Northern Ry.—Winnipeg and Northern Ry.—The Board of Railway Commissioners has recommended the Governor-in-Council to approve of the agreement amalgamating the W. & N. Ry., with the C.N.R. The W. & N. Ry. is a short line running out of Winnipeg, which has always been a C.N.R. line.

Canadian Pacific Ry.—Announcement was recently made that the C.P.R. Co. will redeem at once £7,191,500 of 5% mortgage bonds which fall due July 1, 1915. The redemption price is £102. Bondholders desiring to take advantage of the offer were asked to deposit their bonds, with Baring Bros. & Co., London, Eng., prior to June 29.

Grand Trunk Pacific Ry.—A meeting of shareholders is to be held at Montreal, July 16, to authorize an issue of $15,000,000 of debentures under the provisions of the G.T.P. Loan Act of 1913.

Intercolonial Ry.—It was stated in reply to a question in the House of Commons recently that the receipts of the I.R.C. for the year ended Mar. 31 amounted to $11,467,207.45, of which $3,438,447.32 was from passenger traffic and $8,028,760.13 from freight traffic.

Kingston and Pembroke Ry.—Application will be made to the Ontario courts to appoint a trustee in place of H. V. Rogers, deceased, in the matter of a mortgage of the K. and P. Ry., made Dec. 31, 1898.

Temiscouata Ry.—Gross earnings for March, $22,979.89; operating expenses, $15,751.04; net earnings, $7,228.85. Aggregate net earnings for nine months ended Mar. 31, $47,210.

It is anticipated that on account of the more favorable traffic returns for the year ended June 30, the directors will be enabled to pay a dividend of 1½ or 2% on the 5% income bonds, against 1% for the past five years.

Toronto, Hamilton and Buffalo Ry.—Following are the directors for the current year, elected at the annual meeting, June 3:—J. N. Beckley, President; Sir Thos. G. Shaughnessy, Vice President; W. C. Brown, W. H. Newman, H. B. Ledyard, D. McNicoll, W. K. Vanderbilt, Jr., Sir Edmund Osler, W. F. Torrance, W. L. Scott and D. W. Saunders.

White Pass and Yukon Route.—Aggregate earnings for four months ended Apr. 30, $134,805, against $81,439 for the same period 1912.

The introduction of heavy passenger equipment is rapidly doing away with both 4 and 6 wheel wooden frame trucks, their place being taken by cast steel and rivetted wrought steel frames, the reduced cost of maintenance amply justifying this change.

Canadian Pacific Railway Construction, Betterments, Etc.

Atlantic Division.—A contract is reported to have been let to H. Post, Woodstock, N. B., for the erection of new shops at McAdam, N.B., at an estimated cost of $100,000. The new buildings will be of concrete and steel, and will be built on a site partially occupied by other buildings, which are now being torn down, and the remaining part of the site cleared.

Eastern Division.—The new portion of the Windsor St. station, Montreal, was opened to the public, June 7. The entrance is from the corner of Windsor and St. Antoine streets.

It is expected that the alterations to the Place Viger hotel, Montreal, will be completed so as to permit of the addition being opened to the public early in July.

Press reports state that additions are to be built to the Angus shops, Montreal, at a cost of about $500,000. The additions will be made, it is stated to the passenger and freight car shops, the locomotive shop, upholstering shop, pattern storage building, maintenance building, general office building, and the power house building.

Campbellford, Lake Ontario and Western Ry.—We are advised that the contract for the erection of all the buildings on this railway between Glen Tay and Agincourt, Ont., has been let to the John S. Metcalf Co., Montreal. The buildings include seven brick stations, 12 wooden stations, nine 40,000 gall. water tanks; a 12-stall locomotive house with turntable, machine shop, coaling plant, ash pit, and sand house; nine freight sheds at Trenton, Ont.; seven station residences, 25 tool houses, and several miscellaneous buildings, making in all 85 structures. It is intended to have all these completed by the end of this year.

Ontario Division.—The Board of Railway Commissioners has approved location plan for an additional track from lot 23, station 4611.59, concession 3, Scarboro tp., mileage 87.34 to Leaside Jct., mileage 95.64, Havelock Division, and has approved of revised grade as built. This forms part of the second track between Toronto Union Station and Leaside Jct., which is being built in connection with the Campbellford, Lake Ontario and Western Ry.

Considerable progress has been made with with the grading for the second track from west of Islington to Guelph Jct. Most of the culverts have been put in and the piers for the larger structures are being built. None of the bridge structures are very large. It is expected that track laying will be started early in July.

Tillsonburg, Lake Erie and Pacific Ry.—The subsidy voted by the Dominion Parliament in 1912 for the building of a line from Ingersoll, northerly to a junction with the St. Marys and Western Ontario Ry., at Embro, Ont., 10.38 miles, has been revoked. The Minister of Railways stated that should this line not be built at once, there would be no further revote of the subsidy.

Lake Superior Division.—Work is reported to have been started on additions to the shops at North Bay, Ont. Among the buildings to be put up will be an erecting shop, with accommodation for the repair of ten locomotives; a car construction and repair shop; and an additional machine shop.

Manitoba Division.—It is expected that the new yards at North Transcona, east of Winnipeg, will be in full operation by Sept. 15. About 45 miles of tracks in the yards are being used. and on Sept. 15, an additional 47 miles will be ready for use. The cut-off connecting the west part of Winnipeg with the yard has been completed, with the exception of the bridge, the piers for which are being put in. The completion of this structure will enable the bringing of the grain traffic direct into the yard instead of hauling it through the city.

An agreement has been reached between the company and the Winnipeg City Council to remove the present subway at Main St., and to build a new one considerably wider and 6 ft. higher, the work to be done within two years.

It is expected that a start will be made at an early date on the alteration and enlargement of the passenger terminal facilities in Winnipeg. The improvements involve a 474 room addition to the Royal Alexandra Hotel, a six story office building to replace the present baggage and old express offices, extension to the waiting room and train shed, and other minor improvements. The estimated cost of the whole is $1,500,000. The contract has been let to Westinghouse, Church, Kerr and Co. S. J. Brunkerhoff is in charge of the work for the contractors.

The subsidy voted in 1908 for the building of a line from Gimli to Icelandic River, at Riverton, Man., 30 miles, has been revoked by the Dominion Parliament. This is an extension of the Selkirk and Winnipeg Beach Branch beyond Gimli.

Saskatchewan Division.—The Dominion Parliament has revoted the subsidy granted in 1908 for the building of 123 miles of railway from Moose Jaw, Sask., northwesterly. The Minister of Railways stated recently that the line had been built, but the subsidy had lapsed.

The Board of Railway Commissioners has authorized the opening of traffic of the branch from Kerrobert northeasterly from mileage 0 to 36.1.

Press reports states that plans are under consideration for the building of machine and repair shops at Wilkie, at an estimated cost of $180,000.

The Board of Railway Commissioners has authorized the building of a bridge over the South Saskatchewan River, on the branch northwesterly from Swift Current, subject to the conditions that a draw span be provided of such width as may be sanctioned by the Department of Public Works, which Department must also approve of the location of the bridge.

Alberta Central Ry.—The Dominion Parliament has regranted the subsidy voted in 1908 for the building of a line from Red Deer to Rocky Mountain House, Alta., 70 miles. The line is under contract, and a considerable amount of grading has been done.

Alberta Division.—The newly built line from Bassano to Irricana, was opened for traffic June 2.

The first passenger train to cross the new high level bridge over the Saskatchewan River at Edmonton left Strathcona June 2, and a regular train service was established into Edmonton June 15.

Calgary-Vancouver Second Track.—Contracts are reported to have been let for the following mileages of second track work:—Revelstoke to Taft, 24 miles; Westmore to Kamloops, 25 miles; Kamloops to Tranquille, 9 miles; the contractors being Grant Smith, McDonnell and Co., Pacific Building, Vancouver.

The Board of Railway Commissioners has authorized the opening of traffic of the second track completed between Mission Jct., and Hammond, B.C., 18.29 miles.

Winnipeg press dispatches, June 16, state that the contract for the building of the double track tunnel under the Selkirk Mountains, starting from near Bear Creek Station, has been let to Foley Brothers, Welch and Stewart.

Pacific Division.—The plans for the new C.P.R. line from Port Moody to North Vancouver, are under the consideration of the Board of Railway Commissioners. The route from Port Moody is around the head of the inlet and west, bridging the north arm and on through North and West Vancouver to Point Atkinson.

Considerable progress has been made with the new station and terminal buildings in Vancouver.

It is proposed to erect a $70,000 building at the False Creek yards, Vancouver, for the use of the sleeping and dining car department. (June, pg. 278.)

Intercolonial Railway Construction, Betterments, Etc.

The Dominion Parliament has voted the following sums in addition to those already mentioned in these columns on account of the Intercolonial Ry. new terminal facilities at Halifax, $2,500,000; second track from Chaudiere Jct. to St. Romauld, Que., $173,000; improvements at Levis, Que., $160,000; locomotive and car shops at Moncton, N.B., with equipment, $136,000; car ferry and dock at Mulgrave, N.S., $460,000; improvements at Point Tupper, N.S., $90,000; additional facilities at Riviere du Loup, Que., $28,000; surveys and inspections, $25,000; diversions at Sydney Mines, N. S., $40,000; increased accommodation and facilities at 19 points on line, and $25,000 for contingencies, $126,000; increased accommodation at Truro, N.S., $155,000; spur to Wallace Harbor, $69,500; to increase water supply $41,500.

Reference was made on pg. 264 of our June issue to the plans for the construction of new terminals at Halifax. The Department of Railways has under consideration tenders for grading a double track line from Rockingham to the site of the new terminals. The Minister of Railways paid a visit to the city June 16 to look into the project, and Jas. MacGregor, the engineer in charge, has been in consultation with the City Engineer, in connection with a number of matters. He is reported to have stated that the building of the line will be started early in July, and that the surplus material from the cuttings will be used in filling up the wharves etc., at the terminal site. $1,000,000 has been voted by the Dominion Parliament on account of the construction of a railway from Dartmouth via Musquodoboit Harbour and the Musquodoboit Valley to Dean's Settlement. The Minister of Railways stated recently that the line will be 73 miles long, and its estimated cost $28,545 a mile. It will be laid with 65 and 67 ft. rails taken up from the Intercolonial Ry. The $1,000,000 includes a revote of $600,000. The contract was originally let by the late Government. The present Government is not yet prepared to make any announcement as to the building of the proposed line to Guysboro, the original estimate for the construction of which was $68,000 a mile. (May, pg. 219.)

The Intercolonial Ry. has received the following additions to rolling stock:—19 box cars, 60,000 lbs. capacity, 218 box cars, 80,000 lbs. capacity, from the Canadian Car and Foundry Co.; 99 Hart convertible cars, from the Hart-Otis Car Co.; and 4 freight locomotives from the Canada Foundry Co.

Canadian Northern Railway, Construction, Betterments, Etc.

Canadian Northern Quebec Ry.—The Dominion Parliament has extended the time for the building of certain branch lines in Quebec.

Plans have been approved by the Board of Railway Commissioners for the erection of a new passenger and freight station at Maisonneuve, Montreal, to be situated on the south side of the track at the junction of Third and Fourth Avenues.

Land has been acquired in Hochelaga for the enlargement of the company's yards and the erection of new workshops. It was reported at the City Hall that the carrying out of the work would involve the closing of a number of streets. The matter is being looked into by the engineer and a committee of the council.

Canadian Northern Montreal Tunnel and Terminal Co.—It was reported by S. P. Brown, Chief Engineer in charge of the tunnel construction work, June 5, that 800 ft. of heading in solid rock had been cut in 31 days from the Dorchester St. end. The heading has now advanced 3,750 ft. west of Dorchester St., and very nearly equal progress has been made on the other heading. It is estimated that, if the same rate of progress is maintained the headings will be joined in September. About 3,600 ft. of the tunnel has been completed.

Canadian Northern Ontario Ry.—A proposition is reported to have been submitted suggesting that the C.N.O.R. join with the C.P.R. and the G.T.R. for the building of a joint four track line from a common point near Queen St. East at the Don River, Toronto, where a union station can be built, alongside the Don, to the union station tracks.

Plans have been filed showing the proposed entrance into Toronto from the west. They show a line four miles long, and include a tunnel of 2,360 ft. from east of St. Clarens Ave., just south of Davenport Road, to Talbot St. The tracks will be depressed at the west end, and the Humber will be crossed by a high level bridge. We have been officially advised that it is expected to start construction of this bridge by the end of June. In connection with the entry of the line into Hamilton, the Mayor has been advised that the company is willing to enter into an arrangement with the other companies for a common right of way through the city, and the Mayor has arranged for conferences with a view of ascertaining whether such a plan would be feasible. It is reported that the project to build from Beamsville direct to the Niagara River has been abandoned, and that a route terminating at Bridgeburg or Fort Erie will be chosen. A bridge will be built across the river and the line extended to Buffalo, so the reports state.

Montreal-Ottawa-Port Arthur Line.—The agreement between the company and the North Bay Town Council respecting the route of the line through the town was approved June 11, and the Mayor authorized to sign it.

Canadian Northern Ry.—It was reported in Winnipeg, June 15, that about 200 miles of line, principally in Saskatchewan and Alberta, were ready to be handed over to the operating department.

Station construction work is being gone on with on the branch lines. A considerable number have recently been completed, a recent list shows those finished to be:—Delisle extension, west of McRory, 8 miles; Swift Current extension from Avonlea, 11 miles; Prince Albert-Battleford branch, 6 miles; Melfort-Humboldt branch, 2 miles; Saskatoon-Calgary line from Excel, mileage 198, 8 miles; Vegreville-Calgary line, 10 miles.

Work is being pushed on the Vonda-Melfort branch in Sask., and on the Vegreville-Calgary line, Alta., so as to have them both ready for traffic after the harvest.

Canadian Northern Pacific Ry.—A. R. Mann, of the Northern Construction Co., is reported to have stated in Vancouver, June 5, that grading will be finished to the Albreda Summit, 430 miles west of Edmonton, by the end of October, and that track will be laid over the whole of the line in British Columbia by Aug. 1, 1914.

Working eastward from Port Mann track has been laid to Boston Bar, 116 miles, and a train service was put on as far as Spuzzum, 115 miles, June 16. An 11 span viaduct, 1,000 ft. long, is being built at Anderson Creek, a few miles further east, and other bridge work is being completed to Kamloops, to which point the grading has been finished. It is expected to have the track laid to Kamloops by the end of the year.

Ties are being delivered for the Lulu Island branch, and it was expected to start track laying by the end of June. (June, pg. 277.)

Canadian Northern Railway Tunnel in Toronto.

The new line which the Canadian Northern Ontario Ry. has projected from Toronto to the Niagara frontier, will negotiate the escarpment near the northwest corner of Toronto by a tunnel 2,360 ft. long. The line, from the proposed union station at North Toronto, will parallel the C.P.R. North Toronto line for about 3 miles, branching off northwesterly, the original survey locating the line to the south of the shoulder of land which the revised line will pass under.

The east portal to the tunnel will be at the corner of Davenport Rd. and St. Clarens Ave., alongside the Canada Foundry Co.'s plant, the tunnel emerging at the west portal a short distance south of St. Clair Ave., just west of the G.T.R. Toronto-North Bay line, the greatest depth over the tunnel being 40 ft. From this point westerly to the outskirts of Toronto, the tracks will be depressed in a 15 to 20 ft. cut, all the streets crossing overhead. This tunnel and depressed tracks will mean a big saving in what would otherwise be heavy property damages, and at the same time will eliminate all grade crossings.

The tunnel will be double tracked, probably of the same form as that now being used in the tunnel the C.N.R. interests are building under Mount Royal at Montreal. This construction is the twin tunnel type of horseshoe construction, with a dividing wall between, it having the advantage of a saving in material and a self induced ventilation.

In the vicinity of the tunnel, there will be three railway crossings to be provided for, but by the use of the tunnel, none of them will be at grade. The G.T.R. Toronto-North Bay line will be passed under just before coming out at the west portal. This will also be the case with the crossing of the parallel lines of the G.T.R. old main line, and the C.P.R. Windsor line a short distance west of the west portal.

The C.P.R. has opened a city freight and passenger office at 404 Victoria Ave., Fort William, Ont., in which the staff of the District and City Passenger Agent and of the District Freight Agent are located.

Burrard Inlet Tunnel and Bridge Company's Project.

The organization meeting of the company was held at Vancouver, June 5, the shareholders consisting of representatives of the district of Vancouver, city of Vancouver, North Vancouver, West Vancouver, and a number of individuals. The company was formally organized, and accounts for expenditures of $56,000 were approved. Following are the officers and directors: President, F. Carter-Cotton, representing West Vancouver; Vice President, Reeve May, representing North Vancouver; other directors:—Alderman F. E. Woodside, representing Vancouver city; Alderman G. W. Vance, representing North Vancouver Council; G. H. Bridgeman and — Loutet, representing the district of North Vancouver. The solicitors are Burns and Walkem, Vancouver, Pringle and Guthrie, Ottawa.

The Dominion Parliament has voted $350,000 towards the construction of the bridge proposed to be built across the Second Narrows of Burrard Inlet, Vancouver, B.C., in lieu of the subsidy granted in 1910. The subsidy was originally granted to the Vancouver, Westminster and Yukon Ry. The B.I.T. and B. Co. was merely a holding company representing the municipalities interested, which proposed to build the bridge with Provincial and Dominion aid.

The bridge, which is intended to cross the Second Narrows at an angle of 75 degrees to the average direction of the flood and ebb currents, is estimated to cost $2,225,000. It will have a clear headway of 45 ft., and will be 64 ft. 5½ in. wide, providing space for a single track steam railway, a roadway with double track for electric cars, and an eight foot sidewalk. It will be built on six piers. The three principal spans will have a total length of 1,045½ ft. Two of these will be fixed spans of 232 ft. each, and the central swing span will be 581½ ft. long, revolving at the centre and giving a clear navigable waterway on each side of 225 ft. (April, pg. 168.)

Dominion Government Internal Storage Elevators.

The Minister of Public Works recently announced that the Government had decided to erect two interior storage elevators, at Moose Jaw and Saskatoon, Sask., respectively, each to have a capacity of from 3,000,000 to 4,000,000 bush., and costing approximately $1,000,000. Similar elevators will be built in Alberta, and though the locations had not been decided on, the first will probably be at Calgary. In addition to these storage elevators, the Government has decided to build a transfer elevator on the Pacific coast, to be owned and operated by the Government, in connection with the anticipated growth of the grain export trade, after the opening of the Panama Canal. A Government owned terminal elevator of large capacity will also be built at Port Nelson, the Hudson Bay terminus of the projected Government railway from Pas, Man., to Hudson Bay. Supplementary estimates include $4,000,000 for this elevator construction, and orders have been given to the Grain Commission, under the supervision of which they will be built, to proceed at once with preparatory work in connection with those to be built at Moose Jaw and Saskatoon. The cities have offered free sites, and the Commission will proceed at once to select same. The elevators will be thoroughly modern, and will be equipped with full inspection and drying equipment.

National Transcontinental Railway Construction.

The Dominion Parliament, at its recent session, [illegible] on account of the construction of this railway from Moncton, N.B., to Winnipeg, Man. [illegible] completed. The amount expended on the [illegible] expected to have the track all laid, and the [illegible]

[illegible] the line in operation from Moncton to Winnipeg by the end of the summer of [illegible] formed, June 13, that the contract for the terminal station and the workshops at [illegible] submitted for signature as soon as ready. [illegible] to [illegible]

It is [illegible] sary to [illegible]

The first section of the journey is over the N.T.R. to Superior Jct. and the second over the G.T.P. [illegible] from Superior Jct. to Fort William. (June, pg. 277.)

Grand Trunk Pacific Railway Construction.

The Dominion Parliament has passed an act authorizing an advance from the Consolidated Fund [illegible] to assist the company in completing the line from Winnipeg to Prince Rupert; such advance to be repayable with 4% interest [illegible] the company's [illegible] of the Acts of 1906, and to be guaranteed by the G.T.R. The Act also provides that the [illegible] is in addition to any sums now remaining unborrowed and negotiable of the loans heretofore authorized.

The Minister of Finance, in explaining the proposals, said the object was to provide [illegible] proceeds of the funds already provided were insufficient. "The cost of construction of the prairie section up to April 30, as estimated by the chief engineer, was $35,438,230.31. To meet this estimated outlay there has been available, from the three sources mentioned, [illegible], leaving a balance of $4,700,821.10 on the prairie section, plus some additions for trestle work, $2,700,000; for additions including building additional elevator tracks and extending some of those already built, constructing new stations, section houses, tank houses, etc., of $3,600,000, making a total of $10,[illegible] required to complete the prairie section. [illegible] which will be exceeded according to the latest available estimates of the Chief Engineer, is [illegible]. Call this $70,000,000. Of this 25% is to be furnished by the G.T.P. This amounts to $17,500,000. The proceeds of the series B bonds were $9,000,000. This leaves a balance to be furnished from other sources—[illegible] $15,000,000—of $8,500,000. So, according to this estimate, an additional [illegible] is required to complete and fully equip the prairie section, and a balance of $8,000,000 to complete the mountain section, making a total of $18,000,000. This will be exceeded, so call it $20,000,000. We are providing $15,000,000, which will be available [illegible]"

[illegible] Vancouver May 22 from an inspection of the line easterly from Prince Rupert, B.C., and subsequently inspected the construction in progress westerly as far are Fort George. He reports that the grading easterly has been completed to Bulkeley Summit, and it [illegible] A considerable amount of grading has been done east of Bulkeley Summit towards Fort George, [illegible] track laid to that point by the end of the year. [illegible] last spike early in the summer of 1914, at a point between Fort George and Fraser Lake, B.C. (June, pg. 277.)

The Master Boiler Makers' Association's annual convention was held at Chicago, [illegible]

The Toronto Viaduct Proposition.

The Dominion Parliament has passed the Toronto Viaduct Act, which authorizes the G.T.R., the C.P.R., and the Toronto Harbor Commissioners, or any of them, in addition to their respective powers under the Railway Act, to expropriate for the purposes of the Toronto viaduct and works connected therewith or incidental thereto, any lands in Toronto covered by water within the district south of the existing C.P.R. right of way, from Yonge St. to the prolongation southerly of Berkeley St., and thence south of the G.T.R. right of way to Cherry St., and extending out to Windmill lane, and also a strip not exceeding 150 ft. wide immediately south of Windmill lane from the prolongation of Parliament St. to Cherry St.

The Minister of Railways in explaining the necessity for the passing of this act said the Board of Railway Commissioners' first order was for a four track viaduct, but it was found that this would not be sufficient for the traffic. The matter was reconsidered, and it was determined to build a six track viaduct. The act gives authority to the railways interested and the city of Toronto to expropriate between the existing tracks and the water. The Toronto Harbor Commissioners were in favor of the proposition in order to facilitate the development of the harbor.

Quebec Bridge Construction.

Three million dollars were voted by the Dominion Parliament at its recent session on account of the construction of the bridge across the St. Lawrence River at Cap Rouge, near Quebec. The Minister of Railways informed the House of Commons that up to the close of the construction season of 1912, there had been laid 63,792 cubic yards out of 105,000 cubic yards of masonry in the substructure. The north abutment and north outer pier are finished; south main pier about 50% done; north main pier about 75% done,; north anchor pier about 50% done; south anchor pier about 10% done. He expects that the work will be completed by the end of this year. In connection with the superstructure he said: The contractors have during the past year completed a new plant at Rockfield, Que., and they have turned out a large quantity of material. This plant has been in operation since the first of this year and about 1,500 tons of the members of the bridge have been fabricated, and part of the material has been sent to the bridge site. Steel for the false work, crane, etc., is being shipped to the site. Ten thousand tons of steel have been ordered from the mills at Pittsburgh, and of this, 6,200 tons have been delivered at the shops at Rockfield and 2,000 tons of the same have been manufactured. The contractors are putting in the concrete foundations for the false work for the approach span and for the crane runways on the north side, and are erecting false work on the south side. The steel for the anchorage has been completed. The crane [illegible] ready for operation. Regular shipments of steel to the site will be commenced shortly. The amount paid so far to the contractors for the superstructure is $471,[illegible]

Examinations in connection with the three scholarships covering four years' free tuition in the Faculty of Applied Science at McGill University, offered by the G.T.R. to apprentices and other employes under 21, and to sons of employes, were held during June.

Dominion Subsidies in Aid of Canadian Northern Railway Lines.

The Dominion Parliament has voted the following subsidies in aid of the building of the Canadian Northern Ry., and its allied lines:—To the Canadian Northern Ontario Ry., for a line from Toronto to Ottawa, Ont., 250 miles, at the rate of $6,400 a mile; for a line from Ottawa to Port Arthur, Ont., 910 miles, $12,000 a mile. To the Canadian Northern Alberta Ry., for a line from Edmonton to the boundary between Alberta and British Columbia, near the Yellowhead Pass, 260 miles, $12,000 a mile. The lines are to be completed within three years from Aug. 1, 1913; running powers and other traffic facilities are to be given to other railways under conditions to be fixed by the Board of Railway Commissioners, but such orders may be varied or rescinded by the Governor in Council; transportation is to be furnished to the government for governmental purposes at reasonable rates, and in payment of these charges the government is to be credited by the company with a sum equal to 3% on the amount of subsidy received up to $6,400 a mile; that books showing the cost of construction and cost of operation shall be produced when desired; that $7,000,000 of the common stock of the C.N.R. shall be transferred to the Government, which may be disposed of at the discretion of Parliament, such stock to be held in trust by the Minister of Finance and Receiver General.

The Minister of Railways, in explaining the reason for the granting of this aid, said the total amount was:—Ottawa to Port Arthur, 910 miles, at $12,000 a mile, $10,920,000; Edmonton to Yellowhead Pass, 260 miles, at $12,000 a mile, $3,120,000; Toronto to Ottawa, 250 miles, at $6,400 a mile, $1,600,000, a total of $15,640,000. The cost of the Toronto-Ottawa line was estimated at $41,131 a mile, and the subsidy was at the regular rate. The average cost of construction of the Ottawa-Port Arthur line was $49,381 a mile. The Dominion Government had already voted a guarantee of bonds for $35,000 a mile, but the company had only been able to dispose of its bonds at 90¾, which produced $31,760,000. The average cost of the Edmonton-Yellowhead Pass line was estimated at $38,500 a mile, in aid of which the Government had already guaranteed bonds, varying from $13,000 to $35,000 a mile, which bonds had produced on an average $22,400 a mile. The cost of these two lines was estimated at $54,638,981, and they had been financed to the amount of $34,578,220, leaving a deficiency of about $20,000,000, towards which the government proposed to grant $14,040,000. A comparison with the aid granted to the C.P.R. could not fairly be made, as that line was a pioneer line, but a comparison could fairly be made with the G.T. Pacific Ry. The saving to the G.T.P. Ry. by reason of the Government building the eastern section was estimated at $26,979,640, and the aid given in respect of the western section was by way of guaranteeing bonds for $62,187,000; by way of loan $10,000,000, implementing guarantee $13,000,000, interest on bonds for seven years $10,561,320. The aid given or proposed to be given to the C.N.R. was as follows:—

Guarantee of bonds—	
Montreal to Port Arthur	$ 8,060,000
Grand View to Edmonton	8,060,000
Edmonton to Yellowhead Pass	6,720,000
	$50,655,000
Cash subsidies—	
Ottawa to Hawkesbury	$ 367,872
Stanley to Fort Frances	1,355,326
Fort Frances to Rainy River	179,200
Yellowhead Pass to Vancouver	6,180,000
Cash subsidy under proposed legislation	14,040,000
	$22,122,398

No land grant had been given direct to the company, but it had through the purchase of other lines acquired with them land grants for 4,000,000 acres, of which 1,225,600 acres applies on its main line.

The Minister of Finance gave an exhaustive analysis of the financing of the company, which showed that the Dominion Government had guaranteed bonds in respect of the building of 2,552 miles of line, of which $57,992,268 had been issued, realizing $52,823,428. On the company's affiliated lines are bonds guaranteed by the Dominion Government amounting to $37,216,664; Ontario, $7,860,000; British Columbia, $16,490,000; Manitoba, $349,000; and there had also been issued $32,808,283 of bonds which were not guaranteed. The total amount of bonds guaranteed for the C.N.R. and its affiliated companies by the various governments amounted to $120,120,461, and of bonds not guaranteed $145,379,151, making the total amount of securities outstanding $265,499,612. The bonds guaranteed by the governments altogether were as follows:

Dominion of Canada	$58,043,250
Province of Manitoba	24,110,546
Province of Saskatchewan	8,030,000
Province of Alberta	5,586,665
Province of British Columbia	16,490,000
Province of Ontario	7,860,000

The mileages laid were:—Quebec to Montreal, 178; Hawkesbury to Ottawa, 57; Port Arthur to Edmonton, 1,265. There were under construction from Ottawa to Port Arthur 910 miles, from Edmonton to Yellowhead 260 miles, and from Yellowhead to Vancouver 525 miles; total, 1,695 miles. Contracts called for completion by the end of 1913, and by the summer of next year it was expected that the C.N.R. would be running across the continent.

The following figures were given, showing subsidies granted:—Ottawa to Hawkesbury, $367,000; Ottawa to Port Arthur, nothing; Stanley to Fort Frances, $1,355,000; Fort Frances to Rainy River, $179,000; Winnipeg to Summit, nothing; Montreal to Quebec, $1,927,000; Yellowhead to Vancouver, $6,180,000. The total of guarantees, Dominion and provincial, on the main line from Montreal to the Yellowhead Pass was $57,000,000, or about $20,000 a mile on the 2,700 miles.

Replying to questions in the House of Commons, June 2, the Minister of Railways said the maximum gradient against eastbound traffic between Port Arthur and Montreal, was 0.50%, or 26.4 ft. a mile, and that against westbound traffic on the same line 0.60%, or 31.68 ft. a mile; the maximum gradient against eastbound traffic on the line from Edmonton, Alta., to Port Mann, B.C., was 0.70%, or 37 ft. a mile; and that against westbound traffic on the same line was 0.50%, or 26.40 ft. a mile.

On June 4, the Minister stated in reply to further questions that the mileage under construction to be controlled and operated by the C.N.R., and not included in the answer given June 2, was 3,143 miles; the total amount guaranteed by the Dominion Government in aid of the construction of such lines was $43,419,585, and the amount granted to date for these lines was $6,180,000; the amount guaranteed by other governments for these lines had not been ascertained by the Department.

It is said that the subsidies will be paid over, so far as constructed lines are concerned, on the completion of inspections which are now being made, and on the remaining mileages as the work progresses.

Six wheel trucks, rivetted wrought steel frames, M.C.B. standard axles, parts and pedestals, and 36 in. wrought steel wheels, have been advocated for exclusive use in steel passenger car truck design.

Dominion Government Railway to Hudson Bay.

The Dominion Parliament at its recent session voted $4,500,000 for the construction of this railway, and the provision of terminals. The Minister of Railways stated that the contracts as let, together with the estimated cost are:—Pas to Thicket Portage, 185 miles, $2,500,000; Thicket Portage to Split Lake Jct., $1,000,000; from Split Lake Jct. to Port Nelson on Hudson Bay, $1,000,000. About $1,500,000 of the vote is on account of harbor work. It is expected to send a number of men with supplies and a complete plant to Hudson Bay to start the development of the harbor there. It is proposed to put a wireless station at Port Nelson and another at Pas. The latter will be removed elsewhere when the land telegraph lines are completed. The bridge across the Saskatchewan River at Pas was only finished at the end of April; tracklaying has been commenced north of the river, but he had not received any report as to the progress made. Grading has been completed for over 100 miles, and it is hoped to get track laid on the 185 miles to Thicket Portage by the end of the year. (June, pg. 273.)

Grand Trunk Railway Betterments, Construction, Etc.

Granite Ballasting Montreal-Toronto Line.—The project for the reballasting of the line between Montreal and Toronto, with crushed granite, has apparently been dropped for the present. The rock crushing plant which had been provided has been put in storage at Kingston, Ont., and the preparations which were being made for installing it at Kingston Mills have been stopped.

Union Station at the Don, Toronto.—A proposition is reported to be under consideration for the building of a union station, to be used by the G.T.R., the C.P.R., and the Canadian Northern Ontario Ry., on the west side of the Don River, just north of Queen St. East, Toronto. The G.T.R. and the C.P.R. now have stations at the Don, within sight of each other, and the Canadian Northern is preparing to build its eastern entrance. The suggestion is that the present stations be abandoned, and that the three lines join up at a certain point and build a four track line to Toronto Union Station.

Erie, London and Tillsonburg Ry.—A revote of the subsidy granted in 1910 for the building of a railway from Port Burwell to London, passing through, Vienna, Calton, Aylmer, Kingsmill and Belmont, Ont., 35 miles, has been granted by the Dominion Parliament. The charter for the building of this railway is held in the interests of the G.T.R. The Minister of Railways said recently he would support a motion to refuse any further renewal of the subsidy for this line. (June, pg. 276.)

Upwards of 1,500 responses were received by the New York, New Haven and Hartford Rd. in reply to a reward offered by that line for the invention of a practicable automatic train control device, following the fatal Westfort wreck last fall. A special force had to be set to consider the large number of devices submitted, but of these, it is said that less than 5% were worthy of consideration, and after final examination by the higher engineering officials, only two were deemed worth a trial.

Telegraph, Telephone and Cable Matters.

The Nova Scotia Legislature has amended the act of incorporation of the Maritime Telegraph and Telephone Co.

The Department of Naval Service received tenders, June 25, for the erection of masts and buildings for wireless telegraph stations to be built at Kingston, Toronto and Port Burwell.

It is reported that the Western Union Telegraph Co. is contemplating the erection of a large station at Bay Roberts, Nfld., and that its station at Canso, N.S., will be ultimately abandoned in favor of Bay Roberts.

The Great North Western Telegraph Co. has opened offices at Ste. Felicite, Que., and Listowel station, Ont., has reopened its offices at Beaumaris and Grimsby Beach, Ont., and has closed its offices at Demorestville and Listowel, Ont.

The Board of Railway Commissioners has extended to Dec. 1, the time limited by Sec. 4, chap. 61, 7-8 Ed. VII., for approval of C.P.R. telegraph tolls between points in Western Canada, including Sudbury, Ont., and from points east thereof, and east of and including Windsor, Ont., during which it may charge such tolls as are authorized under that act.

The United States Forest Service is conducting experiments in the use of wireless telegraphy and wireless telephones as a practical means of communication between fire patrol men and the headquarters office. Quick communication means the arrival of fire fighters in the early stages of a fire. This in turn means that many fires will be extinguished in their incipiency, with only nominal loss.

The Board of Railway Commissioners has ordered that when the City of Hamilton, Ont., has provided underground conduits, in accordance with plans prepared by the City and approved by the Board's Electrical Engineer, the Great North Western Telegraph Co., C.P.R. Telegraphs and Bell Telephone Co. shall remove their poles, wires and cables from portions of certain streets there.

In an interview on the question of telegraph extensions by the C.P.R. during the current season, J. McMillan, Superintendent of Telegraphs, Manitoba Division, C.P.R., Winnipeg, is reported to have stated that about 4,775 miles of wire will be strung along the western lines, and that by the end of the summer, it is expected that about 2,280 miles of C.P.R. track west of Winnipeg will be operated by telephone.

The Dominion Government has awarded a contract to the Marconi Wireless Telegraph Co., for the erection of two stations, one at Pas, Man., and the other at Port Nelson, on Hudson Bay, in connection with the projected Hudson Bay railway. It is stated that the stations will be of 10 k.w. capacity, obtained from 20 h.p. Canadian Fairbanks-Morse engines, and that each station will have a range of 500 miles.

F. D. Boomer, whose appointment as local manager, Great North Western Telegraph Co., Quebec, was announced in our last issue, entered the company's service in April, 1902, at Adams, N.Y., and in Jan., 1902, was in charge of the Postal Telegraph Co.'s office at Alexandria Bay, N.Y., being transferred to Ogdensburg, N.Y., Sept., 1903. From Sept., 1904, to May, 1906, he was all night manager at Watertown, N.Y., and re-entered G.N.W.T. Co.'s service, May, 1906, at Toronto, being appointed traffic inspector in Oct., 1910, and chief operator at Ottawa, June, 1911.

A bill is before the Newfoundland Legislature providing for the confirmation of the agreement between the Government and the Marconi Wireless Telegraph Co. of Canada, for the operation of wireless telegraph stations at certain points in Newfoundland and Labrador. Stations have been erected at Battle Harbor, Venison Tickle, Seal Island, Domino, Grady, Indian Harbor, Cape Harrison and Mokkovik, and further stations are provided for under the agreement. The Government pays a subsidy of £100 on each of the stations, with an additional £50, a year for certain of them.

Among the Express Companies.

The Canadian Northern Ex. Co. has opened its offices at Lake Joseph and Royal Muskoka for the summer season.

The Dominion Ex. Co. has moved its Edmonton, Alta., office, to its new building on Jasper Ave.

The Board of Railway Commissioners has defined delivery and collection limits, for Dominion Ex. Co., in Gull Lake, Sask.

The American Ex. Co. has resumed its service to St. John, N.B., operating over the Eastern Steamship Co.'s International Division.

The Dominion Ex. Co. has placed its service in effect on the Canada and Gulf Terminal Ry., between Ste. Flavie and Matane, Que., and has opened offices at Priceville, St. Ulric, Sandy Bay, Metis Beach and Matane.

The Board of Railway Commissioners has extended the express delivery and collection limits in Winnipeg, to include the portion of Elmwood, from the corner of Chambers and Watt Sts., along Watt St. to Union Ave., and thence on Union Ave., to C.P.R.

Dominion Express Co.'s Appointments.

L. D. CHURCHILL has been appointed cashier at Halifax, N.S., vice J. Doherty, transferred.

J. DOHERTY, heretofore cashier at Halifax, N.S., has been appointed cashier at St. John, N.B., vice W. E. Campbell.

W. E. CAMPBELL, heretofore cashier, has been appointed chief clerk, St. John, N.B.

P. T. DONNELLY, heretofore messenger, has been appointed agent at Levis, Que.

F. H. McGARRETT, heretofore agent at Cobalt, Ont., has been appointed route agent, North Bay, Ont., vice D. F. Martin.

A. ROBERTS, heretofore agent at South Porcupine, Ont., has been appointed agent at Cobalt, Ont., vice F. H. McGarrett, transferred.

J. McLAY, heretofore agent at Kenora, Ont., has been appointed agent at Maple Creek, Sask.

Reduction of Express Rates in Western Canada.

In Canadian Railway and Marine World for May, it was announced that the Board of Railway Commissioners had ordered a 20% reduction of express rates in the Prairie Provinces and British Columbia. Following is the official order (General order 104, Apr. 30.):—

In pusuance of the powers conferred upon it by secs. 28 and 348 of the Railway Act, and of all other powers possessed by the Board in that behalf its is ordered:—

1. That the express companies under the Board's jurisdiction be required to submit new standard tariffs of maximum mileage rates to be charged for express freight classified as merchandise between points west of and including Sudbury, Ont., making a reduction of approximately 20% from the maximum mileage rates in excess of 50c. per 100 lbs. now being charged; the said reduced maximum rates to carry with them the appropriate tolls of the graduate table, scales K and N, and the special tariff for single shipments of 500 lbs. or over;

2. That the said maximum rates, so reduced, for the mileage group from 900 to 1,000 miles, do not exceed $4 per 100 lbs. in the section between Sudbury, and Sault Ste. Marie, Ont., and Crowsnest, Canmore, and Thornton, Alta., and $4.75 per 100 lbs. in the section west thereof, in place of $5 and $6, respectively, as now charged;

3. That the said reduced standard tariffs of maximum mileage rates be published and filed so as to become effective on or before July 15, 1913.

Parcel Post Legislation in Canada.

While the Postmaster General's bill for the establishment of a parcel post system in Canada was under discussion in the Commons recently, he said that it had been decided to fix the weight limit of parcels at 11 lbs. and the maximum length and girth combined at 6 ft. The zone system will be adopted, each province forming a zone, with the exception of the three maritime provinces, which will form a zone together. The first zone, however, will be within a radius of 20 miles of the point where the parcel was posted, irrespective of the provincial boundary; the second zone will be outside the 20 mile radius, and within the provincial boundary. It is anticipated that the system will come into force, by proclamation, Jan. 1, 1914.

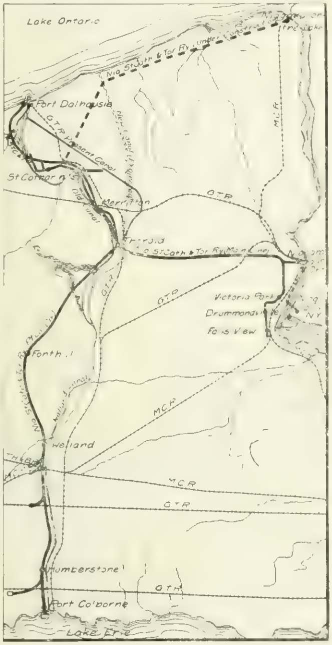
South East Calgary Corporation.—This company, owning about 4,000 acres of land in the neighborhood of the C.P.R. Ogden Shops, near Calgary, Alta., has built about 6 miles of railway track through its land, south east of the Ogden Shops, connecting with the Calgary Municipal Ry. at the city boundary. The line was built under the supervision of T. H. McCauley, Superintendent, Calgary Municipal Ry., and is fully equipped and quite up to date. One car has been received, which it was expected to place in operation, July 1. The fares for the six miles are at the same rate as those in the city, workmen's tickets 8 for 25c., and ordinary 6 for 25c., single fares 5c. Jas. Walker, D. W. Trotter and P. Burns, Calgary, are among those chiefly interested. We are advised that the line will be operated by the city of Calgary.

The Use of the Screw Spike for fastening down rails, is increasing in popularity. The principal objections to its use are that the first cost, and the difficulty of laying the rails and making repairs and renewals are increased; but it is felt by those using them that these disadvantages are more than offset by the increased life of the tie, decreased cost of maintenance, and the greater strength and stability of the track. From the fact that at each relaying they are driven in new holes for security, the old holes loosening in time, ordinary spikes cause the tie to become what is termed "spike killed," that is, the tie no longer will effectively hold the spike. It is for this reason that some roads that use tie treating, only have the process carried far enough to give a preservation corresponding to the mechanical life of the tie. The increased mechanical life from the use of the screw spike makes advisable more complete initial preservation.

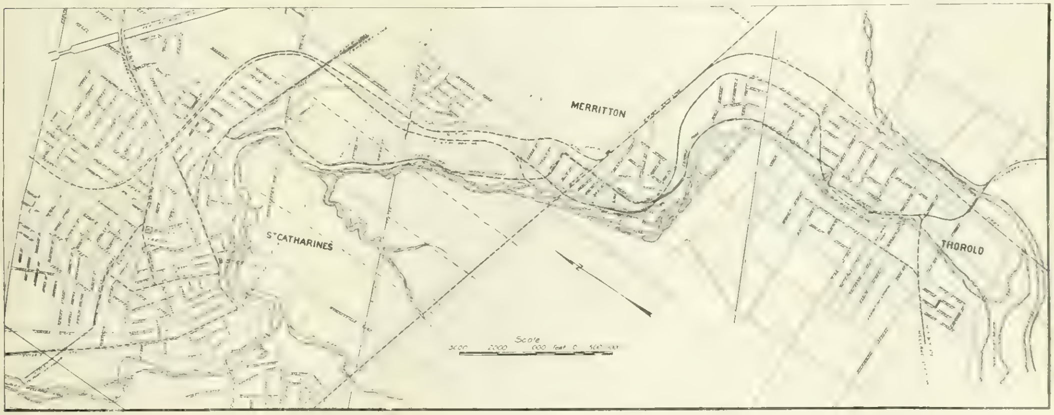
Electric Railway Department.

The Niagara, St. Catharines and Toronto Railway System.

The Niagara, St. Catharines and Toronto Ry. operates a system of electric lines covering a considerable portion of the central Niagara peninsula in Ontario, following principally the portion of the country traversed by the Welland Canal, and covering throughout its length a rich manufacturing district that is increasing in value yearly through the influx of new industries attracted by the close proximity of the cheap Niagara power, the abundance of the labor market and the excellent shipping facilities. At the different towns served, there has been a marked influx of branches of U. S. industries coming into the Canadian field, the establishment of such branches having been rendered necessary on account of the Canadian protective tariff.



Niagara, St. Catharines and Toronto Ry. Lines, Radiating from St. Catharines, Ont.



Niagara, St. Catharines and Toronto Ry. Local Lines in St. Catharines, Merritton and Thorold.

The Niagara, St. Catharines and Toronto Ry's present system consisted originally of three separate lines. The early history of these lines is typical of that of most organizations that have been formed from the amalgamation of several minor lines that to a certain degree have a community of central interests. The main line was the St. Catharines and Niagara Central Ry., a line chartered by the Ontario Legislature in 1881, to build a steam line from St. Catharines to the Niagara River, this privilege being extended by another Act in 1882, authorizing the company to extend the line to Toronto via Hamilton. No action was taken at that time, but application was made to the Dominion Parliament to have the work declared to be for the general advantage of Canada, which was granted in 1887. Construction was pushed forward, and a line was completed from St. Catharines to Niagara Falls and opened for traffic, Dec. 20, 1888. In 1890, the Dominion Parliament reserved the right to extend the line to Hamilton and Burlington, and in 1891 increased financial power was granted, with authority to make physical connection with any railway other than the G. T. R., for transfer to and from New York State. Operation was continued under these conditions until, by Dominion legislation in 1895, the name was changed to the Niagara, Hamilton and Pacific Ry. Co., and authority given to extend the line to several points westerly as far as Woodstock and Port Dover. Shortly after, the line fell into a receiver's hands, but was eventually reorganized, and electrification was authorized by the Dominion Parliament in 1899. By this Act, the company was reorganized and the name changed to that which it at present holds—The Niagara, St. Catharines and Toronto Ry. Co. Power was given it to acquire, by absorption or control of stock, the older company. The new company was given power to extend its lines in several directions, including to Toronto, via Hamilton, to Port Dalhousie, and to Fort Erie. Wide powers of operation were granted, including the acquisition of vessels for operation on the Niagara River and Lake Ontario to Toronto and points west. Further Dominion legislation within the next three years, to be mentioned later, permitted the acquisition of the other two lines now comprised in the system.

The smallest unit of the system is the Niagara Falls, Wesley Park and Clifton Tramway Co., Ltd., incorporated by Ontario letters patent, Aug. 7, 1886, to construct a tramway through certain streets of Niagara Falls and Stamford township, to be operated by any power desired. This line was built shortly after, operated at first as a horse car line, and then electrified, being sold under permission of Ontario legislation of 1901, to the Niagara, St. Catharines and Toronto Ry. Co., the latter company being permitted to acquire this line under Dominion legislation of 1901.

The earliest line of the system was the St. Catharines Street Ry. Co., incorporated by Ontario legislation in 1874, to operate a horse car line, with the option of sleighs in winter, in St. Catharines, Port Dalhousie, Merritton, Thorold, and Grantham township. No immediate action being taken under this charter, the time for construction was extended by the Legislature in 1877, following which the line was built from St. Catharines through Merritton to Thorold, and operated as a horse car line. In 1882 the Ontario Legislature changed the name of the company to the St. Catharines, Merritton and Thorold Street Ry. Co., and the operation continued as before, until in 1893 the name of the company was changed by letters patent to the Port Dalhousie, St. Catharines and Thorold Electric St. Ry. Co., but under this renewed charter, which granted the privilege of extending the line to Port Dalhousie from St. Catharines, no action was taken, the line operating as before. In 1902 the Ontario Legislature authorized the company to transfer its holdings to the Niagara, St. Catharines and Toronto Ry. Co., the latter being permitted to take over the property by Dominion legislation of 1901, and the same company was given authority to absorb the two smaller companies.

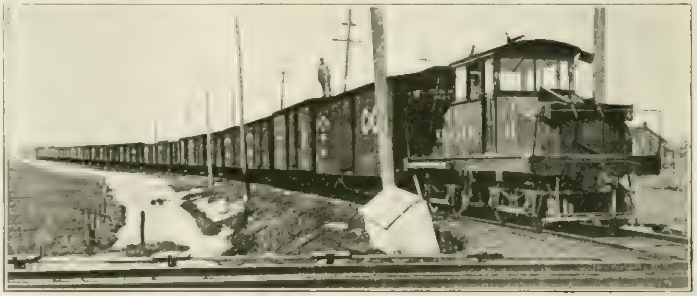
St. Catharines Yards of the N. St. C. & T. Ry., with Shops in Background.

From 1901 the history of the main company is the history of the subsidiary companies, the present of the companies absorption on this date of the amalgamation of interests. Shortly after the absorption, the Niagara, St. Catharines and Toronto Navigation Co. was formed, and the Dominion Parliament in 1902 granted the Niagara, St. Catharines and Toronto Ry. Co. authority to acquire the navigation company's stocks and bonds, which it immediately proceeded to execute.

As mentioned, the main line of the company from St. Catharines to Niagara Falls was originally steam operated, and in the nineties fell into evil days and was placed in the hands of a receiver, who operated it for a number of years. In 1899, the insolvent line was taken over by a New York syndicate, associated with which were four Canadians, Z. A. Lash, J. H. Plummer, J. W. Flavelle and Aemilius Jarvis, of Toronto. F. A. Cheney was appointed General Manager by the new interests, and the electrification of the line was proceeded with at once. In 1900 E. F. Seixas was appointed General Manager, which position he still holds. In the same year the line was first operated by electricity. In 1905, [illegible] interests of the company were bought out by F. Nicholls and E. R. Wood. of Toronto, the former becoming President. In 1908 the Mackenzie Mann Co. interests acquired control, D. B. Hanna, Third Vice President, Canadian Northern Ry., becoming President.

Welland Station on Niagara, St. Catharines and Toronto Ry.

Prior to its absorption the Niagara Falls, Wesley Park and Clifton Tramway had been operated as an electric line. The original line of this unit operated from Bridge St., Niagara Falls, Ont., through the town streets and out beyond Lundy's Lane, paralleling the Niagara River, some distance back from the river road. Immediately after absorption, the new interests had the line extended a short distance beyond Lundy's Lane, into Falls View, the high land immediately above the Falls. This gave a total length of 4.35 miles, which has not been extended since.



Train of 37 Cars on Niagara, St. Catharines and Toronto Ry.

The main line from Niagara Falls, Ont., to St. Catharines was originally 11 miles long. Immediately after the absorption of the subsidiary lines in 1901, this was increased by extending the line through St. Catharines to Port Dalhousie, in order to connect with the subsidiary Niagara, St. Catharines and Toronto Navigation Co., two boats for which, the Lakeside and Garden City, had been purchased by that company the same year the line was extended. The boat line was changed in 1910 by the replacing of the Lakeside by the new steamboat Dalhousie City.

The Port Dalhousie, St. Catharines and Thorold Electric Street Ry. line through St. Catharines, Merritton and Thorold, is the same at present under the N. St. C. & T. R. Co. as before the absorption.

The company's lines were extended in 1907 from the main line at Thorold to Welland, and in 1908 from the latter point to Port Colborne, both lines being built under authority of Dominion legislation passed in 1906, which authorized several extensions, including one now under construction from St. Catharines to Niagara on the Lake.

The company's main line leaves the radial station on St. Paul St., opposite Mary St., in St. Catharines, following James and Raymond Sts. and Welland Ave. to the G.T.R. Port Dalhousie branch tracks, from which point it turns easterly over its own right of way, paralleling the G.T.R. very closely all the way to Merritton, and thence to Thorold, the general direction and location of the line being that of the original canal on the high land to the east. Merritton is situated on a low area, and as the line has passed up a steady grade coming out of St. Catharines, a drop into Merritton is avoided by constructing the line at higher elevation than the ground through that town, part of the way on an embankment, but the greater part on a timber trestle over half a mile long, the line through this portion following an ascending grade, negotiating the height of land which is reached beyond Thorold. This ridge is is over 350 ft. above Lake Ontario, from which the line rises through St. Catharines, the principal portion of the rise being between St. Catharines and Thorold. From Thorold, the line runs almost due east, crossing the present Welland Canal on a swing bridge, following an almost straight route for Niagara Falls. From the outskirts of St. Catharines to the outskirts of Niagara Falls, the line is exclusively on its own right of way. Entering Niagara Falls at the north west corner of the city, the line follows the highway, going into the city over the tracks of the subsidiary company, the Niagara Falls, Wesley Park and Clifton Tramway Co., terminating at the foot of Bridge St. For the heavy summer tourist traffic, arrangements have been made with the International Ry. whereby the N., St. C. & T. Ry. cars run over its line from the foot of Bridge St., along the river bank to the upper steel bridge across the river near the Falls, crossing that bridge, and thence a short distance to the terminal station of the International Ry., in the heart of Niagara Falls, N.Y., landing through passenger without change.

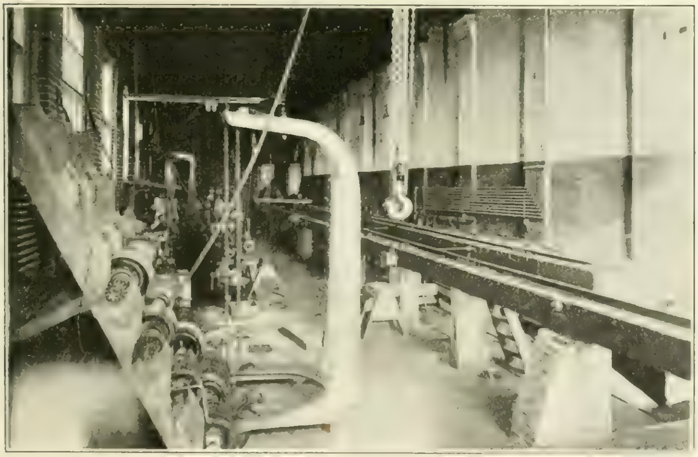
The company's Port Dalhousie branch leaves the St. Catharines station over the same lines as the main line, but instead of turning off at Raymond St., proceeds to Lake St. and Louisa St., leaving the west end of the latter street for its own right of way along the sides of the steep east bank of the old Welland Canal. Crossing the canal on a swing bridge, the line goes through the centre of Port Dalhousie to the Navigation Co.'s wharf, where connection is made with the Port Dalhousie-Toronto boats. Between Toronto and Niagara Falls, by way of St. Catharines, there has developed a considerable traffic, particularly in the tourist season. To accommodate this, there is a through service over the company's lines from Port Dalhousie to Niagara Falls, N.Y. From the Port Dalhousie branch to the main line, in the outskirts of St. Catharines, there is a cut off along Louisa St. for diverting this through traffic from the centre of the town, practically skirting the border of the city. The normal service over the Port Dalhousie branch is from the St. Catharines station to Port Dalhousie, this through service only being used to connect with the steamboats in the tourist season.

In St. Catharines, there is a purely local service, operating from the city park, at the south end of St. Paul St., the main thoroughfare of the city, through the business section, and out Queenston St. to the cemetery, located on the banks of the present Welland Canal, a total distance of about 2 miles, cars operating every 40 minutes.

The Merritton and Thorold division also operates a local service through a portion of St. Catharines, serving principally the manufacturing sections of these three places. The western terminus is at the McKinnon factory at the extreme west end of the city, near the point where the Port Dalhousie branch drops down the canal bank, crossing this line a few hundred feet from the end. Following Ontario and St. Paul Sts., it passes the terminal station, and then runs on Queenston St. to the Thorold Road, following the latter along the bank of the old canal through Merritton into Thorold, terminating at the main line station near the centre of the town, the main line crossing this line at three points en route. Thus the company has a rapid transit line over its own right of way from St. Catharines to Thorold, with a local line between the same points, following the canal bank closely, serving the numerous industries that are clustered along that old waterway. The local line thus acts as a feeder for the main line drawing from this rich district.

The company's new line southerly through Welland to Port Colborne leaves the main line a short distance south of Thorold station, branching off directly west, passing over the old Welland Canal on a swing bridge. All the way from the junction point to Port Colborne, the line runs on its own right of way, with very light grades. All over the system the gradients are very light, with the exception of the maximum 2% grade on a portion of the main line ascending the mountain at Thorold. This new line passes through Fonthill, and then on to Welland, cutting through the westerly fringe of that town. South from there, the line passes through Humberstone, and thence to Port Colborne.

E. F. Seixas,
General Manager, Niagara, St. Catharines and Toronto Ry.



Interior of N., St. C. & T. Ry. Repair Shop at St. Catharines.

The latest extension of the company is to Niagara on the Lake, which is under construction, and is expected to be completed this year. This extension leaves the main line in St. Catharines at the corner of [illegible] and Welland Ave., proceeding up [illegible] crossing the present canal, running [illegible] on it own right of way after leaving the city, until it reaches the Lake Shore Road at the mouth of Ten Mile Creek, where the proposed Welland ship canal is to be entered from Lake Ontario. For about half the remaining distance from this point to Niagara on the Lake, the line will run on the highway allowance, running across country the remaining distance on its own right of way south of the military reservation, going into Niagara on the Lake parallel to the M.C.R. tracks along King St., with the terminus at Queen St. The total length of this extension will be about 13 miles. The construction will be similar to that on the main line, using 80 lb. rails, 4|0 grooved trolley wire, and 35 ft. cedar poles. The maximum gradient will be 0.25%, with a minimum curvature of 500 ft. radius.

In general, the system is operated very much the same as a steam railway, with a train dispatcher located at Merritton, the most central point of the system. Telephone train dispatching is employed. At the principal points there are well appointed stations for both freight and passenger service, in charge of each of which is an agent. These stations are St. Catharines, Port Dalhousie, Merritton, Thorold, Niagara Falls, Fonthill, Welland, Humberstone and Port Colborne.

Freight is one of the principal items of revenue on this line, just as on a steam road. Along the company's lines are 60 industrial sidings, aggregating about 15 miles of track. All the freight is handled in trains, hauled by electric locomotives, and it is no uncommon sight to see trains of as many as 40 cars. In order not to interfere with the heavy passenger schedules, none of which are less than hourly each way during the daytime, the freight is handled as much as possible by night. In St. Catharines, where some of the sidings are from the local line, night handling of freight is required by law. In addition to the freight business the Dominion Express Co. operates over the company's lines. The freight business is so heavy that at St. Catharines there are 6 drays owned by the company in constant service. At other points on the system, the cartage is handled under contract. The St. Catharines freight terminals are quite extensive, and the traffic is so heavy that they are greatly overtaxed. In most particulars they resemble steam road freight terminals. Located where the Port Dalhousie cutoff strikes the main line near the outskirts of the city, the cutoff has been found a most useful adjunct for handling the through freight. On one side of the main line at these terminals is a platform shed, arranged in the conventional manner. On the other side of the main line are fairly extensive yards for an electric line, where trains are made up, and similar work performed.

The rolling stock equipment consists of the following:—50 interurban and local passenger cars, 7 electric locomotives, 3 snow ploughs (1 rotary and 2 push), 30 box cars, 30 gondolas, 16 flats, 1 derrick car, and 2 cabooses. The interurban passenger cars are of the double truck type, 50 ft. long, the majority closed, but several open for summer traffic. Each of these cars has a separate baggage compartment for handling passengers' luggage as expeditiously as a steam road. This is checked through to destination in the usual manner. The freight equipment is limited, but is all that

[illegible]

[illegible] The freight increase is even more marked, reaching 344,656 tons in 1912. The line is particularly well situated for the [illegible] in elevation of 326 ft., most of this rise occurring at or near Thorold, the centre of a heavy manufacturing district along the old canal. The extremely hilly nature of [illegible] of the numerous factories to each other along the canal, makes it very difficult for steam lines to run in sidings, they being [illegible] for their lines than are essential for electric operation.

Power for the operation of the line is received from the Electrical Development Co. of Ontario at the generated pressure of 12,000 volts, and is transmitted to trans-

[illegible] N., St. C. & T. Ry. at Welland.

[illegible] 700 k.w., Thorold 1,000 k.w., St. Catharines 1,000 k.w., and Welland 500 kw. At all of these stations are rotary converters delivering power to the line at 600 volts d.c.

Over the whole system, the overhead work is of 4/0 copper wire. The main lines are laid throughout with 80 lb. rails, with 60 lb. on the local lines. The main and [illegible] a total of 70 miles of rail line. The steam- [illegible]

[illegible] Carey.

Dogs on British Columbia Electric Ry.— [illegible] rected conductors to strictly enforce its rule [illegible] of the owner, and then controlled so as [illegible] be strictly enforced.

The Tramway Situation in Montreal.

The report of G. Jarvis, City Engineer, on the tramway situation in Montreal, presented to the Board of Control, June 6, is a lengthy document, based on information collected by Mr. McLeod, of the city engineering staff, and the reports of a number of "experts," [illegible] engaged by various interests to make suggestions for the improvement of the service. Mr. Jarvis states that the overcrowding on all lines and at all hours has been found to be the rule and not the exception. He approves of the laying of car tracks on Dorchester St. between Guy St. and Beaver Hall Hill in order to facilitate the operation of the Guy-Beaver Hall line; the division of the Windsor-St. Lawrence line into two sections each returning from Place d'Armes Square; the making of Victoria Square the turning point for several lines by the installation of new tracks, and the relieving of the congestion on the lines by Point St. Charles, by a line from Wellington St., via Charlebois St., Center St. and Atwater Ave. [illegible] St. Other recommendations [illegible] the following: the elimination of all unnecessary stops; the placing [illegible] at every important [illegible] point; that passengers should always have their fares ready; that larger and clearer [illegible] that the congestion on the rear end of cars be stopped; [illegible] more closely supervised; that delays at [illegible] the short turning of cars at the option of [illegible] the car lines.

[illegible] a special committee was appointed to act with the Board of Control in making a careful study of the report, and to report [illegible] with the least possible delay.

The Board of Control, which has been in consultation with E. A. Robert, President, M.T. Co., agreed on a report, June 17, to be presented to the City Council for adoption at the next meeting. The report recommends 15 new routes, the elimination of [illegible] improved switching and the modification of a number of existing routes.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. Gross earnings for April [illegible] operating expenses $367,044; net operating expenses $198,250; renewal funds $51,620; net earnings [illegible] operating expenses; $173,923 net operating earnings; $37,935 renewal funds; $135,988 [illegible] from investments; $160,988 net income, for [illegible] ings, for same period 1911-12.

Calgary Municipal Ry.—[illegible] City Commissioners are putting the rail- [illegible] pended on extensions and improvements of the lines.

Cape Breton Electric Co. Gross earnings for April, $27,916.65; operating expenses and taxes $15,857.77; net operating earnings, $12,058.88; interest charges $4,891.67; balance $7,167.21; sinking and improvement funds $1,190; net balance $5,977.21, against $26,558.86 gross earnings; $16,064 operating expenses and taxes; $10,494.86 net operating earnings; $4,495.83 interest charges; $5,999.03 balance; $1,206.67 sinking and improvement funds; $4,792.36 net balance for April, 1912. The construction charges during April were $2,498.29.

Grand Valley Railway.—By an arrangement made June 18, the action of the Brantford City Council against the company has been adjourned until September, the company agreeing in the meantime to pay, by July 1, $5,000 on account of taxes in arrears, and $2,500 additional, by Sept. 1. The city is making application for forfeiture of the company's charter on the ground of failure to live up to its terms and conditions.

Montreal Tramways Co.—The first call of 10% upon the new stock issued April 15, became due and payable June 20.

Toronto Ry., Toronto and York Radial Ry., and allied companies.—Gross earnings for April $760,676; operating expenses, maintenance, etc., $397,875; net earnings $362,801, against $658,174 gross earnings; $296,286 operating expenses, maintenance, etc.; $361,888 net earnings, for Apr., 1912. Aggregate gross earnings for four months ended Apr. 30, $3,028,408; net earnings $1,446,107, against $2,622,724 aggregate gross earnings; $1,345,987 net earnings for same period 1912.

The Toronto Ry. receipts for May were $510,767.20 and the percentage paid to the city was $102,153.84, against $446,371 and $89,274.20 respectively for May, 1912.

Winnipeg Electric Ry. Gross earnings for April, $323,563; operating expenses $174,465; net earnings $149,098, against $292,037 gross earnings; $152,938 operating expenses; $139,099 net earnings, for Apr., 1912. Aggregate gross earnings for four months ended Apr. 30, $1,324,509; net earnings $582,669, against $1,209,557 aggregate gross earnings; $554,437 net earnings for same period 1912

Moose Jaw Electric Railway Company's Report.

The report for the year ended Dec. 31, 1912, shows receipts of $77,996, and passengers carried, 1,607,770. The earnings showed a steady monthly increase, and it is anticipated that this will continue through this year. There are nine miles of track in use, and 12 cars. During this year a further seven or eight miles of track will be laid, and ten cars have been ordered from the Ottawa Car Co., two of which have been received. The company has acquired a pleasure park site just outside the city, to enhance receipts from pleasure traffic. Power is generated by oil engines, the first in Canada to be used for this purpose. There are 200 h.p. units, and an additional unit of 500 h.p. is being installed.

The assets consist of property, plant and equipment, $570,128; accounts receivable, $2,239; total, $572,367; and liabilities of $557,008, leaving a balance to profit and loss of $15,359. The stock was put on a 6% dividend basis in the early part of the year.

Following are the officers and directors: President, A. A. Dion; Vice President, N. J. Lowe; Secretary-Treasurer, D. R. Street; other directors, P. B. Mellon; D. O'Connor, Jr., T. F. Ahearn, E. J. Daly, C. E. Armstrong and A. H. Dion.

Canadian Electric Railway Association's Annual Meeting.

The annual meeting held at Hamilton, Ont., May 28, 29 and 30 was in every way the most successful in the Association's history, and the attendance was larger than at any previous meeting, member companies from the Atlantic coast to the Pacific coast being represented, including officials from the St. John Ry., St. John, N.B., on the east, and from the British Columbia Electric Ry. on the west. The chair was occupied by the President, Patrick Dubee, Secretary-Treasurer, Montreal Tramways Co.

After routine business four new companies were admitted to membership, viz.: Pictou County Electric Co., Stellarton, N.S.; Sherbrooke Ry. & Power Co., Sherbrooke, Que.; Montreal & Southern Counties Ry. Co., Montreal, and Moose Jaw Electric Ry. Co., Moose Jaw, Sask.

The Secretary-Treasurer, Acton Burrows, Managing Director, Canadian Railway and Marine World, presented an exhaustive report on the Association's work during the year, dealing with a number of important topics. The report was considered, section by section, and elicited some valuable discussions, decisive action being taken on a number of matters vitally affecting electric railway interests.

A special committee which had been appointed to consolidate and revise the constitution and bylaws presented a report which was adopted. The most important alteration recommended and approved was the changing of the name from Canadian Street Railway Association to Canadian Electric Railway Association.

A number of important papers were read, including the following:—

Application of standard code of train rules on electric interurban railways.

The property serving a population of twenty thousand or less.

Electric railway track construction.

The relations of a surgeon to a traction or railway company.

Electric railway switch work.

Some problems of interurban railway operation in Canada.

Modern tendencies in railway control.

Accident claims.

Adjudication of claims arising from industrial accidents.

Underground cables.

Hydraulic power vs. steam power.

Freight and express traffic on suburban and interurban railways.

Results of test operation of new types of cars and description of new standard city cars on the British Columbia Electric Ry.

The renewal of trolleys with steel wire.

Training of employes.

The work order system as applied to electric railway accounting.

These papers, which are copyrighted by the Association, will be printed in the official proceedings and distributed to officials of member companies. They were very fully discussed and the opinions elicited will form a most valuable symposium on the important subjects dealt with.

On the election of officers being taken up, the Vice President, C. B. King, Manager London St. Ry., proposed the re-election of Patrick Dubee as President and paid a warm tribute to his energetic discharge of the duties. This was carried amid applause, Mr. King being unanimously re-elected Vice-President.

Acton Burrows was unanimously re-elected Secretary-Treasurer for the seventh consecutive year.

The following were elected as the executive committee: Hon. [illegible] Ry.; E. P. Coleman, General Manager, Dominion Power & Transmission Co.; A. Eastman, General Manager, Windsor, Essex & Lake Shore Rapid Ry.; J. D. Fraser, Director and Secretary-Treasurer, Ottawa Electric Ry.; H. M. Hopper, General Manager St. John Ry.; Wilson Phillips, Superintendent, Winnipeg Electric Ry. The President, Vice President and Secretary-Treasurer are ex-officio members of the executive committee.

Aubrey Acton Burrows, Secretary and Business Manager, Canadian Railway and Marine World, was unanimously re-elected Assistant Secretary.

The representatives attending the meeting were taken by special train over the Dominion Power & Transmission Co.'s Hamilton and Brantford line, which proved a most enjoyable trip, the roadbed and track being in excellent shape and the scenery very attractive. Opportunities were also afforded for inspecting other portions of the company's system. E. P. Coleman, the General Manager, who had charge of the local arrangements, was most assiduous in his attentions, his efforts being heartily supported by other officials of the company.

Patrick Dubee,
Secretary-Treasurer, Montreal Tramways Co., and President, Canadian Electric Railway Association.

One of the interesting features was the inspection of a number of the important manufacturing industries in Hamilton, which are producing goods used by electric railways. Visits were paid to Canadian Westinghouse Co.; Steel Co. of Canada; Standard Underground Cable Co. and National Steel Car Co., a considerable time being spent at each plant, thoroughly viewing the different processes of manufacture.

As a most enjoyable wind up to the proceedings the Dominion Power and Transmission Co. gave a dinner at the Hamilton Club, which was attended by the officials of member companies and by a number of other invited guests. E. P. Coleman occupied the chair, and among the [illegible] of Dominion Power & Transmission Co.; Patrick Dubee, President, and C. B. King, Vice President of the Association; [illegible] Vice President and Manager, [illegible] Montreal Tramways Co., the [illegible] being Burrows.

British Columbia Electric Railway Co's. Social Features.

The employes of the British Columbia Electric Railway Company take great interest in the development of the social side of the company, and the management is assisting in this movement, as it has been found that a social gathering of this kind works to the best interest of the service. During the past month the B.C.E.R. Social Club held a ladies' night and conversazione in its Vancouver quarters. It was attended by over 200 members of the club and their lady friends. General Manager Sperling and all the chief officials of the Company were present and took an active part in the programme. At Victoria the office staff gave a dance at the Alexandra Club, which was attended by over 200 members of the staff and their friends. In the Delta district the employes of the Company organized and gave a dance at Ladner, which was the chief social event of the season in the district. The management is paying attention to providing for the pleasure of its employes during the outdoor season. The company recently acquired 10 acres of land in the suburbs of Vancouver and plans to utilize it for the present as recreation grounds for its employes. This year one acre will be cleared, lawn tennis courts laid out, and a club house erected. The clearing work will be continued next year and continued until the grounds are available for all forms of outdoor sport.

Transportation of Postmen by Electric Railways.

Canadian Railway and Marine World for April contained, on pg. 189 full particulars of the bill introduced in the House of Commons by the Postmaster General to confer on himself and his successors in office the power to decide the rate to be paid electric railway companies for the transportation of postmen, respecting which strong representations were made by a deputation from the Canadian Street Railway Association. The Association's Secretary-Treasurer continued to watch the measure, paying several subsequent visits to Ottawa for that purpose and [illegible]. On May 31 the Postmaster General announced in the Commons that he had decided to withdraw the bill for the then current session at least. In the course of the discussion he stated that he had made a contract with the Toronto Ry. Co. recently to carry postmen and special delivery messengers for four years at $12,000 a year. There being 355 postmen and special delivery messengers that averages $[illegible] per head per year which average will be reduced as the number of men employed increases, the amount to be paid annually being stationary. In answer to questions he stated that a contract had been made with the Montreal Tramways Co. for a year at $[illegible] a man. The Quebec Railway Light and Power Co. is being paid $42.50 a man, and the Ottawa Electric Ry. is being paid $[illegible] a man.

Electric Railway Projects, Construction, Betterments, Etc.

Bell Island Transportation Co.—The Newfoundland Legislature has passed an act for the encouragement of the construction of tramways at Bell Island. The Bell Island Transportation Co., which is registered under the Companies Act of 1899, is authorized to build inclined and other power tramways there for freight and passenger traffic, being given an exclusive franchise for 50 years under certain conditions, the Government guaranteeing 5% dividend on the capital expenditure, up to $2,000 a year, or $40,000 in 20 years; $1,000 a year for 20 years after the completion of a wharf, and $100 a year for 20 years for the conveyance of mails from the wharf up the inclined railway. Construction is to be completed within three years. The company's franchise is not to interfere with the rights of the Nova Scotia Steel Co., the Dominion Iron and Steel Co., or other mine owners to building tramways from their mines to their shipping piers.

Berlin and Waterloo St. Ry.—A bylaw has been passed by the ratepayers of Berlin, Ont., authorizing the city council to expend $30,000 to build a second track from Wellington St. to the Waterloo boundary line during this year. (Nov., 1912, pg. 575.)

The Berlin, Waterloo, Wellesley and Lake Huron Ry. Co. has deposited with the Secretary of State at Ottawa an indenture setting forth that the line of the Galt, Preston and Hespeler St. Ry. has been conveyed to it. The G.P. and H. St. Ry. is a local line operated in conjunction with the C.P.R. and the B.W.W. and L.H. Ry., which is controlled in the interests of the C.P.R., and has power to build a number of lines in the district indicated by the names of towns in the title. (July, 1909, pg. 491, and G.P. & H. Ry., July, 1912, pg. 367.)

Brandon Municipal Ry.—While the first car was run over the recently completed municipally owned electric railway, May 16, the regular service was not inaugurated until June 2. Superintendent Antonisen is in charge of the lines. (June, pg. 286.)

British Columbia Electric Ry.—Work was started, May 30, on the construction of the Hastings St. line in North Burnaby, B.C. It will be two miles long, and it is expected to be in operation by the end of the summer. The new line to Kerrisdale, starting from Tenth Ave. and Crown St., was opened for traffic, June 2. The company has informed the Vancouver city council that it cannot undertake the extension of the proposed line on Broadway west from Alma Road this year.

The contract for the erection of a 700ft. double track treatle at the south end of Granville St. bridge, Vancouver, calls for the use of 1,000,000 ft. of lumber. The trestle is to be used in connection with the station to be built for the Lulu Island branch. The contract for the erection of a wharf at Port Moody, will require 200,000 ft. of lumber and the driving of 300 piles. W. G. Gilley is contractor for both works. (June, pg. 286.)

Burrard Westminster Boundary Ry. and Navigation Co.—The Dominion Parliament has extended the time within which the company may build its authorized lines. (June, pg. 286.)

The Cape Breton Electric Co.'s management has authorized the expenditure of a considerable sum upon improvements of its lines in and around Sydney and Glace Bay, N.S., the work to be done this year and during 1914. Among the more important are the building of an addition to the Sydney car barn, the construction of a second track on Townsend St., and the putting in of additional turnouts so as to establish a 15 minute service on the Pier line.

Conception Bay Electric Co.—The Newfoundland Legislature has incorporated a company with this title having power among other things to build electric railways connecting Brigus, Cupids, Clarke's Beach, Port de Grave, Bay Roberts, Spaniards' Bay, and other towns and villages adjacent thereto. W. H. Jarret, Clarke's Beach, Nfld., and Rev. G. H. Field, Brigus, Nfld., are among the incorporators.

Dominion Power and Transmission Co.—The charter of the Brantford and Hamilton Ry., owned by this company, has been amended by the Dominion Government, so as to give power to build a branch from near Lynden to Galt, Ont. We were officially advised recently that preliminary surveys for this line had been made, but nothing has been definitely decided as to construction. E. P. Coleman, Hamilton, Ont., General Manager. (June, pg. 286.)

The D.P. & T. Co., we are officially advised, is considering the advisability of installing a steam plant of considerable size in Hamilton, not as an auxiliary, but for continuous operation as an extension of its power producing capacity. The plant, incidentally, will aid in dealing with frazile ice troubles at the DeCew Falls generating station, but this trouble is so slight that it would not warrant the installation of a steam plant for the sole purpose of dealing with it. No decision has been arrived at as to size of the plant, or when it is going to be installed. (June, pg. 286.)

The Dominion Ry. and Plaster Co. owns plaster deposits on Bras d'Or Lakes and Gilbert Lake in Cape Breton, N.S.; and has a charter to build an electric railway from these properties to Sydney. It is said that negotiations are being carried on with the Cape Breton Electric Co., and with the Sydney city council, with a view of arranging for the building of the line. Up to the present, however, nothing definite has been arrived at. The officers and directors are:—President, A. B. McCormack; Vice President, T. Cozzolino; Secretary, J. P. Joy; other directors:—J. C. Mathers, F. deYoung, all of Sydney, N.S.

Edmonton, Stoney Plain and Wabamun Ry.—Press reports state that arrangements are being completed for the building of the proposed railway from Edmonton, via Stoney Plain to Wabamun, Alta., 40 miles. E. S. McQuoid, Edmonton, Alta., is reported to be interested.

Grouse Mountain Scenic and Incline Ry.—An extension of time to Dec. 31 has been granted to the company by the British Columbia Government to make certain expenditures on surveys, plans, etc., which the regulations provided should have been done by June 30. (Nov., 1911, pg. 1071.

Imperial Traction Co.—The Dominion Parliament has extended the time within which the already authorized lines may be built, and has given the company power to build the following additional lines:—From Smithville, in Lincoln County, to Bridgeburg, Welland County; and from Hamilton to Toronto. (Dec., 1912, pg. 622.) .

The Levis County Ry. has been extended to Gareau bridge, a few minutes walk from the site of the south approach to the Quebec Bridge, where a picnic park has been laid out. (July, 1912, pg. 367.)

London St. Ry.—The directors made an inspection recently of the new track work in course of construction, and the new plant which is being added to the power equipment. The work is expected to be fully completed by July 31.

The city council had before it, May 31, a report of the City Engineer, recommending that the company be asked to build some extensions of lines. (June, pg. 286.)

Lunenburg Electric Ry.—The Nova Scotia Legislature has extended the time within which the company may build the lines authorized by chap. 133 of the statutes of 1911.

Manitoba Radial Ry.—The Dominion Parliament has extended the time within which the company may build the lines authorized to be built by chap. 105 of the statutes of 1907. (Mar., pg. 141.)

Medicine Hat, Alta.—The ratepayers decided recently by a vote of 974 to 131 to grant a franchise to the Montreal Engineering Co. for the building of an electric railway in the city. A summary of the franchise agreement was given in our June issue, pg. 285.

Montreal and Southern Counties Ry.—The Board of Railway Commissioners has authorized the company to open for traffic its line from the Country Club branch through Greenfield Park to the Central Vermont Ry., St. Antoine de Longueuil, Que., 2.25 miles. From this point the C.V.R. is being electrified to Richelieu, 15 miles, and it is expected that this section will be opened for traffic shortly. The electrification of the C.V.R. from Richelieu to St. Cesaire, 15 miles, is expected to be completed this year. Surveys have been made for a line from St. Cesaire to Granby, 16 miles, but it is not expected that any construction will be gone on with this year. (June, pg. 286.)

Montreal Tramways Co.—Montreal papers, in discussing the tramway situation in that city, state that the company's plans involve the practical reconstruction of the system within the next two or three years. The standard to be maintained in all new work will be 116 lb. rails, with 132 lb. guard rails, with 7 ft. instead of 6 ft. ties, laid more closely than heretofore, and on a concrete roadbed 21 inches thick. The work will be done gradually, and it is stated that already nearly 1,500 men are engaged on it. Track has already been laid on Notre Dame St., and work is now in progress on St. James St. from McGill St. to St. Lambert Hill; on St. Catherine St., and on Bleury St., from St. Catherine St. to Sherbrooke St. (June, pg. 286.)

Moose Jaw Electric Ry.—A contract is reported to have been signed for the building of a line passing through Boulevard Heights and Parkdale Boulevard, at a cost of $50,000. It will open up a considerable area of building land, the owners of which are providing the funds for building the extension. It is said that the line will be built this year. (Dec., 1912, pg. 622.)

Morrisburg and Ottawa Electric Ry.—A contract is reported to have been let to the Reliance Construction Co., Chicago, Ill., for the building of an electric railway from Ottawa to Morrisburg, Ont. (May, pg. 235.)

Nipissing Central Ry.—The Dominion Parliament has extended the time within which the lines authorized by chap. 112, statutes of 1911, as amended by chap. 135, statutes of 1912, may be built.

Track laying was started June 11 on the extension to Armstrong St., Liskeard, Ont., and it is expected to have the whole work completed early in July. (June, pg. 286.)

Ontario Hydro-Electric Power Commission's Proposed Electric Railways. Resolutions have been passed by the Whitby, Ont., town council, asking the Commission to submit an estimate of the cost of constructing an electric railway from Toronto with terminals at Uxbridge, Port Perry and Whitby. The Barrie, Ont., town council has passed a resolution asking the Commission to submit an estimate for the building of an electric railway from Barrie to a junction with the C.P.R. Toronto-Sudbury line. The Civic Utilities Committee of Kingston, Ont., has asked the Commission to submit an estimate of the cost of building a line from Kingston to Cornwall. The act under which this construction may be done was given in full in our May issue, pg. 234.

Ottawa and St. Lawrence Electric Ry.—We are officially advised that plans and profiles have been prepared for the section of this projected railway from Ottawa to Morrisburg, Ont., and from a point on this line to Russell, 55 miles. This mileage is ready to be put under contract, and it is expected that it will be let at an early date. The company is applying to the municipalities through which the line will pass to grant subsidies in aid of construction. (June, pg. 286.)

Ottawa, Rideau Lakes and Kingston Electric Ry.—Press reports state that financial arrangements for the construction of this projected railway are being made. It will be 125 miles long, from Ottawa to Kingston, passing through Smiths Falls, with a branch to Perth and Lanark. The maximum gradient is 0.7%. N. M. Clougher, Ottawa, is President. (May, pg. 235.)

Regina Municipal Ry.—Recent information states that the extensions of the electric railway in Regina, Sask., will be completed by Aug. 31. They include lines to the R.N.W.M.P. barracks, the Canadian Northern Ry. shops, the Grand Trunk Pacific Ry., the country club, and the sewage disposal works. Seven gangs of men and 440 teams are employed. H. Doughty is Superintendent. (June, pg. 286.)

St. Thomas Electric Ry.—At a meeting of the St. Thomas, Ont., city council, June 3, a bylaw was prepared for submission to the ratepayers to authorize the expenditure of $17,500 on the laying of a second track on Talbot St. (April, pg. 185.)

Saskatoon Municipal Ry.—The ratepayers recently passed a bylaw authorizing the expenditure of $100,000 upon the extension of the railway. (June, pg. 289.)

Stratford Ry.—It is said that arrangements have been completed for the immediate starting of construction of the lines proposed to be built in Stratford, Ont. A. Waddell, Stratford, is President, and J. E. Rothery, of Mackenzie, Mann and Co.'s staff, Toronto, is Manager. (May, pg. 236.)

Toronto Suburban Ry.—We are officially advised that at the end of May 90% of the grading on the eight mile extension from Weston to Woodbridge, Ont., had been done, and that the remaining grading was well forward. Tracklaying has been started, and it is expected to have the line finished early in July. Nothing definite has been decided as to the construction of the new line on a private right of way from Weston into Toronto, reference to the filing of the plans for which was made in our May issue, pg. 236.

The work in progress on the line to Guelph starts at the Senate Hotel, Dundas Road, runs into Lambton Park, crossing Humber River, and Mimico Creek, thence northerly and under the C.P.R. tracks to Dundas St., which is crossed at Islington. The route follows Dundas St., on the north side to the Etobicoke River, where it crosses to the south side, and gradually approaches the C.P.R., which is followed closely to Cooksville station, thence the line swings northward to Meadowvale, crossing the Credit River there through Churchville or Huttonville, where it gets out of the Credit River valley, passing near Norval, through Georgetown and Limehouse on the south side of the G.T.R. to Acton, through that village, and on in a direct line through Eden Mills to Guelph, where there will be a station on Dundas Road. The line will be 46.25 miles long. It is intended to extend the line from Guelph, crossing the Speed River at the old grist mill, and on by a fairly direct route to Berlin. The G.T.R. line to Harrisburg will be crossed, and there will be two crossings of the Grand River. No surveys have yet been made for any extension beyond Berlin.

The contract for the construction of the line from Lambton to Guelph is being carried out by Ewen Mackenzie, who has sublet portions of the work. The grading is more than 50% completed, and good progress is being made with the bridge work. Tracklaying was expected to be started by June 20, at Cooksville, the gangs working east and west. It is hoped to have the line completed in the fall. (June, pg. 287.)

Vancouver Hydro-Electric and Tramway Co.—We are advised that M. Yates, 511 Union Bank Building, Victoria, is the trustee for the company. The bylaw which has been approved by Ladysmith city council, granting a franchise to the company, provides for the building of an electric tramway system on such streets as may be agreed upon, the first lines to be completed within twelve months after the signing of the agreement. Regulations governing the operation of the lines are made, and it is provided that the city council may acquire the line at the expiration of 25 years, at a price to be agreed upon, and if the purchase is not then made the franchise is to be extended for five years, when the option to purchase may again be exercised. The company is to be exempt from taxation for ten years. (May, pg. 236.)

Winnipeg Electric Ry.—Wilford Phillips, Manager, recently announced that the company proposes laying about 14 miles of steel this year, which includes second track on existing lines, and some extensions. The St. Mary's road extension will be completed this summer to two miles south of the border of the St. Vital municipality. The Academy Road-Godfrey Ave. line will be extended to Ash St., and the Arlington St. line from William Ave. to Logan Ave. (June, pg. 287.)

An arrangement is said to have been practically concluded by which the company will start work immediately on the building of a line from the present terminus of the Park Lane line, along the Pembina highway, through the municipality of Fort Garry.

Port Arthur and Fort William Electric Railway Rolling Stock.

The joint commission operating the Port Arthur and Fort William Electric Ry. has ordered four double truck and five single truck p.a.y.e. cars from the Ottawa Car Co. The whole cars will be of all steel underframe construction with monitor roof, similar to those recently put into service by the Ottawa Electric Ry. Following are the chief details:—

Double truck:—Length over buffers, 45 ft. 3 ins.; length over bulkheads, 33¼ ft.; length of front vestibule, outside, 4½ ft.; length of rear vestibule, outside, 6½ ft.; width of belt rails, 8 ½ft.; seating capacity, 42 trucks, 27-G-1; motors, Westinghouse 101-B; air brakes, Westinghouse [illegible]; life guards; arc headlights; standard rattan upholstered seats.

Single truck:—Length over bulkheads, 21 ft.; length over buffers, [illegible] ft.; length of vestibule, 4 ft. 6 ins.; width of belt rails, 8 ft. 2 ins.; seating capacity, 32; motors, Westinghouse 101-B; air brakes, Westinghouse, S-M-1; electric heaters; life guards; arc headlights; standard upholstered rattan seats.

Regina Municipal Railway Notes.

Referring to the information on this subject, published in Canadian Railway and Marine World for June, pg. 1913, H. Doughty, Superintendent, writes: "The mention that wages are paid on the basis of 10 hours a day is somewhat misleading. On the old rates 10 hours a day was paid, but on the new scale, effective April 1 last, only 9½ hours a day is given."

A Regina correspondent writes:—"The city council has gone on record in favor of Sunday street cars. The matter will have to be referred to the people, a two third vote being required. There seems little doubt that before long the cars will be in operation on Sundays, as the council did not take action without an agitation having been first worked up in favor of Sunday operation.

"There is a possibility that workmen's special tickets will be done away with, as it is believed that but few avail themselves of the opportunity this cheap fare affords them of going home to dinner.

The consent of the Board of Railway Commissioner, to ten new crossings of steam railway lines is necessary before the city can carry out its programme of street railway construction."

Dominion Power and Transmission Company's Railway Lines.

In the comprehensive article in Canadian Railway and Marine World for June, dealing with the above lines, a paragraph covering the Bartonville section of the Hamilton Radial Ry. was omitted. It is now given, as follows:

The Hamilton Radial Electric Ry. also operates a short line from the southern terminus of the King East and Barton line of the city service, from the corner of Sherman Ave. and Main St., along the highway to Bartonville. This is single track, with a return trip distance of 2¼ miles. One single truck car operates on this line, carrying all the service, which, to this small suburb, is quite light. Between the city lines and this line, there is a transfer ticket arrangement. Between the lines of the Hamilton Street Ry., Hamilton, Grimsby and Beamsville Ry., and this Bartonville section of the Hamilton Radial Electric Ry., there is no physical connection, although the three lines come together at the corner of Sherman Ave. and Main St.

Port Arthur and Fort William Electric Ry.—Material for the construction of the new car lines in Fort William, Ont., has been delivered, and construction was started June 2. (April, pg. 185.)

Quebec Rapid Transit Co.—The Dominion Parliament has extended the time within which the company may build its authorized lines. (Nov., 1912, pg. 605.)

Three Rivers Tramway Co.—A second call of 10% on the subscribed capital has been made. R. Bournival, City Hall, Three Rivers, Que., is Secretary-Treasurer. (May, 1912, pg. 252.)

The Proposed Acquisition of the Toronto Railway by the City.

Following on the legislation obtained by the City of Toronto at the recent session of the Ontario Legislature, to enable it to negotiate for the acquirement of the Toronto Ry., a series of conferences have been held between the President, Sir William Mackenzie, and Mayor Hocken, to arrive at a basis of agreement on which the necessary bylaw may be prepared for submission to the ratepayers. In an interview, June 16, Mayor Hocken is reported to have said that he had suggested that the city might give $21,000,000 for the Toronto Ry., and all the electric railway lines in the city owned by the company, including the franchises of all portions of the Toronto and York Radial Ry. and the Toronto Suburban Ry., which are within the city limits, as at present defined. As it has been laid down by the company that only an offer which includes the purchase of the Toronto Electric Light Co. will be considered, the Mayor also stated that the city would probably pay $7,500,000 for all the assets and franchise of that company, making $29,000,000 for the two properties and all their assets. These figures are approximately on the basis of 160 for the Toronto Ry. shares, and 135 for Toronto Electric Light. It is understood that by acquiring these properties the city would also take over the unexpired contracts of the companies with the Electrical Development Co. of Canada for the supply of power for about seven and eight years respectively.

At a subsequent meeting of the Board of Control, an appropriation of $10,000 was made to obtain the services of experts for a valuation of the physical assets of the companies, and R. A. Ross, Montreal; B. J. Arnold, Chicago; and J. W. Moyes, Toronto, were agreed upon to investigate and report.

Before the matter can be finally decided upon, in addition to being submitted to the company's shareholders for ratification, it will have to be approved by the Ontario Hydro Electric Commission, and then voted on by the qualified ratepayers.

Full details of the capitalization of the companies concerned, and their relations with other companies of the local electrical group, were given in Canadian Railway and Marine World for May, page 238.

Personal Paragraphs.

BERT GREENWAY, until recently connected with the Brandon Municipal Ry., is now on the Regina Municipal Ry.'s staff.

T. STOTHERS has been appointed trustee for the three municipalities which have guaranteed the bonds of the Ontario West Shore Ry.

A. G. PERRY, Local Manager, British Columbia Electric Ry., North Vancouver, B.C., returned, June 1, from a holiday trip to England.

T. AHEARN, President, and **J. D. FRASER**, Director and Secretary Treasurer, Ottawa Electric Ry., left Ottawa, June 23, for a six weeks' trip in Europe.

G. W. WILSON has been appointed Treasurer of the International Railway Co., Buffalo, N.Y., vice N. P. Baker, resigned, who has gone to West Virginia to enter private business with his two sons.

R. A. SHAW, ticket agent, British Columbia Electric Ry., Vancouver, died suddenly on the street on his way to church, June 1. He was formerly in the Great Northern Ry. service at Langdon, N.D.

Electric Railway Notes.

The Brandon Municipal Ry. was officially opened for traffic, June 2.

The Halifax Electric Tramway Co. is reported to be in the market for six closed street cars.

The City of Calgary, Alta., is reported to be in the market for six cars for its municipal railway service.

The Montreal Tramways Co. has received three steel street car bodies, from Canadian Car and Foundry Co.

The Edmonton Radial Ry. has received six single end, double truck, semi convertible city cars, from Preston Car and Coach Co.

The Montreal Board of Control has decided not to oppose the granting of permission to the Montreal Tramways Co. to haul freight during this summer.

The Grand Valley Ry. started the operation of its cars between Paris and Galt, Ont., by power supplied by the Hydro-Electric Power Commission, June 2.

The Cape Breton Electric Co. has authorized the purchase of some new cars for its lines in Sydney, N.S., and the purchase of an additional ferry steamboat.

The Ottawa Electric Ry. has ordered two double truck locomotive type snow sweepers from the Ottawa Car Co., for delivery in November.

The British Columbia Electric Ry. has ordered three single truck snow sweepers, similar to those supplied last year, from the Ottawa Car Co., for delivery in November.

The Board of Railway Commissioners has approved the Hull Electric Co.'s standard mileage freight tariff for all distances to and including 15 miles.

The Halifax Electric Tramway Co. has agreed to take back those of its employes who were engaged in the recent strike for increased pay. The company's offer of 21, 22 and 23c. an hour, according to length of service, was accepted.

The Ottawa Electric Ry. has decided to change the color of the exterior of its cars from maroon to dark green. The 20 new cars about to be put into use will be green, and the present cars will be repainted the new color when they go into the shops to be repaired.

A press report states that two of the cars which the Calgary Municipal Ry. is having built by the Preston Car and Coach Co., will be of the stepless type, and that the company is negotiating with the patentees in the U. S., for the securing of the Canadian rights.

A meeting of property owners at Fort William, Ont., recently, decided to petition the city council asking for an extension of the municipal electric railway on Victoria Ave. westward to the city limits, thence south on Neebing Ave. to Montreal St., where connection would be made with the present line, thus practically forming a belt line.

The Regina Municipal Ry. has received, from Preston Car and Coach Co., 8 double truck, and 3 single truck, p.a.y.e. Five of the double truck cars are equipped with G. E. 80 motors, and 3 are equipped with Westinghouse 101 B2 motors, as are the 3 single truck cars, all quadruple equipment, and all the cars have Westinghouse air brakes D. E. G. 1 compressors.

The Winnipeg Electric Ry. operates its cars over its subsidiary line, the Winnipeg, Selkirk and Lake Winnipeg Ry., on Sundays as far as Parkdale. It was expected that arrangements would be completed for extending their operation through the municipality of St. Andrews, starting on June 22. The people of Selkirk are petitioning to have the operation of the cars on Sundays extended into that town.

The City of Regina, Sask., is building at its municipal railway shops, one motor haulage and four flat cars. The haulage car will have 27G 1 double trucks, 16 ft. centre to centre, 4½ ft. wheel base, 32 ft. long over all, Canadian General Electric Co.'s G.E. 80 A motor equipment and Westinghouse air brakes; the flat cars will have F.E. single trucks, 8 ft. wheel base, 26 ft. long over all, reversible hand brakes and Ohio Brass Co.'s Tomlinson couplers.

The Port Arthur and Fort William Electric Ry. service has been in full operation during the past month, the strike of the employes having collapsed. The railway is owned by the two municipalities, and is operated by a joint commission, and an agreement as to rates of pay, etc., had still some time to run, when the men demanded increased pay, and when that was refused, they struck work. Outside assistance was brought in, and a partial service was given for some time, but as the public generally opposed the strike, it soon collapsed.

The British Columbia Electric Ry., in conjunction with the New Westminster Progress Club, has arranged a series of excursion trips between Vancouver and New Westminster, for the season. Special cars will leave Vancouver at 1 p.m. daily for New Westminster, where parties, after spending a short time in the city, will embark on a steamboat for a trip down the Fraser River to Steveston, returning over the Lulu Island line to Vancouver, which will be reached about 5 p.m.

The Manitoba Public Utilities Commission has issued an order, taking effect July 1, under which the Winnipeg Electric Ry. Co. is directed to carry passengers on the lines to a point in Kildonan, at the same rate schedule as if the territory were part of the city system. The Commissioner held that he had power to fix this rate under the terms of the franchise, which states that the fare to be charged shall not be in excess of certain figures. The agreement mentions the maximum fares to be charged, and it is accordingly evident that conditions should be examined into from time to time to see how the service, both as to rates and transportation provision, stands in relation to the public interests on the one hand, and fair returns to the company on the other. The order will provide for an adjustment of rates to the extent mentioned, and will require the filing of a plan and construction of a connection to improve the service.

The Quebec Court of Review gave judgment, June 12, on a question raised by the Montreal Street Ry. Co., in connection with the application made some two years ago by a number of its employes for the appointment of a Board of Conciliation under the Industrial Disputes Act. The company raised the point that it was a provincial organization and questioned the right of the Dominion Government to interfere, but on this point the court decided against the company. The men making the application were 40 in number, who formed a union after their dismissal, and the court has now held that this organization could not be regarded as a trades union as defined by the Quebec Act. Only one of the men forming it could be held to be an employe of the company at the time the union was formed, And the company had over 2,000 employes with whom there was no dispute. The court held that the men did not come within the provisions of the act and consequently the original prohibition against the appointment of the Board of Conciliation must be upheld.

Marine Department.

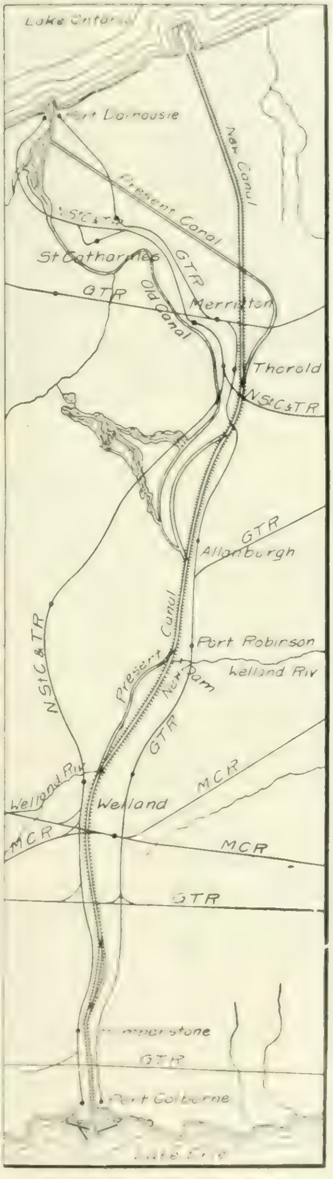
The New Welland Ship Canal Between Lakes Erie and Ontario.

The new Welland Ship Canal, [illegible] have been called for, as finally [illegible], follows the course of the present canal from Port Colborne on Lake Erie to Allanburg, about half way across the peninsula. From this point an entirely new cutting is to be made, crossing the present canal just below lock 25, the water level of the two canals at this point being the same, viz., 568 ft. above sea level. The new canal will again cross the present one below lock 11, the water of both canals at this point being at an elevation of 382 ft. above sea level.

The new canal will be entered from Lake Ontario at the mouth of Ten Mile Creek, about three miles east of Port Dalhousie, the entrance to the present canal. The total length of canal from lake to lake will be 25 miles, and the difference in level between the two lakes, 325½ ft., is to be overcome by seven lift locks, each having a lift of 46½ ft. These locks are to be 800 ft. long by 80 ft. wide in the clear, and with 30 ft. of water over the mitre sills at extreme low stages in the lakes. The width of the canal at the bottom will be 200 ft. and at first the canal reaches will be excavated to a depth of 25 ft. only, but all structures will be sunk to the 30 ft. depth, so that the canal can be deepened at any future date by the simple process of dredging out the reaches.

A new western breakwater, consisting of an immense rubble mound of stone from the excavation north of Port Colborne, and terminating in a timber and concrete head block located some 2,000 ft. farther out in the lake than the present breakwater, will be built to insure quiet water in Port Colborne harbor during storms, which is not the case now, the present breakwater not being far enough out in the lake to deaden the swells. The outer harbor at Port Colborne now has a 22 ft. depth of water at ordinary stages of the lake, which is as much as is available at most of the lake ports and in the channels connecting the lakes at present, and the deepening of this portion of the harbor may be left for a few years until the connecting channels in the lakes allow deeper navigation. The inner harbor at Port Colborne will be deepened to the proposed new depth, and the old locks and regulating weir now in the centre of the village will be entirely removed.

The present rock cut from Port Colborne to Humberstone will be deepened and widened on the west side, and just below Humberstone a thorough cut will be made across the point now forming Ramey's Bend, to materially straighten the canal. The material from this cut will be nearly all rock, and will be used to form the breakwater previously mentioned. A guard lock will be built in the rock cutting a short distance below Humberstone, and when this new cutting is ready for navigation a regulating weir will be built across the abandoned portion of the present canal, which will be used as a by pass to furnish water to the canal. This lock and regulating weir will control the elevation of the summit level of the canal, which it is proposed to keep at the level of extreme low water in Lake Erie, viz.: 568 ft. above sea level.



Route of New Welland Ship Canal

From Ramey's Bend to Welland the present canal will be [illegible] by excavating a strip along the [illegible] bank. Instead of building a new aqueduct at Welland, to carry the canal over the Welland River, it is proposed to raise the level of the river to that of the sum- [illegible] out into the Niagara River, at Chippawa, [illegible]

[illegible] bank between the canal and the river, through which vessels will again enter the canal prism.

The raising of the Welland River, above Welland, will flood some 1,600 acres of low land adjoining the river bed. This land is not of any great value, as it is flooded every spring by the flood water in the river and is principally used for pasturage. The Wainfleet Tsp., adjoining the Welland River on the south side, consists principally of low lying ground which drains into the Welland River, and to prevent damage to this land on account of the raising of the river, it will be necessary to open up most of the ditches from the point of their present entrance to the river to the intended high water mark.

The turning of the Welland River into the canal will pollute the waters which are at present used by the towns of Welland, Thorold and Merritton, and by the City of St. Catharines for domestic purposes. This may necessitate the construction of extensive filtering plants, which scheme is not looked upon with favor by those interested. An alternative scheme, to lay a pipe line from Lake Erie to the reservoirs of the different municipalities, through which clean water would be continuously pumped, is under consideration and appears to be the most feasible scheme available.

Between Port Robinson and Allanburg what is known as the deep cut (deepest cutting 66 ft.), will be deepened and widened by cutting a slice off the western bank. Allanburg is now the junction of the present and old Welland Canals, and the water required for the latter, which is quite considerable, on account of the numerous power developments along it, is taken into the canal through a weir at this point.

[illegible] the new canal, it is proposed to close the present old canal entirely between Allanburg and Marlatts Bridge, near Thorold, first building a new weir at the head of lock 25 of the present canal, to supply the above mentioned water. A dam will then be thrown across the old canal at Allanburg, and the old bed of the canal between the dam and Marlatts Bridge will be utilized as a dumping ground in which to place the material removed from the above [illegible] in widening the deep cut. This [illegible] a very convenient dumping ground [illegible] old canal will become more [illegible] as at present the entrance works are situated at an inconvenient distance from the remainder of the canal.

[illegible]

on the old canal, entrance may be had to it through lock 25 of the present canal, when the new canal is completed, by making a short cut through the bank separating the two waterways.

A pair of twin guard gates are located on the proposed canal, near the southerly limits of the Town of Thorold, and a short distance north of them will be located lock 7, the head of this lock being directly opposite the head of lock 24 on the present canal. The portion of the present canal between locks 25 and 24, together with a pond of about 27 acres, formed by flooding the upper valley of the Ten Mile Creek, will be utilized as a regulating basin from which water to fill lock 7 will be drawn. This method of drawing water from a side pond, instead of directly from the canal above, avoids the formation of objectionable currents and surges in the canal and locks, and is the method adopted for filling all of the locks.

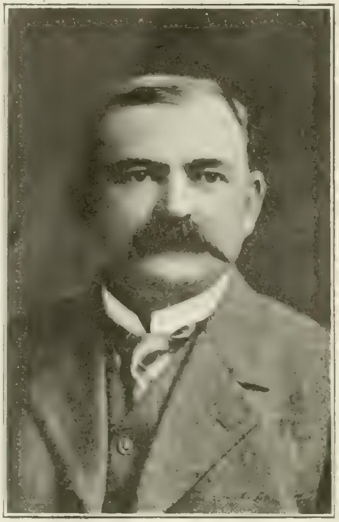
Below lock 7 will be a short reach of canal, with an adjacent side pond or regulating basin having a surface area of about 84 acres, and immediately below will be located twin locks 6, 5 and 4 in flight. These three locks will overcome a descent of 139½ ft. One flight will be used for down bound vessels and the adjoining flight for up bound, a double flight being required to save long delays in the passage of vessels through the canal.

The G.T.R. main line between St. Catharines and Niagara Falls will cross over the foot of twin locks 4, by means of two short bascule lift bridges.

The G.T.R. Port Dalhousie-Welland branch is situated just where the new locks are to be built, and it will be necessary to divert it some distance to the west. The diverted line will bear the same relation to the new canal as the present line does to the present canal, following upon the west side of the locks, but remaining on the west side of the canal for some distance above the present lock 25, when it will cross over the new canal on a bascule lift bridge to the east side.

From lock 4 the new canal will cross the meadow to the north, following in part the bed of Ten Mile Creek till it crosses the present canal at the foot of lock 11, at an elevation of 382 ft. above sea level, which is the level of the present canal at that point. This will enable small vessels, which wish to do so, to use the Port Dalhousie entrance as at present, as far as lock 11.

Lock 3 will be located immediately north of the present canal, and at its head on the east side will be an equalizing basin, or pond, of 150 acres. Below lock 3 a heavy cutting will be required through the village of Homer to the bed of Ten Mile Creek again, above Carleton St., and just below Carleton St. lock 2 will be located. It was difficult to find a location for this lock on account of the lack of rock for a foundation, but eventually a suitable foundation was found at the present site. The canal at the head of lock 2 will be at an elevation of 335½ ft. above sea level, and will flood about 200 acres of land in and adjoining the bed of Ten Mile Creek. Below lock 2 the canal will follow the bed of the creek to the lake, lock 1 being situated just below the Lake Road. The pond at the head of lock 1 will cover an area of 107 acres.

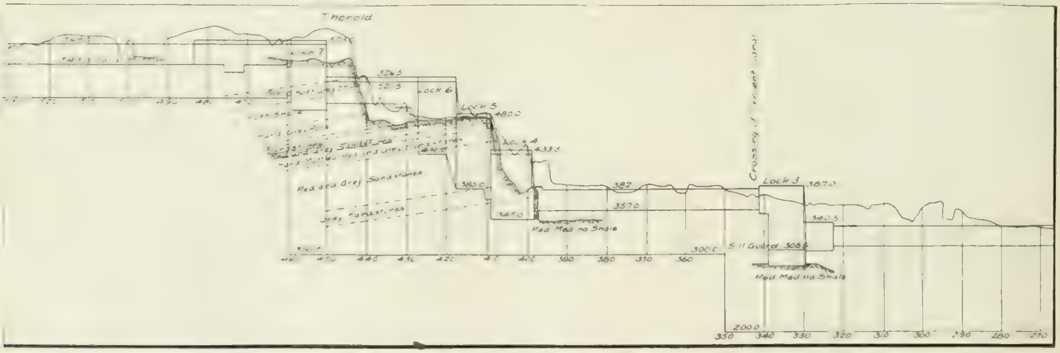


J. L. Weller, M. Can. Soc. C.E.,
Engineer in Charge, New Welland Ship Canal

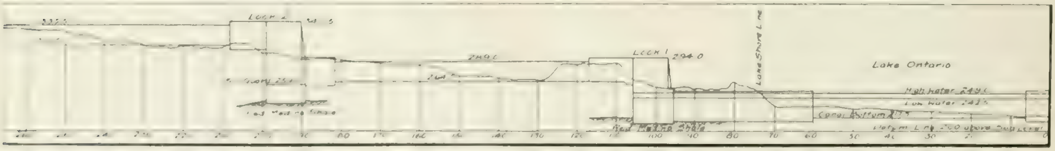
The outer entrance piers in Lake Ontario will be placed about a mile and a half from shore, where the depth of water is 30 ft. A wide channel will be dredged from these piers to lock 1. The sides of this channel will be protected near the shore end by reinforced concrete cribs, with concrete superstructures, alongside which vessels may lie. From the shore line of the lake to the outer entrance piers an embankment about 500 ft. wide will be formed on either side of the channel, from material excavated from the canal between the lake and Thorold. For the purpose of conveying this material from the different contracts to the lake, the Railways and Canals Department will build a double track railway along the west side of the canal from the foot of the flight locks near Merritton to the lake, and temporary trestles will be built out in the lake on either side of the harbor, from which to start the dumps. The railway will also be utilized to haul crushed stone from the site of the flight locks to locks 1, 2 and 3, where it will be used for making concrete. The contractor for the rock excavation from the site of the flight locks will, under his contract, be obliged to crush a sufficient quantity of the good rock taken from his excavation to supply all the crushed stone required for making all the concrete for the different locks and structures.

The lock walls will be 82 ft. above the top of the gate sills, and including the necessary foundation work required below this level two of the locks will have walls 100 ft. high.

The lock gates will be of the single leaf type, swinging on a hinge at one side of the lock, and resting in a notch cut in the opposite wall, a single leaf thus spanning the whole width of the lock chamber. The gate at the foot of each lock will be 83 ft. high and 88 ft. long, and will weigh about 1,100 tons.



Profile of North End of New Welland Ship Canal.



Profile of North End of New Welland Ship Canal (Cont'd.)

The valves and culverts in the walls will be of large dimensions and will permit of the lock being filled in less than eight minutes. This will mean that the time of passage through the canal will be very much reduced below that required at present, the estimated saving being three hours.

The length of the first section for which tenders have been invited is about 3 miles, and will include the pier works at the Lake Ontario entrance and lock 1.

The original and present canals followed a route from Port Colborne across the Niagara peninsula, practically paralleling each other at the northern end, entering Lake Ontario at Port Dalhousie. The original canal was commenced in 1824, and completed in 1833, the line following very closely certain water courses, to facilitate construction, making the length 27½ miles. This canal contained 27 locks, 24 of which were 150 by 26½ ft., and the other three, 200, 230 and 270 by 45 ft., respectively. The depth of water on the sills was 10½ ft., with a total lift of 326¾ ft. The initial construction of these locks gave a depth of 8 ft., the increase of 10¼ ft. being a subsequent change. The present canal was commenced in 1872, and completed in 1887. The route at the northerly end was slightly changed to the east near St. Catharines, the canal coming out into Lake Ontario at the same point as the original one. The locks are 26 in number, 270 by 45 ft., with a depth of 14 ft. over the sills.

The surveys for the new canal were made under the direction of J. L. Weller, M. Can. Soc. C.E., Engineer in charge, who also prepared the plans, etc., and to whom we are indebted for the foregoing particulars.

Work on the St. Lawrence Ship Channel.

In reference to the $894,000 provided for expenditure on the St. Lawrence Ship channel, the Minister of Marine recently stated in the House of Commons, that it is for the maintenance and operation of the dredging fleet, and was made up as follows: 6 elevator dredges with tugs, at $45,000 each, $270,000; 1 new steel elevator rock dredge or tug, $45,000; 1 new steel elevator rock dredge with tug, now under construction, and expected to be ready for next season, $45,000; 1 new self propelling steel elevator dredge with tug, being built by contract, half season, $25,000; 1 hydraulic dredge with two tugs, $118,000; 2 suction hopper dredges, 1 tug and 1 self propelling hopper barge, $150,000; 2 dipper dredges with tugs, at $40,000 each, $80,000; 2 inspection and sweeping tugs, at $18,000 each, $36,000; 2 stone lifters and 1 floating shop, $15,000; 1 rock cutter, $10,000; amount for outfitting, docking and providing extra parts for dredging fleet generally, including the necessary improvements to fleet, $100,000. It is estimated that to obtain a channel 35 ft. deep at extreme low tide, and 1,000 ft. wide, in the north channel below Quebec, 16,153,173 cu. yds. of material would have to be dredged. Of this 2,211,000 cu. yds. had been dredged up to Sept. 28, 1912. With the present two dredges in operation, it will take about eight months to complete the work, but as the various shipping interests are anxious that it be completed in a shorter time, it will be necessary to acquire an additional powerful dredge.

The Department of Railways and Canals has awarded the contract for the construction of a stern wheel tug, required in connection with the work of the Hudson Bay Ry., to Polson Iron Works, Toronto.

Fishery Patrol Steamboat for Lake Winnipeg.

The fishery patrol steamer now being built for the Department of Marine and Fisheries for service on Lake Winnipeg will be of the following dimensions: length over all 149½ ft.; length b.p. 140 ft.; breadth moulded 26½ ft.; breadth extreme 27 ft. ¾ in.; depth moulded 13½ ft.; draft mean 7½ ft.; indicated horse power 900; speed 12 knots.

The vessel has been specially designed for this particular service, and, in addition to performing general patrol duties, will be equipped with arrangements for carrying large quantities of spawn in connection with the fish hatchery at Lake Winnipegosis, together with an installation for the handling of buoys on Lake Winnipeg.

The vessel will be built of steel throughout, to Lloyds 100 A. 1. (lake service) class, and will have a raked stem and cruiser stern. The hull will be divided by five main transverse watertight bulkheads, and two longitudinal bunker bulkheads which will also be watertight. At the fore end, special strengthening will be introduced in order to meet the stresses set up when working in light ice. The under water portion of the vessel will be completely sheathed with wood, to afford protection as much as possible from wear and tear through grounding in shallow waters and working in ice.

The deck auxiliaries will include the usual windlass, capstan and steering gear. The steering engine will be located in the engine casing, connected to the rudder head by chains and quadrant, and controlled from the wheelhouse on the navigating bridge. Complete systems of steam heating, ventilation, pumping and draining, fresh water and sanitary services will be provided throughout the vessel, the latter service being on the pressure system, supplied from a duplex pump situated in the engine room. The electric generating plant will consist of a steam turbo-generator of 14 k.w. capacity, capable of supplying at the same time both the ordinary ship's lighting and searchlight. The searchlight, which will be located on the wheel house top, will be of 16,000 candle power, and arranged to work from the wheel house. The equipment of the vessel will be in accordance with Lloyd's rules and the Canadian Steamboat Regulations. In addition to the usual lifeboat accommodation, which will be sufficient for all on board, there will be provided on the boat deck a motor launch having a speed of about eight miles an hour.

Accommodation will be provided for a total complement of 17, including officers, men and fish crew. On the lower deck forward will be the dining saloon, steward's room, pantry, and cold storage, whilst aft on the lower deck will be the engineers', officers' and men's quarters, including crew's mess room and lavatories, and officers' bath and w.c. On the main deck will be the captain's cabin, entrance hall, bathroom and w.c., and spare stateroom, the galley being situated between the engine and boiler casings. At the aft end of the deckhouse will be a large spawn house, fitted up with racks and rollers, etc., and every convenience for the rapid handling of a large quantity of spawn. The navigating bridge will be on top of forward deckhouse, on which will be the wheelhouse, containing compass, wheelstand, chart table, etc. The coal bunkers will be placed longitudinally on each side of the boiler room, and have a capacity of about 60 tons.

The propelling machinery will consist of two sets of inverted, vertical, direct acting, [illegible] minute with 180 lbs. steam [illegible] will include air pump of the twin beam [illegible] heater, filter, injector, and fresh water and sanitary pump, will all be independent of the main engines. The motive power will be supplied from two [illegible] ended boilers 11 ft. diameter by 10½ ft. long, fitted with Morison's furnaces and [illegible] draught, the fan and engine being situated in the engine room.

The vessel was [illegible] being built under the superintendence of Chas. F. M. Duguid, Naval Constructor to the Department of Marine and Fisheries.

The Launching of the Cunard Liner Alaunia

The s.s. Alaunia, which the Cunard Line is having built for its Canadian service, was launched at Greenock, Scotland, June 7. She is a sister vessel of the s.s. Andania, launched for the same service in March. Her chief dimensions are, length 540 ft., breadth 64 ft., depth 46 ft., and she will be equipped with two sets of quadruple expansion engines, balanced to reduce vibration to a minimum. She will have all modern appliances for safety and comfort, including Marconi wireless telegraph apparatus, submarine signalling, etc. There will be accommodation for 2,140 passengers, for two classes, 520 second and 1,620 third. The cabins will be entirely on B and C decks, those on the former being all outside rooms. The lounge and writing room will be on A deck, also the smoking room, while immediately aft of the lounge will be a completely equipped gymnasium. The dining saloon will be on D deck, with all the customary kitchen accommodation. The third class accommodation has been designed to give the best service, and includes a ladies' room, two smoking rooms and a general room for music, etc.

Judgment on Appeal in the Bengore Head Stranding Case.

The appeal of Capt. Hoy, of the Head Line's s.s. Bengore Head, against the decision of the Dominion Wreck Commissioner, Oct. 17, 1912, re the stranding of the vessel in the Strait of Belle Isle, Oct. 5, 1912, when his certificate was suspended for three months, was heard before the Admiralty Court in London, Eng., recently, when the decision was quashed. In delivering judgment, the President, Sir Samuel Evans, said that he saw no reason to suppose that the master was inaccurate, negligent or over confident in taking bearings, and in the circumstances, (he had been on duty for 30 hours, and on the bridge for 20 hours), he was quite justified in going below after giving proper instructions to the second officer. To find the master primarily responsible for the casualty, under sec. 470 of the Merchant Shipping Act, the court obviously must have found that it was caused by his wrongful act or default, and this was not borne out by the evidence. The master's anxiety to clear his character was shown by the fact that the notice of appeal was given within six days, and the President thought he was justified in his action. The decision of the Canadian court must be reversed and the certificate restored as from the date of the suspension.

Suction Dredge for Dominion Government Harbor Work in Hudson Bay

Construction for the new harbor work which the Dominion Government is to build in Hudson Bay at the terminus of the railway from Pas, Man., is to be pushed forward during this summer, and a 24 in. suction dredge has recently been ordered for the work, to be completed for delivery within four months from the commencement of the construction, early in April. This will mean delivery in August, so that the dredge may be towed to the north before the close of the season. The Government intends using it in the latter part of the year, if the plans at present proposed are fulfilled. The progress of the work to date is such as would indicate that the delivery will be as contracted for.

A plan and elevation of the dredge are given herewith. It will be the second largest dredge ever built in Canada. Completely equipped, it will weigh 1,200 tons. It is to be 180 by 43 ft., with a moulded depth of 11 ft., and a draught of 6½ ft. It will be a double decked structure, steel throughout, and fitted with five bulkheads, dividing it into six watertight compartments. The 24 in. suction pump will be located in the forward end of the hold, directly connected with a 14 by 22 by 36 by 21 in. triple expansion engine, obtaining steam from two 13 by 12 ft. Scotch boilers, also located in the hold to the rear of the engines.

At the rear of the dredge will be the suction pipe and cutter head, on an arm pivotted to the rear end of the deck and supported at the outer end by cables from shear legs, one on each side of the deck, these latter being braced by cables from near the front of the boat. The cutter arm will dredge to a depth of 48 ft. The cutter at the outer end of the suction pipe arm is a steel casting with six attached manganese steel blades. Two sizes of cutters are to be employed, 4 ft. for hard material, and 5 ft. for soft material, both of the same general construction. These will be driven through a shaft along the cutter and suction arm, and a system of bevel gears, by double 12 by 12 in. vertical engines on the rear end of the deck. The suction pipe of 26 in. seamless tubing, ½ in. thick, will connect at the boat, through a ball connection, to a pipe running back to the centrifugal pump, which will discharge through a similar pipe running along the side of the boat to the front, where connection will be made with piping, 3,000 ft. of which is to be supplied. This latter is to be of the floating type, carried on each side by floating cylinders. When working with a short length of discharge pipe, the capacity will be 20 cu. yds. of solids a minute, or 1,200 cu. yds. an hour. When using the full length of discharge pipe, that is, 3,000 ft., the discharge will be reduced to 800 cu. yds. an hour. The design of the dredge is such that a side connection from the dredge near the pump can be easily arranged.

The operation of the dredge will be out of the ordinary, it not being of the stern pivot type. Two steam capstans will be located at the stern, and one at the bow, and by means of anchors located some distance each side of the vessel at both front and stern, the dredge will be moved from side to side bodily, the dredge end of the discharge pipe moving with it. The cutter and suction arm at the front will be raised and lowered by a winch engine in the centre of the vessel. All the control of the suction, cutter and winch machinery will be from a central point at the rear in an operating room, on the upper deck.

An 8 in. centrifugal bilge pump will be located on deck on the starboard side of the dredge, connected with all the bulkheads. This pump will be steam driven, obtaining the steam from a 48 in. locomotive boiler in front of it on the deck. This latter will also be used as a source of auxiliary steam, for use in heating the vessel when it is laid up and the main boilers are out of commission, also for auxiliary purposes.

There will be a 10 k.w. steam driven generating set in the engine room for the supply of electrical power. This will be used for lighting the ship, and for the search lights above the deck, front and rear.

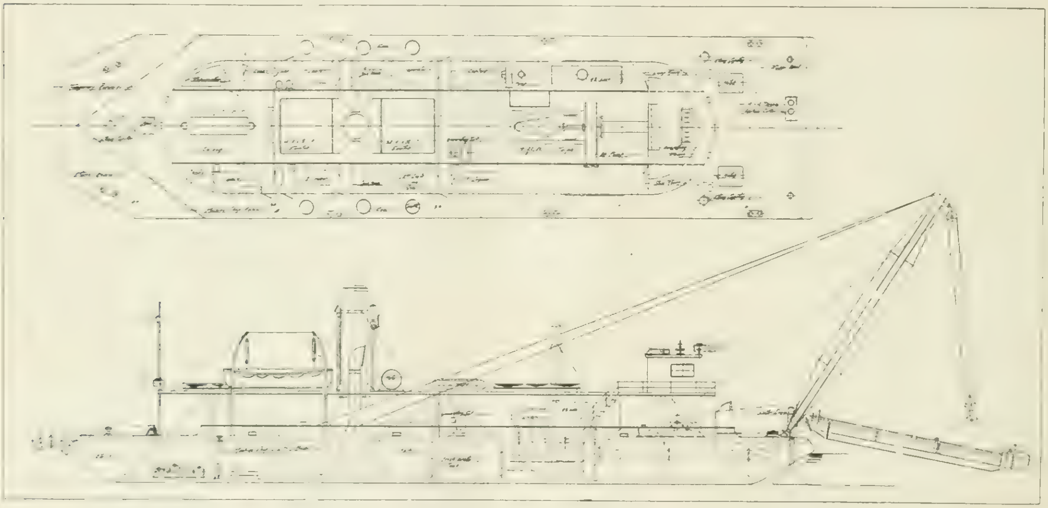
A most important feature of the dredge will be a complete machine shop, equipped with lathes, planer, drills, etc., in a room in the hold at the stern. In addition, there will be a compressed air unit with a supply of air tools, and a small brass furnace for the production of small brass castings. This will make the dredge self contained in the event of break downs far away from supplies.

Both sides of the main deck at the front of the engine room are to be divided off into cabins for the officers and crew, and the central part of the main deck at the front is to form a saloon. A crew of 35 will be carried.

The dredge, while operating for the most part in fresh water, is to be given salt water equipment throughout. This will include copper piping and there will be a fresh water tank of 80 tons capacity. The coal capacity will be 250 tons.

The dredge is to make the trip from Toronto, where it is being built, to Hudson Bay by way of the St. Lawrence River, being of a suitable size to pass through the locks, and round the Labrador coast, being towed all the way. Temporary rudders on each side of the stern will be added for the trip. The dredge is to be provided with 600 ft. of 1½ in. stud link chain with a 3 ton anchor. There is also to be a sea anchor in case it is necessary for the tugs to cast the dredge adrift at sea.

The dredge is being built by the Polson Iron Works, Toronto, to the designs of Wm. Newman, A.M.I.N.A., Works Manager. The motive power and auxiliary machinery were designed by J. Sharp, Chief Engineer. The short time allowed for the completion of the work by the company has necessitated carrying it on 24 hours a day. The cost of the dredge will be about $270,000.



24 inch Suction Dredge for Government Harbor Service in Hudson Bay.

The Lake Winnipeg Shipping Co. is arranging to extend its dock on the Red River, at Winnipeg, from the southern end of the existing dock near Broadway Ave., southerly for 475 ft., and also northerly for 100 ft. Hugh Sutherland, Executive Agent, Canadian Northern Ry., is President of the company.

The Northern Navigation Company's New Steamship Noronic.

The steamship Noronic, which was launched at Port Arthur, June 2, and which will run between Sarnia, Port Arthur and Fort William, Ont., and Duluth, Minn., will be the largest passenger vessel on the Great Lakes. Her principal dimensions are as follows:—

Length over all	385 ft.
Length between perpendiculars	[illegible]
Breadth, moulded	52 ft.
Depth, moulded	[illegible]

The hull is built on the Isherwood system of longitudinal framing. The frames, instead of running transversely, as in ordinary ships, run fore and aft, or longitudinally, and are supported by large plate web frames, fitted transversely, spaced 10 ft. apart. This construction is very much stronger than the old system, and is lighter, thus gaining in carrying capacity and speed. A double bottom is fitted 4¾ ft. deep, extending the full length of the vessel, and the hull is divided by eight watertight transverse bulkheads into nine compartments. Two collision bulkheads are fitted forward.

There will be six decks, all being made of steel, as follows: Main, spar, promenade, observation, boat and hurricane deck. The entrance hall or lobby will be on the main deck, the side walls will be panelled with quartered oak, with interlocking rubber tiling floors. The main stairway will lead to the social hall on the spar deck, and the office will be on the port side. This office is to be fitted similar to that of a large hotel, where clerks will be on duty at all times. There will be 151 staterooms on this deck, and it will be well equipped with lavatories, bathrooms, barber shop, etc. The main corridors of the spar deck will be finished in white enamel, with the social hall panelled in quartered oak.

The promenade deck will be panelled throughout in mahogany. At the forward end will be the drawing room, fitted with comfortable lounges, upholstered in Spanish leather. Aft of the drawing room will be ten en suite cabins, furnished in mahogany. These rooms will be fitted with brass beds and each will have a private bathroom adjoining, finished in white tiling. The smoking room, at the after end, will be finished in fumed oak. There will be 70 ordinary staterooms on this deck. There will be a wide promenade extending completely around the vessel. The distance around will be about 880 ft.

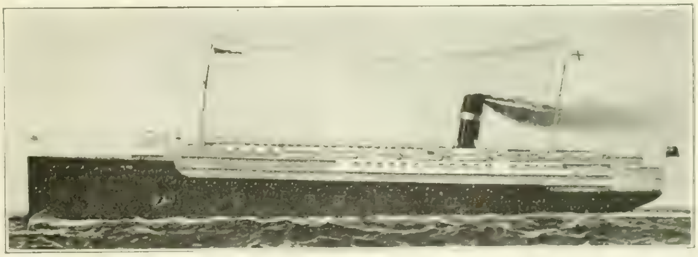
The observation deck will contain the observation room, dining room, kitchen, store rooms and refrigerating rooms. The observation room, at the forward end, will be 140 by 38 ft., panelled in quartered oak. The floor will be waxed oak for dancing. The observation room will be divided from the dining room by folding glass partitions, and an orchestra stand will be built at this point, so that the music may be used for dancing or the glass doors may be folded back for the dining room. The dining room will be 180 by 50 ft., with a seating capacity of 286. The side walls will be panelled in mahogany, the tables and chairs will be of mahogany, and the ceiling will be enamelled white, with raised ornamental figures. The electric lighting will be indirect, large bowl fixtures being fitted over each table. Fireless cookers will be fitted at each table for the purpose of keeping vegetables, etc., warm. The kitchen will contain ranges, steam tables, plate warmers, broilers, electric toasters, egg boilers, dish washers, etc. The refrigerating rooms will contain separate compartments for meats, fruits, butter and eggs, fish, and an ice making room. The cooling system will be a 12 ton [illegible] capacity [illegible] machine.

The boat deck will be finished [illegible] in quartered oak panels, and a large dome skylight will be fitted overhead extending the full length of the cabins. There will be 48 staterooms on this deck, together with large [illegible] quarters and pilot house will be located forward, and the [illegible] rooms, recreation rooms and bakery aft. Fourteen life boats will be fitted, each 24 ft. long. In addition, there will be carried life rafts, so that the combined capacity of boats and rafts will be sufficient to carry all the passengers and crew.

All of the staterooms will be completely fitted out with single upper berths and double lower berths, with electric reading lights at the head of each berth. Vitreous wash stands, with hot and cold running water, will be fitted in each room.

The electric fixtures and decorations throughout will be special features of the whole design, and are being tastefully obtained by a careful selection of woods worked out, simplicity, with rich effects was taken as the keynote, in preference to using large ornaments and gilt.

The lower hold will be divided into four cargo compartments, each provided with two cargo hatches through main deck. The 'tween decks will have five gangways on each side, in addition to the passengers and engineers' gangways. The sides of the hold and 'tween decks will be covered with wood sparring, to prevent freight package from damage.



Northern Navigation Co.'s s.s. Noronic.

The engines will be of the four crank, triple expansion type, built for Dominion Government requirements, for 200 lbs. pressure at high pressure engine. The cylinders will be arranged from forward to aft with low pressure, high pressure, intermediate pressure and low pressure, the high pressure being 29½ ins. int., 47½ ins., and the two lows 58 ins., with a common stroke of 42 ins. The pistons will all be of the dished type, h.p. cast iron solid and the int. and low pressure of cast steel. The forward pair of cylinders will not be rigidly held together, but will have a brass slip joint, which will connect them to the after pair, allowing for expansion and vibration. The cylinders will be supported on four heavy back columns, which will carry an adjustable slipper guide with loose face, water cooled, and six front columns, well braced together. The cylinder lagging will be of planished steel. The connecting rods will be forked at the top end and tee head at bottom, with steel bearings lined with white metal. The crank shaft will be 14¾ ins. diam., and the cranks will be counterbalanced to reduce vibration to a minimum. The valve gear will be the Stephenson link, with adjustable cut-off. The h.p. will have [illegible] improved assistant cylinders. Connected to [illegible] condenser. Bilge and cooler pumps will also be attached to the main engine. A double cylinder turning engine will be arranged for turning on main engine. The engine will be provided with a six collar horse shoe thrust bearing, lined with white metal. Propellers will be cast steel on cast iron hub. The bed plate will have six main bearings and will be of the box section, girder design. Circular steel shells in square boxes will be used on bearings, so they can be removed without disturbing shaft.

There will be four main boilers 15½ ft. inside diam., by 11 ft. inside of heads, for Canadian and Lloyd's rules, 200 lbs. per square inch. Each boiler will contain 452 2¾ o.d. tubes, 7¼ ft. long, and three 48 in. furnaces. The shell plates of the boilers will be made in two pieces, having no circumferential seam in centre. The auxiliary boiler will be 12½ ft. diam., by 11 ft. between heads, and will have 296 2¾ in. o.d. tubes and two 48 in. furnaces, shell in two plates, for 200 lbs. per square inch pressure. Forced draught will be used, air being supplied by two blowers, with 48 in. wheel, direct connected with double enclosed, self oiling engine, arranged so that one blower can supply all the air should accident happen to the other. Patent flue blowers will be fitted in the breechings of each boiler, to blow tubes in boiler and air heater tubes. Four of the latest improved ash guns will be fitted in the fire rooms.

Two 12-16-18 in. ballast pumps are installed in engine room and connected to manifold, which in turn is connected to all ballast piping in boat. The two main feed pumps will be single 12-8 by 24 in. vertical pumps, which will pump directly to the feed water heater, the latter being of the horizontal film type, with copper tubes, and capable of raising the temperature of 80,000 lbs. water per hour from 130° Fr. to 210° at delivery. The tubular hot water heater will be fitted for sanitary system of boat, water heated by auxiliary steam after passing through main heater.

The main steam pipe will be of steel and will be connected by heavy forged steel flanges, expanded and rivetted to pipes. The steering engines will be of the direct acting type, both geared to cut toothed quadrant and arranged so that either can be thrown in or out of gear from pilot house at will. The windlass will be spur geared, 10 by 10 ft., and will be arranged with wire spools, and supplied with clutches and brakes for handling wire lines. A 12 by 12 in. cargo hoisting engine will be supplied with all [illegible] for handling cargo.

A large party of Richelieu and Ontario Navigation Co.'s directors and guests went from Sarnia, Ont., on the s.s. Hamonic to witness the launching. The Managing Director, James Playfair, was called back shortly after the Hamonic passed Sault Ste. Marie, owing to his father's fatal illness, in consequence of which the christening was performed by Mrs. E. Bristol, wife of another director, instead of by Mrs. Playfair, as at first intended. A large number of Winnipeg people were also present, having travelled by special train. After the launching the guests were entertained at luncheon on the Hamonic by the builders, the Western Dry Dock and Shipbuilding Co.

The Proposed Montreal-Georgian Bay Ship Canal.

In connection with the proposal to build a ship canal between Montreal and Georgian Bay, utilizing the French River for a portion of the route, and on the discussion, in the House of Commons, recently, on a vote for $500,000 for French River waterways improvements, the Minister of Public Works stated that he was carrying out the recommendation made some years ago by the Royal Commission on Transportation, to the effect that it would be advisable to have an investigation made of the commercial feasibility of the project. Regarding the French River end of the route, he estimated that sufficient water power would be developed to repay interest of the proposed outlay of $500,000. The report made by his predecessor in office had resulted in complete information being on hand with reference to the engineering features of the work, and in that respect it was regarded as feasible, but he considered it necessary also to ascertain the commercial value of the undertaking, and such information would be obtained. In the meantime it was proposed to develop the French River section.

The Canadian Gazette, London, Eng., which is usually well informed in regard to Canadian affairs and accurate in its statements, has evidently been misled in regard to the position of this project. In a recent issue it states that the scheme has made considerable progress, that both political parties have pledged their support to it, that it will be financed largely by means of bonds guaranteed by the Dominion Government, and that the financial side of the question is in the hands of Sir Robert W. Perks, who has recently returned to England.

It might be concluded from the Gazette's remarks that the Dominion Government has completely endorsed the project and is prepared to go ahead, but as above pointed it was distinctly stated in the House of Commons recently by the Minister of Railways and Canals that the commercial side of the matter would be thoroughly enquired into before anything is decided on. When this occurs the next decision for the Government to make will be whether the work shall be carried out as a public one, by letting contracts for construction to contractors, or if it shall be built by Sir Robert W. Perks' company under a Government guarantee or aid. The statement that the financial side of the question is already in his hands appears to be at least premature.

The hearing of the actions between Mackenzie, Mann and Co. and James Dunsmuir arising out of the sale of the Dunsmuir interests in collieries, etc., on Vancouver Island, in June, 1910, was begun in a British Columbia court, May 13.

Dominion Government Lightship for Halifax

The Dominion Government has awarded a contract for the construction, equipment and delivery of a steel single screw steam lightship for service at Halifax, the vessel to be built at Paisley, Scotland. The principal dimensions are:—

Length over all	135	ft.	0	ins.
Length on waterline	114	"	0	"
Beam, moulded	29	"	0	"
Depth, moulded	14	"	8	"
Draught	12	"	9	"
Complement	16			

The vessel is to be built of mild steel throughout, to be classed 100 A1. at Lloyd's, and fitted out in accordance with the Board of Trade regulations and Government inspection. The stem will be of the clipper, and the stern of the elliptical type. Four transverse watertight bulkheads will be fitted, while watertight flats at the bow and stern will, with the bulkheads adjoining, form trimming tanks. There will be three decks, the main and spar decks being continuous, and the lower deck extending from the stem to the coal bunker bulkhead, and from the stern to the after engine room bulkhead.

A powerful revolving lantern will be carried on a heavy steel tower, access to the lantern chamber being made by a stairway inside. Inside the lower portion of the tower will be a large air pressure tank for supplying the fog horn, which will be on the spar deck just forward of the tower. In the engine room on the level of the main deck will be two air compressors connected to this tank. The oil for the lantern will be controlled by a pump situated in the oil room on the lower deck forward. In addition to the fog horn, a large organ whistle will be fitted to the funnel.

The deck machinery will consist of a large windlass of special design, for the handling of the heavy mooring anchors, and a small steam winch on the spar deck for working the boats, etc.

A complete electric lighting installation will be fitted throughout the ship, supplied by a steam turbo generating set in the engine room.

Complete fresh water and sanitary, fire, and steam heating systems will be fitted in the most up to date manner.

Besides the lantern tower, the vessel will have a main mast carrying a main sail and wireless aerials. The boat equipment will consist of one 23 ft. lifeboat on the port, and a 24 ft. motor launch on the starboard side.

Accommodation for captain, officers and engineers will be provided aft on main deck, while forward on the same deck will be the crew's quarters, including galley, pantry, mess rooms and store rooms. On the lower deck aft will be the engineer's workshop, sail room and provision rooms, and on the lower deck forward the carpenter's shop, oil rooms, cold storage, galley coal bunker, and various store rooms. On the spar deck aft, the wireless cabin and companion to officers' quarters will be located, and forward at base of lantern tower will be the chart room and companion to crew's quarters.

In the hold forward and in the tunnel aft will be placed large fresh water tanks of a capacity of 7,000 gals., while arrangements will also be made for catching, storing, and making use of any rain water which may fall on the decks.

The propelling machinery will consist of one set of fore and aft compound engines, having cylinders 16 and 32 ins. diameter by 24 ins. stroke, driving a right hand four bladed propeller. The complement of independent auxiliaries will be very complete, and will include air, circulating, feed and bilge pumps, general service fresh water and sanitary pumps, also an evaporating and distilling plant for the supply of fresh water, capable of distilling 2,000 gals. of fresh water per 24 hours.

Steam is to be supplied from two Scotch boilers 10½ ft. diameter by 10¾ ft. long, designed for a working pressure of 120 lbs. per sq. in.

The vessel was designed by Chas. Duguid, Naval Constructor, Marine and Fisheries Department.

The Marine Department will shortly call for tenders for the construction of a steamboat, to be named Scout, for use in the lighthouse service between Montreal and the Welland Canal. The dimensions of the vessel will be, length 155 ft., breadth 30 ft., depth 13 ft., and it is stated that a special stipulation will be made that the vessel is to be built in Canada.

Sault Ste. Marie Canals Traffic.

Hydrographic Vessel for Dominion Government Service.

The steamship Acadia, which was launched at Newcastle on Tyne, Eng., for the Dominion Government's Hydrographic Service, is 170 ft. long, 33½ ft. beam, and will attain the highest class in Lloyds Register. She will be schooner rigged and will be propelled by a set of triple expansion engines, supplied with steam by two boilers working under forced draught, and is expected to have a speed of 12 knots an hour.

She is built of steel, and strengthened to enable her to run through ice, and will be completely outfitted for her intended service, having two motor launches, sounding machine, marine sentry, sounding winch, electric light with projector, etc.

Besides the usual accommodation for the deck and engine room officers, there will be well furnished rooms for the various officials engaged in survey work.

The vessel is being constructed to the designs and under the superintendence of R. L. Newman, of Ottawa, who was present at the launch.

A full illustrated description of this vessel appeared in Canadian Railway and Marine World for Nov., 1912, pg. 577; see also C. R. & M. W., July, 1912, pg. 370; Aug., 1912, pg. 425; and Oct., 1912, pg. 530.

Dominion Government Hopper Barge for St. Lawrence River Dredging.

The Dominion Government hopper barge No. 1, was launched at Levis, Que., recently. She is classed 100 A1, Lloyd's River Service, built under special survey and according to Canadian regulations. The deck arrangements consist of a series of six double doors on each side, operated separately or simultaneously, and when open, are so arranged that they do not extend below the bottom of the hull. The propelling machinery consists of triple expansion engines with cylinders 14¾, 24 and 38 ins. diar., by 22 ins. stroke, supplied with steam at 180 lbs. by two horizontal multitubular boilers, each 10 by 10 ft. There are two pumps of the vertical direct acting type, air pump, feed heater, evaporator and filter, centrifugal circulating pump, general service pump, two separate acting bilge pumps, sanitary and fresh water pumps, patent ash ejector, etc. The deck machinery consists of a capstan at the after end, a winch for operating the hopper doors, and windlass on the forecastle deck for the anchors. A steam steering gear is operated from the flying bridge, and electric lighting and steam heating services are installed. The general dimensions are: length between perpendiculars 180 ft., breadth 32 ft., depth 14½ ft., draught 12 ft., gross tonnage 850.

New Vessels for the Canadian Pacific Railway British Columbia Coast Service.

As reported in Canadian Railway and Marine World for June, the C.P.R. has ordered to be built at Dumbarton, Scotland, two vessels for service on the Pacific coast to be ready early in 1915. They will be somewhat of the appearance of the s.s. Princess Charlotte, and equipped with turbine engines, fitted with oil burning apparatus. They will be built on the cruiser stern principle, with three decks and three funnels. There will be accommodation for about 450 first class, and 80 second class passengers. J. W. Troup, Manager, C.P.R. British Columbia Coast Service, who went to Great Britain in connection with the placing of the contract, returned to Canada, June 5.

Canadian Notices to Mariners.

The Department of Marine has issued the following:

138. May 7. New Brunswick, east coast, Northumberland Strait, Shediac Bay, Pointe du Chene, Shediac north channel range light towers increased in height.

139. May 7. Quebec, Gulf of St. Lawrence, Anticosti lightship, date to be replaced on her light station.

140. May 7. Quebec, River St. Lawrence, St. Thomas bank, gas buoy established.

141. May 7. Quebec, River St. Lawrence, ship channel between Quebec and Montreal, Gentilly front range light, illuminating apparatus.

142. May 9. Quebec, River St. Lawrence, Lake St. Louis,, Lachine range lights, illuminating apparatus.

143. May 9. Quebec, Ottawa River, Lake of Two Mountains, St. Placide front range light, illuminating apparatus.

144. May 9. Ontario, Lake Ontario, Wicked Point, light to be discontinued.

145. May 9. Ontario, Lake Ontario, Cobourg harbor, change in character of buoy marking submerged portion of central pier.

146. May 9. Ontario, Lake Huron, north channel, Bruce Mines, change in color of light.

147. May 9. United States of America, Lake Superior, Duluth-Superior harbor, St. Louis River range lights, color to be changed.

148. May 12. New Brunswick, south coast, off Negro Head, change in character of buoy.

149. May 12. New Brunswick, east coast, entrance to Shippigan Gully, bell buoy to be established.

150. May 12. Nova Scotia, south coast, Port Hebert, buoy established.

151. May 12. Prince Edward Island, east coast, Cardigan Bay, Mosquito Shoal, buoy established.

152. May 13. Ontario, Bay of Quinte, Nigger Narrows, shoal removed.

153. May 13. Ontario, Lake Ontario, Burlington Bay, entrance to Desjardins Canal dredged.

154. May 13. Ontario, Georgian Bay, east side, Matchedash Bay and Coldwater Creek, dredging, buoys established.

155. May 14. British Columbia, Burrard Inlet, north arm, southwestward of Turtle Head, buoy established.

156. May 14. 156 British Columbia, Strait of Georgia, Sutil Channel, Mary Island, Boulder Reef, buoy established.

157. May 14. United States of America, Washington, Rosario Strait, Cypress Island, rock reported westward of.

158. May 16. Nova Scotia, north coast, Northumberland Strait, Caribou Reef, conical buoy to be replaced by bell buoy.

159. May 16. Prince Edward Island, north coast, Tracadie back range lighthouse, illuminating apparatus.

160. May 16. New Brunswick, Chaleur Bay, Petit Rocher, permanent light.

161. May 16. Quebec, River St. Lawrence, Long Pilgrim light, change in illuminant.

162. May 19. Nova Scotia, south coast, Lahave River, bell buoy to be established.

163. May 19. Nova Scotia, Gut of Canso, Port Hastings, removal of storm signal station to Point Tupper.

164. May 19. Prince Edward Island, south coast, Hillsborough Bay, Hazard Point, color of range lighthouses.

165. May 19. New Brunswick, east coast, Northumberland Strait, Shediac Bay, Shediac harbor, dredging, buoy established.

166. May 20. Ontario, Lake Ontario, Toronto harbor, dredging.

167. May 20. Ontario, Detroit River, gas buoy at junction of Ballard Reef and Livingstone Channels, change in color of lights.

168. May 20. Ontario, Detroit River, Livingstone Channels, change in position of gas buoy.

169. May 23. Quebec-Ontario, River St. Lawrence, Lake St. Francis, western portion, chart, Lancaster Bar to Cornwall issued.

170. May 23. Ontario, River St. Lawrence, Thousand Islands, description of light on island west of Duck Island.

171. May 23. Ontario, Lake Ontario, Toronto harbor approaches, buoyage.

172. May 23. Ontario, Lake Huron, north channel, Little Current, construction of railway bridge, north opening obstructed by false work.

173. May 26. Ontario, Georgian Bay, approach to Midland, east of Elimere Point, McNicoll range lights established, Old Midland range lights to be discontinued.

174. May 27. British Columbia, Burrard Inlet, First Narrows, west entrance, new lighthouse and fog alarm.

175. May 27. British Columbia, Queen Charlotte islands, Hecate Strait, gas lighted beacon moved from Koya Point to Danger Rocks.

176. May 30. Ontario, Lake Ontario, Oakville, harbor entrance, position of lighthouse corrected.

177. May 30. Ontario, Detroit River, Livingstone Channel, gas buoy no. 29, change in characteristic of light.

178. May 30. Ontario, Detroit River, Ballard Reef Channel, light vessel replaced.

179. May 30. Ontario, Georgian Bay, north side, western approach to Killarney, Ann Long Bank, buoy established.

180. June 2. Nova Scotia, Avon River, Dimock Point, change in color of light.

181. June 2. Nova Scotia, south coast, Aspotogan Peninsula, New Harbor, light established.

182. June 2. Prince Edward island, south coast, Northumberland Strait, Belle River, light established.

183. June 2. Quebec, River St. Lawrence, Quebec harbor, off mouth of St. Charles River, buoy moved.

184. June 4. Maritime Provinces and Quebec, Canadian list of lights and fog signals, new edition.

185. June 4. Nova Scotia, Chedabucto Bay, Guysborough harbor, buoyage.

186. June 4. Quebec, River St. Lawrence, Godfry River, range of day beacons established.

187. June 6. Nova Scotia, south coast, Torbay, entrance to Larry River, buoys established.

Pilotage in the St. Lawrence River.

An order in council has been passed amending bylaw 22 of Montreal Pilotage District bylaws, which now reads as follows:—"Any pilot may, with the approval of the Minister, agree with the agent of one or more regular lines of vessels for special services for a season of navigation, and any pilot not having made such agreement shall when required by the superintendent repair on board and take charge of any vessel and pilot the same according to the tenor of the requisition so made to him. No agent or firm having only one vessel a month—a monthly service of one vessel—shall be allowed to engage a special pilot for that service, but may be authorized to arrange with another agent or firm in a similar position, to share the services of a pilot, and failing this to be obliged to go to the tour de role when a pilot's services are required.

Canada Transportation Lines, Limited, to take Over the Richelieu and Ontario Navigation Company, Etc.

A special general meeting of shareholders of the Richelieu and Ontario Navigation Co., Ltd., was held at the company's office, Montreal, June 19, to ratify an agreement of sale of the company's assets and undertaking, as a going concern, to a new company formed for the purpose. The President, Jas. Carruthers, said:—

This matter has received the most earnest and careful consideration by your directors and before sending out this notice, they were unanimously of the opinion that it was in the interests of this company to become part of a large organization. A new company has been formed called the Canada Transportation Lines, Limited, the authorized capital of which is $25,000,000, divided into 125,000 7% cumulative preference shares of $100 each, and 125,000 ordinary shares of $100 each, and with authority to issue 30 year 1st mortgage debenture stock of $8,000,000, bearing interest at 5%, with power to increase the amount of such mortgage debenture stock from time to time, providing the proceeds thereof are used for the purchase of new boats or other property necessary for the company to acquire, and on the terms more fully to be set forth in the mortgage trust deed. The trustees for such debenture stock will be the Law Debenture Corporation, London, Eng., and the Prudential Trust Co., Montreal. The registrars for such stock will be the Royal Trust Co., Montreal, and Brown-Shipley & Co., London, Eng. The registrars for shares will be the Royal Trust Co., Montreal and London. Transfer agents, Prudential Trust Co., Montreal and London. Bankers, the Bank of Montreal. Brokers, J. & A. Scrimgeour, and Linton, Clarke & Co. Auditors, Marwick, Mitchell, Peat & Co.

Further particulars of the new company and other matters connected therewith will in due course be given to shareholders. It is expected the new company will eventually acquire as going concerns, including all their assets, good will and profits for the current year, the following companies:—Richelieu & Ontario Navigation Co., Ltd.; Inland Lines, Ltd.; Northern Navigation Co., Ltd.; St. Lawrence River Steamboat Co., Ltd.; Richelieu & Ontario Navigation Co. of U.S.A.; Quebec Steamship Co., Ltd.; Canada Interlake Line, Ltd.; Ontario & Quebec Navigation Co., Ltd.; Merchants' Montreal Line; S. S. Haddington; Thousand Island Steamboat Co., Ltd.

The assets of the above companies have all been appraised by the Canadian Appraisal Co. and the accounts have been audited by Marwick, Mitchell, Peat & Co. Their reports and statements are open to the inspection of shareholders, and have been carefully examined by your board. Assuming the purchase to be carried out on the lines proposed, the new company will [illegible] by the statement of the appraisal company of $33,055,538, in which vessels have been valued at $16,866,834; real estate, buildings and dock prop- [illegible] would be cash on hand, and $8,698,969.89 would represent the value of leases, contracts and goodwill acquired by the company and covered by ordinary shares. The new com- [illegible] above the debenture stock issued, and current accounts. The net earnings of the consolidated companies for the year ended Dec. 31, 1912, was $1,494,554.48, which shows an ample amount for the payment of interest on debenture stock and interest on the preference stock with a fair amount applicable to reserve and ordinary stock.

Allowing for new tonnage not in operation in 1912 on the same basis as earnings on similar tonnage in 1912, the increase in net earnings from this source alone over last year would amount to $263,000. In the item of insurance premiums I am advised by competent authority that a reduction of a considerable amount can be effected.

The impression that prevails in some quarters that it will be necessary for the new company to advance rates in order to improve its financial position is entirely unfounded. After giving the matter careful consideration, I am of opinion that the savings that can be effected by the new company over the individual companies in handling their boats, in preventing overlapping, and by giving a prompter and more efficient service, would be very great.

The important points that your directors had to consider was whether in their opinion it was in the interest of the Richelieu shareholders to sell out the assets and undertaking of that company, and if so, whether the Richelieu shareholders were in their opinion obtaining a fair share of the stock of the new company for the stock which they now hold. It is proposed that the shareholders of this company receive $12,000,000 7% cumulative preference shares of the new company for the $10,000,000 of Richelieu stock. For example, each holder of 10 shares of Richelieu will receive 1[illegible] fully paid 7% cumulative preference shares of the new company, and in addition 4 fully paid ordinary shares, which I think you will agree with your directors is an excellent arrangement.

The most important reason for your board being willing to advise the sale of the Richelieu assets and undertaking at the present time, is the fact that in their opinion it is essential to put the affairs of the company on the soundest possible financial basis both for the present and future requirements.

The growth of the water transportation on the Great Lakes is assuming enormous proportions, and if Canada in the future is to continue to go ahead as she has in the past, the growth of this trade from year to year is going to be very great.

This means that if we are to give satisfactory service to the farmers and shippers of this country we must be in a position to provide new boats from time to time and see that the grain grown in the country gets out of it in the promptest, cheapest and most efficient manner. In view of the world-wide financial stringency and the fact that requirements for money would be practically a matter from year to year, it commended itself to the judgment of your directors to sell to the larger organization which, in our opinion, will be able to finance the new company on a much better and more satisfactory basis than any smaller individual company can do.

Furthermore, we believe it to be in the interests of the water transportation companies of Canada that they should get [illegible] capital on a large scale interested in this business just as it is today interested in the great railways of the country. The only way this could be accomplished successfully in the opinion of your Board was to be connected with a new company large enough to command the interest of some of the most important financial [illegible] London. [illegible] which are connected with the proposed financing of the new company are, in my opinion, the best available, and the result will be, in my judgment, the placing of the new company, which means your company, on a permanently sound financial basis where it can from time to time reach the money markets of the world on the most favorable terms.

Moreover, the fact that the $25,000,000 authorized capital of the new company will be listed on the London Stock Exchange, and a substantial portion of the preference stock will be taken at par by strong financial interests in London, is, in my opinion, a strong factor in advising the shareholders of this company to confirm the sale which your directors advise.

The President, in response to questions, stated that the $8,000,000 debenture issue would be utilized in retiring the bond obligations of the old company, in acquiring new properties, and in furnishing a working capital of approximately $600,000.

A. Haig Sims and G. Caverhill asked about the disposition of the $500,000 preferred and $8,500,000 common stock in the new company which will be left over after acquiring the R. & O.N. Co., and as to how much of it was to be issued to promoters, etc., but the president said he was unable to answer this.

On motion of J. P. B. Casgrain and Aemilius Jarvis, a resolution sanctioning the agreement was adopted.

Of the companies named above, which will be acquired by the new company, the Richelieu and Ontario Navigation Co., Ltd., already controls, either by purchase outright, or by a large majority of the stock, the Inland Lines, Ltd., Northern Navigation Co., Niagara Navigation Co., St. Lawrence River Steamboat Co., Thousand Island Steamboat Co., and Merchants' Montreal Line, details of which have been given in previous issues of Canadian Railway and Marine World.

The Ontario and Quebec Navigation Co. was recently acquired by Aemilius Jarvis and Co., Toronto, and full details were given in our last issue.

The s.s. Haddington is owned by the Mathews Steamship Co., Toronto, and was built at Toronto in 1904, her dimensions being, length 256 ft., breadth 42½ ft., depth 15 ft.; tonnage, 1,603 gross, 1,010 register; and she is equipped with engine of 87 n.h.p., driving a screw.

The Quebec Steamship Co. owns the s.s. Cascapedia, operating between Montreal, Gaspe, Mallbaie, Perce, Summerside, Charlottetown and Pictou; and in addition operates a service between New York, Bermuda and the West Indies, with the steamships Bermudian, Guiana, Parima and Korona. In summer it operates the s.s. Trinidad between Quebec and New York.

Canada Interlake Line, Ltd., was formed at the close of 1912 to consolidate the interests operating under the name of the Merchants' Mutual Line, and full details, covering the vessels operated, etc., were published in our January issue.

Comparison of the Largest Vessels.

Below is a tabular statement of the dimensions of the Olympic, the largest vessel in service; the Mauretania, only recently the record holder; the Imperator, of the Hamburg-American Line, recently built; the Aquitania, of the Cunard Line; and the Vaterland, of the Hamburg-American Line, the two latter being under construction:—

Ship	Gross tonnage.	Length, ft.	Breadth, ft.	Date.
Mauretania	[illegible]	790	88	1907
Olympic	45,000	883	92	1911
Imperator	50,000	900	96½	1913
Aquitania	50,000	901	97	Building
Vaterland	[illegible] +	950	100	Building

Tug for Harbor Work in Hudson Bay.

The Department of Railways and Canals has given a contract to Polson Iron Works Ltd., Toronto, for a steel stern wheel tug, to be used in the harbor work at the government railway terminal on Hudson Bay. The dimensions will be: length over all 117 ft., breadth 18 ft., depth moulded 4 ft., draft [illegible] 2 ft.

The framing is to be spaced 18 in. centres, and to consist of [illegible] angles throughout, plating to be [illegible] in. steel throughout, to have three transverse watertight bulkheads, [illegible] Wales to be of [illegible] oak, held in place by [illegible] angles. Stringer plate to be [illegible] in. thick all around tug and connected to sheer plate by [illegible] gunwale bar. Sheer plate to extend 12 ins. above above deck to receive cabin stanchions; forward of cabin, sheer plate to extend 30 ins. deck to receive cabin stanchions; fore and centre truss to consist of [illegible] in. plate, 15 ins. wide; to have two slide keelsons of 6 in. shipbuilding channels from end to end. To have ample accommodation for crew, with complete outfit such as electric light plant, plumbing and steam heating, galley furnishings, etc.

Machinery to consist of one pair of stern wheel engines, having cylinders 12 ins. in diameter by 48 ins. stroke, built for a working pressure of 160 lbs. Boiler to be of the locomotive type, [illegible] in diameter by [illegible] long, for 160 lbs. working pressure. [illegible]

Hull is to be [illegible] and sent to Hudson Bay in knocked down shape, contractors furnishing men to erect and complete the tug at destination.

Return of Capt. Harrison's Certificate.

As announced in a previous issue the British Board of Trade decided to return the certificate of Capt. Harrison, who was in command of the s.s. Royal George of the Canadian Northern Steamships line, which was stranded near Quebec, Nov. 6, 1912.

The official information in regard to the matter is of a very meagre nature. The Board of Trade has issued a printed sheet giving in full the decision of the Dominion Wreck Commissioner in the matter, as delivered in Montreal on Dec. 11, 1912, and which was published in full in Canadian Railway and Marine World. Appended to the decision is the following note:—"On April 18, 1913, the Board of Trade decided to exercise the powers vested in them by sec. 474 of the Merchants Shipping Act, 1894, and to return to Capt. Harrison his certificate of competency as master, which had been suspended [illegible] months."

[illegible]

The Grand Trunk Pacific Railway's Dry Dock, Etc., at Prince Rupert.

Canadian Railway and Marine World for Feb., 1912, contained a very complete illustrated description of [illegible] for the G.T.P.R. at Prince Rupert, B.C., respecting the construction of [illegible] have been furnished recently with some [illegible] official information. The work under contract consists of rock cut and [illegible] the pier and platform work amounting to something over 200,000 sq. ft., or approximately five acres, and the foundation work for the buildings. On June 2 we were advised that nearly all the pile work had been completed, and that it was expected that the pier and platform work would be completed by the end of July, and that the foundations of all the buildings would be ready for the steel work by the end of September, but the steel is not due to reach Prince Rupert until Nov. 1.

The B.C. Premier announced May 5 that his Government had allowed space in the Songhees Reserve, Victoria, at the foot of Broughton St., for a site for the Dominion Marine and Fisheries Department, where a depot will be established.

List of Steam Vessels Registered in Canada during May, 1913.

Heretofore, Canadian Railway and Marine World has published throughout the year, complete lists of all vessels, of whatsoever nature, placed on the Canadian register, but owing to the large increase in the number of steamboats of small power, and of gasolene and other power driven launches, which it is now necessary to register, and to the growing demands on our space, power driven vessels of less than 10 n.h.p. will not be included in our published lists, in future. To a large extent, those which will be excluded, will not be engaged in commercial transportation, but will be utilized, more or less, for pleasure.

Official Statistics of Canadian Shipping.

The total number of vessels on the Canadian register for the year ended Dec. 31, 1912, was 8,380, measuring 836,278 tons, an increase of 212 vessels and 65,832 tons, as compared with 1911. There were 3,667 steamers with a gross tonnage of 641,225, and assuming the value at $30 a ton, the value of the net registered tonnage for 1912 was $25,088,340. The number of vessels built and registered in Canada during 1912 was 420, measuring 34,886 tons net register, which, estimated at $45 a ton gives a total value of $1,569,870. During the year, 241 vessels were removed from the register. It is estimated that 42,490 persons were employed on Canadian vessels during 1912.

The number and tonnage of vessels, according to Provinces, is as follows:

	Sailing ships and Steamships.	Steamships.	Gross tonnage of Steamships.	Net tonnage of Sailing Ships and Steamships.
Ontario	2,017	1,461	[illegible]	[illegible]
Quebec	[illegible]	519	[illegible]	[illegible]
Nova Scotia	[illegible]	359	[illegible]	[illegible]

Of the vessels removed from the register during the year, 117 were broken up, re-[illegible]

[illegible] Britain with its dominions and colonies (including Canada) stands first, with 12,580,488 tons, more than the combined tonnage of the next seven countries. Canada occupies [illegible]

Atlantic and Pacific Ocean Marine.

The Taconic Steamship Co., J. S. Lovell, Montreal, President, has increased the number of its directors from seven to eight.

During May, 65 ocean steamships arrived at Montreal with a combined registered tonnage of 445,098, as compared with 73 vessels, and 478,073 tons, in May, 1912.

The Canadian-Australian Line's s.s. Niagara arrived at Victoria, B.C., May 28, on her maiden voyage to the Pacific coast. The officers of the vessel were entertained by the Mayor and corporation, and the Board of Trade.

The Union Steamship Co. of New Zealand, operating the Australian-Canadian mail service between Australasia and Canada, has declared a dividend of 9 ½d. a share for the six months ended Mar. 31. This does not, however, apply to the 200,000 shares recently issued.

An order in council has been issued amending the portion of bylaw 45 of the Montreal Pilotage District, by providing for the increase of pilotage fees for seagoing vessels, either up or down, of 50c. for each foot of draught, making a total of $3 per foot draught.

The British s.s. Gerald Turnbull reported ashore on Gannet Rock ledges, near Yarmouth, N.S., at the end of May, was abandoned to the underwriters, June 2, all hope of saving her having been given up on account of local storms. She was on her second voyage, and was valued at $250,000.

The C.P.R. has purchased the s.s. St. George, which has been operated for some time between Fishguard, South Wales, and Rosslare, on the southwest coast of Ireland, by the Great Western Ry. of England. She is 2,456 tons gross, was built at Birkenhead, Eng., in 1906, and valued at about £90,000. She will be utilized on the route between Digby, N.S., and St. John, N.B.

The Union Navigation Co., of Toronto, a subsidiary of the Union Sulphur Co., of New York, has acquired the s.s. Harley, which was recently transferred from the British to the Canadian register, in the name of C. W. Harrison, London, Eng., as managing owner. She was built at Hartlepool, Eng., in 1906, and is screw driven by engine of 336 n.h.p. Her dimensions are: length 359.8 ft., breadth 50.2 ft., depth 26.4 ft.; tonnage, 4,171 gross, 2,707 register.

Referring to the report that the Canadian Northern Steamships, Ltd., was about to add to its Atlantic fleet, Sir William Mackenzie, President, is reported to have stated in Montreal, June 12, that for the past three or four years there had been a boom in shipbuilding in Great Britain, that all the shipyards were crowded with orders at present, and it would be necessary to wait until this state of affairs had subsided before the company could consider the question of ordering new vessels. It is reported that the company is laying a scheme before the Montreal Harbor Commissioners for better provision for its vessels there.

In connection with the collision last year between the C.P.R. Empress of Britain and the s.s. Helvetia, under charter by the Dominion Coal Co., by which the latter was sunk and lost, an appeal was recently made by the owners of the Helvetia, on the point of valuation, it being claimed that the value must be based on charter, which was until 1917. Judgment had been entered for £2,000 for loss of hire to the end of the 1912 season, and £65,000 for loss of the vessel, as against the claim of £24,320 loss of hire and £75,000 for the vessel. The Admiralty Court has referred the case back for a valuation to cover loss of hire for the remainder of the charter period. As both vessels were held to blame for the loss the damage was to be shared, the C.P.R. paying five twelfths.

The International Mercantile Marine Co.'s report for 1912 shows a combined surplus of all the component companies, of $3,787,911, after meeting all fixed charges and operating expenses, including repair, maintenance and overhaul charges. The surplus for 1911 was $4,509,269. On account of the Titanic loss during the year, the insurance fund shows a loss of $1,498,885, but with the surplus brought forward from the previous year, the fund shows a surplus for 1912, of $507,971. The report refers to the retirement of J. Bruce Ismay from the Presidency, and from the management of the Oceanic Steamship Co. (White Star Line).

The C.P.R. s.s. Empress of Russia, the first of the new steamships which the C.P.R. has added to its Pacific fleet, arrived at Vancouver, June 7, from Great Britain. She sailed from Liverpool, Eng., Apr. 1 with a large party making a tour of the world, entirely by the C.P.R. The route taken was by the Mediterranean and the Suez Canal, and it is announced that the whole trip was most successful, and passed off without accident. Her sister vessel the Empress of Asia, sailed from Liverpool, June 14, for Vancouver, by way of Maderia and the Cape of Good Hope, and is expected to arrive at Vancouver, Aug. 30. She is conveying another party on a round the world trip on the C.P.R., but by another, and longer route.

Maritime Provinces and Newfoundland.

The Nova Scotia Legislature has amended the Liverpool Marine Railway Co.'s act of incorporation.

It is reported in Sydney, N.S., that the Reid Newfoundland Co. is considering the question of removing its Canadian terminal there from North Sydney.

A powerful suction dredge for the N.B. Government was recently launched at St. John. She is of steel and is the largest steel vessel built at St. John, being 110 ft. long over all, and has 30 ft. beam.

The Sydney and Westmount Ferry Co.'s ferry boat Westmount, was launched at Westmount, N.S., June 4. She will carry about 100 passengers, and will be operated by gasolene engines.

On the arrival of the Canada Atlantic and Plant Line Steamship Co.'s new steamship Evangeline, at Charlottetown, P.E.I., on her first trip, June 6, the Board of Trade gave her an official welcome and presented H. L. Chipman, Manager of the company, with an address.

The s.s. Senlac, which has been lying up at Dartmouth Cove, N.S., since she was sold about two years ago, on account of the bankruptcy of her former owner, has been acquired for a 12 months charter in the mail service between St. Pierre, Miquelon and Halifax, N.S. This service has been performed during the past year, by the Newfoundland Produce Co.'s steamships Fogota and Sagona.

The Fredericton Steamship Co., the incorporation of which was announced in our last issue, has acquired the steamboat Hampstead, formerly operated on the St. John River and its tributaries, by the St. John River Steamship Co. She was built at Hampton, N.B., in 1893, and is screw driven by engine of 20 n.h.p. Her dimensions are, length 94 ft., breadth 17.7 ft., depth 7 ft., tonnage, 235 gross, 150 register. The company's office is at Fredericton, N.B. W. G. Clarke, Fredericton, is Presiednt, F. D. Swim, Doaktown, Vice President, and F. W. Porter, Secretary-Treasurer.

In response to an offer from England to establish a shipbuilding plant at Sydney, N.S., a reply has been sent to the effect that Sydney has already voted [illegible], and considerable time and money have been spent by the council in the matter without producing any results. While it may be taken for granted that the city will grant a large bonus to any company establishing a plant there, until a company expresses a definite intention to build there, the matter will not again be placed before the citizens for a vote.

The [illegible], owned at Glace Bay, under charter to the Dominion Coal Co., and carrying ore from Newfoundland to Sydney for the Dominion Iron and Steel Co., and coal to the St. Lawrence for the Dominion Coal Co., which went ashore near [illegible], Nfld., in May, and was subsequently abandoned to the underwriters, has been definitely abandoned by the latter, who made efforts to refloat her, without success, on account of storms. The wreck has been offered for sale as she lies on the rocks. She was insured for $320,000, and was practically a new vessel.

The construction of a marine railway dock at Burin, Nfld., is under consideration there, a local company for that purpose being in course of formation. It is intended to install a system similar to that now in operation at Harbor Grace, with the object of handling vessels which now have to go to St. Pierre, from Fortune Bay and Placentia Bay, for repairs. It is also considered likely that a similar plant will be built at Fortune Bay or Grand Bank. The Newfoundland Government recently passed an act by which it may grant aid in the construction of such works, by guaranteeing a return of 5% on the outlay for 15 years.

Province of Quebec Marine.

The name of the steamboat Massachusetts, registered at Montreal, no. 130927, has been changed to Compton.

The Sincennes-McNaughton Line steam tug Aurelie G., arrived at Sydney, N.S., from Great Britain, at the end of May, and immediately proceeded to Montreal, where she was overhauled and put into service. The voyage across the Atlantic occupied 16 days.

During May 879 permits were issued to vessels passing through the Lachine Canal, an increase of 298 over May, 1912. The number of vessel passages during May was 1,307, with a combined tonnage of 634,126; number of passengers, 1,923, and tons of cargo, 541,667, an increase of 246,726 tons.

It is anticipated that the new freight shed at the foot of St. Paul St., Quebec, will be completed by about the end of July. The freight building extension on the breakwater is about completed and the Commissioner's office building is progressing satisfactorily. Other work, in connection with the Louise docks and the bulkhead pier in the St. Charles River, are also progressing.

The estimated cost of the projected dam to be built in the St. Charles River at Quebec, is $2,500,000. It will be of concrete, 1,600 ft. long, an average height of 20 ft., with two locks respectively 450 and 350 ft. long by 65 ft. wide, in the entrance wall, each lock having 15 ft. of water on the sill at low water. Quinlan and Robertson, Montreal, are the contractors.

W. G. Ross, Chairman, Montreal Harbor Commission, returned to Montreal, June 10, after a tour of the terminal and grain handling facilities at the head of the lakes, and at other points. He is reported to have stated that he considered the present season would be the greatest in the port's history, but that a large quantity of grain would necessarily pass through [illegible] at Montreal.

The supplementary estimates recently passed by the House of Commons, include $1,000,000 for a dry dock to be located at Lauzon, Que., $1,000,000 for Quebec harbor, [illegible] for improvements on the St. Charles River, and $11,000 for a ferry landing wharf at Levis. The Minister of Public Works stated that the dry dock would be one of the largest in the country, that the contract would be let within the next few months, and that the work would probably be completed in about two years.

In connection with the vote of $1,000,000 for a dry dock at Lauzon, opposite Quebec, the Minister of Public Works stated in the House of Commons recently, that a site of about 32 acres is being expropriated, the value being something over $200,000. The dock would be a graving one, 1,150 by 125 ft. It will be one of the largest in the world, and it is anticipated that it will be completed within two years of the letting of the contract, which will probably be in July, or August.

The improvement work in the Quebec harbor, which the Quebec Harbor Commissioners propose to carry out, and on account of which an appropriation of $1,000,000 was made by the Dominion Parliament, recently, consists of the building of piers 1 and 2, composed of 38 solid close faced stone filled timber cribs, each 46½ ft. wide at the base, 20 ft. 10 ins. at the top and 45 ft. high, with concrete superstructure, with the necessary dredging in connection therewith, at an estimated cost of $1,778,230.

A United States shipping paper recently stated that "in connection with the various handicaps imposed upon shipowners trading to St. Lawrence ports, the matter of dry dock accommodation is most important; for some years past there have been many vessels trading to the St. Lawrence, there are 28 such vessels today of such beam that it is not possible to dock them for repairs in any dry dock in the St. Lawrence River." We might call our contemporary's attention to the floating dry dock installed at Montreal, which has a length over platforms of 600 ft., and over pontoons of 550½ ft., and a lifting capacity of 25,000 tons. This is the fourth largest of the type in the world, the largest being owned by Germany and Great Britain, respectively, in the order named. In a recently published list of the largest floating dry docks in the world, the U.S. does not appear.

Ontario and the Great Lakes.

It is announced that W. H. Dwyer Co., of Ottawa and Montreal, has completed arrangements for the erection of a grain elevator of 100,000 bush. capacity, with full equipment of drying and cleaning machinery on Island no. 2, Fort William.

The Toronto Insurance and Vessel Agency, Ltd., had reduced its capital stock from $500,000 to $50,000, by the cancellation of 3,000 shares of authorized, but unissued stock, and of 1,500 shares of issued stock recorded in the name of the Winnipeg Insurance and Vessel Agency, Ltd.

A proposal is being considered in Collingwood, to build a 1,000,000 bush. elevator there, at a cost of about $500,000. In connection with the financing of the scheme, it is stated that the intention is to issue 6% [illegible] bonds, with a bonus of one share of common stock for each share so [illegible]. It is also stated that Jas. Playfair, Vice-President and Managing Director, [illegible] Co., is interested in the matter.

[illegible]

[illegible] Fort William, Ont. [illegible]

The s.s. W. H. Dwyer was recently launched at Sunderland, Eng., for Forwarders, Ltd., Kingston, Ont., for use on the Great Lakes. She is of full Welland canal size, and is expected to arrive on this side and be in operation on the route early in July. Capt. W. Steeves, of the company's [illegible], went to England to bring over the new vessel.

The charter of the Long Sault Power Co., granted by New York State in 1907, for developing power on the St. Lawrence River, and which has been consistently combatted by the Dominion Marine Association and other similar interests, has been revoked by the Governor of the State on the grounds that its provisions were improvident, unwise and indefensible, both from an industrial and economical point of view.

The wrecking tug Premier, which recently passed through the Welland canal on its way from New York to Georgian Bay ports, and which was reported to have been acquired for operation as a passenger vessel by Inland Lines, Ltd., on the Georgian Bay, was in reality purchased by Jas. Playfair, for use by the Midland Towing and Wrecking Co., of which he is President and General Manager. The vessel has been generally overhauled at Collingwood.

The U. S. Government has decided to carry out the proposed widening of the Livingstone Channel entrance in the Detroit River by the removal of the westerly corner of the channel bank at the entrance to the new passage, beginning about 2,500 ft. above the apex of the Livingstone and Ballard Reef channels, and extending in a diamond shape to the upper end of the westerly dyke. The work covers an area of about 500,000 sq. ft., and will cost approximately [illegible].

The U. S. Lake Survey reports the levels of the Great Lakes in feet above tidewater, for May, as follows:—Superior, 602.13; Michigan and Huron, 581.05; Erie, 573.98; Ontario, 247.97. Compared with the average May levels for the past ten years Superior was 0.11 ft. above; Michigan and Huron, 0.33 ft. above; Erie, 1.22 ft. above, and Ontario, 1.14 ft. above. It was anticipated that during June, Superior, Michigan and Huron would rise 0.3 ft.; Erie, 0.2 ft., and Ontario, 0.15 ft.

The Toronto Harbor Commission has awarded the contract for dredging in connection with the water front development at Toronto, to the Canadian Stewart Co., Montreal. The plans and specifications call for the removal of approximately [illegible] cubic yards of material by hydraulic dredging, and borings indicate that 70% is sand and gravel, and [illegible] a mixture of sand, silt and clay. The estimated amount to be spent in harbor development is [illegible].

The Dominion Government has awarded a contract to R. Miller and Son, Toronto, for the lock gates on sections 3 and 4 on the Trent Valley Canal, to complete the outlet to Trenton on the Bay of Quinte, from Lake Simcoe. It is stated that the contract covers the construction and erection of 40 double lock gates, for about $250,000. The work is to be commenced at once, and it is anticipated that the entire contract will be completed by the fall of 1914. It is also announced that tenders will be called for shortly for work on the northern section of the canal from Lake Simcoe to the Georgian Bay, by the way of the Severn River. The total expenditure on the canal, to date, is about $11,000,000, and it is estimated that the expenditure of a further $5,000,000 will complete it and give a continuous waterway from Georgian Bay to Lake Ontario, of from 6 to 7 ft. deep.

Manitoba, Saskatchewan and Alberta.

The Dominion Parliament has voted $70,000 for the construction of approaches to the bridge over the dam at the St. Andrews lock and dam on the Red River, near Winnipeg.

The Winnipeg Harbor Commission has decided to ask the Dominion Government to grant $50,000 for the construction of docking facilities along the frontage on the Red River, to enable the Commissioners to cope with the congested traffic there.

The channel of the Red River, between Provencher and the Canadian Northern Ry. bridge, Winnipeg, is being dredged to obtain a greater depth of water, necessitated by the increased traffic. A wharf on the south side of Provencher is being built, and rails have been laid connecting it with the railways in the vicinity.

The Hudson's Bay Co. has appointed the following officers for its vessels for the current season. The second column gives the names of the captains, and the third those of the chief engineers:—

[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	
[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	
[illegible]	[illegible]	[illegible]

British Columbia and Pacific Coast Marine.

The Fraser River Navigation Co. announces a daily steamship service between New Westminster and Port Coquitlam, and in connection with it, will build a wharf at Pitt River.

J. E. Dalrymple, Vice President, G.T.R. and G.T. Pacific Ry., is reported to have stated recently, that the G.T.P.R. is preparing plans for the erection of an elevator [illegible] capacity, at Prince Rupert, B.C., so that the company will be in a position to handle grain through that port, on the opening of the Panama Canal.

In connection with the incorporation of the Vancouver Harbor Commissioners, it had been reported in Vancouver, that the [illegible] Pilotage Commission. This matter was [illegible] with the Minister of Marine, [illegible] Pilotage Commission [illegible]

A press report from England states that the appeal of J. H. Welsford and Co. against the decision of the High Court, in [illegible] Steamship Co. of British Columbia, has been dismissed with costs. On behalf of the appellants it was claimed that there had been misrepresentation by the previous owners, and on account of this the final payment by J. H. Welsford and Co. had been withheld.

Side Streams Navigation Co., Ltd., recently incorporated, as mentioned in a previous issue, has appointed the following officers for its steam vessels for the current season: Eva, captain, W. Bragg, chief engineer, R. R. Crosby; Pauline, captain, J. S. Raymond, chief engineer, E. A. Dixon; Vidette, captain, E. Gray, chief engineer, G. Waltenbough.

The Vancouver Harbor Commissioners have been incorporated by the Dominion Parliament, with jurisdiction over the harbor, which includes Burrard Inlet, with the North Arm and Port Moody, False Creek and English Bay, and all other tidal waters lying east of a line drawn from the Point Atkinson lighthouse southerly to the most westerly point of Point Grey. The corporation shall consist of three commissioners appointed by the Governor-in-Council, on the recommendation of the Minister of Marine, two of whom shall form a quorum.

In connection with press reports emanating from Vancouver, and mentioned in our last issue, to the effect that C. H. Nicholson, Manager, G.T. Pacific Coast Steamship Co., had recently visited Winnipeg for a conference with the management regarding plans for the construction of a steamship to be ready for service in 1914, we are officially advised that the reports were entirely unauthorized and are not correct, and that the management has no knowledge of any vessels to be built for the company, at present.

The Vancouver civic harbor and improvements committee of the Board of Trade harbor and navigation committee have appointed a special committee to consider the question of the appointment of an expert to advise on the needs of the city in regard to dry dock accommodation. It was stated that there were two companies in the field with applications for Government subsidies, and it was suggested that in addition to finding out the actual standing of the companies, the kind and size of dock best suited to Vancouver should be thoroughly discussed.

The North Fraser Harbor Commissioners have been incorporated by the Dominion Parliament, to control the North Fraser harbor, the limits of which are,—from a line drawn across the North Arm of the Fraser River in continuation southerly of the westerly boundary of New Westminster, thence down stream to the North Arm on both sides to the average high water mark, to lines drawn across the outlets of the North Arm into the Gulf of Georgia, but not extending further southerly than a point equidistant between the most southerly and the most northerly points of the western shore of Lulu Island, nor extending further northerly than Point Grey; including the adjacent waters of the Gulf of Georgia on Sturgeon Bank as far seaward as may be determined from time to time. The corporation is to consist of three commissioners, two appointed by the Governor-in-Council, and one, elected by a majority of four persons, one of the latter each being selected by the municipalities of Richmond, South Vancouver, Burnaby and Point Grey, for the purpose, and such commissioner shall be appointed for three years.

The act passed at the recent session of the Dominion Parliament, incorporating the New Westminster Harbor Commissioners, [illegible] the limits of the harbor shall extend from a line drawn north and south to each shore of the Fraser River from the average high water mark, on the eastern end of Manson, or Douglas Island, known as Point Sebastien, at the mouth of the Pitt River, thence down stream extending on both sides to lines drawn across the outlets of the Fraser River into the Gulf of Georgia, but not extending further northerly than a point equidistant between the most southerly and most northerly points of the western shore of Lulu Island; including the adjacent waters of the Gulf of Georgia on the Sandheads as far seaward as may be determined from time to time, but not including any portion of the North Arm of the Fraser River west of a line drawn across the North Arm in continuation southerly of the westerly boundary of New Westminster. The corporation shall consist of three commissioners, one appointed by the New Westminster City Council and two by the Governor-in-Council, the city Commissioner being appointed for three years.

The St. Lawrence and Chicago Steam Navigation Co.'s s.s. James Carruthers.

The s.s. James Carruthers, the launching of which, at Collingwood, May 22, was mentioned in our last issue, is of the single deck type, with estimated carrying capacity of 15,000 tons on a 19 ft. draught, and has been specially designed for carrying coal, ore and grain. She is of steel, constructed on the arch and web frame system, the holds being entirely free from pillars and other obstructions. There are 31 cargo hatches, each 38 by 9 ft., spaced 12 ft. centres, and she is built with complete double bottom with side tanks to main deck. The bottom tank is supported by a centre keelson and side girders of the depth of the tanks, and there are two collision bulkheads. The hold is divided into six compartments, and the double bottom into five compartments, and there is a transverse bunker bulkhead between the boiler and engine rooms. The spar deck stringer plating is supported by longitudinal channel girders.

The propelling machinery consists of triple expansion engines with cylinders 24, 40 and 66 ins. diar., by 42 ins. stroke, supplied with steam by three Scotch boilers, each 13 ft. diar., by 11 ft. long, at 185 lbs. pressure. The furnaces are equipped with Howden's forced draught, and there is a grate area of 45 sq. ft. to each boiler. Steam steering gear is placed aft on the main deck and is controlled from the pilot house by hydraulic telemotor. There is also an emergency steering gear and independent steam gear. The auxiliary equipment is of the most modern type, and there is a complete electric light installation for about 200 lights.

The officers' quarters are situated forward on the forecastle deck, and are rather more commodious than customary, on account of the greater size of the vessel.

Her dimensions are, length over all 550 ft. 8 ins.; length between perpendiculars 529 ft.; beam 58 ft., moulded depth 31 ft.

Rules of the Road.—An Ottawa press dispatch says:—"In connection with the alteration in the rules of the road designed to make navigation on the Great Lakes harmonize as between Canadian and United States shipping, the shipping interests have been advised that any changes will be effective only on the Lachine Canal and westward. Montreal harbor and the river eastward, and also the Maritime Provinces will not be affected. There has been opposition to any change which might lead to collision and resultant accident."

Canadian Railway and Marine World.

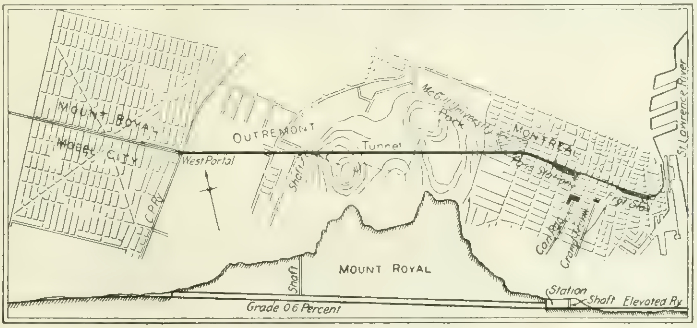
August, 1913.

Canadian Northern Railway Mount Royal Tunnel.

By S. P. Brown, M. Am. Soc. C.E., Chief Engineer, Canadian Northern Montreal Tunnel and Terminal Co., Ltd.

The C.N.R. is now operating about 5,000 miles of track in Manitoba, Saskatchewan and Alberta, besides its Eastern lines. It also has about 2,500 miles under construction that when completed in 1914 will make it a transcontinental system, with Vancouver, on the Pacific, and Montreal as its main eastern distributing point. When this work is finished it will be important to have proper terminal facilities already prepared in the main eastern point, and, with this in view, the Canadian Northern Montreal Tunnel & Terminal Co., Ltd., was incorporated to make the necessary developments in and about the city of Montreal.

Montreal has a population of about 600,000 and is the main eastern seaport during the busiest part of the year. The business and financial part of the city is largely concentrated in a narrow strip of land between the St. Lawrence River and Mount Royal, which is already so congested that the resident section is gradually spreading up and down the river and around the mountain into Westmount and Outremont. Mount Royal forms a very positive barrier between the people living back of the mountain and the business portion of the city.



Plan and Profile of Mount Royal Tunnel.

General Features of Project.

The natural location of the business centre of Montreal, between Mount Royal and the river, made the problem of entry at first appear complicated. To enter from either end of this strip meant a detour that was undesirable, and might have resulted in two separate stations for the eastbound and westbound traffic. A study of the topography and economic distribution of the city and island showed that a tunnel was the logical, as well as the economical, method of entry. It was found that the railways coming from the west could be brought from a convenient site for yards, shops, etc., near the Back River, to a junction point with the Quebec lines near the present Jacques Cartier Union Railway (G.T.R.) and thence at a very flat grade to a tunnel portal at its crossing with the C.P.R. belt line, about a mile from the Outremont yard. Thence the line will pass through a twin tunnel 3.25 miles long, down a 0.6% grade to a passenger terminal in the very centre of Montreal.

From the main passenger terminal the tracks may be extended across to the lower town on a viaduct at a level grade to connect with a viaduct along the harbor front, proposed by the Harbor Commissioners of Montreal, and a possible bridge across the St. Lawrence River. Such an extension would also include in the commercial part of the town an elaborate freight distributing depot, a department to which the C.N.R. is giving most serious thought at present. In connection with this freight department, large sorting and transfer yards are being developed back of the mountain and east of the city, where most of its shunting and mechanical part of the freight transference will be accomplished.

Back of the mountain, in the broad, gently sloping country, including some of the most fertile farms in Eastern Canada, the C.N.R. saw an opportunity for the site of a new city. With this in view, the Canadian Northern Montreal Land Company, Ltd., was incorporated to purchase this farming country and develop it as part of the general scheme of financing.

The New Model City.

The city of Mount Royal, or as it is locally termed, the "model city," is laid out on a rectangular plan, with four diagonal boulevards radiating from the railway station, which forms the centre of the town site. There is also a meandering boulevard connecting a series of parks and playgrounds distributed over the city, in general midway between the central park and the station site and the city limits. The land, consisting of a gently sloping plane, makes the situation ideal for drainage and sanitation. The streets will be paved principally with asphalt and macadam, the stone for which will be taken from the tunnel excavation. Street car service and lighting have already been arranged for with local companies in Montreal, which assures excellent service, and through trolley connections with Outremont, Westmount and Montreal proper are contemplated. The lots are being sold under very rigid building restrictions, as it is desired to produce a quarter of town for the better class of people who are rapidly being crowded out of the more desirable parts of Montreal, as well as for the city's rapidly growing population. A short multiple unit train service through the tunnel will bring the Mount Royal station within a very few minutes of the main passenger terminal in the city proper and trolley cars will tie the street car lines of the "model city" with those of Outremont and Montreal. A small freight yard near the west portal of the tunnel will serve for the delivery of local freight and express and for the manipulation of multiple unit trains during the rush hours. The entire terminal scheme is to be utilitarian from the Back River to the waterfront. The idea is to produce structures and developments that will be attractive to the eye and so designed and disposed as to be self supporting in themselves without the assistance of the ordinary railroad traffic.

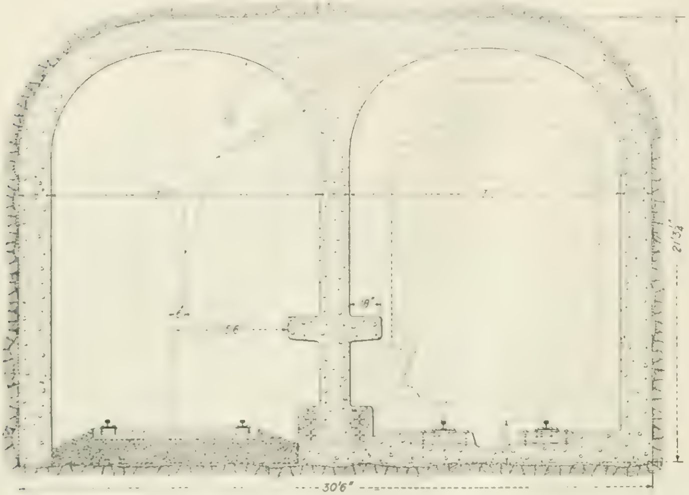
Tunnel History.

To the writer the most interesting part of the study of tunnels is its history. From the days of the cave man, through those of the Egyptians, Chaldeans, Romans and Europeans of modern times, the evolution has continued. The changes in the tunnel itself are small but the methods of excavation and construction have changed beyond recognition. The Lake Fucinus tunnel driven in the Abruzzi, during the reign of Claudius, was 6 ft. high, 10 ft. wide, and 3½ miles long. It took 11 years to build, and employed 30,000 men. To expedite this work some 40 shafts and inclines were sunk, some over 400 ft. deep.

As a comparison the present Mount Royal tunnel is practically the same length; the heading, however, is about 9 ft. high by 12 ft. wide, over 50% larger than the Lake Fucinus tunnel. It has one intermediate shaft about 240 ft. deep and another about 50 ft. deep at Dorchester St., which is at present acting as the eastern portal. The first heading was started on July 8, 1912, and since that time the shafts have been sunk and over 2 miles of heading driven on the tunnel line, besides more than ¼ mile at the shafts and in the terminal sites. The reason of this great difference in speed is method and equipment.

In the Lake Fucinus tunnel they used crowbars, chisels, picks, shovels, and possibly drills and saws with cutting edges of corundum. Most of the progress, however, was made by "fire setting," i.e., by building fires against the face of the heading until the rock was highly heated and then dashing cold water or acid, such as vinegar, on it to break the ground. Condemned criminals and prisoners were used in this work, as the death rate was terrific.

Compare this with modern tunnel prac-



Cross Section of Twin Tubes, Mount Royal Tunnel.

tice using electricity, compressed air and high explosives, which, combined with highly perfected machinery and carefully systematized forces, produce speed and economy that would have seemed incredible even a couple of generations ago, and one realizes how the usages have changed.

When the obstacles confronting those early tunnel diggers, however, are considered, we can but be filled with the sincerest admiration for the confidence, courage and perseverance that made the accomplishment of such great works possible. Their immature systems, methods and appliances required genius to produce success, and the stories of their early struggles form far more thrilling romances that one can find in the most visionary novel of today.

Mount Royal Geology.

Mount Royal is an intrusion of igneous rock forced upward through the original bed of Trenton limstone. There have evidently been several stages of eruption or intrusion, as both the limestone and main igneous bodies are broken and cut by a multitude of dikes and sheets of different and varied character, and evidently of later origin.

The two principal rocks to be encountered on the present line are Trenton limestone, slightly tilted upward toward the mountain, and essexite, which is the main intrusion of igneous rock. The Trenton limestone, at a considerable depth, is quite hard and crystalline, and except where silicious or too much cut up by dikes is a very good tunneling rock. At the city end the limestone was very soft and rather blocky for the first 2,000 ft., with occasionally earth in the heading roof. As the cover increased the rock became harder and more cut by dikes. At present it is quite hard and becoming slightly crystalline, the dikes causing the only difficulty in the tunneling. The essexite is very hard, but aside from this as a good tunneling rock. The most difficult tunnel rock is a volcanic breccia, which when cut by dikes is so badly broken and blocky that it is extremely hard to drill, does not shoot well, and will require almost continuous masonry lining. This is especially common near the junction of the limestone and the main volcanic intrusions.

Tunnel Location.

The location of the tunnel under Mount Royal was more or less established by the location of the passenger terminal in Montreal and the model city at the back of the mountain. It was, of course, known that the heart of the mountain was of hard, igneous essexite, as above described, which, with breccia, also showed outcroppings in a ridge near the western portal. While this lower ridge of hard rock and breccia could not have been avoided without seriously affecting the layout of the model city, a portion of the hard rock in the centres of the mountain could have been avoided had it been considered expedient.

The line finally adopted is the shortest one possible between the two main objective points that could be devised to avoid surface obstructions and take advantage of the geological formation, as far as it is able to be anticipated. It is believed that while much of the breccia and part of the limestone will require masonry lining similar to that required in soft ground, much of the limestone, inclined as it is to the present tunnel line, will require only a centre wall for safe support; in the essexite no centre wall will be required except for ventilation and purposes of safety in case of derailment or accident. This gives, economically, an extremely good tunnel line, which, with the exception of one curve under the McGill University grounds, is all on a tangent and at only sufficient grade to insure proper drainage.

Tunnel Cross Section.

A twin tunnel cross section has been adopted for three main reasons—economy in excavation and construction, ease and economy in ventilation, and safety in case of accident or derailment. The outside wall clearance is coincident with the clearance for new structures in the New York Central terminal work in New York and in excess of the clearance of the Pennsylvania Lines East of Pittsburgh.

A high headroom, almost the same as that of the Detroit River tunnel, was adopted, on account of the probability of a high voltage overhead contact circuit. The flattened three centred arch was adopted to allow for the sway of the pantograph and on account of the stratification of the rock where much of the lining will occur.

The walkway is made narrow, so that people will be forced to pass along it in single file, thus avoiding the danger of crushing and panic. The normal clearance at the walkway edge is 2 in. greater than that of the normal high passenger platform adopted in the terminal, which is somewhat greater than that allowed on the New York Central and Pennsylvania lines about New York. The walkway edge also coincides with clearance lines (outside of the platform) of the Penn-

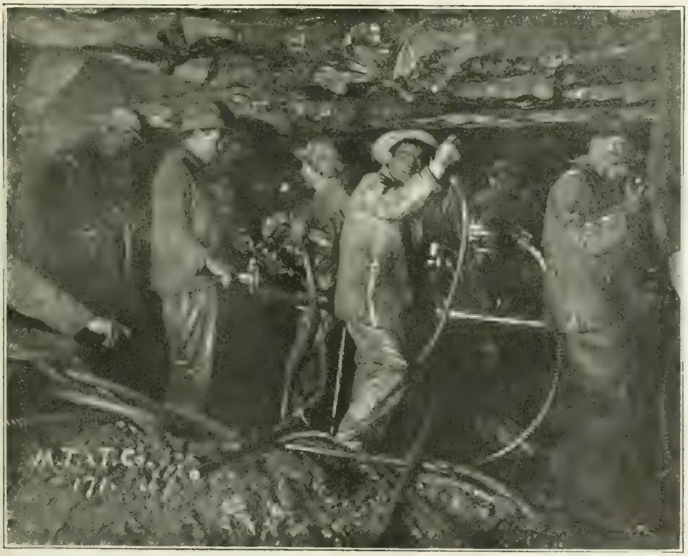
Mount Royal Tunnel—Breakup, Showing Jumbo Timbers in Heading.

sylvania Lines East of Pittsburgh, including the through lines between New York and Pittsburgh. Underneath the walkway is a continuous refuge niche, except at splicing chambers, where trackmen may sit on the duct bench at the bottom of the dividing wall and be absolutely protected from passing trains.

Excavation.

The method of excavation adopted is perhaps more European than American, although a close analysis would show it to be the resultant of several systems. In modern tunnel practice, lines of demarcation and sectionalism that were quite distinct only a comparatively few years ago are gradually becoming lost, so that an engineer is apt to select a combination of several systems which he considers wisest for his ground and structure. The things that stand out most sharply in all tunnels where great progress has been made and which are principally European in origin are: First, the opening heading is always comparatively small and usually in the bottom of the section; second, a horizontal bar is used to support the drills instead of columns; and, third, short rounds are drilled and shots are fired often. Every little economy in time is practised, and all delays, no matter how trifling, are analyzed and corrected, when possible. Workmen are given a bonus for extra progress above the specified minimum, and machinery, such as drill carriages, is used where it is found advantageous.

European engineers, like our Western miners, like to get under the muck, so that much of it falls into the cars by gravity instead of having to be lifted in. Sometimes this is accomplished by stoping, and sometimes by driving a top heading directly above the bottom heading. The one important point is to keep the bottom heading open for traffic at all times, so that the heading progress is never materially affected. The full size excavation can be carried on over jumbo timbers at as many places as necessary to keep up with the heading.



Mount Royal Tunnel—Heading. Observe Drills on Horizontal Bar and Water Attachment to Drills.

A bottom heading in bad ground, if possible, is even more desirable than in rock, for by this method the heading can be driven on rapidly and the timbering work and full sized section developed with care and without hurry in many places simultaneously along the line.

Mount Royal Tunnel—West Portal, Crushing Plant and Tipple.

A great many mechanical drilling, excavating and mucking apparatus have been devised, and in some cases they were found to work advantageously, but where the space is confined and delays serious, the laborer, with his pick and shovel, is usually employed. One man can handle a good deal of muck in his shift, shoveling off slick sheets into low cars. At present muckers in the Mount Royal tunnel heading are handling 15 cu. yd. of muck per man per eight hour shift.

Bottom Heading Method.

The method of excavation adopted in the Mount Royal tunnel is a bottom centre heading with break ups at intervals where the full sized tunnel section is developed. The heading is driven by the horizontal bar method. In one heading, where very hard rock is encountered, requiring extra heavy drills, a drill carriage is used with a mechanical muck carrier for loading the cars. In this drill carriage the drill bar is supported on a beam which can be extended 20 ft. ahead of the carriage over the muck pile and has also a vertical and lateral movement to accommodate the heading.

On the city end outside conditions are very disadvantageous. The city of Montreal has never had any previous experience in underground excavation, so that blasting that would be hardly noticeable in New York, for instance, is considered quite serious. For this reason under the city proper, where the cover was light, no blasting was allowed between 11 p.m. and 7 a.m.; the holes in the heading were reduced to 36 and 42 in. in depth, including the cut, and the powder was reduced to a mere "trace."

The effect of all this on heading progress was not so serious as might have been expected. While the holes were short, the rounds were fired so often that an average progress of about 17 ft. a day was maintained. In approaching the mountain, where 5 ft. cut holes could be used, the average progress was about 20 ft. per day.

Record Tunnel Progress.

During the month of May, just ended at this writing, as the rock cover had very much increased, shooting was allowed at night, which very much improved the heading progress. In this way, a total of 810 ft. of 8 x 12 ft. heading were driven in the 31 working days immediately following May 1. This, the writer believes, is the best tunneling record yet made in a hard rock heading.

A greater record than the above was made in the Loetschberg tunnel in Switzerland, where 1,013 ft. of 6.5 x 10 ft. heading were driven in one month through soft triassic limestone. An excellent record was also made last year in Arizona, where 799 ft. of 8 x 8 ft. heading were driven in 31 working days through granite porphyry sufficiently hard to drill well and in general stand without timbering. Neither of these rocks can be creditably compared in hardness with the diked Trenton limestone now being excavated in the Mount Royal tunnel. However, as the rock encountered in the Loetschberg tunnel was sufficiently hard to require the use of air drills, that progress of 1,013 ft. will undoubtedly stand as a world's record for a long time, and certainly stands as a monument to good tools, good management, and good men.

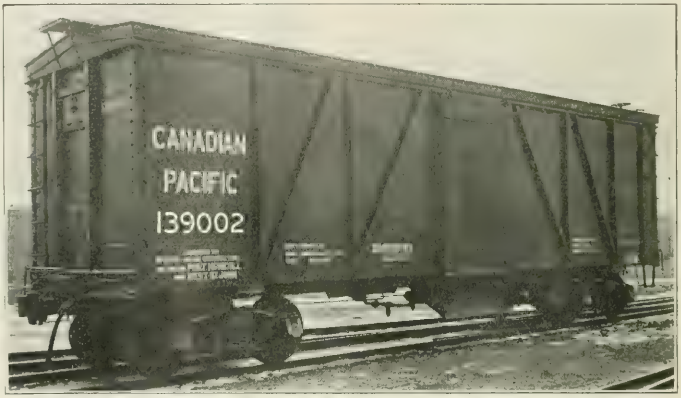
The rock in the Dorchester St. heading of the Mount Royal tunnel, while not so hard as it is back of the mountain, is a very good Trenton limestone, which makes an excellent concrete stone, being sharp and not too high in lime. All stone coming from the tunnel is being crushed and what is not used by the company is being sold for massive and reinforced concrete, principally in Montreal.

The break ups, as they are called, where the full sized tunnel is excavated, are opened at as many intervals as desired. This excavation is extremely cheap and rapid. In one break up about 200 cu. yds. are now being excavated per day with two shifts of drillers. Jumbo timbers are framed into the headings at the break ups, so that the heading traffic is never interfered with, and the bulk of the break up muck drops into the cars by gravity. It is to permit the use of a fairly broad gauge double track at these break ups that the Mount Royal headings are driven 8 to 10 ft. high by 12 ft. wide.

While so large a cross-section very materially reduces the progress of the headings driven each month, it very greatly increases the economy of further excavation and construction. Back of the mountain, where the very hard rock is encountered and the drill carriage is in use, the heading averages about 10 x 12.5 ft., and the May progress was 510 ft. in 27 working days. At the city end, where the record was made, it was permitted to reduce this to about 8 x 12 ft. in order to assist the progress. It is expected to remove most of the benches below the level of the jumbo timbers with a steam shovel.

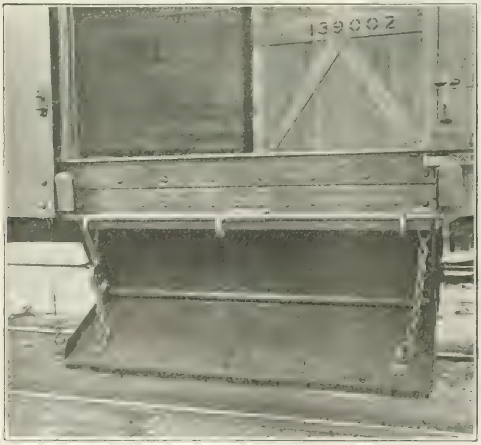
As this work is being done by Mackenzie, Mann & Company, Ltd., who also represent the Canadian Northern Ry., every opportunity for economy may be taken advantage of. The job organization covering both design and construction consists of R. Byers, General Superintendent, West; E. Duffy, General Superintendent, East; W. C. Lancaster, Electrical and Mechanical Engineer; H. T. Fisher, Tunnel Engineer; H. D. Robinson, Engineer of Design, and J. C. K. Stuart, First Assistant Engineer. The writer is managing engineer for Mackenzie, Mann & Co., Ltd., and Chief Engineer of the Canadian Northern Montreal Tunnel & Terminal Company, Ltd.—Engineering Record.

Hopper Bottom Grain and Coal Car Built for Canadian Pacific Railway.

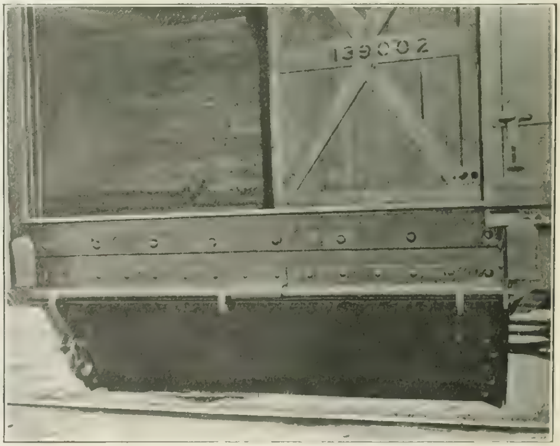


Hopper Bottom Grain and Coal Car for C.P.R.

Ever since grain has been handled in box cars, the construction of a suitable grain door has been one of the most difficult problems in car design, and up till recently it has remained the one unfinished part of the car. A satisfactory grain door is one that will hold grain as securely as any other part of the car body, is always there when required, will not be demolished in unloading, does not obstruct or decrease lading room when not in use, and is of reasonable first cost and low cost of maintenance. A grain car so constructed that there will be no loss that would be detected, will appeal to all persons who are in close enough touch with the handling of grain to be familiar with the loss that there has always been, and as other problems in railroading are being worked out and as railroading as a whole is becoming more efficient and refined, there will be a demand for a higher degree of efficiency in the handling of grain. Working to this end, the Canadian Pacific Ry. has built 200 Burnett hopper bottom grain cars, shown in the accompanying illustrations.

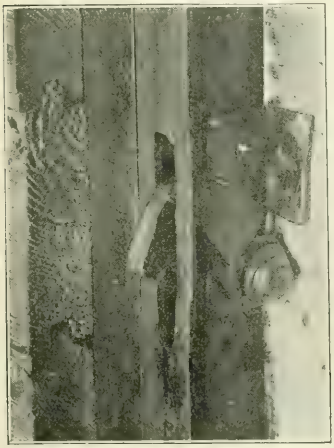


Car With Steel Hopper Open.



Car With Steel Hopper Closed.

There are several new features in this hopper door. The hinge is made by interlocking the edge of the hopper door and floor, making a continuous hinge, which, instead of weakening the edge, strengthens it the same as would the application of an angle, and instead of the load having a tendency to open the joint as with all other hinges, the load tightens the joint. The hopper door also differs from hopper doors previously constructed, in that it is hinged at the bottom and is almost vertical, and has no closing shaft, but is closed by hand, and secured by the shaft, on which are projections which engage the edge of the door at different points, holding it to a positively closed position. The ends of the hopper doors have flanges which shut into pockets or grooves formed by plates on the ends of the hopper. The whole construction of the hopper is so simple and strong that an inspection of the car convinces one that it is very unlikely that the hopper would ever become defective unless in a wreck, and the hopper not being subject to corrosion the same as open coal cars, should, barring wrecks, last the life of the car. The grain doors are formed by section of the floors at the doorway folding up against the door posts. As can be seen, these doors are thoroughly reinforced, are simple, and should not cost much more to maintain than the floor section at this point.



Grain Door Clasp.

One of the principal reasons for working out this car was to secure a car suitable for coal in one direction and grain in the opposite direction, so as to avoid, to a large extent, empty mileage while hauling other cars for coal. This refers more particularly to anthracite coal. In working this out, it seems that the solution of the grain door problem has been reached. In building, each hopper is filled with flaxseed and hammered, which is the most severe test possible, outside of water. They are all absolutely flaxseed tight.

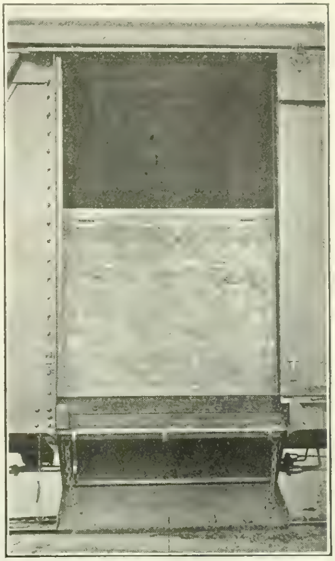
In dumping, the grain is thrown to the side, using the same elevator arrangement as the ordinary car. In dumping coal, it goes without saying that it is better to throw the load to the side rather than to the centre of the track and have the men crawl under for it. To unload a car of grain, the pin which holds the clamping shaft handle is driven out, which allows the hopper door to open and some 50% of the load runs out about as fast as the elevator can take it away, after which the floor door is unlatched and pushed down, and the remainder of the load brought out through the side door in the usual manner. This saves about one third of the time ordinarily taken to unload.

The arrangement increases the weight of the car about 800 lbs., compared with a car not fitted with grain door equipment, but when both cars are loaded with grain this difference is reduced the amount of the grain and fittings of the ordinary car.

The cost of maintenance of the ordinary grain door and fittings, including the usual nailing strips on the door posts, has been variously estimated at from $6 a year up. Approximating the additional cost of hopper bottom and folding grain door at $50 a car, the cost would be less with the hopper bottom car than with any kind of grain door that has been used in the past.

In addition to the saving on grain doors and fittings, it has been noted that where ordinary grain doors are used there is quite a force at elevators engaged in removing nails from the door posts and inside lining, etc., and getting the car ready for the load. This force of men would be almost entirely done away with in the use of this hopper bottom car. Short sections of Z bars are applied on the inside of the door post, above the folding grain door, so that when lading would extend higher than the folding grain doors ordinary boards can be sawn off and dropped in to carry the load to any height desired.

These cars are giving excellent satisfaction in service and are much sought for by the elevator men. The following are some of the advantages it would appear this car has over the ordinary car:—



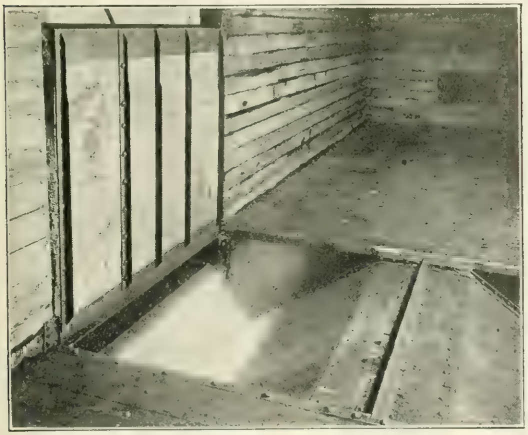
Grain and Coal Door Up, with Hopper Open.

Combined first cost and maintenance less.

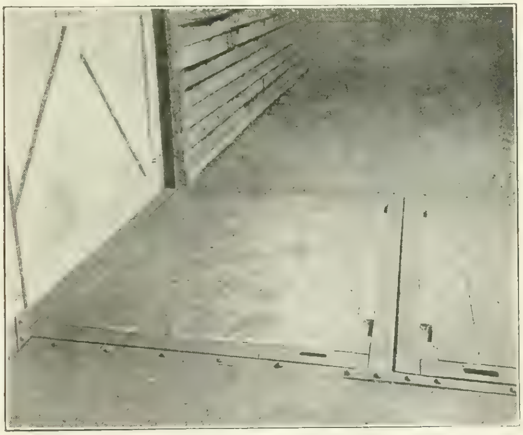
Car available for coal or any lading that can be dumped, as well as being absolutely the same for all other lading as the ordinary box car.

A most convenient grain door, which does not waste grain the same as grain doors have in the past, all of the grain that is loaded into the car being delivered at the other end of the run.

In addition to the reduced cost of maintenance, it saves inconvenience, room and cost of handling temporary grain doors at elevators, and cost of shipping temporary grain doors back to



Hoppers Open and Grain Door Up.



Interior of Car with Grain Doors Down.

point of loading, also cost of force of men at loading points removing nails and fitting cars for grain.

Patents are being taken out by R. W. Burnett, General Master Car Builder, C.P.R., Montreal. The car illustrated was built by the Canadian Car and Foundry Co.

Canadian Northern Railway Pacific Type Locomotives.

The Canadian Northern Ry. recently had delivered four Pacific type locomotives of the J-1-a class, the first of this type ever used by this road. They were built by the Montreal Locomotive Works, and were mentioned in Canadian Railway and Marine World at the time the order was placed. For the most part, the design is standard, but as there are some features differing from usual practice, they are here outlined. The general dimensions are as follows:—

[illegible]	[illegible]
[illegible]	[illegible]
Boiler—	
[illegible]	[illegible]
[illegible]	[illegible]
[illegible]	[illegible]
Tubes—	
[illegible]	[illegible]
[illegible]	[illegible]
Wheel base—	
[illegible]	[illegible]
[illegible]	[illegible]
[illegible]	[illegible]
Weight—	
Locomotive in working order	216,000 lbs.
Tender in working order	142,000 lbs.
Locomotive and tender, total	358,000 lbs.
On leading truck	41,100 lbs.
On drivers	136,400 lbs.
[illegible]	[illegible]
Fuel	Bituminous coal.
Heating surface—	
Tubes	2,296 sq. ft.
Fire box	180 sq. ft.
Total	2,476 sq. ft.
Grate area	48.2 sq. ft.
Maximum tractive power	31,100 lbs.
Factor of adhesion	4.38
Tender capacity—	
Coal	12 tons.
Water	6,000 Imp. galls.

The general arrangement presents nothing out of the ordinary, following pretty closely the lines of the Montreal Locomotive Works standard design in appearance. The principal point of variation in general design is in the arrangement of driving wheels. It will be noted that 69 in. wheels are called for, but the design has been worked out with the expectation of at some future date using 75 in. drivers, the wheel base being such as to permit of this rearrangement.

The boiler is of the extended wagon top design, possessing no features of consequence other than the manner of cross bracing of the steam space above the firebox by pin connected rods from side to side of the shell immediately over the fire sheet. This acts as a positive assurance against the boiler bulging outwards. The steam dome has a 20 in. opening at the top for entry in case of internal inspection, the throttle being so designed as to permit of this without the removal of the stand pipe. The tubes are of seamless steel, and the staybolts are of staybolt iron. Four rows of Tate flexible expansion stays are used on the firebox. In the firebox, there is a brick arch, supported on studs from the sides of the firebox.

The front end arrangement of the locomotive is of the Master Mechanics' standard design, with double petticoat pipes. The superheater in this end is of the Schmidt fire tube type A, comprising 25 units running back through the 5⅜ in. flues.

The cylinders are of the latest design, employing outside steam pipes running down from the superheater headers, a design that has met with general adoption within the last two years. Piston valves as is usual with superheated steam are employed. Over the valves is a by pass valve of what is generally termed the Pennsylvania type. It is claimed to be the best type in use owing to its positive action. Both the Baltimore and Ohio Rd., and the Pennsylvania Rd. use it as a standard. The cylinder cocks are of the double lift valve type. Instead of using a ball joint, with a ring at the mud ports in the bottom of the barrel, a 4 in. plug is used, and it is claimed that no trouble is experienced from leaking, and it is easier to remove and maintain. Both cylinders and valves are bushed. The piston valves are 14 ins. diameter.

The valve gear is of the Walschaert type, in one of the latest designs, comprising an outside slab frame for the outside link support, carried from the locomotive frame both front and rear. A light frame ladder is supplied on both sides of this supporting slab frame for internal inspection of the forward running gear and the oiling of the links. The valve stem is of the self centring type, supported directly from the valve chamber cover, and the front end of the piston rod is carried on a slipper in guides on the front end of the cylinder, both these features being recent practice.

The connecting and side rods are of open hearth steel, as are also the crank pins. The crank pin collars are secured by a lock nut and split pin through the crank pin, which is standard C.N.R. practice. All the grease cups are forged solid with the rods.

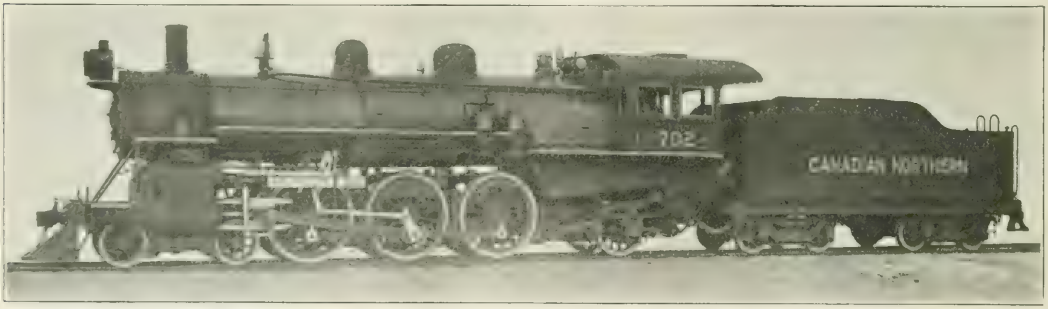
The frames of the locomotive are cast Vanadium steel, to the front end of which is attached a cast steel bumper carrying a standard C.N.R. Sharon coupler. The pilot is of the C.N.R. standard, built up of oak, and fitted with an iron band shrunk on tightly.

The driving wheel centres are of cast steel, with bronze hub liners, and carrying supplementary counterbalance weights. The driving tires are of steel, 3½ ins. thick and 5½ ins. wide, and lipped on the outside to prevent their moving in. All six drivers are flanged. The axles are of hammered open hearth steel, with the main journals 9½ by 12 ins., and the others 9 by 12 ins. The driving boxes are of cast steel fitted with brasses, but with no babbitt in the bearings, and fitted with grease cellars. The springs of the spring system are of the Canadian Steel Foundries make.

The locomotive truck wheels are 33 ins. diameter, with cast steel spoke centres, with open hearth steel tires 3⅛ ins. thick by 5½ ins. wide, fitted with C.N.R. standard retaining rings rivetted in place. The axles are of hammered open-hearth steel, with journals 5½ by 12 ins. The trailing truck wheels are 45 ins. diameter, with 38 in. cast steel spoke pattern centres, and have iron tires 3½ ins. thick and 5½ ins. wide. The axles are of hammered open hearth steel with journals 8 by 14 ins.

The cab is of the C.N.R. standard type, which can be renewed in parts in a simple manner. The runboards are of diamond surface steel plate with an angle iron edge. The sanders are piped to the front of the main drivers. The headlight has an 18 in. round case Ross type reflector, and a Pyle type E generator supplied with steam through copper pipes run under the lagging. Auxiliary lighting is from C.N.R. standard oil lamps.

The ashpan arrangement is of the C.N.R. standard, which was described in these columns recently. The firedoors are of the Franklin automatic type. The lagging on the boiler is H. W. Johns-Manville fire felt, 2 ins. thick. The jacketing is of no. 22 planished steel. The bell ringer is of the Taylor and Arnold type. There are three 3 in. open pops. The boiler feed is from a no. 10 Ohio injector on the left side and a no. 11 on the right. The bearing metals throughout are the Canadian Bronze Co.'s make. The steam heating is on the Gold system, and all the metallic connections are through flexible hose. All boiler fittings are connected to the boiler with the C.N.R. standard 12 threads per inch. The air signals are on the Westinghouse schedule L, and the air brakes are all Westinghouse, with two 9½ in. pumps



Canadian Northern Railway Pacific Type Locomotive, J-1-a Class.

on the left side. A no. WM-2 and WD are applied to the locomotive truck and all the drivers, but with no braking on the trailing truck. All gauges have a double spring crank movement graduated to 300 lbs.

The tender tank and frame are of the C.N.R. standard construction described in these columns recently. The trucks are also of the standard C.N.R. equalized pedestal type, with cast steel bolsters and Wood's roller side bearings. The truck wheels have 33 in. diameter cast steel plate centres with tires, 2⅞ ins. thick and 5½ ins. wide. The axles are of open hearth hammered steel with 5½ by 10 in. journals.

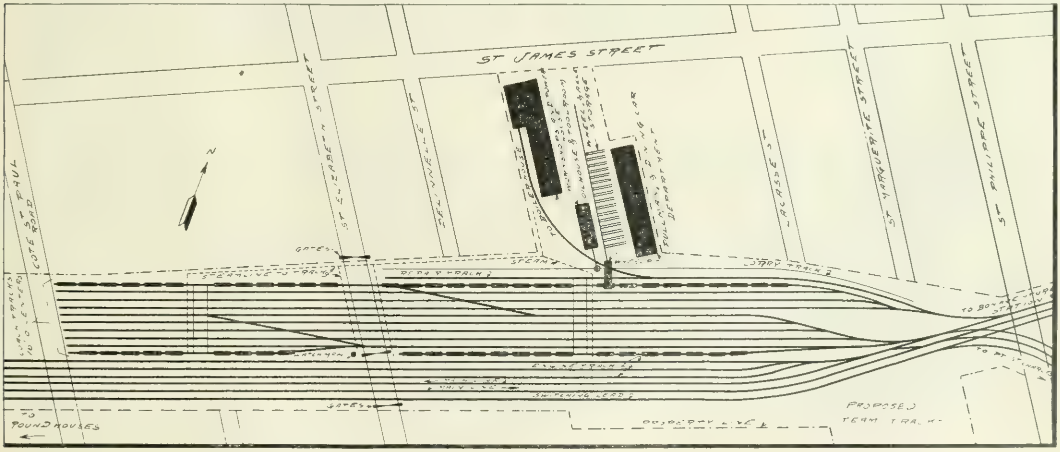
We are indebted for the above information to A. L. Graburn, Mechanical Engineer, C.N.R.

Grand Trunk Railway New Passenger Car Yards at Montreal.

By A. Stoikowitz, Car Department, Grand Trunk Railway.

In order to keep steps with the enormously increased passenger traffic of the G.T.R. and with the advent of the G.T. Pacific Ry., it was found necessary to abandon the old facilities at Bonaventure station, Montreal, and to build a separate passenger car yard and cleaning plant for this purpose. This plant is constructed along highly efficient lines, great care having been taken to reduce the cost of operation to a minimum, and many mechanical devices have been substituted for hand labor wherever it was found advisable. The location, two miles west of Bonaventure station and adjoining the Turcot locomotive houses, is very ideal. The yard has a capacity of 180 cars, is 2,400 ft. long and extends from St. Marguerite St. to Cote St., Paul Road. It consists of 10 car tracks, spaced 16 ft. centres, and one repair track, the latter running next the workshops from La Casse St. to St. Elizabeth St. Cleaning platforms are provided between all the tracks, 6 ft. wide by 10 ins. high, being entirely free from any obstructions, such as poles, etc. These platforms are tapered at St. Elizabeth St., and at two crossings or midways, which are 20 ft. wide, one of them being located directly opposite the workshops, the other halfway between St. Elizabeth St. and Cote St. Paul Road. By means of these crossings, and in connection with the lead tracks, the yard is subdivided into eight sections, which arrangement permits an increased output with the least possible handling of cars.

General View of G.T.R. Passenger Car Yards, Montreal.



Plan of Grand Trunk Ry. Passenger Car Yards at Montreal.

The drainage system consists of a 15 in. main line running through the centre of the yard, connecting 34 branch lines 8 ins. in diameter, and spaced 150 ft., throughout the yard; the main line being connected to the city sewers at three points. There are three independent water mains which supply the great amount of water used for cleaning purposes, one of them supplying the boiler room and workshops. All the platforms are provided with water outlets, 120 ft. apart; the pipes and fittings used being extra heavy.

Owing to the fact that day and night shifts have to be maintained for cleaning cars and making up trains, the lighting system has been made specially effective. It consists of 60 Westinghouse arc lights of 2,500 candle power, which are suspended 18 ft. above the tracks from ½ in. galvanized wire cables, crossing the tracks at 100 ft. intervals. Each cable has a span of 185 ft. and carries three lamps, which are controlled separately by means of a switch box, secured to the poles on one side of the yard. The poles are 26 ft. high, and consist of a strut and brace made of 80 lb. rails, imbedded into a solid concrete foundation 6 ft. square by 6 ft. deep, the brace being secured to the foundation by means of a 1½ in. foundation bolt. It was found that these poles were quite inexpensive and strong enough to withstand the enormous tension stresses of a span of 185 ft. The lamps are staggered throughout the yard and give an evenly distributed light of great brightness.

The steam and compressed air lines are carried overhead on trestles from the power house to the midways and St. Elizabeth St., respectively, whence they are carried under ground to supply each track with steam and compressed air. The steam main line starts with a 7 in. pipe at the boiler house, and graduates down to 3½ ins. at its end, the four distributing mains under ground being controlled separately, graduate down to 2 ins. at the last outlets, where automatic steam traps discharge the condensation. The main line is of extra heavy pipe, covered with 2 in. asbestos sponge felted pipe covering and provided with expansion joints every 100 ft. The compressed air line carries a mean pressure of 80 lbs. per sq. in., starting with 4 ins. at the power house and graduating down to ¾ in. at its last outlet. Compressed air is used extensively for testing air brakes, cleaning seats and carpets, operating air hoists, wheel pit, etc.

The workshops, power house, etc., located in a separate yard in close proximity to the tracks as indicated in the general plan, are solid brick structures with concrete basements. The boiler room is 90 by 60 ft., carrying five return flue steam boilers, having a combined capacity of 750 boiler h.p. There is room for three additional boilers for future enlargements. A separate elevated track enters the boiler room and inclined chutes take the coal directly to the boilers. A grated ash pit and an automatic conveyor dispose of the ashes into gondola cars.

Yard in front of Workshops and Power House, G.T.R. Passenger Car Yards, Montreal.

It is estimated that the number of cars to be heated will not exceed 120 at a time. Figuring the water of condensation to be approximately 70 lbs. per car and per one half hour preheating time at an outside temperature of zero, and allowing an evaporation of 30 lbs. water per horsepower hour, the necessary boiler horse power for heating purposes will be

$$\frac{120 \times 2 \times 70}{30} = 560 \text{ boiler horse power.}$$

The workshops in connection with the boiler room have a combined length of [illegible] ft. by 62 ft. respectively, [illegible] ft. outside dimensions, and contain separate rooms for the electricians, carpenters, upholsterers, painters, plumbers and airbrake men, a dining room for the car cleaners, a big storeroom, offices, lavatories and bathrooms.

The engine room contains an Ingersoll-Sergeant duplex air compressor, with a capacity of 1,670 cu. ft. of free air per minute, at a pressure ranging from 70 to 100 lbs. a square inch, and also contains different switch board panels and a dynamo for charging batteries. The exhaust steam of the air compressor is utilized in winter for heating the buildings, the condensation thereof being carried back to the boiler feed pumps. The basement underneath the workshops, being only 3 ft. beneath the yard level, is used as a blacksmith shop, cleaning and charging place for batteries, and as a storeroom for heavy and bulky material; an air hoist connecting same with the storeroom above.

The oil house is constructed entirely of concrete and fire proof materials, and contains an oil tank 30 ft. long, located underground in a concrete pit, and covered with a reinforced concrete floor. This tank is divided into four compartments and is capable of storing 2,950 galls. Galena oil, 1,000 galls. lamp oil, 1,000 galls. coal oil and 600 galls. of signal oil. It is equipped with gauges, safety valves and heating coils, compressed air being used to discharge the oil into buckets. A general tool room at one end of the oil house is for storing heavy tools of car repairers, etc.

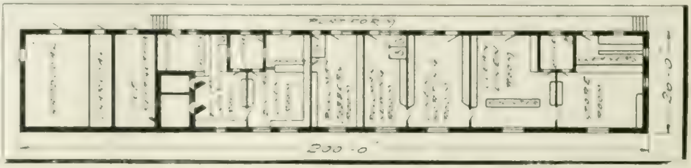
A separate building accommodates the sleeping and dining car departments and storage rooms for hard coal, charcoal and ice. This building is 200 by 26 ft., sanitary in every respect and equipped to handle the greatest amount of business. The dining car department is thoroughly equipped with lockers, shelves, counters, etc., and an office with glass partitions, located to permit a perfect supervision; the storerooms have concrete floors, all the woodwork and lockers are painted white and enamelled. A refrigerator of an approved type, located in one of the store rooms, is 18 by 14 ft., having a separate compartment for dairy products. It is iced from the ice storage by means of an air hoist.

The sleeping car department consists of a jobbers' room, sewing room, linen sorting room, clean linen and storerooms, and an office and a dining room for cleaners. All the rooms are equipped with lockers, shelves and counters, the lockers in the clean linen room being painted white and enamelled.

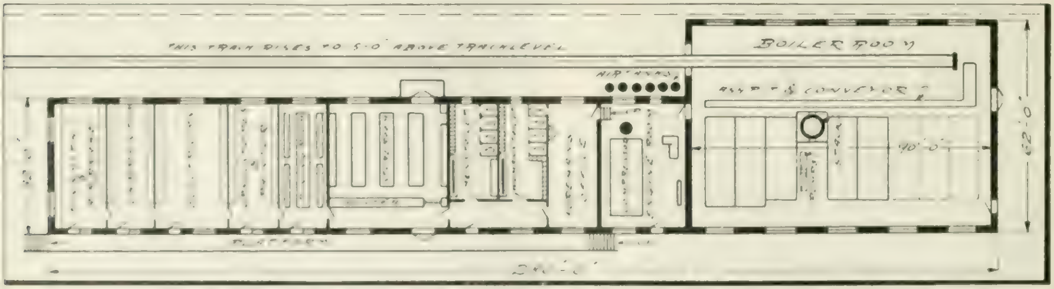
The yard between the buildings is used for wheel and axle storage. Air hoists and runways for loading and unloading them are in course of construction, also a pneumatic wheelpit, which is automatic in its action.

A more efficient method than fumigation has been adopted for disinfecting the cars from time to time, which will be accomplished by the liquid spray method. Pure carbolic acid is used as a disinfectant, with a co-efficient of 20, a dilution equivalent to 1 in 500. Practical experience has shown that 10,000 approximately five cents. There is a complete absence of objectionable odor by using a disinfectant with such a high co-efficient and the results obtained are highly satisfactory.

This plant was designed by the G.T.R. sq. ft. can be disinfected at a cost of Car Department under the direction of its Superintendent, Jas. Coleman, and the work was carried out by the Bridge and Building Department.



Floor Plan of Dining and Sleeping Car Departments, G.T.R. Passenger Car Yards.

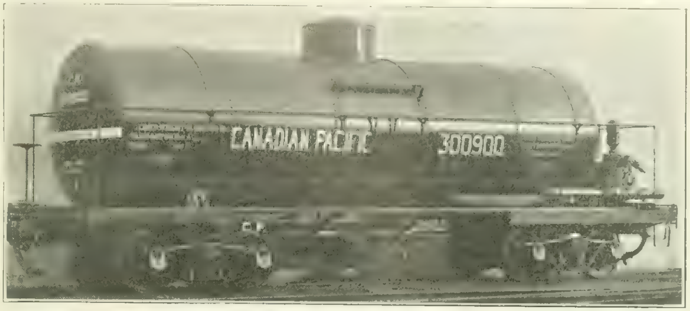


Floor Plan of Workshops and Power House, G.T.R. Passenger Car Yards, Montreal.

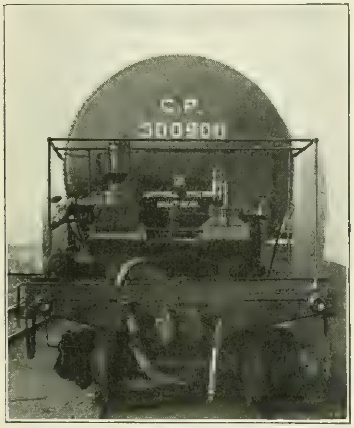
Canadian Pacific Railway Fire Fighting Cars.

A novel departure has been made by the C.P.R. in the construction of a couple of tank cars specially equipped for fire fighting. In general, they are of the standard M.C.B. tank car construction. Two cars have been built, as they are intended to operate in pairs. Apart from the end arrangement of the auxiliary equipment, they are identical in construction. Each car carries a tank of 8,428 imp. galls. capacity. On the end of one car there is a 7 x 10 x 10 in. duplex fire pump, using steam from the locomotive boiler. The corresponding end of the other car has a rack construction on which can be carried 6,000 ft. of 2½ in. fire hose.

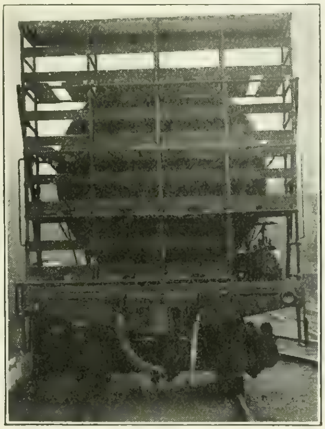
The tanks are 92½ ins. diameter by 28 ft. long, made from 5|16 in. plate. Over the centre is the usual dome, 44 ins. diameter, inside of which is a 23 in. opening, a light metal ladder being provided inside for entry purposes. Inside the dome, there is a valve wheel, connected with a 6 in. valve in the bottom of the tank, with the usual outlet below. The centre sill of the car is built up of two 15 in. 55 lb. channels, these comprising the whole longitudinal sill construction of the car, except for the reinforcements for the body bolsters over the truck. Draft gear is attached to the ends, housed in a pressed steel end sill. The car is designed for a weight capacity of 100,000 lbs., so standard 50 ton trucks are employed.



C.P.R. Fire Fighting Tank Car, With Duplex Pump.



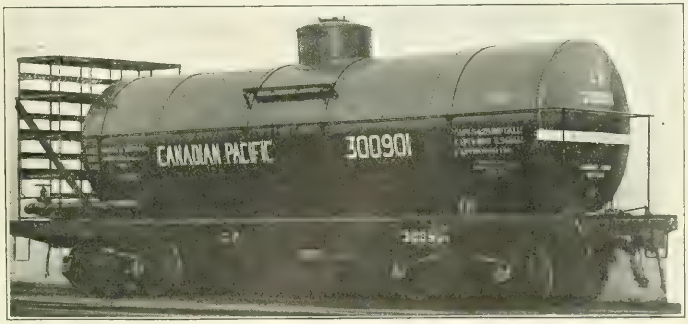
Pump on Fire Fighting Tank Car.



Hose Rack on Fire Fighting Tank Car.

The tanks are placed a little further to one end than is usual, the platform space thus provided at the open end being used in the one case for the pump, and in the other for the hose racks. In both tanks, the suction is through a 6 in. pipe near the bottom and to one side of the centre line, forming a U bend, the open end of which drops down to within an inch of the bottom of the tank. The suction pipe, from the point it leaves the tank, passes along the side of the tank on the deck, to the open platform ends. In the rack, this terminates in a capped end, to which can be connected a short section of 6 in. rubber hose, supplied with the car, for connecting up with the pump car. In the pump car the connections are somewhat similar, with a capped end pipe, but this short length of pipe from the tank to the capped end contains a 6 in. T connection to the pumps. In both cars the connecting length has a globe valve.

The hose racks on the rack car are made up of 1 in. extra heavy piping, made into sectional openings, 27 ins. square. There are 16 of these openings, 40 ins. deep, in which the rolls of hose are placed on edge, in rolls up to 27 ins. diameter. The accommodation is for 6,000 ft., which can be connected up to the pump.



C.P.R. Fire Fighting Tank Car, With Hose Rack.

The two cars were built to the C.P.R. designs by the American Car and Foundry Co., and are in service in the operating department, being located at Brownville Jct., Me.

Customs Regulations on the Importation of Foreign Repair Parts. The importance of conforming to Customs regulations when shipping repair parts from U.S. lines into Canada is a most vital question with the store and car departments of the different Canadian lines, as, on account of the absence of properly vouched for invoices accompanying the parts, they are usually held pending correspondence from the Canadian consignee to advise the U.S. consignor of the difficulty. In the meantime, the car is held on the bad order track, where it is not only freed from the per diem regulations, but also blocks up necessary home repairs. This subject has been treated in a thorough manner by L. E. Thomson, Storekeeper, Canadian Northern Ontario Ry., in a paper at the Railway Storekeepers' Association Convention in Chicago recently. In his paper, all the considerations involved in the resulting delay are dwelt upon, and the necessary procedure in forwarding the parts so as to avoid this delay is explained. It is to be hoped that the presentation of the paper will have the desired effect, as a proper following of the Customs regulations will mean a considerably increased repair track capacity for Canadian lines.

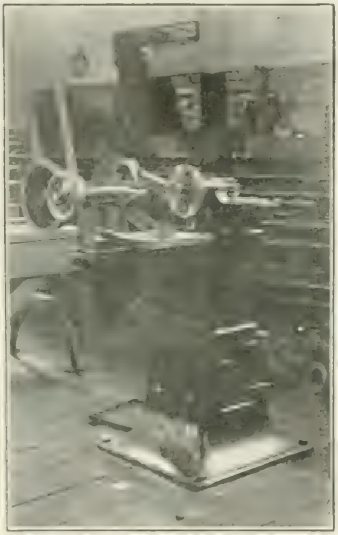
Sale of Return Tickets on Trains.—The Board of Railway Commissioners has asked railway companies to state whether their conductors have instructions to sell round trip tickets to passengers boarding trains at flag stations, or at stations where no agents are on duty immediately before the departure of trains therefrom.

Railway Mechanical Methods and Devices.

Grinding In Machine at Grand Trunk Railway London Shops.

The air brake department of the G.T.R. London shops has a machine for grinding in valves such as angle cocks, etc., made to their own design. The construction is to be seen in the accompanying illustration. Others of the same design are said to be in use at other points on the system, no doubt copied from this.

The frame closely resembles that of a small vertical miller. To the rear, there is a 3 step cone pulley, carried on a shaft in bearings. There is a disc crank at the other end of this shaft at the furthest point to the rear in the machine, as shown by the illustration. This crank has a connecting rod attached to a short section of rack, guided in ways on the top of the machine frame as noted to the right. A pinion carried in a bearing to the left and above the rack, connects to a small faceplate on the front end of the pinion shaft.



Machine for Grinding in Valve Seats

A knee from the front of the machine frame has a channelled upper surface, carrying a light tailstock, the centre of which is in line with that of the faceplate right up to which it can be moved on the ways.

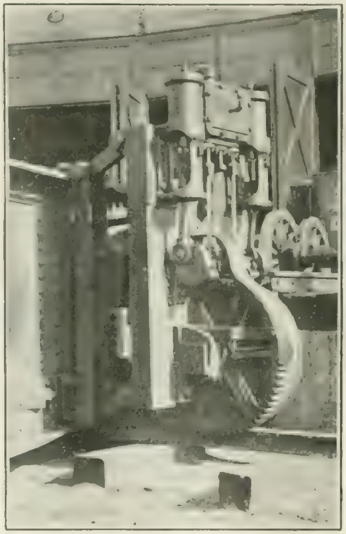
The valve to be ground to a seat is placed in the machine between the two centres, being driven from the faceplate. The seat, as in the case of an angle cock, [illegible] up to the work by the operator, there being [illegible] cock, and alternately relieving the valve from the seat to allow the spreading of the oil and emery introduced at intervals by the operator.

The revolving crank disc at the rear [illegible] rack, which in turn revolves the pinion [illegible] This motion keeps constantly reversing, making an ideal grinding in movement.

Standard Turntable Motor on Grand Trunk Pacific Railway.

A standard type of turntable motor is being introduced along the G.T.P.R. The accompanying illustration of the installation at Rivers, Man., is typical.

The operating medium is compressed air. Twin cylinders, with the air chest between, connect through connecting rods of good length, with a crank shaft through disc cranks, the valves operating directly from this shaft in the usual manner. This crank shaft carries a small pinion, meshing with a large gear located on the inner side of the turntable rail. Integral with the large gear is a wheel of the same diameter, running on the turntable rail. Both wheel and gear are carried on a shaft carried in bearings on the frame to the rear.



Standard G.T.P.R. Turntable Motor.

The whole operating mechanism is carried on a frame, which is a heavy iron casting, held to the turntable by four links, giving free vertical movement to the weight and mechanism. The weight is of such proportions as to give sufficient adhesive force for the air motor to move the turntable around, even if the locomotive is not exactly centred.

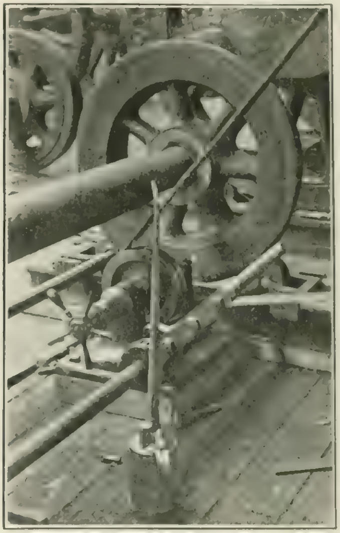
The particular advantage of this outside motor arrangement lies in the fact that the locomotive does not require to be so accurately spotted. When operated by hand power, the locomotive must be accurately centred. With a power mechanism attached directly to the turntable frame, the locomotive must be tilted slightly in that direction to obtain the necessary adhesion. With a mechanism flexibly connected in the manner in which this one is attached, such precautions are unnecessary.

The motor is operated from an air handle at either end of the turntable, a small operating shaft, along the top of one of the turntable girders, connecting the two handles.

Drilling Retaining Rings at Grand Trunk Railway Stratford Shops.

Of the large number of useful labor saving appliances in the G.T.R. machine shop at Stratford, Ont., the one illustrated herewith is one of the best. It is a machine for drilling out the old rivets that hold the retaining ring for the securing of the tire on the wheel centre. When the tire requires renewing, this ring must be removed, and the method generally adopted is to drill them out by some means.

The method here shown is simple, and the additional appliances required are limited. The wheels which require the removal of the rings, are mounted on rollers to raise the tread slightly above the ground, the common practice employed in the handling of locomotive driving wheels. Secured to the floor, in line with the centre of the axle, at the level of the rivet to be removed, there is a drilling machine. Alteration for elevation is made in the wheels instead of in the drilling machine, the rollers having an attachment whereby they can be drawn close together or further apart by means of a right and left hand screw altering the location of the rollers, each side being regulated independently.



Drilling Out Retaining Ring Rivets

The frame of the drilling machine, secured to the floor on a block of wood, consists of a base carrying two upright bearings. In these bearings there is mounted a hollow spindle, driven by means of a belt from the line shaft above and to the right. The hollow spindle carries the drill spindle, on the outer end of which there is a drill socket for the reception of the drill. This drill spindle receives its lengthwise motion from a feed screw attached to the handwheel at the near end. The drill spindle is feathered in the hollow spindle, from which it receives its motion.

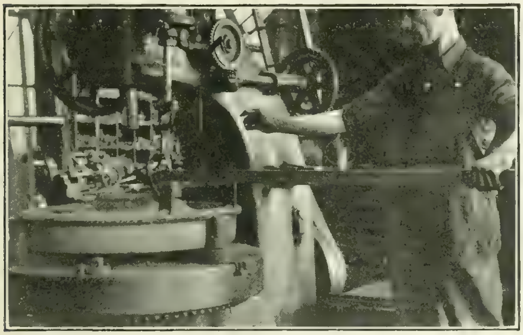
On the completion of each hole, the

wheels are moved around to the next position by means of the rachet attachment in the foreground, connecting with one of the supporting wheels on each side. This, of course, can be turned in either direction.

A somewhat similar attachment to this one is in use for drilling the thrust brass holes of the large driving wheels. It operates in almost an identical manner, the difference being that the drill for the brasses is mounted on a V block, which rests on the axle, to which it is clamped. Power is obtained in this case as in the latter, from belting from the line shaft.

Car Wheel Boring Lift at Toronto, Hamilton and Buffalo Railway Shops.

The majority of car wheel boring machines have attached a small hoist for placing and removing car wheels for boring, this attachment usually being applied by the manufacturers. Some of the older makes of borers have no such attachment, and it is for these that the lift shown in the accompanying illustration will be found of value. In the T.H. & B.R. shops at Hamilton, Ont., W. T. Kuhn, Master Mechanic, it has been found that with its use, equally as quick entry and removal of the wheels is possible as with the usual standard appliance.



Car Wheel Borer Lift Hook Attached to Air Hoist.

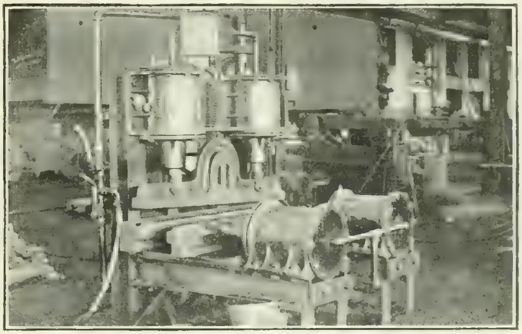
Were it not for the boring head of the machine, it would be a simple matter to use a hook arrangement through the centre bore, and lift the wheel into the mill. The construction of the machine makes necessary an eccentric lift. The T.H. & B. attachment makes this possible. On the inner end of a fulcrum rod, there is attached a small hook such as will pass in through one of the three wheel core holes and catch on the inner face. Above this hook is an eye, to which the hook of an air hoist is attached. The rod is fulcrumed a few inches back from the inner end on a U bridge, which bears on the flange of the tread. The leverage is such that while the lift is eccentric, a very light pressure on the outer end of the fulcrum rod will balance the wheel. The fulcrum rod serves a further purpose as a guide rod in directing the wheel into the faceplate jaws. The operation is clearly to be seen in the accompanying illustration.

A recent estimate of the saving in main line operation under electrification places the figure at 6.8%, based on a surplus of this amount over and above the payment of 5% on the actual cost of electrifying the line.

Straightening Brake Beams at Canadian Pacific Railway Winnipeg Shops.

The number of cars wrecked on the C.P.R. western lines is so great, owing to the extensive mileage over which it operates, as to require special provision to be made for the reclaiming of certain of the parts that are not placed beyond repair in a smash up. One part of the car equipment that is capable of reclamation is the steel brake beam, if of the I beam section as the majority are. In the company's Winnipeg shops, a special press of the form shown in the accompanying illustration has been rigged up for the special purpose of putting such brake beams back in service.

The device consists of a double vertical and horizontal frame, with two air brake cylinders mounted on the vertical part and two on the horizontal part, each pair so connected as to act in unison. The horizontal pair of cylinders carry on the end of their plungers, a die, slightly shorter than the width of a brake beam, and with a projecting flange that will fit into the channel of the I beam. This operates against a similar die, stationary on the frame. The vertical cylinders carry a flat die on the ends of their plungers, which will bear down on the top of the two lower dies, these latter forming the mating die for that cylinder.



Air Press for Straightening Brake Beams.

The brake beams, as brought in from the road, are twisted in all sorts of shapes. They are first heated bodily to a working heat in an oil furnace, and then, with alternate workings under the dies of the press, and with sledge hammers on an anvil block, the I beam is finally brought back to shape. The final forming is accomplished by tightening down thoroughly in the press. Considerable dexterity is required to bend back the twisted bars in the press, first operating one or other of the pairs of cylinders, but the operator, through considerable experience in this kind of work, is very skilful in handling the beams through the operation.

Handling Boiler Plate at Canadian Northern Railway Shops.

Last year, a systematic means of handling boiler plate was evolved at the C.N. R. Winnipeg shops. Outside the building, adjoining the door nearest the boiler shop section of the locomotive shop, there were erected two parallel wooden walls, about 6 ft. apart, and 75 ft. long, against which the boiler plate can be piled in stacks, with about 5 piles in each of the four rows. Spanning these piling racks is a traveller, running on tracks just outside the outer rows of plates, which in all the piles stand on end. On the cross beam of the traveller is a small carriage with block and chain, at a height above the plate just sufficient to enable the latter to be lifted clear of the ground. The plates from each of the piles can be thus lifted and carried along to the door entering the building. To the end of the traveller tracks can be attached short lengths of rail, which enable the traveller to be brought along from the rack end over the shop track, which comes out through the door of the building. If a car be first spotted on the latter, and the traveller rails be laid out from the ends, the plates can be placed directly on the car, and run in the shop, where they can be picked up by the shop crane, and run down to the boiler department.

Tie Preservative Experiment.—To test the effectiveness of preservative treatment of ties, the Chicago, Milwaukee and St. Paul Rd. has laid a section of single track branch line, which is subject to fairly heavy traffic, with treated and untreated ties, both red oak and hard maple, the ties used by the road. Six different preservatives are to be tried, 100 in a lot, of each kind of wood, which with 100 of each unpreserved makes a total of 1,400 ties under test. Half the ties are to be secured with screw spikes and flat tie plates, and the other half unprotected by tie plates and fastened with ordinary cut spikes. Most of the experimental track will be laid on a fill with a section in a cut. In order that the track may remain undisturbed as far as possible, new rails are to be laid with the ties.

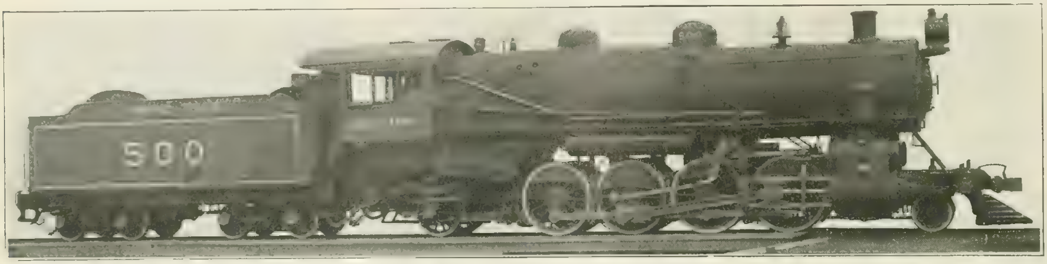
More Permanent Creosoting.—The old problem of retaining the creosote in treated timbers seems to be solved in the new plan of applying the creosote with paraffin or stearic acid heated to the melting point. Of course the wood must be hot also. The mixture or solution of liquids penetrates to the heart of the timber, and on cooling the paraffin or stearic acid solidifies, holding the creosote permanently in the pores.

The Lehigh Valley Rd. has issued an order instructing conductors and trainmen in the event of delay to trains to advise passengers of the cause in order that they may change their plans accordingly if they see fit. The same order applies to ticket agents, who must advise prospective passengers when any delay on the line has occurred.

Grand Trunk Railway Mikado Locomotives.

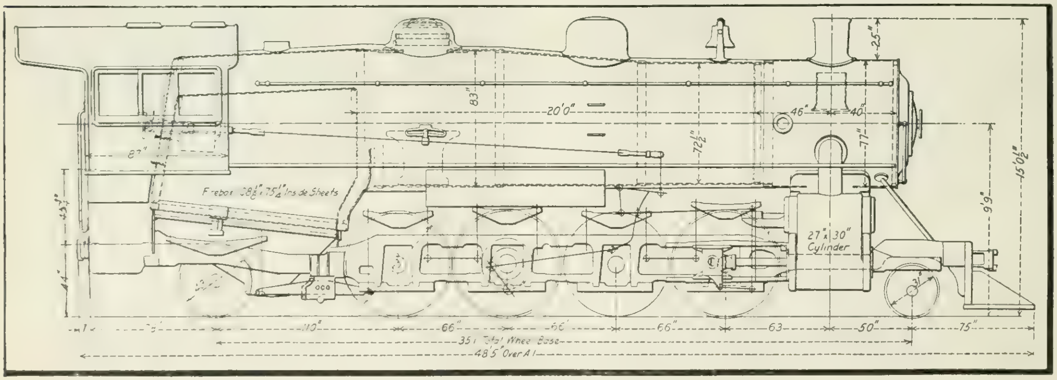
The Grand Trunk Ry. has recently received 25 locomotives of the 2-8-2 class from the American Locomotive Co., and an order was placed with the same builders for 50 more of the same design.

Freight traffic on the G.T.R. has until recently been hauled mainly by Richmond compound consolidation type locomotives, which have a total weight, including the tender, of 349,800 pounds, and a tractive power of 34,000 lbs. The mikados have a total weight, including the tender, of 455,100 lbs., and a tractive power of 51,700 lbs. With an increase in weight of only 30%, an increase in tractive power of 52% is obtained. This is very important, as more power per pound of locomotive weight means more revenue from the same motive power investment.



Grand Trunk Railway 2-8-2 Mikado Locomotive.

The consolidations are saturated engines, and have a total heating surface of 2,952 sq. ft. The mikados have an equivalent heating surface (evaporating heating surface plus 1½ times the superheating surface), of 4,776 sq. ft., an increase of 62% over the consolidations, with an increased grate area of only 11½%.



Elevation of Grand Trunk Ry. 2-8-2 Mikado Locomotive.

The mikados are doing their best work on the Western Division, which is made up of broken grades, which do not exceed 0.6%, except in one case, where a 5 mile 0.95% grade requires a helper service.

On the Western Division the following ratings have been put into effect:—

	Miles	Helper Service	Consolidation tons	Mikado tons	Increase
Port Huron to Nichols	156½	None	2000	2800	40%
Nichols to Elsden	168½	None	1700	2500	47%
Elsden to Nichols	168½	For 5 miles	2000	2800	40%
Nichols to Port Huron	156½	None	2000	2800	40%

These runs are being made over this division with an average speed for the consolidations of 20 miles an hour, and for the mikados of 22 miles an hour. The consolidations are averaging 38,500 ton miles, and the mikados 60,000, an increase of 56%.

The design in general follows the standard of the builders. The boiler is of the extended wagon top type. It is 74 ins. in diameter outside at the front end, and 83 ins. in diameter outside at the largest course. The barrel is fitted with 240 two in. tubes, 20 ft. long, and a 32 unit, Schmidt type, top header superheater. The firebox is 108⅛ by 75¼ ins., and includes a firebrick arch, a pneumatic fire door, and a power operated grate shaker. This well proportioned boiler, equipped with fuel saving devices, should give great economy in operation.

An interesting feature is the arrangement of the throttle lever support. It combines the lever fulcrum and quadrant support in an integral casting. This means a saving in the number of parts and also a reduction in the number of holes in the back head. It is also universal, as the support fits around the stuffing box as a sleeve, and can be turned to any desired angle to bring the lever in a convenient position. It is also of great advantage as a means of passing obstacles on the back head.

Other interesting features which have been included in this design are, outside steam pipes, screw reverse gear, self centring valve stem guides, the new guide for the extended piston rod, long main driving box, and the improved outside bearing radial trailing truck.

Following is a comparison of dimensions and ratios with that of the consolidations:—

Type	2-8-2	2-8-0
Weight on driving wheels, lbs.	213,500	183,700
Weight on leading truck, lbs.	26,000	25,700
Weight on trailing truck, lbs.	43,500	....
Weight, total of engine, lbs.	283,000	209,400
Weight of tender, lbs.	172,100	140,400

Cross Ties Purchased by Railways in 1912.

The statistics in this bulletin are based on reports received from 51 steam railways and 36 electric railways operating in Canada in 1912. The total number of ties, 21,308,571, were valued at $9,373,869. Part of these were imported, but the bulk of the ties used are cut in Canada. The imports of ties in 1912 were valued approximately at $1,697,431, which would indicate that less than one fifth of the ties purchased in 1912 were imported.

TABLE 1

Kind of Wood	1911 Number	1911 Value	1911 Average Value	1911 Per Cent	1912 Number	1912 Value	1912 Average Value	1912 Per Cent
Total	14,389,224	$5,540,769	$0.39	100.0	21,308,571	$9,373,869	$0.44	100.0

(1) Less than one-tenth of one per cent.

Table 1 gives the number of ties purchased in 1911 and 1912, together with the total value, average value and per cent. distribution.

There were purchased in Canada in 1912 a total of 21,308,571 cross-ties, an increase in actual numbers of 6,919,347, or 48.1% over 1911. This increase took place on almost all the railways and was especially noticeable on transcontinental lines. Nineteen different kinds of wood were used, with jack pine still leading. The use of each material increased from 1911, with the exception of eastern spruce and red pine. Balsam fir and western spruce were added to the list of 1911, and poplar and black ash were dropped. The use of cedar ties has varied greatly from year to year. In 1908, 1909 and 1910, they headed the list, although the numbers purchased showed decreases each year. In 1911 cedar ties formed only 10% of the total and fell back to fourth place on the list. In 1912 their use increased by some 1,898,710 ties and this wood moved up to second place on the list, forming 15.6% of the total. Douglas fir has steadily increased in use since 1909, when data concerning its use was first obtained. Oak and the other five hardwoods—chestnut, beech, maple, birch and elm—have also increased remarkably. There seems to be a tendency on the part of the management of older established steam railways to reduce the use of soft, light material for cross-ties, especially where fast trains and heavy rolling stock are used. Some of the eastern roads have ceased to purchase cedar, pine, hemlock and tamarack and use only the hardwoods. The use of imported hard pine has increased with the hardwoods and was used in making 3.1% of the ties purchased in 1912. Western larch formed 5.6% of the total number, over a million ties of this wood having been purchased.

The average value of ties, at the point of purchase, increased from 39 to 44 cents in 1912. Increases are noted in the case of jackpine, cedar, hemlock, tamarack, eastern spruce, chestnut, beech, maple, white pine, birch, red pine, and elm. The increases in the value of beech, maple and birch were probably due to the fact that ties of these three materials were treated chemically in considerable numbers to prevent decay, and their cost is materially increased on this account. The decreases were in the values of Douglas fir, oak, hard pine, and western cedar. Western larch ties were purchased at the same price as in 1911. The values in all cases, being based on the cost at point of purchase, can never be considered to represent exactly the relative values of the different kinds of wood for cross-ties. So many variable factors enter into this cost that only in those cases where ties of a certain kind of wood are used in large numbers can the values given in the table be said to indicate the intrinsic value of the material.

TABLE 2.

Kind of Wood	1911 Number	1911 Value	1911 Average Value	1911 Per Cent.	1912 Number	1912 Value	1912 Average Value	1912 Per Cent
Total	13,799,982	$5,368,330	$0.39	100.0	20,825,209	$9,131,675	$0.44	100.0

(1) Less than one tenth of one per cent.

Table 2 gives the details of ties purchased by steam railways in Canada in 1911 and 1912.

Steam railways in 1912 reported the purchase of 20,825,209 ties, this number forming 97.7% of the total for all Canada. The relative importance of each kind of wood and the average values in each case were approximately the same as those given in table 1, owing to the large proportion of the total used by these companies. The total is an increase of 7,025,227 ties, or 50.9% over 1911.

Steam railways paid an average price of 44 cents for their ties as compared with 50 cents paid by the electric railways. The steam railways paid less for every kind of wood used by both classes, with the exception of eastern spruce. These companies are usually closer to the source of supply, buy in greater quantities, and have better facilities for transporting their tie material than the electric roads. The steam railways used all the ties purchased in Canada in 1912 of the following kinds of wood:—Western larch, chestnut, beech, maple, birch, red pine and balsam fir.

It is interesting to note the increased use of hardwoods by steam railway companies. In 1911 woods such as oak, chestnut, beech, maple, birch, elm and black ash, together formed only 1.8% of the ties purchased. In 1912 this percentage increased to 6.7%, through increased purchases of 1,148,578 hardwood ties.

Table 3 gives the details of the purchases of tie material by the electric railways of Canada in 1911 and 1912.

Electric railways in Canada reported having purchased 483,362 cross-ties in 1912. This is a decrease of 18% from 1911, and, where the purchases of these railways in 1911 amounted to over 4% of the total, they formed less than 3% in 1912. As stated previously, the value of ties of every kind of wood used by both classes were greater in the case of steam railways, with the single exception of eastern spruce. The greater part of the material used by these companies was of the softer, lighter woods. Coniferous woods formed together 99.4% of the total. The only hardwoods used were oak and elm, and these together formed only 0.6% of the total. Imported hard pine, however, is used to a slight extent, and this material is in reality much harder than many of our native so-called hardwoods. Decreases in the number of ties purchased by electric railways are noticeable in the case of cedar, Douglas fir, oak and white pine, and these woods together form the bulk of the material used. Increases are seen in the use of hemlock, tamarack, jackpine and eastern spruce. Ties of western cedar, western spruce, hard pine and elm were reported for the first time in 1912. The use of red pine and chestnut was not reported by electric roads in 1911. These companies used all the western spruce ties reported in 1912.

TABLE 3.

Kind of Wood	1911 Number	1911 Value	1911 Average Value	1911 Per Cent	1912 Number	1912 Value	1912 Average Value	1912 Per Cent.

(1) Less than one-tenth of one per cent.

Many Canadian railway companies are beginning to realize the value of preserving at least a part of their tie material from decay and insect injury. The practice of chemical treatment of railway ties has been carried on by railways in the United States for some years with apparently satisfactory results. The practice in Canada is just beginning, but it is increasing rapidly, with the increasing cost of tie material and the constantly decreasing supply. In 1910 practically no treated ties were used by Canadian railways. In 1911 some 206,209 ties received chemical treatment before being placed in the roadbed. This number, while forming only 1.4% of the total number of ties used, was, nevertheless, an indication of the increase in this particular form of conservation. In 1912 a total of 1,818,189 ties were chemically treated. This number forms 8.5% of the total number of ties purchased. Steam railways used 1,789,189 of these treated ties, and electric railways used 20,000. The treated ties were mostly hardwoods, as it has been found more economical to treat the heavier, stronger woods than those which are liable to fail from mechanical wear before they have time to decay. The greatest actual saving by preservative treatment is found in the use of the so-called "inferior woods," provided that these are properly protected from mechanical wear. Until the price of the durable woods becomes excessive, the railway companies will not resort to expensive treatment of inferior woods, on account of this cost of protecting them from mechanical wear.

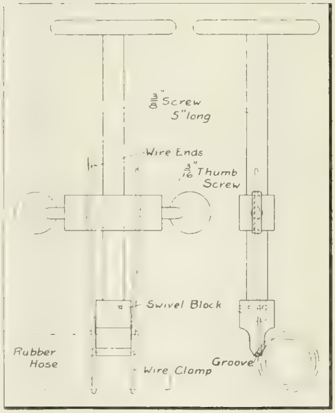
The foregoing bulletin was prepared by the Interior Department's Forestry Branch, R. H. Campbell, Director of Forestry.

A remarkably rapid piece of trestle building was recently completed jointly by the Pennsylvania and Lehigh Valley Railroads, when a double track trestle bridge across Newark Bay, which had been destroyed by fire, was completely rebuilt in 12 days. 2,857,059 ft. of timber were used, and 1,500 men were employed on the work. Rapid work was necessitated, as the trestle formed an important link in the New York freight connections for both roads.

Hose Wire Tightener at Grand Trunk Railway Port Huron Shops.

The workmen in the air brake department of the G.T.R. car shops at Port Huron, Mich., have made up a wire tightener for tightening up the wire on the ends of hose connections where the hose connects to the air coupling or nipple. Somewhat similar wire tighteners are in use in some shops for the same purpose, used particularly by wiremen in the stringing of wire fences in the country. This design differs from such tighteners to a sufficient degree to make a description worth while.

In the majority of shops where hose is attached to its couplings, an air tight joint is made between the hose and coupling by binding the outside of the hose over the coupling with wire closely wound. This arrangement, while quite satisfactory as regards efficiency, is deficient from the standpoint of not being rapidly made up, the numerous windings all requiring time. The coupling which this tightener makes is in more or less common use. It consists of a U bent piece of wire wrapped around the hose with the two loose ends of the U bend passed through the U and drawn up tightly, these loose ends being then turned back and cut off.



Wire Tightener for Small Air Hose.

On the lower end of a ⅜ in. screw, there is a swivel block. The turned down end fits into a corresponding hole in the block, a pin through the latter passing tangent to the screw in an annular groove in the latter. There is a turning handle on the upper end of the screw. The lower face of the swivel block is grooved to fit the size of wire to be used for the hose tightening. Mounted on the screw there is a vise block made from ⅝ in. square rod, with 3|16 in. thumb screws in the ends bearing down on 5|32 in. holes parallel with the central screw opening.

The U bent piece of wire is twisted around the hose end, and the loose ends slipped through the lower end of the U. The grooved swivel block is placed in the U end of the wire, and the loose ends slipped up through the holes in the vise block, and the thumb screws tightened down. Revolving the screw forces down the U and draws up the loose ends, thereby taking up the slack of the wire, finally drawing it up so as to tightly bind the hose end. The whole apparatus is then given a turn of 180 degs., and the loose ends cut off close up to the bend. This gives a splendid joint, and the workmen who have used it but a short time, giving up the old binding method in its stead, are very pronounced in its praise.

Canadian Pacific Railway Shops at McAdam Junction, N.B.

The C.P.R. is building an erecting shop and machine shop at McAdam Jct., N.B. The shops when completed will be 150 by 130 ft., comprising six stalls, one of which will be equipped with an electric locomotive lift. The construction will be entirely of concrete, reinforced where required, and finished with white cement.

The erecting shop will form the high portion of the shops, extending to a height of 40 ft. with a flat roof supported on heavy purlins and steel trusses spanning about 70 ft. Running the whole length of the erecting shop there will be a five ton electric travelling crane equipped with all the necessary motors.

The machine shop will be 80 ft. across, with concrete walls, steel columns and beams, and mill construction roof, and when completed will be equipped with all the necessary tools and mechanical labor saving machines. In connection with the machine shop there will be a lavatory, tool room and foreman's office.

The erecting and machine shops will be heated by hot air, and the car repair shop by steam, and they will be electric lighted throughout. Work on the foundations is well advanced, Henry Post, of Woodstock, N.B., being the contractor.

There will also be a car repair yard and car shop built to facilitate the repairing of cars in the contiguous districts. The total cost of the whole work will be about $100,000.

The use of powdered coal for fuel is receiving attention, and it is stated that one of the locomotive companies is spending $50,000 in an endeavor to adopt it for locomotives. It is claimed for it that there is a saving of about one third through more perfect combustion, a saving by the abolition of ash pits and cleaning gangs, and a direct saving in the ability to cut off fire at will when standing in stations and sidings, as well as other minor savings. The flexibility of fire, with the absolute regulation of coal and air, is also emphasized, and in switchers and small locomotives, the services of a fireman might be dispensed with.

Just 100 years ago last June, the first practical locomotive propelled by steam power was produced by W. Bradley and T. Hackworth. This locomotive, which was for use on a colliery line, was named the "Puffing Billy," and is still to be seen in the South Kensington Museum, London, Eng.

Orders by Board of Railway Commissioners.

[illegible] done this.

[illegible] to them.

[illegible] June [illegible].—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to [illegible]

[illegible] May [illegible].—Authorizing C.P.R. [illegible] main line and sidings of its Island Subdivision, B.C., across Franklyn St., Lubock Square, and Fitzwilliam St., Nanaimo, B.C.

[illegible] June [illegible].—Amending order [illegible], May 27, re road allowance of Alberta Government across C.P.R. between Secs. 7-24-25 and 12-24-26, w. 4 m.

[illegible] June 12.—Extending to [illegible], time within which G.T.R. shall install electric bell at crossing of Clara St., near Glen Robertson Station, Ont.

19563. June 12.—Ordering Canadian Northern Ry. to rebuild shelter at Wroxton, Sask., to afford accommodation equal to standard third class station; to be completed by Sept. 15. and rescinding order [illegible], May [illegible].

[illegible] June [illegible].—Ordering G.T.R. to employ night and day watchmen at crossing of Hurontario St., Port Credit, Ont., maintenance to be paid, [illegible] by G.T.R. and [illegible] by Toronto Tp.

[illegible] June [illegible].—Approving location of C.N. Ontario Ry. station grounds at Galea, mileage 259.30 from Ottawa.

[illegible] June [illegible].—Extending to July 15, time within which Canadian Northern Ry. shall erect gates at crossings of Frederica and Edward Sts., Fort William, Ont.

19567. June 11.—Authorizing C.P.R. to build spur for Massey-Harris Co., Calgary, Alta.

10568. June 12.—Ordering Canadian Northern Ry. to install, within 60 days, an improved type of automatic electric bell at highway crossing [illegible] Lots 2 and 3, Con. 1, Station 2661, Scarboro Tp.

10569. June 11.—Authorizing C.P.R. to build Johnville ballast pit spur across public road at grade between Lot 27, r. 3, and Lot 27-D., r. 2, Eaton Tp., Que.

[illegible] June [illegible].—Re allowance to shippers who furnish slats for floors of refrigerator cars. This order is given in full on another page.

[illegible] June [illegible].—Ordering C.P.R. to build spur to east boundary of Canada Tile and Fireproofing Co.'s property; and ordering Canadian Northern Ry. to build spur to southern boundary [illegible] three months.

[illegible] June [illegible].—Approving plan of proposed location of temporary chain hoist and raised rail, for unloading supplies in connection with St. Clair Ave. civic car lines near G.T.R. Davenport Station, Toronto.

19573. June 16.—Authorizing C.N. Ontario Ry. to build across Kathleen St., Sudbury; and within 60 days to install improved type of automatic electric bell there.

19574. June 16.—Authorizing Algoma Eastern Ry. to build Goat Island coal handling bridge on Goat Island docks, near Little Current, Ont.

19575. June 16.—Authorizing Esquimalt and Nanaimo Ry. to build bridge 27.8 over Coal Creek, on its Comox Extension, Vancouver Island, B.C.

[illegible] June 16.—Approving change in Campbellford, Lake Ontario and Western Ry. (C.P.R.) line in Lots 23, 24 and 25, Con. A, Haldimand Tp., Ont.

19577. June [illegible].—Authorizing C.P.R. to build extension across certain lands, streets and lanes in Edmonton, Alta.

19578. June 16.—Authorizing C.P.R. to build diversion of road allowance in n.e. ¼ of Sec. [illegible] its right of way, mileage 44.47 at Kelloe, Bredenbury Subdivision, Man.

19579. June 16.—Authorizing G.T.R. to rebuild [illegible]

19580 to 19582. June 12.—Authorizing G.T.R. to build siding for A. Davis and Son, Kingston, Ont.; siding and spur for Dominion Tire Co., Berlin, Ont., and 2 sidings for C. A. Scott, Toronto.

[illegible] June [illegible].—Approving [illegible] G.T.R. plan for its new bonded freight house, Wellington St., Montreal.

19584. June 16.—Authorizing Canadian Northern Ry. to build spur across Avenue T, for City of Saskatoon, Sask.

19585. June 17.—Recommending to Governor General in Council for sanction agreement, of June 2, amalgamating Canadian Northern Ry. and C.N. Branch Lines Co.

19586. June 16.—Approving plans of Pennington drain under G.T.R., South Norwich Tp., G.T.R. to have option of doing work on its right [illegible]

[illegible] Pacific Ry. stations, no. 1, mileage 1155.6, and no. 2, mileage 1147.2, west of Winnipeg, Cariboo District, B.C.

[illegible] June [illegible].—Approving location of G.T. Pacific Branch Lines Co.'s station at Fort Saskatchewan.

[illegible] June [illegible].—Authorizing G.T. Pacific Branch Lines Co. to carry traffic on its Biggar-Calgary Branch between Biggar, mileage 0, and Dodsland, mileage 48, Alta.; speed of trains not to exceed 20 miles an hour; and rescinding order [illegible], Oct. [illegible], 1912.

19591. June 16.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build road diversion in Lot 25, Con. 1, Clarke Tp., at mileage 142.05 from Glen Tay.

19592. June 16.—Approving clearances on C.P.R. plan of its coaling plant in North Transcona yards, Man.

19593. June 17.—Authorizing C.P.R. to build bridge 103.7, near Foster Station, Sherbrooke Subdivision, Que.

19594. May 19.—Authorizing C.P.R. to build spur to Hastings Park, Vancouver, B.C.; to be completed within three months from date.

19595. June 16.—Authorizing C.P.R. to build new trackage in its North Transcona Yard, across City of Winnipeg's transmission line in Lot 58, Kildonan, Man.

[illegible] June 17.—Extending to Aug. 15, time within which C.P.R. shall install gates at North Vancouver Ferry, Columbia Ave., and G.T. Pacific Ry. team crossings, Vancouver, B.C.

19597. June 17.—Authorizing C.P.R. to build its ballast pit spur across 2 highways at grade between Lot 8, Con. 1, and Lot 8, Con. 2, and in Lot 9, Con. 2, Hinchinbrooke Tp., Ont.

19598. June 16.—Ordering Canadian Northern Ry. to build a third class station and two-car cattle pen at Decker, Man., to be completed by Sept. 15.

19599. June 16.—Ordering C.P.R. to move station off public road allowance to [illegible] ft. west; build crossing along existing highway at Franklin, Man.; and move grain elevators off highway; work to be completed within 60 days.

19600. June 17.—Authorizing Dominion Atlantic Ry. to build siding for Markland Fruit Co., Kingston, N.S.

[illegible] June [illegible].—Authorizing G.T.R. to build spurs for Pilkington Bros., Thorold Tp., Ont.

[illegible] June [illegible].—Authorizing C.P.R. to build spur for T. R. Johnston, Medicine Hat, Alta., to be completed within 3 months.

[illegible] June [illegible].—Authorizing Canadian Northern Ry. to build spur along lane through Blocks 21 and [illegible], across Isabella St., [illegible] through Block 30, Saskatoon, Sask.

[illegible] June [illegible].—Ordering that all wires on Yonge St. and [illegible] Rd., North Toronto, be placed underground [illegible] cost of moving its wires.

[illegible] June [illegible].—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to operate work train service over C.N. Ontario Ry. crossing for [illegible] months, pending completion of interlocking plant; crossing to be protected by flagman maintained by C.,L.O. & W.R.

[illegible] June [illegible].—Relieving C.P.R. from providing further protection at crossing of [illegible] highway east of Berthier Jct., Que.

19607. June 16.—Ordering C.P.R. forthwith to remove trees south of track and west of crossing at mileage [illegible], about [illegible] miles [illegible] Lac Station, Que.

19608. June 12.—Authorizing C.P.R. to build spur adjoining Neebing Ave., Fort William, Ont., from its main line, at mileage 3.14, and extending to 100 ft. south of Canadian Northern Ry. main line to connection with industrial spur.

19609. June 13.—Approving location of G.T.R. station at Rideau, Ont.

[illegible] June 11.—Authorizing C.N. Ontario Ry. to build across [illegible]

19611. June 18.—Approving location of G.T. Pacific Branch Lines Co. station on its Regina Boundary Branch, at Boundary Line, mileage [illegible], Sask.

[illegible] June [illegible].—Approving location of G.T. Pacific Ry. station grounds through Charles Indian Reserve [illegible]

[illegible] June [illegible].—Approving G.T. Pacific Branch Lines Co. site and station at Totzke, Sask.

19614. June 18.—Authorizing C.P.R. to build bridge 312 near Elmsley Station, Ont.

19615. June 18.—Authorizing C.P.R. to revise grade of crossing on Sims St., Hallam Tp., Ont.

[illegible] June [illegible].—Approving [illegible] ture of bridge 265, at mileage 46.80, District 13, Hamilton Division, G.T.R., Ont.

19617. June 18.—Authorizing Brantford Tp., Ont., to build Humberstone Ave. across Brantford and Hamilton Electric Ry.

[illegible] June [illegible].—Rescinding order [illegible], May 26, re approval of G.T. Pacific Ry. station at Empire Ave., Neebing Tp., Ont.

[illegible] and C.P.R.

19623. June 19.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build [illegible] izes said crossing.

[illegible] trains, operated across Wellington St., just north [illegible] miles on hour, and that all switching movements be flagged.

[illegible] within which G.T.R. install bell at crossing of Main St., Thorndale, Ont., as required by order [illegible]

19626. June 19.—Authorizing G.T.R. to build siding for Galt Stove & Furnace Co., Galt, Ont., within 3 months from date.

19627. June 18.—Approving location of G.T. Pacific Branch Lines Co.'s station at Lett, Sask.

19628. June 18.—Approving revised location of G.T. Pacific Branch Lines Co. Biggar-Calgary Branch and station in w. ½ Sec. 29-33-18, w. 3 m., Saskatoon District, Sask.

19629. June 17.—Authorizing C.N. Quebec Ry. to build across public road in St. Eustache, and reserving question of protection to be provided.

19630. June 17.—Authorizing Canadian Northern Ry. to build spur for Manitoba Gypsum Co., Winnipeg, within 3 months from date.

19631. June 18.—Authorizing Canadian Northern Ry. to divert River Road, near Victoria Bridge, Calgary, Alta., and take necessary land for same; and to maintain diversion for one year.

19632. June 19.—Extending to Sept. 1, time [illegible] at crossing of Bridge St., Yarker, as required by order [illegible]

19633. June 18.—Authorizing G. R. Duncan, Fort William, Ont., to build siding in McIntyre Tp., across Waterloo St., Port Arthur, to C.N.R. right of way, C.N.R. to build remainder.

19634. June 19.—Authorizing New York Central and Hudson River Rd. to build spur for Howard Smith Paper Mills, Beauharnois, Que., within 3 months from date.

19635. June 19.—Authorizing C.P.R. to build road diversion at mileage 36 from Golden, B.C., and close portion of present road allowance within its right of way.

19636. June 20.—Authorizing C.P.R. to build spur for Canadian Lumber Yards, Moose Jaw, Sask.

10637. June 20.—Authorizing C.P.R. to open for traffic portion of its Edmonton Subdivision from Strathcona to Jasper Ave., Edmonton, including high level bridge over North Saskatchewan River, provided speed of trains does not exceed 12 miles an hour across the bridge.

10638. June 20.—Ordering that C.P.R. crossing of Rue Plinguet, St. Boniface, Man., be protected by watchman between 7 a.m. and 7 p.m.

10639. June 19.—Approving location of C.P.R. double track from Islington, mileage 10, to Guelph Jct., mileage 39.1, London Subdivision, Ont.

19640, 19641. June 19.—Authorizing C.P.R. to build road diversion at mileage 33.47 from Golden, B.C., and close portion of road allowance within its right of way; and to build road diversions at mileage 31.2 and 35.6 from Golden, B.C.

19642. June 20.—Authorizing G.T.R. to build siding for S. McCord, Toronto.

19643. June 16.—Approving location 10 G.T. Pacific Branch Lines Co. stations in Cariboo District, B.C.

19644. June 19.—Approving location of Kettle Valley Ry. from mileage 0 to 20, Hydraulic Summit to Penticton, B.C.

19645. June 18.—Authorizing Algoma Eastern Ry. to build dock at Goat Island, near Little Current, Ont.

19646. May 16.—Authorizing C.P.R. to operate interlocking plant at Batiscan River Bridge, Quebec Subdivision, at mileage 102.5, on condition that when a distant semaphore is at "Caution," all trains stop at that semaphore until it is cleared, as well as at the home semaphore.

[illegible] June [illegible].—Extending to [illegible], time within which C.P.R. shall install electric bell at highway crossing at Glen Major flag station, Ont.

19648. June 20.—Amending order 19571, June [illegible] Co.'s spur by C.P.R. and Canadian Northern Ry.

10649. June 18.—Authorizing C.P.R. to build road diversion and to carry its Swift Current Northwesterly Branch across same at grade at mileage 40.84 from Swift Current, Sask.

[illegible] June [illegible].—Ordering C.P.R., within [illegible]

[illegible]

[illegible] C.P.R. to build extension to spur for Dearborn Chemical Co., [illegible]

[illegible]

[illegible] Couchiching Narrows, near Atherley, Ont., with- [illegible]

[illegible] within which C.P.R. shall complete branch line [illegible]

[illegible] engine passing over crossing of Archabail St., [illegible] the [illegible]

[illegible] Manufacturing Co., [illegible]

[illegible]

[illegible] Sask.

[illegible]

19689. June 25.—Authorizing Toronto Suburban Ry. to build across C.P.R. Goderich Branch, and spur into Prison Farm, in Lot 2, Cons. 1 and 2, Guelph Tp.; and rescinding order 19171, May 5 [illegible]

[illegible] location at the Jacques-Cartier River, Lots 79 and 80, Les Ecureuils Parish.

[illegible] Road, Toronto, without first being brought to a [illegible]

19692. June 23.—Authorizing clearances at [illegible]

19693. June 25.—Ordering Brockville, Westport and North Western Ry. to renew ties on bridges just east of Lynn Station, just west of [illegible]

19694. June 26.—Authorizing G.T.R. to build [illegible]

[illegible] work of opening in fill at Cameron Bay, near [illegible]

[illegible] days, to install electric bell at crossing of John St., Port Hope, Ont., and thereafter maintain [illegible]

[illegible] Southern Counties Ry. to run trains with passengers, baggage, express and other traffic over Central Vermont Ry. between east end of its Southwark Yards, St. Lambert, and Richelieu, Que., 12 miles; and to use C.V.R. passenger and freight stations, yards, and other facilities.

19698. June 26.—Amending order 18907, Apr. 8, re C.P.R. spur at mileage 41 from Crowsnest, [illegible]

19699. June 26.—Authorizing C.P.R., pending installation interlocking plant, to operate trains over G.T.R. crossing at Tecumseth St., Toronto, on signals from switchmen; interlocking plant to [illegible]

[illegible] to connect its Ansley spur line with city's spur line, Medicine Hat, Alta.

19701. June 26.—Authorizing C.P.R. to build 2 spurs for Canada Malting Co., Calgary, Alta.

[illegible] shown on page 4 of Montreal and Southern Counties Ry. Local Passenger Tariff, C.R.C. 3, [illegible] real and Richelieu and intermediate stations in Quebec.

19771. July 7.—Approving Canadian Northern Ry. [illegible] class station buildings.

19772. July 8.—Authorizing Vancouver, Victoria and Eastern Ry. and Navigation Co. to build across Phillips Ave., Burnaby Municipality, B.C.

[illegible] July [illegible] [illegible] C.P.R. [illegible]

[illegible] July [illegible] C.P.R. to build extension to spurs for A. Snyder & Co., Portage la Prairie, Man., and for B. S. Spaulding, Medicine Hat, Alta.

19776. July 8.—Relieving C.P.R. of speed limitations on its line between mileage 75.85 and 112.00, Weyburn-Lethbridge Branch.

[illegible] July 8.—Authorizing C.P.R. [illegible] two connections with the Otis Staples Logging Ry., at mileage 15.15, near Kimberly, B.C.

19778. July 10.—Authorizing C.P.R. to build at grade a siding track across roadway between Lots 3 and 4, Con. 1, Saltfleet Tp., Ont.

19779. July 10.—Authorizing C.P.R. to build additional track across 14 highways, mileage 35.8 to 47.9, from Brandon, Man.; after diversion at mileage 46.46 is made and grade crossing built, it may close portion of road allowance diverted within its right of way.

19780. July 10.—Dismissing L. J. Chevrier's application to reopen matter of C.P.R. taking certain lands in Rigaud Village, Que.; and order 18721, Feb. 13.

19781. July 10.—Amending order 19603, June 17, authorizing Canadian Northern Ry. to build spurs in Saskatoon, Sask.

19782. July 8.—Authorizing Canadian Northern Ry. to build additional track across Main St., Humboldt, Sask.

19783. July 5.—Extending, to July 31, time for installing interlocking plant by C.N. Ontario Ry. at crossing of C.P.R. and G.T.R., near Ottawa, as provided by order [illegible], Aug. [illegible].

19784. July 9.—Ordering C.N. Ontario Ry. to build cattle passes, with 5½ ft. clearance, at T. McLaughlin's farm on Lots 24 and 25, Con. B, Westmeath Tp.

19785. July 7.—Authorizing C.N. Ontario Ry. to build bridge across Little Sturgeon River, Beaucage Tp., mileage 243.5 from Ottawa.

19786. July 10.—Approving proposed Supplement 1 to Canadian Classification 16, as finally revised and submitted by Canadian Freight Association, to become effective Aug. 20.

19787. July 10.—Approving Essex Terminal Ry. location from its line on Lot 59, Con. 1, to Turkey Creek, Sandwich West Tp., Ont.

19788. July 10.—Authorizing G.T.R. to build siding for Silicate Brick Co., Ottawa.

19789. July 11.—Authorizing G.T.R. to build siding for Dominion Canners, Ltd., East Sandwich Tp., Ont.

19790, 19791. July 11, 10.—Ordering G.T.R. and C.P.R., respectively, forthwith, to employ watchmen at crossing on road from Beaconsfield to Ste. Genevieve, Que., from 8 a.m. to 7 p.m, until Oct. 15, and thereafter from May 15 to Oct. 15, each and every year until further order; one third of cost to be paid by municipality.

19792. July 11.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build across road allowance at mileage 153.76 from Glen Tay, Ont.

19793. July 12.—Approving revised location of portion of C.P.R. Thompson Subdivision, from mi'eage 6.76, to 7.72; and from mileage 8.46, to 8.67, from Kamloops, B.C.; and to build additional track at grade across Third and Second Aves., Kamloops, and road allowances in Sec. 12-20-18, w. 6 m.; Lot 435, and Lot 346, P.G.S., r. 18.

19794. July 10.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build across 4 highways, at mileage 79, 79.04, 79.19, and 79.61 from Glen Tay, Ont.

19795. July 11.—Authorizing C.P.R. to build bridge across Red River, on its Kildonan cutoff, near Winnipeg, and rescinding order 18618, Feb. 3.

19796. July 16.—Amending order 19644, June 19, re approval of Kettle Valley Ry. location between Hydraulic Summit and Penticton, B.C.

19797. July 15.—Authorizing C.P.R. to divert road and cross same at grade in Sec. 7-12-23, w. 3 m., Sask., and close portion of road allowance within its right of way.

19798. July 16.—Authorizing Saskatchewan Government to carry Third St. East across Canadian Northern Ry., at Service Townsite, Sask.

19799. July 11.—Approving British America Express Co.'s Standard Tariff C.R.C. 12.

19800. July 17.—Amending order 16998, July 13, 1912, re C.P.R. spur near Longue Point, Que.

19801. July 17.—Authorizing C.N. Ontario Ry. to build across public road between Lots 13 and 14, Con. 1, Pembroke Tp., by bridge, provided that proper road be left for J. A. Gourlay, between road at right angles to road to be crossed, and Muskrat River.

19802. July 17.—Approving C.N. Ontario Ry. revised location through unsurveyed territory, Algoma District, mileage 198.26 to 201.66.

19803. July 17.—Authorizing South Hull Tp., Que., to build crossing over C.P.R. at mileage 9.7 from Aylmer.

19804. July 17.—Authorizing C.P.R. to build [illegible] Subdivision, Sask.

19805. July 17.—Approving C.P.R. revised location [illegible] Moosomin [illegible].

19806. July 11.—Authorizing G.T. Pacific Ry. to build spur across Canadian Northern Ry. between [illegible] and C.N. Alberta Ry., in n.e. ¼ Sec. 6-53-19, w. 5 m., North Alberta District, crossing to be protected by a diamond in C.N.R., and by watchmen; and such crossing to be temporary until C.N.R. commence to operate the line, when order shall be rescinded, cost of diamond and watchmen to be paid by G.T.P. Ry.

19807. July 17.—Authorizing G.T. Pacific Ry. to build spur for Edmonton Portland Cement Co., in Sec. 1-53-19, w. 5 m., Alta., to be completed within three months.

19808. July 15.—Approving G.T.R. plan showing proposed automatic block installation on Victoria Jubilee Bridge, Montreal, carrying automatic block district from east end of Point St. Charles across bridge to St. Lambert and connecting it with the interlocking plant at St. Lambert Jct.

19809. July 17.—Authorizing C.P.R. to build spur for Watson & Todd, Ltd., Ottawa.

19810, 19811. July 18.—Extending, to Sept. 15, time within which G.T. Pacific Ry. install interlocking plant at crossing by its stock yard spur, of Canadian Northern Ry., St. Boniface, Man., as required by order 16930, June 29, 1912; and also for installation of interlocking plant at crossing of Port Arthur and Fort William Electric Ry., at Syndicate Ave., Fort William, Ont., as required by order 17657, Sept. 24, 1912.

19812. July 18.—Authorizing C.P.R. to rebuild bridge 18.1, near Inglewood Station, Ont.

19813. July 17.—Authorizing Canadian Northern Ry. to extend spur for Twin City Coal Co., across Sixth St. East, Edmonton, Alta.

19814. July 17.—Approving location of C.P.R. Port Moody and North Shore Branch, from station 182+70, to ferry dock, east side of North Arm; and from Roche Point, where car ferry is shown on plan, to Hendrie Ave.

19815. July 17.—Authorizing City of Regina, Sask., to build its municipal railway at grade across C.P.R. Arcola Branch and spur at Winnipeg St., between Ninth and Tenth Aves.

19816. July 18.—Authorizing Hamilton St. Ry. to build across Oliver Chilled Plow Works of Canada's spur, on Gilkison St., opposite McKinstry St., Hamilton, Ont.

19817. July 17.—Approving location of G.T. Pacific Branch Lines Co.'s stations at Erith, Weald, McLeod River, Embarras, and Minehead, Alta.

19818. July 18.—Approving G.T. Pacific Branch Lines Co.'s station site and station at Charlton, Bear's Head, and The Lean Man Indian Reserves, 110 and 11, Battleford Branch, Sask.

19819. July 18.—Approving location of Algoma Eastern Ry. station at Little Current, Ont.

19820. July 17.—Approving location of G.T. Pacific Ry. stations at Petry, Empire Ave., Kelly, Yonde, and Alcona, Ont.

19821. July 17.—Approving locations of C.P.R. stations at Verwood, Mayronne, Aneroid, Kincaid, Landscape, and Hazenmore, Sask.

19822. July 18.—Ordering G.T.R. to build crossing between Lots 5 and 6, Con. 7, Fitzroy Tp., mileage 160, near Carp, Ont.; easterly line of proposed road to be 60 ft. clear of westerly end of culvert.

19823. July 17.—Authorizing Niagara, St. Catharines and Toronto Ry. to build spur along King and John Sts., Niagara-on-the-Lake, to connect same with Michigan Central Rd. siding, and to cross Regent St., to be completed within three months.

19824. July 11.—Authorizing City of Medicine Hat, Alta., to build subway on Esplanade St., to be completed within six months from date.

19825. July 11.—Approving revised location of portions of C.P.R. as built from mileage 18.27 from Brandon, Man., westerly to mileage 35.69; and from mileage 115 to 124; and authorizing building of additional track across 26 highways and diversion of road, in Sec. 27-9-23, w.p.m., portion of road allowance within its right of way to be closed.

19826. July 18.—Authorizing C.P.R. to use bridge 109.7, over Pitt River, Cascade Subdivision, B.C.; speed of trains over bridge limited to 6 miles an hour.

19827. July 11.—Authorizing C.P.R. to build road diversion at Suffield, Alta., and close portion of present road allowance within its right of way.

19828. July 11.—Authorizing C.P.R. to build branch line for S. E. Stewart, Saskatoon, Sask.

19829. July 18.—Authorizing C.P.R. to build double track of main line across Municipal Roads D.G.S. 66, 67, 86, 87, and 93, Kildonan Parish, Man.

19830. July 14.—Ordering that all switching movements on the two G.T.R. sidings which parallel the main line, be flagged over crossing of Barrett St., Port Hope, Ont.

General Order 107, July 4.—Rules and regulations governing fire guarding by railways under the Board's jurisdiction; and rescinding order 16570, May 22, 1912.

Railway Development

Projected Lines, Surveys, Construction, Betterments, Etc.

The Algoma Eastern Ry. Co. has been authorized by the Board of Railway Commissioners to build a dock at Goat Island, near Little Current, Ont., with a coal handling bridge thereon. (July, pg. 331.)

The Athabasca and Grande Prairie Ry. which it is proposed to build, would open up what are known as the Hoppe coal fields in the Smoky River Valley of Alberta. They are said to contain anthracite of good quality. Preliminary surveys have been made, and press reports state that application is about to be made for approval of the plans, with a view of asking the Dominion Government to aid in the construction of the line by a cash subsidy and a guarantee of bonds. (July, pg. 331.)

Brockville, Westport and Northwestern Ry.—The Board of Railway Commissioners has ordered the company to renew ties on several bridges, to place new stringers under rails, to renew at least 30,000 ties on the whole line, to ballast the whole line, and to make the highway crossings conform to the Board's standard regulations, the work to be completed by Nov. 1.

Buctouche Ry. and Transportation Co.—The Minister of Railways has approved location plan for the projected extension from Richibucto to Loggieville, N.B., 47 miles; but he has refused to approve of plans for a line from Painsee Jct. to Cape Tormentine, N.B., 42 miles. (July, pg. 331.)

Central Ry. of Canada.—An injunction has been granted by a Quebec court, preventing the company from going on with the construction of the line, either on its own account or through contractors other than C. J. Wills and Sons. This firm has a general contract for building the line from Montreal to Midland, Ont., and has done considerable work. There have been some differences between the contracting firm and the company as to financing, which have been made the subject of action. The company claimed that the contractors were not proceeding with the work at a fast enough rate and proposed to put an end to the contract, and to let the work to another firm. The court held that the contractors were doing all they had agreed to do; that they were entitled to payment for the work already done, and that the company was not justified in attempting to get other contractors. (July, pg. 331.)

Edmonton, Dunvegan and British Columbia Ry.—J. D. McArthur, President, is reported to have recently stated at Edmonton, Alta., that the first section of this line from Edmonton to Mirror Landing on the Athabasca River will be opened for traffic in the fall. (May, pg. 219.)

Essex Terminal Ry.—The Board of Railway Commissioners has approved location plans for an extension of the line from lot 59, con. 1, to Turkey Creek, both in the Sandwich West township, Ont. Press reports state that surveys are being made for an extension of the line to Amherstburg, but the company's officials state that there is no present intention of extending the line there. (April, pg. 168.)

Esquimalt and Nanaimo Ry.—We are officially advised that the expenditures authorized on this line for this year amount to $1,461,630, distributed as follows:—Main line bridges, $164,000; track, $77,000; buildings, $26,000; transfer slip, etc., $44,630; terminals at Victoria, $250,000; construction of new branches, $900,000. Most of this work is in progress.

The 10 stall locomotive house under construction on the new terminals being laid out on the Songhees Reserve, Victoria, B.C., was expected to be completed July 30. A permit has been granted for the erection of a one story brick car repair shop, 52 by 152 ft., to cost $15,000, for which E. R. Dee is the contractor.

Plans for the building of a new passenger station, freight shed and yards, at Nanaimo, are being prepared, and local reports state that work on the new buildings will be started immediately.

A passenger train service was put in operation over the Cowichan Branch, June 18. This branch leaves the main line between Duncan and Somenos, and passes two stations—Tansor and Sahtlam—before reaching Cowichan Lake. It has been operated for freight purposes for a year.

H. E. Beasley, General Superintendent, completed an inspection of the lines in operation and under construction, July 7. He reports that track laying and ballasting on the extension from McBride Jct. to French Creek have been completed. The bridge over French Creek is practically completed, and it was expected to resume track laying on the extension towards the Qualicum River a few days after his visit.

An engineering party in charge of H. Schupp, is reported to have started out from Victoria, July 1, to make surveys for a line from Campbell River, towards the northeast end of Vancouver Island, about 150 miles. (July, pg. 331.)

Hartland and Miramichi Ry.—The New Brunswick Legislature has granted an extension of time for the building of the line from Hartland, Carleton County, to a point on the G.T. Pacific Ry., authorized to be built in 1910. E. A. Britton, D. H. Lamont, S. S. Miller, M. L. Hayward, H. A. Smith, are provisional directors. (July, 1912, pg. 547.)

Kettle Valley Lines.—The Board of Railway Commissioners has approved of location plans for this line from Hydraulic Summit, to Penticton, B.C., 20 miles.

A. McCullough, Chief Engineer, is reported to have stated, July 3, that over 3,000 men are employed on the sections of this line under construction, together with two steam shovels. Sixty miles of track have been laid south of Merritt, and 30 miles of track north from Midway. More than half the grading on the 180 miles intervening between the end of track on the two sections is done. It is expected to let contracts for the 54 miles between Otter Summit and Hope, which is to be built by the K. V. L. and used jointly with the Vancouver, Victoria and Eastern Ry. (July, pg. 331.)

Lake Erie and Northern Ry.—Grading is reported to have been completed between Waterford and Bloomsburg, Ont., and the construction of the bridge at Waterford, which is estimated to cost $65,000, has been started. Considerable work is also reported to have been done in the vicinity of Galt, on the section of the line north of Brantford. A map showing the route of the line through Brantford was filed with the city authorities July 5. It shows a route from Lorne bridge to the city limits at Eagle Place.

W. P. Kellett, General Manager, is reported to have stated, July 4, that it is expected to have the line opened from Brantford to Galt, by Oct. 1, and the section from Brantford to Port Dover, by June 1914. The line is being built to steam railway standards, but the story that it is to be exclusively a steam railway has no foundation in fact, as electricity will be the motive power used ultimately, though it may be operated by steam for a time at first. (July, pg. 331.)

Medicine Hat, Alta.—R. O. Sweezy, General Manager, Montreal Engineering Works, stated in Medicine Hat, Alta., that the coal carrying spur line, known as the Ansley spur line, will probably be electrified in the near future and operated in connection with the electric railway which his company is arranging to build in that city. (Jan., pg. 19.)

Minneapolis, St. Paul and Sault Ste. Marie Ry.—U.S. press reports state that the company has engineering parties west of Conrad, Mont., finishing up the uncompleted portion of Plaza extension survey. It is not expected, however, that any construction will be done this year. The reports further state that grading is being done in Sheridan County, in the northeastern part of Montana, and that tenders have been invited for the grading of a stretch of line south of the International Boundary to Barre, Valley County. It is said that this line is to be extended to a junction with the Alberta Ry. and Irrigation Co.'s line, terminating at Sweet Grass, which is now owned by the C.P.R. (April, pg. 169.)

New Brunswick Coal, Iron and Clay Co.—The New Brunswick Legislature has incorporated a company with this title, having power, among other things, to build railways or tramways to connect its properties with the C.P.R., and with shipping points on the St. John River, "but shall not be bound to operate such railways or tramways as a common carrier." The provisional directors are:—T. Bell, S. A. Payne, St. John, N. B.; H. W. Binning, Fredericton, N.B.; J. D. Mitchell, Lincoln, N.B.; J. W. Wilson, Welsford, N.B.

Northern New Brunswick and Seaboard Ry.—A contract under the act granting aid to certain railways, has been entered into by the Dominion Government with the company for the building of a line from the Drummond Mines at Austin Brook to the Intercolonial Ry. where it intersects the branch line from Bathurst station to Bathurst Harbor, N.S., 16.9 miles. This line has been operated for a couple of years, but the subsidy was only made available last session. (July, pg. 332.)

Pacific Great Eastern Ry.—A start was made with the construction of the 14 miles of line to connect North Vancouver with Howe Sound, B.C., July 1. It is expected that this will be completed and the line opened by July 1, 1914. At Howe Sound connection will be made with the Howe Sound and Northern Ry., which has been acquired by the P.G.E. Ry. From the terminus of that line construction is being pushed as far as Lillooet, and work is also in progress thence to the Fraser River. A subcontract on this latter section has been let to Rankin & Co. Orders have been placed in the U.S. for 20,000 tons of steel rails for the line, and the first shipment will be made from New York early in August. (July, pg. 332.)

Quebec Oriental Ry.—The Board of Railway Commissioners has ordered that this line be ballasted from Matapedia to New Carlisle, Que., with a complete lift of 6 ins. of ballast, and that fencing, gates, wooden culverts and all decayed portions of trestles be renewed, the whole work of be completed by Dec. 31.

Salisbury and Albert Ry.—An order has been issued by the Board of Railway Commissioners directing the company to put guard rails on all its bridges, 50 ft. long or over, by Aug. 20. (Jan., 1912, pg. 23.)

Timiskaming and Northern Ontario Ry.—Although no definite announcement has been made either by the Ontario Government or the T. and N.O.R. Commission, it is stated that the amount of the subsidy voted by the Dominion Parliament will be utilized for the reduction of gradients and the improvement of the line from North Bay to Liskeard, Ont., 113 miles. This was the line laid out by the late Ontario Government as a pioneer railway, consequently the gradients are high and the line winds about considerably. The extension northerly to Cochrane, the junction with the National Transcontinental Ry., was built to a higher standard, and, with the traffic now passing over the line an improvement on the original section, with a view of reducing operating expenses, is deemed advisable. The surveys for this have been completed, and the right of way for the necessary diversions is said to have been secured. Some details of the revision work to be undertaken were given on pg. 595 of our issue of Dec., 1912.

The grading of the branch from Iroquois Jct. to Iroquois Falls is reported to have been completed, and tracklaying is in progress. (July, pg. 332.)

Toronto, Hamilton and Buffalo Ry.—The Hamilton, Ont., City Council was notified July 8, that the company declined to join with the G.T.R. and the Canadian Northern Ry. in the suggested plans for a joint route and a union station, and that no inducement could be held out to get it to agree. The company desires to elevate its tracks along Hunter St., while the city authorities are in favor of depressing them. The proposals for a joint line were made in the hope that a compromise might be arranged. The Mayor advocates that application be made to the Board of Railway Commissioners for an order to compel the removal of the tracks from Hunter St., and to join with the G.T.R. and the C.N.R. in a common entrance along the G.T.R. cut for all railways.

The City Engineer, in a report to the Mayor, July 11, pointed out the advantages of the proposed joint route. So far as it affects the T.H. and B.R. its adoption would mean the building of about two miles of line on a 0.64 gradient. The City Engineer was instructed to prepare complete plans, and the City Solicitor is preparing the city's case for presentation to the Board of Railway Commissioners. (July, pg. 333.)

Association of Transportation and Car Accounting Officers.—At the recent summer meeting at Charlevoix, Mich., the following officers were elected for the current year:—President, F. Price, Superintendent of Passenger Service, G.T.R., Montreal; First Vice President, J. M. O'Day; Second Vice President, J. T. King; Secretary, G. P. Conard, New York; Treasurer, F. M. Luce. It was decided to hold the winter meeting at Galveston, Tex., Dec. 9 and 10.

Canadian Railways and Forestry Work.

Among those who took part in the Canadian Forestry Association's meeting at Winnipeg recently were George Bury, Vice President, C.P.R., Winnipeg, and J. S. Dennis, Assistant to the President, C.P.R., and head of the company's department of Natural Resources, Calgary, Alta.

Mr. Bury, in a paper which, owing to his unavoidable absence, was read by a delegate, dealt with the subject of "The Railways and Forest Protection." In this paper he pointed out that outside the Government, the C.P.R. had probably made the most elaborate study of the preservation of forests of any organization in the world. The company was carrying out on the forest tracts it owned, the system of caring, guarding and patrolling followed in the privately owned forests of Germany. This study and care of forests by the company was being made with a twofold purpose: to estimate the amount of traffic that may be derived from year to year in the territory adjacent to the line, and what production can be made from the timber and still preserve it to such an extent that in a hundred years the production will be so advanced that the revenue from the territory will be as great or greater than it is at present. The paper then went on to point out all that had been done by the railways to minimize the danger of fire from their locomotives, but there was still much to be done before all the dangers were eliminated. Sawmills, logging railways, camps, and other possible sources of danger must be regulated, and this could only be done by the adoption of a better system of patrolling. It had been estimated that the revenue derived by a railway from the production of one acre of heavily timbered land is equal to the accumulated traffic of an acre of agricultural land for 80 years.

Mr. Dennis addressed the convention on "Why the Railways Are Interested in Forestry." There were, he said, three reasons: (1) Because they were interested in all the great national questions which stand for the development of the country in which they had so much at stake; (2) because the railways were practically the greatest consumers of forest products in the Dominion; and (3) because lumber products formed a very large portion of their traffic. The railways used about five billion feet of lumber in the shape of wood for ties, bridges, fences, etc. There were in place on the C.P.R. western lines about 30,000,000 ties, the no. 1 ties consisting of 42 ft. each board measure. Then the railways required about 10% of the total of five billion feet to maintain what they had. Then there was the timber required for the extensions being made. The railways were therefore very practically interested in forestry. Were it not for the lumber traffic there would not be railways in certain districts. The original line had been built for the lumber traffic, and in certain districts it was to the continuance of this traffic by forest protection and reproduction that the company would have to look for a continuance of traffic. The railways were also interested in forestry from the standpoint of protection of the water supply. The C.P.R. was specially interested in forest protection on the eastern slope of the Rocky Mountains, because it was from thence that the supply of water would be drawn for the irrigation projects in Alberta, upon which the company was expending $20,000,000. In conclusion, Mr. Dennis said there was no question that was more readily listened to than the question of forestry expenditure for protection from fire along the line; for examination of the timber areas adjacent to the line, and for the purpose of getting timber requirements according to the intelligent forestry methods. He had no doubt that the other railway companies were doing their share of the work also, though perhaps the C.P.R. had the advantage of being a little farther on in the game. The railways felt that the work being done by the association was important, and would be pleased at all times to do their share in attaining the objects which the association had in view.

The Transportation Interests of Anticosti Island.

A short time ago the Montreal and Quebec Boards of Trade paid a visit to Anticosti Island, in the Gulf of St. Lawrence, which is owned by H. Menier, of Paris, France, making the trip on the R. and O. N. Co.'s steamboat Saguenay. The Quebec Chronicle, in an article on the trip, made the following references to the transportation interests:—

"The double deck pier, stretching 4,000 feet into the deep water of Ellis Bay, was first examined. This magnificent dock, constructed in the most solid manner, can be classed with any Government work of its kind in Canada and must have cost a vast sum, and yet it was built without Government aid and entirely of timber and materials found on the spot. The railway runs the entire length of the dock, and about midway runs up an incline to an upper level, where the pulpwood and other goods intended for shipment are automatically discharged into iron pockets and thence directly into the hatches of the steamers awaiting cargo, thus entirely saving all manual labor and ensuring rapid dispatch.

"On the arrival of the party, an ocean steamer, the Thyra Menier, was taking a cargo of rossed pulp wood in this manner, trains of cars running from the mill to the dock to keep the vessel supplied. All the Menier steamers are of British register and consequently fly the British flag.

"A train then carried the visitors to the end of the Anticosti Ry., which has 18 miles of main line and 9 miles of branch—27 miles in all. The railway is most substantially built, with substantial roadbed, steel rails of 55 and 70 lbs. to the yard, and well ballasted with the best of ballast, taken from gravel pits, where steam shovels were excavating ballast of a quality to make any railroad man happy. M. Menier has wisely made the railway of standard gauge, foreseeing the possibility of connecting it with the railway systems of the continent by means of a car ferry to Gaspe, only 50 miles distant. All along the railway are vast quantities of pulp wood awaiting shipment to the mill, where it is cut into short lengths and rossed or barked. About 35,000 cords of wood were made during the past winter, and a fleet of steamers is now busy carrying this wood, as fast as it passes through the barking mill, to the United States."

The Quebec Central Ry. has received two ten wheel locomotives from Canadian Locomotive Co.

Canadian Pacific Railway Construction, Betterments, Etc.

Atlantic Division.—The new locomotive house and machine shops under construction at McAdam Jct. are fully described on another page of this issue. H. Post, the general contractor, is reported to have sublet portions of the work as follows:—Masonry, Wm. Stevens, Woodstock, N.B.; roofing, J. E. Wilson, St. John, N.B.; lumber, Murray and Gregory, St. John.

Eastern Division.—Local press reports state that plans are being prepared by the C.P.R. for an electric railway between Lennoxville and Coaticook, Que., at an estimated cost of $500,000.

The Board of Railway Commissioners has refused the company permission to close Charlemagne St., Maisonneuve, as a part of some improvements which it is proposed to effect there, and it is said that a bridge will be built to carry the line across the street.

Campbellford, Lake Ontario and Western Ry.—The Board of Railway Commissioners has recommended the sanctioning by the Governor-in-Council of a lease of this line, now under construction from Glen Tay to near Agincourt, Ont., to the C.P.R.

Track has been laid on the Agincourt-Whitby section of the line, and a train was run over it July 4. Construction between Whitby and Oshawa is being pushed forward, and it is expected to have it completed at an early date. The remainder of the line to Glen Tay is almost finished, and it is expected to have the entire 183 miles in operation in the fall.

Ontario Division.—Press reports state that plans are being made for the building of a second track from near Lindsay station to the junction at the eastern end of the town, and the building of a cement wall along the Scugog River, beside the line.

Tenders are under consideration for the substructure of a subway at Yonge St., Toronto, in connection with the North Toronto grade separation work. B. Ripley is engineer in charge.

The Board of Railway Commissioners has approved of location of second track from near Islington to Guelph Jct., 29.1 miles. The contract for this work is being carried out by Johnson and Girouard, Ottawa, who have sublet portions of the grading to local men. The bridge work is nearly completed between the starting point west of Islington to Cooksville, and preparations for tracklaying between these points are being made. The work between Cooksville and Streetsville is rather heavier, but is well forward, as is also the grading from Streetsville to Guelph Jct.

Manitoba Division.—We are officially advised that the C.P.R. has let a contract to the John S. Metcalf Co., Ltd., Montreal, for extensive alterations at the Steel River house at Elevator D, Fort William, Ont., at an estimated cost of $45,000.

The construction of the double track bridge across the Red River in Kildonan, on the Bergen cutoff, is being rapidly pushed forward. The substructure, which consists of seven piers and two abutments, is being put in by the Foundation Co. These rest either on hardpan, or solid rock, in some cases the concrete rests on the arch, and in others on the piles, the concrete in all cases being carried 15 ft. below the bed of the river. The superstructure will be erected by the Dominion Bridge Co.

Saskatchewan Division.—J. G. Taylor, General Superintendent, is reported to have stated, July 4, that steel has been laid on the second track work to mileage 97 west of Regina; ties are in position on the 12 miles west of Chaplin, and grading is completed westerly to seven miles east of Swift Current. It is expected to have the second track completed into Swift Current by Sept. 30.

Tenders are under consideration for trenching, pipelaying and backfilling 3.3 miles of a 10 in. wooden pipe line at Weyburn, Sask. T. Martin is Division Engineer, Moose Jaw, Sask.

Alberta Division.—The C.P.R.'s new land maps show a line from Saskatoon, Sask., crossing the Moose Jaw-Macklin line at Milden, practically paralleling the Canadian Northern Ry. Goose Lake line, and connecting with the C.P.R. Swift Current-Bassano line at Empress, Alta.

Press reports state that plans are being prepared with a view to carrying out further improvements at Calgary station in the near future.

Press reports state that it is intended to carry the line from Weyburn, Sask., which is to connect with the Alberta Ry. and Irrigation Co.'s line at Stirling, westerly from the latter point, to a junction with the Crowsnest branch at Pincher.

The Board of Railway Commissioners has approved of location plans of the Suffield-Blackie branch from mileage 58.29 to 149.9.

In granting an order for the operation of traffic on the newly completed line from Strathcona to Jasper Ave., Edmonton, Alta., the Board of Railway Commissioners has limited the speed of the trains to 12 miles an hour when crossing the high level bridge over the North Saskatchewan River.

Calgary-Vancouver Second Track Work.—We are officially advised that a contract has been let to Foley Bros., Welch and Stewart for the construction of a tunnel five miles long under the Selkirk Mountains, B.C. George Bury, Vice President, is reported to have said in a recent interview: "The tunnel will be on a tangent and 1% grade, and when completed will be electrified so that trains will move through it by electricity instead of steam. The tunnel will come out of the Selkirk mountains on the west end about where the loop now is. The building of this tunnel will do away with 4.5 miles of snow sheds, will reduce the distance 4.5 miles, and will make the grade over the Selkirks 514 ft. less than it is at present. That is, the difference in the elevation of the tracks at Rogers Pass and of the tunnel will be 514 ft. To build the tunnel it is necessary to construct a new track on each side of it. The total length of the new track which will have to be constructed is 14½ miles, which, adding the tunnel, five miles, will make the distance of the tunnel and the new grade revision 19½ miles as against 24 miles by the present line. With the construction of this tunnel there will not be more than six miles of 2% gradient through the mountains."

The contractors have got a large quantity of their plant on the site, and expected to start work on the new tracks and approach cuts by July 30. A. C. Dennis, who is in charge, is reported to have stated that the first work would be the building of five miles of track, leading to the approaches. The tunnel will be driven from both sides by shifts working continuously night and day. It is expected to complete the boring in three years, and to have it in operation six months afterwards. A good deal, however, will depend upon the character of the rock and the quantity of water encountered.

The contractors for the three sections of second track work between Revelstoke and Taft, 24 miles; Westmore to Kamloops, 25 miles, and Kamloops westerly for nine miles, are, we are officially advised, Grant Smith & Co. and McDonnell, Ltd., Pacific Buildings, Vancouver, B.C.

Kootenay Central Ry.—The Board of Railway Commissioners has authorized the C.P.R. to open for traffic the section of the K.C.R. from Golden to Spillimacheen, B.C., 41 miles. A section from Colvalli, the junction point with C.P.R. Crowsnest branch, has been in operation for 23 miles for some time. The gap of about 100 miles between the terminal points of the two sections is under construction.

Pacific Division.—The Winch dock, having a frontage of 200 ft. on Burrard Inlet, was taken over by the C.P.R. July 1. It is proposed to build shed on it at once. (July, pg. 334.)

Dominion Government Railway to Hudson Bay

The line from the junction with the Canadian Northern Ry. at Pas, Man., over the bridge across the Saskatchewan River, has been laid with 80 lb. steel, and several side tracks have been laid on both sides of the bridge to facilitate construction work. The filling in of the trestle approaches to the bridge is being proceeded with. Track has been laid for some 15 miles beyond the bridge, but no ballasting has been done. This work is being pushed forward and it is expected that track will be laid to Thicket Portage, 185 miles, this year.

The locomotive house to be erected at Pas will at first consist of one unit of 12 stalls, but plans have been prepared for its ultimate enlargement to 44 stalls. Boiler shops, machine shops and other buildings will be located adjoining the locomotive house.

The resignation of H. T. Hazen, M. Can. Soc. C.E., from the position of engineer in charge of the terminal on Hudson Bay, will go into effect about the middle of August, when he expects to return from Port Nelson, for which place he sailed from Halifax, N.S., on the s.s. Bonaventure on July 2. The s.s. Bellaventure also sailed from Halifax, June 30, both vessels carrying men, plant and supplies to Fort Nelson. (July, pg. 337.)

Trunks as Freight.—The Board of Railway Commissioners has ordered that trunks be accepted by railway companies as freight, when securely corded. The Canadian Freight Association opposed the order on the ground that it would lead to objectionable traffic, that trunks were not accepted in any freight classification, and that they should not be accepted by Canadian railways unless they were boxed, had steel bands, or were wired to prevent possible pilfering, for which railway companies would be responsible.

Railway Finance, Meetings, Etc.

Canadian Pacific Ry. As some misconception may have arisen as to an issue of stock by the company, it has been officially announced that application was made to the Government last August, for permission to issue $75,000,000 stock, but consent has not yet been given, and that application is still before the Government. When consent is obtained, the directors may, or may not, issue that amount. Regarding the $60,000,000 of stock, now being taken up in lieu of the consolidated debenture stock, which was issued by the shareholders' authority, it is stated that three fifths is already paid up. The Government's consent to this issue was not necessary.

A London, Eng., cable, July 18, states that $20,000,000 of the $35,000,000 of C.P.R. mortgage bonds had been presented for redemption at that date.

Canadian Pacific Ry.—The company paid off in London, Eng., July 1, $35,000,000 of outstanding 5% mortgage bonds, two years ahead of the time they were due for redemption. There are now no mortgage bonds outstanding on the C.P.R. lines, but there are some small amounts outstanding on lines acquired by the company and amalgamated with it. Sir Thomas Shaughnessy, President, is quoted as stating that the company's indebtedness, consists of about $165,000,000 of debentures, and the common stock.

In connection with press reports that the C.P.R. contemplated the issuing of a further $60,000,000 of common stock early in 1914, Sir Thomas Shaughnessy stated July 9:—"No new issue of common stock is contemplated, because the proceeds of any such issue could not be utilized to advantage, ample provision having already been made for the company's money requirements for a long time to come."

Grand Trunk Pacific Ry.—At a special meeting of shareholders at Montreal, July 16, a bylaw was passed authorizing the issue of $15,000,000 debentures under the provisions of the Grand Trunk Pacific Act passed at the last session of the Dominion Parliament.

Grand Trunk Ry.—A cablegram to the Montreal Star, July 14, stated that the latest effort to secure control of the G. T. R. and have the headquarters in Canada had failed, a speculative group which had been working for that end for some time having got out of its depth, and that many options would not be exercised.

International Ry. of New Brunswick.—Press reports state that negotiations are in progress on the part of the Dominion Government and the C.P.R., for acquiring this line. The I.R. of N.B., which is practically owned by Thomas Malcolm, extends from Campbellton to St. Leonards, N.B., 104 miles. It has a charter to build a bridge across the Restigouche River and connect with the Intercolonial Ry. and the Quebec Oriental Ry. at Matapedia, Que.; and also the building of a bridge across the St. John River to give connection between the terminus at St. Leonards, and the U.S. lines at Van Buren, Me.

Montreal and Vermont Jct. Ry.—Following are the directors for the current year,—President, E. J. Chamberlin; Vice President, G. C. Jones; Auditor, W. G. Crabbe; Secretary and Treasurer, A. H. Gilmour; Assistant Secretary and Treasurer, W. H. Chaffee; other directors, E. C. Smith and C. W. Wilkes. The Managing Directors are, E. J. Chamberlin, W. Wainwright and G. C. Jones.

Napierville Jct. Ry.—Following are the directors for the current year,—President, L. F. Loree; Vice Presidents, C. S. Sims and W. H. Williams; Secretary, L. J. Beique; other directors, G. T. Hartt, F. L. Beique, F. A. Beique, and R. Adair.

Quebec Oriental Ry.—Meetings of the holders of 5% first mortgage gold bonds and of 5% second mortgage bonds of the Matapedia section of the company's line will be held in London, Eng., Aug. 13, to increase the amount of the issue of 5% prior lien mortgage gold bonds on the section from £50,000 to £100,000.

Temiscouata Ry.—Net earnings, for April, $9,710; for May, $4,969; aggregate for 11 months ended May 31, $61,889.

White Pass and Yukon Route.—Earnings from Jan. 1 to June 14, $272,751, against $223,074 for the same period 1912.

Great Northern Railway Lines in Canada.

Vancouver, Victoria and Eastern Ry. and Navigation Co.—J. H. Kennedy, Chief Engineer, is reported to have stated, June 30, that satisfactory progress was being made with construction on the section of the line between Coalmount and Otter Summit. Four steam shovels and a large force of men were at work. This section will connect with the joint section to Hope, which is to be built by the Kettle Valley Lines.

Victoria and Sidney Ry.—F. Van Sant, Superintendent, is reported to have stated recently that the work of improving the roadbed will be put in hand at an early date. The line will be regraded in part, and rails will be laid, and additional ballast added at an a cost of $100,000. New turntables are being built at Victoria and Sidney, to handle a gasoline electric car which will shortly be added to the rolling stock. (May, pg. 224.)

Enlargement of Angus Shops, Canadian Pacific Railway

The following extensive additions are being made to the Angus Shops, Montreal, the percentages given in connection with some of the works showing the amount of work completed to July 16 as advised us officially:—

Steel passenger and freight car shops, comprising material shops, 182 by 100 ft., and 209 by 100 ft.; passenger car shop 202½ by 110 ft.; freight car shop 405 by 72 ft.; transfer table 80 by 75 ft. 80% done; bolt and nut shop. 420 by 60 ft. 25% done; new shipping platform for wheel foundry 100 by 72 ft.; extension to scrap platform and shed 60 by 50 ft.; extension to pattern storage, 60 by 50 ft.; addition to car ovens, 3 new ovens; extension to locomotive shops, 594 by 80 ft.; 20% done; addition to tube rack; extension to office building, 80 by 75 ft.; extension of power house, 20 by 62 ft. 11 ins.; 30% done; extension of upholstering shop, 80 by 75 ft., 30% done; extension to frog shop, finished.

Canadian Northern Ry. Elevators.—We are officially advised that there is nothing in the press report that the Canadian Northern Ry. is to erect a series of grain elevators between Port Arthur and Winnipeg, and that beyond the recent addition of 2,500,000 bush. to its elevator capacity at Port Arthur, nothing is at present being done in the matter of grain storage.

Grand Trunk Railway Betterments, Construction, Etc.

Southern New England Ry.—An application was made to a [illegible] Mass., recently, for the [illegible] a receiver for the company. The applicant, J. Marsch, of Chicago, Ill., stated that he had expended $1,500,000 on carrying out his construction contract, on account of which he had received $500,000. A considerable portion of the balance had accumulated through the stoppage of the work. The question of the court's jurisdiction was raised, among other points, and the hearing of the application was adjourned.

Central Vermont Ry.—A contract is reported to have been let to J. E. Cashman, Burlington, Vt., for the construction of a concrete arch and viaduct over the C.V.R. tracks and the river at Winooski. The structure will have a total length of 278 ft. 8 ins., including a 93 ft. arch over the river.

Montreal Track Elevation Plans.—The Montreal City Council decided, July 14, to consult with the Board of Railway Commissioners with a view of seeing what steps could be taken to compel the company to proceed with the work of elevating the tracks from Bonaventure station. The work is estimated to cost $10,000,000, towards which the city is authorized by the Quebec Legislature to contribute $2,000,000.

Proposed New Line to Ottawa.—Press reports state that negotiations are in progress for obtaining running rights over the Ottawa and New York Ry., from Cornwall to Ottawa, Ont. The object aimed at is to secure a shorter route than is at present available between Toronto and Ottawa. (July, pg. 337.)

Station and Yard Improvements at Stratford.—G. A. Mitchell, Superintendent of Bridges and Buildings, was in Stratford, Ont., July 16, completing arrangements for the erection of a new station. Foundation work was started at the Shakespeare St. site two years ago, but was stopped pending the settlement of some difficulties. Since then the plans have been somewhat altered, and the new building will be a larger structure than was previously intended. The yard accommodation is to be rearranged, to meet the altered conditions at the station.

Tests on Locomotive Fireboxes.—As the result of a series of tests, it has been shown that, 1, the outwardly inclined water leg is the most desirable as far as the water circulation is concerned; 2, the direction of rolling of the sheet affects its ability to withstand the strains imposed in service, and that the direction of rolling should be specified; 3, the relative values of the different steels to withstand these strains are in the order of nickel, acid and basic; 4, the lowest specification carbon content and tensile strength requirement should be asked for and accepted; and, 5, the single piece firebox as now applied is a mistake.

Reports indicate that the use of lignite as a locomotive fuel is increasing in the northwestern portion of the United States. This is due to the high cost of good coal, and the proximity to large areas of lignite. The latter gives very good results when briquetted, as the heating value is increased, and the rapid deterioration incidental to raw lignite when stored, is largely decreased. The heat value of briquetted lignite is about 9,000 b.t.u.

Mainly About Transportation People.

W. H. DARCY, General Claims Agent, Western Lines, C.P.R., Winnipeg, is spending a vacation in Europe.

SIR WILLIAM MACKENZIE left Toronto, July 15, for England, sailing from Quebec by the s.s. Royal Edward, July 16.

SIR THOS. G. SHAUGHNESSY returned to Montreal, July 17, after spending a short holiday at his summer home at St. Andrews, N.B.

GRANT HALL, General Manager, Western Lines, C.P.R., Winnipeg, whose illness was reported in our last issue, has recovered and returned to his office.

J. H. PANNEN, formerly agent and operator, Don Station, C.P.R., Toronto, has entered the hotel business, having recently purchased the Lambton House, Lambton, Ont.

GEORGE BURY, Vice President, C.P.R., addressed the Canadian Forestry Association Convention, at Winnipeg, July 9, on the railways and forest protection.

D. N. MILLER, Superintendent, Hamilton St. Ry., Hamilton, Ont., was instantly killed on July 23, when his automobile went over a steep bank in the dark.

M. McDONALD, heretofore Vice President and General Manager, Maine Central Rd., has been appointed President, Boston and Maine Rd. and Maine Central Rd., vice C. S. Mellen, resigned.

F. PRICE, Superintendent of Passenger Service, G.T.R., Montreal, has been elected President of the Association of Transportation and Car Accounting Officers for the current year.

SCOTT GRIFFIN, European Manager, Canadian Northern Ry., and Canadian Northern Steamships Ltd., London, Eng., and Mrs. Griffin, arrived in Canada, July 9, for the remainder of the summer.

Count Jacques de Lesseps, and the Countess, a daughter of SIR WILLIAM MACKENZIE, with their two sons, arrived in Canada for the summer, July 9. It is said that they will make their home in Canada.

SIR THOMAS TAIT, President, Fredericton and Grand Lake Coal and Ry. Co., was in Toronto, July 19, to attend the funeral of his brother-in-law, Major Cockburn, V.C., who was killed by a kick from a horse, on his ranch near Maple Creek, Sask.

W. M. FLYNN, station agent, Prince Edward Island Ry., Cardigan, was presented with a gold headed cane and a pipe and case, by a number of local residents, July 3, on his removal to Georgetown, where he has been transferred to a similar position.

GEORGE STEPHEN, General Freight Agent, Canadian Northern Ry., Winnipeg, was born at Montreal, July 5, 1876, and not in 1870, as stated in Canadian Railway and Marine World for July, under "Birthdays of Transportation Men in July."

J. S. PLAYFAIR, one of the founders of the Muskoka Navigation Co., whose death was mentioned in our last issue, left an estate of $109,192. Three sons, one of whom is Jas. Playfair, Vice President and Managing Director, Richelieu and Ontario Navigation Co., are executors.

C. S. MELLEN, President, New York, New Haven and Hartford Rd., Boston and Maine, Rd., and Maine Central Rd., resigned the presidency of the latter two companies, early in July, in order to devote his time to the affairs of the first named. On July 17, he resigned his position on the N.Y., N.H. & H. Rd.

ALFRED PRICE, General Superintendent, Alberta Division, C.P.R., was entertained to dinner, at Calgary, July 8, prior to his leaving for his new position at Montreal, by the local Y.M.C.A. and the Round Table Club, and presented with a loving cup, and a set of Browning's works, as an appreciation of his work connected with the association.

C. J. O'DOHERTY, who has been appointed Storekeeper, G.T.R., Ottawa, was born there, July 28, 1878, and entered railway service Oct. 1, 1895, since when he has been, to Dec., 1898, clerk, Motive Power Department, Canada Atlantic Ry., Ottawa; Jan. 1, 1899, to May 31, 1913, chief clerk, Stores Department, G.T.R., Ottawa.

J. B. LAMBKIN, formerly Assistant General Passenger Agent, Intercolonial Ry., Halifax, N.S., has been appointed a Government agent in connection with the carrying out of the recently enacted laws relating to white slavery. He acts under the direction of the Chief of Dominion Police, with headquatrers at Montreal.

Alfred Price.
Assistant General Manager, Eastern Lines, Canadian Pacific Railway.

RT. HON. ALFRED LYTTLETON, K.C., M.P., who died in London, Eng., July 4, was, with the late P. S. Archibald, of Moncton, N.B., a member of the board of arbitration appointed in 1904, to deal with the disputes between the Newfoundland Government and the Reid Newfoundland Co., arising out of the construction and operation of the railway in that colony.

W. G. BARNWELL, who was recently appointed Assistant Freight Traffic Manager, Atchison, Topeka and Santa Fe Rd., Coast Lines, San Francisco, Cal., was born at Danville, Que., Apr. 13, 1865, and commenced railway work in 1881 as agent and clerk in the office of Auditor of Freight Accounts, Canada Atlantic Ry. [illegible] been in the U. S.

G. A. AIRD, General Agent, Freight [illegible] funeral taking place from his brother's house (John Aird, Assistant General Manager, Canadian Bank of Commerce), [illegible] Aird, who was Mechanical Foreman of the old Northern Ry. at Toronto.

A. C. O'NEIL, who has been appointed Travelling Freight Agent, G.T.R., London, Ont., was born at Point Edward, Ont., Nov. 30, 1886, and entered G.T.R. service, July 15, 1904, since when he has been, to Mar. 15, 1909, clerk at Point Edward and Sarnia Tunnel, Ont.; Mar. 15, 1909, to Nov 1, 1912, cashier at same points; Nov. 1, 1912, to May 1, 1913, chief clerk and General Agent, same points.

JAMES CONMEE, ex-M.P., of Port Arthur, Ont., who died at Prescott, Arizona, July 23, after a long illness, was one of the early contractors on the C.P.R. main transcontinental line, having had several contracts along the north shore of Lake Superior, in connection with which he had protracted litigation with the company. He also had contracts on the Canadian Northern Ry., and the Algoma Central and Hudson Bay Ry.

R. G. McNEILLIE, who has been appointed Assistant General Passenger Agent, Western Lines, C.P.R., Winnipeg, was born at Lindsay, Ont., July 1, 1883, and entered C.P.R. service, Oct. 1, 1901, since when he has been, to April 25, 1906, stenographer and clerk, General Passenger Department, Winnipeg; April 25, 1906, to Oct. 20, 1909, chief clerk, General Passenger Department, Winnipeg; Oct. 20, 1909, to April 15, 1910, District Passenger Agent, Nelson, B.C.; April 15, 1910, to July 1, 1913, District Passenger Agent, Calgary, Alta.

A. A. GOODCHILD, who has been appointed General Storekeeper, Lines East of Fort William, Ont., C.P.R., Montreal, was born in London, Eng., June 3, 1866, came to Canada, June, 1886, and entered railway service, July, 1886, since when he has been, to Jan. 1, 1888, in Audit Department, G.T.R.; Jan. 1, 1888, to Oct. 2, 1899, in Comptroller's office, C.P.R.; Oct. 2, 1899, to Jan., 1900, Assistant Auditor of Disbursements, C.P.R.; Jan., 1900, to Dec. 28, 1904, Auditor of Statistics, C.P.R.; Dec. 28, 1904, to July 1, 1913, Auditor of Stores and Mechanical Accounts, C.P.R.; July 1 to 16, 1913, acting General Storekeeper, Lines East of Fort William, Ont., C.P.R., Montreal.

H. H. MELANSON, whose appointment as acting General Passenger Agent, Intercolonial Ry. and Prince Edward Island Ry., Moncton, N.B., was mentioned in our last issue, was born at Scadouc, N.B., Mar. 99, 1872, and entered Intercolonial Ry. service, Nov. 18, 1889, since when he has been, to Aug., 1892, clerk in Mechanical Department; Aug., 1892, to Dec., 1899, clerk in Passenger Department; Dec., 1899, to Mar., 1901, chief clerk, Passenger Department; Mar., 1901, to May, 1903, General Baggage Agent; May, 1903, to Nov., 1909, chief clerk, Passenger Department; Nov., 1909, to May, 1913, Assistant General Passenger Agent, all at Moncton, N.B.

R. G. McNEILLIE, who has been appointed Assistant General Passenger Agent, Western Lines, C.P.R., Winnipeg, was born at Lindsay, Ont., July 1, 1882, and entered C.P.R. service Oct. 1, 1901, since when he has held various positions in the Passenger Department, Winnipeg, and was from 1907 to Oct. 20, 1909, chief clerk, General Passenger Agent's office: Oct. 20, 1909, to Apr., 1910, District Passenger Agent, Nelson, B.C.; Apr., 1910, to July, 1913, District Passenger Agent, Calgary, Alta. Prior to his leaving Calgary, July 8, the local staff presented him with a walrus suit case and a fitted club bag, also a silver mesh purse for Mrs. McNeillie.

D. T. MAIN, who has been appointed Master Mechanic, British Columbia Division, C.P.R., Vancouver, and whose portrait appears in this issue, was born at Kirkintilloch, Scotland, and came to Canada in 1903, when he entered Mackenzie, Mann & Co.'s service as draughtsman, and in 1904 transferred to C.P.R. service, and was, from 1907 to Mar., 1908, Locomotive Foreman, Minnedosa, Man.; Mar., 1908, to Mar., 1910, Locomotive Foreman, Cranbrook, B.C.; Mar., 1910, to Jan., 1912, District Master Mechanic, District 1, British Columbia Division, Nelson; Jan., 1912, to June 30, 1913, Master Mechanic, Saskatchewan Division, Moose Jaw.

W. B. SMITH, Managing Director of the Dominion Transport Co., Montreal, has been appointed a Justice of the Peace there. He has been connected with the railway cartage business since the opening of the Great Western Ry. between Hamilton and London, Ont., first with Hendrie and Shedden, continuing with the Shedden Co., then the Montreal Cartage Co., later with a cartage company in connection with the Quebec, Montreal, Ottawa and Western Ry., now part of the C.P.R., and since the formation of the Dominion Transport Co., 25 years ago, he has been General Manager, and latterly Managing Director of that company, which conducts the cartage business of the C.P.R.

A. E. ROSEVEAR, who has been appointed General Freight Agent, G. T. Pacific Ry. and G. T. Pacific Coast Steamship Co., Winnipeg, was born at Montreal, Feb. 20, 1863, and entered G.T.R. service in 1879, since when he has been, to 1885, clerk in General Superintendent's office, Montreal; 1885 to 1890, stenographer to General Manager; 1890 to 1892, accountant, G.T.R. West Shore Fast Freight Line, Chicago, Ill., and Detroit, Mich.; 1892 to 1898, accountant, Reading Despatch Line, Detroit, Mich.; Oct. 1, 1898, to Apr., 1908, Freight Claims Agent, G.T.R., Montreal; Apr. 20, 1908, to Oct., 1912, Assistant General Freight Agent, Montreal; Oct., 1912, to June 28, 1913, Assistant to the Vice President (Traffic), Montreal.

G. H. EATON, Assistant Master Car Builder, Western Lines, C.P.R., Winnipeg, who died there, June 30, and whose portrait appears in this issue, was born in Staffordshire, Eng., June 9, 1860, and entered railway service in 1876, since when he had been, to 1879, carpenter, Brockville and Ottawa Ry., Brockville, Ont.; 1879, carpenter, G.T.R., Toronto; 1879 to 1884, Credit Valley Ry., Toronto; 1884 to 1887, yard foreman of repairs and cleaning, C.P.R., Toronto; 1887 to 1888, Shop Foreman, C.P.R., Toronto; 1888 to 1893, Car Foreman, C.P.R., Toronto; 1893 to 1897, General Car Foreman, C.P.R., Hochelaga Shops, Montreal; 1897 to Aug., 1905, General Car Foreman, C.P.R., Farnham, Que., and from Aug., 1905, Assistant Master Car Builder, Western Lines, C.P.R., Winnipeg.

L. O. ARMSTRONG, who has been appointed Colonization Agent, Department of Natural Resources, C.P.R., Montreal, was born at Manor House de Lanaudiere, Maskinonge Co., Que., and entered railway service in May, 1868, with the Ohio and Mississippi Rd. He was, from July, 1880, to July, 1881, Land Commissioner, Manitoba and South Western Ry., Winnipeg; and on the acquirement of that line by the C.P.R. in 1881, he was appointed Right of Way Agent, C.P.R., under A. B. Stickney, General Superintendent, Winnipeg. Since Dec., 1883, he has occupied the positions of Colonization Agent, Colonization and Tourist Agent, Colonization and Industrial Agent, and on the formation of the Department of Natural Resources, he was attached to that department, with office at Montreal.

C. E. DEWEY, who has been appointed Freight Traffic Manager, G.T.R., Montreal, was born at Cheshunt, Eng., Oct. 2, 1873, and entered G.T.R. service, Nov., 1888, since when he has been, to Apr., 1896, clerk, Toronto; Apr., 1896, to Aug., 1897, chief clerk to Division Freight Agent, Stratford, Ont.; Aug., 1897, to Aug., 1899, chief clerk to Division Freight Agent, Hamilton, Ont.; Aug., 1899, to July, 1902, Division Freight Agent, Stratford, Ont.; July, 1902, to July, 1907, Division Freight Agent, Toronto; July, 1907, to Apr., 1908, Assistant General Freight Agent, Montreal; Apr., 1908, to May 1, 1911, General Freight Agent, Central Vermont Ry., St. Albans, Vt.; May 1, 1911, to June 28, 1913, General Freight Agent, G.T. Pacific Ry. and G.T. Pacific Coast Steamship Co., Winnipeg.

C. A. Hayes,
General Traffic Manager, Canadian Government Railways.

M. J. POWER, General Storekeeper, C.P.R., Montreal, died there, July 4, after 14 weeks illness due to internal trouble. He was buried July 7, when the whole Stores Department was closed for an hour. He was born at Montreal, June 19, 1877, and entered C.P.R. service Mar. 16, 1891, since when he had been, to Nov., 1893, office boy, etc., General Passenger Department, Montreal; Nov., 1893, to May, 1897, stenographer, same department; May, 1897, to June, 1898, secretary to General Passenger Agent, Montreal; June, 1898, to Aug., 1901, secretary to Passenger Traffic Manager, Montreal; Aug., 1901, to July, 1908, secretary to the President; July, 1908, to July, 29, 1912, chief clerk and private secretary to the President; July 29, 1912, to the time of his death, General Storekeeper, Montreal.

H. DARLING, whose appointment as Locomotive Foreman, G.T. Pacific Ry., Nicholl, B.C., was mentioned in our last issue, was born in Northumberland, Eng., July 27, 1873, and entered railway service July, 1890, since when he has been, to July, 1905, fitters' assistant and locomotive fireman, London and North Western Ry., St. Helens and Garston, Eng.; Jan. 15, 1906, to May 4, 1907, machinist, G.T.R., Turcot roundhouse, Montreal; May 15, 1907, to Aug. 4, 1909, machinist, G.T.R. erecting shops, Montreal; Aug., 17, 1909, to Sept. 10, 1911, machinist, G.T. Pacific Ry., Rivers, Man., and Wainwright, Alta.; Dec. 4, 1911, to Jan. 20, 1912, machinist, Foley, Welch and Stewart, G.T.P.R. Contractors, Prince Rupert, B.C.; Jan. 22, 1912, to May, 1913, machinist, G. T. Pacific Ry., Prince Rupert, B.C.

C. MURPHY, who has been appointed General Superintendent, Manitoba Division, C.P.R., Winnipeg, and whose portrait appears in this issue, was born at Prescott, Ont., Nov. 20, 1865, and entered C.P.R. service in 1883, since when he has been, to 1885, operator; 1885 to 1890, chief operator and dispatcher; 1890 to 1899, Chief Dispatcher, Ottawa; 1899 to June, 1900, acting Superintendent, and June, 1900 to 1902, Superintendent Chapleau, Ont.; 1902 to Nov., 1903, Superintendent North Bay, Ont.; Nov., 1903, to Feb., 1908, Superintendent, District 2, Ontario Division; Feb., to June, 1908, relieving General Superintendent, at North Bay, Ont., and Montreal; June, 1908, to Sept. 30, 1910, General Superintendent, Eastern Division, Montreal; Sept. 30, 1910, to July 15, 1913, General Superintendent of Transportation, Eastern Lines, Montreal.

R. A. GAMBLE, who has been appointed General Yardmaster, C.P.R., Winnipeg, was born at Dublin, Ireland, Mar. 1, 1876, and entered C.P.R. service Feb. 1, 1901, since when he has been, to May 15, 1903, checker, Winnipeg; May 15, 1903, to Feb. 11, 1904, chief night yard clark, Winnipeg; Feb. 11, 1904, to Oct. 15, 1906, chief clerk to General Yardmaster, Winnipeg: Oct. 15, 1906, to Sept. 11, 1907, Assistant Yardmaster, Winnipeg; Sept. 11 to Nov. 25, 1907, Night Yardmaster, Winnipeg; Nov. 25, 1907, to Jan. 26, 1908, chief clerk, Car Service Department, Western Lines, Winnipeg; Jan. 26, 1908, to Apr. 1, 1910, Inspector, Refrigerator Service, Western Lines, Winnipeg; Apr. 1, 1910, to May 1, 1911, Fuel Agent, Alberta Division, Calgary; May 1, 1911, to July 1, 1912, Car Service and Fuel Agent, Saskatchewan Division, Moose Jaw; July 1, 1912, to July 1, 1913, Assistant General Yardmaster, Winnipeg. Prior to entering railway service, he was engaged in water transportation service, in various capacities, from deck hand to chief mate.

D. C. COLEMAN, who has been appointed General Superintendent, Alberta Division, C.P.R., Calgary, was born at Carleton Place, Ont., July 9, 1879, and entered C.P.R. service, Nov., 1899, since when he has been, to Jan., 1900, stenographer, Assistant Engineer's office, Fort William, Ont.; Jan. to July, 1900, secretary to Superintendent, Fort William, Ont.; July to Sept., 1900, secretary to General Superintendent, Winnipeg; Sept., 1900, to Feb., 1901, secretary to Superintendent, Fort William, Ont.; Feb. to Mar., 1901, secretary to Superintendent, Cranbrook, B.C.; Mar., 1901, to May, 1902, chief clerk, Superintendent's office, Cranbrook, B.C.; June 1, 1902, to Apr., 1903, chief clerk, General Superintendent's office, Lake Superior Division, North Bay, Ont.; Apr., 1903, to Feb., 1904, General Superintendent's accountant, Lake Superior Division, North Bay, Ont.; Feb., 1904, to Mar., 1907, chief clerk, General Superintendent's office, Central Division, Winnipeg; Mar. to June, 1907, chief clerk, Assistant General Manager's office, Western Lines, Winnipeg; June, 1907, to Nov. 30, 1908, Superintendent, District 3, Pacific Division, Nelson, B.C.; Nov. 30, 1908, to Feb. 14, 1912, Superintendent of Car Service, Western Lines, Winnipeg; Feb. 14 to Mar. 25, 1912, acting General Superintendent, Manitoba Division, Winnipeg; Mar. 25 to Apr. 1, Superintendent of Car Service, Western Lines, Winnipeg; Apr. 1 to July 15, General Superintendent, Manitoba Division, Winnipeg.

ALFRED PRICE, who has been appointed Assistant General Manager, Eastern Lines, C.P.R., Montreal, was born at Toronto, Dec. 6, 1861, and entered railway service, Sept., 1879, since when he has been, to 1881, operator, messenger and clerk, Credit Valley Ry.; 1881 to 1882, car accountant, same road, Toronto. He remained with the C.P.R. when it took over the Credit Valley Ry. in 1882, since when he has been, to 1884, operator and relief dispatcher, Toronto; 1884 to July, 1888, dispatcher, Toronto; July, 1888 to May, 1896, car distributor, Toronto; May, 1896 to Aug., 1898, car distributor and Chief Dispatcher, Toronto; Aug., 1898, to May, 1901, Superintendent, Toronto; May, 1901, to Sept., 1902, Superintendent, Districts 8 and 9, Toronto; Sept., 1902 to May, 1903, Superintendent, Districts 10 and 11, Toronto; May, 1903 to 1905, Superintendent, Fort William, Ont.; 1905 to Feb., 1907, Superintendent of Transportation, Western Lines, Winnipeg; Feb. to Dec., 1907, General Superintendent, Central Division, Winnipeg; Dec., 1907, appointed General Superintendent, Western Division, Calgary, Alta., and in July, 1910, when the Western Lines were reorganized into four, instead of three, grand divisions, he was appointed General Superintendent, Alberta Division, Calgary.

Birthdays of Transportation Men in August.

Many happy returns of the day to:—

V. T. Bartram, ex-Purchasing Agent, Timiskaming and Northern Ontario Ry., now of Toronto, born at Ottawa, Aug. 2, 1880.

A. E. H. Chesley, General Accountant, Dominion Atlantic Ry., Kentville, N.S., born near Annapolis Royal, N.S., Aug. 27, 1877.

A. B. Chown, Travelling Passenger Agent, G.T.R., Pittsburgh, Pa., born at Belleville, Ont., Aug. 4, 1887.

C. H. N. Connell, Engineer Maintenance of Way, Canadian Northern Quebec and Quebec and Lake St. John Rys., Quebec, born at Woodstock, N.B., Aug. 26, 1876.

F. Barlow Cumberland, ex-Vice President, Niagara Navigation Co., Port Hope, Ont., born at Portsmouth, Eng., Aug. 5, 1846.

E. L. Desjardins, Assistant Superintendent, Montreal and Ste. Flavie District, Intercolonial Ry., Riviere du Loup, Que., born at St. Jean Port Joli, Que., Aug. 1, 1859.

F. L. Ellingwood, Superintendent Building Construction, C.P.R., Montreal, born at Eastport, Me., Aug. 6, 1863.

G. H. Ham, Publicity Department, C.P.R., Montreal, born at Trenton, Ont., Aug. 23, 1847.

W. P. Hinton, General Passenger Agent, G.T.P.R., Winnipeg, born at Hintonburg, Ont., Aug. 30, 1871.

R. Kerr, ex-Passenger Traffic Manager, C.P.R., born at Toronto, Aug., 1845.

E. Lait, General Yardmaster, Winnipeg Joint Terminals, born at Toronto, Aug. 23, 1889.

J. D. McDonald, Assistant General Passenger Agent, G.T.R., Chicago, Ill., born at Toronto, Aug. 27, 1855.

T. McHattie, Master Mechanic, Eastern Division, G.T.R., Montreal, born at Dufftown, Banffshire, Scotland, Aug. 8, 1854.

M. K. McQuarrie, Resident Engineer, District 1, British Columbia Division, C.P.R., Revelstoke, born at Sault Ste. Marie, Ont., Aug. 17, 1884.

The Late G. H. Eaton.

J. A. Marsh, Trainmaster, British Columbia Electric Ry., New Westminster, B.C., born at Dresden, Ont., Aug. 16, 1876.

J. M. Maver, Contracting Freight Agent, Northern Pacific Ry., Montreal, born at Toronto, Aug. 9, 1884.

W. J. Meakin, Locomotive Foreman, C.P.R., Castor, Alta., born at Toronto, Aug. 22, 1869.

C. Montgomery, Master Mechanic, Pere Marquette Rd., St. Thomas, Ont., born near London, Ont., Aug. 29, 1860.

W. E. Mullins, General Manager, Costa Rica Division, United Fruit Co., San Jose, Costa Rica, born at Stratford, Ont., Aug. 13, 1870.

F. H. Phippen, K.C., General Counsel, C.N.R., Toronto, born at Belleville, Ont., Aug. 26, 1862.

W. M. Porteous, Freight Agent, C.P.R., St. Louis, Mo., born at Edinburgh, Scotland, Aug. 3, 1857.

J. F. Richardson, Superintendent Telegraphs, British Columbia Division C.P.R., Vancouver, born at Granby, Que., Aug. 23, 1861.

W. G. Ross, Chairman Montreal Harbor Commissioners, born at Montreal, Aug. 6, 1873.

W. Le B. Ross, Local Treasurer, G.T. Pacific Ry., Winnipeg, born at Ottawa, Ont., Aug. 9, 1868.

Major Salt, Car Foreman, C.P.R., Toronto, born at Lichfield, Eng., Aug. 12, 1859.

F. C. Salter, European Traffic Manager, G.T.R., and Canadian Ex. Co., London, Eng., born at Sarnia, Ont., Aug. 31, 1863.

C. R. Scoles, General Manager, Quebec Oriental Ry., New Carlisle, Que., born at Grantham, Lincoln, Eng., Aug. 27, 1856.

S. A. Simpson, Superintendent, Sleeping, Dining and Parlor Cars and News Service, Alberta Division, C.P.R., Calgary, born at Toronto, Aug. 22, 1880.

W. Stitt, General Passenger Agent, C.P.R., Eastern Lines, Montreal, born in Kirkcudbrightshire, Scotland, Aug. 3, 1855.

J. F. Sweeting, Industrial Agent, Natural Resources Department, C.P.R., Calgary, Alta., born at Worthing, Eng., Aug. 20, 1872.

W. F. Taylor, General Storekeeper, Intercolonial Ry., Moncton, N.B., born at Hillsboro, N.B., Aug. 20, 1855.

R. L. Thompson, ex-District Passenger Agent, C.P.R., Toronto, born at Montreal, Aug. 17, 1873.

Capt. F. J. Thomson, s.s. Royal George, Canadian Northern Steamships, Ltd., born in Cheshire, Eng., Aug. 20, 1876.

F. E. Warren, Division Car Foreman, Ontario Division, C.P.R., West Toronto, Ont., born at Chelsea, Que., Aug. 29, 1872.

W. B. Way, Superintendent District 1, Eastern Division, C.P.R., Farnham, Que., born at Bowmanville, Ont., Aug. 22, 1867.

E. H. Williams, Locomotive Foreman, Canadian Northern Ry., Brandon, Man., born at West Toronto, Ont., Aug. 26, 1844.

Railway Route Maps Approved.

The Minister of Railways approved the following railway route maps, July 2:—

Canadian Northern Ry., revision of Regina-Red Deer line from Tp. 26, r. 23, w. 3 m., to Alsask, 42.92 miles.

Canadian Pacific Ry., from Snowflake westerly, 9.1 miles; and Lake Winnipeg extension of West Selkirk Branch, from Gimli north, 26 miles.

Grand Trunk Pacific Ry., Prince Rupert westerly from mileage 2.25 to 3.23.

Moncton and Northumberland Strait Ry., from Richibucto to Loggieville, about 40 miles.

Canadian Irrigation Association at Lethbridge, Alta.—The seventh annual meeting of this association will be held at Lethbridge, Alta., Aug. 5, 6 and 7. The pioneer irrigation system on a large scale in Western Canada was started in 1900 in connection with what afterwards became the Alberta Ry. and Irrigation Co., now owned by the C.P.R. This was known as the Lethbridge system; it operates 250 miles of canals and ditches. J. S. Dennis, Calgary, Assistant to the President, C.P.R., is Vice President and Chairman of the executive committee of the association. Among those who will speak at the meetings will be L. O. Armstrong, Coloniation Agent, C.P.R., and J. G. Rutherford, Superintendent of Agriculture and Animal Industry, C.P.R.

Transportation Appointments Throughout Canada.

Allan Line Steamship Co.—G. E. BUNTING, heretofore Travelling Agent, Toronto, has been appointed General Western Freight Agent, Allan Line Steamship Co., and Manager, Allan and Co., General Agents, Passenger Department, same line, at Chicago, Ill., vice E. Francis, retired. Office, 127 North Dearborn St.

Canadian Government Railways.—C. A. HAYES, heretofore Freight Traffic Manager, G. T. R., Montreal, has been appointed General Traffic Manager, Canadian Government Railways, vice E. Tiffin, assigned to other duties in Toronto. Office, Moncton, N. B.

S. L. SHANNON, heretofore Comptroller and Treasurer, Intercolonial Ry., has been appointed Comptroller and Treasurer, Canadian Government Railways. Office, Moncton, N. B.

C. B. BROWN, A.M. Can. Soc. C.E., heretofore Principal Assistant Engineer, Eastern Lines, C. P. R., Montreal, has been appointed Chief Engineer, Intercolonial Ry., and Prince Edward Island Ry., as reported in our last issue. Office, Moncton, N. B.

Canadian Northern Ry.—F. J. CREIGHTON has been appointed Travelling Passenger Agent, Winnipeg, vice A. I. Daniels, transferred.

A. I. DANIELS, heretofore Travelling Passenger Agent at Winnipeg, has been appointed City Ticket Agent at Regina, Sask.

J. W. EATON, heretofore Assistant Station Master at Winnipeg, has been appointed Station Master at Edmonton, Alta.

D. G. MADILL has been appointed station ticket agent at Edmonton, Alta.

Canadian Pacific Ry.—A. PRICE, heretofore General Superintendent, Alberta Division, Calgary, has been appointed Assistant General Manager, Eastern Lines. Office, Montreal. This is a new position.

A. A. GOODCHILD, heretofore Auditor of Stores and Mechanical Accounts, has been appointed General Storekeeper, Lines East of Fort William, Ont., vice M. J. Power, deceased. Office, Montreal.

J. W. ORROCK, heretofore Division Engineer, North Bay, Ont., has been appointed Principal Assistant Engineer, Eastern Lines, reporting to the Assistant Chief Engineer, vice C. B. Brown, resigned to enter Canadian Government Railways service. Office, Montreal.

M. A. FULLINGTON, heretofore Assistant Division Engineer, Eastern Division, Montreal, has been appointed Assistant Engineer, Eastern Lines, Montreal.

F. M. RUTTER, heretofore Resident Engineer, Toronto, has been appointed Assistant Division Engineer, Eastern Division, Montreal, vice M. A. Fullington, promoted.

B. S. JENKINS, heretofore General Superintendent of Telegraphs, Western Lines, Winnipeg, will it is reported, be appointed to a new position in the Telegraph Department, at Montreal.

L. O. ARMSTRONG, Colonization Agent, Department of Natural Resources, Montreal, has been appointed to give lectures throughout Canada and the U. S. on the opportunities existing in the Dominion. The lectures will be illustrated by cinematograph views of actual scenes in the Western Provinces, and of the development of the Dominion's natural resources in both Eastern and Western Provinces.

D. M. EWART, heretofore assistant to Resident Engineer, Ottawa, has been appointed Resident Engineer, Toronto, vice F. M. Rutter, promoted.

F. J. BLAINE, heretofore rate clerk, Assistant Passenger Traffic Manager's office, Winnipeg, has been appointed District Passenger Agent, Fort William-Port Arthur District. Office, Fort William, Ont. This is a new position.

W. BLENNERHASSETT, heretofore locomotive driver, Fort William, Ont., has been appointed acting District Master Mechanic, District 1, Manitoba Division, vice W. W. Webster, transferred. Office, Kenora, Ont.

JOHN McMILLAN, heretofore Superintendent of Telegraphs, Manitoba Division, Winnipeg, has been appointed General Superintendent of Telegraphs, Western Lines, vice B. S. Jenkins, assigned to other duties. Office, Winnipeg.

C. MURPHY, heretofore General Superintendent of Transportation, Eastern Lines, Montreal, has been appointed General Superintendent, Manitoba Division, vice D. C. Coleman, transferred. Office, Winnipeg. The position of General Superintendent of Transportation, Eastern Lines, has been abolished.

C. Murphy,
General Superintendent, Manitoba Division, Canadian Pacific Railway

A. C. SHAW, heretofore Assistant General Passenger Agent, Western Lines, Winnipeg, has been appointed General Passenger Agent, Western Lines, vice C. B. Foster, promoted. Office, Winnipeg.

R. G. McNEILLIE, heretofore District Passenger Agent, Calgary, Alta., has been appointed Assistant General Passenger Agent, Western Lines, vice A. C. Shaw, promoted. Office, Winnipeg.

F. STEPHENS has been appointed acting General Claims Agent, Western Lines, during the absence of W. H. D'Arcy in Europe. Office, Winnipeg.

T. G. ARMSTRONG, heretofore General Foreman, Winnipeg, has been appointed Assistant Master Car Builder, Western Lines, vice G. H. Eaton, deceased. Office, Winnipeg.

E. M. PAYNE, heretofore Inspector of Telegraphs, Manitoba Division, has been appointed Superintendent of Telegraphs, Manitoba Division, vice J. McMillan, promoted.

D. ENGLAND, heretofore General Yardmaster, Winnipeg, has been appointed acting Trainmaster, there, vice P. F. Weisbrod, transferred, temporarily.

R. A. GAMBLE, heretofore Assistant General Yardmaster, has been appointed General Yardmaster, at Winnipeg, vice D. England, promoted.

J. G. STONE has been appointed Assistant General Yardmaster at Winnipeg, vice R. A. Gamble, promoted.

J. W. DAWSON, heretofore chief clerk to District Passenger Agent, Calgary, Alta., has been appointed chief clerk, Passenger Department, Winnipeg, vice R. Dawson, promoted.

M. J. SCOTT, heretofore District Master Mechanic, District 1, British Columbia Division, Revelstoke, has been appointed Master Mechanic, Saskatchewan Division, vice D. T. Main, transferred. Office, Moose Jaw.

D. C. COLEMAN, heretofore General Superintendent Manitoba Division, Winnipeg, has been appointed General Superintendent, Alberta Division, vice A. Price, promoted. Office, Calgary.

J. G. RUTHERFORD, C. M. G., heretofore Superintendent of Animal Husbandry, has been appointed Superintendent of Agriculture and Animal Industry, Department of Natural Resources. Office, Calgary, Alta.

W. J. ELLIOTT, heretofore Superintendent of Agriculture, Department of Natural Resources, Calgary, Alta., having been appointed Principal of the Agricultural College of Olds, Alta., the duties have been merged with those of Animal Husbandry, as mentioned in the previous paragraph.

P. F. WEISBROD, heretofore Trainmaster, Winnipeg, has been appointed acting Superintendent, Calgary Terminals, Alberta Division, vice C. S. Maharg, on leave of absence.

R. DAWSON, heretofore chief clerk, Passenger Department, Winnipeg, has been appointed District Passenger Agent, Calgary, Alta., vice R. G. McNeillie, promoted.

J. J. ANDERSON, heretofore Travelling Passenger Agent, Toronto, has been appointed District Baggage Agent, Alberta Division, vice W. E. Allinson, transferred. Office, Calgary.

C. H. BOWES, heretofore chief clerk to General Passenger Agent, Vancouver, B. C., has been appointed Assistant General Passenger Agent, Lines West of Revelstoke, B. C. Office, Vancouver, B. C. This is a new position.

D. T. MAIN, heretofore Master Mechanic, Saskatchewan Division, Moose Jaw, has been appointed Master Mechanic, British Columbia Division, vice S. Phipps, retired. Office, Vancouver.

Central Vermont Ry. — JOHN McCRAW, heretofore acting Superintendent, Southern Division, has been appointed Superintendent, and the position of acting Superintendent has been abolished. Office, New London, Conn.

W. BIBBY, heretofore Roadmaster, Grand Trunk Ry., Allandale, Ont., has been appointed Assistant General Roadmaster, C. V. R. Office, St. Albans, Vt.

Delaware and Hudson Co.—JAMES FITZSIMONS, heretofore General Eastern Freight Agent, Albany, N. Y., has been appointed General Canadian Freight and Passenger Agent. Office, Montreal.

Grand Trunk Pacific Coast Steamship Co.—See Grand Trunk Pacific Ry.

Grand Trunk Pacific Ry.—A. E. ROSEVEAR, heretofore Assistant to the Vice President, G. T. R. and G. T. P. R. (Traffic), Montreal, has been appointed General Freight Agent, G. T. P. R. and G. T. P. Coast Steamship Co., with territory Port Arthur, Ont., and west, vice C. E. Dewey, promoted to G. T. R. service. Office, Winnipeg.

F. R. PORTER, heretofore Division Freight Agent, Edmonton, Alta., has been appointed Assistant General Freight Agent, vice R. J. Foreman, transferred to G.T.R. service. Office, Winnipeg.

F. G. ADAMS, heretofore Commercial Agent, Regina, Sask., has been appointed Division Freight Agent, Edmonton, Alta., vice F. R. Porter, promoted.

ALBERT DAVIDSON has been appointed General Agent in charge of Passenger and Freight Traffic in Western British Columbia, north of Rivers Inlet, including Queen Charlotte Islands, G.T.P.R. and G.T.P. Coast Steamship Co., vice A. E. McMaster, promoted. Office, Prince Rupert.

A. E. McMASTER, heretofore General Agent, Prince Rupert, B.C., has been appointed Commercial Agent, Regina, Sask., vice F. G. Adams, promoted.

The following agents have been appointed,—Elie, Man., A. Fullum; Ingelow, Man., J. A. Babin; Quinton, Sask., P. D. Hamilton; South Saskatoon, Sask., H. A. Murphy; Landis, Sask., G. H. LeGallais; Dandurand, Alta., E. B. Elgood; Tete Jaune, B. C., J. L. Strong; Battleford, Sask., J. P. Gillis.

Grand Trunk Ry.—C. E. DEWEY, heretofore General Freight Agent, G. T. P. R. and G. T. P. Steamship Co., Winnipeg, has been appointed Freight Traffic Manager, G. T. R., vice C. A. Hayes, resigned to enter other service. Office Montreal.

R. J. FOREMAN, heretofore Assistant General Freight Agent, G. T. Pacific Ry., Winnipeg, has been appointed Assistant to the Vice President (Traffic), G. T. R. and G. T. P. R., vice A. E. Rosevear, transferred to G. T. P. R. service. Office, Montreal.

W. C. CHISHOLM, K.C., formerly City Solicitor for Toronto, has been appointed General Solicitor, G.T.R. Office, Montreal.

A. E. BECKETT, Solicitor, will, as heretofore, take charge of such matters arising in the Province of Quebec, as may be assigned to him.

W. E. FOSTER, heretofore Assistant Solicitor, Montreal, has been appointed Solicitor, and will take charge of such matters arising in the Province of Ontario, as may be assigned to him.

A. C. O'NEIL, heretofore chief clerk to General Agent, Sarnia, Ont., has been appointed Travelling Freight Agent, London, Ont.

The following agents have been appointed,—Noyan Jct., Que., P. W. Marier; Beaverton, Ont., J. G. Holman; Goodwood, Ont., W. T. Byam; Sutton, Ont., R. G. Winters; Trout Creek, Ont., I. B. Musselman; Terra Cotta, and Cheltenham, Ont., F. J. Jones; Tottenham, Ont., H. J. Quinlan; Glen Huron and Nottawa, Ont., F. C. Prosser; Thamesville, Ont., J. W. Miller; Walkerville and Windsor, Ont., A. R. Huston; Bridgeburg, Fort Erie, Ont., and Black Rock, N. Y., S. V. Beck; Dunnville, Ont., S. Young; Norwich, Ont., F. W. Lee; Milverton, Ont., J. C. Cunningham; Dalkeith, Ont., R. J. Hardy; Admaston, Ont., E. J. Pepper; Eganville, Ont., J. P. Smith; Kallaloe, Ont., H. W. Lora; Brighton, Ont., (outside), A. Mark.

Intercolonial Ry.—DONALD McDONALD, heretofore Superintendent, Montreal and Ste. Flavie District, Levis, Que., is reported to have been appointed District Passenger Agent at Montreal.

R. COLCLOUGH, heretofore Assistant Superintendent, Moncton, N. B., has been appointed Superintendent, Montreal and Ste. Flavie District, vice D. McDonald, transferred. Office, Levis, Que.

Napierville Jct. Ry.—See Quebec, Montreal and Southern Ry.

Prince Edward Island Ry.—See Canadian Government Railways.

Quebec, Montreal and Southern Ry.—JAMES FITZSIMONS, heretofore General Eastern Freight Agent, Delaware and Hudson Co., Albany, N. Y., has been appointed General Manager, Q. M. & S. R. and Napierville Jct. Ry. Office, Montreal.

D. T. Main,
Master Mechanic, British Columbia Division, Canadian Pacific Railway.

Southern New England Ry.—H. C. ESTEP, Engineer of Construction, having resigned to enter another company's service, the position has been abolished.

H. A. PHELPS has been appointed Division Engineer, vice T. I. Ellis, resigned. Office, Providence, R.I.

The Board of Railway Commissioners has passed an order requiring the Quebec Oriental Ry. to add to its equipment by Dec. 31, two new locomotives capable of carrying at least 160 lbs. steam pressure to the square inch, and also if, after hydrostatic tests, the boilers of its present locomotives be found incapable of carrying similar steam pressure, it shall purchase at least four additional boilers for its 17 by 24 in. class of locomotives, capable of carrying such pressure.

Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those for 1911-12, from July 1, 1912:—

	Gross Earnings	Expenses	Net Earnings	Increase
July	$1,829,700	$1,335,100	$494,600	$133,000
Aug.	1,745,800	1,375,000	270,800	56,100
Sept.	1,671,500	1,248,000	423,500	4,100
Oct.	2,351,200	1,645,900	705,300	24,800
Nov.	2,509,700	1,631,900	877,800	212,600
Dec.	2,132,000	1,551,000	581,000	77,200
Jan.	1,513,400	1,243,200	270,200	46,500
Feb.	1,398,700	1,130,200	268,500	30,900
Mar.	1,685,900	1,254,400	431,500	4,700
Apr.	1,745,300	1,242,200	503,100	100,000
May	2,218,400	1,638,200	580,200	122,100
	$20,801,600	$15,295,100	$5,506,500	$812,100
Incr	$5,032,700	$2,220,400	$812,100	. . .

Average mileage operated during 1913, 4,297, against 3,851 in the previous year.

Approximate earnings for June, $2,178,200, against $1,709,500 for June, 1912.

Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases or decreases, compared with those for 1911-12, from July 1, 1912:—

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease
July	$12,052,398.58	$7,604,221.68	$4,448,176.90	$745,148.5
Aug.	12,251,715.87	7,533,790.21	4,717,925.66	642,354.65
Sept.	11,579,733.98	7,329,430.13	4,250,303.85	332,857.05
Oct.	13,060,397.80	7,999,510.61	5,060,887.19	379,782.44
Nov.	12,362,666.42	8,104,527.38	4,258,139.04	270,772.52
Dec.	12,213,278.72	7,823,559.21	4,389,719.51	289,989.22
Jan.	9,679,607.39	8,017,233.61	1,662,373.78	579,516.05
Feb.	9,747,685.55	7,227,616.21	2,520,069.34	136,202.67
Mar.	11,111,892.78	7,256,475.89	3,855,416.89	137,015.78
Apr.	11,750,913.45	7,805,835.90	3,945,077.55	x170,674.24
May	11,904,979.02	8,400,949.16	3,504,029.86	176,485.37
	$127,721,269.56	$85,103,149.99	$42,618,119.57	$3,166,479.43
Incr	$15,713,125.53	$12,546,646.10	$3,166,479.43	

x Decrease.

Approximate earnings for June, $11,187,000, against $10,848,000 for June, 1912.

Commencing with July 1, the mileage under operation was increased to 11,565.

Grand Trunk Railway Earnings, Etc.

The following figures show the earnings and expenses of the G.T.R., C.A.R., G.T. Western Ry. and D.G.H. & M.R. for May, as compared with those for same period in 1912:—

Grand Trunk Railway.

	1913.	1912.
Earnings	$3,867,600	$3,366,300
Expenses	2,668,400	2,359,300
Net earnings	$1,199,200	$1,007,000

Canada Atlantic Railway.

	1913.	1912.
Earnings	$212,600	$202,100
Expenses	222,000	204,400
Deficit	$9,400	$2,300

Grand Trunk Western Railway.

	1913.	1912.
Earnings	$635,900	$557,400
Expenses	598,000	441,300
Net earnings	$37,900	$116,100

Detroit, Grand Haven and Milwaukee Ry.

	1913.	1912.
Earnings	$197,900	$177,500
Expenses	247,450	173,600
Net earnings	x$49,550	$3,900

x Deficit.

Approximate earnings for June, $5,048,541, against $4,453,475 for June, 1912.

The mileage in operation during the year, was 4,533, the same as the previous year.

TRAFFIC RECEIPTS OF THE SYSTEM.

Aggregate from Jan. 1 to June 30:—

	1913	1912	Increase
G.T.R.	$21,218,906	$18,605,299	$2,613,607
C.A.R.	1,151,877	1,046,130	105,747
G.T.W.R.	3,642,809	3,202,444	440,365
D.G.H. & M.R.	1,143,189	1,017,879	125,310
Totals	$27,156,781	$23,871,752	$3,285,029

Grand Trunk Pacific Railway Earnings.

The earnings of the Prairie Section and Lake Superior Branch for June, were $504,065, and the aggregate earnings for six months ended June 30, were $2,659,678.

The Victoria and Sidney Ry., a subsidiary of the Great Northern Ry. (U.S.), is reported to have acquired a gas electric car, for operation between Victoria and Sidney, B.C.

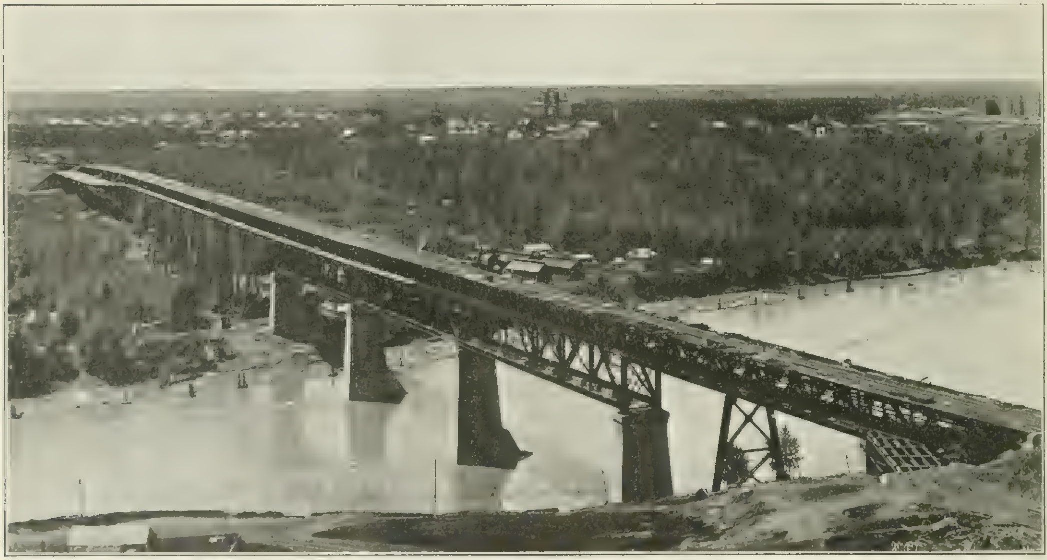
The Canadian Pacific Railway High Level Bridge at Edmonton.

The accompanying illustration shows the bridge recently completed by the C.P.R. over the North Saskatchewan River between Edmonton and South Edmonton, Alta. It is a steel span structure 2,500 ft. long from face to face of ballast walls of the end abutments. This distance is made up of three 288 ft. centre spans across the river, 10 tower spans each from 30 to 50 ft. long, and 14 open spans each from 30 to 100 ft. long. The main spans over the river are supported on concrete piers which measure approximately 115 ft. from the base of rail to the footing, the latter in one instance extending to a depth of approximately 40 ft. below the river surface. The approach trestles on each bank are carried on concrete pedestals built up on concrete piling.

The bridge is to carry steam and electric railway and vehicular traffic. The railway deck on the top of the structure carries three tracks, one for C.P.R. trains and the other two for electric railway service. The roadway deck is located 20 ft. below the railway tracks, and consists of a reinforced concrete roadway 23 ft. wide, paved with wood, in addition to which there are two side paths 8 ft. wide supported on cantilever brackets.

The highways and electric line approach the bridge from Saskatchewan Ave., on the Edmonton side, and from Anthony St. on the South Edmonton side. The C.P.R. tracks on the Edmonton side are carried across Victoria and MacKay Aves. on reinforced concrete structures, and across Saskatchewan and Jasper Aves. on steel structures. On the South Edmonton side Anthony St. is carried over the railway tracks on a reinforced concrete bridge.

The Dominion Parliament voted the C.P.R. as lessees of the Calgary and Edmonton Ry., a subsidy of 15% of the cost of the bridge.



Canadian Pacific Railway High Level Bridge at Edmonton Alta.

Buildings on the Campbellford, Lake Ontario and Western Railway.

The contract for the erection of all the buildings on this new line from Glen Tay to Agincourt, Ont., which is being built for the C.P.R., has been let to the John S. Metcalf Co., Ltd., Montreal, as stated in our last issue. It is intended to have all the buildings completed and the line opened for traffic this year.

The buildings to be erected at Trenton, the divisional point, include, station class A, 23 by 89 ft.; standard no. 1 freight shed, 40 by 128 ft.; standard no. 1 enclosed tank of 40,000 gals. capacity; standard no. 2 single tool house, 10 by 14 ft.; 80 ft. turntable; standard no. 4 store and oil house, 30 by 30 ft.; 12 stall locomotive house; machine and boiler house; two track coaling plant, 32 by 50 ft.; two track sand house, 44 by 12 ft.; two track ash pit, 35 by 39 ft.; ice house, 30 by 300 ft.; and 10 in. stand pipe. Standard station A plan is similar to the new station at West Toronto, built of brick on concrete foundations, with slate roof and interior finish of natural wood.

The passenger stations at Cobourg and Oshawa will be of the standard plan B, similar to the new station at Orillia, Ont., 28 by 109 ft., of brick on concrete foundations; with slate roofs, and finished on the inside with natural wood. Those at Brighton, Port Hope, Bowmanville and Whitby will be of the standard plan C, similar to the station at Listowel, Ont., 20 by 77 ft. 6 in., of brick on concrete foundations, with slate roof, and interior finish of natural wood.

Standard no. 2 stations will be built at Colborne, Newtonville and Newcastle. These are of wood on concrete foundations, 24 by 91 ft. Standard no. 5 stations will be built at Glen Tay, Christie Lake, Crow Lake, Wilkinson, Roblin, Lonsdale, Shannonville, Grafton and Cherrywood. These are of wood on concrete foundations, and vary in dimensions from 21½ by 67 ft., to 21½ by 77 ft. The station at Parham will be of a special plan.

Standard no. 1 enclosed water tanks will be built at Crow Lake, Wilkinson, Roblin, Colborne, Cobourg, Newtonville, Bowmanville, Agincourt, and Whitby.

Standard no. 1 freight sheds, 40 by 128 ft., will be built of wood on concrete foundations at Belleville, Brighton, Cobourg, Port Hope, Bowmanville, Oshawa and Whitby.

The other buildings consist of single and double tool houses, and other structures.

Eastern Railway Companies Cancel Cartage Tariffs.

The railway companies operating east of Port Arthur have announced that they have decided to cancel all cartage agreements under which they have heretofore delivered freight at consignees' warehouses, and that on and after Oct. 1 shippers and consignees must make their own arrangements for the cartage of their freight.

Under the present arrangements the railway companies have agreements with certain cartage companies, under which the freight is carted at a fixed schedule of rates, and the railways charge a general rate of 50c a ton, with a minimum of 15c for small or single shipments. The railway companies claim that they have been paying out more for cartage than they have been collecting, and there have also been numerous complaints that the system discriminated in favor of large places against smaller ones which have no cartage system. It is stated that an application will probably be made to the Board of Railway Commissioners in the matter, so that the views of the shippers may be stated as to the effect of the change on general business conditions. Over 20 places, including the principal cities and terminal points, will be affected.

National Transcontinental Railway Construction.

D. MacPherson, Assistant to Chairman, N.T.R. Commission, is reported to have stated on his return from a recent trip of inspection over the line that the only remaining gap where rails are not laid is one of 53 miles between Cochrane, Ont., and Heaney Jct., Que., and that this will be done by the fall. There is no reason, he added, why the whole line could not be ready for operation by the fall of 1914.

R. W. Leonard, Chairman of the Commission, arrived in Cochrane, Ont., July 9, where he met M. Donaldson, Vice President, Grand Trunk Pacific Ry., and started on a trip of inspection over the line west to Winnipeg. The work of finishing up the line between Cochrane and Superior Jct. has been in progress for some time, and it was expected that as the result of this inspection a regular passenger service would be arranged.

Tenders are under consideration for the construction of a car ferry slip at Levis, Que., and for dredging for the same.

The proposed contract between the Commission and the city of Quebec for the construction of workshops at St. Malo, was submitted to the City Council July 11. (July, pg. 336.)

Grand Trunk Pacific Railway Construction.

Work on the main line is reported to be progressing satisfactorily. Track has been laid to 1,137 miles west of Winnipeg, or about 380 miles from Trout Creek, B.C., to which point the track laying gang has worked eastward from Prince Rupert. An additional track laying equipment has been sent to work westwards. Work has been started by the Bates-Rogers Construction Co., Chicago, Ill., on the bridge across the Fraser River at Fort George. Application is being made to the Minister of Railways for the approval of route plan for an extension of the line at Prince Rupert round the north shore of Kaien Island and along the Shawlawan passage, 3.5 miles.

G. T. P. Branch Lines.—The Board of Railway Commissioners has authorized the opening for traffic of the Biggar-Calgary branch, from Biggar to Dodsland, Alta., 48 miles, at a speed of 20 miles an hour, rescinding the order of Oct. 24, 1911. Track laying has been completed on this branch to mileage 63, and grading has been completed to the Saskatchewan-Alberta boundary, mileage 105.

It is expected to lay steel during this year on the Young-Prince Albert branch, from Wakaw, the present track end, to Prince Albert; and to lay some track on the Cutknife branch.

Tracklaying has been completed on the Tofield-Calgary branch, and it is expected to have the line ballasted and ready for operation right through by Sept. 1. (July, pg. 336.)

Railway Rolling Stock Notes.

The Canadian Northern Ry. has ordered five electric lighted first class cars, from Canadian Car and Foundry Co.

The Intercolonial Ry. has ordered 20 box baggage cars and 10 vans from its Moncton shops, and has received 8 vans from its Moncton shops, 1 Hart convertible car, built by the Canadian Car and Foundry Co., from the Hart-Otis Car Co., and 1 freight locomotive from Canadian Allis-Chalmers, Ltd.

It is anticipated that delivery of the 2,000 steel underframe box cars which the G.T.R. recently ordered from the Eastern Car Co., will be commenced during August.

The Timiskaming and Northern Ontario Ry. has ordered two complete steel passenger trains, to be built by the Pullman Co., Chicago, Ill., for delivery next year.

The Canadian Car and Foundry Co. has received orders from the Canadian Northern Ry. for five first class passenger cars, and from F. H. Hopkins and Co. for one 30 ton Lidgerwood car.

The Kettle Valley Ry. has ordered one Rodger double plough distributing car, from Hart-Otis Car Co. Following are the chief dimensions:—

Capacity	[illegible]
Length over end sills	[illegible]
Width over side sills	[illegible]
Height from rail to floor	[illegible]
Truck centres	[illegible]
Wheel base of truck	[illegible]

The Grand Trunk Pacific Ry. has received 10 colonist cars, nos. 3043 to 3052; 2 pay cars, nos. 4106 and 4107; one mail car, no. 110; 7 mail and express cars, nos. 117 to 123, and 5 sleeping cars, from Canadian Car and Foundry Co. The sleeping cars are named, Canterbury, Calcutta, Cardiff, Cape Colony and Cambridge.

The Canadian Northern Ry., between June 14 and July 15, received the following additions to rolling stock:—200 box cars, from Canadian Car and Foundry Co.; 200 flat cars, from Crossen Car Co.; 50 Hart cars, from Hart-Otis Car Co.; 40 refrigerator cars, from Mount Vernon Car Co.; 180 box cars, from Nova Scotia Car Works; 5 consolidation locomotives, from Canadian Locomotive Co.; and 2 consolidation locomotives, from Canadian Allis-Chalmers, Ltd.

The Algoma Steel Corporation has ordered 19 special Otis type all steel general service cars, from the Hart-Otis Car Co. These cars will be built by the Canadian Car and Foundry Co., and will be specially and heavily constructed to take care of the hard service for which they are intended. Following are the principal dimensions:—

Capacity	100,000 lbs.
Length over end sills	38 ft. 9 ins
Length inside	36 ft. 9½ ins
Width overall	9 ft. 11¼ ins
Width inside	9 ft. 6 ins
Height	5 ft.
Height from rail	9 ft. 4-13/16 ins.
No. of doors on each side	6

Pacific Coast Claims Agents.—The annual meeting of this association, representative of the claims agents of the steam and electric railways operating on the Pacific Coast, was held at Vancouver, B.C., July 10 to 12. The British Columbia Electric Ry. Co. entertained the members of the association and their wives in various ways during the visit, terminating at a banquet at which A. E. Beck, the company's Claims Director, presided. The officers were elected:—President, J. H. Handlon, San Francisco, Cal.; First Vice President, T. J. Aston, Spokane, Wash.; Second Vice President, A. M. Lee, Seattle, Wash.; Third Vice President, G. N. Smith, Portland, Ore.; Secretary-Treasurer, E. H. Odell. The nominating committee placed the name of Mr. Beck, of the B.C.E.R. Co., before the convention, but he declined on the ground of not being in the centre of business for the Pacific Coast.

Extensions and Alterations at C. P. R. Winnipeg Station and Hotel.

The accompanying illustration shows the C.P.R. station and Royal Alexandra Hotel at Winnipeg as they will be when the alterations and extensions now being made are completed. These alterations and extensions will largely change the appearance of the existing buildings. The improvements being made will be an addition to the hotel which will add 184 room, not 474 as stated in daily press reports, to its accommodation; a new six story building will replace the present baggage room and Dominion Express Co.'s offices; there will be considerable extensions to the present station and waiting rooms, and in the train shed the tracks will be raised six feet, and the Main St. subway is to be raised to a corresponding height and widened to permit of the installation of two additional tracks.

The internal improvements to the hotel will give two additional elevators for baggage; and additional elevators for guests; the addition of a ball room 100 by 40 ft.; a banquet room of similar dimensions, and 10 private dining rooms.

The station accommodation will be rearranged so as to provide special waiting rooms for immigrants; a complete rearrangement of the space allotted for the handling and checking of baggage, and the construction of a subway with connecting stairways between the hotel and the station.

Canadian Pacific Railway Station and Royal Alexandra Hotel, Winnipeg, as They Will Appear When Extensions Contracted for Are Completed.

The work is being carried out by Westinghouse, Church, Kerr and Co., whose local representative is E. J. Brinkherhoff. F. Lee, Principal Assistant Engineer, is in charge for the C.P.R.

The New Brunswick Public Utilities Commission Act.

The powers of the Public Utilities Board appointed in 1910, have been extended by the New Brunswick Legislature. The new sections of the act are 23 to 27 inclusive, and provide as follows:—

(23) Authorizing the Board to make orders for the joining of the tracks of two or more railways chartered by the New Brunswick Legislature and entering any municipality where necessary for the proper interchange of traffic, and providing penalties for neglecting to obey the order.

(24) Granting similar power in case of the intersection of a line chartered by the New Brunswick Legislature with a line chartered by the Dominion Parliament.

(25) Authorizing the Board to act in conjunction with the Board of Railway Commissioners in applications under Dec. 24.

(26) Declaring that the word "railway" in the preceding sections shall include "any steam or electric railway, street railway or tramway."

(27) Provides that "upon the application of not less than 50 owners of real estate in any district in which a street railway is being operated, or of an adjoining district asking for an order of the Board for the extension of the said railway," the Board may, after an inquiry, make such order as the public interests may require.

(28) For refusing or neglecting to obey such order a penalty of $25 a day is provided, which may be enforced under the terms of sec. 6, chap. 55, 1 Geo. V.

Intercolonial Railway Betterments and Extensions.

Following the return to Ottawa of the Minister of Railways from his recent trip of inspection over the Intercolonial Ry., press reports stated that important plans for the improvement of the line had been decided on. These were said to involve the building of a second track from Moncton, N.B., to Halifax, N.S., where new deep water terminals are to be built, and the improvement of the entire line in respect of gradients and curvature. We have been officially advised that these reports are merely newspaper talk.

In a recent interview F. P. Gutelius, General Manager, said the aim of the present management was to creat a 0.6% gradient on the line right through to Halifax and Sydney, and that the change to this gradient would be effected at the rate of about 100 miles of line a year. Following up this report we are officially advised that surveys are now being made for grade revision on the Cape Breton line, from Point Tupper to Sydney, 91 miles, and that the surveys have been so far completed that it appears that a gradient of 0.6% will be secured in both directions. It is also proposed to build a second track from Levis to Chaudiere Jct., Que., nine miles, and a diversion from Derby Jct., to Nelson, N.B., which will shorten the line into Fredericton by about three miles.

We are officially advised that a contract has been let to the Cook Construction Co., of Sudbury, and Andrew Wheaton, of Amherst, N.S., for the building of a double track line from Rockingham to the new ocean terminals at Halifax, N.S. The estimated cost of this work is $1,500,000, and it is to be completed within two years. This piece of line will be about five miles long and will be known for bookkeeping purposes as the Halifax Terminal Ry. The construction will involve a good deal of excavation, the material from which will be used in filling on the work at the new deep water dock. A short description of the new terminals was given on pg. 264 of our June issue.

In connection with the new deep water terminal plans F. W. Cowie, who advised the Government on the matter, said that after consultation with various authorities it was decided that it was necessary to provide accommodation for nine ocean going vessels at once; for nine additional vessels in about three or four years, and for a further nine vessels after the opening of the Quebec bridge, with a corresponding increase in the railway accommodation at the same time. Having these requirements as a guide all possible locations were considered and it was finally decided to adopt George's Island Bay as the site for the new terminals. With an excellent approach through Fairview to the harbor site from a railway point of view, it was then necessary to lay out as most suitable, in consideration of the physical features of the location, the type and design of harbor development which has been decided upon. It was found that a union station could be located within half a mile of the centre of the city, with excellent streets leading from the station to all city points. It was found that by building a bulkhead wharf along the narrower waterfront 2,000 feet of bulkhead quay could be provided so as to give the very best possible harbor accommodation.

The most important construction work going on is the building of the line from Dartmouth to Upper Musquodoboit, 67 miles. The maximum gradient is generally 1%, but there is one stretch of 7,000 ft. where the gradient is 1.20%. With the exception of one curve of eight degrees, the maximum curvature is six degrees; all curves sharper than two degrees were spiralled before grading commenced. There are 36 steel structures, and one steel viaduct. The viaduct consists of one span of 70 ft. and two of 40 ft. each, while the dimensions of the bridges are as follows:—Two of 125 ft. each, one of 115 ft., one of 75 ft., three of 60 ft. each, three of 40 ft. each, one of 30 ft., one of 20 ft., and 24 of 17 ft. each. We are officially advised that 75% of the grading and 50% of the masonry has been completed and that 10 miles of track has been laid. It is expected to have 50 miles of track laid by the end of the year, and to have the line completed during 1914. The general contract was let to M. P. and J. T. Davis, Quebec, who sublet the entire work to Cavicchi and Pegano. W. A. Hendry, A.M. Can. Soc. C.E., is engineer in charge of construction. (July, pg. 334.)

A contract for the construction of the first unit of the Davidson and Smith elevator at Fort William, has been let to the Barnett and McQueen Co. for $358,000. It is stated that work will be started at once

Traffic Orders by the Board of Railway Commissioners.

The dates given for orders are those on which the hearings took place, and not those on which the orders were issued:—

Interswitching at Belleville, Ont.

19481. June 2. Re application of City of Belleville, Ont., and The Graham Co., Ltd., for an order directing the Grand Trunk and Canadian Northern Ontario Railway Companies to furnish interswitching facilities between their respective railways at Belleville. It is ordered that the tracks of the C.N.O.R. and G.T.R. Companies at Belleville be so connected as to provide for the reasonable receiving, forwarding, delivering, and interswitching of traffic between their respective railways; the C.N.O.R. Co. to file, within 15 days from date, plans showing proposed connection and interchange tracks, located on the south side of Wharf St., leading from the said Company's tracks to the Canada Steel Co.'s plant, and connecting with the G.T.R. tracks leading to the said plant near George St.; and that the work be proceeded with, and proper facilities afforded for the receiving, forwarding, delivering, and interswitching of traffic between the said railways, within 30 days after the approval of the plans by the Board, upon the city consenting to tracks being laid on Wharf St. The apportionment of cost of said work is reserved.

Terminal Charges at Kelowna, B.C.

19497. May 15. Re application of Kelowna Board of Trade for an order directing the C.P.R. to discontinue the charge of $1 made by it on all incoming and outgoing cars delivered from and taken to its car barges. It is ordered that the application be dismissed.

Extension of Cartage Limits at London.

19539. June 9. Re application of the City of London, Ont., for certain extensions to the area in the city within which the railway companies undertake the collection and delivery of freight at the tolls published in their special tariffs of cartage charges. It is ordered that the eastern limit of the area within which the railway companies undertake the cartage of freight in London, at the toll therefor published and filed, be extended to, and including, Ashland Ave.; and that the southern limit of the area be extended so as to include Adelaide St. south of the River Thames to Terrace St. and Terrace St. westwardly, to, and including, the factory of the Richards-Wilcox Canadian Co.; the said eastern extension to be made within 10 days from the issuance of this order, and the said southern extension immediately upon the completion of a permanent pavement thereon.

Slats for Refrigerator Cars.

19570. June 13. Re order 18825, Mar. 5, 1913, made upon the application of the Fruit Growers' Association of Ontario, for an order directing railway companies, inter alia, to furnish refrigerator cars equipped with rack or slatted floors, so as to ensure free circulation of cold or warm air, and to reimburse the cost of such rack or slatted floors when they have to be furnished by the shippers themselves; and directing, with respect to that part of the application, that the Grand Trunk, Grand Trunk Pacific, Canadian Pacific, and Canadian Northern Railway Companies notify the Board, not later than April 15, 1913, what number of their, and each of their, refrigerator cars in service are supplied with slatted floors, and what number are not. Upon the information having been furnished in compliance with the order, and the reading of the report of the Chief Traffic Officer of the Board, it is ordered that where shippers furnish slats for the floors of refrigerator cars not equipped with permanent slatted or double floors, or for the floors of box cars tendered to and accepted by shippers in lieu of refrigerator cars, for the carriage of fresh fruits, railway companies of Canada shall allow the shipper $3 a car for the slatting; the shipper to be permitted to deduct the allowance from the freight charges payable by him upon the shipment in such car in which the slatting has been furnished; the shipper's receipt for the amount allowed to be given the railway company's agent at the forwarding station, and to be accepted by him as so much cash in the prepayment of the freight charges on such car.

Ore Rates in British Columbia.

19712. June 30. Re application of Hudson Bay Mining Company, Salmo,B.C., complaining of the rate on ore from Salmo to Nelson charged by Great Northern Railway, as compared with the rate charged by C.P.R. from Nelson to Trail; and that the G.N.R. insists on a shipping valuation of $100. It is ordered that G.N.R. put into force on shipments of ore, in carloads, from Salmo to Nelson, the following additional rates, viz., $1.10 a net ton when the valuation does not exceed $15 a ton, $1.15 a net ton when the valuation does not exceed $20 a ton. The said additional rates to be made effective within 30 days from date of this order.

Modification of Rules.

19710. June 27. Re order 18564, Jan. 25, 1913, directing that the effective date of the modification of rule 7 of G.T.R. Special Freight Tariff, C.R.C., no. E. 2374, I.C.C. no. 1660, contained in supplements 5 and 3 thereto, and the modification of rule 33 of the C.P.R. Local Freight Tariff, C.R.C. no. E. 2141, I.C.C. no. E. 1288, contained in supplements 9 and 6 thereto, be postponed pending a hearing of the matter at the sittings of the Board to be held in Toronto, Feb. 7, 1913. At the hearing at the said Toronto sittings, the effective date of the said modification was further postponed until July, 1, 1913, to enable the companies to furnish the Chief Traffic Officer of the Board with further material. And upon the recommendation of the Chief Traffic Officer it is ordered that the effective date of the modification of the rules be further postponed until Aug. 1, 1913.

Transportation of Explosives.

General order 105. May 22. Re general order 100, Jan. 16, 1913, approving regulations for the transportation of explosives by railway companies; and the application on behalf of the railway companies to amend the regulations to provide, under certain conditions, for the haulage of explosives in mixed trains. It is ordered that par. 1666 (1), and the unnumbered par. between pars. 1683 and 1684, pages 23 and 27, respectively, of the regulations, be amended to provide that railway companies, but only on such lines, or portions of lines, on which solid freight trains are not operated, be permitted to carry explosives, the carriage of which is not forbidden by the general order 100, and in accordance with the regulations therein contained, in quantities not exceeding 500 lbs. in any mixed train; the explosives to be contained in but one car, and said car to be so placed in the train that not less than 5 freight cars are between it and the passenger car or cars.

Readjustment of Lumber Tariffs.

In May the C.P.R. appealed to the Governor in Council against the Board of Railway Commissioners' order directing it, the Canadian Northern Ry. and the Grand Trunk Pacific Ry. to adjust lumber tariffs, the application for the order having been made by the Mountain Lumber Association. Since the appeal was lodged conferences have taken place between the parties interested, which have resulted in the Association withdrawing its complaint and the railway companies issuing tariffs which are satisfactory to the Board.

Among the Express Companies.

F. M. Smith, heretofore route agent, Canadian Ex. Co., Winnipeg, has been appointed agent there, vice F. Norman, promoted.

F. Norman, heretofore agent, Canadian Ex. Co., Winnipeg, has been appointed Superintendent, Northwestern Division, vice N. J. Ross, transferred to Montreal. Office, Winnipeg.

N. J. Ross, heretofore Superintendent, Northwestern Division, Canadian Ex. Co., Winnipeg, has been appointed Superintendent, Eastern Division, Montreal, vice P. A. Paterson, resigned.

N. J. Ross, who has been appointed Superintendent, Eastern Division, Canadian Ex. Co., Montreal, entered Canadian Ex. Co.'s service in 1885 at Orillia, Ont. He was appointed Superintendent at Montreal in 1907, and in 1908 was transferred to Winnipeg to establish the company's system over the Grand Trunk Pacific Ry.

The Board of Railway Commissioners has approved the Dominion Ex. Co.'s Schedules, B, C.R.C. 4345, to supersede C.R.C. 2583; C, C.R.C. 4346, to supersede C.R.C. 2584, and D, C.R.C. 4347, to supersede C.R.C. 2585, approved by order 14418, July 19, 1911; the Canadian Northern Ex. Co.'s schedule B, C.R.C. 791 to supersede C.R.C. 725, approved by order 14418, July 19, 1911; the Canadian Ex. Co.'s schedule B, C.R.C. 1514, to supersede C.R.C. 1364, and C, C.R.C. 1515, to supersede C.R.C. 1365, approved by order 14413, July 19, 1911, and the Great Northern Ex. Co.'s schedules A and B, C.R.C. 298, to supersede C.R.C. 270, approved by order 14417, July 19, 1911.

Railway Lands Patented. — Letters patent were issued during May, covering Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

Alberta Central Ry.	[illegible]
Canadian Northern Alberta Ry.	[illegible]
Canadian Northern Ry.	81.73
[illegible] Ry.	[illegible]
Canadian Pacific Ry.	[illegible]
Grand Trunk Pacific Branch Lines Co.	67.26
Qu'Appelle, Long Lake and Saskatchewan Rd. and Steamboat Co.	28.83
Total	[illegible]

The Projected Round the World All Red Route.—A London cablegram of July 15, states that a contract has been signed for the building of a railway from Collooney to Black Sod Bay, County Mayo, Ireland, and for the construction of harbor works at that point. This is part of the project for an all British round the world route, and will be linked up with the Canadian railway system by a steamship service, which the promoters say will make the trip in three and a half days.

The Grand Trunk Ry. Co. has over 60,000 shareholders.

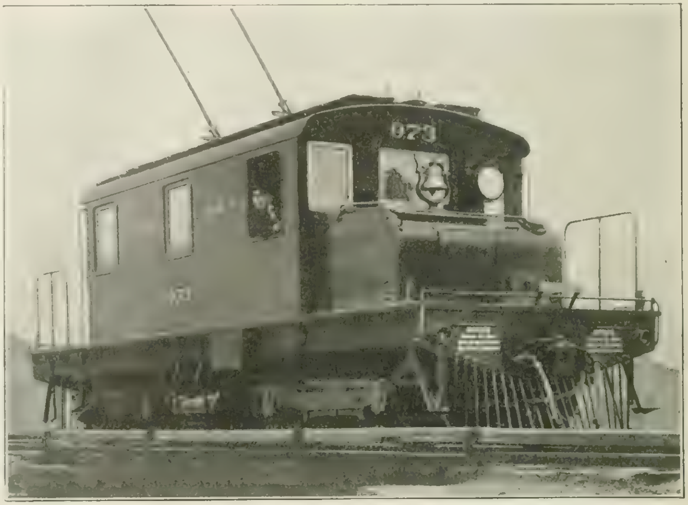
Electric Railway Department.

Electric Locomotives for British Columbia Electric Railway Freight Service.

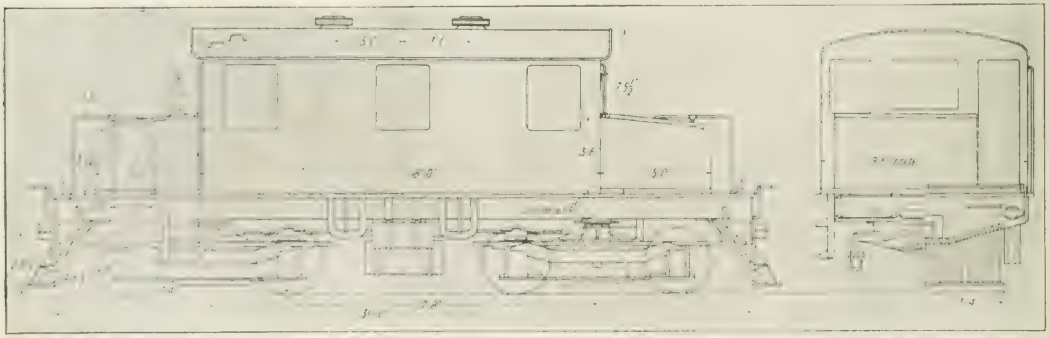
The B.C. Electric Ry. Co. has recently received five 50 ton electric locomotives for freight service, which are similar to some 60 ton ones built recently for the Southern Pacific Co. They are standard gauge, and are of the double truck type, with a central cab of the steeple type. This type of locomotive, because of its flexibility and simplicity of construction, is said to be proving very successful in freight, switching and industrial service, where severe operating conditions are frequently met.

Each locomotive is equipped with four Westinghouse 308-D-3 box frame commutating pole 600-1200 volt railway motors, and Westinghouse type hb unit switch control. The 308-D-3 commutating pole motors are adapted to subway, elevated and trunk line railway service. Since this motor is high powered and of the commutating pole type, heavy loads can be handled without encountering motor troubles that are incident to such conditions. The 308-D-3 motor is well adapted where 1,200 volt direct current operation is desired, and for such service two motors are permanently connected in series. The box frame construction is claimed to have decided advantages, on account of its solid mechanical construction and the alignment of all parts. The commutating pole feature of this motor is claimed to make it operate reliably and economically, as heavy overloads can be handled safely and a large range of over voltage is permissible without serious consequences, which is incident to such heavy service in which this equipment operates.

The mechanical features of the motors are of interest. The frame is a one piece steel casting with large openings bored out at each end to admit the armature bearing housings and for taking out the armature.



Fifty Ton Electric Locomotive for British Columbia Electric Railway.



Side and End Elevations, Electric Locomotive, British Columbia Electric Railway.

The weight of the motor on the axle is carried almost entirely by a solid bracket, which extends over the axle. The split of the axle caps is such that the weight of the motor is taken off the axle cap bolts, thus greatly reducing troubles at this point. This type of motor is, it is claimed, easily handled in the shop where travelling cranes are available. The frame has a large lug or nose cast on it which, by means of a truck suspension bar, carries the weight of the motor except that part carried by the axles. Safety suspension lugs provided as an additional safeguard are so arranged that should the main suspension lug break the motor would drop but a fraction of an inch on to the truck suspension bar, causing no trouble. Axle bearing dust guards are provided, which consist of sheet steel casings arranged between the axle bearing housings. The dust guards effectively protect the axle bearings against the entrance of dust and dirt and thereby increase the life of the bearings, gears and axles.

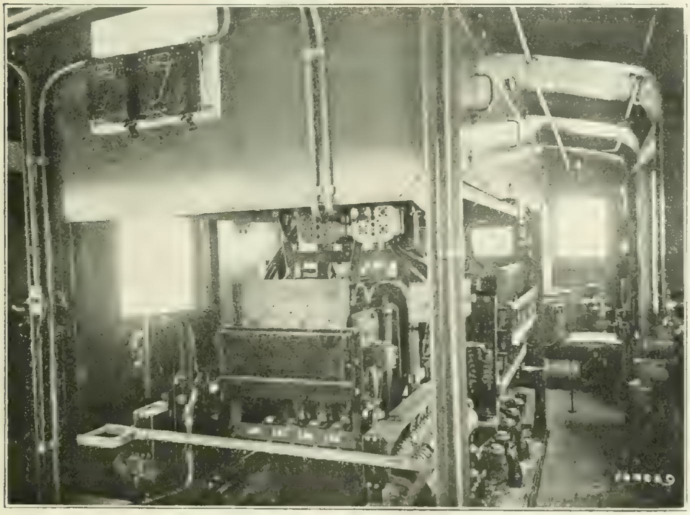
At each inspection of the bearing construction it is possible to gauge the oil by means of a chamber provided for this purpose, which results in economy in oil. Each housing consists of three chambers, an oil reservoir, a waste pocket, and an overflow pocket. Oil is poured into the oil reservoir and then, through a bottom connection, reaches the waste in the waste pocket. The oil then filters up to the bearing by capillary attraction, leaving all dirt at the bottom under the waste. The reservoir has ample capacity and is so located in the bearing housings as to be easily emptied and cleaned.

The Westinghouse unit switch control used is similar to the control used by many electric railways and electrified steam roads. It is claimed that it is especially adapted to locomotive service, where currents of high value are to be handled and broken, for, due to the inherent construction of the unit switch, there is positive action in the making and breaking of circuits carrying heavy currents, and due to the high pressure between contacts made possible by closing all switches by compressed air, no overheating or burning is experienced. It is also claimed to be simple and accessible for inspection, reliable in operation, and economical to maintain.

The control equipment consists of the following principal apparatus:—2 master controllers, 2 switch groups, 2 reversers, 1 series parallel switch, 1 line switch, 1 control resistor, 2 hand operated change over switches, 2 sets of storage batteries (10 cells, each set giving 20 volts). All of the above pieces of apparatus are enclosed in a wire cage supported by an angle iron frame work in the centre of the locomotive cab.

The grid resistors are mounted in the roof of the locomotive cab over the unit switch apparatus, in a portion framed off and ventilated through the roof by two ventilators. Each of the two master controllers have three running notches on 600 volts and two on 1,200 volts. An interesting item of this equipment is a series parallel switch, which is controlled by a single pole double throw knife switch at either end of the cab. On 1,200 volts the connections are so arranged on the change over switch that the series parallel switch is in the 1,200 volt position, connecting two motors in series regardless of the position of the knife switch.

On 600 volts, the connections on the change over switch are so altered on changing over to the 600 volt position that the motors of each pair, by means of the series parallel switch, may be thrown either two in series or two in parallel, where in the 1,200 volt position the motors are two in series only. This is of particular advantage on 600 volts in accelerating heavy loads. The motors are first connected four in series until the train is started. The controller is then returned to the "off" position, and the series parallel switch thrown to connect the motors of each pair in parallel. The master controller is then operated to connect in "series parallel" and finally in "parallel." In changing over from 1,200 volts to 600 volts, the resistances are paralleled, and also the dynamotor circuits are adjusted for 600 volts. This is all done by the two change over switches.



Cab Interior, Electric Locomotive, British Columbia Electric Railway.

On these locomotives particular care has been taken in arranging the apparatus to facilitate ease of inspection and maintenance. By the control equipment being centrally located, it is accessible from all four sides. This is a distinct advantage to operating companies, since ease of inspection assists in reducing the maintenance.

Two Westinghouse dynamotor compressors are used to furnish compressed air for the brakes and control, a blower fan attached to the dynamotor shaft furnishes the air for ventilating the main motors. One of these is mounted under each end hood. The dynamotor runs continuously, but the air compressor does not run all of the time, it being stopped by a governor throwing the friction clutch out between the dynamotor and compressor. The dynamotor compressor supplies 600 volt current for the lights. A steel air duct built into the frame of the dynamotor compressor delivers air for ventilation to points directly over each motor where by means of canvas ducts the air is conducted to the motors. Two dynamotor switches are furnished, one for each dynamotor. Two transfer switches are used for transferring the lighting load from one dynamotor and the cab lights on the other.

All wiring is put in conduit. A complete type EL combined straight and automatic air brake equipment, with two D3 compressors, each having a displacement capacity of 35 cu. ft. of free air per minute, is included in the equipment for each locomotive.

The trucks are of the equalized pedestal type, with rolled steel side frames and angle iron end frames. They have rigid centres, the bolsters secured directly to the side frames. The bolsters are of cast steel. The truck is kept square by heavy cast steel gusset plates, which are bolted to both side frames and bolster. The springs are half elliptic, and of such length (44 ins.) as to insure easy riding qualities. The wheels are steel tired, with cast iron spoke centres.

The frame is composed of four 13 in. longitudinal channels. These are strongly braced transversely, above the truck bolsters, by means of plate stays, which are riveted to the channels, frame bolster and floor plating. The channels are also braced transversely, midway between the truck centres. The end bumpers consist of steel plates 1 in. thick, to which the coupler pockets are bolted. The couplers are of the M. C. B. type, placed at standard height (34½ ins.) above the rail.

The cab is of steel, arranged for double end operation. It is provided with end doors, and careful attention has been given to such details as hand holds, steps and cab windows. A sloping hood is placed at each end of the locomotive. The floor of the cab is of steel plate, covered with hardwood matched flooring.

The equipment includes air and hand brakes on all wheels, air sanders, a pilot and head light at each end, a bell gong and air whistle.

These locomotives are designed to negotiate curves of 40 ft. radius when running without trailing loads. Their principal dimensions are as follows:—

Wheel base, rigid ......7 ft. 4 ins.; total,	25 ft.
Driving wheels, diameter	36 ins.
Journals	5 x 9 ins.
Width, over all	10 ft.
Height of top of cab	12 ft.
Length between coupler knuckles	35 ft.
Weight	100,000 lbs.

The electric apparatus was built by the Westinghouse Co., and the mechanical parts by the Baldwin Locomotive Works.

Attempt by Board of Health to Regulate Street Railways in Toronto.

On the recommendation of C. J. Hastings, M.D., Medical Officer of Health for the city of Toronto and executive officer of the Local Board of Health, the Board has passed the following regulations:—

"From and after the approval of these regulations, all companies or corporations operating street passenger cars or vehicles constructed and used for the purpose of carrying passengers, whether propelled by horse, electricity or cable power, are prohibited from hauling, carrying or conveying in any car at any one time a greater number of passengers than is equal to 1 2-5 times the proper seating capacity thereof, with the addition of five passengers on the rear platform of each car; and said railway companies or corporations are further prohibited from carrying any passengers between the seats of the open summer cars.

"None of the said street cars or vehicles shall be furnished with cushions, on the seats or backs, made of any material that cannot be readily cleaned and disinfected. and all cars shall be so constructed as to provide for and secure efficient ventilation and heating at all times, to the satisfaction of the Medical Officer of Health. A Fahrenheit thermometer shall be hung in the centre of each and every car.

"Each and every street passenger car used for the transportation of passengers shall, on the days on which it is used for such purposes, be carefully and thoroughly washed and cleansed on the inside, and all cushions and upholstering thoroughly cleansed by means of a vacuum cleaner.

"All straps or hangers on any of the aforesaid cars shall be composed of or covered with celluloid, or a similar non-absorptive material, and must be regularly cleaned, as ordered by the Medical Officer of Health."

The Master Car and Locomotive Painters' Association will hold its annual convention at Ottawa, Ont., Sep. 9 to 12.

Electrification of the Canadian Pacific Railway Rossland Subdivision.

In Canadian Railway and Marine World for May, 1912, mention was made of the contemplated electrification of the C.P.R. Rossland subdivision, in British Columbia, as a means of determining the suitability of electrification for main line operation on the company's line on the B.C. Division, this branch having been selected as an excellent trial portion for this purpose, owing to the heavy nature of the line. At that time, both the alternating and direct current systems were under consideration, and it was only recently that it was decided by the C.P.R. management to adopt the d.c. as best adapted to its requirements.

The section to be electrified runs from Rossland to Castlegar Jct., the junction with the Boundary subdivision. From Smelter Jct. to the end of the section at Rossland, 10.6 miles, is one long continuous grade. The length of the Rossland subdivision is 29.3 miles, which with sidings and yard track mounts up to a total trackage of 43 miles, all laid with 80 lb. rails. From Castlegar Jct. to Smelter Jct., 18.7 miles, there is a ruling gradient of 2.2%, except for a short distance at China Creek hill, where it is 4%. From Smelter Jct. to Rossland is the heavy portion of the line, with a 4.8% ruling gradient, averaging 4% over the section, and a maximum curvature of 20°. One mine switch on this line has a 26° curvature. All grades and curves are compensated.

There is a fairly heavy tonnage to be handled over both portions of the line. The average daily tonnage from Castlegar Jct. to Smelter Jct. (the junction point for Trail, two miles distant on a branch) is 2,489 tons, of which 2,349 are freight. In the opposite direction the figures are 1,039 tons, of which 899 are freight. From Rossland to Smelter Jct. there are 2,110 tons, of which 1,970 are freight; and in the opposite direction 1,910 tons, 1,770 tons being freight. This traffic is now being handled by five locomotives; two of 115% capacity or 23,000 lbs. tractive power, two of 180% or 36,000 lbs., and one of 120% or 24,000 lbs.

The motive power installation will consist of four, and possibly a greater number of, 75 ton electric locomotives with the following general dimensions:—

[illegible]

The locomotives will have four pairs of driving wheels, with no trailing or leading trucks. To each pair of drivers will be geared a GE239 1,100 volt 185 ampere motor, of 270 h.p. each. The impressed voltage will be 2,400, and for slow speed operation, the motors will be operated in series, with series parallel for high speed operation. The operating equipment will be such that three locomotives can be operated in multiple. The trucks on which the motors will be mounted will be articulated, and will negotiate a minimum curvature of a radius of 280 ft., or a curve of 20 degrees. The instantaneous tractive effort will be 45,000 lbs., based on a 30% coefficient of adhesion. The maximum speed on the level with a train of 925 tons will be [illegible] miles an hour. The coasting speed will be 40 miles an hour.

Power will be obtained from the West Kootenay Power and Light Co. at a pressure of 60,000 volts, which will be stepped down to the 2,400 volt line pressure at substations, the locations of which have not yet been determined. The overhead construction will be catenary.

It was announced recently by George Bury, Vice President, C.P.R., in charge of Western Lines, at Winnipeg, that the locomotives, machinery, etc., will be supplied by Canadian General Electric Co., the details in connection with which are being worked out by H. H. Vaughan, Assistant to the Vice President, Montreal.

Montreal Tramways Mutual Benefit Association.

The report for the year ended April 30, 1913, gives the following summary of relief work done, as compared with the preceding year:—

	1912-13	1911-12
Members disabled through sickness or injury	1,205	1,173
Visits made by physicians to disabled members..	[illegible]	626
Consultations given by physicians to disabled members	[illegible]	[illegible]
Prescriptions issued	5,769	5,811
Paid for sickness and injury	[illegible]	$10,274.10
Paid for medicine	[illegible]	$1,725.95
Paid for pensions	$408.50	$354.50
Paid for withdrawals ..	[illegible]	[illegible]
Paid for death and burial insurance	$7,083.34	$12,533.35

Fourteen members died during the year and two had their benefits commuted. The ninth annual picnic netted a profit of $9,590.29. The Montreal Tramways Co. gave a special Christmas donation of $4,000, making the total contributions received from the company $18,318.71, which, added to fees and dues received from members, viz., $15,651.00, the proceeds of the picnic, and the interest on investments and bank deposits amounting to $15,506.52, made a total revenue for the year of $50,476.23, and the expenses being $28,795.42, left a surplus of $21,680.81.

Since the Association's organization the following amounts have been paid in benefits:—

Death and burial insurance	[illegible]
Sickness and injury benefits	83,765.25
Medicine	[illegible]
Medical attendance	[illegible]
Pensions	1,754.50
Refunds	[illegible]
Total ..	[illegible]

The initiation fee for members is $1, and the monthly fee, 50 cents, which secure the following benefits:—

In cases of disablement after the first 6 days, 60 cents a day for 90 days, and 30 cents a day for the next 90 days; free medical attendance; free medicine; 20% discount on all medicines, etc., required by members of the family; a life insurance policy of $500 and $50 towards cost of funeral expenses; a pension when superannuated and too old to work; members leaving service after 5 years membership are entitled to a refund of one third of fees and dues paid in by them, less amount received in benefits; members leaving service after 10 years membership are entitled to a refund of two thirds of fees and dues paid in, less amount received in benefits.

The principal officers of the Association are:—President, J. E. Hutcheson, General Manager, Montreal Tramways Co.; Secretary-Treasurer, Patrick Dubee, Secretary-Treasurer, Montreal Tramways Co.

Wheel Guards on Montreal Tramways Company's Cars.

Some little time since the Montreal Tramways Co. applied to the Quebec Public Utilities Commission to suspend its order of Nov. 18, 1910, special direction No. 4, in regard to single truck cars until a compensating device could be thoroughly tested. The committee accordingly directed that tests should be made under direction of A. Fregon, who reported the results of a number of tests from which he concluded that the compensating device could be effectively used in connection with the H. & B. wheel guard upon single truck cars, and that the same would be advantageous for further protection to the public in the operation of the company's system.

The commission then ordered that all single truck cars in use upon the company's system shall be forthwith equipped with the H. & B. wheel guard and trip gate, with the compensating device, reported upon, to operate with the trip gate so as to overcome the difficulty from oscillation in the use of this class of car. The company shall report each month the number of single truck cars in use and the number so in use thus equipped, such equipment to proceed with all possible diligence.

The order respecting the abolition of single truck cars is not to be considered as in any wise modified by this order, but such abolition shall proceed as directed by order of Nov. 18, 1910.

Regina Municipal Railway Notes.

Some weeks ago the ratepayers voted in favor of the operation of the railway on Sundays, the vote being 473 for, 82 against. The Sunday service was inaugurated June 22, when about 9,000 passengers were carried, the revenue being about $400.

A shipment of 8 double truck p.a.y.e semi convertible cars has been received from Preston Car and Coach Co., which makes the total rolling stock, 18 double truck and 6 single truck cars. Following are the principal dimensions of the new cars:—

Length of car body	28 ft.
Length of front vestibule (outside)	5 ft.
Length of rear vestibule (outside)	7 ft.
Projection of bumpers	6 ins.
Length of car over bumpers	41 ft.
Width of car over side sheathing.....	8 ft. 4 ins.
Width of car inside	7 ft. 8 ins.
Height of car from bottom of sills	8¼ ft.
Width of front vestibule door	30 ins.
Width of rear vestibule door	48 ins.

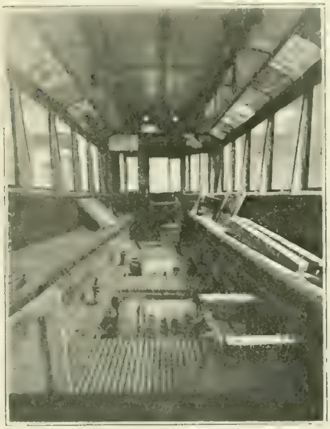
A Regina correspondent wrote us recently that there was a possibility that workmen's special tickets would be done away with, as it was believed that few availed themselves of the opportunity the cheap fare affords for going home to dinner. We are officially advised that the management has no such intention. These tickets are sold at 8 for 25 cents. They are good from 6 to 8 a.m.; 10.30 a.m. to 1.30 p.m.; and 5 to 7 p.m.

Following are particulars of revenue and passengers carried for 10 weeks up to June 21, when the line was operated 6 days a week. Sunday operation commenced June 22:—

				Revenue.	Passengers.
Week	ended	April	19.	[illegible]	68,104
"	"	"	26.	[illegible]	68,616
"	"	May	3.	[illegible]	[illegible]
"	"	"	10.	[illegible]	[illegible]
"	"	"	17.	[illegible]	[illegible]
"	"	"	24.	[illegible]	76,055
"	"	"	31.	[illegible]	74,277
"	"	June	7.	[illegible]	[illegible]
"	"	"	14.	[illegible]	[illegible]
"	"	"	21.	[illegible]	[illegible]

Tractor Emergency Car on Dominion Power and Transmission Co.'s Line.

During the past spring a portion of this company's line on the Radial Division, including the portion of the city service that operates to the industrial area in the east end of Hamilton, was flooded by the high water of Lake Ontario. This short section of possibly a quarter mile follows a narrow shore inlet, over which pass two steam railway lines. To obtain the necessary clearance under these two bridges, it was necessary for the electric line tracks to be set near the water level, and in consequence the high water flooded the line.



Motor Suspension for Operation Through Water Covered Tracks.

Operation through this section of the line was made impossible to the regular equipment, from the presence of the water, and in order to carry on the service with as little interruption as possible, an old car was partially converted to act as a tractor for trailer cars through this section, the passengers being transferred at both ends of the short run to the regular cars. Passing the regular cars, with the motors low set as in the normal installation, would lead to numerous burnouts.

The arrangement of the tractor car is shown in the accompanying illustration. It was an old single truck motor car, carrying two motors, which are normally suspended from the truck framing at the casing end and on the axle on the pinion side. In the makeshift arrangement adopted, both motors were disconnected from their rear frame support, and swung up through the floor about the axle support. Along the floor of the car, in front of the side seats, were placed lengths of 3 in. angles, from which the frame of the motor casing was supported by bolts on each side, bearing on small coiled springs. A flexible spring motor suspension was thus obtained, and the motors raised far enough to be clear of water up to about 15 ins. deep.

Citizens of Sydney, N.S., are urging on the Reid Newfoundland Co. the desirability of making its Canadian steamship terminal at Sydney, instead of North Sydney, as at present. It is not likely that such a change will be made, in the near future at any rate.

Betterments and Extensions on the Cape Breton Electric Company's System.

We are officially advised that the following works are being carried out during this season:—Building a two story addition to the present warehouse and freight shed at Sydney; constructing an extension to the car houses at Sydney thereby increasing its capacity 50%—included in this will be a new paint shop and special facilities for more easily handling truck repairs; reconstruction of switch board in power house at Sydney; construction of a 22,000 volt 3 phase transmission line from Sydney power house to Reserve Jct., on the interurban line, with the erection of reinforced concrete substation, in which will be installed at present one 300 k.w. motor generating set for supplying current to the Glace Bay Division—this substation will do away with the operation of the present steam station at Dominion no. 4, and will necessitate the installation on the Sydney end of the line of a bank of 2.250 k.v.a. step up transformers. Oil switches will also be installed in the high tension room of the Sydney power station on this new line, and on the present North Sydney transmission line as well; a telephone despatching system will be installed on the Glace Bay Division; a double track will be built on Townsend St., Sydney, from the car house to Terrace St., with two sidings on the pier line to allow a more frequent schedule to be operated thereon, and two complete supply dry pipe automatic sprinkler systems will be installed in the present Sydney car house and extension. Other minor items include the purchase of shop machinery, railway feeders and overhead ground returns. Much of the work has already been done, and orders have been placed for all the machinery and material necessary for the completion of the work. E. L. Milliken, Sydney, N.S., is Manager. (July, pg. 334.)

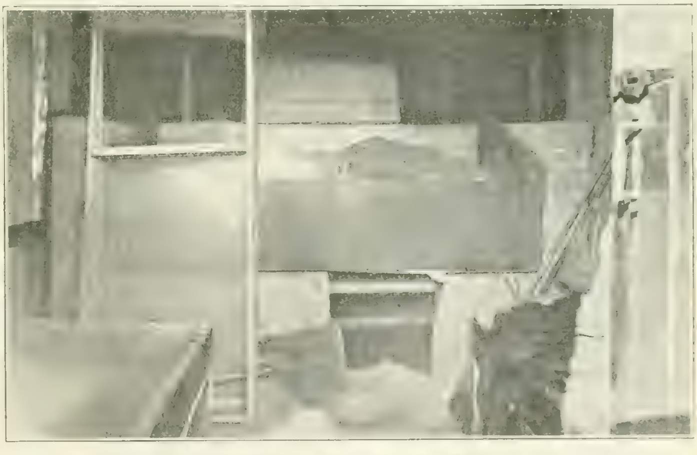
A Car Foreman's Opinion.—B. Bunton, Car Foreman, Grand Trunk Ry., Belleville, Ont., writes: "I cannot be without Canadian Railway and Marine World, as I find it very instructive as well as interesting, and I shall have great pleasure in renewing my subscription when it becomes due."

Judgment Against the Grand Valley Railway.

The case of Allen vs. Grand Valley Ry. Co., et al., was heard in the Trial Court at Toronto, June 30. This was an action by a firm of steel manufacturers at Sheffield, Eng., to recover moneys claimed as balance due for goods supplied to defendant company for use in construction of the railway, and payment of which plaintiffs claim defendants, M. A. Verner, of Pittsburgh, Pa., the President, and W. S. Dinnick, of Toronto, the Vice President, guaranteed. Mr. Justice Kelly gave the following judgment:—"My opinion is that the sureties were not discharged from liability. I find that the period of credit dating from the delivery of the goods had expired at the time the action was begun and that, therefore, these proceedings were not premature. No evidence was submitted to substantiate claims set up in defendant's counter claim. Judgment for plaintiffs for $12,041.91 and interest as claimed and costs, and dismissing defendant company's counter claim with costs." A stay of 30 days was granted.

Sand Drying Plant on Niagara, St. Catharines and Toronto Railway.

At this company's shops in St. Catharines, Ont., there is a complete sand drying plant, housed in a small frame building adjoining the main line, near the main shop building. The size of the plant is shown by the accompanying illustration, which includes practically the whole interior. The sand drying apparatus consists of a shell of brick work, raised about a foot above the ground, into which the wet sand is placed. In the hollow chamber formed by the brick walls under the sheet metal sand box, there are electrical heating coils. These are built up of wrought iron piping covered with asbestos and on which resistance wire is wound. These coils may be seen through the front opening, immediately beneath the sand box. The electrical connections are on the extreme right of the box. In the left foreground, beside the door, is the storage box, into which the dried sand is shovelled. This arrangement is due to W. H. Horton, Engineer of Equipment.



Electrically Heated Sand Drying Plant.

The Medicine Hat Electric Railway.

As previously stated in these columns the electric railway to be built in Medicine Hat, Alta., will be constructed by the Montreal Engineering Co., Ltd., which will complete it and put it in operation before turning it over to Medicine Hat Tramways, Ltd., which will probably have a Dominion charter. This has been the Montreal Engineering Co.'s practice in the past in regard to Porto Rico Railways Co., Camaguey Co. (Cuba), Trinidad Electric Co., etc.

We are officially advised that it is proposed to build 11 miles of track within 15 months, but the location of only a portion of this has so far been announced by the city council. It is hoped to have 3 or 4 miles in operation by Dec. 1, but this depends on the delivery of electrical machinery and rails. The line will be laid with 72 lbs. 6 in. Loraine T. rails. laid with 72 lbs. 6 in. Loraine T rails. vertible, double end control, closed vestibule.

The Ansley spur, which is being built by the city council to connect with an adjacent coal mine, will be electrified and will be maintained and operated by the company under agreement with the city. The company's charter empowers it to carry freight during restricted hours, and an electric locomotive will probably be ordered of a box car type, suitable for carrying building material and other freight to other parts of the city.

The company will not build a power house at first, but will buy power from the city, delivered at 2,200 volts, three phase, 60 cycle, a.c. at 1 cent. per k.w. hour. Later, when the population increases and the company wishes to operate a power house of its own the city will supply natural gas at 5 cents per 1,000 ft.

Motor Bus Traffic in England.

In connection with the recent application of interests allied with the London General Omnibus Co. to the Toronto City Council for an exclusive franchise for the operation of motor busses in the city, the following taken from the evidence of the Managing Director of that company, before a Select Committee of the House of Commons, in London, Eng., might be interesting, as showing the trend of motor bus traffic.

He stated that his company had 32 different types of bus, and in the latest types the laden weight had been reduced from 5 to 3½ tons, and the vehicles were less noisy than formerly. The influence of the police had been very useful, their regulations becoming more and more stringent, thus developing a highly efficient bus. He had had considerable experience in Canada and the U.S. in connection with tramway operation, and in that connection he believed that compared with the early days of electric operation accidents had become rarer, owing to familiarity and the adoption of safety appliances, together with greater care on the part of the public and employes, and he considered that the same would follow on the development of the motor bus. As to the operation of the busses, he stated that they had working agreements with all the tramway companies in London, except the municipal lines, and he considered that the ideal state of things would be that the whole of the busses and tramways should be under one control, not with the idea of creating a monopoly of the traffic, but to lessen danger to the public caused by competition due to multiple control. There were 107 fatal accidents in 1911, and 150 in 1912, but in proportion to the number of vehicles operated, the number of passengers carried, and the mileage, in 1912 the fatalities were less than when compared with the figures of 1911.

Proposed Electrification of the London and Port Stanley Railway.

A. Eastman, General Manager, Windsor, Essex and Lake Shore Rapid Ry., submitted a report, July 14, to the Mayor of London, Ont., dealing with the "estimated amount of earnings and operating expenses of the L. & P. S. Ry., if electrified with ample equipment, terminals and sidings provided, and roadbed put in first class condition." He understood that the cost of doing this work had been estimated at $640,000, which he considered ample. He suggested the provision of terminals at London and St. Thomas, and additions to the terminals at Port Stanley. The rolling stock should consist of 6 passenger motor cars equipped for train operation, with at least 10 trailer cars and 4 electric locomotives, each capable of hauling a 300 ton train.

The estimate of earnings appended should be reached during the second year's operations, and should continue to show an average increase of about 10% a year for the next four years, and possibly after that an annual increase of about 6%. The total earnings he estimated at $210,000, made up as follows:—Passenger revenue, $100,000; freight revenue, $80,000; trackage and terminal rights, $20,000; miscellaneous income, $10,000. The operating expenses he placed at $131,245; and taxes at $3,700, leaving a surplus of $75,055 available for interest on investment, depreciation or profit. The proportion of operating expenses to gross income shows 62%. On the basis of these figures the estimated earnings per car mile are 22.27 cents; estimated earnings per car hour, $5.70.

Another report has been prepared for certain citizens by A. N. Warfield, formerly promotor of the People's Railways at Berlin, Ont., which estimates that operation by steam will produce an annual deficit of $33,444.05; operation by a combination of steam and a storage battery system a profit of $17,667.86; and operation by electricity a profit of $38,034.64.

According to the city year book the bond issue of 1903 amounts to $1,332,854; the amount due the city for interest is $234,992.61; and the capital stock cost $442,340. The first cost of the railway in 1854 was $765,311. The line is at present operated under lease by the Pere Marquette Rd., on a rental and percentage basis which brings in the city about $18,000 a year. This lease expires in 1914, and it is in connection with negotiations for its renewal that the matter of the electrification of the line is being discussed.

London St. Ry.—Gross earnings for June, $29,440.48; expenses, $20,308.01; net earnings, $9,132.44; deductions, $2,526.80; net income, $6,605.64. Aggregate gross earnings for six months ended June 30, $157,874.45; expenses, $114,094.41; net earnings, $43,825.04; deductions, $14,526.84; net income, $29,298.20.

Electric Railway Finance, Meetings, Etc.

Brandon Municipal Ry.—Receipts for the first month of operation ended June 30:—Cash fares, $1,613; tickets sold, $1,776.06; average daily receipts, $135.56; average daily operating cost, $105, interest and sinking fund charges not calculated. Passengers carried, 71,919.

British Columbia Electric Ry—Gross earnings for May, $566,128; operating expenses, $365,401; net operating earnings, $200,727; renewal funds, $51,620; net earnings, $149,107; approximate income from investments, $35,000; net income, $184,107; against $491,826 gross earnings; $313,469 operating expenses; $178,357 net operating earnings; $37,935 renewal funds; $140,422 net earnings; $25,000 approximate income from investments; $165,422 net income for May, 1912 Aggregate gross earnings for 11 months ended May 31, $6,269,123; net earnings, $2,117,280; against $5,251,343 aggregate gross earnings; $1,836,830 net earnings for same period, 1911-12.

Cape Breton Electric Co.—Gross earnings for May, $29,989.33; operating expenses and taxes, $19,11526; net operating earnings, $10,874.17; interest charges, $4,891.67; balance, $5,982.50; bond sinking and improvement funds, $1,190; net balance, $4,792.50, against $28,577.95 gross earnings; $16,192.34 operating expenses and taxes; $12,385.61 net operating earnings; $4,495.83 interest charges; $7,889.78 balance; $1,206.66 bond sinking and improvement funds; $6,683.12 net balance, for May, 1912. Construction charges for May, $3,297.32.

Nelson St. Ry.—A novel situation has arisen at Nelson, B.C., in connection with the proposal to pass a bylaw guaranteeing the company's bonds to the extent of $40,000. Practically the entire stock of the company is owned by citizens, and four out of the six aldermen are among the shareholders. One of the two non shareholding aldermen is opposed to the passing of the bylaw, and if the shareholding aldermen cannot legally vote, the question arises how the popular feeling may be given effect to, without loss of time.

Saskatoon Municipal Ry.—Total receipts for May, $14,094.80, an increase of about $180 over April. Total mileage for the month, 55,481; average receipts per car mile, 25.41c.; average passengers per car mile, 5.69; operating expenses per car mile, 25.405c.

Toronto Ry., Toronto and York Radial Ry., and allied companies.—Gross earnings for May, $811,872; operating expenses, maintenance, etc., $418,415; net earnings, $393,457, against $693,015 gross earnings; $342,545 operating expenses, maintenance, etc.; $350,470 net earnings, for May, 1912. Aggregate gross earnings for five months ended May 31, $3,840,280; net earnings, $1,839,564, against $3,315,739 aggregate gross earnings; $1,696,457 net earnings for same period, 1912.

Winnipeg Electric Ry.—Gross earnings for May, $326,827; operating expenses, $180,275; net earnings, $146,552; against $298,743 gross earnings; $162,364 operating expenses; $136,379 net earnings for May, 1912. Aggregate gross earnings for five months ended May 31, $1,651,336; net earnings, $729,221, against $1,508,300 aggregate gross earnings; $690,817 net earnings for same period, 1912.

The Belt Line Ry.'s horse cars along Tenth Avenue, New York, N.Y., are to be replaced by storage battery cars.

Electric Railway Projects, Construction, Betterments, Etc.

Brandon Municipal Ry.—The Brandon, Man., City Council has decided to extend the present lines, which have only recently been completed on several streets. A. Antonisen, is Superintendent. (July, pg. 344.)

British Columbia Electric Ry.—The last spike of the suburban line along the Saanich Peninsula, connecting Victoria with Deep Bay, 23 miles, was driven by the Premier June 18. A car service was placed in operation June 19. (July, pg. 344.)

The Coquitlam City Council has endorsed the proposal to build a tram line from New Westminster to Port Coquitlam, and a committee is arranging plans and terms with the B. C. E. Ry.

C.P.R. Electric Line—Hamilton to Niagara Falls.—Press reports state that the C.P.R. will build an electric line from Hamilton, Ont., to Niagara Falls, via St. Catharines, and that M. N. Todd, who is President of the Galt, Preston and Hespeler St. Ry., and a director of the Lake Erie and Northern Ry., which is under construction from Galt to Brantford, on the way to Port Dover, and both of which lines are closely allied to the C.P.R., was in St. Catharines, July 21, interviewing the City Council in regard to the matter.

The Dominion Ry. and Plaster Co. was organized under Nova Scotia laws in 1908, the promotors and officials being all practically Cape Breton men. The company proposed to build an electric road from Sydney to East Bay, 13 miles, and to develop a water power for generating electricity. It was intended to use the line mainly for freight purposes, carrying limestone, etc., to the steel works at Sydney. Beyond preliminary surveys, nothing has been done, and it is not thought likely that anything material will be done in the way of construction for the present. (July, pg. 334.)

The Edmonton, Stony Plains and Wabamun Ry Co., which was incorporated in March last, with an authorized capital of $750,000, proposes to build an electric railway from Edmonton to Lake Wabamun, Alta., via Stony Plains, 40 miles. About $60,000 of the capital is reported to have been subscribed locally, and negotiations are in progress for placing a bond issue. The project is regarded favorably, but some doubt is expressed as to whether, in the present state of the money market, a bond issue could be satisfactorily placed. (July, pg. 344.)

Forest Hill Electric Ry.—A draft of the proposed agreement with the York Township Council for the building of an electric line from Forest Hill Road, easterly, 2.5 miles north of Eglinton Ave., north of Toronto, has been under consideration. The agreement provides that construction is to be started, as soon as the plans have been approved, and that $50,000 is to be expended within a year. At a meeting of the York Township Council, in Toronto, July 9, it was resolved that, subject to a proper agreement being entered into, the council approves of the building of the line. The agreement is not to be submitted to the ratepayers for approval, but to the Ontario Government. (June, pg. 286.)

Lake Erie and Northern Ry.—See under Railway Development, in earlier portion of paper.

London and Lake Erie Ry. and Transportation Co.—The refitting of the steam power house at London, Ont., was completed July 5, to ensure the continuance of car service in the event of any accident to the Hydro-Electric power system which has been interrupted rather frequently of late. (Aug., 1912, pg. 421.)

Medicine Hat, Alta.—R. O. Sweezy, General Manager, Montreal Engineering Co., which has secured the franchise for building an electric railway in Medicine Hat, Alta., has been in the [illegible] ing for construction. He stated that orders have been placed in the U. S. for steel rails for August delivery, and that construction is to be started at once on the unpaved streets, working towards the centre of the city. Orders have been placed for a number of single and double truck cars, and for an electric locomotive for switching. It is expected that the car barns and power station will be erected near the Ogilvie flour mills. It is expected that the line will be ready for operation by the end of the year. Mr. Sweezy stated that there was a prospect of the Ansley spur line being electrified and operated by the company, and that was partly the reason why the electric locomotive had been ordered. (July, pg. 344.)

Melita. Man.—Press reports state that a franchise for the building of an electric railway in Melita, Man., has been granted to R. E. Denny & Co., 32 Ninth St., Brandon, Man.

Montreal.—A project for the construction of an underground tramway service in the city has been submitted to the Montreal City Council by F. S. Williamson, M. Can. Soc. C. E. The plans show 12.50 miles of double track lines, and the estimated cost is $20,000,000.

Montreal and Southern Counties Ry.—The Board of Railway Commissioners has authorized the company to operate its cars, carrying passengers, baggage, express and other traffic over the Central Vermont Ry., between the east end of its Southwark yards, St. Lambert and Richelieu, Que., 12 miles, and to use the C.V.R. passenger and freight stations, yards and other facilities. The line was opened for traffic June 28, a through service being given from McGill St., Montreal, to Richelieu. (July, pg. 344.)

Montreal Tramways Co.—Work was started June 23, laying down the new loops and extensions recommended in the engineer's report approved by the City Council June 17. A report was presented to the City Council July 10, showing the work in progress, and stating that it was expected to have it so far completed that the new routes recommended would be in operation by July 31. (July, pg. 344.)

Morrisburg and Ottawa Ry.—Tenders are being asked for the building of 19 miles of line from Ottawa in the direction of Morrisburg, Ont. We are officially advised that this section will terminate at South Gloucester, the intermediate points being:—Billings Bridge, Gatesville, Ridgemount, Ellwood, Henderson Corners, and Lebrun.

The directors and officers are:—President, J. G. Kilt, Ottawa; Vice President, R. J. Biggar, Ottawa East, Ont.; Secretary-Treasurer, R. A. Bishop, Ottawa; other directors:—Jas. Oliver, W. T. Stroder, R. E. Reardon, A. H. Caplan, J. W. P. Bogar. (July, pg. 344.)

Nipissing Central Ry.—The work on the spur line to the wharf at Haileybury, Ont., has been completed, and some parts of the line in the town have been raised, in order to [illegible]

Ontario Hydro-Electric Commission's Proposed Electric [illegible] state that considerable [illegible] made with surveys for the projected electric railway from Toronto to Port Perry, Ont., to be built in connection with the Ontario Hydro-Electric [illegible] power plant. F. S. Gaby, Chief Engineer of the Commission, [illegible] stated that engineers were looking [illegible] the engineering features of the route, and the revenue possibilities of the district, through which the line, 45 miles in length, would run, and that report would be presented to the Commission in due course. (July, pg. 345.)

Ottawa and St. Lawrence Electric Ry.—A bylaw granting a 25 year franchise to the company, with a right of way on certain streets in the town, has been approved by the ratepayers of Morrisburg, Ont. The lines to be built under the franchise are to be completed by Dec. 31, 1914. (July, pg. 345.)

Quebec Rapid Transit Co.—The Dominion Parliament has incorporated a company with this title to build a system of radial lines from Quebec serving Limoliou, Beaufort, Charlesbourg, Riviere Jaune, Lake St. Charles, Indian Lorette, St. Foy, Cap Rouge, Montcalmville, St. Gregoire, St. Anne de Beaupre, and the Isle of Orleans. Nothing appears to have been done in the way of arranging for construction. While the company is authorized to use steam or any other motive power, it is said that the lines, if built, will be operated by electricity. A. Taschereau, Quebec, is interested. (Jan., pg. 21.)

Regina Municipal Ry.—The City Council has under consideration plans for the extension of the city car line into the C.P.R. annex, crossing the G.T. Pacific Ry. at Thirteenth St. The line is also being extended on Young St., to the new power house on Winnipeg and Twentieth Streets. Orders have been placed for supplies for new construction as follows: Steel rails, $12,000; ties, $1,690; cement, $11,000; steel poles, $2,100; trolley wire, $352.40; overhead construction, $592.60. (July, pg. 345.)

Stratford Electric Ry.—We are officially advised that this proposition is dead so far as the franchise given to interests allied with Mackenzie, Mann and Co., are concerned. The Ontario Government desires to have a clause in the franchise providing for the use of current from the Provincial Hydro-Electric Commission, if terms and conditions are equal to those which can be obtained elsewhere or otherwise. Therefore, Sir Wm. Mackenzie would not accept the franchise and build under it. (July, pg. 345.)

Three Rivers Tramway Co.—We were officially advised, July 15, that construction would start in a few days thereafter, it being the intention to build about seven miles of line on the following streets:—St. Roch, St. Philippe, St. Antoine, Notre Dame, Ste. Cecile, St. Paul, St. Maurice, Champflour, Ste. Marie, Niverville, Royale, Des Forges, and also outside of the city to the Cap de la Madeleine. The authorized capital is $500,000, of which $400,000 has been subscribed. The officers are:—President, L. P. Normand; Secretary Treasurer, R. Bournival, Three Rivers, Que.

Toronto Suburban Ry.—A bylaw has been passed by Toronto City Council calling on the company to build and put in operation by Jan. 1, 1914, a line on

Jane St., from Bloor to Annette St.

The town of Weston has asked the company to remove its tracks from the west side to the centre of Main St., from Church St. to the northern boundary of the town.

In connection with the extension to Guelph, a siding has been run on to the right of way at Cooksville, and ties and other materials are being distributed westerly. Grading is completed westerly from Cooksville for several miles, and is well advanced right on to Guelph. Easterly from Cooksville grading is practically finished to near the crossing of the Humber River. (July, pg. 345.)

Winnipeg Electric Ry.—We are officially advised that the company has under construction eight miles of single track on various lines in Winnipeg and St. Boniface, and six miles of suburban track in St. Vital and Fort Garry, Man. Wilford Phillips, Winnipeg is Manager.

We are officially advised that the branch line to Stonewall, Man., which is being built under the Winnipeg, Selkirk and Lake Winnipeg Ry. Co.'s charter, is under construction between Middlechurch and Stony Mountain. It is expected to have the line in operation as far as Stony Mountain by the end of the year. (July, pg. 345.)

Electric Railway Notes.

A Sunday car service was started on the Regina Municipal Ry., Regina, Sask., June 29.

The Halifax Electric Tramway Co. has ordered six box cars, 21 ft. bodies, from the Nova Scotia Car Works.

The Dominion Power and Transmission Co. has received one suburban car from the Preston Car and Coach Co.

The Montreal Tramways Co. put in force July 1, a new rule prohibiting smoking by passengers on the cars.

The Brandon, Man., City Council has authorized the purchasing of ten trailer cars from the Winnipeg Electric Ry. for the Brandon Municipal Ry.

The Regina Municipal Ry. has received five single ended p.a.y.e. city cars, mounted on 21-E trucks, with 8 ft. wheel base, each equipped with Westinghouse 101 B2 motors, double equipment, from the Preston Car and Coach Co.

The Edmonton Radial Ry. has received six single ended, double truck, p.a.y.e. city cars, mounted on O-50 trucks, and equipped with Westinghouse 101 B2 motors, quadruple equipment, from the Preston Car and Coach Co. These are a portion of an order for 35 cars, placed with the company, by the City of Edmonton, Alta, for its municipal railway

The freight shed of the interurban lines of the Dominion Power and Transmission Co., at the corner of Catharine and Main streets, Hamilton, Ont., were destroyed by fire, July 6, the loss being estimated at $75,000. Five freight cars, an auto truck and other stock were destroyed. The sheds belonged to the Hamilton, Grimsby and Beamsville Ry., one of the D.P. and T. Co. subsidiaries.

With reference to a paragraph in our [illegible] in color of painting of the Ottawa Electric Ry. cars, we are officially advised [illegible] that red is a perishable color, the 20 cars [illegible] the company's double truck cars will be [illegible]

The city of Saskatoon, Sask., has awarded contracts, as follows, for material for its municipal electric railway:—copper rail bonds, Canadian General Electric Co.; trolley wire, Eugene F. Phillips Electrical Works; continuous rail joint, Rail Joint Co. of Canada; clinch and splicing ears, Northern Electric and Manufacturing Co.; wood strain insulators, straight line hangers, trolley frogs and trolley guards, Ohio Brass Co.

The ratepayers of Selkirk, Man., by a majority of 367 to 40 have decided in favor of the operation of electric railway cars within the municipality on Sundays. Cars are now in operation from Winnipeg to Parkdale; the municipality of St. Andrews voted in favor of Sunday traffic recently, and the Selkirk vote will enable the Winnipeg, Selkirk and Lake Winnipeg Ry., a subsidiary of the Winnipeg Electric Ry., to operate cars over its whole main line on Sundays.

In dealing with possible acquirements of street railways by municipalities, it is quite evident that in some quarters a few millions on one side or the other is of no particular consequence. Canada, a weekly paper published in London, Eng., recently stated that the purchase price of the Toronto Ry., and the properties allied therewith, which the city of Toronto proposes to take over, is "now stated to be $428,000,000." The price of the stock on the market did not appear to be affected by this announcement.

Personal Paragraphs.

The St. Thomas, Ont., City Council has appointed MISS E. MAXWELL at Secretary-Treasurer of the St. Thomas St. Ry. at $35 a month.

T. BLUNDELL BROWN, and E. Maes Harvey, directors of the British Columbia Electric Ry., arrived in Vancouver, July 5, from London, Eng., for an inspection of the company's various properties in the province.

HAROLD F. COOK, who was recently appointed Assistant to the President, Ottawa, Rideau Lakes and Kingston Ry., Ottawa, was born at Croydon, Eng., June 13, 1888. He attended a four years course in civil and mechanical engineering at the Central Technical College London, Eng., taking his degree in 1909. From June, 1909, to Sept., 1910, he spent some time in aeroplane designing, and also as assistant manager, Bell's Asbestos Co., London, resigning in order to obtain workshop experience, which was done, from Sept., 1910, to Mar., 1913, at the Royal Arsenal, Woolwich.

Canadian Electrical Association.—At the annual meeting in Toronto recently the following electric railway officials were elected to office:—President, D. R. Street, Secretary Treasurer, Moose Jaw Electric Ry. Co.; Managing Committee—A. A. Dion, President, Moose Jaw Electric Ry. Co.; H. G. Matthews, General Manager, Quebec Railway, Light, Heat and Power Co.; E. L. Milliken, Manager, Cape Breton Electric Co.; R. H. Sperling, General Manager, British Columbia Electric Ry.

A Master Mechanic's Opinion. — T [illegible] Master Mechanic, Algoma Central and Hudson Bay Ry., and Algoma Eastern Ry., writes Canadian Railway and Marine World as follows: "Enclosed is express order to pay for my renewal subscription to your valuable magazine. I wish it every prosperity and continuous success."

Telegraph, Telephone and Cable Matters.

A. W. Bell has been appointed agent, Great North Western Telegraph Co., at Midland, Ont., vice Miss Switzer, resigned.

The New York Central and Hudson River Rd. is installing telephone dispatching circuits on its Adirondack Division, from Utica, N.Y., to Adirondack Jct., Que., the dispatcher being located at Utica.

E. M. Payne, heretofore Inspector of Telegraphs, Manitoba Division, C.P.R., Winnipeg, has been appointed Superintendent of Telegraphs, Manitoba Division, C.P.R., Winnipeg, vice J. McMillan, promoted.

The telephone cable which has been laid between Vancouver and Vancouver Island, B.C., is 35 miles long, and at one point on the route the water is 1,356 ft. deep. The cost of laying it is given as $20,000, and the cable was made in England at a cost of over $100,000.

The Newfoundland Government, it is announced, will erect about 250 miles of telegraph line along the coast during this year, and will also establish a telephone system in St. Johns and other outlying places, as well as build three wireless telegraph stations in Labrador.

John McMillan, heretofore Superintendent of Telegraphs, Manitoba Division, C.P.R., Winnipeg, has been appointed General Superintendent of Telegraphs, Western Lines, C.P.R., with office at Winnipeg, vice B. S. Jenkins, who has been assigned to other duties in the east.

The Great North Western Telegraph Co. has reopened its offices at Clifton House, Niagara Falls; Crystal Beach, Petawawa Camp, Port Cockburn, Queens Royal Hotel, Niagara on the Lake; Royal Muskoka Hotel, Ont.; Abenakis Springs, Chaudiere Basin, Manoir Richelieu, Pointe a Pic, Paspebiac, Que., for the season.

The following appointments in the Grand Trunk Pacific Telegraph Co.'s service have been made recently:—R. M. Hicks, heretofore city manager, Saskatoon, Sask., has been appointed city manager at Edmonton, Alta., vice W. G. M. Corregan, resigned; J. D. Edgett, heretofore night manager at Winnipeg, has been appointed city manager at Saskatoon, Sask., vice R. M. Hicks, transferred; A. J. Hoag has been appointed night manager at Winnipeg, vice J. D. Edgett, promoted; E. H. Hiscock has been appointed electrical inspector at Edmonton, Alta.

The Dominion Telegraph Co.'s report for the year ended June 30, shows assets of $1,309,702.94, and liabilities of $1,017,180.93, with a balance to credit of profit and loss account of $292,522.01. Payment of the guaranteed 6% interest on the capital stock has been paid regularly quarterly in advance, for the past 34 years. The property is leased to the Western Union Telegraph Co. for 99 years, from July 1, 1879. The officers and directors for the current year are: President, T. Swinyard; Vice President, Sir Henry M. Pellatt; Secretary and Treasurer, F. Roper; other directors, B. Brooks, T. F. Clark, R. C. Clowry, Aemilius Jarvis, C. O'Reilly and A. G. Ramsay.

The Port Arthur and Fort William Electric Ry. created a record for one day's business, July 1, when it carried 32,000 passengers.

Marine Department.

Grain Shipping Facilities in Montreal Harbor.

The illustrations on this and the following page show the grain shipping facilities, etc., in Montreal harbor. At the extreme left of the panoramic view is shown the 1,100,000 bush. steel elevator, marine tower and shipping galleries built for the Grand Trunk Ry. A 665,000 bush. reinforced concrete storage addition to this plant is being built.

Grain Shipping Facilities at Montreal (Continued below.)

The elevator next at the right is the 1,000,000 bush. steel structure, with two marine towers, owned and operated by the Harbor Commissioners. Since the photograph was taken, construction has been started on a 1,500,000 bush. reinforced concrete addition to this elevator.

The largest elevator in the illustration is the 2,600,000 bush. reinforced concrete elevator no. 2 of the Harbor Commissioners. Its steel marine tower, with two unloading legs, is seen above the end of one of the piers. This elevator was completed in 1912.

The G.T.R. elevator, with 1,400 ft. of shipping conveyor galleries, serves two steamer berths.

Grain Shipping Facilities at Montreal (Continued from above.)

The Harbor Commissioners' elevators no. 1 and no. 2 are interconnected to serve 19 vessel berths. The shipping galleries are 2 1-3 miles long and contain 10½ miles of rubber belting.

With the completion of the above, grain can be handled in Montreal harbor as follows:—Receiving from cars, 625 cars in 10 hours; receiving from lake vessels, 82,000 bush. per hour; shipping to ocean vessels, 180,000 bush. per hour; total storage capacity, 6,865,000 bush.

The panoramic view photograph and the plan from which the illustrations were made were furnished by John S. Metcalf Co., Ltd., Montreal, who built the Harbor Commissioners' elevator no. 2 and the G.T.R. elevator, and designed and equipped the gallery system for the Harbor Commissioners' two elevators. They are now building the 1,500,000 bush. addition to the Harbor Commissioners' elevator no. 2.

Proposed Weir in the Niagara River.

The International Waterways Commission has, through the President, recommended to the United States Congress the construction of a weir in the Niagara River, to raise the level of Lake Erie. The commission stated the value of the proposed work to Lake Erie ports could hardly be estimated and that it would result in extensive improvements to harbors and docks.

The cost of the weir and consequent works to avoid damage to property is estimated at $3,500,000. The commission recommended its location at Grill Creek on the U.S. shore and Hog Island on the Canadian, just above Welland River. The dam would raise the level of the Niagara 3 ft. for a distance of 1½ miles. The commission suggested the construction of a levee to prevent damage to adjoining property.

At low water the level of Lake Erie would be raised 0.51 ft. at extreme low stage, 0.39 ft. at mean, and 0.11 ft. at extreme flood stage. The commission reported that the plan would raise the mean level of Lake St. Clair 0.23 ft. and that of Lake Huron 0.09 ft.

The commission also reported that the weir would eliminate any injurious effect upon the Lake Erie level of diversion of waters at Niagara Falls for water power purposes, and would reduce the range of oscillation on Lake Erie 4½%.

The report pointed out that diversion of water to the Chicago Drainage Canal, to the Erie Canal and for power plant purposes at Niagara Falls had considerably reduced the level of Lake Erie.

Electrically Propelled Vessels for the Great Lakes.

The recent launching of the Montreal Transportation Co.'s electrically propelled vessel Tynemount, at Newcastle-on-Tyne, Eng., will to a great extent settle the question as to how far electricity can be utilized in the propulsion of heavy cargo vessels, and as to what economy can be effected, both in cargo space, and in operation on the Great Lakes. The propelling machinery of the Tynemount is a combination of a Diesel engine and electric motor, the latter being direct connected to the propeller, and this is the first time that the principle has been applied to, what may be termed, an ocean going vessel. Certain conditions of operation on the Great Lakes, and especially through the canals, make it necessary to have the largest coarse pitch propeller which can be driven by an ordinary triple expansion engine at about 80 revolutions a minute. Diesel engines run at about 400 revolutions a minute, but in the system in use on the Tynemount this speed can be reduced, as between the engine and the propeller, by means of the electric transmission. The whole system, especially for lake navigation, is yet in its very early stages, and any movement will be watched with considerable interest by those concerned. There are quite a number of experienced navigators on the Great Lakes who are firmly of the opinion that the reciprocating engine is the only one for safe navigation through the numerous locks connecting the Great Lakes up to the present, and are content to wait for further developments before committing themselves to [illegible]

Atlantic and Pacific Ocean Marine.

The Union Navigation Co., Ltd., H. J. Donelly, Secretary, has changed its head office from Toronto to Montreal.

The depth of the St. Lawrence ship channel, on July 1, was 31 ft. 11 ins., compared with 31 ft. 5 ins. at the same date last year.

The Union Steamship Co., of New Zealand, which holds the contract for the Canada-Australia mails, has chartered the British s.s. Canada Cape for the Vancouver run, as an extra vessel, next fall.

From the commencement of the St. Lawrence navigation season to June 30, 271 ocean going vessels, with a tonnage of 898,651, entered Montreal harbor, an increase of 44 vessels and 257,396 tonnage over the the same period in 1912.

A Pacific Coast report states that the Great Northern Steamship Co.'s s.s. Minnesota, which runs between Seattle, Wash., and Orient ports, will shortly make Victoria, B.C., a regular port of call.

It has been held in the British Courts that the conditions as printed on the passenger tickets, issued by the White Star Line, which have recently come under review, during claims for damage and loss occasioned by the wreck of the s.s Titanic, are illegal.

A. Piers, Manager, C.P.R. Steamship Lines, Liverpool, Eng., has arranged for two additional hammocks in the Lancashire and National Sea Training Home for Boys, at Liverpool, to be known as Empress Hammocks. They will be supported by the officers and crews of the C.P.R. steamships Empress of Britain and Empress of Ireland.

A press dispatch from London, Eng., states that a contract has been signed for the construction of a railway and harbor on the west coast of Ireland in connection with the all red route scheme. The railway, it is said, will run from Collooney to Blacksod Bay, County Mayo, from which port vessels will run to Halifax, N.S., in 3½ days.

Quebec press reports state that it is probable that the Hamburg-American Line will commence a steamship service on the St. Lawrence route in the near future, making its port on the east end of the Isle of Orleans, and connecting with the city of Quebec by a bridge across the river between the Falls and the Island. It is stated that the company has an option on about 10,000 acres of land, or has made the purchase, and a final decision is expected shortly.

An English press dispatch states that the s.s. St. George, recently purchased from the Great Western Ry. of England, by the C.P.R., for service between Digby, N.S., and St. John, N.B., as mentioned in our last issue, will be towed across the Atlantic, by the Liverpool steam tug Blackcock, as it appears it is not possible to bunker her sufficiently for the trip. She will, however, have a full crew on board, and will be fully coaled in case she is separated from the tug in bad weather. It is said to be somewhat new for a fully powered and large steamer to be towed across the ocean while not being disabled in any way.

Maritime Provinces and Newfoundland.

Steamship owners in Nova Scotia have granted increases of pay at various rates to all marine engineers in their employ.

It is reported that a suitable site has been selected for the construction of a vessel repairing dock at Burin, Nfld., and that negotiations for its purchase are being pushed, so that the company interested in the project may proceed with the work immediately.

We are officially advised that press reports as to the possible construction by the Dominion Government of "a great shipyard capable of permitting the construction of small cruisers and other war vessels" at Charlottetown, P.E.I., are without any foundation in fact.

Consumers Coal Co., Ltd., has been incorporated in New Brunswick, with a capital of $49,000 and office at St. John, to deal in coal and other fuel, and also to carry on a general navigation and carrying business, and to own and operate vessels, elevators, warehouses, etc.

The Dominion Coal Co.'s s.s. Cacouna collided with the schooner Sarah A. Townsend, July 11, the latter being so badly damaged that she was abandoned. She was later towed to Cape Traverse, where her cargo of lumber was discharged. The Cacouna proceeded to Charlottetown, P.E.I., for temporary repairs.

The Dominion Government hydrographic steamship Acadia arrived at Halifax, N.S., from Newcastle, Eng., July 8. It is announced that she will be placed in service as soon as possible, and proceed to Hudson Bay, for hydrographic and survey work in connection with the proposed harbor and terminal work there.

A survey of the Dominion Coal Co.'s s.s. Wabana showed that she was more seriously damaged in her recent accident than was surmised. The bottom is badly set up on both sides for about 200 ft., and about 130 plates and topsides are leaking, in addition to a certain amount of damage to her machinery. She is insured for about £48,000.

At a meeting of the North Sydney Board of Trade recently, it was stated that the Reid Newfoundland Co. had made complaint of the amount of pilotage and harbor dues it was compelled to pay on vessels entering North Sydney harbor, and figures were quoted showing that the company is taxed about $1,100 a year for harbor dues, and $12.50 a day pilot dues, which was considerably in advance of what it would have to pay if Sydney were made its Canadian terminal. A committee was formed to interview the Harbor and Pilot Commissioners, with a view to having the charges decreased. A movement is on foot in Sydney to urge the Reid Newfoundland Co. to change its terminal to Sydney, but it is not likely that such a change will be made, at any rate for the present.

The Cape Breton Electric Co. is having a ferry boat built for its service between Sydney and North Sydney, N.S. She is being built at Portland, Me., of white oak frames and timbers and planked with hard pine. Ample provision will be made for carrying freight, the entire lower deck forward being enclosed for the purpose, and will be sufficient for carrying teams and automobiles. On completion the hull will be towed to Yarmounth, N.S., where the machinery, now being made there, will be installed. The propelling machinery will consist of triple expansion engine with cylinders 12, 19 and 30 diar., by 30 ins. stroke, supplied with steam by a two furnace Scotch marine boiler at a working pressure of 160 lbs. Complete electric lighting equipment will also be supplied. It is expected that the boat will be completed and ready for service about the middle of December.

Province of Quebec Marine.

The U.S. s.s. Wallula was recently seized at the Lachine Canal, for non payment of towage dues.

The Department of Marine has established a series of five buoys to mark the channel leading to the floating dry dock in Montreal harbor.

The Montreal, Valleyfield and Soulanges Navigation Co., Ltd., has registered its head office at 404a St. Joseph St., Lachine.

The Quebec Harbor Commission has received three switching locomotives from the Montreal Locomotive Works. Details of these were given in a previous issue.

The Dominion Government s.s. Dollard, for use in the St. Lawrence lighthouse and buoy service, has been delivered to the Marine Department by the builders. She has been equipped with a wireless telegraph installation.

Work is in progress on the crib work for a wharf 4,000 ft. long at Quebec, which is to be used in connection with the National Transcontinental Ry., and for the car ferry connecting the north and south shores, which is expected to arrive at Quebec next spring.

It is announced in Montreal that the Harbor Commissioners will undertake the extension of all piers in the harbor, at an approximate cost of $1,000,000. It is estimated that about 250 ft. will be added to each pier at the west end, with the possible exception of Victoria pier, thus giving accommodation for eight more vessels.

A. Johnston, Deputy Minister of Marine, and a number of the Department's officials, accompanied the members of the Lighthouse Board, on an inspection of the lights in the St. Lawrence ship channel, July 9 to 11. Complaints had been made by pilots between Montreal and Quebec that the red lights on the route were ineffective, and it was suggested that white lights should be used instead, but after the official inspection it was announced that the present system of red lights would be continued.

W. G. Ross, Chairman, and Farquhar Robertson, of the Montreal Harbor Commission, had a conference with the Minister of Marine, July 11, concerning the proposed acquisition of certain lands on the Lachine Canal and the harbor front near the G.T.R. elevator. The Commission wants to extend the harbor facilities and provide extra shed accommodation, and according to the terms of the leases under which the land is held the Government can, if the property is required for Government purposes, give the lessees two months notice of its intention to take over the land.

Ontario and the Great Lakes.

The Richelieu and Ontario Navigation Co. was fined $200 in each of seven cases, at Toronto recently, for selling intoxicating liquors on its passenger vessels.

The Canadian Towing and Wrecking Co., Ltd., has increased its capital stock from $100,000 to $200,000 by the issue of 1,000 new shares.

The steamboat City of Montreal, which was formerly owned by the Montreal and Lake Erie Steamship Co., and which, as announced in our last issue, was recently acquired by J. H. Hall, Ottawa, has had its name changed to Westerian.

The large grain elevator at Point Edward, in which the G.T.R. is chiefly interested, was destroyed by fire, July 7, together with about 72,000 bush. of grain. The elevator was built in 1904. The loss is estimated at $350,000.

An Ottawa press report states that the formation of a co-operative steamhsip company, to operate a line of steamships between Montreal and the head of the lakes, is being considered by a number of large wholesalers in eastern and western Canada.

The contractors' plant which was utilized some time ago in connection with the building of the Newmarket Canal, and which has been lying idle for nearly two years, has been removed, any further work on the project having been abandoned by the Government.

The Department of Public Works will receive, to Aug. 25, tenders for the construction of a sea wall, breakwater, ship channel and retaining wall, in connection with the scheme of general harbor improvement and development being carried on at Toronto.

The city of Fort William, which has been arranging for the construction of three tunnels under the rivers surrounding the city, is negotiating with the Dominion Government for permission to proceed with the work, as the Government controls all navigable streams.

The Marine Department will receive tenders to Aug. 22 for a single screw steel steamboat for the lighthouse service. The principal dimensions will be: length between perpendiculars, 155 ft.; length over all, 164½ ft.; breadth moulded, 30 ft.; depth moulded, 13 ft.

The Canada Interlake Line s.s. A. E. Ames ran ashore at Salmon Point, about 40 miles west of Kingston, July 4. She was released July 9, and discharged her grain cargo at Kingston. As the Kingston dock was engaged and booked ahead, the A. E. Ames had to go to a U.S. dock for repairs to her hull.

The small steam tug W. H. Price, owned by J. H. Daball Parry Sound, was burnt there, June 29, and sank where it is not possible to raise her. She was built at Collingwood in 1903, and was screw driven by engine of 2 n.h.p. Her dimensions were:—Length, 38 ft.; breadth, 10 ft.; depth, 4.6 ft.; tonnage, 13 gross, 9 register.

The National Steamship Co., Ltd., has been incorporated under the Dominion Companies Act, with $2,000,000 capital, and office at Toronto, to carry on a general navigation business, and to own and operate vessels of every description. The incorporators are: Cawthra Mulock, G. F. Perry, J. B. Foote, E. H. Laschinger and M. Stobie, Toronto.

The results of the Canada Interlake Line's motor vessel Fordonian's first trip to the head of the Great Lakes are reported to be entirely successful, an average speed of 11½ miles an hour having been made. It is stated that the company is considering the question of ordering another similar vessel for the same route.

The steamboat Pontiac, at one time owned by the Prescott and Ogdensburg Ferry Co., and latterly by J. Smith, Toronto, was destroyed by fire at Toronto, July 6. It is stated that it was the work of an incendiary, a similar attempt having been made last year. About three months ago she sank at her moorings and had only recently been raised and repaired prior to again entering service.

The Pembroke Transportation Co., Ltd., which was recently incorporated under the Dominion Companies Act, with $40,000 capital, and office at Pembroke, Ont., has purchased the steamboat Victoria, formerly owned by the Pembroke Navigation Co., and has had it overhauled, remodelled and renamed Oiseau. W. A., W. L., and J. C. Hunter, Pembroke, are chiefly interested in the company.

The dredging, which was started last year, of the slip to the Government elevator at Fort William, is being proceeded with, with the intention of completing the whole contract as soon as possible. The work also covers the opening of the channel to the Canadian Northern Ry. coal dock, dredging the approaches to the dry dock, and the slip to the shear legs at Bare Point. The contract is for $122,460, and is held by W. E. Phinn.

The U.S. Lake Survey reports the levels of the Great Lakes in feet above tidewater, for June, as follows:—Superior, 602.31; Michigan and Huron, 561.20; Erie, 573.83; Ontario, 248.02. As compared with the average June levels of the past ten years, Superior was 0.05 ft. below; Michigan and Huron, 0.19 fet. above; Erie, 0.90 ft. above, and Ontario, 1.04 ft. above. It was anticipated that during July Superior would rise about 0.2 ft., Michigan, Huron and Erie, 0.1 ft., and Ontario remain stationary.

Ottawa press dispatches state that the Railway and Canals Department has let the contract for the first section of the new Welland Ship Canal, which covers about three miles and includes the pier works at the Lake Ontario entrance and lock 1, to the Dominion Dredging Co. for about $3,000,000, and that construction will be started at once. The engineering staff is reported to be at work on specifications for sections 2 and 3, and it is said that tenders will be invited for them in the near future.

The C P R s.s. Athabasca stranded near Flower Pot Island, at the entrance to Georgian Bay, July 6, during a dense fog. As she is equipped with wireless telegraph she soon had the assistance of her sister vessel the Assiniboia, from Port McNicoll, and also a tug and lighter from Owen Sound. After transferring the passengers and lightering a portion of the cargo she floated off and proceeded to Port McNicoll under her own steam, and without apparent damage.

The Ontario and Quebec Navigation Co. has appointed the following officers for its vessels for the current season. In the first column is given the name of the vessel, the second and third columns giving the names of the captains and chief engineers, respectively:—

Aberdeen	A. Hudgins	W. J. Young
Aletha	D. B. Christie	
Alexandria	J. Rinfret	T. Milne.
Brockville	A. McLeod	A. J. Ramsay
Fairfax	T. L. Vandusen.	D. S. La Rue
Geronia	M. Heffernan	J. D. Andrews.
Lloyd S. Porter	T. Heffernan	S. Thurston.
Varuna	J. Rathbun	J. Walker
Water Lily	M. N. Palmatier	R. Davis

Manitoba, Saskatchewan and Alberta.

The Department of Marine has issued a chart of the Red River, from Winnipeg to Lake Winnipeg.

It is announced that the river and lake traffic with Selkirk, Man., judging by number of vessels and by freight tonnage, shows an increase over last season of approximately a third.

A press report from Regina, Sask., states that the C.P.R. will place a pleasure steamboat in operation on Long Lake, by June, 1914, and that it will erect a summer hotel and resort in the vicinity.

British Columbia and Pacific Coast Marine.

The C.P.R. s.s. Joan has been taken off her route to the Gulf Islands, and taken to Victoria for general repairs to her hull and machinery.

The s.s. Colusa recently arrived at Victoria and Vancouver on her first trip in connection with the new steamship service between Puget Sound ports and Buenos Ayres, South America.

The Dominion Government is making the necessary preparations for a survey of the proposed site for the dry dock to be built at Esquimalt, at an estimated cost of $3,000,000.

The Minister of Marine is visiting Vancouver and the Pacific coast, during which he will inspect various Government works in progress at various points, and will probably visit ports in Yukon.

The Alaska Steamship Co.'s s.s. Dolphin ran ashore near Alert Bay, B.C., June 29, on her first trip for the season to southeastern Alaska ports. The passengers were transferred to the C.P.R. s.s. Princess May, and proceeded on their journey.

The Department of Public Works received tenders to July 23 for dredging in the Pitt River. It is provided that only dredges owned and registered in Canada must be used on the work, which must be commenced within thirty days of the awarding of the contract.

The G.T. Pacific Coast Steamship Co.'s s.s. Prince Albert, which was taken off her route during June, in order that the damages sustained by her striking the docks at Port Simpson might be repaired, was replaced in service, between Victoria, Queen Charlotte Islands and Prince Rupert, July 10.

The Skagway Steamship Co., Seattle, Wash., has been registered under the British Columbia Companies Act to carry on its business in the Province, with J. H. Lawson, Jr., Vancouver, as its attorney. It has a capital of $20,000, and power to carry on a navigation business and other incidental businesses, excepting the construction and operation of railways.

W. P. Hinton, General Passenger Agent, G.T. Pacific Ry., Winnipeg, is reported to have stated recently, in connection with the suggested G.T.P. Coast Steamship Co.'s steamship service to San Francisco, that while it cannot be said that such a service will not be inaugurated at a future date, nothing is being done at the present time toward such a service.

The Mayor of New Westminster drove the first pile of the first unit of the New Westminster harbor improvement scheme, July 3, when it was announced that within a few weeks a contract would be let for the dredging of a deep waterway up the Fraser River to Port Coquitlam. It is hoped that this channel will be completed in time for the maiden sailing of the vessel, now under construction at Port Coquitlam, and which it is hoped to launch within the next month or two, to the West Indies.

Ice Breaking Steamship for the St. Lawrence River.

The Minister of Marine and Fisheries has decided to order another ice breaking steamship for the St. Lawrence River, of which the following are the approximate dimensions:—Length, 275 ft.; breadth, 57½ ft.; depth, 30 ft.; draught, mean, 20 ft.; indicated horse power, 8,000.

The general structure will be of great strength. The framing amidships and approaching the ends forward and aft will be of heavy channel section about 12 ins. deep, spaced about 18 ins. apart. At the extreme ends the spacing will be reduced to 15 ins. The complete transverse framing will be bound inside in every way practicable, in order to form a complete structure in itself independent of the outer plating. The outer or shell plating will be of Siemens Martin ship steel. At the ice breaking water line of the vessel, and running fore and aft for the complete length, a special ice belt will be fitted, 10 ft. deep, having a thickness of 1 1-8 ins. at the stem, reduced to 1 in. at the stern. Forward in the bow, and from the bottom of the ice belt to the keel plate, the plating will for a considerable distance aft be 1 1-8 in. and 1 in. thick respectively. Special provision will be made for protecting the rudder during ice breaking operations.

The watertight subdivision will be complete, and the strengthening of the vessel, particularly forward, will be accomplished in such a manner as experience has shown from vessels at present in service and generally in accordance with the largest European ice breakers. It is proposed to make the form forward similar to that of the Russian ice breaker Ermack, which has proved so successful in ice work, and the beam proposed, which should not be reduced, will be such that ample curvature will be given to the lines, longitudinally and vertically, in order that the minimum of surface may be presented to any ice pressure. The present St. Lawrence ice breakers are defective in this respect.

The machinery will consist of two sets of triple expansion engines having working parts varying from 25 to 50 per cent. in excess of the ordinary practice. The indicated horse power of 8,000 on a 12 hours trial will be developed in 8 Scotch boilers, having a working pressure of 180 lbs. per sq. in., and working under natural draught, and the location of these will be such that full benefit will be derived as a crushing load, should the vessel be driven on to heavy ice, such as is met with at Cap Rouge. Special arrangements will be made in the engine room for large ballast pumps capable of transferring large bodies of water from the after to the forward peak tanks and vice versa.

With a vessel of the above particulars, the ordinary sheet ice formed in the river from 12 to 30 ins. thick will present no difficulties, while the packed ice formed in certain parts of the river, particularly at Cap Rouge, should, with the displacement and power developed, be successfully coped with.

A first class, modern wrecking equipment will be installed on the vessel, and will consist of powerful pumps, etc., but the details have not yet been worked out.

The whole plans are well in hand and every effort is being made to hasten their completion, so that tenders for construction may be invited as early as possible.

New Vessels for Canadian Pacific Railway British Columbia Coast Service.

As stated in Canadian Railway and Marine World for June and July, the C.P.R. has ordered to be built at Dumbarton, Scotland, two steamships to run between Vancouver, B.C., Seattle, Wash., and Victoria, B.C., in what is called the company's triangle service. They are to be built to the British Corporation highest class for awning deck steamships, with freeboard. They are to have cruiser sterns, and will be 395 ft. long over all, 54 ft. broad, and 28 ft. deep to the awning deck. They are to have five decks, viz.: boat, promenade, awning, main and orlop, with deck house on the boat deck. They are to be fitted for oil fuel, and will have double bottoms. There will be 13 transverse bulkheads to the main deck and two longitudinal bulkheads at sides of boiler space, with three large oil tanks on each side of the ship. There will be two watertight bulkheads from the main to the awning decks, and the general design is such that if any two compartments are open to the sea when the ship is in a fully loaded condition, she should still remain afloat.

The [illegible] arrangement will be [illegible] to the [illegible] of the company's ships. All of the decks, with the exception of the boat deck, will be continuous steel decks. There will be 16 [illegible] life boats and [illegible] ing boat, and the general equipment will comply with Canadian regulations for 2,000 passengers in the triangular service.

The public rooms will be handsomely finished in hardwood and furnished luxuriously. There will be sleeping accommodation for about 440 first class passengers, with numerous cabins de luxe, bath rooms, etc. The smoking room will be on the boat deck, and there will be a verandah cafe. The dining room will be on the main deck aft, and will seat about 175 people. Arrangements will be made for tables of various sizes. The room will be lighted by patent 21 in. semi elliptical port lights. The galleys and pantries will be fitted up with all the latest appliances, and ample provision is made for ventilation. A refrigerating plant will be provided, sufficient to take care of the ship's stores.

The ships will be steered by telemotor steam steering gear, and the rudder will be of the spade type and balanced. The motive power will consist of 10 Babcock and Wilcox boilers, arranged for forced draught on the closed stokehold system. There will be three stokeholds and three funnels. Turbine machinery of the latest type will be used for driving the ship. Impulse wheels will be used on the go-astern turbines, and the aggregate horse power will be in the neighborhood of 13,500. All the auxiliary machinery will be of the very latest type, 4 feed pumps, any two of which can supply the boilers at full power. Uniflex condensers of the latest type will be used, also air pumps, evaporators, etc. Three electric engines will be provided, any two of which could carry the full load of 1,500 lights, in addition to electric heaters, motors, fans, searchlight, etc. The speed guaranteed is 22½ knots an hour.

The vessels are to be delivered in the winter of 1914, and it is the intention to provide with them a service in the spring of 1915 which will be superior to anything heretofore undertaken on the Pacific coast.

We are indebted for the foregoing particulars to J. W. Troup, Manager, B.C. Coast Steamship Service, C.P.R.

List of Steam Vessels Registered in Canada during June, 1913.

New River Steamboats for White Pass and Yukon Route.

The two new steamboats which the White Pass and Yukon Route has added to its fleet, for service between Dawson, Yukon, and Fairbanks, Alaska, as mentioned in Canadian Railway and Marine World for April, are now on their route, the steamboat Alaska having sailed from White Horse, on her maiden trip of 1,500 miles, to Fairbanks, June 14, and the Yukon following two days later.

The vessels were set up and measured at Seattle, Wash., and then knocked down, shipped to White Horse, Yukon, and put together there. They have saloon and boat decks, with 32 passenger rooms and accommodation for officers. The saloon deck is laid out with large and commodious observation room forward, dining saloon amidships and smoking room and buffet, aft. The propelling machinery consists of sternwheel engines with cylinders 16 ins. diar., by 72 ins. stroke, supplied with steam by local marine boilers. They draw 20 ins. of water with all equipment and stores on board. The first trip, in each case, was from White Horse, but, as mentioned, the regular route is between Dawson and Fiarbanks, about 1,000 miles. The vessels are registered in the U.S., and the company, at the time they were launched, had contracts covering 5,000 tons of freight for conveyance by them. Following are the chief dimensions:—Length, 164.8 ft.; beam, 35.3 ft.; depth of hold, 5.9 ft.; tonnage, gross 765, net 503.

Stranding of the s.s. Kenora.

The Dominion Wreck Commissioner, Commander H. St. G. Lindsay, assisted by Capts. F. Nash and J. McGrath as nautical assessors, held an enquiry recently into the causes of the stranding of the Canadian Lake Transportation Co.'s s.s. Kenora, in Lake St. Louis, June 5. The Kenora sailed from Montreal for Port Arthur, June 4, and after clearing the Upper Lachine canal lock, proceeded to the ship channel, but owing to the smoke from her funnel obscuring the Lachine range lights, she did not maintain her proper course, the strong cross current carrying her to the south side of the channel, where she grounded, doing considerable damage to her bottom. The court is of opinion that the stranding can only be attributed to the smoke obscuring the range lights astern, and exonerates the master and pilot from all blame, and it considers the circumstances so peculiar and unusual that it is unable to make any suggestion that would be likely to help vessels under similar conditions.

Obstructions to Rainy River Navigation.

The Rainy River Navigation Co. was the plaintiff in two actions in which judgment was given in the Trial Court at Toronto, July 16. In the case against the Ontario and Minnesota Power Co., plaintiff claimed $50,000 damages for obstruction of flow of water alleged to be caused by defendant's dam across Rainy River, above the falls. In giving judgment for plaintiff for $540 and costs Judge Britton said: "With some hesitation I have come to the conclusion that the defendants did so interfere with the natural flow of the water from above International Falls into Rainy River as to cause damage to the plaintiff by preventing the running of the Agwinde during part of the season of 1911. Some of the damages claimed by plaintiff has not been proved and are too remote." Thirty days stay of proceedings was granted.

In the other case, against the Watrous Island Boom Co., plaintiff claimed $10,000 damages, alleged to have been sustained by plaintiff through obstruction to navigation by a boom of logs stretched across Rainy River at Hannaford Bar. Judge Britton gave the following judgment: "There must be give and take. In this case defendants' servants made the openings within a reasonable time and gave the plaintiff reasonable facility in navigating the steamer. The plaintiff's claim in this action is quite inconsistent with the claim in the other, where damages are at least in part sought for detention of the same vessel, covering the same period, because of keeping back the water necessary for navigation purposes. The action should be dismissed with costs. Thirty days stay."

Stranding of the s.s. Majestic.

Following is the text of the judgment of the Dominion Wreck Commissioner, Commander H. St. G. Lindsay, concurred in by Capts. F. Nash and J. McGrath, as nautical assessors, in the stranding of the Northern Navigation Co.'s s.s. Majestic, at the time operated by the Richelieu and Ontario Navigation Co. in Lake St. Louis, June 4. The court is of opinion that the master of the Majestic was not justified in accepting the two blast signals from the tug St. Louis, while leaving the Upper Lachine lock and proceeding toward the ship channel, and he therefore committed an error of judgment, and the court considers he should have slowed down and allowed the tug and tow to clear the cut, or have gone ahead and gone to westward of the tow before it came from the cut. The court also considers that the master of the tug was not justified in making the two blast signal, as he apparently made no attempt to keep his tow up on the north side of the cut until it was too late to avoid the accident, and he could, with perfect safety to his tug and tow, have kept on the south side of the channel. It therefore censures both masters and recommends that more care be exercised in future when navigating in narrow waters and especially where cross currents exist.

Government Dry Dock for Levis, Que.

During last year the Dominion Government called for tenders for the construction, within four years, of a dry dock in the Port of Quebec, on a site to be decided by the Government. The work was to be undertaken as a private enterprise, and operated under certain conditions, the Government agreeing to pay a subsidy of 3½% for 35 years on approximately $5,000,000. Surveys of various suggested sites within the port, eventually resulted in the one at St. Joseph de Levis, on the south side of the river, opposite Quebec, being chosen. No satisfactory tenders were received for the undertaking of the work, no tender being submitted in accordance with the terms offered by the Government. It was later decided to take up the question as a Government work, and the contract has been awarded to M. P. and J. T. Davis, Ottawa, at $2,721,116. The dimensions of the dock, which will be a graving dock, and not of the floating type, as at Montreal, will be, approximately, usable length, 1,150 ft.; clear width at entrance, 120 ft.; depth over sill and keel blocks at ordinary high water spring tide, 40 ft. at least. The dock will be built in two compartments.

The Canadian Northern Ry. elevator at Brandon, Man., was destroyed by fire, July 16.

The Alberni Canal Transportation Co., Ltd., has been incorporated under the British Columbia Companies Act, with $20,000 capital, and office at Victoria, to acquire the steamboat College Widow, and to acquire and operate other vessels, and carry on a general transportation business. The College Widow was built at Victoria in 1910, and is screw driven with engine of 10 n.h.p. Her dimensions are: Length, 54.2 ft.; breadth, 15.2 ft.; depth, 7.5 ft.; tonnage, 46 gross, 23 register.

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during June, 1913.

The Lloyd S. Porter's Damage to the Welland Canal.

W. H. Sullivan, A.M. Can. Soc. C.E., Superintending Engineer, Welland Canal, has furnished the following particulars of the accident which occurred on Sunday, June 8, about 5 a.m., when all four gates of lock 1, at Port Dalhousie, were carried out and traffic was interrupted for about 36 hours:

The steamboat Lloyd S. Porter, of the Ontario and Quebec Navigation Co., upbound, had just finished laying up two barges and was proceeding to tie up along the east approach wall about 200 yards below the lock, to await the preparation of the lock to receive her. In the meantime, the Nepawah, also upbound, was about midway in the level between locks 1 and 2. The upper gates were still open and the water in the lock at the level of the upper reach. The engineer of the Porter, misunderstanding the captain's signal to reverse, gave her speed ahead. When she was about 50 ft. from the lower gates, the engines were finally reversed, too late. She struck the west gate a blow sufficient to unmiter the gates. The lift at this lock is 14 ft. and the rush of water tore the two lower gates from their anchorages and they became firmly wedged, one above the other, between the lock walls. The sudden rush of water from the reach above also carried out the upper gates down through the lock and over the two lower gates into the harbor below. The captain of the Neepawah, which was approaching lock 2, became aware of what had happened, and, giving his vessel full speed ahead, succeeded in making lock 2 before the water had lowered enough to ground his boat or for the current to carry her back toward lock 1.

The reaches between locks 1 and 2 of both the old and new canals are connected, and, had it not been for the very large pondage thus afforded, the Neepawah would have been unable to get safely in lock 2 and the accident would have been much more serious.

The pondage above lock 1 is so great that it took fully 12 hours for the water above lock 1 to get down to Lake Ontario level. This also delayed the commencement of making repairs and the resuming of traffic after the repairs had been made.

Four spare gates were put in and navigation resumed about 6 p.m. Monday, June 9. The damage was estimated at about $6,000. The Porter received very small injury, her rudder being slightly damaged.

Loss of the s.s. Gerald Turnbull.

An enquiry into the loss of the British s.s. Gerald Turnbull, on the Gannet Dry Ledge, in the Bay of Fundy, May 10, was held recently by the Dominion Wreck Commissioner, Commander H. St. G. Lindsay, assisted by Capts. N. Hall and J. W. Harrison, as nautical assessors. The vessel was on her maiden voyage, and was apparently in good order and condition, well equipped and apparently navigated in a proper and seamanlike manner. The court, after hearing the evidence, failed to find any reason for the master, Alex. Willison, mistaking the lighthouse on Seal Island for that on Brier Island, as the distance between the two is about 50 miles, and considered that if he had taken soundings after sighting the Seal Island light, and taken into consideration the course and distance he had made between the two buoys, on the southwest ledge off Cape Sable, and the second buoy, which appears to have been the Blonde Rock buoy, he would have found out his mistake in ample time to avoid the casualty. After passing Seal Island, and seeing the fishermen and lobster buoys, he ought to have been on his guard, and apparently he was so over confident as to the vessel's positon that he did not use the ordinary prudence necessary for safe navigation. The court suspended the master's certificate for six months. The court also criticized the evident want of a large scale chart on the vessel, as the one which the master used was not safe and proper for the navigation of a vessel in such dangerous waters.

Reversal of the s.s. Bellona Judgment.

A British court, according to reports, has returned the certificate of J. Cunningham, master of the s.s. Bellona, which was suspended in Dec., 1912, for three months by the Dominion Wreck Commissioner, and whose judgment was concurred in by two experienced navigators, as nautical assessors.

In each of the three cases, which have recently been dealt with in this manner, the master was below at the time of the accident, so that it would appear, at first sight, that the reasons for the return of the certificates were one and the same in each case, viz., that, being below, the master was not responsible. This was practically the reason given by the Judge of the Admiralty Court, in the case of the Bengore Head, mentioned in our last issue, but in the other two cases, the reasons have not been stated.

As we have pointed out in previous issues the matter is perfectly clear so far as the Dominion Courts are concerned, that the master is responsible for everything that may happen in the course of navigation, even though a pilot be on board, the latter being there merely in an advisory capacity on account of his local knowledge. If there is anything in the British act, or general practice, covering this point, it would perhaps be as well for the matter to be set right forthwith.

For several years a dead set has been made by a number of interested British and U.S. papers on the St. Lawrence route and its difficulties have been magnified considerably, and yet the conduct of certain ships' masters, with whom is supposed to rest the responsibily for the safety of their passengers and vessels, in spending the period of what they assert to be most difficult and dangerous navigation, below, and leaving their vessel in charge of the pilot and another officer, who, though qualified, may not be sufficiently experienced, is condoned.

We have no desire to convey the impression that the route is without difficulties or dangers, but the many improvements and aids to navigation which have been provided by the Dominion Government during the past few years, have minimized these to a very great extent, and the number of vessels which have been navigating the entire route for years without accident, is sufficient proof that with ordinary care and judgment, the natural concomitants of good seamanship, the navigation of the waterway from the open sea to Montreal is as safe as any other similar channel in the world.

Examination of Water Levels on the St. Lawrence River.

As previously announced in Canadian Railway and Marine World, Prof. E. E. Haskell, Dean of the School of Engineering, Cornell University, Ithica, N.Y.; W. J. Stewart, Chief Geographer of the Naval Service Department, Ottawa; and V. W. Forneret, Superintending Engineer of the St. Lawrence River Ship Channel, have been appointed a board to investigate and report to the Minister of Marine on the whole question of the water levels of the St. Lawrence at and below Montreal.

The Minister's report, on which the order in council appointing the board was passed states that Prof. Haskell is universally regarded as one of the foremost experts on this continent on all questions relating to water levels. He is to be paid $25 a day, in addition to travelling and living expenses, during the time he is actually engaged in Canada as a member of the Board.

The Loss of the Ship Freia.

The enquiry into the loss of the Norwegian ship Freia, at Sunday Point, Yarmouth, N.S., May 30, was enqired into recently by the Dominion Wreck Commissioner, Commander H. St. G. Lindsay, assisted by Capts. Neil Hall and J. W. Harrison as nautical assessors. This vessel, having taken on her cargo of lumber at Yarmouth, was towed outside the harbor and anchored, with two mates and a seaman aboard. It appears to be the practice at this port to anchor vessels outside the harbor after loading and while waiting for a complete crew. Members of the crew were taken on board from time to time, and on May 29 there were 13 on board. Later, heavy seas arose, and the vessel dragged at her anchors, toward the shore. Unsuccessful attempts to cut away the masts and rigging to ease the ship were made, and she struck on the rocks and disappeared in 15 minutes, the crew being successful in getting on to the rocks. The court was of opinion that everything possible was done under the circumstances to save the vessel, and no blame was attributed to anyone, but considered that the custom of the port in sending vessels into the open with no crew aboard and no sails bent, and leaving them exposed for days to bad weather and strong currents with poor holding ground, is open to criticism.

Dangerous Goods in Public Harbors.—An order in council recently passed for regulating the storing of dangerous goods within the limits of any public harbor, when such goods are not intended for shipment on any vessel, provides that no explosive, inflammable or dangerous goods of any kind may be kept on any pier, or in any bulk scow or floating stage in any harbor without the written permission of the harbor master, under penalty of $100 for each offence. The harbor master may decide, subject to appeal to the Department of Marine, what goods are included under these regulations, and may order their removal whenever permission has or has not been granted.

A passenger on the Quebec and Lake St. John Ry., who refused to give up his ticket recently, on the ground that there was not an available seat on the train, and who was subsequently put off, is suing the company for $1,000.

The Absorption of Canada Interlake Line, Limited.

A. E. Ames & Co., brokers, Toronto, issued the following circular to the preferred shareholders of Canada Interlake Line, Ltd., at the end of June:—

"By an agreement dated June 20, which has the approval of the directors of Canada Interlake Line, Ltd., W. Grant Morden, of London, Eng., and J. P. Steedman, of Hamilton, Ont., have agreed to purchase from the shareholders of Canada Interlake Line, Ltd., their holdings of preferred shares, also their holdings of common shares received as a bonus at the time they subscribed for the preferred, if they still retain such common shares, as follows:—

"The purchase price for preferred shares, carrying with them the bonus of 15% of common shares, shall be $107.50 for each preferred share together with accrued dividends thereon to date of payment. Such shareholders as so desire shall have the privilege, instead of taking cash, of exchanging their holdings for the same number of cumulative 7% preferred shares as they now hold, and 25% thereof in common shares of Canada Transportation Lines, Ltd. (the company recently formed to take over the Richelieu and Ontario Navigation Co., Canada Interlake Line, and several other navigation companies).

"The purchase price for preferred shares, in respect of which the bonus of common shares cannot be delivered, or in the purchase of which no bonus of common shares was received, shall be $100 for each preferred share, together with accrued dividends thereon to date of payment. Such shareholders as so desire shall have the privilege, instead of taking cash, of exchanging their holdings for the same number of cumulative 7% preferred shares as they now hold and 10% thereof in common shares of Canada Transportation Lines, Ltd.

"The terms of the agreement further provide:—That shareholders resident in Canada should deposit their stock with the Prudential Trust Co., Toronto, not later than July 10, and those resident outside of Canada not later than July 21. That the stock so deposited shall be held by the Trust Co. in escrow subject to the terms of the agreement and that the Trust Co. will issue a deposit receipt therefor. That the purchase or exchange, as the case may be, shall be completed on or before Aug. 15, and if not then completed the stock shall be returned by the Trust Co.

"While security holders are free to exercise their choice, we are of the opinion that the exchange of securities will work out to their advantage."

Accompanying the foregoing circular was one from M. J. Haney, President, and J. W. Norcross, Managing Director, Canada Interlake Line, Ltd., which said in part:—"The propositions submitted to you for the exchange or sale of your stock have been sent out after being carefully considered and heartily approved by your directors. We have studied the prospects and possibilities of the Canada Transportation Lines, Ltd., and are confident that the net earnings of the new company will make its securities very attractive. We feel warranted in recommending you to accept the stock of the Canada Transportation Lines in exchange for the stock you now hold in this company. Please note that the preferred shares carry a bonus of 10% common stock."

Canadian Notices to Mariners.

The Department of Marine has issued the following:—

194. June 17. New Brunswick, south coast, Bay of Fundy, off Deadman Head, buoy to be established.

195. June 17. Nova Scotia, southwest coast, Barrington Bay, Congress Shoal, can buoy replaced by bell buoy.

196. June 17. Nova Scotia, south coast, Sambro harbor, buoys established.

197. June 17. Quebec, River St. Lawrence, ship channel between Quebec and Montreal, middle ground below St. Antoine, gas buoy placed.

198. June 17. Quebec, Richelieu River, off de Bleury Creek, buoys established.

199. June 17. Quebec, River St. Lawrence below Montreal, Repentigny, temporary front range light.

200. June 17. England, west coast, Milford Haven, East Pennar Point, alteration to color of light on pier.

201. June 18. New Brunswick, Bay of Fundy, west of Whitehead Island, Whitehead Ledge, buoys established.

202. June 1-8. New Brunswick, east coast, Northumberland Strait, Chockfish River, light established.

203. June 18. Quebec, River St. Lawrence above Quebec, Pointe aux Trembles en bas, light established on wharf.

204. June 21. Quebec. Ottawa River, Fort William, pole light discontinued, lighthouse established on Government wharf.

205. June 21. Ontario, Bay of Quinte, approach to Deseronto, buoys established.

206. June 21. Ontario, Detroit River, Livingstone Channel, float light established.

207. June 21. Ontario, Lake Huron, Goderich, temporary light on south breakwater discontinued.

208. June 21. Manitoba, Red River, chart Winnipeg to Lake Winnipeg issued.

209. June 21. Quebec, Montreal harbor, channel to dry dock, buoys established.

210. June 21, Quebec, River St. Lawrence, Montreal harbor, St. Lambert shoal, buoy established.

211. June 25. Nova Scotia, south coast, Liverpool Bay, Coffin Island, lighthouse destroyed by fire, temporary light.

212. June 25. Prince Edward Island, south coast, Hillsborough Bay, wreck.

213. June 25. Prince Edward Island, south coast, Hillsborough Bay, Haszard Point, day marks on range lighthouses.

214. June 25. Prince Edward Island, south coast, Hillsborough Bay, Charlottetown harbor, color of Brighton Beach range lighthouses.

215. June 25. New Brunswick, Chaleur Bay, Caraquet harbor, buoys established.

216. June 26. Quebec, River St. Lawrence, Lake St. Louis, changes in buoyage.

217. June 26. Ontario, Lake Erie, Long Point Bay, wreck marked by buoy.

218. June 26. Ontario, Lake Erie, Pelee Passage, southeast shoal lightship, additional particulars of lights.

219. June 26. Ontario, Lake Superior, Thunder Bay, Fort William, Mission Channel entrance, buoys to be established, range lights to be established.

220. June 30. British Columbia, Vancouver Island, southeast coast, Esquimalt harbor, Extent of Whale Rock, buoy to be changed in position.

221. June 30. United States of America, Washington, Puget Sound, Alki Point light station, characteristic of light changed, fog signal established.

222. July 3. New Brunswick, St. John River, Scotchtown, buoys established.

223. July 3. New Brunswick, east coast, St. Louis Gully, buoy established.

224. July 3. Nova Scotia, south coast, Halifax approach, Chebucto Head, date fog alarm is to be changed to diaphone.

225. July 3. Prince Edward Island, north coast, Cascumpeque harbor, Alberton, change in position of range lights.

226. July 3. Quebec, River St. Lawrence, Les Mechins, pole light on wharf.

227. July 5. Quebec, River St. Lawrence, Lake St. Louis, buoys established southward of Dorval and Pointe Claire lighthouses.

228. July 5. Ontario, River St. Lawrence, Thousand Islands, gas buoy established near northwest extremity of Georgina Island.

229. July 5. Ontario, Lake Ontario, Presqu'ile Bay, change in color of Brighton back range light.

230. July 5. Ontario, Georgian Bay, west side, Lionhead harbor, light pole replaced by tower.

231. July 5. Manitoba, Red River, Selkirk, lights established on wharf.

232. July 5. United States of America, St. Clair River, St. Clair Flats Canal, light established.

233. July 5. United States of America, Lake Superior, Apostle Islands, Outer Island light, characteristic changed, intensity increased.

234. July 7. Quebec, Saguenay River, below Passe Pierre Islets, light established.

235. July 7. Quebec, Saguenay River, Ile St. Louis, light established.

236. July 7. Quebec, Saguenay River, Trinity Bay, light established.

237. July 9. Ontario, Georgian Bay, east side, Waubuno Channel, Gull Rock, day beacon erected.

238. July 9. Ontario, Georgian Bay, east side, approach to Parry Sound, Black Rock, day beacon rebuilt.

239. July 9. Ontario, Georgian Bay, east side, approach to Parry Sound, Twin Rock, day beacon rebuilt.

240. July 9. United States of America, Lake Ontario, east end, Gallow Shoal, change in position of gas buoy.

241. July 9. United States of America, St. Clair River, Marine City Shoal, gas buoy established.

242. July 9. United States of America, St. Clair River, Stag Island, gas buoy established.

243. July 9. United States of America, Lake Huron, Detour Passage, Crab Island Shoal, gas buoy established.

244. July 11. British Columbia, Cardero channel, Greene Point rapids, Griffiths Island, gas lighted beacon established.

245. July 11. British Columbia, Brown Passage, Tree Nob group, Triple Island, gas lighted beacon established.

246. July 12. Nova Scotia, west coast, Yarmouth Sound, middle ground northeastward of Juhns Cove, buoy established.

247. July 12. New Brunswick, east coast, Shippigan Gully, change in position of back range light.

248. July 12. Quebec, River St. Lawrence, eastward of Orleans Island, gas buoys placed temporarily for dredging purposes.

Canadian Railway and Marine World.

September, 1913.

The Canadian Northern Railway Montreal-Port Arthur Line.

By Henry K. Wicksteed, B.A.Sc., M. Can. Soc. C.E., Chief Engineer of Surveys, Mackenzie, Mann & Co., Limited, Toronto.

The Canadian Northern Ry. has been doing some rather remarkable work in filling in the last links of a transcontinental railway system. For over a year it has had under contract nearly 1,000 miles of main line between Montreal and Port Arthur, besides the completion of a branch of 250 miles between Toronto and Ottawa, and the construction of the Montreal tunnel and terminals, this last being the largest and boldest work of the kind which has ever been undertaken in Canada. These works are all on the east end of the railway system, between Lake Superior and the Atlantic, and independent of the line through the Rockies and down the North Thompson and Fraser Rivers to the Pacific, which are not touched upon in this article.

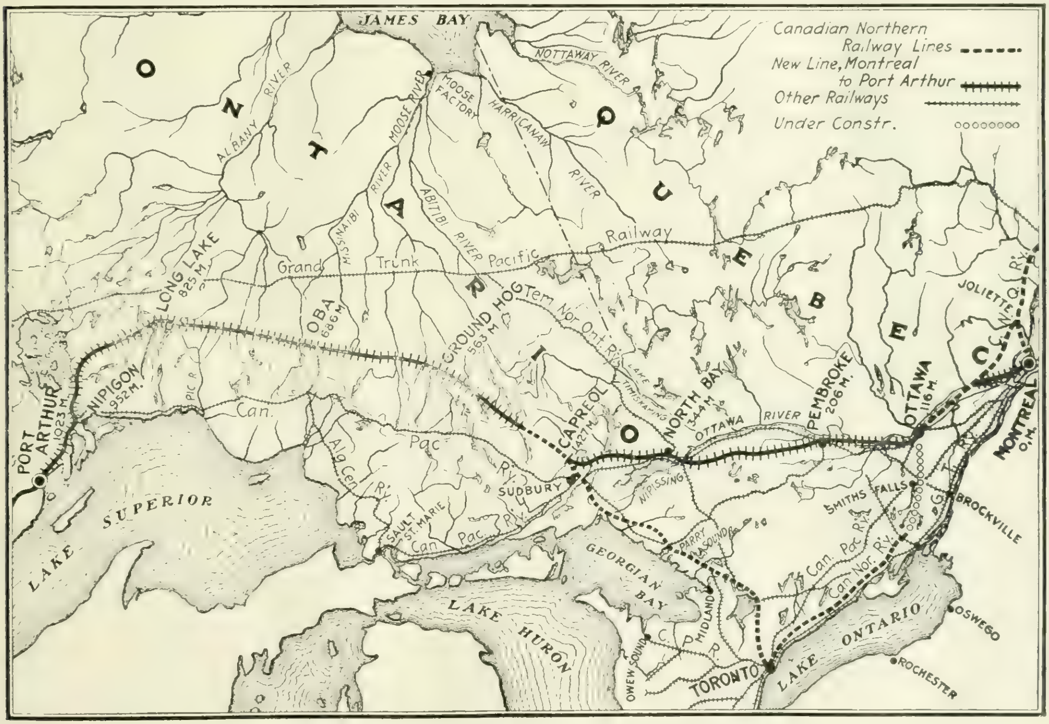

Fig. 1.—Montreal-Port Arthur Section of Canadian Northern Railway's Transcontinental Line.

This important link in the C.N.R. transcontinental system is shown in the map, fig. 1, while a condensed profile is given in fig. 2. This line (1,023 miles) is not only one of the longest stretches of line to be undertaken at one time, but it is also unique in the matter of location among Canadian railways, only the Government National Transcontinental Ry. (now nearing completion) approaching it in the matter of ruling grades. The standard in this particular has been 0.6% against the westbound traffic and 0.4% in the opposite direction. One grade of 10 miles in length is 0.5% (compensated for curvature) against eastbound traffic, but with this single exception the standard has never been exceeded in the whole distance of 1,000 miles, and not even reached except for very short distances.

Owing to the extremely rocky and broken character of much of the country traversed, no attempt has been made to flatten the curvature in the same proportion as the grades. The standard of most Canadian roads is 6°, and this has not been exceeded except in a few isolated cases. The standard obtaining for many hundreds of miles is 4° and less. In another respect the C.N.R. is fully abreast (if not ahead) of the times; that is, the almost total abolition of grade crossings of other railways or of important highways. As a matter of fact, the securing of grade separation at reasonable cost has been a very important consideration (and at several points a governing one) in working out the location.

It will be of interest now to describe the line somewhat in detail.

Montreal to Lake Nipissing.

The Canadian Northern Quebec Ry., an allied corporation, has a terminal in the east end of Montreal and runs thence northeasterly parallel to the St. Lawrence to Quebec and a number of other important points in the province. About 1½ miles from this terminal, is located a sorting yard and a spur connecting with the Montreal Harbor Commissioners' tracks. For economic and topographic reasons this point was chosen as the starting point for the transcontinental line. It runs thence northwest and then west, skirting in a rough semicircle the high plateau at the base of the mountain on which much of the city is built. At 10 miles it passes under the Canadian Pacific Ry.

Half a mile further is the point of connection with the local line which will tunnel directly through Mount Royal (at its highest point) to reach the extensive passenger and freight terminals which have been laid out in the heart of the city, as mentioned above. Two miles beyond, at Cartierville, 600 acres have been reserved for a divisional yard, with repair and erecting shops, and with a margin to be devoted to workmen's dwellings, etc. The Montreal terminal system (with its great tunnel) and the Cartierville yard are shown in fig. 3.

The line now skirts the banks of the Riviere des Prairies, one of the mouths of the Ottawa, for some six miles to mile 20, where it crosses to Isle Jesus and then skirts the east bank to mile 22, where it crosses another channel (the Riviere des Mille Isles) and reaches the mainland near St. Eustache. The line now runs as straight as the topography will allow to Grenville, where it joins the existing line of the C.N.Q.R., and crosses the Ottawa with it on a fine steel bridge, 2,000 ft. long, to Hawkesbury at mile 60. It then skirts the bank of the Ottawa for nearly 50 miles more, passing through L'Orignal and Rockland to Ottawa at mile 116. There are only two important bridges on this section, over the South Nation River and over Greens Creek near the city. Ottawa will be on a branch about a mile long to the existing Central Station.

The main line follows up the Rideau River and crosses it near mile 122. The Toronto branch leaves at this point, which has been called Rideau Jct. The main line swings away again towards the Ottawa and crosses both the C.P.R. and G.T.R. (Parry Sound branch) overhead, and after paralleling the river again for several miles crosses it at mile 154 to the Quebec side. It parallels it again for 22 miles, recrossing into Ontario near mile 176. This is the most important structure so far, necessitating a span of 300 ft. and several smaller ones. At mile 199 it again crosses the C.P.R. overhead, and at mile 206 runs into Pembroke.

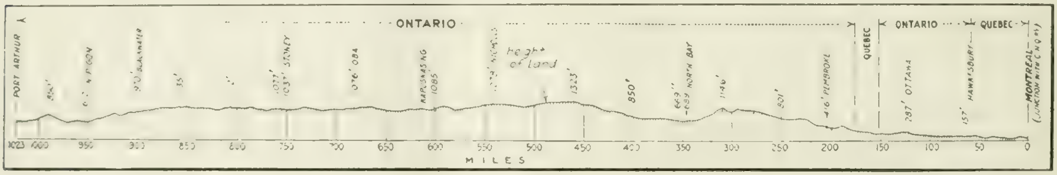

Fig. 2.—Profile of Montreal-Port Arthur Line, Canadian Northern Railway.

So far the line has been in settled country and generally in limestone formation, following one of the great rivers of the continent for practically the entire distance. The securing of light grades has been a comparatively easy matter, but beyond this point the problem is entirely different. The line leaves the Ottawa and ascends the Indian River and almost immediately begins to rise. At mile 225, a divide is crossed which leads t the valley of the South Petawawa (another large tributary of the Ottawa) the line skirting along Grand Lake and some other expansions to mile 253. Another low divide is crossed into the valley of the Little Madawaska, down which the line runs to the main Petawawa. The work is quite moderate, but largely in rocks. The grades, after surmounting the Indian River divide, are almost level.

The Petawawa occupies a very marked depression running for over 100 miles parallel to the Ottawa. At points it narrows to the dimensions of a canyon, and again widens out sufficiently to form lake expansions two miles or more in width. The largest of these is Cedar Lake, 10 miles long. The scenery is very picturesque. The amount of agricultural land being very small, several hundred square miles of this and adjacent valleys have been set aside as a national park and game preserve. The line follows the Petawawa very closely, with heavy rock work and comparatively abrupt ascents in the canyons alternating with easier country and level grades along the lake expansions, to mile 289, where it attains an elevation of 1,100 ft. above sea level.

The rise has been almost constant, and although there are many miles of level there is very little reverse at any point. There is now, however, some four miles of descent to the crossing of the Kioskoqui Lake, an expansion of the Amable du Fond River. This is one of the constructive problems of the road, being 1,200 ft. wide, with 40 ft. of water, over a not very reliable bottom of unknown depth. Eventually there will be a solid earth fill. Another divide, with an elevation of 1,140 ft., occurs at mile 306, after which there is a long descent to Lake Nipissing, at North Bay, where it is 460 ft. lower. About half of this is negotiated on a grade of 0.5%, compensated; the balance is intermittent, and nowhere more than 0.4%. At mile 339, the line again crosses the C.P.R. overhead, and at mile 344 reaches North Bay, the first town since leaving Pembroke.

Lake Nipissing to Port Arthur.

From North Bay the line parallels the C.P.R. along Lake Nipissing to mile 359, then crosses the Sturgeon River at mile 365 and follows its valley and that of one of its branches to mile 397. There it crosses another low divide into the valley of the Wahnapitei, and crossing this it skirts the south shore of the lake. At mile 427 it runs into the existing line from Toronto northward, which has been in operation for some years. This point has been named Capreol Jct.

The combined line now runs up the Vermilion valley through a country which has been proved to contain large mineral wealth. At Moose Mountain, hematite iron is being mined in considerable quantities; nickel, copper and some silver have been turned out at other points. There is also a good deal of timber being taken out at various points. The valley itself is somewhat remarkable. It cuts almost at right angles to the general strike of the country and leads up to an unusually low height of land between Lake Huron and Hudson Bay, 1,350 ft. above the sea, at an average grade of only 10 ft. per mile. This divide is so flat as to be imperceptible to the eye, and at its highest point is a spring pond in a local depression.

For 250 miles the line has been running through a country almost useless from an agricultural point of view. Where it has not been rock, it has been dry sand and gravel, but on the northern slope of the continent it begins to improve, and some of the valleys show good land and are well timbered. At mile 563, the line crosses the Ground Hog, the first of the large rivers which unite further north to form the Moose River. The country is much better and shows considerable areas of clay loam. At mile 577, the Apishkanagama (another large tributary) is crossed, and at mile 610 the Kapuskasing Lake. This again is a very attractive country, which continues across the Missinaibi at mile 632. Although the immediate surface is undulating, the general level is uniform.

At Oba, mile 686, there is one of the topographical freaks which are so common on this great plateau. A considerable stream, the Oba River, forks abruptly; part of it crosses the line and runs north into the Missinaibi, the balance turning abruptly south and after a circuitous course crossing the line at mile 696 as part of the Kabinakagami, which eventually empties into the Albany River many miles north of the Moose River. At mile 712 is another large stream, the Morrison or Shekak (hitherto not laid down on the maps), noted for the size, number and voracity of its trout. Still another large stream feeding the Albany system is the Obakamiga, at mile 740.

From this point westward the line runs into some rough Laurentian country again to mile 800, when it again emerges on to the great northern plain near Mackays Lake. It has crossed the height of land in the meantime, and crosses back again near mile 810. At mile 825 it crosses the outlet of Long Lake, known as the Kenogami River, which also swells the Albany. The lake is an extraordinary sheet of water 55 miles long, extending south to within 30 miles of Lake Superior. It formed one of the problems which the early C.P.R. survey encountered, and forced the line down to the immediate shore of Lake Superior. The effort to find some way round it or across it delayed the C.N.R. surveys over a year. At the south end it is a deep valley between high granite ridges, and the country on either side is almost inconceivably rough. At the north end, on the contrary, is a flat country in every direction, except south, and considerable areas of good land abut against it.

The Hudson's Bay Co. has had a trading post here for half a century or more, and within the last few years the French company, as it is called (Revillon Freres), has established another. Four long travelled canoe routes meet here. One from the south by the lake itself and a chain of lakes and rivers connecting it with Lake Superior near Jackfish Bay. Another starting from Lake Superior by the Pic River and Mackays Lake; a third comes in from Lake Nipigon to the west, and still another follows the Kenogami River to the Albany. This point is therefore a natural gathering place for the Indians of the country and an emporium for the fur trade. The line follows approximately the third of these routes, skirting the north shore of Little Long Lake and Wild Goose Lake.

At mile 854 it crosses the height of land for the fourth time and enters the basin of Lake Nipigon. Crossing the

Sturgeon River at mile [illegible], the line makes for the valley of a parallel stream, the Blackwater, which it follows to mile [illegible]. Leaving the Blackwater about five miles above its mouth, the line turns abruptly south, and at mile [illegible] comes out on the immediate shore of Lake Nipigon at Sand Point. For the next [illegible] miles the work is generally heavy and on side hill. The line follows the bold shore of Orient Bay, and from its head follows a narrow valley between lofty trap mountains, partially filled in with glacial drift, here forming the outlet of the lake. At mile [illegible] is the only tunnel since leaving Montreal, [illegible] ft. in length through a bold trap bluff.

[illegible] ft. to the dividing ridge between it and Thunder Bay. Immediately after crossing this divide is the heaviest piece of permanent trestle on the line, the crossing of [illegible] River at mile [illegible], being [illegible] ft. long and [illegible] ft. maximum height. From this point into Port Arthur, at mile 1,023, there is a long descent on fairly easy ground to within two miles of the city, whence it is being arranged to use the C.P.R. line to a junction with the C.N.R. line already in operation from Port Arthur westward.

Exploration and Surveys.

The surveys for this long stretch of line (1,023 miles) have extended over eight years, although most of the work (and that the most difficult of access) was completed in the past four years. From Montreal to Sudbury the country was fairly well mapped and had been worked over by lumbermen. Supplies [illegible] Capreol Jct. to Lake Nipigon, on the contrary, was almost a terra incognita. A half dozen of the main canoe routes had been traversed by the Geological Survey and laid down on the maps. ther information was misleading and generally worse than useless. One whole summer and parts of other summers were spent in mere exploratory work, and rough [illegible]

[illegible] succession of lakes and rivers, [illegible]

[illegible]

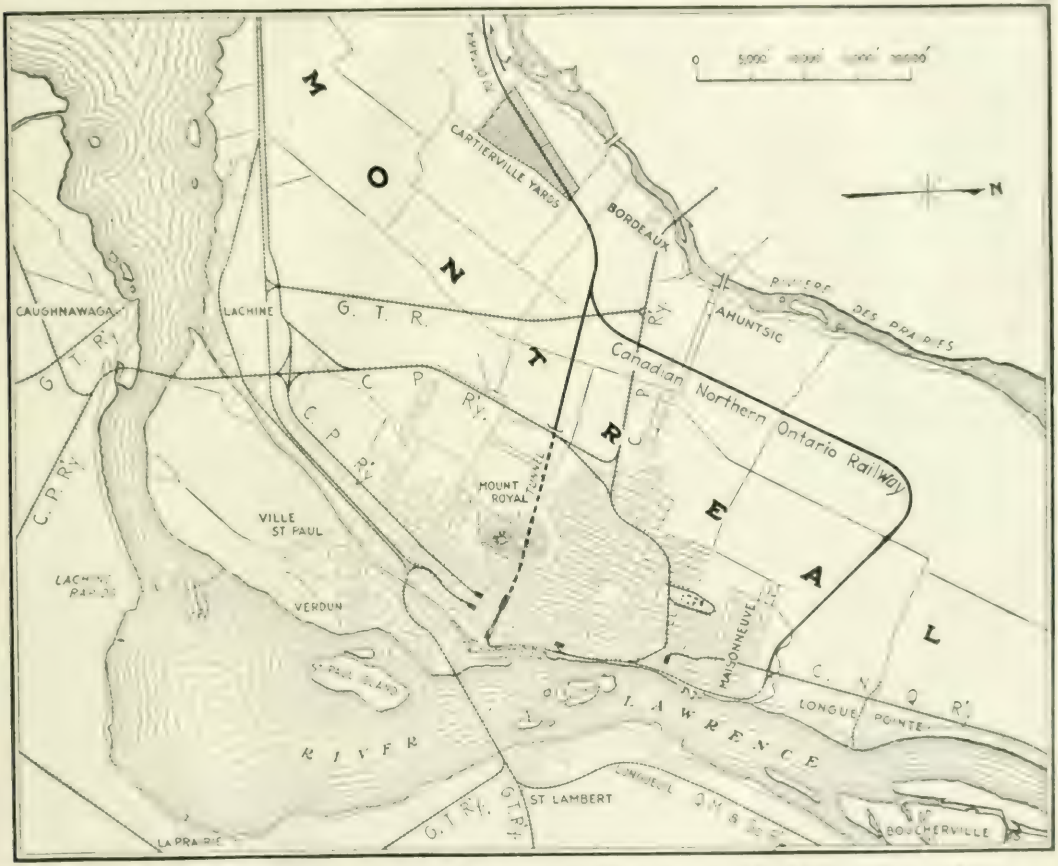

Fig. 3—Canadian Northern Railway Terminal Lines in Montreal, with Tunnel under Mount Royal to Central Passenger Station.

The Nipigon is crossed at mile 945 and the line then follows its west bank to its mouth, crossing the C.P.R. underneath for the last time at mile 952. Just below the mouth of the river on Nipigon Bay is a piece of construction which has given some trouble and anxiety to both the C.P.R. and the C.N.R. in passing round a huge bluff 600 ft. high fronting on Nipigon Bay. The older road has the "inside" track and is partly in cut. The new line is [illegible] and the slopes have run out into 100 ft. of water and mud. This bluff rounded, the line leaves the bay and strikes across the head of Black Bay on very easy ground.

From Black Bay there is a long rise of

[illegible] signed two full parties, averaging from 13 to 17 men each. One of these parties ran traverses and rough exploratory lines ahead of the other and kept from 15 to 25 miles in advance of it. The other followed with trial lines and location.

[illegible] knowledge of the country ahead, sufficient to prevent running into a cul-de-sac [illegible] under the control of the division engineer. The plan worked on the whole remarkably well, largely on account of the personal ability and experience of the two divisional chiefs, H. T. Morrison and J. F. Rose.

The parties worked winter and summer, enough supplies being brought in during the late summer by the water routes to convenient points, at which caches were made, and from these they were distributed as required by dog teams to the various camps. These caches were placed as far as possible ahead of the work, rather than behind. The moral effect upon the spirits of the men, owing to the feeling of security thus engendered, was of marked value. As a matter of fact, there was no real privation at any time through shortage of food, practically no sickness, and very little accident. Some men mutinied at one point, tried to find their way out alone and got frostbitten and half starved; two others were drowned, but in neither case was anyone but themselves to blame. One died from the effects of alcoholic poisoning on his way in. One engineer came out of the woods to die of a disease contracted years before. These represent all the casualties.

On the other hand, the standard of comfort was maintained to practically the same level as on similar work nearer home. The tents were roomy and well heated, and the food was the best which could be obtained. A special mail carrier was attached to each division and made regular trips (by canoe in summer and on snowshoes in winter) over the 75 to 150 mile gap which separated the parties from the C.P.R. Fresh meat was often obtainable and fish almost always, except in midwinter.

One remarkable exception to the general standard of comfort was on an expedition organized by the western divisional engineer through an exceptionally inaccessible belt of country, which it was urgently desired to finish before the spring breakup. Mr. Rose discarded all his white staff except those absolutely necessary for the instrumental work and retained 17 Indians of the country. Tents were abandoned in favor of enough canvas to cover the wigwam. Heating and cooking were done on an open fire in the centre. All the camp impedimenta and provisions were carried on the backs of the men at one trip. It is sufficient to say that in spite of temperatures lower than 50° below zero, the party emerged from the woods three months later in the best of health and spirits and with the work satisfactorily finished.

In one respect the survey parties in this north land had a great advantage over the Antarctic explorers about which so much has been heard lately. Fuel and shelter from the wind were always within reach. On the other hand the light fleecy snow of the north land is incomparably more difficult to travel on than the wind swept wastes of the South Pole. And one is led to wonder whether the British sailor is after all the right man to carry through successfully such expeditions as that of Capt. Scott, and whether the north country Indian or Esquimaux, under competent leadership, is not the proper person.

The half breed runner has been known to make 100 miles in 24 hours on snowshoes. The writer had made 70 miles, and 40 to 50 miles was an ordinary day's work a generation ago. But these men were brought up to it from childhood. No man, however strong, could hope to keep pace with them unless after years of practice. They travelled with the simplest and lightest of outfit; a rabbit skin blanket, a sheet of cotton to keep off the wind at night, a copper teakettle, a tomahawk and a frying pan. This was the outfit, and it was such men as these who accompanied Dr. Rae to the Arctic and men of a kindred race who went north with Peary to the Pole. Nansen made one of the most remarkable journeys in history, in comparative comfort, because he had studied their methods and modes of life during years of residence among them. There are still waste places on the earth to be explored and mapped, and the explorers will do well to attempt merely to improve the methods which have enabled the natives to live and thrive under the local conditions, not to revolutionize them.

Equipment and Camp Outfit.

The outfit of these survey parties was an interesting study in itself. The principal consideration, of course, was transportation. The northern wilderness is for the most part a hopeless jungle of growing and fallen timber, with precipitous rocks, swamps or muskegs, and lakes and rivers intersecting it in every direction. Continuous travel on foot is difficult and exhausting, and the use of pack animals impracticable. But the numerous lakes, ponds and streams afford good (though broken) navigation, and the universal means of travel in summer is the canoe. At first this was the birch bark canoe of the native Indian, a wonderful construction built entirely of the products of the local forest, but extremely delicate and unfit for use by any but practised white men.

Next came the basswood or cedar canoe, built roughly on the Indian models. It was much stronger and more speedy, but also heavier, and weight is a very serious matter on the portages. A still later arrival, and one coming into general use, is the canvas canoe. I believe this came originally from Maine, and it is now brought to considerable perfection. The construction, except for the canvas skin, is very like that of the Indian; but the white man's tools and metal fastenings give him a great advantage over the native, and wonderful as the Indian's work is, considering his facilities, the civilized product is better. The canoes for the C.N.R. surveys were built by the Chestnut Co., in Fredericton, N.B., but its models were rejected in favor of that of the aboriginal craft, and both models and construction were a decided advance on anything previously used.

Tents were also experimented with, and a number of different styles were tried. Here again lightness was essential. The final evolution was a roof of best 8 oz. duck, with back, front and walls of light drill. Shelter being almost always available and windage unimportant, the walls were made unusually high (5 to 6 ft.), adding much to available room inside.

Bedding for summer consisted of the inevitable woolen blankets, but in winter the extremely low temperatures render these insufficient for the ordinary man, even when made into a sleeping bag. The rabbit skin blanket is the most perfect substitute which the red man or anyone else had evolved up to a few years ago, but latterly the eiderdown quilt has superseded everything else. This, made into a sleeping bag, with a protective covering of duck, has been a very satisfactory solution of the bedding question. A well fed man can sleep comfortably in a snowbank in one of these bags with the thermomenter at 30° below zero.

Transport in winter is accomplished over practically the same routes as in summer, the ice on the lakes and rivers forming the road. The toboggan takes the place of the canoe. Experiments have been tried with broad runner sleighs similar to the kometic of the Esquimaux, and under certain circumstances they are admirable. But they need a broad, open road and a fairly hard one, and this they only get on the larger lakes. The portages are too narrow and generally too soft, and the flat narrow flexible toboggan is the only thing which is universal in its adaptation. It is generally made of the native birch, and is another Indian creation which has been little improved on by the white man, although steel screws, tire bolts, and even steel wire ropes have of late entered into its construction to replace the lashings of rawhide.

The hard wood gives a minimum of friction in cold weather, but towards the breakup of winter the wet snow not only makes them difficult to haul but roughens and rags up the wood. Low wooden runners, shod with steel, are then sometimes used as an adjunct, but they are awkward things to carry about during the long winter and the period of wet snow is so short that they are often omitted. Dogs are used for long distance work and rapid travelling.

The most important part of the winter outfit is probably the snowshoe, and it has been one of the hardest to get of serviceable make. The snowshoe the Indian makes for himself is good, but those he makes to sell are the reverse, and those sold by the dealers in civilization are almost useless. The Fredericton firm has taken up this branch of manufacture of late, and is supplying a very good article.

Cooking outfits have also been the subject of much study and experiment. For light flying expeditions, the open fire is all sufficient, but for a large party requiring a variety of food it is difficult in these days to find a cook who is willing to operate on one. In stormy weather his job is not an enviable one, the baking of bread especially being very difficult. Further, the open fire necessitates a very large quantity of dry wood, which is only obtainable anywhere by virtue of much chopping and hauling and sometimes not at all. In any case it takes a helper's whole time to keep the cook supplied. Sheet steel cook stoves have been brought to a fair state of efficiency, but they are still cumbersome and heavy.

Instruments.

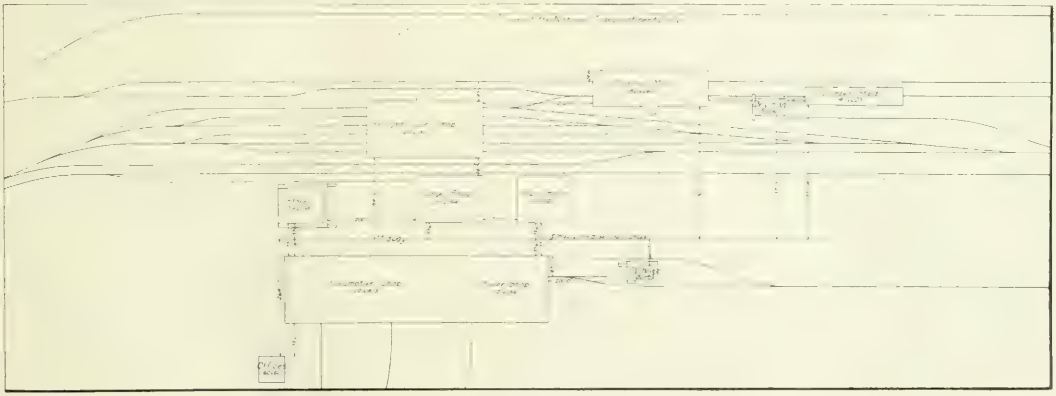
The surveying instruments would seem to be the most important of all, but as a matter of fact they caused little worry and few accidents occurred. American patterns were used almost exclusively, and the simplest and lightest were preferred. One of the worst faults with the smaller instruments was the small diameter of the milled head of the leveling and clamp screws, necessitating the removal of the mitten for every adjustment. Stadia wires or a gradienter attachment for the measurement of distances were essential, in fact much of the exploratory work was carried on by micrometer work. A vertical arc on the other hand was worse than useless, merely so much more weight to be carried.

The dumpy level was the favorite on account of the greater need for ample light than for great magnifying power. For one reason or another long sights in thick woods are seldom possible in any case, and in midwinter in these latitudes the day is only eight hours long and it is important to use the last vestige of daylight. A pole rod, self reading, with figures painted on the wood was used almost invariably. The telescope rods were apt to play tricks, slipping down unnoticed at times and refusing to extend when required.

Repairs were difficult to make, and as a matter of fact this question of repairs with the elementary tools which could be carried (the axe, spokeshave, auger and awl) was one that entered into consideration with almost every article of the equipment.—Engineering News.

National Transcontinental Railway Shops at Quebec.

The plans for the shops to be built by the National Transcontinental Ry. at Quebec, Que., estimated to cost $1,500,000, have recently been prepared and tenders will shortly be invited for the work. They are intended to handle all the repairs on the eastern end of the N.T.R. in conjunction with the larger shops at Transcona, Man., 5 miles east of Winnipeg, the major portion of which has been in operation for some time. A description of the latter, dealing with each of the locomotive department buildings in detail, appeared in Canadian Railway and Marine World for Feb., 1912. These two shops will handle the whole 1,800 miles of the N.T.R. from Moncton to Winnipeg, and in addition, it is the intention to handle the repairs on the G.T.P.R. lines west of Winnipeg, until such time as it becomes necessary for that line to build additional shops further west, as the C.P.R. has recently done at Calgary.



Layout of Shop Buildings at Quebec National Transcontinental Railway.

The shops at Quebec will be located in the suburb of St. Malo, which is about 2 miles distant from the centre of the city and almost due west. From the north end of the Quebec bridge, now under construction for the N.T.R., the line follows a northwesterly direction along the St. Lawrence River to Wolfe's Cove, piercing the escarpment at this point, the tunnel running straight back from the river, coming out near the site of the projected shops at St. Malo. The C.P.R. Quebec-Montreal branch passes through St. Malo, and the N.T.R. line from near the point where it leaves the tunnel, forms a Y in two directions to make connection with the C.P.R. The shops will be located on the southerly of the Y branches, in the track engirdled area, the shop area being about 1½ miles long by ¾ mile wide, the main line running along one side.

The arrangement of the buildings is shown in the accompanying plan, from which it will be noted that the layout, while providing for ample accommodation for meeting all requirements for many years to come, is considerably smaller than that at Transcona, but the layout and grouping is such that additions to present buildings, and additional buildings, may be made at any time without destroying the utility of the present arrangement.

The shop buildings will be arranged along a midway, which will parallel the main line, the relation of the buildings to the midway being somewhat different from that in the generally accepted midway shop arrangement in which the shops are placed end on the midway, with each of the buildings close together, with room for expansion to the rear. In this layout the arrangement is different, involving the location of the buildings which use the heavier materials along the midway, with the other buildings back from it. It is considered that this arrangement will prove most satisfactory for a small shop such as this, because the material brought to the shop by the midway crane and placed at one of the several doors of the building, will be taken from the door to the machines in the most direct way. In this respect, it will do away with the "long haul" in the shop. The midway, which will extend the full length of the main part of the shop grounds, will be 75 ft. wide, and served by a 20 ton travelling crane, the track for which will be supported on building abutments and steel columns.

The level of the ground on which the shops will stand is to be raised slightly by spreading over the surface the material removed from the tunnel under the mountain. Most of the buildings in the group will be of practically the same construction, a self supporting steel frame with white brick superstructure walls, the whole supported on a concrete wall carried up to the window sills. The roof of each building will be of double wood sheathing, with ventilators and skylight, and covered with a prepared roofing. The flooring in all cases, save where specially excepted, will be of 6 in. concrete overlaid with a 1½ in. layer of special grease resisting mastic asphalt. The heating of all but the locomotive and boiler shop will be by direct radiation, the locomotive and boiler shop having an indirect fan system.

THE LOCOMOTIVE AND BOILER Shop Building will be 603 by 152 ft., containing both locomotive and boiler departments in opposite ends, there being no divisional walls in the length of the building. The building will be divided into three bays, extending the length of the shop, and divided into 26 traverse bays at 23 ft. centres. Of these traverse bays, 18 will contain locomotive pits, leaving 8 traverse bays for the boiler shop. The longitudinal bays will be as follows:—Erecting bay, 75 ft. wide; large machine bay, 55 ft.; and small machine bay, 18½ ft. Over the small machine tool bay there will be a gallery extending the length of the shop, containing the lighter equipment and heating plants. The locomotive shop space will give an area of 3,400 sq. ft. of floor area per pit, which is slightly smaller than that of the Transcona shops. These shops being smaller will probably not average as heavy repairs as the western shops near the centre of the combined system. The floor area per pit when compared with many other shops, shows that there is ample provision for future needs, and the shop will not soon become encumbered with material and locomotive parts.

The relation of the locomotive and boiler shop building to the midway will be rather unusual, being located with the long side to the midway instead of the usual end on arrangement. This layout is the result of careful consideration, which counselled this arrangement in order that all parts of the shop would be convenient to the midway, for the crane in the latter to bring parts from the stores and other buildings into the shop without disturbing the interior working of the shop as frequently occurs when material must be handled the full shop length. The material can be taken in through doors located at intervals along the midway side. Along the other side of the shop there will be two entry doors to the locomotive shop, and one to the boiler shop, for the entry of locomotives and tenders. In the erecting bay of the locomotive shop there is to be a 120 ton travelling crane for placing the locomotives on their respective pits. There will be in addition, two 10 ton cranes. The boiler shop will have a 20 ton crane, as well as additional smaller cranes not decided on as yet.

THE SHOP OFFICES will be located in a three story and basement building 60 ft. square, near the end of the locomotive shop, and back from it. All the shop officials will be located in this one building, dispensing with minor shop offices. This building will differ slightly from the others, but will be similar in the main, of brick construction on concrete foundations.

THE STORES BUILDING will be of reinforced concrete throughout, 104 by 79 ft., flush with the midway, and with a 10 ft. platform extending around three sides, with ramps leading up from the ground level on the platform at two of the corners. It will also contain a basement. The platform on the midway side will be served by a 20 ton midway crane, facilitating the delivery of stores to and from the different units of the plant.

THE FORGE SHOP is a building 155 by 107 ft., of the typical construction, except that the flooring is to be cinder instead of dressed concrete, as is usual in forge shop practice. It will contain the usual complement of forges, hammers, etc. The steel work of the roof is designed to support the jib cranes.

THE POWER HOUSE will be 125 by 107 ft., divided by a fire wall into engine and boiler rooms, with a pump pit running along this fire wall in the engine room, and a basement extending under the whole area of the boiler room to accommodate the coal and ash handling apparatus, a construction closely approximating that at Transcona in most particulars. The power house will be close to the midway, and quite centrally located with regard to all the buildings of the plant, minimizing electrical transmission losses, and supplying dry steam for the hammers. The engine room will be served by a light travelling hand crane.

THE OIL HOUSE will be a reinforced concrete main floor and basement building at the rear end of the plant. The oil house itself will be 30 by 40 ft., standing on a platform 50 by 70 ft., which will form the roof of the basement. The usual oil house stores will be kept upstairs, with the oil tanks for the plant located in the basement.

THE FREIGHT CAR SHOP, 265 by 130 ft., will be the principal of the car department buildings. In common with the other purely car department buildings, it will be located back from the midway, with the buildings used in common with the locomotive department, such as forge shop and power house, centrally located between. It will be divided into three bays, two of which will be served by cranes. There will be six through repair tracks, with rip track accommodation at each end, where future extensions may be made.

THE PLANING MILL, 82 by 265 ft., will be conveniently located to the rear of the freight car shop. It will be but a short distance across from the power house, to which the mill shavings will be forced under a fan system.

THE DRY KILN, to the rear of the planing mill, will be 38 by 71 ft., of the usual construction.

THE LUMBER SHED, 40 by 225 ft., will be of wooden frame construction on concrete foundations. It will be noticed in connection with the four buildings of the car department that they are so arranged as to give a continuous forward movement of the lumber from the lumber shed, through the dry kiln and planing mill to the freight car shop. The latter is also to be used as a passenger car shop. There will thus be no retrograde movements of the material in passing through the plant.

The whole layout of the Quebec shops, as well as the detail design of the individual buildings, have been prepared under the supervision of W. J. Press, Mechanical Engineer, N.T.R., to whom we are indebted for the data for this article.

Birthdays of Transportation Men in September.

Many happy returns of the day to:—

G. W. Alexander, Local Treasurer, G.T.R. Western Lines, Detroit, Mich., born at Lightcliff, Yorks., Eng., Sept. 10, 1859.

H. Bailey, Bridge and Building Master, Dominion Atlantic Ry., Yarmouth, N.S., born at Huntsville, Ont., Sept. 2, 1879.

W. B. Bamford, Division Freight Agent, Atlantic Division, C.P.R., St. John, N.B., born at Belleville, Ont., Sept. 10, 1863.

G. T. Bell, Passenger Traffic Manager, G.T.R. and G.T.P.R., Montreal, born there, Sept. 7, 1861.

W. H. Biggar, K.C., General Counsel, G.T.R. and G.T.P.R., Montreal, born at the Carrying Place, near Trenton, Ont., Sept. 19, 1852.

E. R. Bremner, ex-Division Freight Agent, G.T.R., Ottawa Division, Ottawa, born at Toronto, Sept. 9, 1875.

M. H. Brown, Division Freight Agent, Ontario Division, C.P.R., Toronto, born at Victoria Square, Ont., Sept. 2, 1866.

W. B. Bulling, ex-Assistant Freight Traffic Manager, C.P.R. Eastern Lines, Montreal, born there, Sept. 16, 1858.

C. F. Burns, Auditor of Disbursements, Intercolonial Ry., Moncton, N.B., born at Clements Port, N.S., Sept. 10, 1854.

A. D. Cartwright, Secretary, Board of Railway Commissioners, Ottawa, born at Kingston, Ont., Sept. 20, 1864.

A. W. Davis, Locomotive Foreman, G.T.R., Stratford, Ont., born at Sittingbourne, Kent, Eng., Sept. 5, 1854.

A. S. Dawson, M. Can. Soc. C.E., Chief Engineer, Department of Natural Resources, C.P.R., Calgary, Alta., born at Pictou, N.S., Sept. 6, 1871.

O. L. Dickeson, President, White Pass and Yukon Route, Vancouver, B.C., born at Ottumwa, Ia., Sept. 16, 1877.

M. B. Dube, General Foreman, Transcona Shops, G.T. Pacific Ry., Transcona, Man., born at Quebec, Que., Sept. 6, 1877.

W. E. Duperow, General Agent, Passenger Department, Grand Trunk Pacific Ry., Vancouver, B.C., born at Stratford, Ont., Sept. 4, 1872.

W. H. Estano, Traffic Auditor, Intercolonial Ry., Moncton, N.B., born at Halifax, N.S., Sept. 29, 1874.

C. B. Foster, Assistant Passenger Traffic Manager, Eastern Lines, C.P.R., Montreal, born at Kingston, N.B., Sept. 30, 1871.

J. P. Ferguson, representing Galena Signal Oil Co., Ottawa, Ont., born at Drummondville, Que., Sept. 12, 1856.

John Gray, General Agent, G.T.R., Toronto, born at River Beaudette, Que., Sept. 28, 1863.

D. W. Hatch, Travelling Agent, Atchison, Topeka and Sante Fe Ry., Montreal, born at Bedford, Que., Sept. 1, 1841.

W. R. Howard, Chief Despatcher and Trainmaster, District 1, Atlantic Division C.P.R., Brownville Jct., Me., born at St. Andrews, N.B., Sept. 14, 1871.

J. E. Hutcheson, General Manager, Montreal Tramways Co., Montreal, born at Brockville, Ont., Sept. 15, 1858.

C. B. King, Manager, London St. Ry., London, Ont., born at Galena, Ind., Sept. 12, 1871.

E. L. Landorph, Resident Engineer, C.P.R., Brandon, Man., born at Copenhagen, Denmark, Sept. 9, 1888.

R. E. Larmour, Division Freight Agent, British Columbia Division, C.P.R., Vancouver, born at Brantford, Ont., Sept. 26, 1868.

H. D. Lumsden, M. Can. Soc. C.E., engineering department, C.P.R., Toronto, born at Belhaire, Scotland, Sept. 7, 1844.

F. J. Mahon, Superintendent Telegraphs, Eastern Division, C.P.R., Montreal, born there, Sept. 18, 1865.

R. E. Merkley, Trainmaster, District 3, Saskatchewan Division, C.P.R., Saskatoon, born at Ottawa, Sept. 3, 1882.

J. F. Mundle, City Freight Agent, C.P.R., Montreal, born at Prescott, Ont., Sept. 20, 1857.

M. B. Murphy, Superintendent, District 2, Central Division, Canadian Northern Ry., Winnipeg, born at Napa, Cal., Sept. 11, 1866.

B. S. Murray, Route Agent, Canadian Express Co., London, Ont., born at Glenwood, N.Y., Sept. 17, 1856.

J. Paul, District Freight Agent, Canadian Northern Ry., Winnipeg, born in Euphrasia tp., Grey Co., Ont., Sept. 13, 1858.

W. J. Pickrell, Master Mechanic, District 3, Ontario Division, C.P.R., Toronto, born at London, Ont., Sept. 15, 1880.

C. S. Richardson, District Freight Agent, C.P.R., Buffalo, N.Y., born at New York City, Sept. 26, 1870.

W. D. Robb, Superintendent of Motive Power, G.T.R., Montreal, born at Longueuil, Que., Sept. 21, 1857.

W. H. Rosevear, ex-General Car Accountant, G.T.R., Montreal, born at Wadebridge, Cornwall, Eng., Sept. 26, 1837.

F. W. Sterling, Travelling Freight Agent, C.P.R., Vancouver, B.C., born at Thornbury, Ont., Sept. 14, 1881.

E. W. Taylor, General Freight Agent, Reid Newfoundland Co., St. John's Nfld., born at Carbonear, Nfld., Sept. 8, 1870.

Sir William Whyte, Director, C.P.R., Winnipeg, born at Charleston, Scotland, Sept. 15, 1843.

H. A. Young, Traffic Manager, Canadian Lake Line, Toronto, born at Brooklyn, N.Y., Sept 1, 1864.

The Dunsmuir Colliery Litigation.—It is understood that both Mackenzie, Mann & Co., Ltd., and James Dunsmuir will appeal against the decision given by the British Columbia Court of Appeals in the cross actions arising out of the sale by the latter of the colliery properties and effects of the Dunsmuir estate on Vancouver Island. The court found that Mackenzie, Mann & Co. were entitled to receive from the vendor all the seagoing vessels engaged in transporting the coal, except the ship Oregon; the stock fuel at the C.P.R. bunkers at Vancouver, B.C., and other collateral properties, and that the vendor is entitled to all the earnings of the properties up to the payment of the purchase money, and not up to the date of the option, as claimed by the purchasers.

In the operation of steam railways throughout the Dominion, during June, there were 24 fatal and 89 non fatal accidents. Of the fatalities, 7 were due to being run over by trains; 4 each to being crushed between cars, to falling from trains, and to being struck by falling material; 3 to being struck by trains, and one each to a derailment and to being crushed by an elevator.

North Toronto Grade Separation, Canadian Pacific Railway.

The C.P.R. is carrying out the grade separation work on its line across the northern part of Toronto, in compliance with the Board of Railway Commissioners order, which called for the elevation of its tracks as well as those of the Canadian Northern Ontario Ry. line, which is projected to enter Toronto from the west along a route following that of the C.P.R. most of the way through that portion of the city. This order called for the elevation of all through tracks from Dufferin St. on the west to Summerhill Ave. on the east, with subways for the majority of the streets crossed. The constructional work is being conducted by the C.P.R., the C.N.O.R. and the city sharing equally in the cost with the C.P.R.

The C.P.R.'s North Toronto line was formerly owned by the Ontario and Quebec Ry., which was absorbed by the C.P.R. in the 'eighties. Originally, this was the only entrance the C.P.R. had to Toronto, but some years ago a diversion was made from Leaside Jct., about two miles east of the centre of the city, to the line across the city waterfront, and thence into the Union Station. This, in conjunction with the C.P.R.'s Toronto, Grey and Bruce line, sidetracked the North Toronto line, the trains entering the Union Station from the east by way of Leaside Jct., and from the west by way of West Toronto. The North Toronto line was afterwards used for freight purposes, a noncongested cut off for through freight being thereby obtained. As the C.N.O.R.'s new line will also enter the north end of the city, the possibility of considerable traffic being handled across the double line made it appear advisable in the Board's opinion to elevate the tracks through the central portion of the line, work on which is now under way.

The viaduct is to be built for 5 tracks, and will be about 3 miles long, covering the more congested portion of the route. Of these five tracks, the northerly one will be used as a service track by the C.N.O.R., as that line connects at both ends with the C.P.R. route from the north. The southerly one will be for C.P.R. service. Of the three central tracks, the two northerly are to be built at present, and will be used jointly for through service. The fifth track will not be built at present, but provision is made for laying it as occasion may require.

To date, only one subway has been built, that at Avenue Road, which is shown in the accompanying illustration. The others will be proceeded with as ordered, the headway clearance of all but this completed subway being as yet under consideration, the city demanding greater head room than the railways feel prepared to give. The Avenue Road subway is 66 ft. wide, with a roadway clearance of 14 ft. It is of a concrete substructure construction, with the former street level depressed about 5 ft. Macpherson Ave. enters the subway from the west on the north of the tracks, requiring a slight street diversion, with retaining wall along that side. All street approaches are on a 5% grade. The subway is crossed on steel plate girders. Work on this subway was carried forward without interruption to train service by leaving one track at grade and building the concrete abutments on both sides of this track, finally carrying the service across on a trestle bridge at the new elevation, and building in the open space in the abutments. The street traffic was diverted to the east on the Marlborough Ave. side.

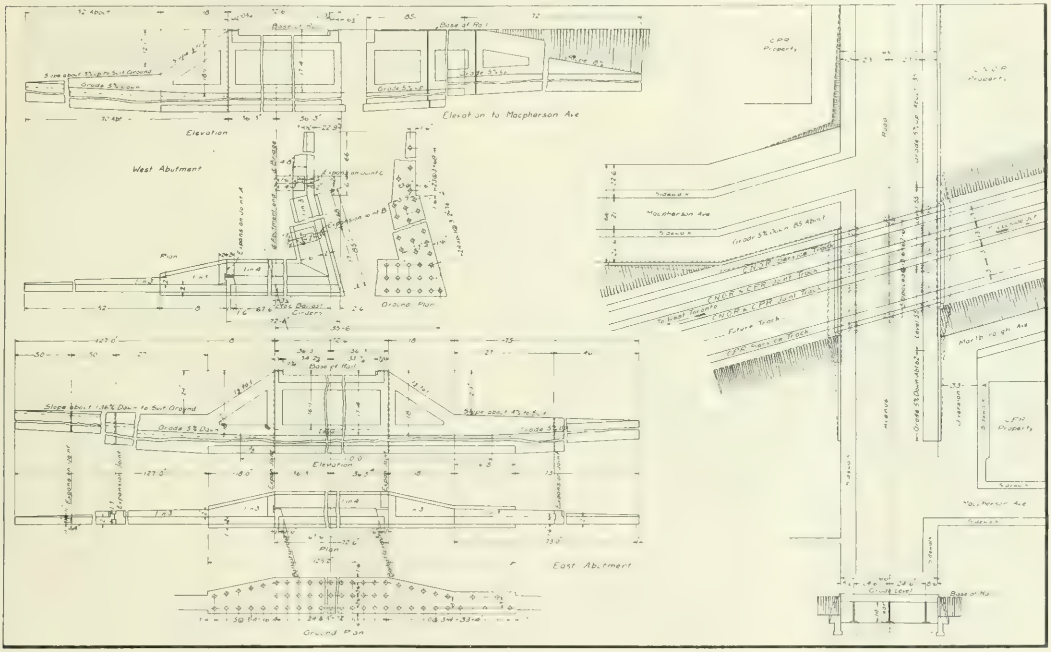
The elevation work between subways has been carried forward in a similar manner, leaving the southerly track open at grade, building a trestle on the north side, on which traffic was diverted. The portion that has so far been elevated is the section from Summerhill Ave. to near Davenport Road, including Yonge St. crossing, which is now being carried on a temporary timber trestle, pending a settlement in the clearance dispute. The two northerly tracks are completed, and the others are being pushed forward. On this section, the elevation is about 12 ft. above the former grade.

It is expected that the new Union Station for the C.P.R. and C.N.O.R. will be in this portion of the line, on the east side of Yonge St., but no definite decision has been announced.

The next subway to be built will be at Davenport Road, where two streets—Davenport Road and Poplar Plains Road—will be carried under the tracks in one subway, by forming a T entrance from the north, the two streets uniting at the tracks.

Subways are projected, in addition to the three mentioned, at Spadina Road, Howland Ave., Bathurst St., Christie St., Shaw St., Ossington Ave., and Dovercourt Road. These are all to the west of the semi completed portion.

The elevation work is being carried out under A. L. Hertzberg, M. Can. Soc. C.E., Division Engineer, Ontario Division, with B. Ripley, M. Can. Soc. C.E., Engineer of Grade Separation, directly in charge.



Avenue Road Subway, North Toronto Grade Separation.

The question of introducing on the C.P.R. Eastern Lines, the unit system of organization for the general superintendents and superintendents offices which has been in force on the Western Lines for some time, is said to be under consideration.

Canadian Northern Ontario Railway Supply Car.

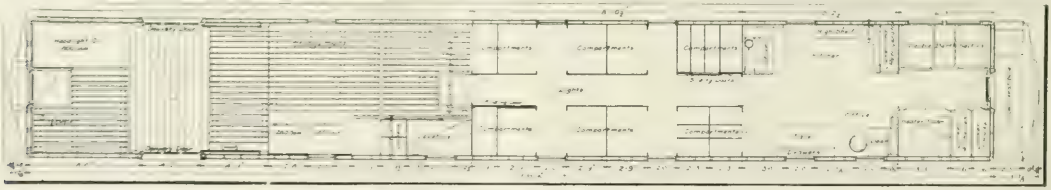
Early this year, the C.N.O.R. placed in service a new supply car, which is illustrated herewith. The car is an old Pullman sleeping car, rebuilt under the direction of A. L. Graburn, Mechanical Engineer, to designs evolved in conjunction with L. C. Thomson, Storekeeper, embodying a number of new features that have appeared desirable to the latter through his long familiarity with store cars, both on the C.N.R. and the C.P.R.

The fact that the car is a piece of passenger equipment, discarded, not on account of being unserviceable, but rather from the fact that for present day equipment it was a little antiquated, made a splendid base on which to construct the store car. While but little of the old body remains, the underframing, car framing, and trucks have been utilized, the whole making for a very solid car. The trucks are six wheel, with 36 in. steel wheels; the underframing is of steel I beams throughout; and it is provided with standard draft rigging. The air and signal arrangement is that of a standard passenger car.

The car was of the old open vestibule type. One of these vestibules, on the store end, has been removed. The overall dimensions of the car body are 66 ft. 2 ins. long, by 9½ ft. wide. As refinished, the window arrangement of the former sleeper has been rearranged with a few higher windows along both sides. The finish of the car corresponds to the C.N.R. standard.

The open vestibule end is the living and business end of the car. To the right on entering from that end is a double berth section for the attendant in charge. Opposite this section, in the corresponding length of the car—6¼ ft.—are three sections, two of which are shelf lockers, with a heater room alongside, containing a Baker heater with its auxiliary apparatus.

Beyond this section of the car is a room 10 ft. 2½ ins. long, designed for the attendant's general living quarters, the portion on the right forming the kitchen, and the opposite side the office. In the kitchen portion, at the entry end, is a double locker, cupboards above and refrigerator below, the front of the cupboard forming a kitchen ledge and sink. In front of this is a garbage chute to the outside of the car. The opposite end of the kitchen section contains a small kitchen range, insulated on the two wall sides and floor. The office half of the room contains at the entry end a small desk attached to the wall, with revolving desk chair in front. Over the desk are tiers of pigeon holes for the stores bills, etc. To the rear of the desk, along the side of the car, is a table 4 ft. long, used principally in wrapping up parcels for delivery at the different stations.



Plan of Supply Car, Canadian Northern Ontario Railway.

Beyond this double utility room, in the centre of the car, is an 18 ft. 10½ in. section containing three storage sections on each side of a central aisle. These sections are of different shapes and sizes, to accommodate to the best advantage the full range of stores carried. The first section at entering on the right is a set of four vertical compartments above and below, opening into the centre aisle by sliding doors. Across from this section is a double section of tiers of drawers, entered both from the office and a cross aisle. The other store sections take different shape, all opening from the cross aisles with the exception of the end section on the left, which has sliding doors from the centre aisle. The two sections opening on the centre aisle was necessitated by the lack of space in the narrow cross aisles.

Supply Car, Canadian Northern Ontario Railway.

Beyond these storage sections, the balance of the car is a long open room, except for the lavatory on the left, and a tier of special lockers beyond the latter, for the storage of inflammable material, such as matches, fusees, etc. This section is kept under lock and key, and the interior, both walls and door, is lined with galvanized iron to minimize the fire danger. This is an idea embodied by Mr. Thomson as the result of an experience encountered some years ago in the handling of inflammable stores. The tightness of these compartments makes the possibility of fire very small.

This large room, 30 ft. 10 ins. long, contains three oil tanks, two small 280 gal. tanks for journal and signal oils, and the third at the very end of the room of 800 gal. capacity, for headlight oil. All these tanks are equipped with Bowser measuring and drawing apparatus. This whole room, with the exception of the strip across between the two 4 ft. sliding doors near the end of the larger tank, is laid with slatting. Under this, on the underflooring, is a surface of galvanized iron, draining to 1½ in. drain holes at each end of the room, through which all the wasted oil is drawn off from the floor of the room. This idea of slatting on the floor and surfacing underneath is one of the most valuable features of the car.

The side doors are very similar to those found in baggage cars, sliding on wheels into protected door pockets. Across between the doors, the surface is of 2 in. close flooring. All the stores are given out through these side doors at the stations, nobody but the attendant being allowed in the car, he thereby having a closer check on all the stores. The practice in service is to have the stores for delivery at a certain station made up on the run and piled opposite the delivery door ready for serving out without delay. For safety, there is a 1 in. grab iron across the door opening above the door.

The large oil tank room is also the store room for bulk stores, such as tie plugs, which can be heaped in the open spaces at the end of the room or opposite the small tanks.

The lighting is from six pairs of oil lamps suspended from the roof, spaced at even intervals down the centre of the car. There is also a side bracket lamp over the attendant's desk. Fire protection is provided for by a chemical fire extinguisher above the desk, and four pails of sand on a ledge over the door leading into the oil room.

The factor of operating the car is well looked after in the design. All the oil tanks have connections on the under side of the car through which they are filled, removing that dirty operation from the body of the car. Any oil that does slop out inside the car is drained off as noted. All supplies are loaded into the car at the loading depot through the side doors and distributed to their several locations for redistribution along the line without having occasion to go into the living section of the car at all. The whole arrangement is a considerable improvement on the former stores car, which was an old caboose, slightly rearranged for this particular service. Everything has been so carefully planned for convenience, that the writer is informed by Mr. Thomson that it is now the practice to frequently place the car near the head end of a passenger train, and while the train is running the order for the next station is being made up, and on arrival, everything being in readiness at the side door, it is unloaded with dispatch and the receipt for the same taken without delaying the train.

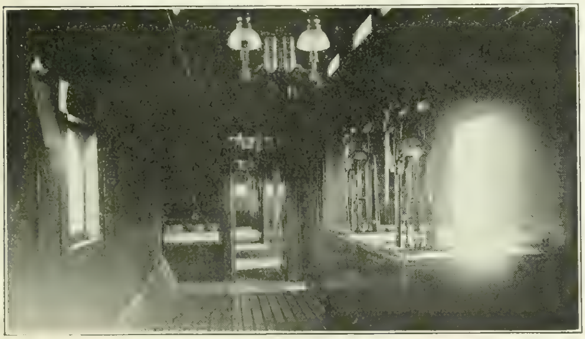
The Reid Newfoundland Co.'s employes held their first annual outing at Octagon, Aug. 23.

During June there were 14 fatal and 10 non fatal accidents on railway construction in the Dominion. Thirteen of the deaths were due to premature explosions, and one to a derailment.

Railway Transportation Problems of the Future.

By J. Grant MacGregor, M. Can. Soc. C.E., Assistant Engineer, Construction Department, C.P.R. Red Deer, Alta.

The building of so many transcontinental lines across the Dominion, and the opening up of new inland and ocean waterways for the transportation of the produce of the country, may be regarded as the dawn of a new era in the history of railway transportation. The rapidity of the pace set by competitive lines is in a measure responsible for the state of bewilderment in which the country now finds itself when confronted with the most important railway building and transportation problems of the age. The situation has been the subject of much controversy both among members of the engineering profession and those concerned financially in the economics of present-day railway construction and operation. Precedents based on past experience in pioneer railroading have been disregarded and the researches and life work of the greatest authorities on railway economics have been found antiquated when compared with the progress of recent events. There is also a decided lack of harmony between different departments of the various railways in regard to the advantage of the present practice of building railways with long stretches of low ruling grade, all of which tend to unnerve the engineer who may have placed too much faith in the adaptability of old and well known rules to modern conditions.



Supply Car Interior, looking from Oil Room towards Vestibule End.

Oil Room of Supply Car.

The question that now arises is, To what extent are the conditions changed that require a departure from well known rules and practice in railway building? The two greatest factors that have entered into and hold sway in all problems of railway engineering and operation since the invention of steam are those of "tractive power" and "train resistance," and as long as the law of gravitation exists we shall have at least one of those to contend with. In considering the other factors, the development of steam tractive power and its application to overcoming train resistance, we find that no great strides have recently been made whereby increased efficiency in the hauling power of locomotives should bring about a change in the conditions affecting grade and alignment. Until closer co-operation is instituted between the operating and engineering departments of the various railways, very little will be accomplished in the way of building railways on a basis by which the best results can be obtained in their operation. Too frequently is advantage taken of a new line with low grades as an accessory for the use of old or obsolete locomotives, whereby a saving can be effected to the operating department at the expense of the construction department.

If, by constructing railways with lower ruling grades, a solution is not obtained to the problem of hauling heavier train loads with present locomotive efficiency, then a step has been taken in the wrong direction, which is not at all unlikely. The solution, however, will not be found in any further development of the increased weight of the present unit of steam tractive power. More likely it shall be found where a greater number of units are used, whether of steam, electrical or oil gas propulsion, whereby the load to be hauled can be increased to a proportion consistent with the proper train unit for minimum cost of operation.

But to return to the question of the value of lower ruling grades. It should not be necessary at present to make a strong plea for their use wherever they can be introduced at a reasonable cost. The fact that millions are being spent annually by the various trunk lines on grade reduction should be sufficient evidence that the movement has got beyond the experimental stage. The wisdom of such a course is apparent from the beneficial results obtained in the way of increased revenue and lower cost of operation. The changes and modifications of grade profile, designed to produce the beneficial results obtained, have invariably been based on well known rules in railway location and data obtained from experiments of the actual performance of trains under the conditions sought. If there should be any uncertainty about the continuous performance or endurance of certain classes of locomotives on long stretches of low ruling rades, the sooner the value of such a factor is taken into account the better. In the meantime, are we to assume that the defect is of a mechanical nature, and that until such time as it can be removed the grade profile should be modified to provide suitable resting places for the recuperation of the "old horse?"

Under present conditions, what is most urgently required is a more definite system of grade profile analysis, by which the proper amount of tractive power can be assigned to the requirements of each division of road to be operated. The analysis referred to, once carefully prepared and put in graphic form, should show the performance of each class of engine between stations, with a load line adusted to conform to the requirements of minimum speed over long stretches of ruling grade. To obtain satisfactory results, close co-operation is necessary between all departments affected.

The growth of the trade of the Dominion, affecting transportation companies, is so rapid that greater caution than ever should now be exercised in constructing new arteries of commerce. It would appear that in determining the main arteries of commerce of the future, greater consideration should be given to conditions affecting their future development, than to questions of rapid transit and shortest route under present conditions. The fact must not be overlooked, however, that there will always be a limit to the extent to which physical obstacles can be removed from a route, and for this reason it may be necessary to look for developments along other lines. Some of the sources from which relief must be expected are already to some extent receiving attention from the principal transportation companies, such as greater facilities for a more speedy and continuous flow of traffic in both directions along the main arteries, with corresponding facilities for the better handling of freight at distribution and terminal points.

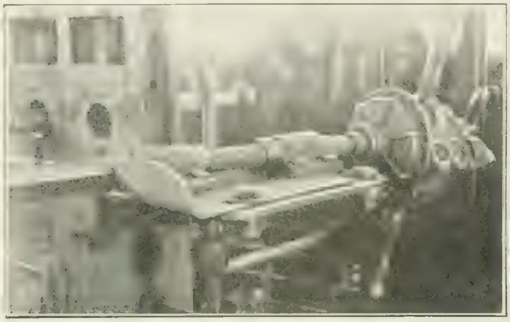
If the demand, however, for increased train loads should continue to find favor, a change in the present principle of the application of tractive power to the hauling of trains must be exepected. It is to be hoped the day is not far distant when it will be found more economical to combine the power now developed by such a huge fleet of locomotives into stationary engines for the distribution of power in a manner better adapted to modern requirements, so that it shall no longer be necessary to have one or two portable power houses attached to each train, unduly wasting the products of our mines, and diffusing the sparks which destroy the combustible products of the forest and prairie.

Government Elevator at Port Arthur.—Access is to be provided for the C.P.R. and the Grand Trunk Pacific Ry. to the Dominion Government elevator at Port Arthur, Ont., by means of a spur line to be built by the C.P.R., and connecting with the Canadian Northern Ry. An order to this effect has been made by the Board of Railway Commissioners, which directs that the cost of the spur line is to be borne by the Board of Grain Commissioners.

Railway Mechanical Methods and Devices.

Tube Expander at Toronto, Hamilton and Buffalo Railway Shops.

Numerous methods of flaring the ends of boiler tubes preparatory to safe ending are in vogue at different shops, the majority employing the taper pin method, the heated end of the tube being forced by impact on the end of a taper pin, flaring the end slightly.



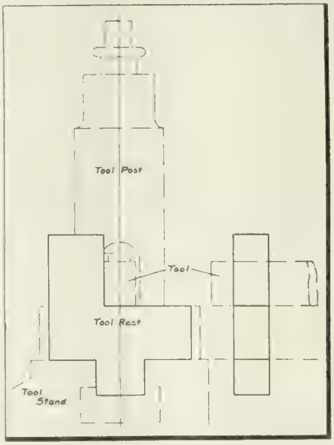
Rotary Tube Expanding Mandrel.

The method used in the T. H. & B. R. shops at Hamilton, Ont., W. T. Kuhn, Master Mechanic, is unique, and has some features about it that recommend the practice. Instead of the impact force alone being used for the flaring, a rotary motion of the flaring pin is employed in conjunction, the arrangement being as shown in the accompanying illustration. In addition, the taper pin resembles in some respects a taper reamer, with four equally spaced shallow flutes extending the length of the pin. The body of the pin is carried in two bearings on an elbow support from the side of an automatic air hammer, where the subsequent welding operation is performed. The rotary motion of the pin, in conjunction with the flutes, causes the tube end to spread more rapidly, producing an excellent job. The pin is driven by an air motor as shown. An adjustable stop plate on the surface of the supporting elbow gauges the depth to which the tube must be forced over the revolving pin.

Loading Wheels at Grand Trunk Pacific Railway Shops at Rivers.

A novel method of loading mounted car wheels is used at the G.T.P.R. shops at Rivers, Man. The wheels as mounted at the wheel press in the shops are rolled out to the storage yards, where they are stored on interlocking double tracks in the conventional manner.

These storage tracks lie at right angles to the locomotive house lead track. When it is required to load a flat car with wheels for shipment to another divisional shop, the car is spotted on the lead track about 200 ft. away from the wheel storage tracks, and blocked in that position. On the storage track end of the flat car, two lengths of rail are placed, sloping up from the track rail to the car platform, and secured in place, forming a rail ramp. The wheels to be loaded are placed on the lead track opposite the storage space, and with recessed end sticks several men put the wheels in motion, increasing the speed of the wheels, a pair at a time, until by the time they have reached the rail ramp up to the car, they have a considerable impetus, and run up the ramp by their own momentum on to the car. This method is very rapid, but of course is not at all economical on account of the number of workmen required. It might be found useful at small shops.

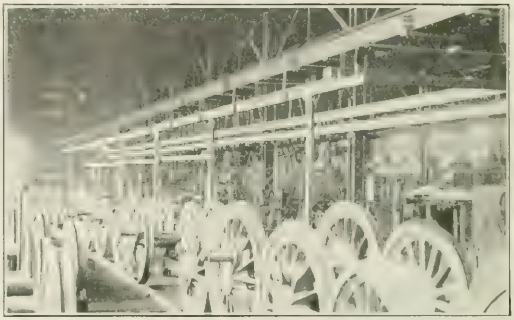


Tool Rest That Insures Parallel Boring.

Lathe Tool Support at Grand Trunk Railway Stratford Shops.

For internal boring in the engine lathe, unless the cut be extremely light, the tool has a tendency to back away from the work and produce a hole tapering from the entering end. All mechanics have doubtless experienced this difficulty.

A simple expedient for the removal of all trouble from this cause is in use in the G. T. R. locomotive shops at Stratford, Ont., and is illustrated herewith. Fitting into the groove of the tool stand, and breaking up under the tool at the rear, there is a block of steel. This tool rest block has an upward projecting arm on the left against which the tool is set when fitting in the tool post. The consequence is that the tool when boring in trying to swing away from the work, is prevented from so doing by the butt end of the tool being stopped by this tool rest. The fit of the tool rest block must be such as to prevent any lifting action from the tool in swinging tipping the block over on a corner. This is taken care of by making the block of such a height that the rear of the tool rests on the upper surface of the block.



Light Crane Over Driving Box Department.

Department Crane in the Canadian Pacific Railway Winnipeg Shops

In the C.P.R. locomotive shop at Winnipeg, the driving wheel and driving box departments are located side by side in one of the side bays of the building. The driving wheels as stripped from the locomotives are run in on tracks, with the driving box still attached. In this location the boxes are removed.

The crane way shown in the illustration covers the length of the driving box department, a small traveller accommodating all the machines. On three of the crane supporting columns are attached small jib cranes, by which the driving boxes are swung over from the driving wheel tracks into the driving box department, where they are carried to one end, where they are thoroughly cleaned on a cleaning stand, and then taken to the different machines in the department.

The crane is of simple construction, but is a most useful adjunct in the handling of the work through the department.

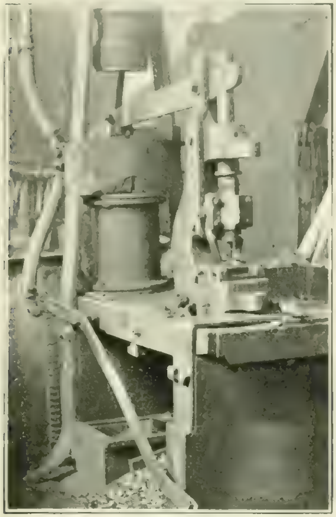
Air Operated Punch at Grand Trunk Railway London Shops.

In the blacksmith shop of the G.T.R. car shops at London, Ont., of which T. Treleaven is Master Car Builder, there is a small punch for piercing small holes in thin metal, the unique feature of the press being the fact that it is home made and operated by air.

On a cast iron frame, there is placed a 2½ in. plank as the illustration shows, on the rear end of which there is mounted vertically an air cylinder, bottom down. Straddling the air cylinder is a loop of ¾ x 4 in. bar iron, holding in the upper end of the loop a couple of large chunks of rubber such as are used in the Bradley hammer. These cushion the plunger of the air cylinder at the upper end of the stroke when relieved from the strain on the hole being pierced.

On the front end of the board base, there is a simple punch press frame guiding a vertical plunger. Just back of this plunger, there is looped band from the inner surface of the frame, carrying the fulcrum pin, on which a bar from the plunger at the rear fulcrums, being connected immediately in front to the punch plunger.

In a channel in the base of the punch frame, the dies are located, the punch lining up directly over it in the punch press plunger, in which it is secured by a set screw.



Air Operated Punch Press.

The press is quite powerful, as may readily be surmised when it is considered that an air pressure of around 100 lbs. in a 10 in. cylinder, with the multiplication of the fulcrum arm, is used. The operation is almost the same as on any up to date punch press, the air being admitted to the cylinder by the pressing of the pedal to the left, as in a power driven machine. The blacksmiths find it of great assistance in the production of their work, where they are hampered by the lack of a large power machine.

Oil Screw Jack at Canadian Northern Railway Shops.

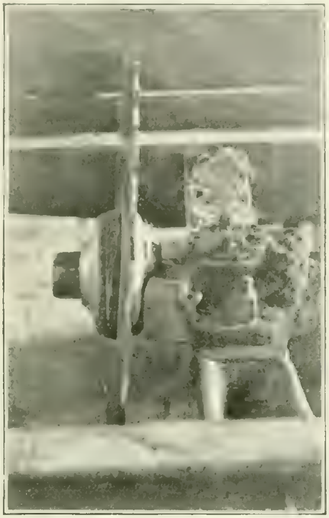
In the C.N.R. shops at Winnipeg, there is in use an oil screw jack, as shown in the accompanying illustration. The principal use to which it is put is in removing bolts from tight holes, such as those connecting the parts of a frame. From its small construction it can be worked in a tight corner, where there is small clearance between the bolt head and the frame.

The body is of steel, bored lengthwise, and at right angles at one end. In the end of the long bore is a bushing carrying a snugly fitting 1½ in. screw. The other bore contains a short 2½ in. piston. The method of using is obvious. With the small diameter screw, and proportionately large lifting piston, a high pressure is possible.

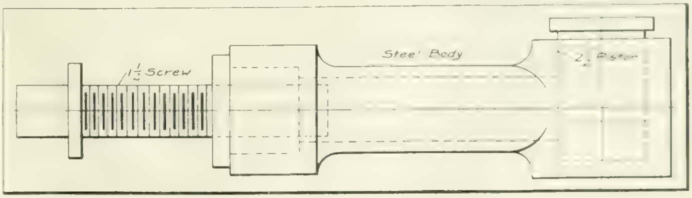
For removing bolts from frames, it is a much more satisfactory medium than that of using small cannon, a practice common in some shops, although this, of course involves considerable danger to the mechanic.

Sawing Truck Bolster Truss Rod Grooves at Grand Trunk Railway Port Huron Shops.

The truss rods applied to truck bolsters pass up at an angle through the wood of the bolster and come out through the centre of the end, where the end cap, with a nut on the end of the rod, secures it in place. Instead of boring a hole diagonally through the wood from both ends, it is a more satisfactory method to remove the wood on the angle down to the path of the rod through, for the width of the rod. The truss rods being usually about 1¼ in. in diameter, require that the channeled cut must be at least that width. To cut this channel through the wood would require a solid cutter if cut out by the ordinary methods.



Thin Rip Saw Set to Channel Truss Rod Grooves.



Oil Screw Jack for Forcing Out Tight Bolts.

In the woodworking department of the G. T. R. shops at Port Huron, Mich., a different method is employed. Instead of a wide cutter, an ordinary thin rip saw, as shown in the illustration, is all that is required. On the saw arbor, on each side of the saw, there are tapered wooden washers, thin at one edge and thick at the other, as shown on the left of the saw. This sets the saw off at an angle with regard to the arbor, causing the saw to oscillate from side to side, sweeping out a path wider than the thickness of the saw, depending on the taper of the wooden washers.

The bolster [illegible] supported over the saw by the centre, the end resting on the saw table, the centre being raised the correct amount to give the necessary angle to the cut. When revolving, the saw presents a solid appearance as if a saw the width of the cut being made. It is most surprising to observe the rapid rate at which the saw set in this manner cuts through the wood, leaving a clean channel.

One of the first questions that arises in the mind of an observer is whether the scheme is safe, and if the strain is not sufficient to tend to cause the saw to break. Enquiry elicted the information that while this method of channeling the bolsters has been in use for a number of years, not a single accident has occurred, seeming to prove that the method is a safe one, and could be safely recommended. All the bolsters that go through these shops are slotted in this manner.

New M. C. R. Buildings at St. Thomas.

The M.C.R. is having a new locomotive repair shop and power plant built at St. Thomas, Ont. The locomotive shop is 290 by 179 ft. The construction consists of concrete foundations, brick masonry walls, steel superstructure, steel sash, cement tile roof covered with felt and pitch roofing, and creosoted wood block floors. The building has three longitudinal bays, viz., erecting bay, 72 ft. wide, accommodating 13 pit tracks; heavy machine tool bay, 60 ft. wide; and light machine tool bay, 45 ft .wide. The erecting bay is to be served by a 150 ton electric travelling crane, and the heavy machine tool bay by one of 10 ton capacity. The building will be equipped complete with hot blast heating system, modern plumbing, electric lighting and power facilities, workmen's lockers, locomotive material racks, and shop accessories.

The power plant building is 87 ft., with elevated coal trestle and storage bins 16 ft. wide along the boiler room side. The construction will be similar to the locomotive shop. The equipment will consist of four 250 h.p. boilers with chain grates, radial brick chimney, steel smoke breeching, 375 kva. engine driven alternating current generator delivering current at 575 volts, 3 phase, 25 cycle. Additional power will be supplied by the Ontario Hydro-Electric Commission.

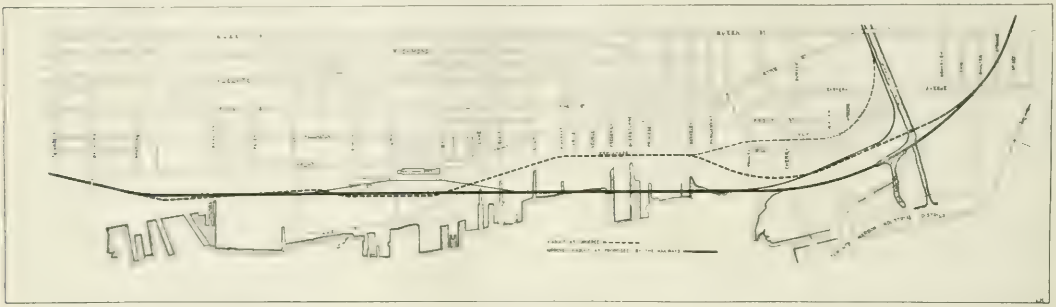
One steam driven air compressor will be installed in the plant at present, and additional compressors later. The greater portion of the machinery and equipment has been purchased, and construction will be carried out so as to get the new plant into commission early in the winter.

The plans and specifications were prepared by the Arnold Co., Chicago, Ill., which is also doing the construction and will equip the building complete.

Railway Viaduct Along Toronto's Water Front.

After protracted negotiations, the Toronto viaduct question entered recently on what is probably its final stage prior to construction, when a draft agreement to be entered into between the city of Toronto, the Toronto Harbor Commissioners, and the Canadian Pacific and Grand Trunk Railway Companies was submitted to the City Council and approved. In submitting the agreement for consideration, G. R. Geary, Corporation Counsel, and R. C. Harris, Commissioner of Works, gave a history of the circumstances leading to its preparation, and pointed out its principal features, as follows.—

"In June, 1909, by order 7200 the Board of Railway Commissioners for Canada ordered a viaduct to be built from a point west of John St. to a point at or near Berkeley St., from the point at or near Berkeley St. on the C.P.R. right of way to Queen St., and from the same point on the Grand Trunk Railway right of way to Logan Avenue. The order, together with the plan incorporated therein, provided for the dimensions and details of construction and for the existence of three tracks on either side of the viaduct east of Church St., and the city was ordered to pay to the railway companies one-third of the cost:—1. Of the viaduct, the elevation of the C.P.R. coach yards and the G.T.R. Don sorting yards, and the elevation of the tracks from Berkeley St. to Queen St. and Logan Ave. respectively, excepting rails and track laying: 2. Of the erection of bridges at Eastern Ave., John St. and Spadina Ave.; 3. Of the substructure for the elevation of necessary tracks and platforms consequent upon the increased elevation of the proposed new union station.



The Viaduct to be Built Along Toronto's Water Front.

"On a revision of the plan, York St. was shown to be closed, and an application was then made by the city, and the Board issued order 16019, Feb. 22, 1912, amending the plan by showing York St. open to Lake St., and that a subway the full width of the street be provided through the elevated portion of the railway lines and tracks, and declaring that the question of compensation to be made to the C.P.R. for the lands taken, or consequential injury or damages to its facilities by reason of the opening of the said street, be reserved for further consideration. It will be seen, therefore, that the question of the opening of York St.—which had been closed many years before by agreement of the city—involves substantial questions of compensation, which are not part of the original viaduct order, and have yet to be decided upon. The cost, then, of the old order, as amended, was fixed at one-third of the cost of the viaduct, as ordered by order 7200, together with such compensation (if any) as the city may be called upon to pay to the C.P.R. for lands taken for opening York St., or consequential injury or damages to the company's facilities by reason of the opening of the said street.

"In the meantime, and extending from the issue of the order in 1909, to the final judgment of the Privy Council, May 10, 1911, the question of the jurisdiction of the Railway Board to make its original order, and its right in law so to do, were taken before the Courts; but the contention of the city was finally upheld, and judgment given that the Board had jurisdiction to make the order.

"Closely allied with the construction of the viaduct is, of course, the question of the new union station. The Board ordered that plans of a new union station be submitted, and these were submitted—one by the Toronto Board of Trade, providing for a stub or terminal union station, and one by the G.T.R., providing for a station of the ordinary type, but with improvements. The plans were thoroughly discussed, and all parties interested were heard, and the Board finally by order 17034, July 18, 1912, approved of the plan submitted by the G.T.R., and ordered immediate construction. This plan was slightly modified on a subsequent application, but in its essential principles remains intact.

"All matters, apparently, being settled, the city pressed hard and constantly for the commencement of the work. One appeal remained open to the protesting companies—the appeal provided by sect. 56 of the Railway Act to the Governor-General in Council. The city having applied to the Railway Board at its sittings in Toronto, held on Sept. 26, 1912, for a peremptory order for commencement of the work, all parties were heard in regard to the matter, and the railways finally declared that they would at once take an appeal to the Governor General in Council. A strong attempt was made to set aside the Board's order for a viaduct, the alternative proposed being that of bridges, connecting, generally speaking, Front St. with the water front. As the argument developed, it was recognized by the railways that they could not succeed on this ground, and that bridges would never be substituted for a viaduct, and they offered, as an alternative, a proposal that a different situation for a viaduct be considered. Judgment was reserved, but the Chairman of the Board of Railway Commissioners, on the same day, instituted proceedings for an investigation into the merits of the scheme suggested by the railways. This marks the inception of the present scheme. Plans were drawn and submitted to the engineers for all parties, terms of a proposed agreement became the subject of discussion between all parties, and finally an agreement was prepared, which is before you for adoption. The plan accompanying the agreement fixes the new location of the viaduct. This agreement covers the whole situation as fully as can be. It has been arrived at after being given careful consideration, has been settled by and is approved by the Chairman of the Board.

"On the question of cost, the outstanding feature of the agreement is, that the city's share of what, for convenience sake, we may call the new viaduct, is limited to an amount which is one third of the cost which it had to pay under the old viaduct order. There are, in addition, certain items of work which were to be done in connection with the old viaduct, but which were not included in the order and plan of 1909. The cost, then, to the city is one third of the cost (composed of physical cost and damage) which the old viaduct would have caused, the city's share under the York St. pronouncement, when made, and the items just above referred to, which the Board may consider as part of the old viaduct cost.

"The outstanding feature as to the location of the viaduct is that it is to be built considerably to the south of the existing rights of way of the railways upon which the old viaduct was to be built. This means that, despite construction, business can be carried on as usual. The importance to the city of this arrangement will be readily seen when you realize that so great was the congestion of freight, owing to lack of accommodation in Toronto, that there was a blocking back even as far as the yards in Fort Erie and Buffalo; so great that for many weeks last year there was an embargo on freight shipped from the United States to Toronto. This caused very great disturbance of business conditions here, and how much greater would have been that disturbance can be readily realized if you contemplate the partial and, for some periods, practically total disruption of terminal facilities in Toronto extending over three years.

"Since the original viaduct order, the Toronto Harbor Commissioners have acquired the city's interests along the water front, and have engaged in the preparation of and brought to complete form plans for a great development in Ashbridge's Bay and along the water front of Toronto Bay. Naturally, being so vitally interested, the Commissioners were represented throughout these negotiations, and have been very active in their assistance, as, of course, has been also the Board of Trade. The new location of the viaduct to the south presented an opportunity to negotiate for the acquisition of the water front, and one great advantage wrought by the present arrangement is, that through it the Toronto Harbor Commissioners become possessed of practically all the water front on Toronto Harbor. By the agreement now under consideration, the new right of way for the viaduct is to be acquired through the purchase of all the property between the existing rights of way of the railways and the Windmill Line; and, after the actual amount to be used by the railways, and a street 47½ ft. wide is set aside, the remaining portion thereof, north and south of the new viaduct, is to be turned over to the Harbor Commissioners on paying 50% of its actual cost, which means that the railway company acquires its right of way of 230 ft. in width on paying 50% of the total cost of the property referred to, that is, from the street 47½ ft. wide immediately south of the railway's right of way south to the Windmill Line, while the Harbor Commissioners get what may be said to be the preponderating balance on payment of the same amount. An alternative option is reserved to the Harbor Commissioners to take over all the property to the south of the new viaduct on paying one third of the total cost of acquiring the entire block from the said proposed street south to the Windmill Line, less what may be realized from the sale of that part of such block between the said street and the new viaduct.

"In connection with this plan for securing control of the water front under the viaduct order, we are advised by the Harbor Commissioners that agreements have been practically reached between the railways and the Harbor Commission by which all the property west of Yonge St. bordering on the water front is likewise to be turned over to the Commission.

"In regard to the new union station, the Chairman of the Board advises us that at the present moment experts are engaged in revising the existing plans with a view to constructing a station which will fully meet all requirements of appearance and utility, and he assures us further that actual work will be commenced at the earliest possible moment."

Railway Route Map Approved.—The Minister of Railways approved, July 30, the Lake Erie and Northern Ry. route map for revision of line between Waterford and Brantford, Ont., 10 miles.

Tree Windbreaks on the Canadian Pacific Railway.

Trees to replace portable snow fences are being tried on a large scale by the C.P.R. Along the main line and within the district broadly defined as lying between Winnipeg, Man., and Calgary, Alta., more than 1,356,200 trees had been planted for this purpose up to Dec., 1912, by the Forestry Branch of the Natural Resources Department.

The country traversed by the C.P.R. in which this tree planting has been done is largely rolling prairie, and the frequent high winds have an unobstructed range over which to drift the winter's snow. Portable fences of a standard type have been employed to arrest the snow and prevent it from drifting into the cuts and blockading traffic. This method has the usual disadvantage of high first cost and continual repairs and maintenance.

As in the case of portable snow fences, the distance of the tree windbreak from the track depends upon the topography at each point and upon the width of right of way. In general, however, the inside row is from 75 to 85 ft. from the track.

The method of planting the windbreaks may be briefly described as follows: The land is broken and backset the first year, subsoiled the next, and planted the third. The planting crew consists of a foreman, 12 laborers, a cook, and two teamsters to each camp. The laborers are divided into three-man groups. In this way one man digs the holes, another places the trees in position and packs the earth firmly around their roots, and the third fills in the earth to a little above the old nursery mark, places it around the trees and levels the ground at each side of the row. This method was found to be the fastest and most satisfactory, as the foreman could then check over each group's work.

The young trees, which were grown in the C.P.R.'s nursery at Wolseley, Sask., were all baled in gunny sacks and sent by baggage or freight to the station nearest the camp. The man placed in charge of each car was supplied with two or three barrels of water, with which he kept the roots moist while in transit. As soon as the trees were received they were heeled in and after sundown distributed by wagon to each plantation, where they were again heeled in for the next day's work. When the trees were taken out next day for planting they were carried in a pail or tub containing a puddle of earth and water.

Manitoba maple, Russian poplar, cottonwood, laurel leaf willow, red willow, golden willow, ash and spruce are the species of trees which have been planted. Two species of shrubs were also planted—Caragana and Artemesia. All trees were two to three year old transplants and would vary from 24 to 36 in. in height. The loss or renewal has not exceeded 10%.

The trees have been planted 4 ft. apart in the rows and 7 to 8 ft. between rows, leaving a cultivated strip 8 ft. wide around the plantation. This reduces the cost of cultivation, as the trees quickly spread foliage and by shading the ground soon kill the weeds. With the rows 7 or 8 ft. apart there is plenty of room for a disc harrow to be worked between them, thus saving much time which would be wasted if small one-horse cultivators were used.

Two furrows have been ploughed on each side and across the ends of these plantations, thus making a fire guard of about 20 in. and a cultivated piece of more than 8 ft., or in all a strip of nearly 10 ft. in width around the plantation. Experience has shown that ground fires in that locality will not jump such a fire guard, or even injure plants within it.

As yet the saving in cost between portable fences and tree windbreaks is very indefinite. The trees first set out in 1908 were only high and strong enough to remove the portable fences during the fall of 1912, and owing to the light snowfall during the past winter little information as to relative value of trees and fences as snow barriers has been available to those interested.—Engineering Record.

Trees Just Set Out. Note Panel Fence Off Right of Way.

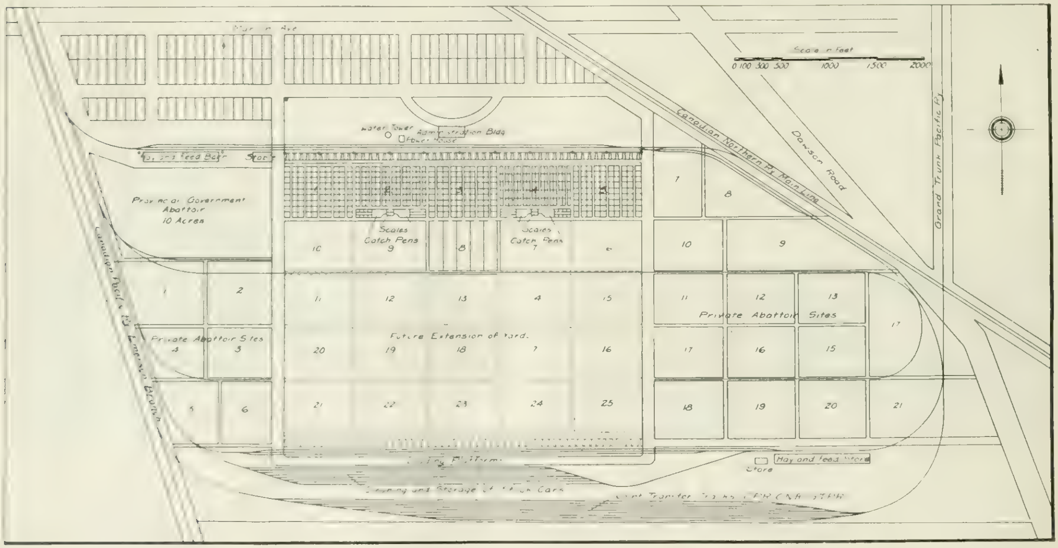
Tree Snow Fence, With Wide Fire Guard, near Medicine Hat, Alta.

The American Boiler Maufacturers' Association will hold its 25th annual convention at the Hollenden Hotel, Cleveland, Ohio, Sept. 1 to 4, when amongst other matters to be dealt with will be the adoption of standard and uniform boiler specifications. The entertainment committee are making special efforts for the success of the convention in view of the fact that the association, this year, celebrates its silver anniversary.

The G.T.R., it is announced, will build a larger, and more up to date elevator at Point Edward, Ont., in place of the one recently destroyed by fire. The new building will, it is said, be of steel and concrete, and be absolutely fireproof. It is probable that the old site will be utilized.

Union Stock Yards at St. Boniface, Manitoba.

The union stock yards which have been constructed at St. Boniface, Man., have a unique organization. In 1911 the Manitoba Legislature incorporated the Public Markets, Limited, with an authorized capital of $1,000,000 in $100 shares and head office at Winnipeg, to establish stock yards, etc. The shareholders are limited to railway companies which enter into an agreement with the Government. Each railway company appoints one director and the Government appoints one, who, however, has no vote except in case of a tie. At present the shareholders are the C.P.R., with 334 shares; the Canadian Northern Ry., 333 shares, and the Grand Trunk Pacific Railway, 333 shares. There is provision for the control of rates and charges by the Government, but not so that 6% cannot be earned upon the capital invested. The Government also reserved the right to the first selection of a site, not exceeding 15 acres, on which it is proposed sometime, either directly by the province or by some municipality with provincial assistance, to establish a public abattoir. The Government also regulates the charges, tolls, etc., in the yards.



Union Stock Yards, St. Boniface, Man.

The land on which these yards are being erected consists of 232 acres at St. Boniface, 2½ miles from the heart of Winnipeg. On the north is Marion Ave., the main thoroughfare to the Red River, which divides Winnipeg and St. Boniface; on the extreme south are the joint transfer tracks of the Canadian Pacific, Canadian Northern and Grand Trunk Pacific Railways; on the west is the C.P.R. Emerson branch, and on the east are Dawson St., which intersects Marion Ave., the C.N.R. main line and the G.T.P.R. The three trunk lines come into the yards on equal footing, each will deliver its stock at transfer tracks which pass east and west close to unloading chutes, which are situated at the extreme north of the yards proper, affording interchange of traffic between the C.P.R. on the west, and the C.N.R. and G.T.P.R. on the east. The stock hauled to the yards by the above railways will, upon arrival at transfer tracks, be turned over to the Union Stock Yards Co.'s railway for placing at chutes for unloading. There are 50 chutes, hence 50 cars of stock may be placed at one time and unloaded without interruption. To the north of the chute tracks are two supply or storage tracks where may be held trains of stock awaiting their turn to be unloaded. The chutes open into an alley running east and west of the yards, so that as stock is moved from unloading chutes, they pass through the alley to any part of the yards to which they may be assigned. Paralleling this alley is another alley, which may be used for stock moving in the opposite direction, thus facilitating the movement in either direction without much chance of mixing it.

Just south of the chutes—bottle shaped—are blocks 1 to 5, which represent the developed pens; 6 to 25, excepting block 8, which is partially developed, represent the undeveloped land. Each block contains 2½ acres, so that the 25 blocks, approximately, contain 62½ acres. The finished pens are as follows:—Blocks one and five, 80 each or 180 open pens; block two, 98 covered pig pens; block three, 90 covered cattle pens; block four, 80 covered sheep pens, making a total of 448 pens. At the south side of blocks 2 and 4 are two brick scale houses, each equipped with the most modern scales, and adjoining the scale house is another main alley, also running east and west of the yards, which will be used as an exit for live stock. In this alley, several hundred feet apart, are six hydrants, each equipped with hose for fire protection.

One of the chief features of these yards is, that every foot of floor space, from the unloading platform, which is 8 ft. wide, including chutes, alleys and pens, are made of rough concrete, which may be flushed as required, thus the yards may be kept in a most sanitary condition. The troughs are also made of cement.

Opposite to and north of the chutes, occupying the middle ground between the yards and Marion Ave., stands the administration building, a handsome three story structure of rich, dark red brick, 101 by 53 ft. and 40 ft. high, finished in red oak, and when completed will contain 20 rooms or more for offices for those doing business at the yards, including the Stock Yard Company. To the west, 140 ft. from the Administration building, is the power house for furnishing water and heat to the yards and buildings. It has two large boilers, and an electric motor capable of forcing water 100 ft. high into an iron tower of 150,000 gallon capacity. From this tower water is supplied throughout the plant. The store house has not yet been built. To the west and across from the main alley of the yards is erected a comfortable, commodious brick stable, which will accommodate 15 horses, and to the west a barn covered with corrugated iron, as a protection against fire. The barn is adjacent to the tracks, is 400 ft. long and will hold hundreds of tons of hay.

South of the hay barn ten acres have been blocked off, which is for the Provincial Government for public abattoirs, etc., and which still leaves great blocks of land to be used as required, for leasing to private abattoir companies, etc.

J. W. Buckpitt, who was connected with the New York Central Stock Yards at Buffalo, was appointed Superintendent recently, as previously announced in these columns.

Aid to Injured, Instruction Car.—The C.P.R. has fitted up a special car for giving instruction in first aid to the injured work, to employes on its lines. The car, with an instructor has been started out on a complete tour of the system, from New Brunswick to the West and will remain at the grand divisional points for about three weeks, and at the smaller ones, for about ten days.

Poles Purchased in Canada in 1912.

The statistics in this bulletin are based on reports received from 207 telephone companies, 131 electric light and power concerns, 29 electric railways, 18 steam railways (operating telegraph and telephone lines), and 4 telegraph companies. These 389 companies reporting purchases in 1912 represent at least 95% of the wooden pole users in Canada, and the figures in this bulletin include at least 95% of the poles purchased in 1912. Pole users are divided into two groups, with steam railways, telephone and telegraph companies forming one group, and electric railway, power and light companies the other.

Table 1 shows the number, total value, average value and per cent. distribution of poles purchased in Canada in 1911 and 1912.

There were 608,556 wooden poles reported as having been purchased in 1912, an increase of 22,853 poles, or 3.9%, over 1911. While this increase is slight, it follows a decided decrease from 1910 to 1911. The average pole has a life of at least ten years, and the demand for poles is therefore more or less intermittent, depending on the building of new pole lines.

Altogether nine kinds of wood were reported for poles in 1912, with eastern cedar heading the list, as in past years. Cedar has been, and probably will be for some time, the most popular wood for telegraph, telephone and other pole lines. Although the purchases in 1912 show a decrease, wood for this purpose need not be specially strong or hard, as there is little or no mechanical strain to be endured. Durability in contact with the soil, lightness, and a slender tapering form are most essential, and cedar seems to fit those requirements better than any other native wood used in an untreated state. The use of the British Columbia species of cedar (Thuja plicata) has increased in the last few years, with the decrease in the supply of poles of the eastern species in the greater length classes. While these poles are not so strong nor so durable as those of eastern cedar, they can be obtained in greater lengths, and the source of supply is more easily accessible. The two species of cedar together formed over 85% of the total. Balsam fir was reported for the first time in 1912. It is being used more and more each year for all purposes, especially in the Maritime Provinces, where the supply of pine is beginning to fall below the demand. As far as form and lightness are concerned, this should make excellent pole material, if its lack of durability were made up for by some preservative treatment. Increases are to be noted in the use of western cedar, tamarack, spruce and chestnut, with balsam fir added to the list, and decreases in the use of eastern cedar, jack pine, Douglas fir and hemlock. No poles were reported in 1912 of red, white or yellow pine.

The average prices given in tables are based on the cost at point of purchase, and may or may not include transportation charges. Only in the case of those woods which are used in large quantities can the values given be taken to represent the relative value of the wood. The average value of poles in 1912 was $1.83, an increase of only 3 cents over 1911. A slight increase was recorded in the case of eastern cedar, and other increases to be noted are in the value of spruce and jack pine poles. All other kinds of wood decreased in value, and the balsam fir reported in 1912 was valued at an average below the general average for 1911.

Steam railways, telephone and telegraph companies reported the purchase of 549,560 poles in 1912, an increase of 5.4% over the total for 1911, and is evident in the cases of western cedar, tamarack and the newly added material, balsam fir. All other woods show a decrease in number, although Douglas fir and chestnut were added to the list of woods purchased by steam railways. The average value of $1.51 per pole is an increase from 1911. The average values of poles purchased by this class of pole line companies is always less than with the electric railway, power and light concerns, as the steam railway and telephone companies are usually closer to the source of supply and purchase their poles in greater quantities. They also use more poles of the shorter length classes. These companies used all the poles purchased of balsam fir, tamarack, jack pine, Douglas fir and chestnut. They purchased 90.3% of all the poles used.

The electric railway, power and light companies purchased a total of 58,996

* Less than one tenth of one per cent

[illegible] of all the poles purchased in 1912. This number is a decrease of 5,135, or of over 8% from the total in 1911. These companies used only four kinds of [illegible] western and western [illegible] spruce and hemlock. Hemlock was not reported in 1911 by these companies, and poles of Douglas fir, chestnut, yellow pine and tamarack reported in that year were dropped from the list in 1912. The electric companies as a rule purchase the best class of poles, of the greatest length, and seldom obtain their supply locally. These facts are probably responsible for the high values in the table. The average value per pole of $4.79 is an increase of 24 cents over 1911.

Table 2 gives the details of the poles purchased by all classes of pole line companies, separated according to length [illegible]

Of the total 608,556 poles, 66.1% were from 20 to 25 ft. long, and were valued at $1.15. Over 20% were in the 26 to 30 ft. class, and were valued at an average of $2.42. In the 31 to 35 ft. class, 7.8% of the poles were placed, and these were valued at $4.01. The 36 to 40 ft. poles formed 3.4% of the total at $5.38, and the poles of 40 ft. and over, at a value of $6.68, made up the remaining 1.5%.

Cedar poles formed the bulk of each length class and made up practically all the poles in the greater length classes (36 ft. and over). Tamarack and spruce poles were also used in the greater length classes and formed a large per cent. of the poles between 26 and 35 ft. The jack pine poles were all in the 26 to 30 ft. class, and practically all the poles of Douglas fir, chestnut and hemlock were less than 25 ft. long. The spruce and chestnut poles in the greatest length class (40 ft. and over) were purchased for special purposes and their low prices do not indicate their relative value.

Many of the pole line companies use preservative treatments of different kinds to prevent decay and insect injury. These include impregnation of the butts of the poles with creosote, zinc chloride and other chemicals. In some cases the bark is left on the part of the pole which comes into contact with the soil, and this tends to increase the life with some kinds of wood. Painting the butts of the poles with hot tar or creosote will increase their life by several years. Many companies have found that the increased life which is accomplished by preservative treatment brings about a considerable saving in the annual cost of the upkeep of a pole line. By thorough treatment with preservatives many non-durable woods, such as balsam fir, are being used satisfactorily where their use in an untreated state would not have been possible.

The foregoing bulletin was prepared by the Interior Department's Forestry Branch, R. H. Campbell, Director of Forestry.

Orders by Board of Railway Commissioners.

[illegible] Canadian Railway [illegible] done this.

The dates given of orders, immediately following [illegible] took place, and not those on which the orders [illegible] not issued for a considerable time after the dates assigned to them.

[illegible] July 14.—[illegible] 9, re protection of G.T.R. crossing at King St., [illegible]

[illegible]

19833. July 14.—Authorizing City of Saskatoon, Sask., to build highway across Canadian [illegible]

19834. July 11.—Substituting C. N. Ontario [illegible] over Conklin River, for plan approved under order [illegible]

[illegible] 35-25, w. 4 m., Alta., to be completed within [illegible]

19836. July 18.—Ordering C.P.R. to install im[illegible] cost to be paid out of the railway grade crossing [illegible]

[illegible] type of automatic electric bell, 20 per cent. of [illegible]

[illegible] at mileage [illegible]

[illegible] (C.P.R.) to build [illegible]

[illegible] Branch Lines Co. to build its Tofield-Calgary [illegible]

19844. July 21.—Approving location of G.T.R. station and freight shed to be built at New Lowell, Ont., also proposed rearrangement of track and detail plans of station and freight shed.

[illegible]

19846. 19847. July 14.—Authorizing City of St. Thomas, Ont., to lay 12 in. water main under Pere Marquette Rd. on Wilson Ave., between Ada and Elm Sts., and 18 in. water main under G.T.R. on Hughes St.

19848. July 14.—Authorizing Canadian Copper Co., Copper Cliff, Ont., to build crossing, with gates, over Algoma Eastern Ry., in Lot 11, Con. 4, McKim Tp.

19849. May 30.—Establishing express collection and delivery limits in St. Boniface, Man., and rescinding order 15024, Sept. 15, 1911, in same connection.

19850. July 18.—Ordering Canadian Northern Ry., within 60 days, to install improved type of illuminated electric bell at crossing of Fort William Road, between Fort William and Port Arthur, Ont., 20 per cent. of cost to be paid out of the railway grade crossing fund; speed of trains limited to 6 miles an hour over crossing; and a sign post to be erected at least 250 ft. from crossing, indicating that cars must be kept inside that point, on spur track.

19851. July 22.—Postponing effective date of [illegible] G.T.R. Special Freight Tariff, C.R.C. E.2374, I.C.C. 1660, in Supplements 5 and 3, respectively, and of Rule 33 of C.P.R. Local Freight Tariff, C.R.C. E.2141, I.C.C. E 1288, in Supplements 9 and 6, respectively, until otherwise ordered.

19852. July 21.—Authorizing C.P.R. to build [illegible] its Suffield-Blackie Branch, at grade across highway between Secs. 12 and 13-15, w. 4 m., mileage [illegible]

[illegible] C.P.R. [illegible] G.T.R. [illegible] onto

[illegible] July 17.—Authorizing C.P.R. to move [illegible] crossing from its present position, at or near mileage 50, north of McAdam Jct., N.B., to [illegible]

[illegible] on plan, from G.T.R. side track to one of Pratt & Letchworth Co.'s buildings, Brantford, Ont.; [illegible]

[illegible] through embankment near to leading from barn of D. H. and C. S. Grey, Elizabethtown Tp., Ont.

19857. July 21.—Establishing express collection and delivery limits in Grand Forks, B.C.

19858. July 22.—Disallowing cancellation of stop over arrangement at Outremont, Que., in connection with shipments of grain and grain products from Western Canada, as contained in Supplement 9 to C.P.R. all rail and lake and rail Special Tariff, C.R.C. E.2480, said supplement having been made effective June 19, and suspending, until otherwise ordered, cancellations of stop over arrangements at Toronto, West Toronto, Montreal and Outremont, in connection with shipments of grain, grain products, hay and potatoes, items 22 and 23, of C.P.R. Special Freight Tariff, C.R.C. E.2141, as contained in Supplement 16, effective [illegible]

[illegible] July [illegible]—Approving Moose Jaw Electric Ry. to build single track on High St. West, across C.P.R. Outlook Branch.

19860. July 21.—Authorizing Toronto, Hamilton and Buffalo Ry. to cross, at grade, highway between Lots 26 and 27, Con. 3, Saltfleet Tp., with a passing siding.

19861. July 22.—Authorizing C.P.R. to build spur, for Vermont Marble Co., in Peterboro, Ont.

19862. July 23.—Amending order 19676, June 25, re switching lead at C.P.R. yards, Smiths Falls, Ont.

19863. July 21.—Authorizing Michigan Central Rd. to build weighing scales on side track leading to Canadian Shredded Wheat Co., on Lewis Ave., Niagara Falls, Ont., and approving clearances of bridge over same.

19864. July 21.—Authorizing City of St. Thomas, Ont., to lay 18 in. water main under M.C.R. on Moore St., between Talbot and Centre Sts., and Moore and Mill Sts., and on Mill St. between Centre and Amelia Sts.

19865. July 22.—Approving Great Northern Ry. Standard Passenger Tariff C.R.C. 825, applying a maximum rate of 3c. a mile between stations on its lines as follows:—Brandon, Saskatchewan and Hudson's Bay Ry.; Manitoba Great Northern Ry.; Midland Ry. of Manitoba; Victoria and Sidney Ry., and Victoria Terminal Ry. and Ferry Co.; and temporarily approving, pending judgment in inquiry into rates generally in B.C., tariff applying a maximum rate of 4c. a mile between stations on its lines as follows:—Bedlington and Nelson Ry.; Crows Nest Southern Ry.; Nelson and Fort Sheppard Ry.; New Westminster Southern Ry.; Red Mountain Ry.; and Vancouver, Victoria and Eastern Ry. and Navigation Co.

19866. July 21.—Approving, temporarily, pending judgment in inquiry into rates charged generally in B.C., the G.T. Pacific Ry. Standard Freight Mileage Tariff C.R.C. 17, including and cancelling C.R.C. 15, to apply between stations in B.C., Prince Rupert to Morricetown, inclusive.

19867. July 22.—Approving location of G. T. Pacific Ry. station at Cooking Lake, Alta., mileage 766.1 west of Winnipeg.

19868. July 23.—Extending to Sept. 15, time within which interlocking plant be installed at crossing of Canadian Northern Ry. by G. T. Pacific Ry. at Empire Ave., Fort William, Ont., as required by order 19352, May 22.

19869. July 22.—Approving location of C.P.R. station at Trossachs, Sask.

19870. July 22.—Authorizing Campbellford Lake Ontario and Western Ry. (C.P.R.) to build at grade across Ontario St., Cobourg, Ont., mileage 120.20 from Glen Tay.

19871. July 22.—Authorizing C. N. Ontario Ry. to build across and divert public road under Mississippi River bridge, in Lot 22, Fitzroy Tp.

19872. July 23.—Authorizing C.N. Ontario Ry. to build bridge across Petawawa River (west crossing), Deacon Tp., mileage 159.3 west of Ottawa.

19873. July 23.—Authorizing G. T. Pacific Branch Lines Co. to build highway across its Tofield-Calgary Branch, at mileage 104.5 in North Alberta District.

19874. July 22.—Authorizing G.T.R. to build siding for Farquharson-Gifford Co., Stratford, Ont.

19875. July 22.—Authorizing C.P.R. to build spur for Medina Shale Brick Co. and Streetsville Brick Co., Streetsville, Ont.

19876. July 23.—Authorizing C.P.R. to build spur for Abernethy and Lougheed, in Lot 398, Sec. 12, Tp. 12, Haney, N.W.D., British Columbia.

19877. July 23.—Authorizing C. N. Ontario Ry. to build across public road between Saltfleet and Grimsby Tps., Ont.

19878. July 24.—Amending order 19593, June 16, re C.P.R. bridge 103.7, near Foster station, [illegible]

19879. July 23.—Authorizing C.P.R. to build spur for its Irrigation Department at Brooks, Alta., to be completed within three months.

19880. July 23.—Approving G. T. Pacific Ry. revised location and location of its station grounds, in Sec. 17-43-2, w. 4 m., Alta.

19881. July 22.—Authorizing C. N. Ontario Ry. to build across 14 highways in Saltfleet Tp.

[illegible] C.P.R. overhead highway bridge, at Asylum Side Road, London, Ont.

19883. 19884. July 23.—Authorizing C.P.R. to build bridges, 33.5, near Cavan Station, and 5.75, near Norwood Station, Ont.; 55.8, near Station Rooth, N.B.; 7.1, near Norwood Station, [illegible]

[illegible] Governor [illegible] of lease, June [illegible] Kettle Valley Ry. and C.P.R.

Halifax Ocean Terminals, Intercolonial Railway.

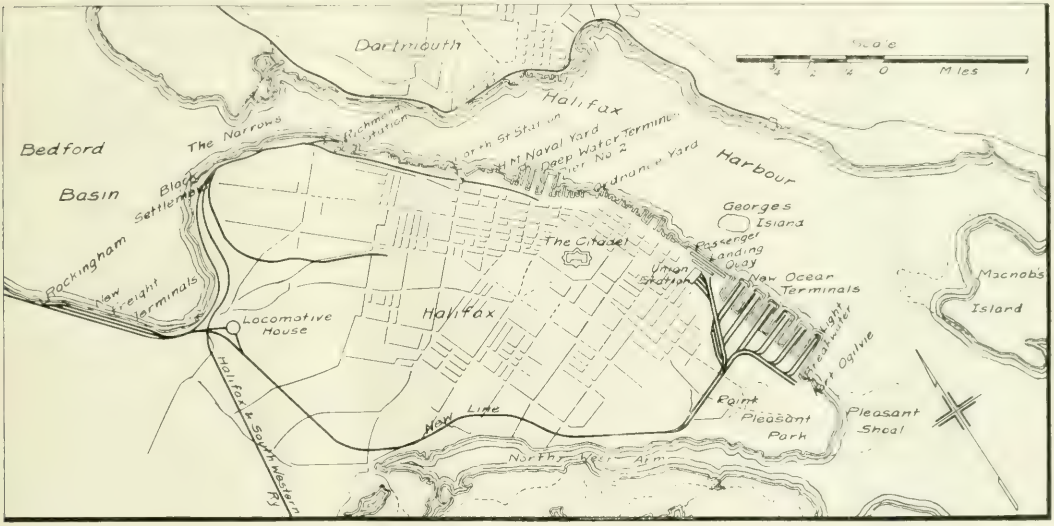
Canadian Railway and Marine World for Jan., 1912, contained an illustrated description of the deep water terminals being built at Halifax, N.S., for the Intercolonial Ry., work on which is still in progress. It, however, became apparent some months ago that these terminals would be altogether inadequate for the port's rapidly growing trade, and the Minister of Railways instructed F. P. Gutelius, M. Can. Soc. C. E., who has since been appointed General Manager, Canadian Government Railways, and F. W. Cowie, M. Can. Soc. C. E., Chief Engineer, Montreal Harbor Commission, to prepare a scheme for more comprehensive terminals, which was adopted. At present Halifax has the Richmond terminals and the "deep water" terminals, the former at Richmond, in the northern extremity of the city, the latter located quite centrally in the city, off Water St. It has been decided to place the new ocean terminals considerably farther out in the harbor at Georges Island Bay near the ocean end of peninsula on which the city is situated.

The terminals, which are intended to be the best equipped on the Atlantic coast, will consist of a passenger landing stage or bulkhead wharf 2,000 ft. long with 45 ft. depth of water at low water of spring tides at which three of the largest ocean vessels can dock in safety without tug assistance; a wharf building the whole length of the bulkhead pier; the first floor of which will be for freight and the second floor for passengers, customs and immigration quarters. Passenger and freight tracks will run alongside the ships. The whole will be laid out so as to give the most expeditious, convenient and economical arrangements for the transfer of passengers, baggage, mails and freight from ship to rail and vice versa. This scheme of development provides for the construction of six freight piers 1,250 ft. long and from 320 to 360 ft. wide, which will be equipped with wharf freight sheds and railway tracks; yards for the storage and shunting of cars, the construction of an elevator which will permit of grain being loaded into ships at each of the 32 berths, a locomotive house for the cars of passenger locomotives and switch engines, and a breakwater from Point Pleasant Park to the Reid rock buoy.

The first unit will consist of a bulkhead pier, the freight and immigration sheds, passenger station, one ship and one freight pier equipped with sheds and tracks together with the necessary accessories, which will provide accommodation for eight of the largest ocean steamships. As soon as business warrants it, two more piers will be constructed, giving an additional capacity for eight such steamships; and in five or six years, or sooner if necessary, upon the opening of the Quebec bridge, provision will be made for a further accommodation of eight such steamships. As business develops and the demands of trade necessitate, the two southerly piers will be constructed, thus completing the scheme. Tenders for the landing quay and the first pier are to be called for at an early date.

The union passenger station, which will be built near the corner of Pleasant and South Sts., will be a handsome and substantial structure, and will be provided with all modern conveniences and facilities for passengers and the handling of baggage, mails, express, etc. The passenger car yard will be situated immediately southwest of and adjoining the union station, and will be of ample capacity and equipped with all necessary supply buildings and up to date facilities.

The ocean terminals will be reached by a branch railway to be built from Rockingham, on the I.R.C., four miles from the North St. station, Halifax, about five miles from the present deep water terminals, and about six miles from the new terminals, which will be situated nearer the entrance to the harbor than any existing wharf. There will be no grade crossings, the railway being carried under the Halifax and South Western Ry., and it [illegible] either under or over all streets and routes by means of bridges, the designs for which will be made to harmonize with their surroundings. The railway has been designed for high speed passenger and heavy freight trains. The maximum curvature will be 4°, and all curves will be laid out with suitable easement curves. The maximum gradient will be 0.6%, compensated 0.04% per degree of curvature. To preserve the appearance of the residential sections of Halifax along the Northwest Arm and in the vicinity of Point Pleasant Park, the railway will be constructed from Quinpool Road to Young Ave. in a cutting of sufficient depth to give clearance for the railway under the overhead bridges, which will carry the streets and roads over the railway. The railway will be double tracked throughout, with additional lead tracks at the yards and terminals. The bridges, culverts and structures will be of permanent construction throughout. The excavations for the railway, which will greatly exceed the embankments, will consist mostly of rock, but there will be no wasting of material. The surplus excavations from the northern end of the railway will fill in and reclaim from Bedford Basin a large and comparatively shallow arm, which will be used for the new freight terminal yard. A suitable site for this yard would otherwise be very difficult to provide, on account of the very hilly nature of the peninsula and surrounding country. This new terminal yard will be open ended and will have standing room for 1,000 cars on body tracks 4,000 ft. long, and it can be readily extended. It will take care of all freight to and from both the old and new terminals, transfer or switching engines only being used between the new yard and the city and harbor terminals. The excess materials from the railway cuttings at the southern end will be used for filling behind the quays and piers which are to be built in the harbor. Selected rock will also be obtained from



Site of Halifax Ocean Terminals and Union Passenger Station, with Double Track Railway to be Built from Main Line at Rockingham.

the cuttings for the construction of the [illegible] [illegible] breakwater, which will extend eastward into the harbor for about 1,500 ft.

The grading of the approach railway and the construction of the terminal yard at Bedford Basin and the breakwater at the harbor, the contracts for which have been let to the Cook Construction Co., of Sudbury, Ont., and Andrew Wheaton, of Amherst, N.S., are to be completed by July 1, 1915.

The expenditure is estimated as follows:—For the first unit, including the five miles of double track railway, between $5,000,000 and $6,000,000; for the completed scheme about $12,000,000.

It is proposed to at once proceed with the construction of the quay walls and of the railway, and with the dock and yard filling, the construction of the necessary overhead bridges and such other works as may be found economically convenient in connection therewith, for all of which it is estimated $2,500,000 will be required during the current fiscal year.

The whole scheme of terminals has been prepared under the direction and supervision of F. P. Gutelius, M. Can. Soc. C. E., General Manager, Canadian Government Railways. F. W. Cowie, M. Inst. C. E., Chief Engineer Montreal Harbor Commission, is Consulting Engineer, and Jas. McGregor, A. M. Inst. C. E., is Superintending Engineer in charge of the work at Halifax.

The deep water terminals, now known as pier 2, which were described in Canadian Railway and Marine World for Jan., 1912, will be completed as per contract and will be used for a year or two for passenger and freight purposes, until the ocean terminals are ready. Then the partitions and other interior fittings of the building will be removed and they will be used for freight purposes only.

Preliminary work was started at Fairview on the line to the new ocean terminals, July 31. The contractors' plant is being delivered and consists of two 100-ton steam shovels, electrically fitted, 50 12-yard air dump cars, four standard locomotives, and two Jordan air spreaders. The contract is being carried out jointly by a combination of the Cook Construction Co. and A. and W. D. Wheaton, the officers being:—President, A. B. Cook, Sudbury, Ont.; Treasurer, Alex. Mackenzie, Barrie, Ont., and St. Paul, Minn.; Secretary and General Manager, H. F. McLeod, Toronto; other directors, A. and W. D. Wheaton, Amherst, N. S. The company's offices are at Halifax, N. S.

Dominion Government Railway to Hudson Bay.

We are officially advised that about 2,000 men are grading, tracklaying, ballasting, etc. Sixty miles of track had been laid to July 29, and it is expected to increase this to about 150 miles this year.

Reports received at Ottawa, Aug. 7, state that from the progress made [illegible] construction there is little doubt that the line will be finished within contract time, viz., Dec., 1914. A Winnipeg press despatch, Aug. [illegible], states that over [illegible] miles will be ready for operation next winter. Seventy miles of grading has been fully completed, and so much work has been done beyond that point that it is expected to connect up the grading [illegible] [illegible] point to [illegible] 150 this year. Track laying was started [illegible] 9 and after putting in the yard tracks and sidings, the gang started out on the main line. The ballasting gang is working close behind the tracklayers.

Work is being pushed ahead on the construction of the terminals at Nelson, on Hudson Bay. Supplies of all kinds, together with dredges and other construction plant have been sent up to the Bay for the work on progress there. (Aug., pg. 378.)

Traffic Orders by the Board of Railway Commissioners.

The dates given for orders are those on which the hearings took place, and not those on which the orders were issued:—

Changes in Freight Classification 16.

19786. July 10. The application of Canadian Freight Association, on behalf of railway companies subject to the Board's jurisdiction, under sect. 321 of the Railway Act, for an order approving of proposed Supplement 1 to Canadian Freight Classification 16, containing certain increased, reduced and additional ratings. Notice of the proposed increased ratings having been given in The Canada Gazette, and the Board having invited consideration thereof by the Canadian Manufacturers' Association, the Montreal Chamber of Commerce, the Ontario Grocers' Guild, and the Boards of Trade of St. John, N.B., Quebec, Montreal, Ottawa, Toronto, Hamilton, Brantford, London, Winnipeg, Brandon, Regina, Saskatoon, Calgary, Edmonton, Vancouver and Victoria; it is ordered that the proposed supplement, as finally revised and submitted for approval by the chairman of the Canadian Freight Association, by letter dated Montreal, July 8, 1913, be approved, to become effective on Aug. 20, 1913.

Modification of C. P. R. and G. T. R. Tariffs.

19851. July 22. Re order 18564, Jan. 25, 1913, directing that the effective date of the modification of rule 7 of the G. T. R. Special Freight Traffic, G. R. C. no. E. 2374, I. C. C. no. 1660, contained in supplements 5 and 3, respectively, thereto, and the modification of rule 33 of the C. P. R. Local Freight Tariff, C. R. C. no. E 2141, I. C. C. no. E 1288, contained in supplements 9 and 6, thereto, be postponed pending a hearing of the matter at the sittings to be held in Toronto on Feb. 7, 1913; and order 19710, June 27, 1913, postponing the effective date of said modification of rules until August 1, 1913. It is ordered that the effective date of the modification of the said rules be further postponed until otherwise ordered by the Board.

Stop Over Arrangements on C. P. R.

19858. July 22. Re applications of the Boards of Trade of Montreal and Toronto, for the disallowance of the cancellations by the C. P. R. of certain stop over arrangements at Toronto, West Toronto, Montreal, and Outremont. It is ordered that the cancellation of the stop over arrangement at Outremont, Que., in connection with shipments of grain and grain products from Western Canada, as contained in Supplement 9 to the C. P. R. "all-rail" and "lake-and-rail" Special Tariff, C. R. C. No. E. 2480, the said supplement having been made effective June 16, 1913, be disallowed. That the cancellations of the stop over arrangements at Toronto, West Toronto, Montreal, and Outremont, in connection with shipments of grain, grain products, hay, and potatoes, items 22 and 23, of C. P. R. Special Freight Tariff, C. R. C. no. E. 2141, as contained in Supplement 16, made effective July 23, 1913, to the said tariff, be suspended until otherwise ordered by the Board.

Great Northern Ry. Passenger Tariffs.

19865. July 22. Re application of Great Northern Ry, under sec. 331 of the Railway Act, for the approval of its standard Passenger Tariff C. R. C. 825. It is ordered that the said tariff, applying a maximum rate of 3 cents a mile between stations on its lines of railway as follows, namely: Brandon, Saskatchewan & Hudson's Bay Ry.; Manitoba Great Northern Ry.; Midland Ry. of Manitoba, Victoria and Sidney Ry., and the line of the Victoria Terminal Ry. and Ferry Co., be approved. That the said tariff applying a maximum rate of 4 cents a mile to be charged between stations on its lines of railway as follows, namely: Bedlington & Nelson Ry., Crows Nest Southern Ry., Nelson & Fort Sheppard Ry., New Westminster Southern Ry., Red Mountain Ry., and the line of the Vancouver, Victoria & Eastern Ry. and Navigation Co. be temporarily approved, pending judgment in the inquiry into the rates charged generally by railway companies in British Columbia.

Brick Rates Milton to Toronto.

19973. Aug. 1. Re application of Milton Pressed Brick Co., and Toronto Pressed Brick and Terra Cotta Co., of Milton, Ont., complaining of an increased rate proposed to be charged by the G. T. R. and C. P. R. on brick, in carloads, from Milton to Toronto, from 3 to 3½ c. per 100 lbs., as shown by Supplements issued by the railway companies to become effective Aug. 1, 1913. It is ordered that the effective date of the said proposed increased rate be postponed until Nov., 1913.

Switching Charges and Practice.

On Feb. 4 last the Board gave notice that it would take into consideration the proposed revision of order 4988, July 8, 1908, known as the General Interswitching Order, and of the draft revision suggested by the Board at the sittings held at Ottawa Nov. 5, 1912. At the sittings subsequently held a general discussion took place, but no definite conclusion was arrived at by the railway companies as to their position; and the Board has now asked them to make their written submission on the whole question both as to practices and rates. In addition to the question of interswitching, many complaints have been received by the Board as to the local switching practices an charges. The Board also requires the submissions of the companies as to what rules and practices should be followed and charges made for services of this character at all points of sufficient magnitude on the lines of the respective companies to necessitate a local switching movement. As some of the objections raised by the companies as to switching movements of both kinds are based on insufficiency of the toll, the Board desires the submissions of the companies to indicate the principle that, in the opinion of the companies, should be observed in arriving at a rate basis, supported by particulars of cost the companies are put to in illustrative movements.

The Board of Railway Commissioners will on Sept. 16, take into consideration the matter of requiring railway companies to equip locomotives with air hose on the front end.

Great Northern Railway Lines in Canada.

The Midland Ry. of Manitoba made application recently to the Winnipeg City Council for permission to lay tracks on a lane between Spruce and Clifton streets, which was granted on condition that another avenue be provided for the traffic. The question of building a spur line adjacent to Sherbrooke St., between Ross and Elgin Avenues, is before the Public Utilities Commissioner.

Projected Lines in Alberta.—A press report from Calgary, Alta., credits a construction superintendent of the Great Northern Ry., with stating Aug. 7, that the G.N. Ry. interests had a route surveyed for a line from Nelson, B.C., to Lethbridge, Alta., and that construction would be gone on with during 1914.

Vancouver, Victoria and Eastern Ry. and Navigation Co.—Construction is being gone on with on the uncompleted portion of the line westerly to the summit of the Hope Mountains, and it is expected to have the line finished to that point during 1914. From this point to Hope the company will use jointly with the Kettle Valley Lines, the section which is being built by the latter company down the Coquihalla River Valley the contract for which has been let to McArthur Bros., New York. From Hope the company runs over a portion of the Canadian Northern Pacific Ry., and its own lines into New Westminster, Vancouver and a connection with the G.N. Ry. lines in the U. S.

The details of the False Creek plans are being worked out by the engineers of the G. N. R., the Canadian Northern Pacific Ry. and the British Columbia Government, and the various portions of the work are being put in hand as rapidly as possible.

Victoria and Sidney Ry.—We are officially advised that the G.N.R., having settled all matters previously at issue with the city of Victoria and the British Columbia Government regarding the bond issue of the V. and S. Ry., is now engaged improving its physical condition, putting in a great many new ties, and tie plates, and a large quantity of ballast. A steel gasoline-electric car has been purchased, and is working three round trips daily between Victoria and Sidney. An order has been placed for the building of a new barge with a capacity of nine cars, to supplement the 6-car barge now in service between the railway and Port Guichon, on the Vancouver, Victoria and Eastern Ry. (Aug., pg. 379.)

Railway Rolling Stock Notes.

The Victoria and Sidney Ry., a subsidiary of the Great Northern Ry., recently purchased a steel gasoline electric car from the General Electric Co., which it is now running three trips a day between Victoria and Sidney, B.C.

The G. T. Pacific Ry. has received one mail and express car, no. 116; 6 baggage cars, nos. 426 to 429, 431 and 432; and 10 sleeping cars, named Cork, Carlisle, Ceylon, Cumberland, Cardigan, Capetown, Clyde, Cyprus, Cornwall and Connaught.

The proceeds of a recent issue of £1,500,000 notes by the G.T.R. will be applied in part to the payment of additional rolling stock, viz:—75 locomotives and 8,000 freight cars, the contract price for which exceeds £2,000,000. This additional equipment has become necessary owing to the approaching completion of the G.T.P.R., and the general increase of traffic throughout the system.

The C.P.R., between June 12 and July 30, placed orders for additional rolling stock at its Angus Shops, as follows:—1 second class car, 1 mail and express car, 1 pile driver, 1 box baggage car, 1 freight refrigerator car, 7 stock cars, 7 vans, 2 horse cars 72 ft. long, and 8 horse cars 60 ft. long.

The Canadian Northern Ry., between July 16 and Aug. 15, received the following additions to rolling stock:—200 box cars from the Canadian Car and Foundry Co.; 4 second class cars and 80 flat cars, from the Crossen Car Co.; 5 consolidation and 5 switching locomotives, from the Canadian Locomotive Co.; 2 consolidation locomotives, from Canadian Allis-Chalmers Co., and 20 cabooses from the Mount Vernon Car Co.

The Esquimalt and Nanaimo Ry., which has been operating oil burning locomotives over its lines for some months, has found a considerable saving in operating, but the full benefit has not been felt yet owing to the heavy expense of installing the tanks and adapting the locomotives for oil fuel. It is stated that forest fires have been avoided this year and considerable economy achieved owing to the elimination of forest patrols.

The Canadian Car and Foundry Co., between July 14 and Aug. 15, received orders for the following rolling stock:—from the Hart-Otis Car Co., 1 Rodger double plough, and 19 fifty ton all steel special Otis type general service cars, the latter being for the Algoma Steel Corporation, details of which were given in our last issue; from Cape Breton Coal, Iron and Ry. Co., 30 thirty ton twin hopper cars; from Algoma Steel Corporation, 19 fifty ton steel underframe flat cars.

All C.P.R. locomotives, with the exception of two, operating on the Mountain and Shuswap Subdivisions, between Field and Kamloops, B.C., are now using oil as fuel, instead of coal The remaining two will shortly be converted to oil burners. The first oil burning locomotive has been placed in operation on the Cascade Subdivision, between North Bend and Vancouver, and the other locomotives operating over that subdivision will be converted as soon as possible.

The Canadian Car and Foundry Co., between June 15 and Aug. 15, delivered the following rolling stock:—to Canadian Northern Ry., 13 forty ton wood ballast cars, 332 thirty ton wood box cars; to Canadian Pacific Ry., 1,509 forty ton box cars, 301 forty ton steel underframe flat cars, 300 fifty ton ballast cars, 5 wood tourist cars, 122 forty ton steel underframe stone cars, 15 wood baggage and express cars, 6 plough cars, 14 steel underframes for Lidgerwood unloaders; to the Dominion Bridge Co., 1 pair of seventy-five ton trucks; Hart-Otis Car Co., 1 plough car; to F. H. Hopkins and Co., 1 all wood Lidgerwood flat car; to St. Lawrence Bridge Co., 4 pairs of fifty ton trucks.

The C.P.R., between June 12 and July 30, received the following additions to rolling stock:—113 freight refrigerator sleeping cars, 2 baggage and express cars sleeping cars, 2 bagage and express cars and 16 class U3 locomotives, from its Angus Shops; 1,139 steel frame box cars, 234 steel frame flat cars, 323 ballast cars, 141 stone cars, and 8 tourist cars, from the Canadian Car and Foundry Co.; 500 steel frame box cars, from the National Steel Car Co.; 232 steel frame box cars, from the Nova Scotia Car Works; 4 ballast spreaders, 2 wrecking cranes and 9 Rodger ploughs, from F. H. Hopkins and Co.; 1 Bucyrus plough from Mussens Ltd.; 4 class G2 locomotives, from the Montreal Locomotive Works; 10 sleeping cars, from the Pullman Co.; 714 box cars, from Barney and Smith Car Co.

The Canadian Northern Ry. has received 10 six wheel switching locomotives, one of which is equipped with power reverse gear, from the Canadian Locomotive Co. Following are the chief details:—

[illegible]	[illegible]

Among the Express Companies.

The Canadian Northern Ex. Co. has opened offices at Polwarth and Beadle, Sask.

The Board of Railway Commissioners has established express delivery and collection limits for Grand Forks, B.C., and has re-defined the limits for St. Boniface, Man.

The American Ex. Co. has made a distribution of Wells Fargo & Co. shares, 45,000 of which it has held for some years, among its shareholders at the rate of one share of Wells Fargo to each four shares of A. E. Co. stock. The market value of the stock is about $5,000,000.

The Interstate Commerce Commission has ordered considerable reductions in express rates in the U.S., to become effective on or before Oct. 15. It is stated the reductions will aggregate about 16% of the companies' gross earnings. The order is to be in force for two years, to give opportunity for test of the rates under varying conditions. It is stated that the companies have suffered the loss of considerable traffic of smaller parcels through the introduction of the parcel post system, and that such a sweeping reduction of rates will be intolerable.

Railway Lands Patented.—Letters patent were issued during June, covering railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:

	Acres
Alberta Central Ry.	[illegible]
Calgary and Edmonton Ry.	1,266.00
Canadian Northern Ry.	[illegible]
Canadian Pacific Ry.	500.31
Grand Trunk Pacific Branch Lines Co.	32.78
Manitoba and North Western Ry.	[illegible]
Qu'Appelle, Long Lake and Saskatchewan Rd. and Steamboat Co.	4,642.40
Total	7,743.62

A consolidation of the Railway Act will be one of the matters to occupy the attention of the Dominion Parliament next session. The measure has been in preparation during the past year by S. Price, K. C., St. Thomas, Ont. A draft of the proposed measure is reported to have been completed and to be under consideration.

Canadian Pacific Railway Company's Annual Report.

Following is the 32nd annual report over the signature of the President, Sir Thos. G. Shaughnessy:—

The accounts for the year ended June 30, show the following results:

Gross earnings		$139,395,699.98
Working expenses		93,149,825.83
Net earnings		$ 46,245,874.15
Net earnings of steamships in excess of amount included in monthly report		1,245,563.03
		$ 47,491,437.18
Deduct fixed charges....		10,876,352.15
Surplus		$ 36,615,085.03
Deduct amount transferred to steamship replacement account..	$1,000,000.00	
Contribution to pension fund...............	125,000 00	
		1,125,000 00
		$ 35,490,085 03
From this there has been charged a half yearly dividend on preference stock of 2%, paid April 1..............	$1,473,386 53	
And three quarterly dividends on ordinary stock at 1¾ %, each, paid Jan. 2, April 1, and June 30..........	10,150,000 00	
And interest on instalments on New stock stock subscriptions, paid Oct. 15..........	569,813.87	
		$ 12,193,200.40
		$ 23,296,884 63
From this there has been declared a second half yearly dividend on preference stock, payable Oct. 1..........	$1,486,626.79	
And a fourth quarterly dividend on ordinary stock of 1¾ %, payable Oct. 1..............	3,500,000 00	
		$ 4,986,626.79
Leaving net surplus for the year....		$ 18,310,257.84

In addition to the above dividends on ordinary stock, 3% was paid from special income

DETAILS OF SPECIAL INCOME FOR YEAR

Balance at June 30, 1912...............	$2,460,790 60
Interest on cash proceeds and on deferred payments for land sold.............	2,031,785.05
Interest on deposits and loans..........	1,201,906.69
Interest on C.P.R. 1st mortgage bonds acquired..........................	63,461.33
Interest from Minneapolis, St. Paul & Sault Ste Marie Ry. bonds..........	159,720.00
Interest from Mineral Range Ry. bonds	50,160.00
Interest from Toronto, Hamilton & Buffalo Ry. bonds....................	10,840.00
Interest from Kingston & Pembroke Ry. bonds............................	8,565.00
Interest from Dominion Government bonds...........................	182,500.00
Interest from Ontario Government bonds	48,000 00
Interest from British Consols..........	114,569.44
Interest from Montreal & Atlantic Ry. bonds, and on other securities........	552,298.89
Interest from Berlin, Waterloo, Wellesley & Lake Huron Ry. bonds...........	17,040 00
Dividend on St. John Bridge & Ry. Extension Co stock....................	75,000.00
Dividends on Dominion Express Co. stock............................	240,000 00
Dividends on Minneapolis, St. Paul & S.S.M. Ry. common stock...........	890,645.00
Dividends on Minneapolis, St. Paul & S.S.M. Ry. preferred stock...........	445,326.00
Dividends on West Kootenay Power & Light Co. common stock.............	33,000 00
Dividends on West Kootenay Power & Light Co. preferred stock............	3,850.00
Dividends on Toronto, Hamilton & Buffalo Ry stock..................	164,246 00
Net Revenue from company's coal mines	305,237.93
	$9,058,941.93
Less—Payments to shareholders in dividends: Oct. 1, 1912, Jan. 2, April 1 and June 30, 1913...............	5,700,000 00
	$3,358,941 93
From this a dividend has been declared, payable Oct. 1....................	1,500,000 00

The working expenses were 66.82% of the gross earnings, and the net earnings 33.18% as compared with 64.89 and 35.11%, respectively, in 1912.

Four per cent. consolidated debenture stock for £1,938,394 was created and sold, and of the proceeds £1,051,619 was applied to the construction of authorized branch lines, and £886,775 to the acquisition of bonds of other railway companies whose lines constitute a portion of your system, the interest on which had, with your sanction, been guaranteed by your company. Four per cent. preference stock for £1,569,091 was created and sold, the proceeds being used to meet capital expenditures that had your previous sanction.

Your guarantee of interest was endorsed on 4% consolidated bands of the M., St. P. and S. S. M. Ry. Co. for $2,623,000, issued and sold to cover the cost of 131.15 miles of railway added to that company's system.

During the year 474,798 acres of agricultural land were sold for $7,487,268, an average of $15.77 an acre. Included in this area there were 7,944 acres of irrigated land which brought $48.88 an acre, so that the average price of the balance was $15.20 an acre.

Shares of ordinary capital stock for $2,000,000, the difference between the capital stock outstanding and the amount authorized by the shareholders Oct. 7, 1908, were sold in the market early in the year and realized a premium of $2,860,821.80, which will be used for additions and improvements to your property.

In pursuance of your policy of building and extending branch lines in Western Canada to provide present and incoming settlers with transportation facilities, a line is projected from near Swift Current, on your main line in Saskatchewan, in a northwesterly direction to cross your Lacombe branch at or about Coronation, and eventually to reach Sedgewick, a station on your line between Saskatoon and Edmonton, 290 miles. The first 115 miles of this line should be constructed without delay, and the balance in stretches as circumstances may seem to warrant; two other lines, one of which will run northwesterly from Bassano, on your main line in Alberta, to a connection with the Swift Current line, 118 miles, and the other from Gleichen to Shepard, 40 miles, should be built within the next year. These lines will serve important agricultural districts north and south of your main line and will answer all the purposes of a second track between the points mentioned for some years to come. The Weyburn branch, running south of, and parallel to, your main line in Saskatchewan and Alberta, to a connection with your Alberta railway south of Lethbridge, 436 miles, of which 196 miles have been constructed, or are in process of construction, under your authority, should be further extended year by year until completed. Branch lines from Gimli, Man., in a northerly direction for 26 miles, and from Snowflake, Man., in a westerly direction, 9 miles, and an extension of the Suffield branch in Saskatchewan, 27 miles, will be of substantial service to settlers in these respective districts. Your directors will ask you to sanction the construction of such part of this mileage as you have not already authorized, and the issue, from time to time, of the requisite 4% consolidated debenture stock to meet the expenditure.

Among the important additions and improvements now in process of execution are, 29 miles of second track between Islington and Guelph Jct., on the Ontario Division, to cost $750,000; 133 miles of additional second track between Sudbury and Port Arthur, on the Lake Superior Division, to cost $5,300,000; 178 miles of additional second track between Brandon and Calgary, to cost epproximately $5,000,000; 18 miles of second track and grade improvements, including a double track tunnel, five miles long, between Six Mile Creek and the Loop, near the summit of the Selkirk Mountains, at a cost, without electrification, of about $8,000,000; 139 miles of second track between Revelstoke and Vancouver, in stretches where it will give the most immediate relief, to cost $6,350,000. When this work is finished and the new lines between Regina and Shepard, to which reference has already been made, are constructed, there will be 200 miles of double track between Sudbury and Port Arthur, leaving 352 miles to be provided in the future; between Port Arthur and Calgary there will be 1095 miles of double track, leaving gaps aggregating only 165 miles, and between Calgary and Vancouver 158 miles of double track, leaving 488 miles to be built hereafter. A second track on such a large portion of your main line between Sudbury and the Pacific Coast will relieve the congestion that has prevailed from time to time and will enable you to handle your traffic more expeditiously and economically, and the construction of the long tunnel, between Six Mile Creek and the Loop, will eliminate 4½ miles of snowsheds that it would be necessary to reconstruct at very great expense if the present location of the railway through that section were adhered to. It is not the intention of your directors to proceed with the second track in the more difficult sections along the Thompson and Fraser Rivers until your Kettle Valley Line is ready for traffic between Midway and Hope, in 1915, so that you may have an alternative route available between Medicine Hat and Vancouver via the Crowsnest Pass if anything unforeseen should occur during the prosecution of the double track work to obstruct traffic on the main line.

You will be asked to approve the purchase of two intermediate steamships for the Atlantic trade, 500 ft. long, 64 ft. beam, 11,600 gross tonnage, 15 knots speed, to cost approximately £300,000 each, and two steamships for the Pacific Coast service, 395 ft. long, 54 ft. beam, capable of making 22½ knots an hour at sea, and to cost approximately £200,000 each. The two Atlantic steamships are urgently required for your second and third class passengers and freight traffic between European ports and Canada, and the two fast passenger steamers for the Pacific Coast will further improve the excellent service that you are now providing for the large and growing passenger business between Vancouver, Victoria and other ports on the Pacific Coast.

When the last issue and sale of ordinary capital stock was authorized by you, a portion of the proceeds of the sale was directed to be applied to the retirement of the outstanding 5% first mortgage bonds of the company that mature in 1915, and, therefore, your directors deemed it desirable to give notice to the holders in May last that the company would receive and pay for any of the bonds that might be surrendered before the end of the fiscal year. Pursuant to this notice bonds to the amount of £4,234,700, or $20,608,873.33, were delivered and paid for. These, with the bonds that the company had previously acquired, make a total of £4,487,900, or $21,841,113.33, that have been retired and cancelled, leaving outstanding bonds to the amount of £2,703,600, or $13,157,520, to be redeemed and cancelled as opportunity offers.

For the convenience of those desiring to make transfers in Montreal of shares of your ordinary capital stock, the Bank of Montreal has been appointed Registrar and the Royal Trust Company has been appointed Transfer Agent for the Montreal Registrar, and a bylaw giving effect to the appointments will be submitted for your consideration and approval.

It will be observed that the mileage covered by the statement of gross earnings and working expenses has increased from 10,983 in 1912 to 11,602 in this fiscal year. The business of a number of these new lines will naturally add but little to your gross income for a time while traffic is being developed, but meantime their maintenance and operation have a marked effect on the working expenses. This, coupled with more liberal expenditure for maintenance of way and of equipment and advances in the wage scale in some branches of the service, will account, in a large measure, for the abnormal increase in your working expenses over the previous year.

The item Railway and Equipment in the balance sheet is $69,491,729.27 more than it was in 1912, after applying upwards of $10,000,000 from surplus account. Of this amount $30,137,885.86 represents the cost of additional rolling stock, $9,113,050.21 the expenditure for the construction of branch lines, $36,809,675.82 for additions and improvements to your property, and $3,126,347.32 for additional shops and machinery over the whole system.

CONDENSED BALANCE SHEET

ASSETS

Railway and equipment		$452,320,780 60
Ocean, lake and river steamships		23,049,283 21
Acquired Securities (cost)		100,207,933 88
Properties held in trust for the company		4,386,260 00
Deferred payments on land and town site sales		44,499,115 78
Advances to lines under construction		13,750,205.47
Advances and investments		12,072,811 65
Material and supplies on hand		18,628,206 99
Current assets:		
Agents and conductors balances	$4,118,739.47	
Net traffic balances	120,713.25	
Miscellaneous accounts receivable	7,013,831 74	
		11,253,284 46

Grand Trunk Railway Betterments, Construction, Etc.

Bonded Freight Shed in Montreal.—The company is building a freight shed, 1,200 by 60 ft., for bonded freight at Point St. Charles, Montreal.

At one end will be the office, 60 by 60 ft., giving accommodation for the general, cartage and Customs staff, etc., on two floors, with basement below, in which will be the heating plant, storage room for records and a waiting room for shed laborers.

The building will have concrete foundation up to the floor line of shed with brick walls above, faced with red pressed brick facing. There will be a flat roof, covered with felt and gravel and supported on columns and beams. The office portion will be of fireproof construction.

The shed will have continuous doors along the track side, with glazed steel sashes above, whilst on the other side there will be doors every 15 ft.

At intervals through the building will be travelling cranes, which will be capable of handling a load of 6 tons straight from the cars to the teams on the opposite side of building. Scales for the weighing of freight will also be provided.

A driveway 30 ft. wide will be provided on Wellington St., which will be paved with scoria paving blocks, provision being made at intervals for driveways across the sidewalk.

Track Elevation in Montreal.—The order for the elevation of the G.T.R. tracks in Montreal is reported to have been prepared for issue by the Board of Railway Commissioners. The estimated cost of the work is over $8,000,000, and it may amount to as much as $10,000,000. The only question said to be undecided is the proportion of the cost to be paid by the city. The actual cost of the track elevation is a little over $5,000,000, towards which the city is authorized to contribute $2,500,000, but the company asks for an additional $500,000. The remaining part of the estimated cost of the work is made up of the alteration of terminal facilities to suit the track elevation, and for the building of a new passenger station to replace the present Bonaventure one.

Stratford Station, Yards, Etc.—A start was made, Aug. 8, on the deflection of the Stratford-Buffalo line in connection with the rearrangement of the yards. The Goderich line will also be changed, and it is stated that there is hardly a line in the entire yard that will not be altered before the work is completed. The work on the new station building is being pushed forward, but it is feared that there will be some delay with the stone work, as the quarries at Gananoque are much behind with deliveries. The station building is estimated to cost $60,000. (Aug., pg. 379.)

Alberta and Great Waterways Ry.—Press reports Aug. 13, state that an agreement has been reached between the Alberta Government and the promoters of the A. and G.W. Ry. by which the proceeds of the bond issue now held by the banks will be released.

Canadian Northern Railway Construction, Betterments, Etc.

The question of the Atlantic Coast terminals of the C. N. R. is being discussed in the press at considerable length. On the one hand the probability of the granting of running rights over the Intercolonial Ry. to St. John and Halifax is given credence, while on the other Boston, Mass.; and Portland, Me., are advocated. Sir Donald Mann, Vice President, is reported to have stated, Aug. 12, that the company did not contemplate making Portland its Atlantic terminal. The newspaper reports made a terminal at Boston a part of the Portland terminal The whole question is, however, being given consideration, but there is nothing definite in view at present.

Sir Donald Mann returned east, Aug. 5, from a trip of inspection over the lines under construction in Western Canada. In an interview he stated that the line from Port Arthur easterly giving connection with Montreal and Quebec, via. Toronto, would be opened for traffic by December. On the Canadian Northern Pacific Ry. there were only 80 miles of grading uncompleted, and this line would be finished through from Edmonton to Vancouver by the fall of 1914. The terminals at Port Mann, Vancouver and Victoria were being rapidly pushed forward.

Montreal-Ottawa-Port Arthur Line.—The sections of this line which are being completed for opening this year, are those between Montreal and Hawkesbury, there connecting with the line now in operation into Ottawa, and the line west of Sudbury to Port Arthur. On this latter section a train service is being operated to Ruel, and track has been laid for a considerable mileage beyond. At Obo, some track has been laid easterly, and about 25 miles westerly. About 150 miles of track have been laid easterly from Port Arthur. With the exception of the bridges across the Nepigon River and at the end of Kapuskasing Lake, all the steel bridges on the line have been completed.

The section of the line which will be brought to completion by the end of 1914, or early in 1915, extends from Ottawa to the junction with the Toronto-Sudbury line at Capreol. Construction is being proceeded with. The questions at issue between the company and the North Bay Town Council, are still unsettled, but an early arrangement is hoped for. It is stated that a possible solution for some of the points will be an agreement with the Temiskaming and Northern Ontario Ry. for the use of that railway's station and terminal facilities.

Canadian Northern Ry.—Track is reported to have been laid on what is known as the Fort Rouge cut off at Winnipeg, and it is expected to have it in operation early in September. This cutoff will enable grain trains from the West to go through to the C. N. R. yards at St. Boniface, and to the G. T. Pacific Ry. yards at Transcona, without passing through the Fort Garry terminals. This will relieve the terminals of a large amount of shunting, and consequent delaying of traffic.

The Board of Railway Commissioners has authorized the opening for traffic of the diversion of the Coste Point branch from sec. 21, tp. 11, range 2, east of the first principal meridian.

The extension of the branch now terminating at Bienfait to Estevan, Sask., 9 miles, has been graded, and it is expected to have the steel laid and the ballasting done by Oct. 1. The grading was done by the Western Canada Construction Co.

A plan and book of reference, giving details of route, etc., of the C.N.R. Alaska branch, as located through tps. 25-26, ranges 20-23, west of the third meridian, Saskatchewan, has been deposited in the Land Titles office at Moose Jaw, Sask.

The company's line will enter Moose Jaw, north of the C.P.R. tracks, and will cross the Cousin's siding by an overhead trestle 35 ft. high, according to plans laid before the City Council, which have been approved.

Hugh Sutherland, Executive Agent, C.N.R., Winnipeg, recently stated that the C.N.R and the G.T. Pacific Ry. were planning to erect union stations in every city in Western Canada where the two lines came together.

Every effort is being made to complete the line into Calgary and to have it in operation this fall. It was expected to have the line finished for opening Sept. 1, but there had been considerable delay in the delivery of the steel for the bridges, which had held up construction considerably.

A contract is reported to have been let to John McLeod and Son, Winnipeg, for the erection of a station for the C. N. Western Ry. at Edmonton, at an estimated cost of $40,000.

Canadian Northern Pacific Ry.—Track laying is reported to be in progress westerly in the vicinity of Yellow Head Pass, and grading is in progress right up to the Albreda Summit, to which point the construction is in charge of Mackenzie-Mann and Co.'s Winnipeg staff. The construction from Port Mann to the Albreda Summit is in charge of the Vancouver office. Track has been completed to mileage 86 north of Kamloops, while considerable progress has been made with the work beyond that point.

The Lulu Island branch has been completed and was reported ready for official inspection Aug. 4.

Construction was started Aug. 11 on the first part of the terminal buildings at Port Mann. This will consist of a 15-stall locomotive house, a repair house 140 by 312 ft., and a turntable. The foundation work, which is being done by the Northern Construction Co., necessitates the driving of 2,800 piles. The buildings will be put up by the Imperial Construction Co.

Sir Donald Mann stated on the occasion of his visit to Vancouver, July 26, that a start would be made right away on the filling in and other work on the False Creek terminal site, Vancouver.

Vancouver Island Lines.—In connection with the building of the branch line along the Saanich Peninsula—which is referred to locally as the Patricia branch—notice has been given of the deposit with the Minister of Public Works at Ottawa, of the plans for the trestle bridge and embankment across the Selkirk water to carry the line from the Songhees Reserve to the Selkirk Bridge on the Gorge Road, and also the plans for the railway ferry terminal at the Patricia Bay terminal.

The plans for laying out the Songhees Reserve for terminal purposes have been prepared, and J. Montgomery, of the Imperial Construction Co., was in Victoria, Aug. 10, arranging for the starting of construction. (Aug., pg. 380.)

Mainly About Transportation People.

W. D. REID, President, Reid Newfoundland Co., visited St. John's, Nfld., during August.

D. C. CORBIN, President, Eastern British Columbia Ry., of Spokane, Wash., spent August in Yukon and Alaska.

A. R. CREELMAN, K.C., director, C.P.R., who is visiting in England, expects to return to Canada during September.

Lieut.-Col. J. W. LITTLE, who died at Springbank, London, Ont., recently, was a director of the London and Lake Erie Ry.

G. J. DESBARATS, Deputy Minister of Naval Affairs, rescued a boy who had fallen into the lake at Banff, Alta., recently.

H. P. DWIGHT, President Great Northwestern Telegraph Co., who died in Toronto some months ago, left an estate of $97,546.

A. J. GORRIE, formerly Receiver, Quebec and Lake St. John Ry., Quebec, spent a short vacation during August, at Lake St. Joseph, Que.

GEORGE BURY, Vice President, C.P.R., was the guest of the City of Regina, Sask., recently when he gave his views on handling the grain crop.

R. L. FAIRBAIRN, General Passenger Agent, Canadian Northern Ry., Toronto, and Mrs Fairbairn, were visitors during August, at Lake St. Joseph, Que.

Prof. D. BURNS, formerly a Fellow of the Faculty of Applied Science and Engineering of the University of Toronto, died at Pittsburgh, Pa., July 27.

C. A. HAYES, General Traffic Manager, Canadian Government Railways, was a guest of the Maritime Press Association at St. John, N.B., recently.

A. W. SMITHERS, Chairman of the Board, G.T.R., arrived in Canada towards the end of August on his annual inspection trip over the system.

J. G. ENTWISTLE, Superintendent, District 3, Western Division, Canadian Northern Ry., Edmonton, Alta., has been granted leave of absence for two months.

LORD STRATHCONA has contributed £10,000 to the fund being raised by the Lord Mayor of London, for the acquirement of the Crystal Palace for the nation.

L. H. CURRY, son of Hon. N. Curry, President Canadian Car and Foundry Co., Montreal, was married in England recently to Miss M. S. McKeen, of Halifax, N.S.

Capt. ALEX. CREIGHTON, a former Port Warden of Montreal, and who had been associated with other shipping interests in Montreal and Vancouver, died in London, Eng., Aug. 4.

F. M. SPAIDAL, General Superintendent, C. N. Quebec Ry., and Quebec and Lake St. John Ry., Montreal, with Mrs. and Miss Spaidal, spent the summer vacation at Lake St. Joseph, Que.

ALFRED PRICE, whose appointment as Assistant General Manager, Eastern Lines, C.P.R., was announced in our last issue, arrived in Montreal, Aug. 8, from Calgary, Alta., to take up his new duties.

G. E. GRAHAM, Superintendent, District 2, British Columbia Division, C.P.R., Vancouver, is announced to have resigned to become General Manager of the Coquitlam Terminal Co., Coquitlam, B.C.

J. E. DALRYMPLE, Vice President (Traffic), G.T.R., and G.T. Pacific Ry., has been elected a director of the Northern Navigation Co., as representing the G.T.R. interests, vice W. E. Davis, deceased.

F. H. McGUIGAN, formerly Fourth Vice President, G.T.R., has been appointed to represent that company in the arbitration under the industrial disputes investigation act, respecting wages of track men.

P. B. MOTLEY, Engineer of Bridges, Eastern Lines, C.P.R., Montreal, has been elected a member of the Canadian Society of Civil Engineers' committee to prepare a standard specification on reinforced concrete work.

W. F. TYE, ex-President, Canadian Society of Civil Engineers, who has been visiting in Europe, with his family, for some time, has returned to Canada, and has taken up his residence at the Ritz-Carlton Hotel, Montreal.

D. McNICOLL, Vice President, F. L. WANKLYN, General Executive Assistant, and J. W. LEONARD, Assistant to the Vice President, C.P.R., Montreal made a tour of inspection over the Dominion Atlantic Ry. at the end of July.

A. A. Goodchild,
General Storekeeper, Eastern Lines,
Canadian Pacific Railway.

A. M. NANTON, director, Winnipeg Electric Ry., and associated with a number of other companies, more or less connected with transportation, has been elected a director of the Ogilvie Milling Co., in place of the late Sir Edward Clouston.

Mrs. W. H. Rosevear, wife of W. H. ROSEVEAR, ex-General Car Accountant, G.T.R., Montreal, died at Dublin, Ireland, Aug. 19, following a heart attack. Mr. and Mrs. Rosevear left Canada about two months ago for a trip to Switzerland, Great Britain and Ireland.

G. FERNLEY, formerly City Freight Agent, Canadian Government Railways Toronto, was presented with a gold watch by a number of transportation men, Aug. 11, on his leaving to take up his new duties as Commercial Agent, same system, Montreal.

LORD STRATHCONA celebrated his 93rd birthday, Aug. 6. It is about 75 years ago since he came to Canada, sailing in a vessel which took six weeks on the trip. This was about a year before the first trans-Atlantic steamship made its voyage from England to New York.

W. R. FITZMAURICE was presented with a silver tea service by the I.R.C. staff at Amherst, N.S., Aug. 11, on his leaving there, where he was station agent, for Newcastle, N.B., where he has been appointed Assistant Superintendent, Moncton and Ste. Flavie District, I.R.C.

S. G. TIFFIN was presented with a diamond tie pin at Toronto, Aug. 11, by a number of transportation men, on his leaving there, where he had been General Agent, Canadian Government Railways, to take up his new position as District Freight Agent, Intercolonial Ry., St. John, N.B.

W. DOWNIE, General Superintendent, Atlantic Division, C.P.R., who was recently granted leave of absence for a year, and who is at present touring in Europe, will not, it is reported, resume his duties on the expiry of his leave. It is stated that he has decided to retire, and to take up residence in Vancouver.

T. G. ARMSTRONG, whose appointment as Assistant Master Car Builder, Western Lines, C.P.R., Winnipeg, was announced in our last issue, entered C.P.R. service in 1902, since when he has been, to 1906, foreman at Farnham, Que.; 1906 to Feb. 1, 1908, Car Foreman, Winnipeg; Feb. 1, 1908 to July 3, 1913, General Foreman, Winnipeg.

J. M. GIBBON, who has been appointed General Advertising Agent, C.P.R., Montreal, was born at Udewella, Ceylon, Apr. 12, 1875, and entered C.P.R. service, June 1908, as advertising agent, London, Eng., which position he held to Aug. 10, 1913. Prior to entering C.P.R. service he had engaged in journalism on some of the chief English illustrated weeklies.

H. ELLIOTT, President, Northern Pacific Ry., has been elected a director, and appointed President of the New York, New Haven and Hartford Rd., vice C. S. Mellen, resigned. Effective Sept. 1. It is also announced that he will be appointed Chairman of the Board, as soon as the necessary bylaw creating the position can be passed.

HON. JOHN SHARPLES, who died at Quebec, July 30, aged 65, was, at various times, interested in many transportation companies, having held the following positions,—member Quebec Harbor Commission, director Quebec Bridge Co., director Quebec Ry., Light and Power Co., director Quebec Steamship Co., Vice President, Great Northern Ry. of Canada.

W. P. CLOUGH, heretofore Vice President, Northern Pacific Ry., New York, is reported to have been appointed Chairman of the Board of Directors in charge of the financial administration of the company. It is stated that under this title he succeeds H. Elliott, heretofore President, who has been appointed President, New York, New Haven and Hartford Rd.

ALEXANDER GIBSON, who died at Marysville, N.B., Aug. 14, aged 93, was one of the industrial and railway pioneers of the Maritime Provinces. He built the New Brunswick Ry., now incorporated with the C.P.R., and in conjunction with the late Hon. J. B. Snowball, built the Canada Eastern Ry., between Fredericton and Loggieville, now a part of the Intercolonial Ry.

W. E. FOSTER, whose appointment as Solicitor for Ontario, G.T.R., Montreal, was announced in our last issue, was born at Belleville, Ont., June 27, 1866, and entered the Legal Department, G.T.R., Sept. 30, 1884, as a clerk and student under John Bell, Q.C., General Counsel, Belleville, Ont., later becoming his assistant, and on Mr. Bell's death in 1905, he went to Montreal in a similar capacity, remaining so until Jan. 1, 1910, since when he has been, to July 15, 1913 Assistant Solicitor for Ontario.

G. E. BUNTING, whose appointment as General Western Freight Agent, Allan Line Steamship Co., and Manager, Allan and Co., Chicago, Ill., was announced in our last issue, was born at Toronto, Feb. 8, 1873, and entered transportation service, Sept. 1, 1889, since when he has been, to May 1, 1891, clerk to Division Freight Agent, G.T.R., Toronto; May 1, 1891 to Oct. 1, 1898, clerk, General Office, Lehigh Valley Rd., Buffalo, N.Y.; Oct. 1, 1898, to May 15, 1905, chief claim clerk, Canada Atlantic Ry., Ottawa; May 15, 1905, to June 15, 1913, Travelling Agent, Allan Line, Toronto.

In an automobile accident near Detroit, Mich., on Aug. 9, L. E. Beilstein, until recently General Manager of the Toledo Railways & Light Co., and J. T. Ross, Consulting Engineer of the Northern Ohio Traction & Light Co., and the Lake Shore Electric Ry., and the chauffeur, were killed, and J. F. Collins, Vice President and General Manager of the Michigan United Traction Co., and E. F. Wickwire, Sales Manager of the Ohio Brass Company, Mansfield, Ohio, were seriously injured. Mr. Wickwire had an ankle broken and suffered from severe strain, but is reported to be recovering satisfactorily.

A. E. McMASTER, whose appointment as Commercial Agent, G. T. Pacific Ry., Regina, Sask., was announced in our last issue, was born at Perth, Ont., Oct. 22, 1885, and entered railway service in 1902, since when he has been, to May 1903, in Freight Office, C.P.R., Keewatin, Ont.; May, 1903, to Aug., 1907, various positions, including assistant agent, C.P.R., Port Arthur, Ont.; Aug., 1907, to Aug., 1908, agent and chief clerk to Superintendent, G. T. Pacific Ry., Fort William, Ont.; Aug., 1908, to July 1, 1913, agent and General Agent, G. T. R., G.T.P.R. and G.T.P. Coast Steamship Co., Prince Rupert, B.C.

F. G. ADAMS, whose appointment as Division Freight Agent, G. T. Pacific Ry., Edmonton, Alta., was announced in our last issue, was born at St. John's, Nfld., Apr. 6, 1878, and entered railway service, Sept. 4, 1893, since when he has been, to Dec. 31, 1902, clerk, G.T.R. General Office, Montreal; Jan. 1, 1903, to Mar. 31, 1907, Contracting Freight Agent and Travelling Freight Agent, G.T.R., Montreal; Apr. 1, 1907, to Aug. 31, 1908, Contracting Freight Agent, G.T.R., Winnipeg; Sept. 1, 1908, to July 31, 1911, Travelling Freight Agent, G.T.R., Winnipeg; Aug. 1, 1911, to July 14, 1913, Commercial Agent, G.T. Pacific Ry., Regina, Sask.

A. C. SHAW, whose appointment as General Passenger Agent, Western Lines, C.P.R., Winnipeg, was announced in our last issue, was born at Detroit, Mich., May 12, 1865, and entered railway service in 1880, since when he has been, to 1882, ticket clerk, Great Western Ry., Toronto; 1882 to Mar. 13, 1886, in private business; Mar. 13, to Dec. 1, 1886, clerk, Passenger Department, C.P.R., Toronto; Dec. 1, 1886, to Dec. 1, 1900, clerk, Passenger Department, C.P.R., Montreal; Dec. 1, 1900 to Nov. 1, 1910, General Agent, Passenger Department, C.P.R., Chicago, Ill.; Nov. 1, 1910, to July 1, 1913, Assistant General Passenger Agent, Western Lines, C.P.R., Winnipeg.

W. E. Foster,
Assistant Solicitor, Grand Trunk Railway

C. H. Bowes,
Assistant General Passenger Agent, Lines West of Revelstoke, B.C., Canadian Pacific Railway.

ARTHUR PIERS, who has retired from the position of Manager, C.P.R. Steamship Lines, Liverpool, Eng., on account of ill health, was born in 1851, and was educated in France and England. He entered transportation service in 1870 as clerk in the office of General Manager, Great Western Ry. of Canada, since when he has been, to 1882, secretary, and assistant to General Manager, same road; 1882 to 1889, secretary to General Manager, C.P.R.; 1889 to 1891, in shipping business in London, Eng.; 1891 to 1901, Superintendent, C.P.R. Steamship Lines; 1901 to June, 1903, General Superintendent, C.P.R. Steamships; June, 1903, to Aug. 20, 1913, Manager, C.P.R. Steamship Lines, Liverpool, Eng.

F. M. RUTTER, A. M. Can. Soc. C. E., whose appointment as Assistant Division Engineer, Maintenance of Way, Eastern Division, C.P.R., Montreal, was announced in our last issue, was born at Toronto, Dec. 26, 1880, and educated at Upper Canada College and Toronto University. He entered C.P.R. service, Apr., 1902, since when he has been, to 1904, chainman and rodman, on location surveys and construction, in Ontario and Quebec; 1904 to 1906, Resident Engineer on construction Toronto-Sudbury Line; 1906 to 1907, transitman, Maintenance of Way Department, Montreal; 1907 to 1911, Resident Engineer, Maintenance of Way, Woodstock, N.B.; 1911 to July, 1913, Resident Engineer, Maintenance of Way, Toronto.

R. N. CARD, who has been appointed City Freight Agent, G.T. Pacific Ry., Vancouver, B.C., entered G.T.R. service in Oct., 1899, since when he has been, to Nov., 1902, chief yard clerk, Hamilton, Ont.; Nov., 1902, to Feb., 1904, chief yard clerk, London, Ont.; Feb., 1904, to Aug., 1908, car distributor, Toronto; Aug., 1908, to Nov., 1912, agent, G.T. Pacific Ry., Fort William, Ont.; Nov., 1912, to July 15, 1913, chief clerk, Traffic Department, G. T. Pacific Ry., Vancouver, B.C. During the latter part of July, he suffered from a severe attack of neurasthenia, and went to Winnipeg for medical treatment, under which he improved sufficiently to be able to go to his farm at Asquith, Sask., where he expects to spend the remainder of the summer.

E. E. LLOYD, who has been appointed Auditor of Stores and Mechanical Accounts, C.P.R., Montreal, was born at Great Grimsby, Eng., Sept. 2, 1868, and came to Canada in 1876, settling in Winnipeg. He entered C.P.R. service, Dec. 27, 1887, since when he has been, to June 13, 1894, in various positions in the Stores Department, Winnipeg; June 13, 1894, to Dec. 17, 1897, in charge of pay rolls and labor statistics, same department, Winnipeg; Dec. 17, 1897, to Jan. 31, 1903, chief clerk, same department, Vancouver, B.C.; Feb. 1, 1903, to Nov. 30, 1904, chief clerk to General Storekeeper Montreal; Dec. 1, 1904, to Jan. 14, 1910, chief clerk to Auditor of Stores and Mechanical Accounts, Montreal; Jan. 15, 1910, to July 31, 1913, Assistant Auditor of Stores and Mechanical Accounts, Montreal.

C. H. BOWES, whose appointment as Assistant General Passenger Agent, C.P.R., Vancouver, B.C., was announced in our last issue, was born at Bangor, Me., Mar. 22, 1877, and entered railway service, June, 1896, since when he has been, to 1898, stenographer and clerk to General Passenger Agent, Bangor and Aroostook Rd., Bangor, Me.; 1898 to 1900, chief clerk, same office; 1900 to 1905, chief clerk to Passenger Traffic Manager, same road; 1905 to 1906 Travelling Passenger Agent, C.P.R., St. John, N.B.; 1906, chief clerk to District Passenger Agent, C.P.R., St. John, N.B.; 1906 to 1907, chief rate clerk, Consolidated Steamship Lines, New York; 1907 to 1908, assistant rate clerk, Boston and Albany Rd., Boston, Mass.; 1908 to Aug., 1910, chief clerk, Passenger Department, C.P.R., Vancouver, B.C.; 1911, Passenger

Agent, British Columbia Coast Steamship Service, C.P.R., Vancouver, B.C.; 1911 to July 1, 1913, assistant to General Passenger Agent, C.P.R., Vancouver, B.C.

F. R. PORTER, whose appointment as Assistant General Freight Agent, G.T. Pacific Ry., Winnipeg, was announced in our last issue, was born at Stratford, Ont., June 13, 1875, and entered G.T.R. service, Apr. 23, 1892, since when he has been, to May 1, 1896, clerk and stenographer, Assistant Superintendent's, and Local Freight Agent's offices, Stratford, and London, Ont.; May 1, 1896, to Jan. 31, 1898, clerk, Division Freight Office, Stratford, Ont.; Feb. 1 to Nov. 30, 1898, stenographer to Division Freight Agent, Hamilton, Ont.; Dec. 1, 1898, to July 31, 1899, chief clerk to Division Freight Agent, Stratford, Ont.; Aug. 1, 1899, to Feb. 28, 1901, chief clerk to Division Freight Agent, Hamilton, Ont.; Mar. 1, 1901, to July 31, 1902, Soliciting Freight Agent, Hamilton, Ont.; Aug. 1 to Dec. 31, 1902, Travelling Freight Agent, Hamilton, Ont.; Jan. 1, 1903, to July 10, 1910, Assistant Foreign Freight Agent, Toronto; July 11, 1910, to July 14, 1913, Division Freight Agent, G.T. Pacific Ry., Edmonton, Alta.

WM. ALEX. DUFF, A.M. Can. Soc. C.E., who has been appointed Engineer of Bridges, Intercolonial Ry., Moncton, N.B., was born at Hamilton, Ont., Apr. 20, 1877, and graduated from Toronto University in Applied Science in 1901. During the summer of 1900, he was engaged as Assistant to Engineer on Construction, Toronto, Hamilton and Buffalo Ry., Hamilton, Ont.; and from 1901 to 1902, field draughtsman and acting Resident Engineer, Vancouver, Victoria and Eastern Ry. and Navigation Co., Grand Forks, B.C.; 1902 to 1903, Assistant to Engineer on Construction, G.T.R., Hamilton, Ont.; 1903, draughtsman, Dominion Bridge Co., Montreal; 1903 to 1905, draughtsman and checker, Kenwood Bridge Co., Chicago, Ill.; 1905 to 1907, draughtsman and checker, Canadian Bridge Co., Walkerville, Ont.; 1907 to 1908, chief draughtsman, Bridge Department, National Transcontinental Ry., Ottawa; 1908 to 1913, Assistant Bridge Engineer, National Transcontinental Ry., Ottawa.

A. DAVIDSON, whose appointment as General Agent, G.T.R. System, Prince Rupert, B.C., was announced in our last issue, was born at St. Henri, Montreal, Jan. 29, 1885, and entered railway service, Aug. 22, since when he has been, to Nov. 20, 1901, clerk, Foreign Freight Department, C.P.R., Montreal; Nov. 20, 1901, to Mar. 16, 1903, clerk, Vice President's office (Traffic), C.P.R., Montreal; Mar. 16, 1903, to Aug. 15, 1904, stenographer, General Freight Department, C.P.R., Vancouver, B.C.; Aug. 15, 1904, to Mar. 23, 1905, secretary to Assistant Freight Traffic Manager, C.P.R., Winnipeg; Mar. 23, 1905, to Apr. 1, 1909, tracing, claims, rate and steamship clerk, General Freight Office, C.P.R., Vancouver, B.C.; Apr. 1 to Oct. 1, 1909, chief clerk to Assistant General Freight Agent, C.P.R., Vancouver, B.C.; Oct. 1, 1909, to June 1, 1910, Travelling Freight Agent, Steamship Lines, C.P.R., Vancouver, B.C.; June 1, 1910, to July 15, 1913, [illegible] Freight Agent, G.T.R., G.T. Pacific Ry. and G.T. Pacific Steamship Co., Vancouver, B.C.

JOHN McMILLAN, whose appointment as General Superintendent of Western Lines, C.P.R., Winnipeg, was announced in our last issue, and whose portrait appears in this issue, was born at Liverpool, Eng., Nov. 2, 1866, and entered telegraph service, June 2, 1883, since when he has been, to Mar. 1, 1885, Construction Department from Lake Superior to Laggan, Alta., C.P.R.; Mar 1, to Sept., 1885, Foreman, Telegraph Construction, Government Military Lines in the Northwest during the Riel Rebellion; Sept., 1885, to 1888, on telegraph maintenance, C.P.R., Winnipeg; 1888 to 1895, Maintenance Department, C.P.R.; 1895 to 1896, telegraph operator, C.P.R., Winnipeg; 1896 to 1902, circuit manager, repeater chief and telegraph agent, C.P.R.; 1902 to 1906, Telegraph Inspector, C.P.R., Winnipeg; 1906 to 1907, Assistant Superintendent of Telegraphs, C.P.R., Winnipeg; 1907 to Jan. 1, 1912, Superintendent of Telegraph, Calgary, Alta.; Jan. 1, 1912, to July 1, 1913, Superintendent of Telegraphs, Manitoba Division, C.P.R., Winnipeg.

D. CROMBIE, who has resigned as General Superintendent of Transportation, G.T.R., Montreal, was born at Hamilton, Ont., May 13, 1864, and entered railway service in 1882, since when he has been, to 1887, telegraph operator, G.T.R.; 1887 to 1889, ticket clerk, same road, Chatham, Ont.; 1889 to 1890, dispatcher, same road, London, Ont.; 1890 to 1892, dispatcher, Flint and Pere Marquette Rd., Saginaw, Mich.; 1892 to 1894, car distributor, same road; 1894 to Jan. 1, 1900, Car Service Agent, same road; Jan. 1 to July, 1900, Superintendent Car Service, Pere Marquette Rd., Detroit, Mich.; July, 1900, to 1903, Superintendent of Transportation, same road, Detroit, Mich.; 1903 to Feb., 1907, in commercial business, Feb. to Oct., 1907, Master of Transportation, Middle Division, G.T.R., London, Ont.; Oct., 1907, to Nov. 22, 1910, Assistant to General Transportation Manager, same road, Montreal; Nov. 22, 1910, to Jan. 14, 1913, Assistant to Vice President, Transportation, Maintenance and Construction, same road, Montreal, Jan. 14, to Aug. 1, 1913, General Superintendent of Transportation, same road, Montreal.

A. C. Shaw,
General Passenger Agent, Western Lines,
Canadian Pacific Railway.

National Transcontinental Railway Construction.

It was reported in Ottawa, Aug. 6, that the line from Moncton, N. B., to Levis, had been completed, and it was expected that the Commission would take the balance of the completed mileage over from the contractors about Sept. 30.

Work on the car ferry landing stage at Levis was started, Aug. 10, on the Quebec Warehousing Co.'s site, adjacent to the G.T.R. station. Tracks are being laid to connect with the Quebec bridge, and connection will also be given with the Intercolonial Ry. and the Quebec Central Ry. A contract for dredging at the slip has been let to La Compagnie Generale d'Enterprises Publique, Que., which also has the contract for building the slip. The approximate quantity of material to be removed is 28,000 cubic yards of rock and 2,000 cubic yards of other material.

Temporary tracks have been laid from the north approach of the Quebec Bridge to the Allan wharf, and it is expected that they will be completed to the Champlain Market site in Quebec, Sept. 1.

Tenders are being received to Sept. 2 for the erection of locomotive and car shops at St. Malo, Que.

The work of completing the line between the end of steel west of Quebec, and Cochrane, Ont., is being pushed forward, and it is expected to have the track laid during the winter, and to finish up the bridge building in the spring, so as to have the line fully completed for traffic by August, 1914. The finishing up of the line between Cochrane and Lake Superior Jct., Ont., ie being proceeded with, and M. Donaldson, Vice President, G.T.P.R., recently stated that an announcement would shortly be made as to the taking over of the line from the west to this point. (Aug., pg. 387.)

Grand Trunk Pacific Railway Construction

Track is reported to have been laid to mileage 1166 west of Winnipeg, and to a point east of Smithers, B.C., on the section being built easterly from Prince Rupert. The Board of Railway Commissioners has authorized the operation of traffic between Beament, mileage 195, and Morricetown, mileage 205, on this section.

Work on completion of the Regina boundary branch is being pushed, and the grading of the yards in Weyburn, Sask., the terminus of a branch, is being proceeded with. It is proposed to lay down 7.5 miles of track and to erect station and other buildings. A large steel bridge over the Souris River is in course of erection.

Track laying is reported completed between Regina and Moose Jaw, Sask., and it is expected that steel will be laid for some miles on the grade completed beyond this point before the end of the year.

A train service is in operation to Beiseker, mileage 163 out of Tofield, Alta., to a point 38 miles from Calgary. The ballasting on this 38 miles has not been completed, but it was expected to make an announcement of the date of opening the line into Calgary by Aug. 31. A temporary station will be used pending the completion of the bridge across the Elbow River, which will give access to the site of the former barracks of the R.N.W.M.P., which is being laid out for terminal purposes. (Aug., pg. 387.)

Railway Finance, Meetings, Etc.

Atlantic and Lake Superior Ry.—A meeting of holders of participation in the Atlantic and Lake Superior Ry. Trust Fund was held in Montreal, Aug. 20, to agree to an increase of the issue of the prior lien bonds of the Quebec Oriental Ry. from £50,000 to £100,000.

Canadian Northern Pacific Ry.—An issue of £800,000 of 4½% terminal bonds, guaranteed by the British Columbia Government, was floated on the London, Eng., market July 30, and was reported to have been fully subscribed before the advertised time of closing at a premium of ¼.

The Canadian Northern Ry. Co. is reported to have sold $3,500,000 one year 6% notes, guaranteed by the Dominion Government, and secured by the deposit of its debentures with the Government, to W. A. Read and Co. and the Illinois Trust and Savings Bank. The notes are redeemable six months after July 15 at 101 and interest on 30 days notice. It is stated that about half of these notes have been resold in London, Eng., the remainder being disposed of in the U.S.

The absorption of the Winnipeg and Northern Ry. and of the Canadian Northern Ry. Branch Lines Co. by the C.N.R. Co. has been completed, and the several lines owned by these companies, and heretofore operated by the C.N.R., are now definitely owned by the C.N.R. Co.

Canadian Northern Branch Lines Co.—Notice has been formally given that the amalgamation of the C.N.B.L. Co. with the Canadian Northern Ry. has been completed.

Canadian Pacific Ry.—A special interest payment at 7%, or $3.67164 a share, will be paid, Oct. 15, on the first four instalments ($140), from the due date of each instalment to Sept. 30, on the shares of the recent issue of $60,000,000 ordinary capital stock, as represented by certificates of subscription, to holders of record, Aug. 18, who have paid the instalments on or before their due dates. The shares of this issue, when paid in full, will rank with the existing stock for the full dividend accruing for the quarter ending Dec. 31, payable April 1, 1914.

The directors on Aug. 11, declared a dividend of 2% on the preference stock, for the half year ended June 30, and a dividend of 2½% for the quarter ended June 30, on the common stock, the latter being at the rate of 7% per annum from revenue, and 3% per annum from interest on the proceeds of land sales and from other extraneous assets. These dividends will be paid, Oct. 1 to shareholders of record on Aug. 30.

The Royal Trust Co. has been appointed transfer agent, and the Bank of Montreal, registrar, for the company.

Central Ry. of Canada.—The case of the Hon. Jas. Domville against the company to recover $20,000 alleged to be due as commission on the sale of certain bonds and stocks of the company, in England, was before the courts recently on an application by the company to set aside the order granting leave to sue, on the ground that there was no cause for the action in the jurisdiction under the rules, that the cause for action did not authorize the order, and that the endorsement on the writ was defective, and that in any event, the company should be furnished with particulars. The matter was taken under consideration.

Edmonton, Dunvegan and British Columbia Ry.—The dividend on the first mortgage guaranteed 4% debenture stock was paid Aug. 16.

Grand Trunk Ry.—The recent issue of £1,500,000 five year 5% secured notes due Oct. 1, 1918, in London, Eng., was reported oversubscribed. These were issued at 98, and secured by the deposit with the trustee of £2,000,000 Grand Trunk perpetual 4% consolidated debenture stock. The proceeds will be used in part payment for additional rolling stock.

A further £500,000 of similar notes, on the same terms, were issued, Aug. 15, at 98½. At that date the first issue was quoted at 1¾ premium.

Quebec and Saguenay Ry.—The stock and bonds of this company were pledged Feb. 1, 1911, to secure an issue of 13,000,000 francs of 5% 30 year French currency bonds; and in conjunction with the stock and bonds of the Lotbiniere and Megantic Ry. and the Quebec Eastern Ry., were further pledged, May 1, 1912, to secure an issue of 60,000,000 francs of 5% 30 year French currency bonds, issued by the Quebec Ry., Light, Heat and Power Co. The first issue was all taken up, and of the second issue there are outstanding bonds to the value of 10,922,000 francs. A meeting of the holders of these bonds has been called to be held, at the instance of the Quebec Savings and Trust Co. as trustee, in Montreal, Sept. 2, to consider and take action on the registration on the property of the Q. and S. Ry., "of an alleged lien or privilege for the payment of a sum of money due to the contractors in connection with construction work done on the line."

Temiscouata Ry.—Net earnings for June, $5,515, against $8,057 for June, 1912. Aggregate net earnings for 12 months ended June 30, $67,404.

White Pass and Yukon Route.—Aggregate earnings for six months ended June 30, $352,208, against $315,769 for same period 1912.

Union Stockyards at St. Boniface, Man.—The new union stockyards at St. Boniface which are fully described on pg. 418 of this issue, were opened for business Aug. 14, the opening ceremony being performed by the Premier of Manitoba. As stated in the article referred to the sole stockholders are the C.P.R., the Canadian Northern Ry. and the Grand Trunk Pacific Ry., and no stock can be held except by a railway company. The officers and directors are:—President, J. R. Cameron; other directors:—H. H. Brewer, J. Manson; Superintendent, J. W. Buckpitt; Secretary-Treasurer, W. S. Evans. Under the terms of the act and the agreement with the railway companies, one director may be appointed for the purposes of discussion by the Manitoba Government.

The Dominion Power and Transmission Co. has ordered two 50 ft. freight cars from the Preston Car and Coach Co., and two from the Tillsonburg Electric Car Co., to replace those destroyed by fire recently. The company is arranging for the erection of new freight sheds on the same site as were those burnt, the construction of which will probably be done by the company's staff.

The North Pacific Coast Passenger Agents' Association had a conference at Vancouver, B. C., Aug. 6 and 7, W. E. Duperow, General Agent Passenger Department G. T. Pacific Ry., presiding. The next meeting will be held at Seattle, Wash., Oct. 5.

Railway Development

Projected Lines, Surveys, Construction, Betterments, Etc.

Algoma Central & Hudson Bay Ry.—Construction on the completion of this company's line to Hearst on the National Transcontinental Ry. is rapidly drawing to a close. Trains are being operated from Sault Ste. Marie to Franz, at the junction with the C. P. R., 195 miles north of Sault Ste. Marie, and to Michipicoten Harbor and the company's mines, branching off at Hawk Jct. This section was opened for traffic Dec. 1, 1912. North of Franz, grading is entirely completed through to Hearst on the National Transcontinental Ry. Track was laid to Oba at the junction with the Canadian Northern Ontario Ry. in Dec., 1912. This season this section is being ballasted, and by Oct. 1, will probably be taken over for operation. Tracklaying is progressing north of Oba, and steel is expected to reach Hearst by Nov. 1. By that time this section will be practically ballasted also, so that it is quite probable trains will be operating through to Hearst via the A.C. & H.B. Ry. by Dec. 1. Hearst is 295 miles north of Sault Ste. Marie. Oba is 50 miles south, or via the A. C. & H. B. R., it is an even 100 miles between the C. P. R. and the National Transcontinental Ry. By a rather peculiar coincidence this is the shortest distance these two railways are apart over any feasible route for the connecting line anywhere between Quebec and a point west of Fort William. It is also the only place where the Canadian Northern Ry. comes just midway between these railways, hence the A. C. & H. B. R. has secured the shortest and most direct route connecting by a cross line these three transcontinental railways with the Great Lakes. All new work on the line north of Hawk Jct., 164 miles north of Sault Ste. Marie, is constructed on a maximum 0.6% compensated grade with 6 degrees maximum curves. The Superior Construction Co., T. J. Kennedy, President and General Manager, has the contract for the work north of the C. P. R. R. S. McCormick, M. Am. Soc. C. E., is chief engineer and G. F. Horsey is District Engineer, having direct charge of the work on this section.

Burrard Inlet Tunnel and Bridge Co.—The revised estimates of the cost of this projected bridge place its total cost, including $100,000 for contingencies, at over $2,500,000. The municipalities interested in its construction have subscribed $1,500,000 in addition to which subsidies have been voted by the Dominion Government and the British Columbia Legislature. The bridge company which is formed of representatives of the municipalities, decided recently that it is impossible to raise any more money for the bridge in the locality, and to make application to the Provincial Government to take over the project. A delegation from the company waited on the Government, Aug. 4, to discuss the matter. (April, pg. 166.)

Dominion Atlantic Ry.—The work of improving the roadbed of this line, and bringing it up to C. P. R. standard, which has been in progress for a considerable time, is expected to be completed by the end of the year. The bridge work is well forward, and while it is expected to have most of it completed this year, the big bridge between Annapolis and Digby, N. S., will not be finished until the summer of 1914. The building of the substructure for this bridge was delayed considerably owing to the depth to which the foundations of one of the piers had to be carried in order to reach bed rock. (Feb. pg. 83.)

Esquimalt and Nanaimo Ry.—Tracklaying on the extension from McBride Jct., has been completed to the Little Qualicum River, eight miles. At this point an extensive trestle has to be built, for which the material is being taken in. Grading has been completed from this point to the Big Qualicum River, and there is a short piece of grading to be completed thence to Deep Bay. Grading has been completed from Deep Bay to Courtenay, and it is expected that as soon as the Little Qualicum River trestle has been built, everything will be ready for the track layers right through to Courtenay. (Aug. pg. 376.)

Fredericton and Grand Lake Coal and Ry. Co.—Tracklaying on this line between Gibson and Minto, N. B., was completed, July 30. Ballasting and other finishing up work is being pushed forward, and it is expected that the completed line will be taken over from the contractors, Sept. 30. The line is to be operated by the C. P. R., in conjunction with the New Brunswick Coal and Ry. Co.'s line, which has been taken over from the New Brunswick Government. The railway was projected by Sir Thomas Tait, for the development of the coal deposits in the Grand Lake district, and for the purpose of giving another outlet to the coalfields in the Minto district. Sir Thomas, together with D. McNicoll, Vice President, and other C. P. R. officials, made a brief inspection over the line Aug. 4. Mr. McNicoll said after the inspection: "The Gibson-Minto line will be a first class line when the contractors have finished their work and turned the road over to the company. But the other piece of line, known as the New Brunswick Coal and Ry. Co.'s line, which we have taken over from the Government wants a heap of touching up before we can say the same of it. The C. P. R. will use at least 100,000 tons of coal annually from the mines at Minto to start with, and probably as much more as can be produced." (July, pg. 331.)

Intercolonial Ry.—Surveys are being made, we are officially advised, for a reduction gradients between Point Tupper and the Sydney's, N. S., the work being in charge of J. S. O'Dwyer, Assistant Engineer, Moncton, N.B. It is expected to have the surveys completed this fall.

Tenders have been invited for a second track from St. Romuald to Chaudiere Curve, Que., 3.8 miles. There will be a number of small bridges and culverts, and and overhead crossing of the National Transcontinental Ry. There is a second track from Levis to St. Romuald, 4.3 miles. (Aug. pg. 388.)

Kettle Valley Lines.—A contract has been let to McArthur Bros., New York, for the building of the Hope Mountain section of the line, which extends from the summit of Hope Mountain down the Coquihallo River Valley to Hope, 38 miles. The contract calls for the completion of the section by Nov. 1, 1914. The construction involves very considerable rock work and several tunnels, and is estimated to cost about $3,000,000. F. C. Hitchcock, Vice-President and General Manager of the contracting firm, is reported to be in charge of the work, and to have established his headquarters at Hope. This section is to be built by the K. V. Lines, at the joint cost of itself and the Vancouver, Victoria and Eastern Ry., and will be used jointly by the two companies.

Construction on the uncompleted sections of the line is being pushed rapidly forward. It is expected that the substructure for the steel bridge at Trout Creek will be completed Sept. 1. This bridge will be 250 ft. long and will be at an elevation of 190 ft. Its completion will open up for the track-laying gang about 40 miles of completed grading.

The tender was accepted at a conference held, Aug. 6, between representatives of the two companies, the K. V. Lines being represented by J. J. Warren, President; A. McCulloch, Chief Engineer; and the Vancouver, Victoria and Eastern Ry. by J. H. Kennedy, its Chief Engineer, and A. Stewart, Assistant Chief Engineer, Great Northern Ry.

The contractors will start at once building a waggon road at each end of the section, at an estimated cost of $200,000, for the purpose of getting in plant and supplies. In addition to these waggon roads, supplies will be taken by the 13 mile section of the K. V. Lines, now under construction by Twohy Bros., from Coldwater Jct. to the Hope Summit. This junction is the point at which the K. V. lines in the Nicola River Valley connect with the V. V. and E. Ry. from the Boundary and Okanagan districts. The section is to be operated jointly by the K. V. Lines and the V. V. and E. Ry., and at Hope the latter will switch off to its own route via New Westminster, while the K. V. line will go on to a junction with the C.P.R. by a bridge across the Fraser River.

Lake Erie and Northern Ry.—Work on the construction of this line from Brantford, Ont., northerly to Galt, and southerly to Port Dover, is proceeding at a rapid rate. Several hundred men are employed on grading, together with steam shovels, and very nearly half of the grading has been completed. The bridge work is also well advanced.

The Board of Railway Commissioners has approved of location plans of the line from Lorne Bridge, Brantford, station 0 to station 4.50, in Brantford City. (Aug. pg. 376.)

London and Port Stanley Ry.—Press reports state that it is likely that a vote of the ratepayers of London, Ont., will be taken towards the end of September upon the question of the electrification of the L & P.S.R. from London to Port Stanley.

The Elgin County Engineer reported to the Westminster Tp. Council, Aug. 8, that two overhead crossings of the L. & P. S. Ry. were in a dangerous condition. It is claimed that the responsibility for repairing these bridges rests with the Pere Marquette Rd., which operates the line under a lease having only a few months to run. (May, pg. 220.)

Pacific Great Eastern Ry.—It is reported that the Lonsdale estate in North Vancouver, B. C., has been secured as a station and yard site. The estate comprises 65 acres, and is near the Capilano Indian Reserve. The company is, it is said, to spend $100,000 on the property by Dec. 31, 1915, and an additional $400,000 by Dec. 31, 1918. The buildings proposed to be erected include all that are necessary for freight and passenger terminals, and wharves for ocean and coastwise steamers.

It is also reported that the company is negotiating for the purchase from the Government of the Squamish Indian Reserve at the mouth of the Squamish River, near Newport, which has an area of 1,175 acres, of which the company propose to use 675 for yards and terminal purposes.

Construction is reported to be well advanced along the line from near North Vancouver to Newport, and from the end of the old Howe Sound and Northern Ry. to beyond Lillooet. F. C. Gamble, of the Provincial Government Railway Department, returned to Vancouver, recently from an inspection of the Anderson Lake-Quesnel section of the route. On this section the maximum gradient will be 1% owing to difficulties of construction. The line is being located southerly from Fort George, to a junction with the surveys working northerly.

The Premier, Sir Richard McBride, in a recent speech said that at a future date the question of extending the P. G. E. Ry. into the Yukon Basin, would be taken into consideration by the Provincial Government. (Aug., pg. 376.)

Prince Edward Island Ry.—A contract has been let by the Department of Railways, to the Roger Miller and Sons, Toronto, for the erection of the cary ferrv terminals at arleton Point, P.E.I., at an estimated cost of $950,000. The works included in the contract were described in our July issue, pg. 232. (July, pg. 332.)

St. John and Quebec Ry.—Tracklaying has been started on what is known as the St. John Valley Ry., part of this projected railway, and it was expected to have the section from Fredericton to Gagetown, N. B., laid by Aug. 30. Ballasting is to be started at once, and it is expected to have the section completed and ready for operation by Oct. 30.

The Premier of New Brunswick, with various Provincial officers, made a trip of inspection over the northern portion of the line Aug. 8. Construction is well advanced there, and it is expected that track will be laid so as to enable freight traffic to be operated between Woodstock and Centreville by Oct. 1. To enable this to be done a temporary bridge is being built over the Meduxnakeag River. The line between Centreville and Fredericton is expected to be ready for freight traffic by Nov. 1. (July, pg. 332.)

Taber Transit Co.—Fifteen cars of steel rails and a car of spikes were delivered at Taber, Alta., to the order of the company, July 25. The local council asked the company to put up a $75,000 bond to cover liability on property damages, on the route it had applied for, viz., over Kenaston Ave., from the C. P. R. to the mines on the river. It is said that the company will abandon this route and select another one further east, in order to avoid damage to property. The steel rails delivered are 81 lbs. to the yard. Press reports state that the company proposes to build a line from Taber to Ratlaw, and that the C.P.R. has the first right to acquire the undertaking. Following are the officers and directors:—President, J. F. Kramer, Calgary; Secretary Treasurer, R. C. Baker, Taber; other directors W. E. Bullock, Taber; H. Fluck, G. S. Kramer, Philadelphia, Pa.; J. Schiesel, algary; C. G. Gordon, Toronto. (July, pg. 332.)

Timiskaming and Northern Ontario Ry.—The branch line from Iroquois Junction to Iroquois Falls, Ont., is reported to have been completed. (Aug., pg. 377.)

Transportation Appointments Throughout Canada.

[illegible] error in our announcement will confer a favor [illegible]

Canadian Car Service Bureau.—J. REILLY, heretofore Assistant Manager, has been appointed acting Manager, vice J. E. Duval, resigned to enter G.T.R. service. Office, St. Nicholas Building, Montreal.

D'Alton C. Coleman,
General Superintendent, Alberta Division, Canadian Pacific Railway.

A Copony.
Master Car Builder, Western Lines, Grand Trunk Railway.

Canadian Government Railways.—H. H. MELANSON, heretofore Assistant General Passenger Agent, has been appointed General Passenger Agent. Office, Moncton, N.B.

D. A. STORY, heretofore General Freight Agent, Intercolonial Ry., has been appointed General Freight Agent, Canadian Government Railways. Office, Moncton, N.B.

C. F. BURNS, Auditor of Disbursements, Intercolonial Ry., has been appointed Auditor of Disbursements, Canadian Government Railways. Office, Moncton, N.B.

W. H. ESTANO, Auditor of Traffic, Intercolonial Ry., has been appointed Auditor of Traffic, Canadian Government Railways. Office, Moncton, N.B.

F. E. WHELPLEY, Cashier, I.R.C., has been appointed Cashier, Canadian Government Railways. Office, Moncton, N.B.

T. C. BURPEE, M. Can. Soc. C.E., heretofore Engineer of Maintenance, has been appointed Superintending Engineer, and the first mentioned position has been abolished. Office, Moncton, N.B.

H. McM. KILLALY, B.A.Sc., M. Can. Soc. C.E., heretofore Engineer of Surveys, C.P.R., Montreal, has been appointed Engineer of Construction, Canadian Government Railways. Office, Moncton, N.B.

W. R. DEVENISH, A.M. Can. Soc. C.E., heretofore on the staff of the National Transcontinental Ry. Investigation Commission, has been appointed Division Engineer, Canadian Government Railways. Office, Moncton, N.B.

Canadian Northern Quebec Ry., Quebec and Lake St. John Ry.—W. R. BOON, formerly Bridge and Building Master, District 2, Eastern Division, C. P.R., has been appointed Bridge and Building Master, C.N.Q.R. and Q. & L. St. J.R., vice G. Seaman, resigned. Office, Joliette, Que.

Canadian Northern Ry. — I. L. BOOMER, Trainmaster, has been appointed acting Superintendent, District 3, Western Division, during the absence of J. G. Entwistle, on leave for two months. Office, Edmonton, Alta.

Canadian Pacific Ry.—J. M. GIBBON, heretofore Advertising Agent, London, Eng., has been appointed General Publicity Agent, vice W. T. Robson, resigned. Office, Windsor St. Station, Montreal.

Arthur Piers, heretofore Manager of Steamship Lines, Liverpool, Eng., having retired on account of ill health, H. MAITLAND KERSEY, at one time, Agent, White Star Line, New York, has been appointed Manager in Chief, C.P.R. Trans-Atlantic and Trans-Pacific Steamship Lines. All officers connected with the maintenance and operation of the steamships report to him. Office, 8 Waterloo Place, London, En.

E. E. LLOYD, heretofore Assistant Auditor of Stores and Mechanical Accounts, has been appointed Auditor of Stores and Mechanical Accounts, vice A. A. Goodchild, promoted. Office, Montreal.

S. B. McCONNELL, heretofore Assistant Engineer, Montreal, has been appointed Division Engineer, Lake Superior Division, vice J. W. Orrock, promoted. Office, North Bay, Ont.

J. F. RUGG, heretofore Locomotive Foreman, Neudorf, Sask., has been appointed Locomotive Foreman, Minnedosa, Man., vice W. J. Andrews, transferred.

W. J. ANDREWS, heretofore Locomotive Foreman, Minnedosa, Man., has been appointed Locomotive Foreman, Neudorf, Sask., vice J. F. Rugg, transferred.

W. W. WEBSTER, heretofore acting District Master Mechanic, Kenora, Ont., has been appointed District Master Mechanic, Medicine Hat, Alta.

G. MOTH, heretofore Road Foreman of Locomotives, Macleod, Alta., has been appointed District Master Mechanic, District 1, British Columbia Division, vice M. J. Scott, promoted. Office, Revelstoke.

C. A. COTTERELL, heretofore Trainmaster, Vancouver, B.C., is reported to have been appointed Superintendent, District 2, British Columbia Division, vice G. E. Graham, resigned to become General Manager of the Coquitlam Terminal Co. Office, Vancouver.

W. P. MARTIN, heretofore Wharf Agent, Vancouver, B.C., is reported to have been appointed Trainmaster, District 2, British Columbia Division, vice C. A. Cotterell, promoted. Office, Vancouver.

LINCOLN SMITH, heretofore chief clerk to Manager, British Columbia Coast Steamship Service, Victoria, B.C., has been appointed Assistant to the Manager, same service. Office, Victoria, B.C.

E. C. GILL is reported to have been appointed Advertising Agent, London, Eng., vice J. M. Gibbon, promoted.

Duluth, Winnipeg and Pacific Ry.—J. H. ELLIOTT has been appointed Superintendent, vice C. J. Wilson, resigned. Office, Virginia, Minn.

Grand Trunk Pacific Ry.—J. L. HODGSON, heretofore Master Car Builder, Western Lines, G.T.R., Port Huron, Mich., has been appointed Master Car Builder, G.T.P.R. Office, Transcona, Man.

E. HACKING has been appointed Car Foreman at Transcona, vice J. B. Shelton.

R. N. CARD, heretofore chief clerk to Commercial Agent, Vancouver, B.C., has been appointed City Freight Agent, vice A. Davidson, transferred. Office Vancouver, B.C.

The following agents have been appointed:—G.T.P. Jct., Man., D. Miller; Dugald, Man., P. Chausse; Lestock, Sask., M. G. Billings; Bashaw, Alta., D. C. McCready; New Hazelton, B.C., F. A. Wildmayer; Terrace, B.C., J. E. Lalonde; McBride, B.C., L. C. Pearson; Morricetown, B.C., H. H. Boggs.

Grand Trunk Ry.—J. E. DUVAL, heretofore Manager, Canadian Car Service Bureau, Montreal, has been appointed General Superintendent of Car Service, G.T.R. Office, Montreal.

The positions of General Superintendent of Transportation, heretofore held by D. CROMBIE, who has left the service; Superintendent of Passenger Service, heretofore held by F. PRICE; and Superintendent of Freight Service, heretofore held by W. H. FARRELL, have been abolished.

F. PRICE, heretofore Superintendent Passenger Service, has been appointed Superintendent Car Department. Office, Montreal.

J. B. McLAREN, heretofore chief clerk to Auditor of Freight Accounts, has been appointed Auditor of Freight Accounts, vice J. D. McLennan, assigned to other duties. Office, Montreal.

J. D. McLENNAN, heretofore Auditor of Freight Accounts, Montreal, has been appointed a Travelling Auditor. Headquarters, Montreal.

G. BRADSHAW, safety Engineer, Highland, N.Y., has been appointed to introduce the Safety First System on the G.T.R.

T. CUSHING, heretofore Trainmaster, District 3, Montreal Division, Eastern Lines, Richmond, Que., has been assigned to other duties.

J. W. FARRELL, Trainmaster, District 2, Montreal Division, Eastern Lines, Island Pond, Vt., has had his jurisdiction extended over District 3, and his office removed to Richmond, Que.

T. H. MASON has been appointed Trainmaster, District 4, Montreal Division, Eastern Lines, vice A. D. McCarthy, resigned. Office, Montreal.

T. G. Armstrong,
Assistant Master Car Builder, Western Lines, Canadian Pacific Railway.

J. McMillan,
General Superintendent of Telegraphs, Western Lines, Canadian Pacific Railway.

W. H. FARRELL, heretofore Superintendent of Freight Service, Montreal, has been appointed Superintendent, Toronto Terminals, vice G. A. Stokes, assigned to other duties.

G. A. STOKES, heretofore Superintendent, Toronto Terminals, has been appointed Division Agent, Ontario Lines, with jurisdiction over station agents, etc., and such other duties as may be assigned to him, reporting to the General Superintendent. Office, Toronto. This is a new position.

P. C. HEELS, heretofore Roadmaster, Gravenhurst, Ont., has been appointed Supervisor of Track there, vice T. H. Horner, transferred.

W. T. WINDER, heretofore Accountant, G.T.R. and Wabash Rd., St. Thomas, Ont., has been appointed Travelling Accountant, Ontario Lines, G.T.R.

A. COPONY, heretofore Chief Draughtsman, Car Department, Montreal, has been appointed Master Car Builder, Western Lines, vice J. L. Hodgson, transferred to G. T. Pacific Ry. service. Office, Port Huron, Mich.

The following agents have been appointed:—Hemmingford, Que., G. Williamson; Edgington, Que., A. H. Johnston; Gananoque Jct., Ont., V. E. Parker (acting); Uhtoff, Ont., V. H. Fisher; North Bay, Ont., Passenger, J. H. Meighen; Colwell, Ont., L. A. Hill; Thornbury, Ont., H. E. Emery; Winona, Ont., W. W. Langford; Belle River, Ont., C. J. Forrest; Canfield Jct., Ont., W. A. H. Hayes; Welland Jct., Ont., F. J. Foster; Clifford, Ont., W. J. Kyle; Golden Lake, Ont., D. J. Macintosh; Otter Lake, Ont., J. Summervill; Rose Point, Ont., J. J. White.

Intercolonial Ry.—D. M. CONDON, heretofore acting District Passenger Agent, has been appointed District Passenger Agent, Halifax, N.S.

L. S. BROWN, heretofore Assistant Superintendent, Moncton and Ste. Flavie District, Newcastle, N.B., has been appointed Superintendent, Truro, Sydney and Oxford District, vice Y. C. Campbell, assigned to other duties. Office, New Glasgow, N.S.

Y. C. CAMPBELL, heretofore Superintendent, Truro, Sydney and Oxford District, New Glasgow, N.S., has been appointed Claims Agent for the district from Halifax to Sydney. Office, New Glasgow, N.S.

H. H. SCHAEFER, heretofore Division Freight Agent, St. John, N.B., has been appointed Division Freight Agent, in charge of territory in New Brunswick, Moncton, north and east. Office, Moncton, N.B.

R. S. RICHARDSON, has been appointed Assistant Superintendent, Halifax and St. John District, vice H. B. Fleming, transferred. Office, Moncton, N.B.

S. G. TIFFIN, heretofore General Agent, Toronto, has been appointed Division Freight Agent, in charge of territory in New Brunswick, west of Moncton. Office, St. John, N.B.

W. R. FITZMAURICE, heretofore station agent, Amherst, N.S., has been appointed Assistant Superintendent, Moncton and Ste. Flavie District, vice L. S. Brown, promoted. Office, Newcastle, N.B.

H. B. FLEMING, heretofore Assistant Superintendent, Moncton, N.B., has been appointed Assistant Superintendent, National Transcontinental Ry., between Moncton and Edmundston, N.B., which is being operated by the I.R.C.

See also Canadian Government Railways.

Prince Edward Island Ry.—W. T. HUGGAN, Accountant and Auditor, Charlottetown, P.E.I., is reported to have been appointed District Passenger Agent there.

See Canadian Government Railways.

Quebec, Montreal and Southern Ry., Napierville Jct. Ry.—A. L. CURRIE has been appointed Secretary, vice L. J. Beique, resigned.

Canadian Pacific Railway Construction, Betterments, Etc.

Eastern Division.—Considerable progress has been made with the second track work between St. John's and Farnham, Que., and it was reported, Aug. [illegible], to be almost completed, but for the bridge at St. John's. The concrete substructure has been put in, but nothing has been done at the superstructure.

Work is in progress on the erection of the second of the final two large spans on the bridge across the St. Lawrence River at Lachine, Que. As soon as the first of these is placed in position, the second will be ready to be floated out. It is expected the bridge will be finally completed as a double track bridge this fall. An illustrated descriptive article of this bridge appeared in our issue of Feb., 1912, and a further article on pg. 397 of our Aug., 1912, issue.

Campbellford, Lake Ontario and Western Ry.—An original of the mortgage of the line to the Royal Trust Co., as trustee for the bond issue, has been deposited with the Secretary of State at Ottawa.

Construction trains are at work ballasting the line easterly from Agincourt, the ballast being obtained from a new pit near Markham. The work has been practically completed as far as Port Hope. The bridge work east of Port Hope is being pushed forward, and it is expected that everything will be ready for the operation of the line before the end of the year.

Ontario Division.—In connection with the building of the Campbellford, Lake Ontario and Western Ry., which joins the present Montreal-Toronto line at Agincourt, a second track is being built from the point of junction into Toronto. The work involves the building of two new single track bridges over the Don and the West Don respectively, and the reduction of the present gradient between Wexford and Donlands.

A permit has been granted for the erection of a new repair shop at West Toronto, at an estimated cost of $26,000. The contract for the work has been let to John Hayman and Son, London, Ont.

Track laying was started, Aug. 18, west of Islington on the second track being built from that point to Guelph Jct. The grading is fully completed to west of Cooksville. Between this point and Streetsville there are some good sized cuts and fills, on which considerable progress has been made. From Streetsville to Guelph Jct. the work is also well advanced. The concrete work is in a forward state. The whole work will be finished this fall.

Manitoba Division.—The Board of Railway Commissioners has approved of location plans for the extension of the branch line now terminating at Gimli, northerly to Riverton, Man., 26.05 miles.

The Board of Railway Commissioners has approved of location of the Snowflake westerly branch for 9.10 miles from sec. 19, tp. 1, range 9, westerly to sec. 14, tp. 1, range 11.

Saskatchewan Division.—A contract is reported to have been let to Grey and Co., Minneapolis, Minn., for the laying of 3.5 miles of pipe line at Weyburn, Sask., to extend from the Souris River to the C.P.R. yards, and to provide a water supply for the company's purposes. Local press reports state that 20 acres has been purchased at Weyburn, on which to erect divisional shops, etc., on the Weyburn-Lethbridge line.

The second track work between Swift Current and Moose Jaw, Sask., is nearing completion. In connection with this work about 15 miles of additional tracks are being laid in Moose Jaw yards.

Alberta Division.—Press reports state that surveys are being made for a line from near Cottonwood, Mont., northerly to a junction with the Weyburn-Lethbridge line, now under construction, at Mannyberries, Alta. The survey party is reported to have staked a line entering Canada near Wild Horse Lakes, along the Lost River Coulee, and on to the Lake Pakewki flats. Cottonwood is on the Minneapolis, St. Paul and Sault Ste. Marie Ry., and C.P.R. subsidary, and its engineers are reported to have made the surveys south of the International boundary, C.P.R. engineers making the surveys in Canada.

The second track work on the Broadview section has been completed through the Broadview yards, and work has been started on the subway at Tenth Ave. This structure will be of steel and concrete and is estimated to cost $65,000.

Steel has been laid to Skiff, on the Weyburn-Lethbridge Branch, and it is expected that Eudon, 60 miles east of Stirling, will be reached this season. Ballasting trains are being run to Skiff. It is expected that the section of the line under construction westerly will connect up with the section from the east, in the fall of 1914. (Aug., pg. 378.)

Equipment of Locomotives With Steps.—The Board of Railway Commissioners has issued the following circular:—"The Board's inspectors have called its attention to the fact that a number of railway companies subject to its jurisdiction are equipping their locomotives with steps on the front buffer beam, or on the side post of the pilot, in accordance with Interstate Commerce Commission regulations. The Canadian regulations, agreed to by the railway companies and approved by the Board, Feb. 17, 1913, do not require these steps. If, on account of international service, Canadian railway companies feel that it is desirable or advisable so to equip their locomotives in accordance with United States practice, the Board directs that it shall be encumbent upon such railways to see that these steps are kept in good order and repair."

Canadian Freight Association, Western Lines.—At the annual meeting in Winnipeg, Aug. 7, the following officers and standing committees were elected for the current year,—President, W. C. Bowles, C.P.R.; Vice President, G. Stephen, C.N.R.; executive committee, W. C. Bowles, G. Stephen and A. Rosevear; inspection committee, W. G. Manders, G. H. Smith, F. R. Porter, P. H. Burnham; car service committee, A. Hatton, J. P. Driscoll, T. P. White, W. B. Harris; classification committee, W. B. Lanigan, G. Stephen, A. E. Rosevear, W. G. Manders, F. R. Porter, P. H. Burnham, W. C. Bowles.

An Old Subscriber's Appreciation.—John L. Hodgson, who has recently been appointed Master Car Builder, Grand Trunk Pacific Railway, at Transcona, Man., has taken Canadian Railway and Marine World for many years. A short time ago he wrote: "I am very glad indeed to be a subscriber to Canadian Railway and Marine world, for the information it contains is very interesting. I look forward each month to receiving it and enjoy reading it."

x Decrease.

Approximate earnings for July, $[illegible], against $11,641,000 for July, 1912.

Commencing Aug. 1, the mileage under operation was increased to 11,[illegible].

Grand Trunk Railway Earnings, Etc.

Subject to audit, the accounts for the half year ended June 30, show the following results:—

Gross receipts		$[illegible]
Working expenses		[illegible]
Net receipts		$[illegible]
Deduct debit balance on account of rentals, outside operations and car mileage		[illegible]
Total net revenue		$ 5,266,905
Net revenue charges, less credits		2,589,866
Balance		$[illegible]
Deduct, Canada Atlantic Ry. deficiency	$[illegible]	
Deduct, Detroit, Grand Haven and Milwaukee Ry. deficiency	[illegible]	
		[illegible]
		$[illegible]

This surplus of $1,943,617 added to the balance of $[illegible], from Dec. [illegible], makes a total of $2,005,953 available for dividend, which will admit of the payment of the full dividend for the half year on the 4% guaranteed stock and first and second preference stock, leaving a balance of about $[illegible] to be carried forward.

The accounts of the G.T. Western Ry. for the year ended June 30, after providing for all fixed charges, including the debit balance of $78,621 brought forward from the previous year, show a deficit of $111,280, which is carried forward to the debit of the current half year.

Grand Trunk Pacific Railway Earnings.

The earnings of the Prairie Section and Lake Superior Branch for July, were $519,556.

THE CANADIAN GENERAL ELECTRIC Co., Ltd., has issued a folder on Dossert Connectors, for which it is now agent.

Electric Railway Department.

The Development of the Montreal and Southern Counties Railway.

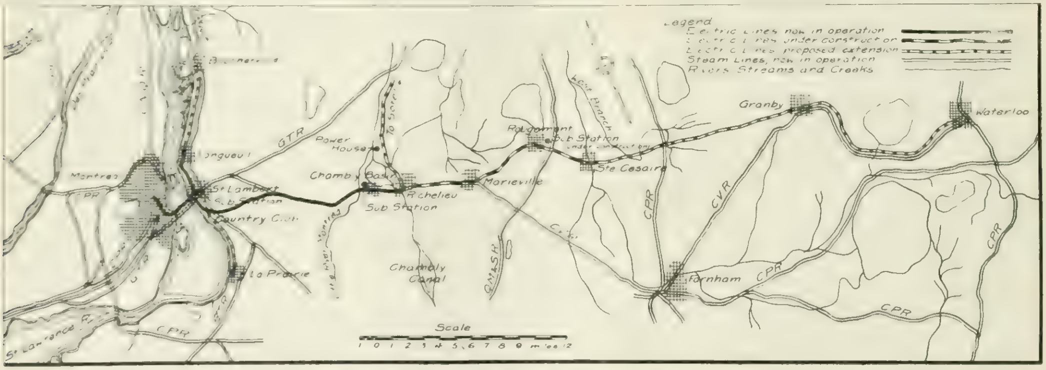
The Montreal and Southern Counties Ry. started operations in Nov., 1909, to give interurban service from Montreal, across the St. Lawrence River, to the southern townships and counties, and in accordance with the company's policy to extend its service in the above suburban districts, under the direction of Bion J. Arnold, of Chicago, it has just completed the rehabilitation of its 600 volt, direct current lines from Montreal, via St. Lambert, to Longueuil and to the Montreal Country Club at St. Lambert, and the extension of them to Richelieu through Chambly and Rouville counties. The company's plans contemplate placing the best procurable facilities at the service of the travelling public and the producers in the territory within a radius of 75 miles from Montreal, and the next points to be reached will be Boucherville, La Prairie, Marieville, St. Cesaire, Granby and Waterloo.

The service hitherto supplied this locality by the previously existing roads, while all that could be expected under the old system of operation, has not been able, perhaps, to entirely meet the demands of the district, which require convenient connection with trains and lowered transportation cost, as well as speed. The character of the territory is recognized as being such as to necessitate this improved service. The agricultural values compare favorably with those in other sections and dairy resources are considerable. Many people from across the St. Lawrence are attracted by the natural beauties of the country and there are already located, either actually or prospectively, desirable industrial plants at certain favorable points.

ROUTE.—From the original Montreal terminal at McGill and Youville Sts., the system has 23.3 miles of track, connecting St. Lambert, Longueuil, the Montreal Country Club, Greenfield Park, Chambly Basin and Canton, and Richelieu. With the additional 26.7 miles on which are next to be included Marieville, Rougemont, St. Cesaire, Abbottsford and Granby, there will be a total of 50 miles in service. Projected lines from Longueuil to Boucherville, 5 miles, from the Country Club to La Prairie, 4 miles, through the counties of Chateauguay and Huntingdon, 50 miles, and from Richelieu to Sorel are yet in a tentative stage.

The line crosses the St. Lawrence River on the Victoria Jubilee Bridge beside the G.T.R. double tracks, and diverges at the east end, the Longueuil branch passing directly through St. Lambert, where are located the car barns and one of the sub stations, while at Front St. the branch to the Country Club and beyond is depressed to pass the steam road.

After passing the G.T.R. over the interlocking crossing at the Country Club, the line is now continuous to Richelieu, which is reached over the Central Vermont Ry.'s right of way, after passing Greenfield Park. About 12 miles of the steam line has been electrified and brought up to the new standard. The intermediate 3 mile stretch between Greenfield Park and the Country Club is entirely new, and has been necessitated by the extensive enlargement of the G.T.R. yards projected at St. Lambert, around which the interurban road has had to pass.



Route and Connections of Montreal and Southern Counties Railways.

At Richelieu the line crosses the Richelieu River and the adjacent Chambly Canal, at which is located the Montreal Light, Heat and Power Co.'s hydro-electric power station.

Beyond Richelieu the Central Vermont Ry.'s existing right of way through Marieville branching to Rougemont and St. Cesaire, 13 miles, will be electrified. The road will be extended by new construction through the mountain district via Abbottsford to Granby, 15 miles.

The right of way into Montreal occupies the Harbor Commissioners' land east of Point St. Charles freight yard, and has been brought within the G.T.R.'s property as far as the pump house on the spill way near Mill St. Traversing the Government property adjacent to Lachine Canal basin, it crosses the latter on Black's Bridge, and thence via Common and Grey Nun Sts. reaches the original Y terminal at McGill St., as permitted by the city legislation of 1908. It is expected this may be revised in the near future to permit carrying passengers to a more convenient terminal on the Place D'Youville.

The structures put up for the interurban electric railway include at present the following buildings:—Sub stations at St. Lambert and Chambly; passenger stations at Montreal, St. Lambert and Longueuil; car barns at St. Lambert; shelters at waiting stations other than the stations mentioned.

The situation and requirements of this interurban electric system are such that power from the Montreal Light, Heat and Power Co.'s plant, in the neighborhood of the Richelieu River, can be used to good advantage, and, accordingly, sub stations have been located at two points about 14 miles apart on the interurban line. With continuity of power service and reasonable rates assured, simplification by the elimination of an individual power house is obviously a considerable advantage.

The site of the Chambly Basin sub station is not far from the hydro-electric power plant. The building is 34 ft. 10 ins. by 42 ft. 4 ins. inside, with concrete foundations, floors, sills, coping and roof—the latter a permanent second floor with cinder concrete fill—covered with composition roofing, and supported on steel I beams, a C.I. column and the brick walls. The tower section is 32 ft. high over all.

The sub station in the group of buildings at St. Lambert, similar in construction to the other station, is 50 by 80 ft. inside, with a 20 by 20 ft. balcony room, and a 14 by 20 ft. oil room additional. Steel trusses and columns support the roof.

The original 3 track car barn at St. Lambert, having a capacity of nine 50 ft. cars, has been supplemented by the new 200 by 55 ft. brick structure, to which there are four entering tracks, making the total capacity under cover at present 25 cars. Inspection and repair pits are located under one track in the old barn and two in the new barn.

Here are located also, in a 125 by 30 ft. annex to the new barn, the general offices, dispatcher's headquarters, locker rooms for the crews, and store house.

The principal stations at the Youville St. terminal, Montreal, St. Denis St., St. Lambert, Longueuil, Chambly Basin, Chambly Canton and Richelieu, are supplemented by additional waiting rooms at the junction on Front St. in St. Lambert, Montreal South, and at the Country Club. More shelters will be built at such points as may be required by trafic over the new extension. These stations and waiting rooms are frame structures of the standard interurban road type, to accommodate passengers and express freight.

Within the Montreal city limits the line passes over Lachine Canal on Black's Bridge and then crosses the St. Lawrence River over the 7,000 ft. Victoria Jubilee Bridge, which was erected in 1897 to replace the old square, steel tube, single track structure of the Robert Stevenson design. This is a double track through bridge of 25 Pratt truss steel spans, resting on stone piers, averaging 280 ft., centre to centre, and while erected primarily by the G.T.R. to carry its steam tracks, allowance was also made for the support of 15 ft. driveways on the cantilever ends of the floor beams extending either side of the 30 ft. portals, and upon one of these ways are now accommodated both pedestrians and the electric cars, although the loading of the structure is such as to limit the weights of the 8 ft. 1 in. by 49 ft. 4 in. cars to 65,000 lbs. each. At its centre span the lower chord of the bridge is 24 ft. above those at the end abutments, and at these points the rails are 99½ ft. above the water in Lachine Canal, totalling about 65 ft. at the greatest rail elevation above the St. Lawrence River.

Montreal Terminal Station.

St. Lambert Station.

The 126 ft. steel span over the Little River Montreal, about 10 miles east of St. Lambert, and the 90 ft. steel girder swing bridge at Chambly Canal were first put up for the Central Vermont Ry. The rails on the Chambly Bridge are only 6½ ft. above the canal water, and as there is considerable traffic on the canal, the construction of cross braced wooden towers at either end has been required to complete the overhead circuit, while the two track ends are connected by two bare 350,000 c.m. copper cables laid, as are the lead covered feeder cables across the canal underground.

St. Lambert Sub Station.

Chambly Sub Station.

Just beyond this point the line crosses the 725 ft. Richelieu River wood trussed deck bridge of seven spans, 103 ft. 7 in. centre to centre of piers, erected also by the steam road. There is no traffic to require a swinging section here, and the rails are carried on top of the trusses 29 ft. above normal water level.

CONNECTIONS.—The 8½ miles of track of the company's first lines, extending from Montreal to Longueuil and the Country Club via St. Lambert, are 56¼ in. gauge, using 80 lb. rails, on oak ties and gravel roadbed. Little overhauling has been required on the roadbed, except some reballasting, and owing to the flatness of the country east of the St. Lawrence River, grading and filling have been of small extent, chiefly confined to the 3 miles of Golf Club-Greenfield Park new construction, beyond which the line occupies the Central Vermont track. At St. Lambert car barn the tracks have been relaid to secure more direct entrance to the barns, and passage to the Longueuil Branch. Double track is contemplated between this station and the Front St. junction point. The tracks within the new barn total 800 ft., those in the old, 480 ft., while the yards have about 300 ft. more available for storage, aggregating 1,600 ft. There are considerable stretches of single tangent track, notably one of 7 and two of 2 miles each, on the Central Vermont right of way from Greenfield Park to Chambly Canton and shorter lengths between St. Lambert and Longueuil, the Country Club and Montreal, in all about 65% of the present system.

There are sidings in Montreal at Common St., Riverside St., and the west approach to the Victoria Jubilee Bridge; the one near the Front St. subway, St. Lambert, soon will be included in the double track to connect it with the St. Denis St. siding in front of the car barns. There are also intermediate sidings or turnouts between St. Lambert and those at Longueuil and the Country Club stations, as well as Chambly Canton, Richelieu and Brookline.

The grades are light, nowhere more than about 1½% and averaging 0.305%, not considering the 3½% at the 550 ft. east approach to the Victoria Jubilee Bridge. On this bridge the roadway rises 24 ft. between the end abutments and the bridge centre, a 0.658% grade, 3,500 ft. long on either half. At Grey Nun St., Montreal, the rails are 3½ ft. lower than the surface of Lachine Canal. The Chambly Basin turnout, beside the sub station, is 23 ft. lower than the high water level of Richelieu River. In the 3 miles between the top of the watershed of the St. Lawrence and Richelieu Rivers, and the Chambly Basin level, there is a difference of elevation of less than 50 ft., a mean gradient of 0.15%.

A special interlocking plant has been installed near the Country Club, where the line crosses the G.T.R. main double tracks. This interlocking plant was installed by the Railway Signal Company of Canada, and is unique in being the most complete plant in Canada for protecting an electric railway crossing. The interlocking machine itself is a 24 lever improved Saxby Farmer type, which is housed in a 2 story frame tower building of standard construction, the machine being located on the second floor. The entire plant is according to the Railway Signal Association's latest approved recommended practice. The leadout is of the box crank type, and the signals are all of the upper quadrant type.

All derails on both lines are operated by no. 8 switch lock movement, and the junction switch on the electric line is locked by a facing-point lock. All home interlocking signals are equipped with 2 arms, the lower arm in each case being fixed. Power distance signals are used on the G.T.R. No distance signals are used on the electric line, because track curvature and operating requirements necessitate slow speed movement through the plant. All signals are bolt locked with the derails and switches of the route [illegible] All crossing frogs are of manganese steel.

In addition to the above [illegible] interlocking plant, there is another crossing [illegible] Victoria Bridge. This crossing is controlled by plant which is only interlocking for the electric line. Signals only are [illegible] crossings in Montreal other than the above are such as to necessitate only [illegible] ductors in negotiating them.

On the new constructions were used 60-lb. A.S.C.E. section Dominion rails and [illegible] bars, style D1 were used on the old 56-lb. rails of the Central Vermont Ry., permitting bonding at joint, crossings and turnouts [illegible] when tucked. 2 0 [illegible] copper terminals [illegible] at intervals corresponding [illegible]. The track [illegible] switchboards of sub

[illegible] real over the Victoria Jubilee Bridge. This practically certain source of energy is tapped [illegible] at St. Lambert and [illegible] 14 miles apart, and is transformed in the Montreal and Southern Counties sub stations at these points to lower voltage and converted into 600 volt direct current, which is distributed to the trolley wires over bare aluminum [illegible] Montreal, St. Lambert and the Longueuil and Country Club branches, which originally was supplied from steam power plant in the G. T. R. yards at Point St. Charles, Montreal, is now supplied directly from the St. Lambert sub station.

OVERHEAD CONSTRUCTION.—The overhead construction on the three mile extension of new track through Greenfield Park, as well as the electrification of the Central Vermont Ry. tracks as far as Richelieu, is notable as being the first installation of the catenary type of overhead construction to be built in this part of Canada. The standard type of catenary construction is used throughout, consisting of 7-16 in. Siemens-Martin grade 7 strand galvanized steel mes [illegible] ported on porcelain insulators, which are fastened to 10 ft. T iron brackets attached to the poles. The bracket type of construction is used throughout the line, except over the double track at Richelieu station, Chambly Canton and two short curves near Chambly Canton and through the streets of Greenfield Park subdivision. At these points the messenger wire is supported by cross spans, using ⅜ in. 7 stranded steel cable and pole type porcelain strain insulators. The miscellaneous overhead material is all galvanized or sheradized and was supplied by the Ohio Brass Company. The hard drawn trolley wire was supplied by the E. F. Phillips Electrical Works, the Imperial Wire & Cable Co. and the Canada Wire & Cable Co. Special steel messenger cable was supplied by the Steel Company of Canada. All the overhead construction is hung to allow 22 ft. clearance from the trolley wire to the top of rail along the track, with 23 ft. clearance at railway crossings.

The trolley wire is supplemented along the entire length by bare aluminum feeder, having a conductivity equal to 500,000 c.m. copper cable. This feeder gives a capacity [illegible] ordinary daily requirements, and is installed to take care of such additional [illegible] time.

The feeder cables are supported on [illegible] to the poles with galvanized [illegible]. On all curves the cross arms are double and iron pins are used instead of oak. [illegible] of the cable and at curves to properly anchor the feeder cables.

At each end of every curve and at

[illegible] at Junction With C.V.R.

Tangent Construction at Three Mile Post, C.V.R.

G.T.R. Crossing Near Country Club.

[illegible]

[illegible]

TRANSMISSION.—[illegible]

[illegible]

half mile intervals the trolley and messenger wires are anchored to extra poles and suitably guyed. The trolley is sectionalized in front of the Chambly Basin sub station and midway between Chambly and St. Lambert sub stations, the section breakers being bridged by disconnecting switches attached to the feeder. During normal operation the two sub stations run parallel. The feeder is tapped at every tenth pole with Dossert aluminum and copper cable taps attached to 3|0 weatherproof wire which terminate in fed in ears attached to the trolley wire. Garton Daniels 625 volt lightning arresters are placed on every tenth pole and connected to the feeder taps. It is interesting to note in connection with this overhead work that provision has been made in the fittings, insulators, etc., for the projected future change to high voltage special pantograph connectors and contact wire, which may be used in event of large extensions of the system.

Multiple Unit Train.

Combination Locomotive and Sweeper.

A COMPLETE TELEPHONE DISPATCHING System has been installed, consisting of the Northern Electric and Manufacturing Co.'s selector type of ringing equipment, with dispatcher operator located next to the Superintendent's office in the car barns at St. Lambert. The telephone line consists of no. 11 hard drawn copper wire, supported on pony glass insulators on side brackets, which are attached directly to the poles supporting the trolley. Telephone wires are transposed at intervals of three poles to overcome the induction from adjacent high tension lines.

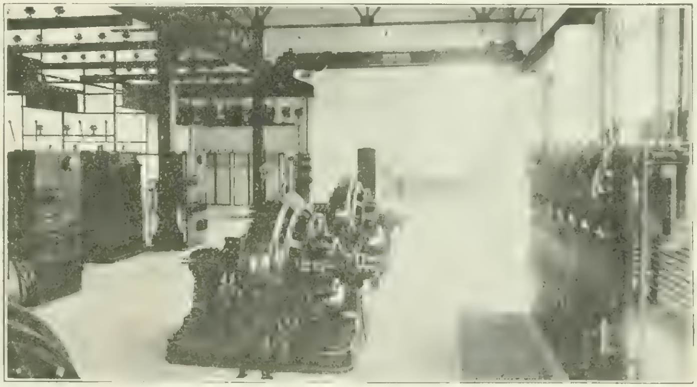
POWER.—The layout of the sub stations has been determined largely by the variation in load on the M.L.H. & P. Co.'s plant at Richelieu. While the voltage supply may vary as much as 12% at Chambly and 4½% at St. Lambert, pressure is maintained practically constant on the interurban system

The interesting problem of power equipment in the sub stations to meet the conditions of line supply has been solved by the installation of a motor generator plant at Chambly and rotary converters at St. Lambert. In addition to the arrangements for present requirements, accommodation for future additions has been made in the walls, foundation space, switch compartments, wiring system, etc.

At Chambly a 6 ft. 4 in. by 13 ft. 2 in. concrete foundation supports the first motor generator unit, and provision is made for a second foundation to support a future additional set. A 600 h.p., 3 phase, 63 cycle, 2,300 volt, 10 pole, wire wound rotary Westinghouse induction motor is driven direct connected to a 400 kw., 600 volt, compound wound, direct current, interpole Westinghouse generator. Power is supplied to the set by three 185 kva. delta connected, oil insulated, self cooled transformers, high tension 24,000 volts, low tension 2,300 volts. Switches and resistance grids are furnished for starting purposes.

The a.c. and d.c. switchboards and the line apparatus, including Northern type A disconnecting switches and air cooled choke coils, both 100 amp. 25,000 volts, the 20-5 amp. Wagner o.w.g. 40, current transformers, the Westinghouse electrolytic lightning arresters, the 100 amp., 22,000 volts 3 phase s.t. condit type circuit breakers, for cell mounting, etc., were supplied by the Northern Electric and Manufacturing Co. An interesting feature peculiar to the connection with duplicate high tension supply is an interlocking device on the oil switch connecting rods back of the a.c. switchboard, installed to prevent paralleling of the M.L.H. & P. Co.'s transmission lines.

For the three rotary converters at St. Lambert there are three concrete foundations 6¾ ft. by 7 ft. 8 ins., and room for two more in the event of increased demand. The use of rotary converters, with their greater efficiency, can be taken advantage of under the conditions obtaining at this point, by special arrangement with the M.H.L. & P. Co. requiring that its lines must not be seriously disturbed in starting up these units. Each converter is 500 kw. capacity, 6 phase, 600 volt d.c., 63 cycles, at 945 r.p.m., 8 pole, compound wound, self starting on the a.c. side from low voltage taps from transformers, and built by the Canadian Westinghouse Co., with shaft extensions to take starting induction motors eventually if needed.



St. Lambert Sub Station.

Connected with each unit are three delta connected, 185 kw., 24,000|428 volt, 63 cycle, Westinghouse transformers, of the same type as installed at Chambly, with 1/3 and ½ voltage taps to be used in starting the rotaries. The disconnecting switches, lightning arresters, choke coils, Wagner current transformers, and the condit oil switches in the unit switch cells, together with the switchboards complete, were supplied by the Northern Electric and Manufacturing Co.

From the a.c. line switches run no. 2|0 B. & S. gauge, bare copper bus bars. From each transformer to a starting panel run two 600,000 cm. main leads and two 300,000 cm. rubber covered, double braided starting taps, and from the a.c. starting panel six 600,000 cm. rubber and lead covered leads are led through three ducts to the machine, while there are similar connections for the positive and negative and equalizer generator leads to the d.c. switchboard. Positive feeder cables from switch on d.c. board to outside of building are 600,000 cm. r.c.d.b., two cables to each feeder panel.

TOOLS.—A 10 ton manually operated travelling crane is a part of the equipment of the St. Lambert sub station. In the repair pits under the track in the new car barns a small hydraulic jack facilitates the removal of motors, etc., from below the cars. No extensive tool equipment is required, inasmuch as the G.T.R. shop facilities at Point St. Charles are available for heavy repairs. At the St. Lambert headquarters perforated steel sanitary lockers add to the road's modern equipment.

ROLLING STOCK.—The car equipment first put into service included 14 single end control 49 ft. 4 in. by 8 ft. 1 in. cars, with 56 seat standard interurban closed bodies, of 54,500 lbs. total weight, which weight was necessarily limited, as previously mentioned by the permissible loading on the Victoria Jubilee Bridge. Their motor equipments of four Westinghouse 101 B2, 40 h.p., 600 volt, d.c. motors, geared 18/66, give satisfactory service. Trucks are standard Curtis type, placed 25 ft. 4 ins. centre to centre, 6 ft. wheel base, Westinghouse automatic air brakes, with individual compressors and the usual hand brakes are on each motor car.

Adhering to this type, and with equipments of 200 h.p. in Westinghouse 306, 50 h.p. at 500 volts d.c. interpole railway motors, an addition of eight cars has been made. The car bodies were built and equipment installed by the Ottawa Car Co., from specifications prepared under direction of the railway company. They have a maximum passenger seating capacity of 56. Two have baggage compartments, two are straight passenger, and four are combination smoking and passenger. The Westinghouse type H.L. multiple unit control system is used on the eight new motor cars to allow the operation of trains for heavy traffic. The cars are coupled together by automatic couplers. They are lighted by 30 c.p. lamps and Crouse Hinds luminous arc headlights are used. Tail lamps are standard, and an equipment of torpedoes and torches is carried on each motor car. The car heating system consists of Gold 115-E-1 heaters in two circuits of 6 and 12 each.

A 48,000 lb. 160 h.p. sweeper and locomotive, geared 15/69, and two rotary snow ploughs of the same power, geared 15/69, are extra equipment, and the possible purchase of other locomotives for freight handling will make this a very modern electric road.

OPERATION.—During reconstruction of the road its original service has not been interrupted. On its own tracks, cars and trains are operated by the Chief Dispatcher, located at St. Lambert. They have a headway of 20 and 40 minutes; those to Longueuil being scheduled to return in 1 hour, 20 minutes, allowing 28 minutes running time each way; the trip to Richelieu taking 50 minutes from the Montreal city terminal, a round trip in 2 hours. On the Richelieu service this will permit an average speed of 25 miles an hour, the maximum attainable being 38 miles on hour.

When on the Central Vermont Ry. tracks, the Richelieu cars are operated according to standard steam road rules, and the dispatch of the trains is done by telegraph from the office in St. Albans, Vt. The double dispatching arrangement satisfactorily permits the simultaneous operation of the electrical and steam road traffics.

At St. Lambert car barns motor cars are run in over the inspection pits once every day in regular service, when they are gone over by the inspectors of trucks, wheels, air, motors, and controllers. The Superintendent, the clerical force, and other employes make their headquarters here.

PERSONNEL.—The officers of the M. & S.C. Ry. Co. are:—W. Wainwright, President; W. B. Powell, Vice President and General Manager; J. Yates, Secretary; Frank Scott, Treasurer.

In bringing the road to its present stage of development, Bion J. Arnold has supplied his considerable facilities as consulting electrical engineer and traction expert, both in making the general and detailed plans and specifications, and in supervising the actual construction to date, the detail work being in charge of his principal assistant, F. A. Sager, and of A. T. Hunt as Resident Engineer in the field.

Montreal Tramways Company's Annual Meeting.

Following are extracts from the report presented at the annual meeting, Aug. 5:—

Your directors beg to submit their second annual report, accompanied by the financial statements, which show the following results for the year ended June 30.

Gross earnings		$6,753,227.37
Operating expenses		4,031,664.57
Net earnings		$2,721,562.80
From which deduct:—		
City percentage on earnings	$489,079.88	
Interest bonds and loans..	721,151.76	
Interest Debenture stock	800,000.00	
Taxes	73,000.00	
		$2,083,231.64
Net income		$ 638,331.16
Dividends		156,382.00
Surplus		$ 481,949.16
Less:—		
Proportion of discount on bonds sold	$ 63,714.20	
Transferred to contingent account	200,000.00	
Transferred to capital reserve	23,670.17	
		$ 287,384.37
Transferred to general surplus		$ 194,564.79

In view of this being the first complete year's operation of this company, the figures submitted cannot be compared with the figures of the last statement, which covered nine months only, but your directors are pleased to state that the increase in gross earnings and the ratio of operating expenses to earnings are satisfactory.

Your directors have appropriated from surplus $200,000 for contingent account, this being in addition to $300,000 appropriated from earnings for the same purpose, making a credit to this account during the year of $500,000, which added to the amount carried forward last year of $127,648.13, makes a total credit to this account of $627,648.13, against which has been charged $442,892.13, leaving a balance at the credit of this account of $184,756.

During the year there has been expended on capital account $976,008.07.

Following out the policy adopted by the company of insuring its properties against fire, a large sum has been spent in changes and additions to same which has resulted in a substantial reduction in premium rates, as well as improving the properties.

During the year the company issued $2,890,000 of its 5% 30 year gold bonds at a satisfactory figure. From the sale of these bonds there remains at the credit of the company at the Harris Trust & Savings Bank, Chicago, $1,637,954.75, which is at the disposal of the company for extensions and improvements. Your directors have issued 9,993 shares of common stock, which have been allotted to the shareholders at par. The bonds, debentures and common stock have been listed on the Montreal Stock Exchange. Application has also been made to have the bonds listed on the London and New York Stock Exchanges.

During the year an interim dividend of 5% was paid, and a dividend of 2½% was declared for the quarter ended June 30 last, payable on Aug. 1.

The following exclusive franchises have been granted to the company:—Parish of St. Laurent, 25 years; Town of Mount Royal, 25 years; Town of Pointe aux Trembles, 40 years; Town of Montreal East, 40 years.

The company has continued its liberal policy towards its employes in respect to wages, having increased them during the year.

The property has been maintained in a proper state of efficiency, and in addition to the large sum spent on maintenance and upkeep there has been expended on extraordinary renewals of track and rolling stock $442,892.13.

Your directors have come to an understanding with the City of Montreal, which it is hoped will tend to relieve the congestion which has arisen by reason of the great growth of the city.

Expenses per cent. of earnings	59.71
Passengers carried	159,892,021
Car earnings per passenger	4.09c
Transfers	53,505,304
Total passengers carried	213,397,325
Car earnings per passenger total carried	3.06c

			1,186,386.87
			$38,010,742.20

It was decided to increase the board from 7 to 9. The retiring directors were all re-elected and W. G. Ross, formerly managing director Montreal St. Ry. Co., and P. J. McIntosh, of New York, were added to the board. The directorate for the current year is as follows:—President, E. A. Robert; 1st Vice President, J. W. McConnell; 2nd Vice President, F. H. Wilson; other directors, W. C. Finley, G. C. Foster, P. J. McIntosh, J. M. McIntyre, W. G. Ross, Hon. J. M. Wilton. The following officers were re-elected:—Secretary-Treasurer, Patrick Dubee; Assistant Secretary, A. E. Shaw; General Manager, J. E. Hutcheson.

London St. Ry. Gross earnings for July, $29,965.54; expenses $20,749.39; net earnings $8,946.15; deductions $2,450; net income $6,496.15, against $28,205.35 gross earnings; $18,711.63 expenses; $9,493.72 net earnings; $2,450 deductions; $7,043.72 net income for July, 1912.

Regina Municipal Ry. Revenue for four weeks ended July 26, $18,609.35. Passengers carried, 449,728.

The Toronto civic street railway service on St. Clair Ave., from Yonge St. to West Toronto, was put into service Aug. 25. A 2c. fare is being charged, and six tickets are being sold for 10c.

Edmonton Interurban Railway Construction, Etc.

Construction on this line, which was commenced last autumn, was again taken up last spring. We were officially advised recently that the initial seven miles from the outskirts of Edmonton, to St. Albert, Alta., had been graded and track laying started, that material for 10 miles was on the ground, and that the construction of the three miles intervening between the Edmonton Radial Railway and the Company's line would be completed by the end of August.

We are officially advised that it is not the Company's intention to operate its cars, at present, by electric power. Traffic conditions ruling at present, and for the immediate future point to the development of the system by means of individual power units rather than by the establishment of a central power station, which would involve a tying up of capital that could be more advantageously applied to the construction of mileage. It has therefore been decided to use cars operated by internal combustion motors, and after a very thorough and exhaustive examination of various types, made by the Chief Engineer and the directorate, both on this continent and in Europe, a type of car manufactured in England has been selected. The most outstanding feature of this car lies in the transmission, in which all gearing is dispensed with. The power of the engine is transmitted, through the medium of a pump connected therewith, by a column of oil under pressure, to oil motors attached to the axles of the driving truck. This forms a very elastic transmission, and is claimed to suffer from none of the defects which are necessarily attached to the old form of gear transmission. The control is directly from the engine, and it is claimed that the car may undergo the most violent changes in speed and direction and may be brought to a dead stop without the use of brakes, without subjecting any part of the mechanism to undue strain. These cars have undergone very exhaustive tests, not only at the hands of the English manufacturers, but also in cars in use in various parts of the world. The cars ordered by the Edmonton Interurban Ry. Co., however, are as yet the largest built to be equipped with this transmission, and it is stated that should the initial test be satisfactory, cars of similar pattern will be used by the Australian Government on the new transcontinental line now being built across the Australian continent, the operation of which by steam power over the arid regions of the interior would be attended with great difficulty.

Negotiations are in progress with the City of Edmonton for running rights over the municipal railway, so that the company cars may run right into the heart of the city.

Two Car Trains on Hull Electric Company's Railway.

The illustration on this page shows a Hull Electric Co.'s two car train on a curve of 40 ft. radius. These trains are used to handle traffic during rush hours, and during race week they proved very efficient and economical between Ottawa and Connaught Park Jockey Club.

The cars are fitted with Westinghouse S. M. E. air brakes and automatic car and air couplers. The trailer has a combined entrance and exit at the front end and there are no steps on the rear of the trailer. Both cars are operated P. A. Y. E. with one conductor on the rear of the motor car and one conductor in charge of the trailer.

We are indebted to G. Gordon Gale, M.Sc., A.M. Can. Soc. C.E., General Superintendent, for the photograph and information.

Two Car Train, Hull Electric Co.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry.—Gross earnings for June, $543,186; operating expenses, $354,049; net operating earnings, $189,137; renewal funds, $51,620; net earnings, $137,517; approximate income from investments, $35,000; net income, $172,517, against $498,306 gross earnings; $317,840, operating expenses, $180,466 net operating earnings; $37,935 renewal funds; $142,531, net earnings; $25,000 approximate income from investments; $167,531 net income for June, 1912. Aggregate gross earnings for 12 months ended June 30, $6,812,309; net earnings $2,289,797, against $5,749,649 aggregate gross earnings, and $2,004,361 net earnings for same period 1911-12.

Cape Breton Electric Co.—Gross earnings for June, $30,644.70; operating expenses and taxes, $17,913.18; net operating earnings, $12,731.52; interest charges, $4,891.66; balance, $7,839.86; bond sinking and improvement funds, $1,190; net balance, $6,649.86; against $29,448.22 gross earnings; $16,791.57 operating expenses and taxes; $12,656.65 net operating earnings; $4,495.84 interest charges; $8,160.81 balance; $1,206.67 bond sinking and improvement funds; $6,954.14 net balance for June, 1912. Aggregate gross earnings for 12 months ended June 30, $373,788.11; operating expenses and taxes $200,742.94; net operating earnings $173,045.17; interest charges $55,931.11; balance $117,114.06; bond sinking and improvement funds $14,380; net balance $102,734.06, against $346,437.67 aggregate gross earnings, $191,444.64 operating expenses and taxes; $154,993.03 net operating earnings; $54,050 interest charges; $100,943.03 balance; $13,880 bond sinking and improvement funds; $87,063.03 net balance for same period 1911-12. Construction charges for June, $4,364.83, and for 12 months ended June 30, $42,274.38.

Grand Valley Ry.—An order was made Aug. 7, for the issue of a distress warrant against the Company's property for $7,555.62, arrears of taxes. The warrant is not to be issued until Sept. 17. The Company is in the hands of E. B. Stockdale, Toronto, as receiver, and an action by the City of Brantford for the forfeiture of the franchise in the city is pending. The receiver has no funds out of which to pay the taxes, and it is claimed that he cannot raise them because of the action.

Moose Jaw Electric Ry.—Some extracts from this company's annual reports for 1912 were given in Canadian Railway and Marine World for July, pg. 342. The following particulars have been received since:—Gross revenue, ticket sales, cash fares, special cars, advertising, lighting, etc., $77,996.85; gross cost of management, operation and maintenance, $65,925.92, showing a surplus of revenue over expenditure of $12,070.93.

Quebec Ry., Light, Heat and Power Co.—Sir Rodolphe Forget, President, is reported to have stated recently, that the bond interest had all been baid, that the company is in a good position, that its earnings are sufficient to cover the whole of the operating expenses and other charges, and that it is anticipated that in the course of a year or two, with careful management, the present difficulties will have been cleared up.

See Quebec and Saguenay Ry under "Railway Finance Meetings, etc."

The St. John (N. B.) Ry. Co. is issuing $200,000 new stock at par. The proceeds are to be used in connection with the extensions and improvements now in progress.

Toronto Ry., Toronto and York Radial Ry., and allied companies.—Gross earnings for June, $815,206; operating expenses, maintenance, etc., $405,337; net earnings, $409,869, against $696,980 gross earnings; $357,365 operating expenses, maintenance, etc.; $339,615 net earnings, for June, 1912. Aggregate gross earnings for six months ended June 30, $4,655,486; net earnings, $2,249,422, against $4,012,719 aggregate gross earnings; $2,036,072 net earnings for same period, 1912.

The Toronto Ry. receipts for July were $500,021.45, against $445,896.44 for July, 1912 The percentage paid to the city for July was $100,004.29, against $89,279.29 for July, 1912.

Windsor, Essex and Lake Shore Rapid Ry.—The shareholders will be asked, in addition to the regular business to be done at the annual meeting to be held in Windsor, Ont., Sept. 3, to ratify a bylaw, resolution and agreement made Dec. 17, 1909, with the Union Bank, and for the issue of the balance of the bonds, amounting to $250,000, now in the treasury, in accordance with the terms of such bylaw, etc.

Winnipeg Electric Ry.—Gross earnings for June, $321,037; operating expenses, $173,270; net earnings, $147,767; against $300,402 gross earnings, $150,090 operating expenses, $150,312 net earnings for June, 1912. Aggregate gross earnings for six months ended June 30, $1,972,374; net earnings, $876,989; against $1,808,703 aggregate gross earnings, $841,129 net earnings for same period, 1912.

Electric Railway Notes.

The Edmonton Radial Ry. has received six city cars, part of order for 35, from the Preston Car and Coach Co.

The Dominion Power and Transmission Co. has received two suburban cars from the Preston Car and Coach Co.

The Regina Municipal Ry. has received two single truck city cars, completing an order of six, from the Preston Car and Coach Co.

The Board of Railway Commissioners has approved of the Hull Electric Co.'s bylaw covering rules and regulations for the governing of its employes.

In connection with the operation of electric railways throughout the Dominion, there were no fatal accidents during June, but there were 11 non fatal ones.

The Hudson Bay Co. hired the 65 cars of the Calgary Municipal Ry. for four hours on Aug. 18, and carried passengers free during that time in connection with the opening of its new store in the city.

The Montreal City Council is being asked to pass a resolution for the annullment of the franchise granted to the Canadian Autobus Co., on the ground that it has broken its agreement in not beginning its service in June.

The Montreal Tramways Co. has entered a test case in order that the courts may determine how far a conductor may go in endeavoring to enforce compliance on the part of passengers with the regulations enacted by the company to maintain good order on the cars.

Following the voting in favor of the operating of cars on Sundays in the municipalities of St. Andrews and Selkirk, an agreement has been reached between the municipalities and the Winnipeg, Selkirk and Lake Winnipeg Ry., with the approval of the Public Utilities Commissioner for Manitoba, that the Sunday service shall consist of seven cars each way. Ordinary fares will be charged, and excursion fares will be granted as circumstances call for. The agreement is for five years.

The Imperial Privy Council recently gave judgment in the appeal from the decision of the Canadian courts, in what is known as the Point Grey, B.C., electric railway franchise case. The municipal council of Point Grey passed a resolution granting the British Columbia Electric Ry. permission to construct an electric railway, without obtaining the formal assent of the ratepayers. Certain ratepayers objected and obtained an injunction preventing the company operating cars on the lines which had been built in Point Grey. The ratepayers voted in favor of the franchise Sept., 1912, and the Privy Council now declared that the original action of the council was valid.

Judgment has been given in London, Eng., in favor of the Toronto Ry., and the Toronto and York Radial Ry., in an action against the National British and Irish Millers Insurance Co., for the recovery of a percentage alleged to be due from the insurance company as underwriters of fire insurance on sheds and contents of the railway companies, and which were damaged by fire, Mar. 25, 1912. Other underwriters concerned agreed to the amount fixed by the adjuster, but the defendant company claimed that the adjustment was not legally binding, and was on a wrong basis. The judgment held that the plaintiffs were entitled to a finding, but that the adjustment was not legally binding, and the amount to be paid would be ascertained hereafter. The question of costs was reserved.

Electric Railway Projects, Construction, Betterments, Etc.

British Columbia Electric Ry.—The laying of a second track on the line along the Westminster Road in South Vancouver has been practically completed.

An extension of the line in the Queensboro section of New Westminster is to be built at once along Canal St., 2,200 ft., to a junction with the Canadian Northern Pacific Ry. tracks at Ewen Ave. (Aug., pg. 344.)

Buffalo, Lockport and Rochester Ry.—Application has been made to the Public Service Commission of New York State for permission to reorganize this company, and to amalgamate with other lines, for the purpose of giving a through service by means of an electric railway, between Rochester, N.Y., and Toronto. The plans, so far as they have been outlined, disclose that it is proposed to use the Buffalo, Lockport and Rochester Ry. line between Rochester and Lockport, lease the International line between Lockport and North Tonawanda, and run over the proposed frontier lines of the International line to Niagara Falls, N.Y. The proposed Trans-Niagara bridge would be used to obtain an entrance into Canada, where connection would be made with the electric lines existing or projected, owned by the Mackenzie, Mann and Co.'s interests. This is the revival of the plans proposed some years ago, but at present nothing definite is known, but that the New York State Public Utilities Commission has before it the application referred to.

Burrard, Westminster Boundary Ry. and Navigation Co.—In connection with the proposal to build an electric railway from Mission to Vancouver, B.C., one of the questions discussed was the construction, with government aid, of a bridge across the Pitt River, near Coquitlam. It was announced on behalf of the British Columbia Government, July 28, that tenders were to be immediately asked for the building of the necessary piers and abutments for this bridge, and that the Government had bought from the C.P.R. the superstructure of the present bridge across the Pitt River at Coquitlam. This bridge is being replaced by a new double track one, and the B.C. Minister of Public Works said, "We have awarded a contract to Armstrong and Morrison to move the sections of the old bridge away as fast as the C P R. is through with them. They will be placed on pile supports nearby to remain until the substructure for the new bridge is ready." The new bridge will provide for general traffic and the proposed electric railway. (July, pg. 344.)

Calgary Municipal Ry.—The Calgary City Council has approved of a project for the building of an extension of the line through Shaganappi Park. The promoters of the extension agree to pay $20,000 for construction, and guarantee the expenses of operation for four years, at the end of which time the city is to pay back the cost of construction. The signing of the agreement is being held up, pending a decision on the question of whether the agreement has to be ratified by the ratepayers or not. (May, pg. 235.)

Edmonton, Stony Plain and Wabamun Ry.—We are officially advised that this projected railway will run from Edmonton West to Stony Plain, and on to Lake Wabamun, 45 miles. It is hoped to build several miles of line this year. The right of way has been secured and cleared for a good distance out of Edmonton. The officers and directors have not yet been chosen. E. S. McQuoid, Edmonton, is solicitor for the provisional directors. (Aug., pg. 395.)

Forest Hill Electric Ry.—The York (Ont.) Township Council, Aug. 8, granted a franchise for this proposed electric railway within the township. It is stated that construction will be started at once. (Aug., pg. 395.)

Montreal Tramways Co.—The Westmount City Council has given permission for the building of a car line on Sherbrooke St., from Green Ave. to the city limits. (Aug., pg. 395.)

Morrisburg and Ottawa Electric Ry.—We are officially advised that a contract has been let to R. J. Tierney & Co., Ottawa for the building of 10 miles of line from Ottawa to South Gloucester, Ont. L. Von Sydow, Ottawa, is Engineer in Charge. (Aug., pg. 395.)

Nipissing Central Ry.—The Ville Marie, Que., Chamber of Commerce, has passed a resolution in favor of the extension of the line to Fort Timiskaming and Ville Marie, and proposes to send a deputation to the Timiskaming and Northern Ontario Ry. Commission to urge its construction.

A start was made, Aug. 7, with the construction of the new car barns at North Cobalt. The contract has been let to Sutcliffe and Neelands, Liskeard, Ont., who expect to have the work completed by the end of the year. (Aug., pg. 395.)

Ontario Hydro-Electric Power Commission.—F. A. Gaby, Chief Engineer, recently stated that the preliminary work on the survey for the projected electric railway from Toronto to Port Perry, Ont., had been completed, and that a report was being prepared for submission to the Commission. A route with satisfactory gradients is said to have been secured. (Aug., pg. 395.)

Port Arthur and Fort William Electric Ry.—The city of Fort William, Ont., is advertising for tenders for erecting an addition to the Walsh St. car barns, and the addition will be of brick, 260 ft. long and 30 ft. high. (April. pg. 185.)

Quebec Ry., Light and Power oC.—H. G. Matthews, General Manager, is reported to have stated Aug. 12, that it was expected to have the Limoilou extension in operation over the Dorwn Bridge, as far as 4th Avenue, Limoliou by Aug. 30. (June, pg. 287.)

Regina Municipal Ry.—Superintendent Doughty is reported to have stated, Aug. 8, that construction for the year was well advanced, but was being held back somewhat to enable the other city departments to catch up with the work on sewers and waterwork mains. An expenditure of about $200,000 has been made on these extensions this year, and they will be brought into operation as fast as possible. The city is expanding rapidly, and it is the policy of the council to provide transportation facilities as long as the expansion continues. It was reported that the city was losing $200 a day on the railway. As a matter of fact the deficit in July was $1,423.91. (Aug., pg. 395.)

St. John Suburban Ry.—Surveys have been made for a line from St. John to Loch Lomond, 14 miles, and for a portion of the line from St. John to Rothesay. It is proposed in addition to run a line from St. John to Westfield and Millidgeville, N.B. (June, pg. 287).

Stratford Ry.—C. T. McAllister, Toronto, and A. E. Beer, Montreal, have been in Stratford negotiating with the directors of the company and the city council respecting the building of an electric railway. In the conference it was stated that the interests represented desired to build an electric railway from London to Grand Bend, via Parkhill, and one from Stratford to Grand Bend, via Exeter, and had also under consideration the possibility of building a line from Stratford to Wellesley and Linwood. In connection with these plans it was proposed to acquire the charter of the Stratford Ry., which has been abandoned by the Mackenzie Mann & Co. interests. It was stated that those interested in the matter have acquired a charter covering the lines to Grand Bend, at which point a site of 100 acres has been acquired for park purposes. A committee was appointed to negotiate with the promoters as to any projected line in Stratford.

C. T. McAllister was in Stratford Aug. 7, in connection with the proposed railway. He said it was a little early to say anything about the suggested line north. The lines from London to Grand Bend, and Stratford to Grand Bend were absolutely assured. Arrangements had been made for the purchase of the necessary right of way. The London-Grand Bend line, for which the company had acquired a charter would be built first. Application would be made to the Ontario Legislature next session for a charter for the Stratford-Grand Bend line. Local reports state that the promoters of the new line are negotiating for the purchase of the charter rights, right of way, etc., of the People's Ry., between Stratford and Guelph. Some little grading was done between these points about three years ago. (Aug., pg. 395.)

Toronto Suburban Ry.—The construction of this railway is being held up near Islington owing to some difficulties as to street crossings, to which the Etobicoke Township Council object. A compromise is being arranged. Grading is practically completed for the greater part of the distance into Guelph, and considerable material for tracklaying has been delivered on the right of way from Cooksville westerly, but at the time of writing no track had been laid. (Aug., pg. 395.)

The Vancouver Hydro-Electric and Tramway Co., which was incorporated under the British Columbia General Act respecting electric railways, Nov. 12, 1912, is reported as proposing to construct an electric railway between Ladysmith and Nanoose Bay, with branches and extensions. The two points named are 50 miles apart, and it is said that the necessary surveys have been made, and that the Minister of Railways for the Province has approved of the route. Application is said to have been recently made to use a trackless system of electric motor trams, but no decision has been given. M. Yates, Victoria, B.C., is the principal promoter. (July, pg. 345.)

Winnipeg Electric Ry.—The extension of the Park line along the Pembina highway has been practically completed as far as the new University buildings, three miles, and is to be extended still further to St. Norbert. (Aug., pg. 395.)

Telegraph, Telephone and Cable Matters.

The Canadian Northern Telegraph Co. has opened offices at Moose Jaw and Beadle, Sask.

W. J. Camp, Assistant Manager, C.P.R. Telegraph, Montreal, is on a tour of inspection over the system in the west.

An agreement between the British Government and the Marconi Wireless Telegraph Co., for the erection of a number of wireless telegraph stations on British territory throughout the world, has been ratified by the British Parliament.

The Colonial Secretary announced recently in the British House of Commons, that by a new subsidy arrangement, the rates by the West Indies cable had been reduced by about 50%. An additional subsidy is now being paid, of £16,000 a year, divided between the British and Canadian Governments.

The Western Union Telegraph Co.'s cable to Bay Roberts, Nfld., has been laid, and the building of the company's new offices at that point is proceeding rapidly. The laying of the Colinet cable is also proceeding. It will be laid in a specially dug trench, and through intersecting lakes to Shearstown, about 25 miles.

A. B. Smith, Manager, G. T. Pacific Telegraph Co., who returned to Winnipeg recently, after an inspection trip over the western lines, stated that telegraphic service would shortly be extended to McBride, B.C., and that commercial service to Moose Jaw, Calgary and other important points would also soon be available.

The C.P.R. Telegraph Department at Toronto has moved into the new C.P.R. building, King and Yonge Sts., from its old offices in the Board of Trade Bldg. The operating room in the new building was completely equipped with the most modern appliances, so that in the moving of the operators no delay whatever occurred in the telegraph service.

J. T. Phelan, Superintendent of Telegraphs in Northern British Columbia and Yukon for the Dominion Government, on his return to Vancouver from the north recently, stated that the Government is building a composite telegraph and telephone line from Queen Charlotte to Masset and Tohill, and connecting Queenstown, about 85 miles. The whole of the line is land wire, except a short stretch of cable at Alford Bay.

The Great North Western Telegraph Co. has completed the installation of a motor generator plant at the Michigan Central Rd. station offices at St. Thomas, Ont., replacing the gravity battery with which the work has been done in the past. The plant consists of five motor generator sets, supplied by the Canadian General Electric Co., each motor of 110 volts, three phase, 25 cycle, and the generators of three units of 240 volts d.c., compound wound and two units 25 volts d.c., compound wound. The telegraph office is also equipped with two sets of Athearn standard quadruplex, two bridge duplex and single line repeaters. The plant is under the supervision of C. E. Davies, the company's Supervisor of Equipment, and the M.C.R. interests are looked after by J. J. Ross, Superintendent of Telegraphs, and C. O. Vandevoort, Telephone Engineer.

Grounding of the s.s. Lake Manitoba.

Following is a judgment of the Dominion Wreck Commissioner, Commander H. St. G. Lindsay, concurred in by Capts. F. Nash and John Mitchell, as nautical assessors, in the grounding of the C. P. R. s. s. Lake Manitoba, on the Isle of Orleans, July 28:

The s.s. Lake Manitoba, belonging to the C.P.R. and engaged in regular trade between Canada and Liverpool, Eng., appears to well found and equipped in every respect, and was navigated in a proper and seamanlike manner up to July 28, when she left Father Point, after having taken on the company's regular pilot, A. Lachance, and proceeded towards Quebec. From this time up to the stranding she was navigated by courses, given under the direction of the pilot, from point to point, and a mean of these courses entered in the ship's log. According to the evidence, St. Jean light was passed abeam on July 29, at a little less than ¾ mile, and a course was then set to pass to the southward of St. Laurent light, which was in sight. Shortly after passing St. Jean, the St. Laurent light became obscured by fog, and orders were then given to put the engine room telegraph at stand by, and immediately after, to half speed. The master being off the bridge, he was at once notified by the junior officer on watch as to the change in weather conditions, and arrived on the bridge just as the return signal for half speed was made from the engine room. It appears that at this time the pilot who was on top of the wheel house, beside the standard compass, saw a bright light about a point on the port bow, and for some unknown reason gave orders to the man at the wheel to port, and a second order to port more was afterwards given, which orders were carried out and the helm put about three parts over, the vessel's head swinging to the northward. The master on coming up to where the pilot was, noticed that the vessel was off her course, by the position of the land, and on asking the pilot the reason for this, was informed that he had ported for a steamer. The man at the wheel was immediately ordered to starboard, but before this order was effective the vessel took ground. She came off stern first under her own steam shortly after, and it was found on docking the vessel at Montreal, that she was very badly damaged.

The court unanimously unites in its opinion that the cause of the casualty was entirely due to the negligence of Adjutor Lachance, the pilot, inasmuch as he totally disregarded the rule of the road in porting for a bright light on his port bow, and also in not being aware of the exact position of his vessel with regard to the land. Moreover circumstances ultimately proved that there was not sufficient room for the execution of this manoeuvre. It is also of the opinion that had the pilot on seeing the bright light, at once stopped the engines and reversed, if necessary, the casualty would have been avoided. The court therefore suspends his license until the completion of the present season of navigation.

The pilot, A. Lachance, is President of the Corporation of Pilots of Quebec, and was one of the commissioners appointed by the Dominion Government, in the recent enquiry into pilotage matters on the St. Lawrence.

[illegible]

[illegible]

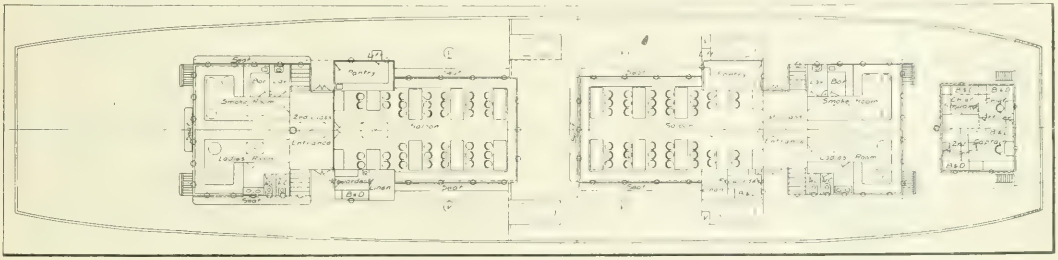
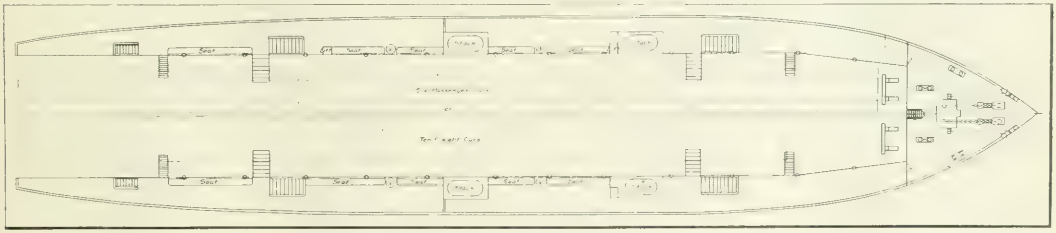
becomes too thick and dense to cut through it directly, the heavy bow is formed to ride upwards on to the ice surface, and the layer becomes broken up through the sheer superimposed weight of the vessel and the propelling effort exerted. The results of the experience gained in the operation of the Ermack and other similar vessels have been incorporated in this new vessel, which will therefore combine all that is modern and of proved excellence in the way of design and fittings for her special work.

The contract for the pier at Cape Tormentine has been let to A. P. Mackie, and new tenders are under consideration for the pier at Carlton Point, the Halifax Dredging Co. having withdrawn the tender originally accepted for this work. Parliament has voted $1,000,000 on account of the work, which is to include the alteration of the gauge of the P.E.I Ry. from narrow to standard. No decision has been announced as to when this part of the work will be done, but it is expected to have the car ferry in operation by the winter of 1914. This will enable freight cars to be landed in P.E.I. and reloaded with freight, thus saving at least two handlings.



Prince Edward Island Car Ferry, Promenade Deck.



Prince Edward Island Car Ferry, Main Deck.

Stranding of the s.s. Maia.

The Dominion Wreck Commissioner, Commander H. St. G. Lindsay, assisted by Capts. Neil Hall and J. H. Harrison, as nautical assessors, held an enquiry recently into the causes of the stranding of the German s.s. Maia, on Seal Island, in the Bay of Fundy, while en route from Magdalen Islands to Manchester, Eng., June 7. Following is the judgment:—

The court is of opinion that the casualty was due to the fact that the master made no allowance for the set of the ebb tide when setting his course on the morning of June 7, as he must have had at least two hours of strong ebb setting him to the southeast before the stranding, and that had the lead been used before the alteration of the course was made the stranding might have been avoided. It is therefore unanimous in its opinion that the master is entirely to blame for the casualty, but having no jurisdiction over his certificate, it recommends that a copy of the evidence and judgment be forwarded to the German Government.

Collision of the Steamboat Mikado With a Motor Launch.

An enquiry into the cause of a collision between the Acadia Sugar Refining Co.'s steamboat Mikado and a motor launch in Halifax harbor, June 7, in which one of the occupants of the launch was drowned, was held at Halifax, N.S., recently, by the Dominion Wreck Commissioner, Commander H. St. G. Lindsay, assisted by Capts. Neil Hall and J. H. Harrison, as nautical assessors. Following is the judgment:—

The court is of opinion that the casualty was caused by the person in charge of the motor launch in not paying attention as to which direction his boat was going after she left the breakwater, he being engaged in attending to his engine, until his attention was called to the fact that the Mikado was close alongside, when he appears to have put his helm the opposite way to that which he intended, and so ran his boat under the bows of the Mikado. The court, therefore, exonerates the master of the Mikado from all blame, as he appears to have done everything he could to avoid the accident. While expressing sympathy with the relations of the man who lost his life, the court severely criticizes the custom of motor boats plying in harbors in charge of inexperienced and ignorant persons to the detriment of general traffic, as being a menace to life and property.

Furness, Withy and Company, Limited.

The report for the year ended April 30 shows profits of £885,245 19s. 5d., against £768,622, 2s 5d for the previous year. £350,000 was transferred to depreciation account, £50,000 to trade contingencies fund, and £75,000 to reserve account for insurance and repairs. Dividends of 5% were paid on preference shares and of 10% on ordinary shares, and £131,020 was carried forward to credit of the current year's account.

The report states that the new cargo and passenger steamship Digby has been placed on the Liverpool and Halifax, N.S., service and is proving very successful.

Among the Company's investments shown is £100,000 of debentures in the British Maritime Trust Co., which has been heard a good deal of in Canada recently in connection with the Richelieu and Ontario Navigation Co. merger.

New Welland Ship Canal Construction.

Tenders for section 3 of the new Welland Ship Canal were received by the Department of Railways and Canals up to Aug. 27. This section is the portion of the canal through Thorold, and is about 2 miles long. While shorter than section 1, tenders for which were recently invited, as mentioned in the descriptive article of the canal in Canadian Railway and Marine World for July, it is possibly the heaviest portion of the route, including as it does the flight of twin locks 4, 5 and 6, and the single lock 7, with the guard gates beyond. This section gives a change in elevation of 186 ft., and in consequence involves constructional work of a heavy nature.

The letting of tenders for sections 1 and 3 about the same time was necessitated by the "cut and fill" nature of the two sections. In section 1, at the entrance to Lake Ontario, there is to be a long breakwater extending into the lake a little over a mile, to be made from the cuttings from the heavier excavation work in section 3. In addition, all the stone to be used on the concrete work on the whole canal is to be supplied from section 3.

The Great North Western Telegraph Co. has closed its offices at St. Felicite, Que., and Merlin, Ont.

The Steamship Glenmavis for the Canadian Lakes Trade.

The steamship Glenmavis, which has been built at Londonderry, Ireland, for the James Playfair interests, is, it is said, intended to run between Montreal and Port Colborne.

As will be seen from fig. 1, the Glenmavis follows in general arrangement and outfit the standard practice evolved by experience for a vessel of her class. She differs, however, from other lake vessels in that she is the first of this type to be constructed on the arch principle devised by Maxwell Ballard, by which a considerable saving in weight of structural material is effected in comparison with the usual system of construction.

The leading particulars of the Glenmavis are: Length, over all, 256 ft.; length, b. p., 250 ft.; breadth, extreme, 42½ ft.; depth, moulded to knuckle, 16 ft.; depth of arch, 4 ft.; total depth, 20 ft.; load draught, 14 ft.

The vessel has been classed with the British Corporation for service on the Great Lakes and the St. Lawrence River. Her structural design and scantlings are shown by the profile given in fig. 2, and the sections at an ordinary frame and a web frame given in figs. 3 and 4, respectively. It will be seen that the vessel has no sheer, the necessary height forward being secured by the adoption of a forecastle, while a bulwark is fitted round the stern aft. Following lake practice, the vessel has no 'tween decks, compensating strength being secured on the girder system, leaving the cargo hold free of all obstructions. A cellular double bottom for water ballast, with floors on alternate frames, extends all fore and aft, and there is also a large peak ballast tank forward. The frames are of bulb angle section spaced 24 in. apart, except right forward, where the spacing is reduced to 21 in. and 18 in., as shown on the profile (fig. 2). The tank top is flush plated, in order not to interfere with the working of grabs, and has no ceiling. Fenders are fitted on each side for protection when passing through the locks.

There are five cargo hatchways, 12 by 28½ ft., with shallow bulb angle coamings, and one large hatchway aft, 26 by 28½ ft., by about 4½ ft. high. The latter provides extra capacity, and at the same time assists the trim of the vessel. The hatchways are spaced 24 ft. centres. Canadian canal steamers, as a rule, have no cargo gear on board, and none is shown in fig. 1, but it is understood that the owners contemplate adding four winches with the corresponding cargo gear, masts, and derricks when the vessel reaches the lakes.

On account of the confined waters which the vessel navigates, a balanced rudder of large area is provided. The rudder is worked by a steam steering gear of special design, situated beneath the arch deck aft and controlled either from the navigating bridge forward or from a steering station on top of the after deck house. A reserve tiller is also provided on top of the arch deck, the rudder head being carried up through the deck for this purpose. To facilitate steering from the forward bridge, a steering pole is fitted at the stem to give the steersman a point to steer by. A powerful steam windlass is fitted under the forecastle deck, and arranged as shown on the plan, while for warping purposes a steam winch is provided amidships and a steam capstan aft. The anchors are housed in pockets to avoid fouling the lock gates.

The accommodation follows the arrangement usually adopted in lake vessels. As will be seen from fig. 1, the officers and seamen are berthed in the forecastle, above which is a steel house containing the chart room and the captain's office and bedroom. Above the captain's house is the flying bridge, upon which is placed the wheel house. The engineers and firemen are accommodated in steel houses at the sides of the engine and boiler casing on the arch deck aft. In the after house are also arranged the galley and pantry, the officers' mess room, an ice house, and the mess room for the crew.

The vessel is propelled by a single screw, driven by a set of triple expansion reciprocating engines, having cylinders 16, 26 and 44 in., respectively, with a stroke of 30 in. Steam is supplied by two single ended cylindrical boilers, 12½ ft. diameter by 10½ ft. long, designed for 180 lbs. pressure and working under natural draught.

The particulars of this article have been abstracted from the Shipbuilder, Newcastle on Tyne, and it is understood that a duplicate is building.—Marine Review.

Additional illustrations of this vessel are given on the two following pages.

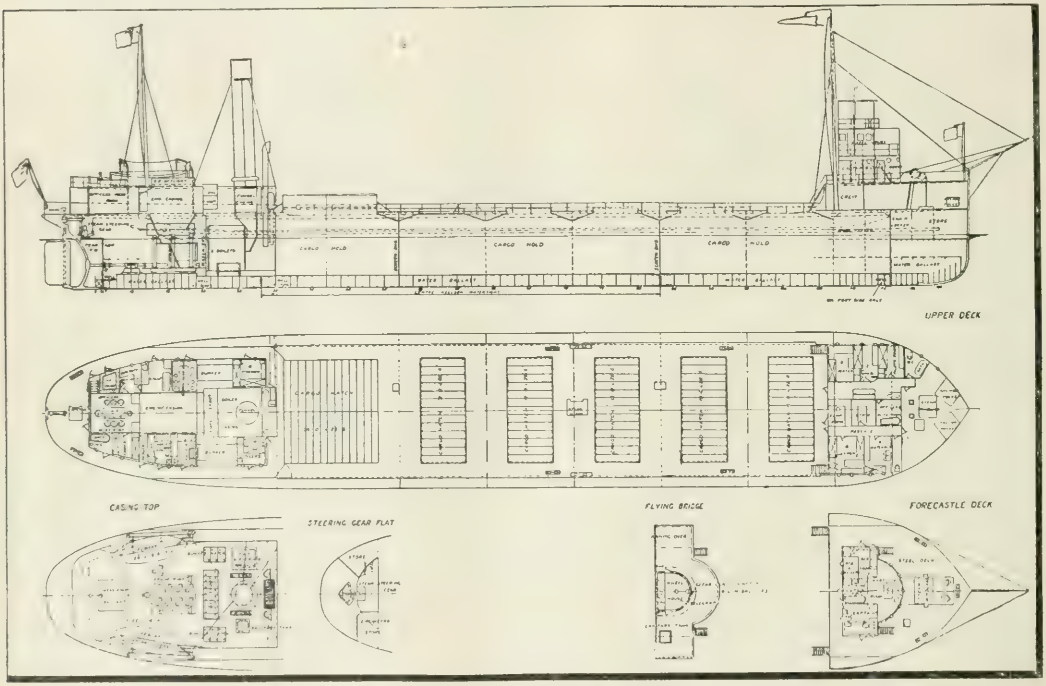


Fig. 1.—General Arrangement of the Glenmavis.

The Dominion Government wireless telegraph station at Port Arthur, Ont., was opened for business, Aug. 9. The site is on Dawson St., and is 650 by 150 ft. All apparatus is in duplicate, and in case of the failure of electrical power, the station is equipped with a generator driven by a gasoline engine of 8 h.p.

Toronto Harbor Improvements.

Tenders for the first portion of the Toronto harbor improvement scheme were invited by the Department of Public Works, to be sent in by Aug. 27, covering the portion of the work that is to be undertaken by the Government. This includes the ship channel 8,000 ft. long, through the new industrial area in Ashbridge's Bay, the eastern breakwater along the waterfront in front of Ashbridge's Bay, from the eastern channel to the Woodbine, 3¼ miles, the marginal way or bulkhead construction between the ship channel and the city side of Toronto harbor, and the western breakwater extending from the western channel to the Humber River, 4 miles. The eastern portion of the work will be of pile construction with mass concrete tops, and the western section, pile construction with concrete block tops. The extent of the work may be gathered from the following tables of the main quantities involved:

Eastern breakwater: Piles, 663,500 lin. ft.; hemlock lumber, 522,460 ft.; southern pine or B. C. fir, 8,594,136 ft.; concrete blocks, 28,912 cu. yds.; mass concrete, 5,763 cu. yds.; structural steel shapes, 3,645,850 lbs.; and stone talus 33,000 tons.

Western breakwater: Piles, 83,328 lin. ft.; cribwork, 162,000 cu. yds.; concrete blocks, 22,363 cu. yds.; mass concrete, 17,203 cu. yds.; reinforcing steel, 1 626,443 lbs.; structural steel, 1,865,570 lbs.; rock fill, 23,000 cu. yds.; and dredging, 48,515 cu. yds.

Ship channel: Piles, 1,290,534 lin. ft.; hemlock lumber, 691,260 ft.; southern pine or B. C. fir, 7,794,348 ft.; concrete blocks, 17,897 cu. yds.; mass concrete, 25,705 cu. yds.; structural steel, 3,755,220 lbs.; white oak or B. C. fir, 215,365 ft.. and dredging, 3,078,000 cu. yds.

Marginal Way: Piles, 228,412 lin. ft.; hemlock timber, 490,300 ft.; southern pine or B. C. fir, 3,127,000 ft.; concrete blocks, 4,400 cu. yds.; mass concrete, 3,082 cu. yds.; reinforced steel, 372,667 lbs.; structural steel, 439,947 lbs., white oak or B. C. fir wailing, 84,654 ft.; and dredging, 48,515 cu. yds.

E. L. Cousins, A. M. Can. Soc. C. E., is Harbor Engineer for the Toronto Harbor Commission, and J. G. Sing, M. Can. Soc. C.E. is Engineer in Charge for the Public Works Department.

Control of Ocean Freight Rates.—The question of Government control of ocean freight rates is being considered by commercial interests in Canada, and the Dominion Government proposes to take up the matter with the Imperial Government. The several departments interested have prepared statistical and other information necessary for the negotiations, which will be carried on on behalf of Canada by H. L. Drayton, Chairman of the Board of Railway Commissioners.

The construction of a tunnel under the Dover Straits, between England and France, is again to the fore, a deputation having recently waited on the British Premier to urge the taking up of the scheme. In reply, it was stated that the matter was engaging the Government's attention. Three schemes for improved means of transportation between the two countries are under discussion, and each has been declared to be quite feasible. In addition to the tunnel project, a bridge is suggested, and also a system of car ferries similar to those operating in Denmark, and between Canadian and U.S. ports.

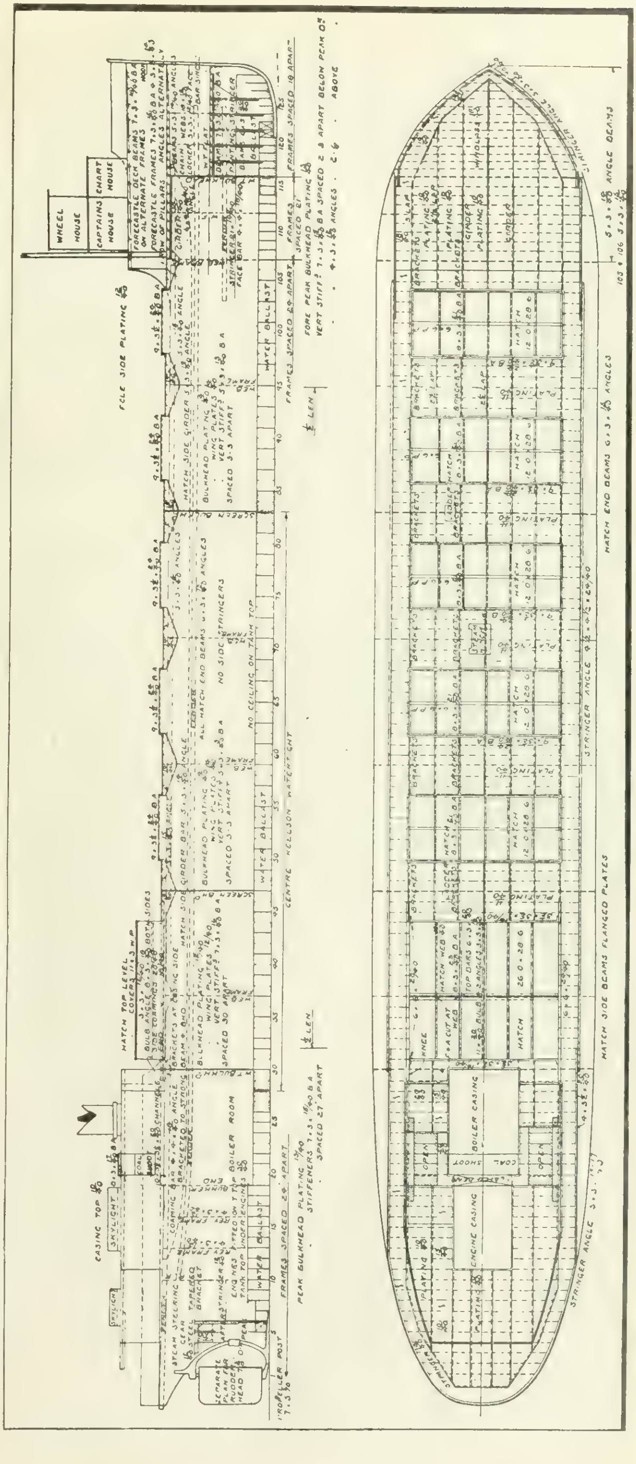

Fig. 2.—Profile and Deck Plan of the Glenmavis.

The National Steamship Company, Limited.

This company, incorporation of which has been mentioned in a previous issue, will take over the steamboats Algonquin and Natironco. The Algonquin was formerly owned by the St. Lawrence and Chicago Steam Navigation Co., and was purchased by Cawthra Mulock of Toronto about two years ago, when the Port Colborne and St. Lawrence Navigation Co. was formed to operate it, in connection with the Maple Leaf Milling Co., with which he is also associated. She was built at Yoker, Scotland, in 1888, and is screw driven by engine of 150 n.h.p. Her dimensions are, length 245 ft., breadth 40.1 ft., depth 20.6 ft.; tonnage, 1,806 gross, 1,172 register. The steamboat Natironco was formerly named Pioneer, and was owned by the Cleveland-Cliffs Iron Co., and operated by the Grand Island Steamship Co., Cleveland, Ohio. She was purchased by Canada Interlake Line, Toronto, last year, and later, sold to the National Iron Works Co., Toronto, with which company. Cawthra Mulock is associated, and she has been operated by the Canada Interlake Line. She was built at Detroit in 1892, and is of steel. Her dimensions are, length 226 ft., breadth 35 ft., depth 18 ft.; tonnage, 1,123 gross, 774 register, and she is equipped with triple expansion engines, with cylinders 20, 35 and 54 ins. diar., by 42 ins. stroke, supplied with steam by two Scotch boilers, each 12 by 11½ ft. at 165 lbs. pressure, and her engines are of 900 i.h.p. The company is being organized to carry on a general package and bulk freight trade between Montreal and Port Arthur. Following are the officers and directors. President, Cawthra Mulock; Vice President, G. F. Perry; other directors, E. H. Laschinger, M. Stobie and J. B. Foote.

The Canadian Northern Telegraph Co. has opened an office at D'Arcy, Sask.

Atlantic and Pacific Ocean Marine.

The Cunard Line s.s Andania, a description of which has been given in a previous issue, arrived at Montreal, July 26, from Southampton, Eng., on her maiden trip.

The C.P.R. s.s. Empress of Russia arrived at Victoria, B.C., on her second trip from Yokohama, Japan, in 8 days, 18 hours, thus making a new record.

The French Line s. s. La Touraine, running between Montreal and Havre, France, has, it is announced, discontinued the service owing to the lack of freight.

The Canadian Northern Steamships' s.s. Royal George, which sailed from Montreal, July 26, and arrived at Bristol, Aug. 2, made a new record of 3 days and 19 hours from land to land.

The Navigazione Generale Italiana inaugurated its Canadian service with the calling of the s.s. Palermo at Halifax, N.S., July 25. The voyage from Naples to Halifax was done in 14 days.

The Judicial Committee of the Privy Council delivered judgment, Aug. 1, in the appeals of the C.P.R. and the s.s. Montcalm, in connection with the sinking of the s.s. Kronprinz Olav in the St. Lawrence River, in Sept., 1910. It was held that no blame could be attached to the Montcalm.

During July, 71 ocean going steamships, with a tonnage of 469,529, entered Montreal harbor, compared with 62 steamships and 425,228 tons during July, 1912. From the commencement of the St. Lawrence navigation season, to July 31, 227 vessels entered the port as against 189 during the same period 1912.

The C.P.R. s.s. Empress of Asia was expected to arrive at Vancouver, B.C., Aug. 30, from Great Britain, by way of South Africa, Ceylon and Hong Kong, with a large party of tourists taking a trip round the world by the C.P.R. She is scheduled to leave Vancouver, Sept. 10, on her first trip from Canada to the Orient.

Fig. 4.—Section of the Glenmavis at a Web Frame.

The s.s. Diana, conveying a party from the U.S. to the Arctic, which ran ashore in Belle Isle Strait recently, returned to St. John's Nfld., badly damaged. The party transferred to the s.s. Erik and sailed for Crocker Land early in August.

The Cairn Line s.s. Bellona, which stranded in the upper traverse of the St. Lawrence River, Oct. 31, 1912, and which has since been lying in a damaged condition at Quebec, is reported to have been purchased by a New York syndicate, who, it is stated, intend having her overhauled and repaired for use in the West Indies fruit trade.

The C.P.R. s.s. Lake Manitoba grounded during a fog off the Isle of Orleans, July 29, and sustained considerable injury to her hull. She proceeded to Montreal and landed her passengers, after which a thorough examination was made in the dry dock, when it was discovered that the repairs required were too great to be undertaken there. She subsequently sailed for New York, where the repairs were undertaken.

An Ottawa press report states that the Government has made arrangements for the subsidizing of a line of grain carrying steamships for the Hudson Bay route, and that a member of a well known shipping firm associated with the Great Lakes carrying trade has been in conference on the subject and will shortly leave for England to conclude arrangements for a number of tramp steamers for such service.

It is unofficially announced that the Allan Line steamships Alsatian and Calgarian, both of which were expected to make their maiden trips to the St. Lawrence this season, will not be completed in time to do so, but it is probable that their maiden trips to Canadian ports may be made during the winter, should the company, as is customary, undertake relief sailings for the C. P. R. Empress steamships, which are both to have thorough overhauling at the close of the St. Lawrence season.

Maritime Provinces and Newfoundland.

The Dominion Coal Co.'s s.s. Wabana, which was recently damaged through grounding near Matane, Que., while proceeding from Sydney, N.S., to Montreal, has been repaired at Quebec and returned to service.

The s.s. Beothic, under charter to the Dominion Government for a trip to Hudson Bay ports, which ran aground off Point Rich, on the northwest coast of Newfoundland, returned to Halifax, after being released, for examination and repairs.

The s.s. Terra Nova, the vessel utilized in the recent Scott Antarctic Expedition, and which has been associated with the Newfoundland sealing industry for several years, has been repurchased by C. T. Bowring and Co., and will be placed in its old service.

The Deputy Minister of Public Works has written to the Traffic Committee of the Board of Trade at St. John, N.B., that the tender of John S. Metcalf Co., Montreal, for the erection of grain conveyors to berths 5 and 6, was approximately $133,000, and that the matter was under consideration.

The dredging of the bar in St. John, N.B., harbor by the Public Works Department was expected to have reached the stage, during August, when the removal of the lighthouse marking the outer edge and the pier would be necessary. It is arranged that a gas and bell buoy is to be established at that point, and moved as dredging progresses, so that it will always mark the limit of width available for navigation, and range lights will also be established to mark the axis of the new dredged channel.

An order in council has been passed defining the pilotage limits of the port of Pictou, N.S., as from the most easterly point of Pictou Island on a line running southeast until it strikes the gulf shore at Arisaig pier, and bounded on the west by a line drawn from Amet Island to Rocky Point at the county line, and embracing all the navigable waters in Pictou County. These are the limits as they were prior to July 21, 1908, when they were extended, the extension having been cancelled as it has been pointed out by the Pilotage Authority that vessels frequently get inside the limits without sighting a pilot, and that the old limits are ample for all purposes.

Province of Quebec Marine.

The Magdalen Island Steamship Co.s s.s. Lady Sybil ran aground near Magdalen Islands, July 29.

The steamboat John Sharples which recently struck a rock near Chicoutimi, Que., cutting a hole in her stern, has been repaired at Montreal.

The Montreal Harbor Commissioners entertained to luncheon, Aug. 12, Dr. I M. Goldstein of Moscow, Russia, who is making a study of matters concerning navigation.

The Montreal Harbor Commissioners have inaugurated a police force for duty within the limits under their jurisdiction. The present force of 20 will probably be increased to 40 by the fall.

The Quebec Board of Trade has pointed out to the Minister of Public Works the desirability of establishing a ship building and repair plant in connection with the projected Government dry dock at Lauzon, Que.

The steamboat Duchess of York, owned by the King Edward Park Co., Montreal, struck a rock while passing through the Lachine Rapids, Aug. 2, cutting a hole in her hull. The damage was repaired temporarily, and the passengers landed safely at Montreal, after which she was dry docked for repairs.

It is reported that the Montreal Harbor Commissioners have decided not to proceed with the addition of 250 ft. to the outer ends of the Alexandra, Jacques Cartier and King Edward piers, until the entrance to the Lachine Canal has been remodelled, on the ground that the work would only add to the congestion of the upper harbor.

A number of members of the Montreal Board of Trade, Chambre de Commerce, and the Canadian Manufacturers' Association, on Aug. 12, presented a large silver punch bowl to each of the ex-members of the Montreal Harbor Commission, G. W. Stephens, L. E. Geoffrion and C. C. Ballantyne, in recognition of their work towards the development of trade through the Montreal harbor.

The Crown Steamship Co., owners of the s.s. Crown of Cordova, has taken proceeding in the Admiralty Court, for the arrest of the s. s. Lady of Gaspe, on a claim for $35,000 as damages, arising out of the collision. It is reported that the Magdalen Islands Steamship Co., owner of the s. s. Lady of Gaspe, will enter a counter action. The Dominion Wreck Commissioner held an enquiry at Quebec, Aug. 7.

Arrangements have been completed for the diversion of small vessel traffic from the ship channel in the St. Lawrence, to the north channel, thus relieving considerable congestion of small craft, which has for some time been more or less of a menace to the safe navigation of the channel by ocean going vessels. The north channel is being well lighted, twelve range lights having been established between Repentigny and Contrecoeur.

The harbor police force, inaugurated by the Montreal Harbor Commissioners, commenced duty within the harbor limits, Aug. 12. It will not in any way interfere with the city police, but will, in addition to regulating traffic on the wharves, act in conjunction with them in dealing with general delinquents. The uniform adopted is of khaki, with brass buttons, and cap bearing the Commissioners' crest.

It is reported that the Department of Marine has decided to order an additional ice breaking steamship for the St. Lawrence service, approximately of the following dimensions: Length 275 ft., breadth 57½ ft., depth 30 ft., with engines of about 8,000 i. h. p. It is stated that the forward construction will be similar to that which is being adopted on the ice breaking car ferry steamship for the Northumberland Strait, now under construction in England.

The Montreal Harbor Commissioners have decided to build another elevator with capacity for about 3,000,000 bush. It is stated that it will be utilized specially for the export trade, in order to relieve the congestion caused by allowing grain to be stored in the others. It will be located in the east end of the harbor in such a position that grain can be taken in at one side and discharged on the other. The total capacity of the elevators in the harbor will then be raised to 10,732,000 bush.

The various works in the Montreal harbor are progressing satisfactorily. The concrete substructure for the addition to the Harbor Commissioners' elevator is approaching completion, and the concrete for the superstructure will be run in during September. The concrete superstructure for the G. T. R. elevator is completel to a considerable height, and work is being rushed day and night. The high level wharf at sec. 26 is about completed, and foundations have been laid for another similar one.

The Department of Marine has established a lighthouse on the north shore of the Ottawa River, on the sandy point about a quarter of a mile below Pointe au Chene village, and it is directed that upbound vessels will use this light as a leading mark from a point abreast of L'Orignal wharf, in the alignment of the light and Pointe au Chene church, until clear of Furniss Point, and from thence a more westerly course should be taken so as to pass about a quarter of a mile south of the light whence McTavish Point light will be used as a leading mark.

The s.s. Lady of Gaspe, owned and operated by Bouchard Bros., Quebec, to Gaspe ports, was rammed by the British s.s. Crown of Cordova, while at anchor, during a fog, near Cap Madeleine, July 28. The passengers were landed safely at Cap Madeleine, and the vessel beached. She was released July 31, and went to Quebec under her own steam in charge of the wrecking tug Lord Strathcona. She was built at Glasgow, Scotland, in 1877, and has borne the names Restigouche and Rathlin. She is screw driven with engine of 180 n.h.p., and her dimensions are, length 229.7 ft., breadth 31 ft., depth 16.1 ft.; tonnage, 1,189 gross, 705 register.

Ontario and the Great Lakes.

The Pelee Island Transportation Co. is having a steamboat built at Collingwood.

the construction of an extension to the breakwater at Upper Salmon River, and to Sept. 8, for the construction of a wharf in Victoria harbor.

The Dominion Government has awarded contracts to the Pacific Dredging Co., for $158,200, for dredging in Pitt River, and to Broley and Martin, New Westminster, for $83,500, for the completion of construction of a jetty at Steveston.

Press reports from New Westminster state that the Dominion Public Works Department has arranged for a survey of the Fraser River between Mission and Hope, with a view to clearing the channel and carrying out some dredging work.

The New Westminster city dredge John A. Lee, was launched there, July 30. It is the first of the city's dredges to be built locally, and it is expected it will be ready for operation about October. The dimensions are, length 100 ft., breadth 40 ft., depth 7½ ft.

The Norwegian s.s. Herakles was drydocked at Esquimalt, early in August, for examination after she grounded in the Fraser River, when just completing her voyage from Sydney, N. S., to Port Mann, B. C., with rails for the Canadian Northern Ry.

The C.P.R. s.s. Princess Maquinna sailed from Victoria, July 25, on her maiden trip to northern ports. George Bury, Vice President, was present when she left, while J. W. Troup, Manager, British Columbia Coast Service, went with her to Holberg.

Twenty-four Inch Steel Hydraulic Dredge, Port Nelson.

The s.s. Rupert City, formerly owned by the Marine Transportation Co., Vancouver, was sold at Seattle, Wash., Aug. 9, by order of the Federal Court, to N. C. Hardie of Vancouver, for $16,000, the value of the vessel being stated at $60,000. She was built at Barrow in Furness, Eng., in 1886, and is screw driven by engine of 300 n. h. p. Her dimensions are, length 310.3 ft.; breadth 38.1 ft.; depth 25.2 ft.; tonnage, 2,536 gross, 1,640 register.

The Department of Marine has placed two fixed red lights, 6 ft. apart vertically, on the breakwater under construction at the entrance to Victoria harbor, extending out westerly from Ogden Point on the east side of the entrance. These lights are placed on a dolphin about 1,000 ft. out from Ogden Point, and will be moved out as the work progresses, to show its extremity. The lower light will be elevated about 20 ft. above high water.

The Dominion Government fishery cruiser Malaspina was launched at Dublin, Ireland, recently, and a second one will follow shortly. These two vessels are for service on the Pacific coast. They are divided by transverse and longitudinal bulkheads into 20 water tight compartments. The propelling machinery will be triple expansion engines supplied with steam at 180 lbs. by marine type boilers equipped with Howden's forced draught. Their dimensions are, length, 162 ft.; breadth 27 ft.; moulded depth, 13 ft. 11 ins.

Canadian Notices to Mariners.

The Department of Marine has issued the following:—

249. July 15. Atlantic Ocean to head of the Great Lakes, weather probabilities communicated from wireless telegraph stations.

250. July 16. Ontario, Georgian Bay, east side, Roberts Island, Honey Harbor channel, buoys established.

251. July 16. Ontario, Georgian Bay, east side, eastern approach to Parry Sound, buoys established.

252. July 17. New Brunswick, south coast, Bay of Fundy, entrance to St. John, shoal being dredged, beacon light and fog bell to be removed, gas buoy to be placed.

253. July 17. Nova Scotia, Cape Breton Island, west coast, entrance to eastern harbor, Cheticamp, buoys established.

254. July 17. Quebec, River St. Lawrence, Quebec harbor, Diamond harbor, piers off Lampson Cove, pole lights.

255. July 18. Quebec, River St. Lawrence below Quebec, Stone Pillar lighthouse, lantern damaged by fire, temporary light.

256. July 18. England, southwest coast, Scilly Isles, Bishop Rock light, alteration in period.

257. July 19. British Columbia, Vancouver Island, southeast coast, Victoria harbor entrance, Ogden Point, breakwater under construction, lights.

258. July 23. Quebec, Ottawa River, Pointe au Chene, lighthouse established.

259. July 23. Ontario, Lake Ontario, Toronto, gas buoy placed temporarily.

260. July 23. United States of America, Lake Superior, Manitou light station, characteristic of light changed and intensity increased.

261. July 23. United States of America, Lake Superior, off east end of Isle Royale, Blake Point, gas and bell buoy established.

262. July 24. Quebec, River St. Lawrence, Green Island, change in character of light.

263. July 28. Prince Edward Island, east coast, Murray harbor, bell buoy established, list of buoys.

264. July 31. British Columbia, weather probabilities communicated from wireless telegraph stations.

265. July 31. Quebec, River St. Lawrence, Lake St. Louis, change in position of Lachine gas buoy.

266. July 31. Ontario, Lake Ontario, Oakville, change in character of light.

267. July 31. Ontario, Lake Erie, Port Colborne, change in characteristic of front range light.

268. Aug. 6. New Brunswick, south coast, Letite Passage, entrance to Letite harbor, gas and bell buoy established.

269. Aug. 6. New Brunswick, south coast, Bay of Fundy, Sisters Rocks, can buoy to be replaced by bell buoy.

270. Aug. 6. Nova Scotia, Chignecto Channel, Cumberland Basin, westward of Amherst Basin, change in position of buoy.

271. Nova Scotia, south coast, Mahone Bay, Tanner Pass, Tanner Island, lighthouse established.

272. Aug. 11., Quebec, Gulf of St. Lawrence, Gaspe coast, Barachois de Malbaie, change in position of pole light.

273. Aug. 11., Quebec, River St. Lawrence below Montreal, Repentigny, change in position of range lights.

274. Aug. 12., Ontario, Detroit River, Ballard Reef channel, temporary changes in positions of gas buoys.

275. Aug. 12., Ontario, Lake Huron, north channel, chart, Meldrum Point to St. Joseph Island, issued.

276. Aug. 12. United States of America, River St. Mary, Brush Point range light station, new structures erected and changes made.

277. Aug. 13. Nova Scotia, Bay of Fundy, Lurcher shoal, lightship to be removed from her station temporarily for repairs.

278. Aug. 13. Quebec, Gulf of St. Lawrence, off Fame Point, submarine bell buoy to be placed.

Suction Dredge for Dominion Government Harbor Work in Hudson Bay.

A description of the new 24 in. suction dredge for harbor work in Hudson Bay, appeared in Canadian Railway and Marine World for July. The first work on this dredge was begun in April last, and as the work was required to be completed by August in order that the dredge might be towed to Hudson Bay before severe winter set in, extraordinary means had to be applied to push forward the work. The Polson Iron Works, which had the contract, completed the task in the remarkably short time of 100 working days, the dredge leaving Toronto for the far north on Aug. 9. following the St. Lawrence route to Sydney, and thence along the Labrador coast line into Hudson Bay.

Briefly, the dredge, which is illustrated on this page, is 180 by 43 ft., weighing complete 1,200 tons. It is divided into six watertight compartments. In the forward end of the hold is a 24 in. suction pump, direct connected to a triple expansion engine, supplied from two Scotch boilers. A cutter arm is carried on the forward end by shear legs, with the cutter driven from a small vertical engine alongside on the forward deck. The discharge from the pumps is through the rear of the dredge to a chain of floating pipes. An interesting feature of the dredge is a completely equipped machine shop. The complete control of the dredge is from the cabin on the forward bridge.

Insurance Rates on the Atlantic Route.

[illegible] more into conformity with those charged [illegible]

[illegible] Canada [illegible]

[illegible] of [illegible] various [illegible]

[illegible]

The above rates are in shillings per [illegible] as under 3%, accidents to crews, etc.

It would appear from the figures given [illegible] the rates on hulls since 1903. The rates on vessels trading between United States ports and the United Kingdom for [illegible]

[illegible]

It will be noted from this that the rates on the Allan Line vessels are the same in each case, Montreal being the chief Canadian port in the summer, and [illegible] Withy, and Manchester Liners, are also the same for Canadian ports as for U.S. ports, there being a reduction of 28½% in the Canadian rate, and about 5% in the U.S. rate, during the past 10 years. No practical comparison can be made in the cases of the other companies, as so many conditions, comprising ownership, age of vessel, etc., enter into the making of a rate. The rates on cargoes, and more especially on grain, are perhaps of more direct importance to the Great Lakes trade, as it is claimed that that is the cause of such a large proportion of Canadian grain passing through U.S. channels. The average season rate of insurance on grain from the St. Lawrence to United Kingdom ports, with the exception of Manchester, was 25½c for each $100 insured, the Manchester rate [illegible] and for tramp steamers with full cargoes of grain, 61c. As against this, the rates, via New York, Boston, etc., were 15c in first class vessels, 17½c in second class vessels, and 50c in tramp steamers with full cargoes of grain. Since 1909, when the rate on the St. Lawrence was [illegible] for Manchester [illegible] for tramp steamers 80c, and the U.S. port rates 17½c and 20c, for first and second class vessels respectively, and 50c for tramp steamers, there have been reductions of 9½c in the St. Lawrence rate, 6½c for Manchester, and 19c for tramp steamers; and in the U.S. rate a reduction of 2½c, the rate for tramp steamers remaining stationary. Although this comparison of rates serves a certain purpose, it should not be taken as a perfectly fair one, as towards the close of the St. Lawrence navigation season, when there is apt to be a rush of grain shipments, the insurance rate is increased materially, while, of course, the U.S. rate is the same all the year round. Thus, during the 1912 season, the rates were as follows:—May 1 to Sept. 15, 25c; to Sept. 30, 27½c; to Oct. 15, 30c; to Oct. 20, 37½c; to Nov. 15, 40c; and to the close of navigation, 45c; all to Liverpool. On the winter routes from Halifax, or St. John, the rate is 22½c, against the U. S. rate of 15c, while the rate on Furness Withy and Manchester Liners for 1912 was 30c, exactly 100% higher than the U.S. rate.

During the 1912 lake navigation season, approximately 113,000,000 bush. of grain were shipped from Fort William and Port Arthur by vessels, and of this total 41% passed through U.S. channels. The estimated value of grain shipped from Montreal during 1912 is $25,000,000, which, if insured at the average rate in 1900 of 56c, would have cost $140,000; and at the 1912 rate of 25½c, $63,750, a saving in 12 years of $76,250. The extra cost of shipping via Montreal, as against New York, on the same basis, would have been $90,000 in 1900, and $26,250 in 1912, showing a reduction in extra cost of [illegible]

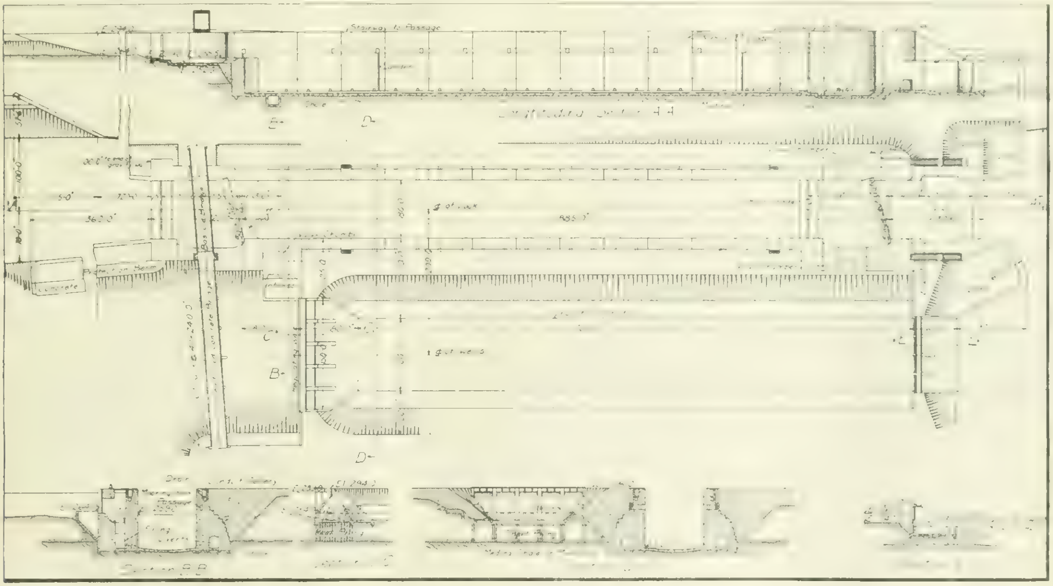
The New Welland Ship Canal Locks.

A description of the new Welland Ship Canal appeared in Canadian Railway and Marine World for July, in which the general canal scheme was outlined, and the general details discussed in comparison with the present and old canals. It will be recalled that the new canal will follow a course from Lake Ontario, where the entrance is 2¾ miles east of the present entrance at Port Dalhousie, through to Thorold, where the course of the new canal will be the same as that of the present one, with the exception of a couple of short stretches which have been changed for the reasons there explained.

The accompanying illustration shows lock 1, which is to be located directly on the shore of Lake Ontario, at the northerly end of the canal. This lock is typical of all the other single locks in all the essential particulars. The locking capacity of the canal will be 800 by 80 ft., with a draught of 30 ft., but to allow for the swing of the gates, the actual length of the lock between gate hinge pivots will be 885 ft., the length of the lock construction extending even beyond that, with a total length of 1,140 ft., not including approach wall. From the bottom of the lock to the top of the walls is a height of 84.5 ft. These dimensions give some idea of the stupendous character of the project.



Typical Lock of the New Welland Ship Canal.

The depth to which the canal structure is carried simplified the foundation problem, as the lower portion of the lock requires rock excavation, directly on which the lock is built. The rock on which locks 1, 2, 3 and 4 are founded is Medina Shale or Mudstone. Locks 5 and 6 are founded on sandstone, and lock 7 on gray shale. At locks 2 and 3 the lock excavations will not extend down to rock, but the side wall foundations will be carried down to that point, thus making the walls 100 ft. high.

The locks are to be constructed of mass concrete throughout, built in sections of 60 ft., between each of which there will be an expansion joint, consisting of a dovetail of concrete extending the full depth of the walls, and in the centre of the dovetail there will be a strip of copper of Z section, connecting the two sections, and forming a water tight division, to prevent seepage of the water through the joint.

In the top of the side wall there will be a 5 by 9 ft. tunnel, the length of the lock. This tunnel will be floored so as to form a shallow chamber below for the electric cables, with the portion above the flooring for passing from end to end of the lock for the workmen. Below this combined tunnel there will be a 4 ft. square tunnel on each side of the lock, extending its full length, for drainage purposes.

With a floor level 30 ft. below the top of the lock walls, there is to be a 4 by 7 ft. tunnel extending the full length of the wall, with openings leading inward to the lock at every 100 ft., in which will be mooring hooks for berthing vessels passing through the lock. This tunnel is to be reached by stairways through the concrete near each end of each tunnel, from the surface above. The introduction of this tunnel is a novel feature of lock design, and should result in a considerable saving in locking time, by the expeditious manner in which the vessel can be secured in the lock. The lift of each of the locks is to be 46.5 ft., and the top of the lock wall will be 5 ft. above the water level when the lock is filled. A loaded vessel will have its deck possibly not more than 10 ft. above the water level when entering from below. Thus the deck will be upwards of 40 ft. below the top of the lock wall, which is too great a height to heave a rope. With the mooring hooks in the wall openings at every 100 ft., the rope can be thrown to an attendant, who will [illegible] rises, the line will be changed to the [illegible] from the lock.

The filling and emptying of the locks have been carefully worked out, and it is expected that these operations will be carried out smoothly without the disturbance to the water in the upper reach of the canal as happens in locks of the usual design. Above each lock there is to be a considerable pondage area. Extending up the canal 360 ft., there will be a concrete berm, separating the channel of the canal from the main part of the pondage area, from which the water to fill the lock will be drawn through a valve chamber at the head of the lock from the side water, leaving the water in the channel undisturbed. At the bottom of the side walls of the lock there will be a 13 by 16 ft. horseshoe tunnel the length of the lock, with 3 ft. square openings leading from these two tunnels into the lock at every 30 ft. This will feed the water into the tunnel uniformly through the 800 ft. length of the lock, balancing the pressure in the lock, disturbing the vessel in the lock a minimum amount. Connection from the valve chamber to the horseshoe tunnel on the side opposite to the valve chamber will be through a 13 by 15 ft. square tunnel of concrete, passing under the lock. The valves will be of the swing type, requiring a minimum time for opening. The emptying of the lock will be through the same side tunnels, which will lead through valve chambers, one on each side of the lock at the lower end, and out through the channel at the lower end.

A novel departure has been made in the gate design, which is of the single leaf type. It is customary to have them of the double leaf type, mitring at the centre, but a number of accidents have occurred with their use, through vessels from below striking one of the gates sufficiently hard to open it enough to al-

[illegible]

[illegible]

[illegible]

adjacent to the dining saloon and on the lower deck there are two large rooms for ladies and children.

Second class accommodation is provided at the after end of the vessel, and is divided into dining room, ladies' rooms and sleeping apartment, with promenade space on the shelter deck. There are two dining rooms, one being for ladies, providing accommodation for [illegible] passengers. The sleeping apartment on the lower deck is a large room with berths for 28 passengers, the upper berths folding down to form the backs of couches during the day.

On account of the comparatively short trips for which this vessel was built, and for which she will be utilized on this side, the bunker space is small, and it was therefore necessary to arrange that she be towed across the Atlantic. The tug ran short of fuel, owing to rough weather, and was compelled to leave the vessel off Newfoundland and put in at St. John's, July 27, for coal. The Reid Newfoundland Co.'s s.s. Kyle, and the tug Blackcock, eventually picked her up, and the journey to Halifax was completed in safety.

The Dominion Government Dry Dock at Lauzon, Quebec.

As mentioned in previous issues of Canadian Railway and Marine World, the Dominion Government has decided that the construction of a dry dock in the Port of Quebec shall be undertaken as a Government work, and has awarded the contract to M. P. and J. T. Davis. The site, which has been acquired by the Government, is located opposite the city of Quebec on the south shore of the St. Lawrence, in Lauzon Village, two miles east of Levis, and close to the existing Government dry dock.

The dock will be of the following dimensions:—length from caisson stop to head wall, 1,150 ft.; width of entrance, 120 ft.; depth on sill at ordinary high water spring tides, 40 ft.; it will be divided in two parts, 650 and 500 ft. respectively. The outer entrance will be closed by a steel rolling caisson, and a ship, or floating caisson will close the inner entrance. The ship caisson will also fit the outer face of the outer sill, so as to facilitate repairs to the rolling caisson, when required. The dock will be emptied by three centrifugal pumps, each having a capacity of 60,000 galls. a minute, operated by electric motors, supplied with current by generators revolved by three steam turbines, steam being furnished by eight water tube boilers, capable of supplying 3,600 h.p. The rolling caisson will also be operated by electric motor.

The general construction work will include the construction of a cofferdam to surround the whole of the entrance walls of the dock, furnished with the necessary pumping machinery to keep the enclosed area dry; the excavation in earth and rock over the area to be occupied by the dock, including all drains, pump wells and sumps; the construction of concrete walls with altars, stairs, floor, manholes, culverts, pump chamber walls and caisson chamber; the building of granite copings, caisson stops, facings to culvert outlets and inlets, facings to timber slide entrance, etc.; the construction and placing of the steel rolling caisson with rollers and one steel floating caisson, complete with pumps, electric motors, valves, etc.; the construction and furnishing of the pump house, with three pumps, each of 60,000 galls. a minute capacity, power house with eight steam boilers with [illegible] [illegible] and [illegible] [illegible] [illegible] three steam turbines and four electric generators, the supply of keel blocks and [illegible] [illegible] with chains and tackle, and all requisite bollards and capstans, the furnishing of all materials, and the building of a brick chimney 180 ft. high, two entrance piers [illegible] ft. long, [illegible] ft. wide, to [illegible] of water at low tide, the dredging of a specified area to a depth of 30 ft. at low tide, and the installation of underground electric wiring and of electric light wiring in the buildings.

The Descriptive Declarations of Cargoes at Montreal.

The Shipping Federation of Canada sent a deputation consisting of A. A. Allan, Jas. Thom and Thos. Robb to Ottawa recently, to protest to the Government against the enforcement of a bylaw of the Montreal Harbor Commissioners, which provides as follows:—"The agent of every vessel arriving in harbor, the cargo of which is subject to wharfage rates, shall within four days after the arrival of the vessel, deposit in the office of the Harbor Commissioners one certified copy of the manifest of said vessel, giving the names of the consignees, full description of the goods and the weight or measurement thereof, according as the goods were carried by water, by ton weight or ton measurement."

The deputation was received by the acting Minister of Marine, who heard the objections, which covered the following points:—The bylaw was passed by the last Commissioners, who, after hearing objections to it voiced by the Shipping Federation of Canada, did not enforce it, and the Federation has taken up the matter with the present Commissioners on several occasions, but they do not seem inclined to rescind the bylaw. The deputation are of opinion that as the information is for statistical, and not for revenue purposes, it should be obtained by the Commissioners' staff. The respective shipping companies have made attempts to carry out the provisions of the bylaw, but find it impossible to do so, as they have no means of obtaining the information other than from the bills of lading. They also think that the in[illegible] [illegible] [illegible] [illegible] [illegible] come law.

The Furness Line's Steamship Digby.

The steamship Digby, which has recently been placed in service between Liverpool, Eng., St. John's, Nfld., and Halifax, N.S., has been specially built for the passenger, fruit and general cargo trade, and should the business warrant it, other vessels of a similar type will be added to the fleet as required. She was built at West Hartlepool, Eng., and has the following chief dimensions:—length over all 365 ft., length between perpendiculars 350 ft., breadth, extreme, 50 ft., depth moulded to upper deck 25½ ft., depth moulded to shelter deck 34 ft. 1 in. She is classed 100 A1 shelter deck class, and is equipped to fulfil the requirements of the British Board of Trade, with a full passenger certificate. The hull is divided into watertight compartments by six transverse watertight bulkheads, and the forward part is strengthened for ice service. A special system of mechanical ventilation is provided to the holds and 'tween decks for the proper preservation of fruit and similar cargo. The passenger accommodation, for 58 first class, and 32 second class, is arranged, the former, amidships, and the latter aft. Complete installations of electric light equipment and refrigerating machinery are supplied. The propelling machinery consists of triple expansion engines with cylinders 28, 46 and 77 ins. diar. by 48 ins. stroke, supplied with steam by four single ended boilers 16½ by 12 ft., at 180 lbs. pressure under Howden's forced draught.

THE GOLDSCHMIDT THERMIT CO. announces that its San Francisco office has been changed from 432-436 Folsom Street, to 329-333 Folsom Street.

[illegible]

INTERCOLONIAL RAILWAY

TENDER

S[illegible] Double Tracking Line Between St. Romuald and Chaudiere Curve," will be received up to and including **Monday, September 8th**, for double tracking the line between St. Romuald and Chaudiere Curve, P. Q.

[illegible] Station Master's Office, Levis, P. Q., at the Chief Engineer's Office, Moncton, N.B., and at the office of the Assistant Deputy Minister and Secretary, Department of Railways and Canals, Ottawa, Ont., at which places forms of tender may be obtained.

All the conditions of the specifications must be complied with.

[illegible]

Quality Not Quantity

Is the reason why we make our Replacers out of the BEST STEEL PLATE instead of cast metal. The distance from caboose to head end of train is getting longer, and when a man carries a pair of our Replacers that distance he is not all used up, but ready to rerail his car or locomotive.

The pair this man is carrying is our Standard No. 1, made of 9-16 plate, weight 164 lbs. per pair, and guaranteed to carry 200 tons.

We make smaller sizes, No. 3 for Mine Work, Electric Motors, Mine Engines and Rope Haulage; weight 58 lbs. per pair.

Do not fool yourself. If you want efficiency and quick service give your men a tool they can handle, that will do the work and that pleases them.

SEND FOR CIRCULAR SHOWING USERS 70,000 PAIR IN SERVICE

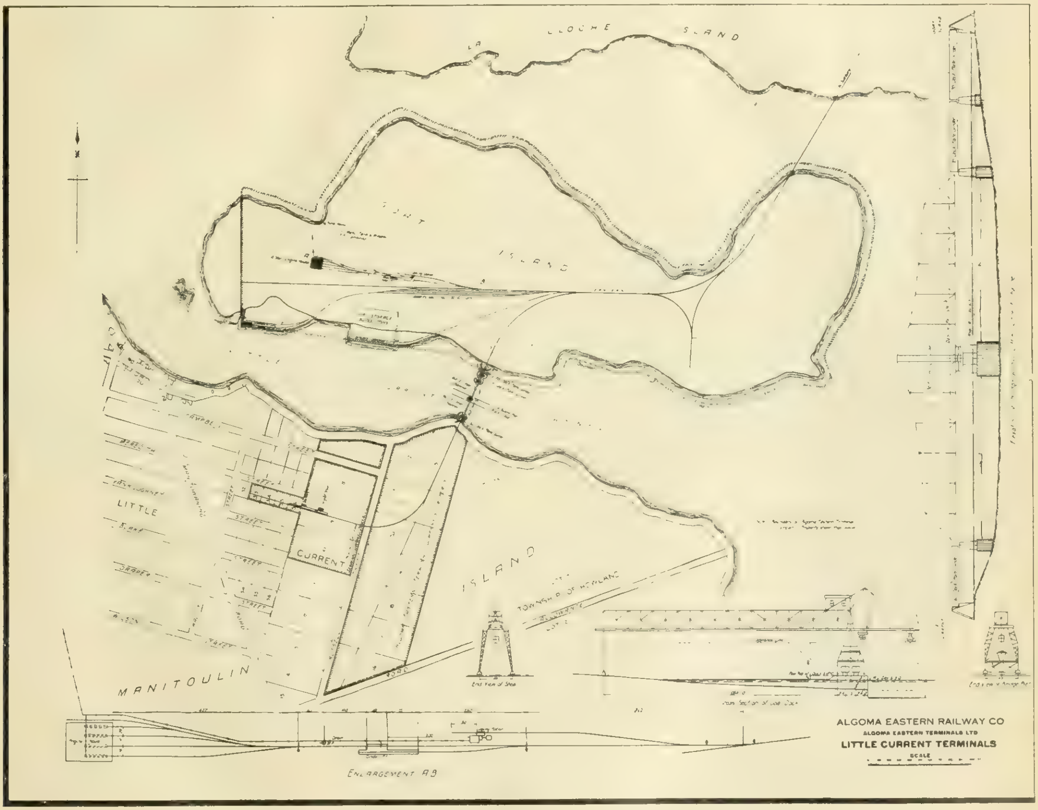
Algoma Eastern Railway Terminals at Little Current.

By R. S. McCormick, M. Am. Soc. C.E., Chief Engineer.

The Algoma Eastern Ry. Co. has its line completed as far as the site of the terminals on Goat Island, opposite Little Current, on Manitoulin Island, Ont. The terminal facilities are now being pushed to completion this autumn and include some interesting features. The work covers the extension of the main line from Goat Island, the site of the yard and docks, over the boat channel to Manitoulin Island, entering Little Current on the east side of the town. A small station building of frame construction, together with a small local freight house, is situated just at the edge of the town, easy of access and convenient for local business.

The bridge crossing the channel is made up of two 70 ft. deck plate girder approach spans on the Goat Island side, a 368 ft. through draw bridge span and a 60 ft. approach span on the Manitoulin side, making a total length between abutments of 573¾ ft. The clear height above meanwater level is 17½ ft. and there is a clear opening for boats of 160 ft. each side of the centre pier. The foundations consist of two wing abutments, three intermediate piers and a pivot pier. These are of concrete, there being a total of 2,570 cu. yds. of concrete in the whole foundation. The protection, or rest pier, is composed of timber cribs filled with stone, extending at right angles to the centre line of the bridge tangent. These cribs are built of round hemlock timber, well drift bolted together, extending to within 2 ft. of low water level; above this elevation square B.C. fir timber is used. The water is 24 ft. deep at this centre pier, the bottom is solid limestone rock, requiring very little work to prepare for sinking the cribs. At the pier points and abutment sites a little preparation, consisting of shooting up the bottom to level up and roughen up the smooth rock was done to guard against any tendency of the piers sliding. The foundation work was done under contract by the Foundation Co. on a cost plus a fixed sum basis. The work was let Sept. 27, 1912, and completed May 1, 1913—and is a very fine job of pier work. The piers in deep water were built inside cofferdams of heavy timber, concrete being deposited in the centre pier to within 2 ft. of low water, where the neat work begins. Gravel and broken stone were both used for the coarse aggregate for the concrete, care being taken to heat all material and the water in cold weather. While the channel where this structure is situated did not freeze up last winter, due to the swift current, ice formed at both ends of it and caused considerable trouble by breaking away and running through it. The current here runs both ways, depending upon wind conditions, and sometimes reverses its direction several times in 24 hours, so that great care had to be exercised in handling the dams and cribs.

The superstructure is of steel, from plans



Little Current Terminals, Algoma Eastern Railway.

made by Boller, Hodge and Baird, consulting engineers, New York, and is designed under the specifications of the Railways and Canals Department, for class 1 loading, and consists of one 368 ft. c.c. through draw span, with one 60 ft. and two 70 ft. over all deck plate girder approach spans, all single track, with one walkway. The approach spans are 6 ft. 6½ ins. and 7 ft. 6½ ins. deep out to out of flange Ls., which in all cases are 6 ft. 6 ins. with 14 in. cover plates. The girders are spaced 8 ft. c. to c. and are thoroughly braced with top and bottom lateral bracing and stiff end and intermediate cross frames. Transverse 10 in. I beams are riveted to the top flanges to form supports for the walkway.

The draw span is 368 ft. long, c. to c. of end bearings, with trusses spaced 18 ft. 3 ins. c. to c., the length being divided up into 12 panels of 30 ft. 2 ins. each with a central panel of 6 ft. over the pivot pier. The depth of truss varies from 30 ft. at the end to 57 ft. c. to c. of chords at the centre over the pivot pier. All members are designed to resist both tension and compression except members L4-U5, U5-U6, U6-U6, which sustain tension only and are made of eyebars. The end posts, top chords and main diagonal posts at the pivot pier are built of 21 in. web plates, 24 in. covers, 3½ [illegible] The lower chords from end to end are built of 20 in. web plates with 4-3½ by 3½ in. Ls and with 13 in. side plates where necessary. All intermediate diagonals, except where eyebars are used, are built of 18 or 20 in. web plates, with 4 Ls 3½ by 3½ in.; the verticals are built of a plate and 4-6 by 3½ in. Ls where they act as hangers and of 2-15 in. Ls where they act as post.

The floor system consists of stringers 53 ins. deep, riveted into the floor beams 66 ins. deep, which are in turn riveted into the verticals of the trusses. Top and bottom bracing is of Ls, designed for tension only in the case of the top laterals, and for both tension and compression in the case of the bottom laterals. Each portal consists of [illegible] in. Ls, forming a frame 3 ft. 9½ ins. deep with two plate braces. Transverse bracing at intermediate points consists of 4 Ls 5 by [illegible] the height of the trusses. The transverse [illegible] consists of frames similar to the intermediate transverse bracing, above the house, and in addition heavy kneebraces [illegible]

[illegible]

eight trailing wheels running on a cast steel track 25 ft. in diameter. The main rack circle and the track are cast together in 13 sections. The two main centre girders are 105 ins. deep out to out of Ls, with 8 by 8 in. flange Ls and 18 in. cover plate and carry the dead load of the span to the pivot girders 6.5 ins. deep resting on a steel casting which bears directly on the discs. While closed the ends of the trusses are supported by cast steel wedges, which are driven by the operating machinery so as to bring a dead load reaction under each end of each truss of 60,000 lbs., thus preventing the end from rising from its support under certain conditions of loading. Each truss is supported at the pivot pier by two wedges spaced 6 ft. apart, but which are so adjusted that they take live load only, the dead load being carried by the pivot. Both the end and the centre wedges are operated by worm gears driven by shafting from the operator's house, and protected by cast iron casing, which is so arranged that the gearing runs in a path of oil. The main pinion for swinging the span is cast steel 15 ins. in diameter keyed to the 7 in. main turning shaft, and suitable gearing is provided between this shaft and the engine shaft to give the required speed.

The power for turning the draw and for operating the end and centre-wedges is supplied by a 25 h.p. Fairbanks Morse gasoline engine, located in the operator's house above the tracks at the centre of the draw, the main shaft having a velocity of 220 r.p.m. and working the machinery through two friction clutches. The turning shaft and the wedge driving shaft are each provided with a jaw clutch, so that the power can be transmitted to each one as desired by moving the necessary lever. A safety device is provided for the wedge shaft, to prevent driving the wedges too far and injuring the latching machinery, consisting of a cross head connected by levers to the jaw clutch of the wedge shaft and so adjusted that when the wedges have been drawn far enough it will have moved sufficiently to disengage the jaw clutch and thus shut off the power from this shaft. The ends of the span when closed are held in position by a latch located at the centre of the end floor beams and which is so connected with the wedge shafting that it is lifted from its socket when the wedges are withdrawn. When the span swings, the latch strikes a projection on the socket casting and is lifted, thereby disengaging a trip, which allows it to drop to its original position, so that when the span is closing the latch rollers will mount the inclined sides of the latch casting on the pier and drop into the socket, thus firmly latching the span before the wedges are driven home. All lengths of truss members are corrected to bring the lower chords in a horizontal line with the bridge closed, and the wedges driven to give a 60,000 lb. reaction at end of truss. The computed drop in end of truss when wedges are withdrawn is 1.4 ins.

The Canadian Bridge Co. was awarded the contract for this job, and this part of the bridge is now being erected. Due to delays in delivery of material from the mill, the bridge company will not complete this erection until some time in October.

The work on Goat Island consists of a small yard, including a 4 stall rectangular house, of frame construction, on concrete foundations, with concrete pits, a concrete cinder pit, a 100 ton Fairbanks-Morse elevator coal chute, and a water station consisting of a 50,000 gall. tub on a 30 ft. tower, with a windmill extension for pumping, together with an auxiliary 5 h.p. gasoline pumper. Water is pumped into this tank and from thence discharged to a 10 in. Sheffield Johnson telescopic standpipe, and to the locomotive house and coal chute for service use and fire protection.

The docks consist of a coal dock and a commercial dock. The coal dock has 450 ft. frontage in the channel. It consists of timber cribs built up to an elevation of 5 ft above water. They are of round hemlock to 2 ft. below low water, and of square 12 by 12 in. B. C. fir above this elevation. They are framed in 100 ft. sections and sunk with rock. Afterwards they are filled to top with stone. These cribs are at present in 6 to 8 ft. of water. Arrangements are completed for dredging in front of the dock by the Dominion Government. After sinking these cribs, forming the face of the proposed dock area, filling will be deposited back of same to bring the area just above water level, forming a storage ground for coal. This storage space is planned to hold 80,000 to 90,000 tons of coal. Later extensions can be made to increase this.

A modern unloading and reclaiming coal handling plant is arranged for in connection with this dock, to be furnished and erected by the Brown Hoisting Machinery Co., of Cleveland, Ohio, and consists of an unloading and reclaiming bridge, of 300 ft. span, covering over the storage space, with a cantilever overhang at the front of 83 ft. One end of this bridge will be carried on a portal pier arranged to run on two tracks spaced 32 ft. centre to centre. Each track will consist of two lines of 100 lb. rail, spaced 2 ft. 4 in. centres, and the other end will be carried on a shear leg, arranged to run on a similar single track.

The front track of the portal pier will be laid on two lines of B. C. fir, 24 by 24 ins. in size, laid directly on the dock cribs, the other portal track will be also laid on two lines of 24 by 24 ins. timbers supported by short 12 by 12 in. cross ties laid on rock filling. These two pairs of rails will be tied together by long cross ties 12 ins. by 12 ins. by 40 ft. spaced 10 ft. apart along the dock front. The shear leg track will be laid on 24 by 24 in. timbers, supported by concrete pedestal piers spaced 10 ft. centre to centre.

The bridge will be of sufficient capacity to unload coal out of a boat at the rate of 200 tons an hour, including the cleaning up. The bucket will be of 124 cu. ft. capacity, and

Nose of Protection Pier ready to sink.

Pivot and Protection Pier.

the specifications call for a rate of 500 ft. a minute hoisting and 1,500 ft. a minute propelling capacity along the runway. The bridge will be capable of propelling itself along the track at the rate of approximately 50 to 70 ft a minute, depending upon the wind.

The portal structure at the dock end will be arranged to span two loading tracks spaced 13 ft. centres. A 40 ton bin will be supported directly over these tracks. The shear leg is designed so that a 40-ton receiving bin, together with the necessary shaker feed box and box car loader, may be added in the future if desired. At present it is not contemplated that other than railway coal will be handled here. This whole crane will be operated by steam. Only a single bridge will be erected now; later, if business warrants, the dock may be extended and another bridge added.

The commercial dock will be constructed on a similar plan to the coal dock, and will have a warehouse 36 by 80 ft. built on it, to which tracks will extend, as indicated on the plan. Considerable solid rock dredging will be required here to permit deep draught vessels to approach this dock.

The entire terminal work, excepting the erecting of the coal crane and the dredging, will be completed this autumn. The coal handling crane will be erected early next spring, in time to handle coal early in the season.

Concreting Pivot Pier, January, 1913.

Foundations complete, looking north.

The Foundation Co. is doing the above work on docks and terminal buildings on a percentage contract. The railway company's forces look after all track work and grading for same.

The Algoma Eastern Terminals, Ltd., is the corporate name of the company constructing these terminals. The writer is Chief Engineer, B. E. Barnhill, Sudbury, is Division Engineer, and J. R. Black, Little Current, is Assistant Engineer in direct charge of the work.

Locomotive Failures in Summer and Winter.

In a recent issue of a United States contemporary, attention was drawn to locomotive observations made on a road operating in that country. This road was rather astounded to find on investigation, that contrary to all expectations, the number and extent of its locomotive failures were considerably greater in summer than in winter. This led to an investigation of the cause, leading to the discovery that anticipated greater numbers of breakdowns in the winter, had led the officials to make greater preparations to ward off trouble, with the result that the number of breakdowns was less in winter than summer. When, following this discovery, the same precautions were taken winter and summer, the repairs were found to assume their normal condition of greater in winter than summer. Desiring to ascertain definitely the conditions as they existed on Canadian lines, Canadian Railway and Marine World sent letters outlining the above observations to mechanical operators of the principal Canadian lines, from whom the answers quoted below have been received.

W. H. Winterrowd, Mechanical Engineer, C.P.R.: "Our locomotive failures are somewhat higher in winter than they are in summer. We keep a record of our locomotive failures by means of graphics."

W. D. Robb, Superintendent of Motive Power, G.T.R.: "You do not state on what roads in the U.S. it is claimed that failures are more numerous in summer than in winter, but I think it must be a road that does not suffer such severe winter conditions or have as much snow as we do in Canada. With the power in practically the same condition, we have a greater number of failures in winter, and our records show an increase of fully 25 to 35%".

S. J. Hungerford, Superintendent of Rolling Stock, Canadian Northern Ry.: "I am inclined to think that there was some unusual condition on the U.S. railway referred to, to cause a decrease of locomotive failures in winter, as it is entirely opposed to general experience and physical conditions. The matter of locomotive failures, however, depends on a great many factors, and it is exceedingly difficult to reduce them to actual failures so that a fair comparison can be made. It is obvious, however, that the chance of fracture during severe weather is greater than in warmer weather, as the metal seems to be affected by the frost, and roadbeds become much more rigid, besides getting out of surface as a result of the frost heaving it in places where the drainage is not perfect. In addition to all this, trains that have been standing for any length of time offer greatly increased resistance, and as the additional resistance due to snow on the track is difficult to determine, it frequently happens that locomotives have to be worked proportionately harder in order to handle tonnage or make time, and this results in greater stresses in machinery, and the greater amount of water evaporated, together with the forcing of the fire, increases the risk of flue leakage. It is also practically impossible under certain weather conditions for employes to examine their locomotives as carefully, or to perform their duties as efficiently, while the usual irregularity of trains in very severe weather also acts as a handicap on locomotive house forces in looking after equipment properly. Taking it altogether, it is my opinion that there is at least twice the chance of failure in winter that there is in summer, in this particular territory at least, and our statistics seem to show this."

G. R. Joughins, Superintendent of Motive Power, Intercolonial Railway: "We, in common with most railways in Canada, find that the failures are greater in winter, but regret that we have no figures that we could give."

Concrete Water Barrels for Railway Bridges.

Concrete water barrels for railway bridges are described by H. McDonald, Chief Engineer, Nashville, Chattanooga & St. Louis Rd., in the 1912 Proceedings of the Engineering Society of the South. One design is 30 in. deep, 24 in. outside diameter at the top, tapering to 22 in. at the bottom. The sides and bottom are 2 in. thick, reinforced with a sheet of expanded metal. The cover is of iron, hinged to a lug embedded in the concrete, and is depressed so as to catch rainwater. They do not leak, the evaporation is slight, and the concrete will resist bullets (which are apt to be fired at the barrels by boys and others). The total cost is about $1.70, divided as follows:

Cover: Galvanized iron, 5 sq. ft. at [illegible]	[illegible]	
Hinge, bolts, rivets and wire	0.05	
Cost of making, 1 man 1 hour	[illegible]	[illegible]
Barrel: 17 sq. ft. exp. metal at 3c	[illegible]	
0.1[illegible] cu. yd. 1:2:4 concrete	0.24	
Forms (25 barrels to one set)	[illegible]	
Labor	[illegible]	1.15
Engineering and contingencies, 10%		0.15
Total		$1.7[illegible]

Other experiments have been made, using a less tapered form of barrel, galvanized iron forms, and poultry netting reinforcements. Plastering the mortar on the reinforcement has not resulted in tight barrels, but 1:2:4 concrete cast and jammed into forms has given good results. It is believed that good concrete water barrels, with metal tops, can be made for $1.30 each, in large quantities. Another design consists of a concrete box let into the ground all but about 1 ft., this upper part being marked with the number of the trestle.

The wooden barrel is the more expensive of the two, considering its capitalized cost, on the basis of six years life, leaving out all consideration of increased cost of maintenance. The ballasted deck trestle is rapidly becoming the standard on most roads, and it is thought that in the future the water barrel will seldom be needed. For this reason concrete barrels are not used to any extent on the N., C. & St. L.R.

Chilled Iron Car Wheels.—In a paper read before the New England Railroad Club recently A. A. Hale stated that, in the development of the freight car from 20,000 to 100,000 lbs. capacity, all parts of the car have been increased in weight, but no part has shown such slight increase as the chilled iron wheel. Car capacity has increased 400%, the weight of axle 149%, the weight of rail 100%, whereas the weight of the wheel has increased only 38%. In the opinion of the author, chilled-iron is the only metal of which wheels are manufactured which will stand up under extremely heavy loads without crushing or flowing.

The Montreal Warehousing Co. expects to have its 1,000,000 bush. extension to its grain elevator B, complete and ready for operation by Nov. 15.

National Transcontinental Railway Power House at Transcona.

The N.T.R. Commission, in building the large general locomotive and car repair shops at Transcona, Man., decided that the best interests of the railway, in economy, efficiency and reliability, could be served by the erection of a modern central power plant in which all steam and electrical apparatus of sufficient capacity to supply the present demands should be located. The power house is therefore one of the group of buildings described in general in Canadian Railway and Marine World for Feb., 1912. The power house is equipped throughout with the best apparatus that money could purchase, and with the care shown in the design and selection of equipment the plant is at least the equal of any in Canada, as well as being one of the largest railway repair shop power plants on the continent.

All the main buildings comprising the shops face on a central midway, which is 1,200 ft. long, and extends through the shop grounds from the locomotive house to the public highway. The buildings in which locomotive repairs are made are those at the south end of the midway and adjacent to the locomotive house, whereas the car repair buildings are on the north end of the midway and alongside the street leading to Winnipeg. The power house occupies a central position between these two groups and is on the west side of the midway. This central location is excellent for an efficient and economical distribution of steam, air, water, and electric power to the various buildings for all purposes. The necessity of possible future extension has been anticipated, and in consequence this building, in common with the others of the repair plant, may be largely extended with a minimum expense.

The power house is of very similar construction and appearance to that of all the other buildings of the plant, being concrete below window sills and local white brick above, while the roof trusses, crane tracks and coal handling and storage plants are supported on steel columns. The outside dimensions of the structure is 110 by 155 ft. with the narrow frontage on the midway, and is divided by a brick fire wall into a 59 by 150 ft. engine room and a 45 by 150 ft. boiler room, the latter being on the south side of the building. The pump pit is a part of the engine room and is 16 ft. wide by 8 ft. deep, extending along the fire brick wall the entire length of the building.

The general arrangement and construction of the 59 by 150 ft. engine room is shown in one of the accompanying illustrations. It will be observed that the roof is carried on nine trusses, supported on steel columns from the side and fire walls. The design is such that with the central skylights in the roof, and large windows around three sides of the room, almost perfect natural illumination is obtained. The walls, ceiling and steel work are painted white, which aids in the illumination of the room. Ventilation is obtained through all windows and skylight ventilators. The roof is spanned by a 10 ton hand operated travelling crane, capable of handling any of the heavier parts of the engine room equipment.

The pump pit and boiler room floors are of [illegible]

[illegible] necessary to carry the foundations for all [illegible]

[illegible] and most of the steam, air and water piping are concentrated in the pump pit mentioned previously, this leaving that portion of the power house above the floor practically clear.

The boiler room contains the entire steam generating equipment for power and heating of the locomotive and car shops, access between this and the engine room being only through fire doors. In this room are also located the coal storage bins and coal ash handling apparatus. A special track for coal supply cars runs along the south side of the power house. The 200 by 11 ft. reinforced concrete chimney is entirely independent of the building and a few feet west of it.

The generating apparatus in the engine room consists of 9 units with a total normal capacity of 2,030 k.w. divided as follows:—1,600 k.w. alternating current and 430 k.w. direct current. The generators were manufactured and installed by the Canadian General Electric Co., and the Goldie & McCulloch Co. supplied and installed all engines.

View of Engine Room, from South West Corner

The standards adopted by the N.T.R. Mechanical Engineer for the various types of apparatus and supplies are as follows:

[illegible]

Hydraulic pressure (for tools)..1,500 " " " "

[illegible]

In order to designate the various piping systems the following standard colors have been used:—

[illegible]

The units supplying the electrical power are provided as follows:— Three 500 k.w., a.c. 600 volt 60 cycle 150 r.p.m. generators each direct connected to a horizontal 21 by 30, 34 by 30 in. cross compound noncondensing Corliss steam engine. One 250 k.w., a.c. 600 volt 60 cycle 150 r.p.m. generator direct connected to a horizontal 18 by 30 in. simple Corliss steam engine. One 150 k.w., d.c. compound wound 250 volt 150 r.p.m., generator direct connected to 14 by 30 in. horizontal simple Corliss steam engine. Two k.w., d.c. compound wound 125 volt 275 r.p.m. exciter generators direct connected to horizontal 11 by 12 in. high speed simple engines. One auxiliary 150 k.w. motor generator set consisting of a 225 h.p. 900 r.p.m. induction motor direct connected to a 150 k.w. d.c. 250 volt compound wound interpole generator. All apparatus is noncondensing, on account of all the exhaust steam from the engine, compressor, and other auxiliary devices being required in the low pressure steam system of the shops.

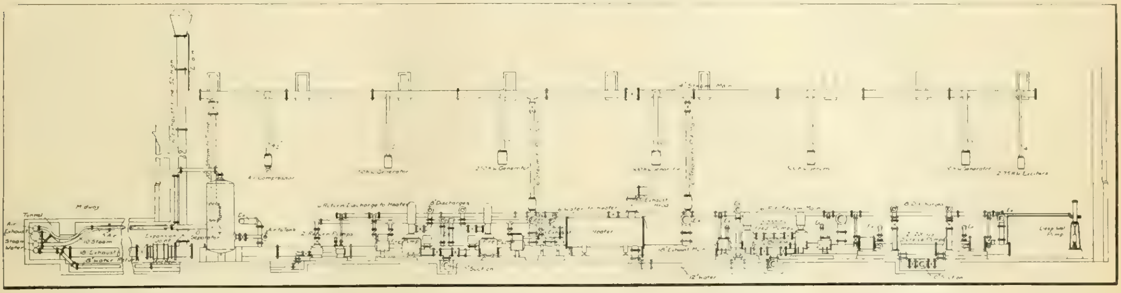
The switchboard controlling these generators was manufactured and installed by the Canadian Westinghouse Co., and consists of 21 blue Vermont marble panels 7 ft. 8 ins. high, and 2 ins. thick, the entire board being 52 ft. long. There are 7 generator panels, 1 a.c. totality panel, 1 d.c. feeder, 1 a.c. general lighting, 1 arc lighting, and 10 a.c. feeder panels, the only special apparatus on the switchboard being the motor operated rheostats with which each of the generator panels is supplied. As all the power and light distribution is underground the necessary cables pass through 38 ducts in the east and west walls to the various buildings. The conductors between all generators and switchboards are rubber insulated, lead covered cables, run in iron conduit from the oil switches to generator terminals; all feeder circuits to the various buildings are paper insulated and lead covered, run in fibre or tile conduit.

There is at present 2,560 k.w. in motor and lighting load connected to this power plant, and this amount will be increased to approximately 4,060 k.w. when the car shops are fully equipped. The low load factor common in this type of shops, still gives the power plant a reasonable margin for emergencies.

The artificial lighting of both the engine and boiler rooms is performed by Cooper Hewitt type H mercury vapor lamps for general illumination, and incandescent lamps in the pump pit, pipe tunnel, and in the boiler room basement. Extension cord receptacles are also located at various places in the building.

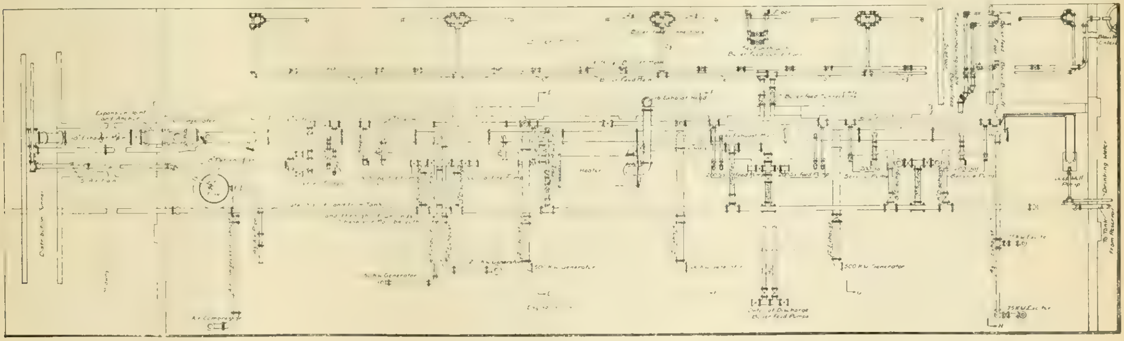
All the large steam driven units are lubricated by a gravity pressure system, and all waste oil flows by gravity to a filter located in the pump pit from which it is again pumped to the overhead supply reservoir.

The pit arrangement is probably the most interesting of the power house details, and is shown completely in the accompanying illustrations. The several boilers all have 8 in. U bend steam connections from the top, connecting through openings in the fire wall with a 14 in. steam main along the fire wall over the pit. From this main, the several connections to the different power units lead off, all protected with magnesia coverings, which in addition to introducing an economy, add an attractive appearance to the piping. At the engine end of each of the connections, there is a separator. Near the centre of the room are two 6 in. steam legs with separators at the lower end, connecting with a 6 in. steam main just below the floor level, this main running the full length of the pit, supplying all the auxiliary equipment there located. At the east end of the upper main, there is a 10 in. steam leg with separator, connecting with a 10 in. main that runs through the tunnel down the midway, supplying steam for shop use, but principally for the steam hammers in the blacksmith shop.



Cross Section through Pit, looking towards Fire Wall.

In addition to the electric generating apparatus in the engine room, there is a horizontal cross compound, Corliss, two stage air compressor having a capacity of 1,500 cu. ft. of free air per minute, at 80 to 100 lbs. per sq. in. pressure. The steam cylinders of the compressor are 16 and 25 ins. diameter, and the air cylinders, 24 and 14 ins., the stroke being 36 ins. Both air cylinders are fitted with Corliss inlet and poppet outlet valves. The speed is regulated by a combination speed and pressure governor, the normal speed being 90 r.p.m. Both air cylinders, heads and intercooler, are water cooled.



Plan of Piping Arrangement in Engine and Boiler Rooms.

The exhausts from the different engines, all lead out from under the engines in shallow trenches under their respective engines, connecting with an 18 in. exhaust main at the bottom of the pit along the fire wall. All the buildings of the plant are heated by exhaust steam on the indirect fan system, as explained and described in the previously mentioned article. This main leads out through the front of the building into the distribution tunnel to all the buildings. At the front of the building, there is an oil separator to keep the heating system clean, and an anchor and expansion ring to take up all the linear expansion due to heat. Midway between the anchor and expansion joint, a vertical 16 in. pipe, 52 ft. high, leads up to an exhaust head on the roof of the building for atmospheric exhaust. There is a back pressure valve in the vertical pipe, which controls the pressure in the heating systems, also the back pressure in the engines; when the heating system is not required, it can be shut off, valves being located in the main just beyond the exhaust head connection.

A feed water heater is located at a central point in the pit, one end connecting with the exhaust main, and the other leading on through an exhaust head similar to the one just mentioned. A valve is situated in the short connection from exhaust main to heater for cutting this out when necessary to clean the heater.

The water system is very complete. In order to obtain a soft water supply at the shop site, a pumping station was erected at the Red River. This station has suction pipes running out into deep water, connected to vertical triplex high speed pumps having a 24 hour capacity of 1,000,000 imp. gallons, direct connected through friction clutches with gas engines. There is a duplicate producer plant to ensure a continuity in the service. The water is conveyed the 6 miles to the shops through 6 in. wooden stave piping. At the shop site, some distance to the rear of the power house, the water is emptied into one end of a storage settling basin of a storage capacity of 2,000,000 imp. gallons. This reservoir is constructed of concrete, and is 60 by 270 ft., and 25 ft. deep, the top being slightly above the level of the ground. The reservoir is divided lengthwise by a reinforced concrete wall, the balance being of mass concrete. The dividing wall makes possible the use of one half of the reservoir for storage, while the other half is being cleaned, and vice versa, as the water from the river is full of sediment, requiring constant cleaning. The reservoir is roofed over with double planking supported on steel beams. Close up under the roof are hung a number of heating pipes, to prevent the water from freezing too thickly on top and interfering with the outlet pipes. The water is drawn off from the end opposite that for the entry, giving the sediment a good opportunity to settle.

From this reservoir, the water is drawn off through a 10 in. pipe, coming into the power house in a trench in the bottom of the pit along the engine room side of the auxiliary machinery pit. This main leads along the side of the pit through nearly its full length. Near the rear of the pit are two 1,200 gallon centrifugal service pumps, driven directly by two 70 h.p. Kerr turbines, drawing their water from a 10 in. suction pipe from the reservoir water main, and each delivering through an 8 in. discharge pipe into a 10 in. water main near the top of the pit on a level with the engine room floor, on the same wall of the pit as the reservoir water main. This upper water main connects at the rear, or west end, of the building with a 100,000 imp. gallon steel

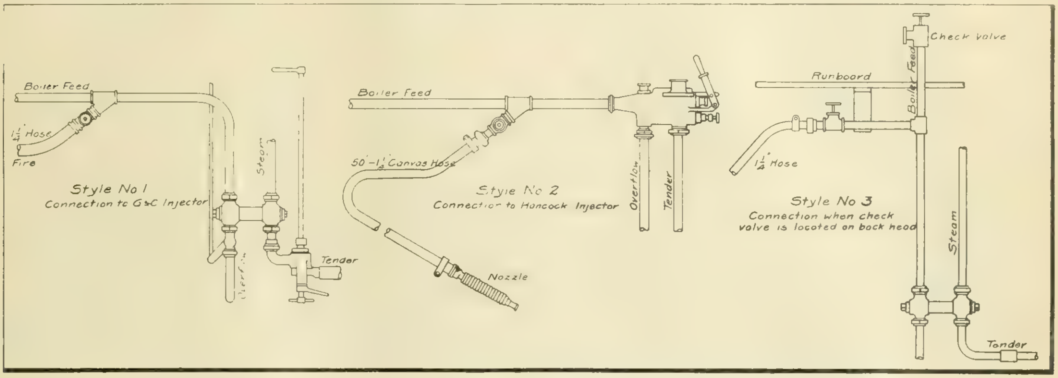
Locomotives Equipped for Fire Fighting on the Canadian Pacific Railway.

Mention has been made in the technical press that certain U. S. railways have equipped some of their locomotives with fire fighting apparatus, to act as auxiliaries to the local municipally owned apparatus at the several stations where these equipped locomotives are to be located.



Equipment of C.P.R. Locomotives for Fire Fighting, showing Water Connections from Boiler Feed Pipe.

For some time past, the C. P. R. has been equipping all its switching locomotives with fire fighting apparatus, and in addition to this being ordered on all new switching equipment, orders have been issued to add it to all of that class as they come in for shopping. At the end of last year, there were on all parts of the system, 162 locomotives so equipped.

The equipment is standard, apart from the method of installation on old and new locomotives. There are three different styles shown in the accompanying illustration. Style 1 is for use with the old G. & C. injector. The only change in the existing arrangement to introduce the fire apparatus, is to place a Y connection in the boiler feed pipe, with a valve connection in one of the legs for the hose connection. In style 2, the arrangement is the same except that it is for the Hancock injector. Style 3 is similar in most particulars to style 1, except that the boiler check valve is in the back head of the boiler, a practice followed with some small saddle back switching locomotives, necessitating a pipe branching off from the feed pipe and running forward under the runboard. Each side of all the locomotives is similarly equipped, so as to make the auxiliary injector of service.

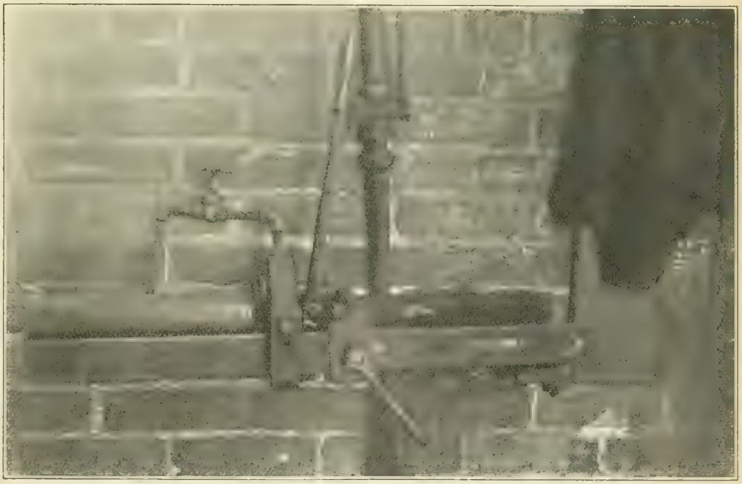
Each locomotive is equipped with 50 ft. of 1 1-4 in. canvas hose for attachment to the Y connection. This is provided with a 5-8 in. nozzle. With the pressure of the water, as forced out by the injector, a stream can be thrown for a considerable distance, with the stream of such volume as to be of considerable assistance in checking a fire in the early stages.. Each locomotive is also equipped with a nipple threaded to fit the local hydrant of the place where the locomotive is stationed, so that the hose may be used on the local service when the water in the tender has been exhausted, or when it is otherwise deemed expedient to do so

The 162 locomotives equipped are well distributed over the system, as shown by the following list of locomotive locations. Eastern Lines: Glen Yard, 3; Sortin, 4; Toronto, 8; Windsor, 1; North Bay, 1; Sherbrooke, 1; McAdam Jct., 1; Hochelaga, 10; Angus Shops, 1; London, 3; Prescott, 1; Quebec, 1; Brownville Jct., 1; Bay Shore (St. John), 3; Outremont, 9; West Toronto, 12; Havelock, 1; Carleton Place, 1; Three Rivers, 1; and Farnham, 3. Western Lines: Winnipeg, 22; Calgary, 6; Kenora, 3; Medicine Hat, 2; Red Deer, 1; Sutherland, 2; Strathcona, 1; McLeod, 1; Weyburn, 1; Fort William, 12; East Calgary, 5; Lethbridge, 2; Eholt, 1; Swift Current, 1; Portage la Prairie, 1; Wilkie, 1; Souris, 2; Smith's Jct., 1; Brandon, 5; Moose Jaw, 8; Vancouver, 9; Revelstoke, 1; Minnedosa, 1; Kamloops, 1; Ignace, 1; Regina, 3; and Cranbrook, 3.

Tube Testing Head at Toronto, Hamilton and Buffalo Railway Shops.

An arrangement is in use in the T. H. & B. R. shops, Hamilton, W. T. Kuhn, Master Mechanic, for expediting the work of testing safe ended tubes. These are all subjected to a hydrostatic presure, most shops having special provision for so doing.

The test stand consists of a length of shallow channel, with water headers at each end between which the tube is placed, and the pressure applied. In this particular, most testing machines are the same. The adjustable head of this stand is out of the ordinary, and is shown in the accompanying illustration. For the accommodation of different lengths of tube, and for introducing tubes of the same length, adjustment is required. For varying lengths of tubes, there is a cross brace in the channel, secured where desired by a clamping screw on the side of the channel as indicated. The water head is loose, and may be moved within a short limit without stop adjustment.



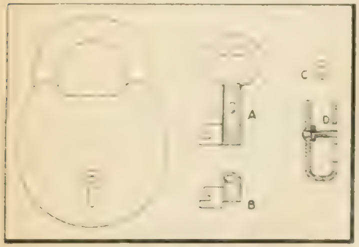
Quick Operating Tube Testing Head.

Pivotted to the face of the stop is a lever, the lower end of which is cam shaped. In the vertical position, the tube can be introduced. By bearing down on the lever, the packed water head can be forced against the end of the tube, forming a tight, packed connection. This connection can be quickly made, and as quickly removed, facilitating the work of testing.

A paper on the railway hotel and its function, by F. W. Bergman, Manager Grand Trunk Pacific Ry. Hotels, was read before the Western Canada Railway Club in Winnipeg, Sept. 8.

An Improved Padlock.

In a large Canadian railway repair shop in Montreal nearly all of the employes have a padlock of their own for various purposes and reasons sufficiently good to themselves. Some are direct and some indirect, and many kinds are used, especially on tool boxes. In spite of their variety, however, some of the employes on the night shift delve deeper than the lock maker, and supply themselves with keys of a dozen different kinds of design, and seem to have no great difficulty in making a private inspection of the interior of the tool boxes. In order to put a stop to these questionable transactions, we cut a small piece off the key ,as shown in the accompanying illustration at B, and made from steel wire an open ring, C. and placed the ring inside of the lock on the key guide pin at D. The lock may be readily opened by the owner of the key from which the small piece has been cut, but when the midnight prowlers come along with their false set of keys, they find that their right hands have lost their cunning, and, as they say, they are up against it, and they are compelled to turn their mechanical ingenuity to some other more honorable occupation.—J. G. Koppel, in Railway and Locomotive Engineering.



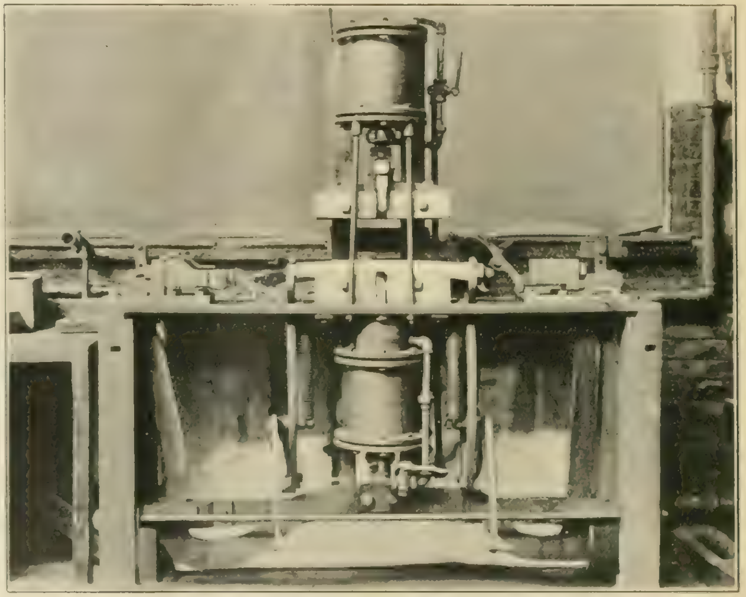
Safety Padlock

Air Hose Machine in Grand Trunk Railway Port Huron Shops.

Practically all the different types of hose repairing machines in use on the various Canadian lines have been described in Canadian Railway and Marine World. Each shop seems to have developed a machine which seems to meet its own particular requirements. In the shops at Port Huron, Mich., the machine shown in the accompanying illustration is in use, a design that was evolved and constructed there.

Mounted on legs above the table is an air cylinder, and in line with it is a similar cylinder supported from the under side of the bench. On the bench is a half die section, grooved to hold the hose, and with a corresponding section attached to the lower end of the upper cylinder plunger rod. The lowering of the latter secures the hose during the forcing in of the fittings. The latter are held in guided blocks just beyond the ends of the hose. These guided blocks are moved along their ways by bell cranks, pivotted on a frame of bar iron under [illegible] to the lower cylinder plunger rod, the de- [illegible] blocks towards each other, forcing the fittings into the hose ends, the latter being [illegible] front of the cylinder, so located that the [illegible] The downward force of the lower cylinder, if the hose fittings are rather tight, is so great that in service, one of the bell cranks failed. In the present construction, this weakness has been remedied by a cross brace between the vertical and horizontal arms of the bell cranks.

The clamping rings over the hose ends, binding the latter to the inner end of the fittings, are tightened up into such a position that the clamping bolts can be inserted by means of the foot levers near the bottom of the view, outside of the coiled springs below the bench. Pivotted at the bench level at each end of the hose, is a pair of long pincers, the upper ends of which come up over the top of the hose clamp, tapering down to a thin edge at the point where they engage the clamp. The lower ends of each pair of pincers are connected through two short joined links, inclined upwards to the juncture. The connecting pin at this juncture is attached to the foot lever, the inner end of which is pivotted at the wall, so that the depression of the treadle forces apart the lower ends of the pincers, the upper ends closing over the clamp ring, when the bolt can be inserted and tightened. To tighten effectively, each end is operated on separately, the operator standing on the end of the treadle of the end being clamped.



Air Hose Machine for Inserting and Removing Fittings.

The machine can also be used for pulling out the fittings from old hose, by fitting into the guided blocks the hooks shown on the bench in the right background. The guided blocks are first brought to their inner position, the hook clamps inserted in the block and attached to the fittings at each end, and by a reversal of the motion in the lower cylinder, the fittings are withdrawn.

Defective roadway and defective equipment jointly caused more than 70% of all the derailments on steam railways in the United States during the quarter ended March 31, according to statistics recently published by the Interstate Commerce Com- [illegible]

Construction Railway and Grand Trunk Railway Deviation on New Welland Ship Canal.

In connection with the building of the new Welland Ship Canal, described in the Marine Department of Canadian Railway and Marine World for July, there is to be built a section of double track industrial railway for the use of the contractors, and in addition, a section of the G. T. R. Welland branch is to be diverted to make room for the new canal, which follows the course of the old railway line through this section of the canal.

It is proposed to build this construction railway double track and standard gauge, along the west bank of the canal, extending from the shore line of Lake Ontario to the stock piles of rock on section 3 of the work north of the G. T. R. main line, near the site of the tier of three double locks, a distance of about 6 miles. This line is to be built by the Department of Railways and Canals in a semi permanent manner, with at least 56 lb. rails, on good ties at 2 ft. centres, and ballasted with broken stone or gravel.

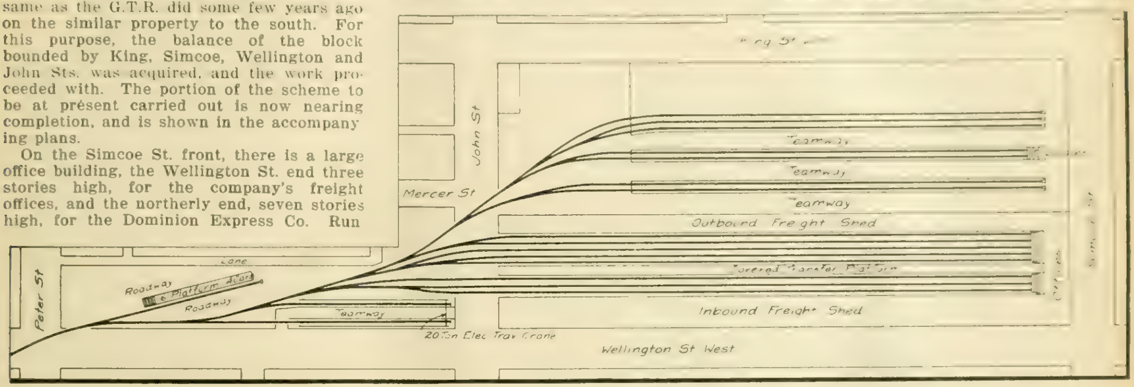
The general contractors for sections 1, 2 and 3 of the canal, which include all the locks and the terminal piers at the Lake Ontario end, will be allowed the free use of the railway for hauling the excavated material to the dump in the lake, and the contractors for sections 1 and 2 will also be allowed its use for the hauling of stone from the stock piles to the various works. Contractors for the steel and other work will also be allowed the free use of the line. A dispatching station will be maintained, with a dispatcher, who, with switchmen, will have complete control of train movements over the railway. Contractors may make connections to the line, under approval. Before using the line, the contractors will be required to sign an agreement relieving the Department of all responsibility in connection with accidents or breakages on the line.

The section of the G.T.R. Welland Branch to be diverted is about a mile which closely follows the present canal just south of where the Welland Branch leaves the main line. The diversion will leave the main line at the same point, but instead of immediately crossing the canal, will follow the west bank, making a sweep to the west and crossing the canal at right angles about a mile south of the present crossing of the existing canal.

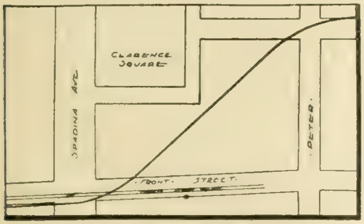
New Toronto Freight Terminals for Canadian Pacific Railway.

About two years ago, the C.P.R. acquired the old Government House property, corner of King and Simcoe Sts., Toronto, on which to erect new package freight terminals, the same as the G.T.R. did some few years ago on the similar property to the south. For this purpose, the balance of the block bounded by King, Simcoe, Wellington and John Sts. was acquired, and the work proceeded with. The portion of the scheme to be at present carried out is now nearing completion, and is shown in the accompanying plans.

On the Simcoe St. front, there is a large office building, the Wellington St. end three stories high, for the company's freight offices, and the northerly end, seven stories high, for the Dominion Express Co. Running back from the office buildings, there are two 900 ft. freight sheds, one for incoming and the other for outgoing freight. Between the two are 8 tracks. There is a covered transfer platform running along between the buildings, also 900 ft. long. To the north of the buildings there are three teamways, with 7 team tracks. The frontage on King St. to the north is to be utilized for future office and freight shed extensions.



Plan of New Canadian Pacific Railway Freight Terminals at Toronto.



Approach to New C.P.R. Freight Terminals.

To the west of John St., additional property was acquired for heavy team tracks. The approach to the yards is through this section of the property. The approach tracks leave the main line at Bathurst St., ascending the escarpment along Front St., reaching the upper level at Spadina Ave., as shown in the smaller illustration. From that point, the line cuts across blocks on its own right of way to the new terminal property.

R. Mee, who took the first C.P.R. passenger train to Port Moody, then the Pacific terminus, died at Vancouver, B.C., Aug. 27.

Proposed Reduction in the Height of Box Cars.

The subject of the reduction [illegible] of freight cars has come up before the Board of Railway Commissioners [illegible] recent occasions. The bulk of the evidence taken indicates that the C.P.R. is the only line operating in Canada that strongly favors the proposed reduction, the principal consideration advanced being that it would facilitate the matter of grade separation. At the first hearing, in Ottawa, June 17, there were representatives of the C.P.R., G.T.R., Canadian Northern Ry., Michigan Central Rd., Wabash Rd., New York Central Lines, Pere Marquette Rd., Toronto Board of Trade, and the Canadian Manufacturers Association, all of whom took part in the discussion. The section discussed was a "consideration of the proposal that by limiting the height of freight cars to 13½ ft. from the top of the rail to the running board, trainmen would be safeguarded and grade separations facilitated; also of proposals submitted by the Canadian Freight Association in conformity with the suggestion that this object would be promoted by basing the minimum weights of the Canadian Freight Classification for light and bulk articles on the cubical capacity of box cars instead of their length as at present." J. W. Leonard, Assistant to Vice President, C.P.R., pointed out that an inside height of 8 ft., plus the 7 ft. clearance over the running board as called for by the Railway Act, would give a clearance of 20½ ft. This difference between 20½ and 22½ ft., the clearance demanded by the Railway Act, would in many instances enable a separation of grades, where the increased cost due to the excess of 2 ft. clearance would make grade separation out of the question. The late Chief Commissioner, J. P. Mabee, is claimed to have stated that there were dozens of cases in the last few years that would have been got rid of but for this consideration. Mr. Leonard further stated that there was a probability that both the C.P.R. and G.T.R. might get together and agree not to build any more cars greater than this height, as recommended by the American Railway Association in 1901, and ordered as standard by the Master Car Builders' Association.

D. Crombie, then General Superintendent of Transportation, G.T.R., stated that as 61% of their traffic in 1910 was international, it might affect that portion of their business if the height of cars were restricted in Canada and not in the U.S. This was an important factor, as it was stated by S. W. Brown, General Superintendent, M.C.R., that there are on this continent 58,000 box cars in excess of the proposed height standard, and Automobile cars appear to be the worst offenders.

The discussion was [illegible] the feasibility of having international shippers advised of the ruling in Canada, and sending their goods in cars that would meet Canadian requirements. Mr. Leonard [illegible] to think this practicable, but the majority of the railway representatives were opposed to this, claiming it would work a discrimination in favor of through U.S. lines which had no such limitations.

Chief Commissioner Drayton then stated that he thought a ruling or order ought to be made that no box cars be built in Canada by railways under the Board's jurisdiction to exceed 13½ ft. high, and that these cars only should be used for shipments between points in Canada. Also, that no cars in excess of 13½ ft. should be loaded in Canada for delivery in the U.S., and that no cars on the U.S. lines of the companies under the Board's jurisdiction should be loaded for delivery in Canada. No action towards enforcing this ruling has been made, nor has an order covering it been issued.

At the second hearing, in Toronto, July 15, in addition to representatives from the the previous hearing, there were representatives of the Canadian Freight Association and of individual manufacturers who would be affected by the passage of the proposed order. The Ford Motor Co. raised the principal manufacturers' objection to the proposed standard, claiming that with the high cars, by loading their motors on end, it was possible to load 7 to a car, whereas with the lower car proposed, it would only be possible to load 3, and the suggested measure of making the cubical contents of a car the basis of minimum weights would not overcome this difficulty, as the increased length of car that this might introduce would not increase the loading capacity as far as this product was concerned. The Canada Ingot Iron Culvert Co. raised objection on the ground that as its product was light and bulky, it was necessary to pile flat cars higher than the proposed height restriction in order to secure anything like the minimum loading. The Chairman of the Furniture Section of the Canadian Manufacturers Association raised the point that U.S. manufacturers would have the advantage over Canadian manufacturers, as the former would be able to use the higher cars for shipping in their product, working a discrimination against the Canadian manufacturer, but this objection was met by the Chief Commissioner stating that the proposed order [illegible] everything except the through movement of high cars. The substitution of the cubical content basis for minimums instead of the car length basis as at present would, in the opinion of those present, eliminate any hardship resulting from the lower car as far as the furniture manufacturers were concerned.

The principal difficulty in connection with an order that presented itself to the Chief Commissioner was the fact that at certain times of the year, principally when the grain was moving, there are so many cars travelling east on lines which carried chiefly a through business, that a large percentage have to return west light for want of loads. On returning west through Canada, they pick up what loads are available, relieving Canadian traffic conditions to that extent. In the event of an order, these lines would be prevented from carrying on this pick up business in Canada with the high cars, which might be a serious matter.

T. Marshall, Traffic Department, Toronto Board of Trade, pointed out that as there are on the average some 30,000 Canadian cars always in the U.S., the exclusion of foreign cars over the height limitation would tend to create a car shortage, for, while it was possible for U.S. shippers to eventually become advised of the car limitations in Canada, for some time it would be necessary to exchange loads at the frontier, leaving fewer Canadian cars open for engagement.

In reply to a query as to whether some revision in minimum weights would be made in the event of an order restricting the height of box cars, the Chief Commissioner stated that such a revision would be made regardless of this proposed order, for to leave the matter as at present is simply for the purpose of competition, to enable one traffic officer to get advantage of the other.

Mr. Leonard suggested that the width of box cars should be considered as well as height, as the widening of cars would necessitate the moving back of objects on the right of way, as required by an order made by the Board some years ago, in conformity with the then accepted standard.

The consideration of the matter of substituting cubical, for the length of car basis, as the minimum for light and bulky articles came up for brief discussion at this meeting, but as the railways did not seem anxious to consider the matter at that time, the consideration of this, as well as a further discussion on the reduction in the height of box cars was deferred to an unstated date.

Railway Efficiency.

By A. Crumpton, Assistant Engineer, Grand Trunk Railway, Montreal.

The product of a railway is transportation, and the measure of its efficiency is the quality and cost of producing the same. In transportation upon land the railway has proven itself pre-eminently superior to any other way. It is a far cry from a rate of $1 a ton per mile for "packing" upon men's backs, or even 25c. a ton mile by team, to ¾c. a ton mile, which is the average cost to the public by railways in America. Passengers in America pay an average charge of a little less than 2c. a mile, and a trip of 500 miles in 12 hours is common. Only the man on the inside realizes what this means, both as regards perfection and economy of construction and operation. In Europe the average freight charge per ton mile is 1½c.—double what it is in America —while passenger rates run from 1½c. to 2c. for third class to 3c to 4c. for first class accommodation. This is only of interest as showing where we stand, but does not prove anything as regards relative efficiency, the conditions of construction and operation being different on the two continents. In 1870, the average freight rate per ton mile was 2c. as against ¾c. in 1909, a reduction in 40 years of 62%.

W. M. Acworth, an international authority on railway economics, who from time to time inspects American railways in the interests of English investors, says: "It has been my opinion that in actual economy of operation the railways of the United States are first in the world."

A railway to continue and increase its efficiency must not only keep up its lines and equipment for current traffic, but must have means in advance to provide for increasing requirements. This country is rapidly growing in population and wealth, and there is an insistent demand for a better and more improved passenger service, faster freight service, and greater safety. Since these things, speaking generally, do not increase revenue they are a proper charge against operating expenses, and should be met by increased rates for transportation, where necessary. The peculiar fact is that while the public appreciates the situation in ordinary matters and expects to pay more for better pavements or better clothes, yet, in matters of transportation it demands better service and refuses to pay more for it. When, in 1910, a large section of the railways of the United States made application to the Interstate Commerce Commission for authority to increase rates, they were met by statements alleging lack of scientific management—that a million dollars a day could be saved by increased efficiency—and their request was refused. Detailed records of cost of building and maintaining railways and of conducting transportation have now to be kept by the railways, at the instance of the Commission, and the appraisal of all the railways in the United States has just been ordered, so that, no doubt, any future question of rates will be dealt with in the light of the efficiency shown by the railways. Briefly, it is claimed that the railways fail in efficiency as follows:

MAINTAINANCE OF EQUIPMENT, which consumes about 20% of the total operating expenses. "Railway repair shops throughout the country do not show 50% efficiency on an average as regards either materials or labor."—Emerson.

MAINTENANCE OF WAY, consuming about 20% of total operating expenses. "Standards of maintenance of way vary, but innumerable assays of actual work show a maintenance-of-way labor efficiency of scarcely more than 30%."—Emerson.

TRANSPORTATION, consuming about 50% of total operating expenses. "Fuel.— On the Santa Fe average fuel used per 1,000 freight train ton miles was reduced from 261 to 239 lbs. On the Chicago, Milwaukee & St. Paul 175 lbs. Dynamometer car 30 lbs."—Emerson.

"It has been demonstrated that by proper instruction, fuel consumption could be reduced at least one-half."—Brandeis.

Terminal expense, particularly the handling of less than car load lots, should be improved by the use of mechanical conveyors.

From the railway standpoint it may be said:

MAINTENANCE OF EQUIPMENT.—A fair comparison cannot be made between industrial shops, with uniform output, and railway repair shops with little uniform work, particularly as such repair work is incidental to the main purpose of producing transportation, and while low cost is desired, expedition is primarily which is required.

MAINTENANCE OF WAY.—The fact that maintenance of way forces may be scattered over thousands of miles of line makes adequate supervision difficult, and that the labor requirements vary with the season makes it impossible to always have the force as efficient as could be desired. The force required to man a thousand miles of line could be concentrated on one acre in a textile mill, so that comparisons of efficiency made under such conditions would be unsatisfactory.

TRANSPORTATION forces are strongly organized and militant, largely increasing the difficulty of reducing labor charges, but by betterment of roadway and the use of heavier power the railways are effecting such economies as are possible. In this connection Mr. Emerson said: "The efficiency of the traffic by my standards is very high; that is, the efficiency of expense in the traffic departments."

As regards economy in fuel and in its use, this has ever been a subject of investigation on the part of the railways, as also that of mechanical conveyance.

It may also be said that railway development has been proceeding along logical lines. First, the period of railway building, then one of traffic organization and consolidation, followed by one of betterments, embracing perfecting of machinery, strengthening roadbed and bridges, cutting down grades and increasing the motive power and weight of trains. And now the human factor is coming in for increased attention and systems of organization are being studied to the end that the machinery as a whole may be brought to the highest efficiency.

In this connection it will be interesting to examine the fundamental principles of scientific management as given by F. W. Taylor, its originator:

"1.—Each man in the establishment, high or low, should daily have a clearly defined task laid out before him. This task should not in the least degree be vague or indefinite, but should be circumscribed carefully and completely, and should not be easy to accomplish.

"2.—Each man's task should call for a full day's work, and, at the same time, the workman should be given such conditions and such appliances as will enable him to accomplish his task with certainty.

"3.—He should be sure of large pay when he accomplishes his task.

"4.—When he fails he should be sure that sooner or later he will be the loser by it.

"When an establishment has reached an advanced state of organization, in many cases a fifth element should be added, namely, the task should be made so difficult that it can only be accomplished by a first class man."

The railway as a proposition is characterized by its great extent, requiring unusual specialization in every branch, and this has in the earlier days led to undue centralization and the creation of departments whose heads endeavored to perform both "staff" and "line" duties. A departmental organization of this kind, projected over large areas with distant headquarters, has proved cumbersome in operation, a breeder of departmental jealousies, and unsatisfactory to both the public and employes. This type of organization is now being superseded by one in which the 'staff" and "line" functions are being separated. "Staff" functions, consisting largely of the theoretical side of the work, studying the underlying principles, whether physical or psychological, which make for efficiency in construction and operation; systematizing and standardizing every operation; providing instruction as to their application and formulating means by inspection and otherwise for unerringly recording both their performance and neglect, is necessarily the work of specialists.

Line functions, consisting of the more practical side of the active conducting and directing of the work, is none the less the work of specialists and experts, but of execution rather than design.

Line officers are in charge of stated districts, representing the railway in general and not any particular department. Under this arrangement the different departmental activities are co-ordinated and all the advantages of the public and employes being brought into close touch with a responsible representative of the railway gained.

In line with this, the accounting for each district is done on that district, to the end that greater accuracy may be attained by first hand knowledge and the officer in charge of the district be in possession of all the figures pertaining to the work for which he is responsible, thus enabling him to supervise more intelligently.

A further development follows—that is a common office and file. While merely a detail, this has proved of great value in reducing the volume of correspondence and locating upon one file everything that pertains to any given subject. The use of this system on the railways recently known as the Harriman Lines saved half a million letters a year.

Since material as well as labor enters into the work of a district, it is logical that this, both as regards purchase and supply, should be as far as possible in the hands of the local man, in order that he may be informed on every point. In the larger matters, blanket contracts would be let and districts would simply order under these, while in minor matters, standard prices would be fixed and where goods could be purchased locally and as cheaply, preference would be given to the district, thus decreasing handling and increasing the good will of the local public. The distribution of the prime functions of railway building and operation would be:

HEADQUARTERS.—Building of railway. Construction of equipment. Creating standards for conducting transportation. Maintenance of roadway, maintenance of equipment, as well as for the necessary instruction and inspection.

DISTRICT.—Conducting transportation. Maintenance of roadway. Maintenance of equipment. A superintendent, with a staff expert in the above mentioned lines, and first hand knowledge through his accountant of actual costs to compare with standard costs, both of labor and material, would at all times know the relative efficiency of his district. The strong feature of this type of organization is that with reasonable standards of work to be performed, everybody concerned from start to finish has something to measure his work by. A New York contractor, as an experiment, arranged for each man to have a bucket to shovel into. Result—almost at once the number of buckets that came out of the hole was doubled.

The creation of standard practice, both as regards methods and cost, is merely an elaboration and extension to every operation of practice now in vogue on all railways. For example: it is decided to bring a line up to a certain standard. Careful account is taken of what exists, then the method of producing the desired result is determined, written instructions are given and the cost calculated. Or a new train service is to be put on. Its requirements are determined, time tables prepared and its cost calculated.

Working to standards throws into prominence any overrunning of standard costs, and this acts automatically, and those in immediate charge of work look into the cause and remove it if possible, and if unavoidable keep proper records of its nature, for the creation of a new standard, if necessary.

INCREASING EFFICIENCY.—Efficiency experts have placed railway efficiency at 70% as against 60% in industrial concerns generally. While the total elimination of waste is impossible, certain classes of work have on many roads reached a much greater efficiency than the above average.

The first step should be to ascertain, tabulate and analyze present practice with particular reference to unit cost of performance. In most cases this could be done with little or no additional expense, simply the introduction of forms designed to this end in place of those now in use. The knowledge so obtained would be a basis from which to work, in fact, could be used as a standard of measurement pending the introduction of proper efficiency standards. Concurrently, present standard practice, as ascertained on one road, should be compared with standard practice on other roads or elsewhere, and when a superior method is found it should be adopted. Plans should be made, written instructions prepared of every step of the operation, not only what is to be done but how, and a standard of cost.

The following is an example from shop practice: Mr. Emerson went to the Santa Fe and found the annual cost of maintaining belting was 100% of its first cost. From previous experience he knew that this figure should be about 14%. Having this to work on, the best belting obtainable was purchased, 5% above the market price being paid for the privilege of rejecting unsatisfactory belting. A man was put in charge of the belting, with instructions that belts were to be kept in condition and replaced before and not after failure. Result—failures reduced from 300 a month to 50 and cost dropped from 100% to 14%. Incidentally machines were not delayed.

In the creation of standards, details down to the tool or machine to be used for a given service are specified. For example, in section work the relative economy of hand cars and motor cars is ascertained. Cars are then studied, improved and standardized, and under given conditions, which is to be used is specified.

The following are a number of instances of increased efficiency given before the Interstate Commission:

"1.—When applied to the simple operation of loading by hand a railway car with pig iron, the performance of the individual worker increased from 12½ to 47 tons a day.

"2.—When applied to shovelling coal, it doubled or trebled the performance of the shoveller.

"3.—When applied to machine work, it developed in certain operations, increases in production, ranging from 400 to 1,800%.

"4.—When applied to bricklaying, the day's accomplishment rose from 1,000 to 2,700 bricks.

It should be borne in mind that in dealing with this side of the question that a representative of railway labor appeared before the Interstate Commerce Commission and stated that the methods referred to could not and should not be introduced into railway work. In like manner the introduction of the Mallet compound locomotive was strongly resisted by the Brotherhood of Locomotive Engineers, and organized efforts were made by conductors and trainmen to have double heading prohibited. The fact is that labor organizations, as at present constituted, are by their very nature detrimental to efficiency. Employes in their respective classes are allied with like classes on other railways, for the furtherance of their particular class interest, and where [illegible] With the [illegible] the standard [illegible] with the union [illegible] The reasonable [illegible] between these extremes and [illegible] scientifically determined, both as regards performance and remuneration, and the present system of highly organized labor holding a pistol at the head of the railways, to the detriment of classes less highly organized, abolished. It would not be easy and would take much time, but it is conceivable that with a scientifically arranged and, therefore, equitable schedule of wages covering every branch of railway service, the settlement of schedules would become a matter peculiar to each railway and not determined by conditions on other railways having no bearing on the case. Such an arrangement would at least be an effort to give a "square deal" to all classes of employes.

As showing the way how not to create standards I quote the following from Scientific Management of Railways, by W. J. Cunningham. "The year 1910 saw the successful culmination of an ambitious plan to 'standardize' the wages of conductors, trainmen, and yardmen in the Eastern States; that is, to set a uniform rate per day, per hour, or per mile for each class of service, regardless of local conditions. The road with the highest wage scale (the Baltimore & Ohio) was selected as the battle ground, and the entire forces of the train service brotherhoods focused upon it in a demand for new and unreasonably high rates. To prevent a strike the railroad invoked the aid of the Board of Mediation under the Erdman Act, and the award, while not granting the rates demanded, carried with it substantial increases over rates already considerably higher than those of other roads in the East with distinctly different operating characteristics. The new basis was then in turn forced upon practically every road in eastern territory. The increases in New England averaged between 20 and 30%, and in some cases exceeded 50%. At the same time long standing differentials between different grades of employes were seriously disturbed. Throughout, the new wage basis and working rules (prescribed partly by Governmental mediation) are far from scientific or equitable."

Cost keeping must be systematized with the same care as other operations and be beyond criticism to be effective. The familiar description of the three grades of lies had its origin, no doubt, in poor cost keeping. There is a story told of a locomotive standing in a repair shop waiting for repairs where costs were carefully (?) kept and everything had to be charged. The old locomotive came in for all doubtful and odd charges until, at the end of three months, it had $5,000 charged against it.

If time is wasted it should be known, as surely as if material is wasted, and should be considered a reflection upon the system rather than upon the individual. The trouble is that where standards are lax there is an uncertainty as to where such waste is taking place, and advantage is taken of this to let the matter go.

Cost keeping as above is becoming necessary to comply with the requirements of the Interstate Commission.

The phase of the situation which is the peculiar problem of today; that is, the bringing of the human factor in the machine up to standard—is first and last a matter of men, the production of highly trained men, for however efficient in design an organization may be, its real efficiency is measured largely by the human element. Unfortunately, under present conditions, a man enters railway life at the point of least resistance and gets where he can by force of circumstances and native wit. The result is that thousands of men are struggling to hold positions for which by nature they are largely unfitted. For many railway positions men are selected, the unfitted being rejected. Why should this not be the case for all? For practically every class of material used specifications have to be complied with, and a certain standard attained to be accepted. Why should this not be the case with men? Psychology has made such strides that it is conceivable that a bureau for the purpose could in a short time pass upon all applicants, and after deciding upon their general fitness or unfitness for railway work, guide as to what particular class of work they are best adapted for. The present method of "trying men out" is both crude and expensive. How often it happens that for important work it is only after half a dozen "trys" a "hit" is scored. Inefficiency is often as much a matter of circumstances as any fault of the individual under present conditions.

When once accepted for railway service a boy or man should have definitely placed before him the necessity for qualifying for the position ahead, and failure to respond should be taken as an indication of unfitness for his particular work or lack of ambition and the case should be dealt with accordingly. Vocational training has many enthusiastic advocates among railway officers, and is more or less the practice on some of our large systems, so that the material is not wanting for the elaboration of this idea.

It was by such means as have been outlined that the German army became well nigh invincible, and the nation which has been referred to as a nation of "Damned Professors" has in a generation by scientific administration and rational educational training of its people, notwithstanding the poverty of its natural resources, passed from inefficiency to the front rank among the nations as regards efficiency.

The nucleus of the foregoing exists on the railways as operated today and all that is needed is that present practice should be brushed up and rounded out to meet expanding needs, and more thoroughly understood by all concerned. Speaking generally, what we need is a better understanding between head and hand, the proper blending of theory and practice; the creation of a feeling down to the last man that the railway interests are his interests and that in furthering its interests he is furthering his own.

The foregoing paper was read before the Canadian Railway Club in Montreal recently.

Birthdays of Transportation Men in October.

Many happy returns of the day to: -

R. A. Burford, cashier, C.P.R. ticket office, New York City, born at Brooklyn, N.Y., Oct. 4, 1878.

T. C. Burgess, Commercial Agent, G.T.R., Minneapolis, Minn., born at New York City, Oct. 2, 1853.

G. E. Burns, Freight Claims Agent, Eastern Lines, C.P.R., Montreal, born at St. Thomas, Ont., Oct. 6, 1863.

K. J. Burns, Assistant General Freight Agent, Great Northern Ry., Vancouver, B.C., born at Rochester, Eng., Oct. 11, 1878.

F. F. Busteed, C.E., Engineer in charge of C.P.R. revision and second tracking, west of Calgary, Kamloops, B.C., born at Battery Point, Que., Oct. 10, 1858.

C. E. Cartwright, M. Can. Soc. C.E., ex-Division Engineer, C.P.R., Vancouver, B.C., born at Toronto, Ont., Oct. 13, 1864.

G. S. Cooke, Superintendent, Grand Trunk Pacific Ry., Melville, Sask., born at Montreal, Oct. 27, 1875.

A. F. Dion, Traffic Agent, Quebec Harbor Commission, Quebec, born at L'Islet, Que., Oct. 1, 1871.

L. V. Druce, Commercial Agent, G.T.R. and G.T.P.R., Vancouver, B.C., born at London, Eng., Oct. 20, 1873.

C. E. Dewey, Freight Traffic Manager, G.T.R., Montreal, born at Cheshunt, Eng., Oct. 2, 1873.

C. E. Friend, General Auditor, Canadian Northern Ry., Winnipeg, born at Brighton, Eng., Oct. 12, 1871.

W. P. Fitzsimmons, Commissioner of Industries, G.T.R., Montreal, born at Detroit, Mich., Oct. 27, 1868.

A. H. Harris, Special Traffic Representative, C.P.R., Montreal, Que., born in Devonshire, Eng., Oct. 15, 1855.

G. Hodge, General Superintendent, Eastern Division, C.P.R., Montreal, born there Oct. 2, 1874.

J. H. Hughes, Assistant Superintendent, District 2, Eastern Division, Smith Falls, Ont., born at Charlottetown, P.E.I., Oct. 7, 1865.

H. Irwin, M. Can. Soc. C.E., Consulting Right of Way and Lease Agent, C.P.R., Montreal, born at Newgrove, County Down, Ireland, Oct. 27, 1847.

J. W. N. Johnstone, General Passenger Agent, Reid Newfoundland Co., St. John's, Nfld., born at Campobello, N.B., Oct. 4, 1878.

S. Way Kent, Ticket Agent, C.P.R., Paris, Ont., born in Brant County, Ont., Oct. 23, 1879.

W. M. Kirkpatrick, Assistant Freight Traffic Manager, Eastern Lines, C.P.R., Montreal, born at Kingston, Ont., Oct. 8, 1874.

W. B. Lanigan, Assistant Freight Traffic Manager, Western Lines, C.P.R., Winnipeg, born at Three Rivers, Que., Oct. 12, 1861.

J. W. Leonard, Assistant to Vice President, C.P.R., Montreal, born at Epsom, Ont., Oct., 1858.

C. F. Lunan, Assistant Commissary Agent, C.P.R., Calgary, Alta., born at Sorel, Que., Oct. 2, 1879.

Sir William Mackenzie, President, Canadian Northern Ry., Toronto, born at Kirkfield, Ont., Oct. 30, 1849.

W. T. Marlow, Import Freight Agent, C.P.R., Montreal, born at Limerick, Ireland, Oct. 25, 1872.

R. Marpole, General Executive Assistant, C.P.R., Vancouver, B.C., born in Montgomeryshire, Wales, Oct. 9, 1850.

H. Paton, President, Shedden Forwarding Co., Montreal, born at Johnstone, Renfrew, Scotland, Oct. 5, 1852.

D. Pottinger, I.S.O., ex-Assistant Chairman, Government Railways Managing Board, Moncton, N.B., born at Pictou, N.S., Oct. 7, 1843.

H. G. Reid, Master Mechanic, Lake Superior Division, C.P.R., North Bay, Ont., born at Pembroke, Ont., Oct. 27, 1863.

W. S. Rollo, joint agent, G.T.R., and Central Vermont Ry., St. John's, Que., born at Dundee, Scotland, Oct. 8, 1852.

J. K. Savage, Superintendent, District 1, Saskatchewan Division, C.P.R., Regina, born at Forreston, Ill., Oct. 5, 1876.

Sir Thomas G. Shaughnessy, K.C.V.O., President, C.P.R., Montreal, born at Milwaukee, Wis., Oct. 6, 1853.

T. Duff Smith, Fuel Agent, Grand Trunk Pacific Ry., Winnipeg, Man., born at Barking, Essex, Eng., Oct. 2, 1868.

A. B. Spence, Travelling Auditor, Reid Newfoundland Co., St. John's, Nfld., born at Harbor Grace, Nfld., Oct. 21, 1882.

E. Sterling, Superintendent, Districts 2 and 3, British Columbia Electric Ry., New Westminster, born at Thornbury, Ont., Oct. 3, 1875.

W. S. Taylor, ex-Treasurer, C.P.R., Montreal, born at Dornoch, Sutherlandshire, Scotland, Oct. 18, 1839.

E. N. Todd, Division Freight Agent, Eastern Division, C.P.R., Montreal, born at Huntington, Que., Oct. 17, 1879.

A. W. Wheatley, Manager, Canadian Locomotive Co., Ltd., Kingston, Ont., born at Ashford, Kent., Eng., Oct. 12, 1870.

L. H. Wheaton, Resident Engineer, Dartmouth branch, Intercolonial Ry., Dartmouth, N.S., born at Sackville, N.B., Oct. 5, 1869.

Express Companies Changes in Montreal.

Half a century ago there was established in a small building on St. Francois Xavier St., Montreal, an office of the Canadian Express Co. where, under a joint arrangement, the business of the American Express Co. and National Express Co. was also carried on. At that time four horses and wagons, stabled on the premises, were sufficient to take care of the collection and delivery service in Montreal, as it then existed.

Some ten years ago the headquarters on St. Francois Xavier St. being found too small, were removed to the new Canadian Express Building on McGill St., where commodious offices, expected to be large enough for many years to come, were established. At the same time large stables were built on Chaboilles St. The business has since then grown to such an extent that it now requires about 140 horses and a corresponding number of vehicles, besides several motor trucks, and the premises of 10 years ago are now again found to be entirely inadequate for the present and future requirements of the three companies. By mutual agreement it has been decided that on or about Oct. 1 a separate office will be established at 231 St. James St. for the American and National Express Companies, where care will be taken of the ordinary package express matter, and the financial department of the American Express Co., now located in the Transportation Building at the corner of St. Francois Xavier and Notre Dame Sts. The Canadian Express Co. requires for its exclusive use in its building on McGill St. all the space heretofore occupied jointly by the three companies, and will continue its business there as in the past. The joint branch office in the Transportation Building will be closed and the work now done there will be carried on at the main offices of the companies.

The American and National Express Companies have made arrangements with the G.T.R. for a warehouse and office at the corner of Mountain and St. James Sts., and also have arranged for stable accommodation for the horses and wagons which will be required for their business. Arrangements have been made with the Collector of Customs for sufficient space in the examining warehouse on Youville Square, where all shipment in bond will be handled as heretofore.

The close and friendly arrangements between the Canadian, the American and the National Express Companies for the exchange of traffic continues as heretofore.

Railway Subsidy Contracts.

The Dominion Government has entered into contracts with the following railways under the act granting aid in construction,—

St. John and Quebec Ry., Aug. 1,—from Andover to St. John, N.B., exclusive of two bridges, 200 miles, in lieu of subsidy granted by chap. 48, 1912, sec 2, item 2.

Tillsonburg, Lake Erie and Pacific Ry., Aug. 8,—from Ingersoll north to a junction with the St. Marys and Western Ontario Ry. at Embro, 10.30 miles.

Alberta Central Ry., Aug. 8,—from Red Deer to Rocky Mountain House, 70 miles.

Canadian Pacific Ry., Aug. 8,—from Moose Jaw, Sask., northwesterly, 123 miles.

The Canadian Pacific Railway Company's Policy in the West.

Speaking at a dinner given by the Regina, Sask., City Council, July 28, at which he was the principal guest, George Bury, Vice President, C.P.R., referring to the company's policy, said: For some years past we have been unable to spend the amount of money which the President set aside for betterment and extensions in the West; due to a shortage of labor and material, rails principally. Our policy has been first to enlarge and add new units to our main line terminals, all of which have been greatly increased in capacity within the past nine years, and to build as much double track as possible in order to take care of present and prospective traffic tributary to our present lines; next, to build branch lines into such parts of the country as are well settled, but remote from transportation facilities. If you will give this policy careful consideration, I think you will agree with me that it is in the best interests of the country and of the people as a whole . . . . At present Western Canada, with a population of 2,000,000 people, is importing a large proportion of its necessary food products from the United States, Eastern Canada and elsewhere. The C. P. R. has been preaching for some years that it is not in the interests of the country in general to attempt to market too large a percentage of the Western crops in the three months intervening between the harvest and the close of navigation. The C. P. R., after all, has a larger investment in Western Canada than any other individual or body of individuals and to advocate any policy just to save a little inconvenience or expense in transportation, which would do serious injury to the country, would be exceedingly foolish, and the most extreme detractor of the company has never charged it with being foolish. Many times even within the past year we have had to sacrifice immediate returns in order to provide against future damage to Western Canada. In the fall of 1912 we prepared ourselves fully to handle just as much of the grain crop in two and a half months as the country cared to offer us, and between harvest and the close of navigation we loaded at times more grain than was ever loaded on any single railway in any part of the world in the same time. During Oct. and Nov. we moved from Winnipeg to Fort William over 40,000 loads of grain, and on occasions as many as 1,500 cars of grain a day were being inspected at Winnipeg. About 60% of this grain came from Saskatchewan, the wheat crop of Saskatchewan having grown 575% in eight years. The result of this movement was that the markets of the world could not absorb our grain as fast as it was poured into the eastern elevators, and in the opinion of many this had a depressing influence on the price. It is easy to offer counsels of perfection to the farmer who is anxious to get the money from his crop to pay his bills, but we really must prepare ourselves in some way to encourage and assist him to so market the crop that it will flow steadily and in moderation to the ultimate markets instead of descending in a flood. The cities in the West have been doing everything in their power to attract industries and to build themselves up, but it seems to me that they should likewise give some of their energies to the settling of the country surrounding them, to the encouraging of advanced agricultural methods, looking forward to having the country surrounding them sustaining a large satisfied population, whose trade will build up the cities on a permanent foundation."

Book Reviews.

Any of the books reviewed may be obtained through Canadian Railway and Marine World at the published price.

STEAMSHIP CONQUEST OF THE WORLD.—By Frederic A. Talbot. 344 pages, 8½ by 5½ ins., with illustrations. Price 6s. London, Eng.. William Heinemann.

This is a further volume of the Conquests of Science series which William Heinemann is publishing, and of which Mr. Talbot has contributed three—"The Railway Conquest of the World," "Moving Pictures: How They Are Made and Worked," and the present volume. He has also written a fourth volume, on "Lights and Lighthouses," which will shortly be issued.

The volume is not directly a history of the development of steam navigation, neither does it pretend to be technical, in any definite sense. It is written for the general reader who is a little bit interested in things of this sort, and sets out to give him in an interesting, understandable, and yet correct manner what he wants to know about the history of steam navigation; the development of the steamship of today from the modest beginnings of a century ago; something of the economics of a big liner, and a good deal about the efforts that have been made to minimize loss of life through any one of the dangers of the seas.

While reference is made to the steamships on all the seven seas, attention is mainly directed to the North Atlantic, because it was in the development of the traffic between Europe and North America that the steamship was born, and in which it has been most extensively developed. The text is illustrated by over 140 illustrations, showing the steamship in all stages, from the laying of the keel to its completion; the machinery; the decorations; the boat lowering mechanism; accidents; derelicts and salvage operations, etc.

BEESON'S MARINE DIRECTORY OF the Northwestern Lakes.—H. C. Beeson, Chicago, Ill.

The 27th annual issue contains complete lists of all U.S. and Canadian vessels on the Great Lakes, with details of their engines and boilers, and various other data useful to all those concerned with lake navigation in any way. In addition, there are concise records of the proceedings of the lake navigation associations and interesting descriptions of the many large works which have been, or are being carried out at various important points, those relating to Canada being exhaustively dealt with. It is the publisher's intention to continue and extend the descriptive section, so as to cover all the vital points relative to lake navigation and its growth from year to year, and all that is of importance which may transpire in lake marine circles.

HANDBOOK OF ENGLISH FOR ENGINEERS.—By W. O. Sypherd. 314 pages; 4½ by 7 ins. Scott, Foresman and Co., Chicago, N.Y., $1.50.

It is a notorious fact that engineers as a general rule are weak in their use of English, and it is for such as have a failing in this direction that this book has been prepared. That English receives but little attention in the curriculum of our [illegible] colleges, is a fact to be deplored, but it is a condition that has arisen through the large amount of technical work to be covered by the students in the usual four years of academic work. The elimination of that which appeared to be the least important has placed the study of English in a minor position, and while this is to be regretted, there appears to be but small chance of remedying the trouble without extending the length of what to some appears an already long enough course. This little work should be of great value to those who wish to improve themselves, and while all the standards as set forth in the book do not appeal to us as being the best practice, they are nevertheless outlined and classified in such a convenient and easily accessible manner that while the letter of the book need not be followed, many helpful suggestions may be derived. Chap. 1 is a dissertation on the general problems of engineering writing, comprising sections of introductory, the preparation of engineering papers, and exercises for practice. Chap. 2 is on mechanical details common to the various forms of technical writing, giving a list of abbreviations, etc. Chap. 3 is on business letters, analyzing the business letters, and giving numerous examples. This chapter appears to us to be the weakest, some of the forms followed not meeting our views of good practice. Chap. 4 is on reports, and Chap. 5 on articles in technical journals. Both these chapters are excellent, the former giving the young engineer good examples to follow, and the latter, a selection of good articles from several of the best of United States technical journals. Another important part of the book is an appendix, giving examples of how to prepare copy for the printers, and the manner of correcting proofs. Examples of faulty paragraphs, and misspelled words follow in a second appendix. A bibliography of works on English is given at the end for those who wish to carry on a more extended study of the language.

Quebec Bridge Construction.

In a recent conversation J. T. Davis, of M. P. and J. T. Davis, said his firm expects to have the substructure for the bridge completed early in November, so far as the piers, etc., on the north side of the river are concerned. The work on the south shore is not expected to be completed until the fall of 1914. The work on the north shore piers involved the building of 106,000 cubic feet of masonry above the caissons, of which over 90,000 cubic feet was reported in place, July 30.

The St. Lawrence Bridge Co., which has the contract for the manufacture and erection of the superstructure, is making good progress with its share of the work. Over 60,000,000 lbs. of steel has been delivered and is in store at the bridge site. Work has been started on the erection of the two first spans from the abutment to the intermediate pier. The plant for the erection of the big spans is being delivered, and preparations are being made for the building of these from both sides. J. D. Wilkins is engineer in charge for the Dominion Government.

The Hudson Bay Railway Bridge at Pas, Man.

Bridge at Pas.—The illustration on this page shows the bridge which has been built over the Saskatchewan River, at Pas, Man., to connect the line which the Government is building from that point to Hudson Bay, with the Canadian Northern Ry. branch line running southwesterly from Pas. The total cubic yards of masonry in piers and abutments is about 7,000. As much as 24 ft. of water was encountered at some of the piers at low water, and 42 ft. at high water, the current being about 4 miles an hour. The bottom was hardpan, covered with small boulders, necessitating the use of steel sheet piling. About 1,000,000 lbs. of the Lackawanna type was used. The piers rest upon the natural bottom at an average of about 8 ft. below the water. This portion of the work was done by Mackenzie, Mann & Co., Ltd. The superstructure is a rivetted truss designed as "class heavy" of the Department of Railways and Canals, with a highway 12 ft. clear bracketed to each side; the total weight being a little over 2,700,000 lbs. There are four fixed spans of 147 ft. each and a swing span of 262 ft., 850 ft. over all. The width of the piers for the fixed spans is 9 ft. 10 ins., and length 34 ft. 4 ins., these dimensions being over the coping. The diameter of the pivot pier is 26 ft. The swing span superstructure was fabricated and erected by the Canada Foundry Co.

The Hudson Bay Railway Bridge at Pas, Man.

G.T.R. Branch St. John's Ambulance Association.—The following have been elected as the first officers and council of the G.T.R. centre of the Canadian Branch of St. John's Ambulance Association:—Hon. President, E. J. Chamberlin; Hon. Vice President, W. Wainwright; Hon. Treasurer, F. Scott; Hon. Secretary, F. A. Bourne; Council—H. G. Kelley, M. M. Reynolds, R. S. Logan, J. E. Dalrymple, W. H. Biggar, K.C., D. E. Galloway, W. H. Ardley, W. D. Robb, J. Coleman, Dr. J. A. Hutchison, Dr. H. B. Carmichael, T. McHattie, A. A. Maver, J. Hendry, D. [illegible], T. W. H. McKee, O. G. Barker. It was stated at the meeting at Montreal, July 30, when these officers were elected, that for over 25 years the G.T.R. had had ambulance classes at various points on the system, but that it had not had a central organization, nor had it been connected with the St. John's Ambulance Association.

Albert Davidson, General Agent, Grand Trunk Pacific Ry., Prince Rupert, B.C., in renewing his subscription, wrote, "I have read Canadian Railway and Marine World with interest for over ten years."

Resuscitation From Apparent Death From Electric Shock.

The Board of Railway Commissioners has issued the following circular: "Attention is directed to circular 37 issued by the Board May 3, 1909, regarding rules for resuscitation from apparent death from electric shock. These rules have recently been revised under the auspices of the National Electric Light Association, T. C. Martin, Secretary, 33 West 39th St., New York. The Board deems it advisable that you should secure copies of them, and have them posted in conspicuous places in every department, so that the knowledge therein contained shall be spread amongst all officials and employees of your institution.

"Attention is also directed to the advisability of warning employes about the absolute necessity of keeping away from all electric light or power lines. On Feb. 28, 1913, near Ingersoll, Ont., one railway man was killed by coming in contact with an electric power line through the medium of a tape line which he was using to measure the clearance between the rails and the wires. He and his companions had acquired the bad habit of throwing a string over the power wires in order to determine the distance between the wires and rails. On the occasion in question, as there was no string at hand, these men used a cloth tape line and, unknown to them, a light copper mesh, which was woven within the tape line, conveyed current from the power line through one of the men to the ground with fatal results.

"Two things are to be impressed upon your employes, first, to keep away from all electric wires; and, second, to become familiar with the rules for the resuscitation of persons apparently killed by electric shock; and to put those rules into operation when the occasion arises."

Suez Canal Traffic for 1912 amounted to a net tonnage of 20,275,120 against 18,124,799 tons in 1911. In 1912 the vessels passing through the canal numbered 5,373. In spite of the reduction on Jan. 1 in the transit dues, from 7.25 to 6.75 francs a ton the gross receipts amounted to the record figure of 136,423,831 francs compared with 134,762,199 francs in 1911.

Kingston and Pembroke Ry.—At the annual meeting at Kingston, Ont., Aug. 12, the following were elected directors for the current year,—W. D. Matthews, D. McNicoll, I. G. Ogden, G. M. Bosworth, W. R. Baker, E. W. Beatty, A. R. Creelman, H. E. Suckling and W. F. Nickel.

Increase of Freight Rates in England.

The following quotations from recent articles in the London Times are of interest as relating to existing conditions in Canada:

"A notice has been issued on behalf of the railway companies of the United Kingdom to the effect that the rates for merchandise traffic by goods and passenger trains has, with certain exceptions, been increased. This increase is the outcome of the recently passed Railways Act, which gives the companies power to raise rates to compensate them for increased expenses as a result of the settlement of the strike of August, 1911."

"The railway industry alone of any great industry in the country has been deprived by Parliament of the opportunity of passing on to the public what may be called its increasing 'cost of production.' We mean in particular the increased cost of coal, materials, higher wages, Government insurance against accident, unemployment, etc. In other words, all improvement in railway wages and in the conditions of railway employment—and they have, of course, been substantial already—have been effected either at the cost of the shareholders, or they have come out of the funds provided by improved methods of management. If the just demands for further improvement in railway labor conditions are to be met without wrecking the whole financial edifice upon which the public industry rests, it is clear that the public must pay. If only to secure continuity of railway service, absence of strikes, etc., some moderate increase in railway charges must be established, and this is the policy which the companies are now endeavoring to carry out under the direct authority of Parliament. Opposition will, of course, be encountered, but so long as the companies, acting in unison, are not extravagant in their demands and keep them well within the terms provided for by the new Act, we do not imagine that any such opposition can avail when the matter comes before the Railway and Canal Commissioners, as it must do sooner or later. Legally and morally the claim of the railway companies is a just one, for it would be absurd to assume that the railway industry alone can flourish under economic conditions which provide for fixity of its charges to the public on the one hand, and rapidly increasing expenses on the other."

Chicago, Milwaukee and St. Paul Ry.—Press reports state that the British Columbia Government has arranged to turn over the Kitsilano Indian Reserve at Vancouver, to the C. M. and St. P. Ry., for terminal purposes, and that the Canadian Northern Ry. is interested in the project. The question of title between the Dominion and the Provincial Governments has not been finally settled, as proceedings for the abandonment of the reserve by the Indians, under the terms of the Indian Act, have not yet been taken. Under the present arrangements the C. M. and St. P. Ry. will secure an entrance into Vancouver over the Great Northern Ry. (Aug., 1912, pg. 411.)

Pacific and Hudson Bay Ry.—Press reports state that a line is being surveyed from Bella Coola, B.C., to Alexis Creek, thence across the Cariboo River between mileage 103 and 105, to Beaver, B. C. E. Both, Bella Coola, B.C., is reported to be in charge of the surveys. (May, pg. 220.)

Orders by Board of Railway Commissioners.

Beginning with [illegible] Canadian Railway and Marine World has published [illegible] summaries of orders passed by the Board of Railway Commissioners [illegible] the Board's [illegible]

The dates given of orders, immediately following the [illegible] for a considerable time after the dates assigned to them.

19886. July 24.—Extending, to Aug. 31, time within which C.P.R. and G.T.R. install bells at crossing of Perth Road, near Kingston, Ont.

19887. July [illegible].—Extending, to Oct. [illegible], time within which C.P.R. install gates at crossing of Centre St., Chatham, Ont.

19888. July [illegible].—[illegible] Pacific Branch Lines Co.'s station at siding [illegible], Sec. [illegible], Sask., mileage [illegible], [illegible] Branch.

19889. July 24.—Extending, to Oct. 15, time within which G.T.R. install interlocking plant at Paris Jct., Ont.

19890. July 24.—Authorizing Chatham, Wallaceburg and Lake Erie Ry. to take Lot 18, Chatham, Ont., for accommodation of the traffic and to secure efficient maintenance and operation of its line.

19891. July 24.—Approving location of Canadian Northern Ry. station at Radville, Sask.

19892. July 21.—Authorizing M.C.R. to build extension to siding on Moore St., between Centre and Talbot Sts., St. Thomas, Ont.

19893. July 24.—Ordering G.T.R. to install electric bell at crossing of Mill St., Milverton, Ont., to be completed within 60 days, 20 per cent. of cost to be paid out of the railway grade crossing fund.

19894. July 24.—Approving location of C.P.R. station at Nolan, Alta.

19895. July 24.—Ordering G.T.R. to remove board fence and cut down bank on its right of way at Marsh Winery Road, Stamford, Ont., for 930 ft., so that no portion of bank be more than 4 ft. above track level.

19896. July 25.—Approving location of C.P.R. station at Arnaud, Man.

19897. July 25.—Approving G. T. Pacific Ry. bylaw 14, superseding bylaw 11, authorizing J. E. Dalrymple, Vice President, and A. E. Rosevear, General Freight Agent, to prepare and issue tariffs of tolls, and rescinding order 15186, Oct. 25, 1911.

19898. July 25.—Authorizing James Bay and Eastern Ry. to build across concession road at mileage 38; side road at mileage 38.7, Mill Road at mileage 39.3, road to Mount Albert, mileage 40.35, side road, mileage 40.6, and side road, mileage 41.6, Gwillimbury Tp., Ont.

19899. July 25.—Authorizing G. T. Pacific Branch Lines Co. to carry passenger traffic over portion of its Tofield-Calgary Branch, between Trochu, mileage 121.4, and Beiseker, mileage 162.6, Alta.; speed of trains not to exceed 12 miles an hour.

19900. July 25.—Approving location of C.P.R. station at Corwhin, Puslinch Tp., Ont.

19901. July 25.—Authorizing Webb Rural Municipality 138, Sask., to build crossings over C.P.R. at Antelope, Gull Lake and Seward, Sask.

19902. July 25.—Authorizing G. T. Pacific Ry. to carry traffic on portion of main line east of Prince Rupert, B.C., between Beament, mileage 195, and Morricetown, mileage 205; speed of trains not to exceed 25 miles an hour.

19903. July 23.—Authorizing Toronto, Hamilton and Buffalo Ry. to build interlocking plant where it crosses Hamilton St. Ry., on Barton St. East.

19904. July 24.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build by means of a bridge across William St., Cobourg, Ont., at mileage 12[illegible].34 from Glen Tay.

19905. July 25.—Ordering C.P.R., within 90 days, to install improved type of illuminated electric bell at crossing of highway at mileage 0.01 from St. Martins Jct., Que., 20 per cent. of cost to be paid out of the railway grade crossing fund.

19906. July 22.—Ordering that signboards be erected at crossings on C. Sheriff's farm, Huntingdon, Que., crossed by G.T.R. and N.Y.C. & H.R. Rd.

19907. July 25.—Ordering Pere Marquette Rd., within 60 days, to install an improved type of automatic electric bell at crossing of highway near Kingsville, Ont., 20 per cent. of cost to be paid out of the railway grade crossing fund.

19908. July 25.—Approving location of C.P.R. station at North Appin, Ont.

19909. July 26.—Approving change in location plan of Campbellford, Lake Ontario and Western Ry. (C.P.R.) to include extra land required for station grounds at Cherrywood, Pickering Tp., Ont., and approving location of station there.

19910, 19911. July [illegible], 28.—Authorizing Dominion Atlantic Ry. to operate over bridges over Sissiboo and Gaspereaux Rivers, N.S.

19912. July 25.—Ordering Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build farm crossing for J. D. Howden, in Lot 24, Con. 2, Whitby Tp., Ont.

19913. July 28.—Authorizing G.T. Pacific Ry. [illegible]

[illegible] spur for John MacGregor Co., at mileage 45.16 from Aroostook Jct., N.B.

19916. July 24.—Ordering that in connection with protection of G.T.R. crossing over Yonge St., 1.5 miles south of Aurora, Ont., mileage 28.66, the side road be diverted into Yonge St.; land to be deeded to the Township by G.T.R., work to be performed by King Tp., electric bell to be installed at crossing of Yonge St. within 60 days; 20 per cent. of cost to be paid from railway grade crossing fund.

19917. July 26.—Approving location of C.P.R. station at [illegible], B.C.

19918. July 28.—Approving plan A showing details of interlocking plant of C. N. Ontario Ry. and C. N. Montreal Tunnel and Terminal Co. with Jacques Cartier and Union Ry., near Jacques Cartier Jct., Que.

19919. July 31.—Ordering G.T.R. to build siding to connect with existing siding for Greenfield Conduit Co. and others who may wish to use same in rear of Broadview Ave., Toronto.

19920. July 24.—Amending order 19348, May 16, re cattle pass on C. N. Ontario Ry. for [illegible] Fletcher and J. Wilson.

19921. July 25.—Authorizing C.P.R. to build spur for Revelstoke Saw Mill Co., Swift Current, Sask.

19922. July 28.—Amending order 19856, July 12, ordering Brockville, Westport and Northwestern Ry. to build cattle pass for D. H. and C. S. Grey.

19923. July 28.—Authorizing C.P.R. to build spur for Saskatchewan Motor Co., Regina, Sask.

19924. July 26.—Authorizing G.T.R. to build sidings for Alabastine Hard Mortar, Ltd., York Sand & Gravel, Ltd., and York Sandstone & Brick Co., Scarboro Tp., Ont.

19925. July 31.—Dismissing application of G. C. Cumming, of Lyn, Ont., to compel G.T.R. to build a subway between Lyn and Brockville, mileage 12[illegible].77 from Montreal.

19926. July 31.—Approving agreement dated July 29, providing for proposed new viaduct and plans and profiles referred to in agreement dated April 25, between the City of Toronto, C.P.R., G.T.R. and Toronto Harbor Commissioners. Work to be completed within 3 years from July 29.

19927. July 31.—Amending order 19288, May 12, re compensation to be paid W. B. Fee by Georgian Bay and Seaboard Ry. (C.P.R.)

19928. July 30.—Authorizing the Vancouver, Victoria and Eastern Ry. (G.N.R.) to take certain lands in New Westminster District, B.C., and to build bridge over its tracks.

19929. July 29.—Authorizing G.T.R. to build sidings for Harris Abattoir Co. north of St. Clair Ave., Toronto.

19930. July 29.—Approving location of G. T. Pacific Ry. station at mileage 128.5, Prince Rupert East, Cariboo District, B.C.

19931. July 29.—Approving location of Campbellford, Lake Ontario and Western Ry. (C.P.R.) station at Grafton, Ont.

19932. July 29.—Authorizing C.P.R. to build its double tracks across highway diversion at mileage 84.99 from Moose Jaw, Sask., present road allowance to be diverted.

19933. July 29.—Approving location of C.P.R. station on n.e. ¼ Sec. 10, Tp. 8, r. 30, w. 2 m., Sask.

19934. July 28.—Authorizing C.P.R. to build diversion of highway and cross same at mileage 77.91 from Moose Jaw, Sask., present road allowance to be diverted.

19935. July 28.—Approving revised location of C.P.R. from mileage 65.04 to 68.14 and construction of double track between mileage 65.04 and 69.24 from Broadview, Sask., and to build across three highways.

19936. July 31.—Ordering C.P.R. to make connection with Canadian Northern Ry. spur to Government elevator at Port Arthur, Ont., within 30 days, also to be used by G.T. Pacific Ry., cost to be paid by Board of Grain Commissioners.

19937. Aug. 5.—Approving G.T. Pacific Ry. Standard Freight Mileage Tariff C.R.C. 18 to apply between stations in Alberta and British Columbia between and including [illegible], Alta., and mileage 1189, B.C.

19938. July 30.—Approving Hull Electric Co.'s bylaw 40, covering rules and regulations for the government of its employes.

19939. July 19.—Approving revised location Campbellford, Lake Ontario and Western Ry. (C.P.R.) in Lot 23, Con. A, Brighton Tp., and authorizing it to take from G.T.R. extra land required for right of way.

19940. July 30.—Authorizing C.P.R. to build spur for Regina Storage and Forwarding Co., Regina, Sask.

19941. July 29.—Approving C.P.R. revised location from mileage 66.7 to 69.6 from Moose Jaw, Sask.

19942. July 30.—Authorizing C.P.R. to build [illegible]

19946. July 31.—Authorizing C.P.R., until Aug. 1, to operate over G.T.R. crossing at Tecumseh St., Toronto.

19947. July 29.—Authorizing Kingston and [illegible] Ry. to build spur for [illegible] Lumber Co., Palmerston Tp., Ont.

[illegible] application of R. H. Souch, Darlington Tp., Ont., to build a sub[illegible]

19949. Aug. 1.—Amending order 19741, July 3, which authorized Campbellford, Lake Ontario and Western Ry. (C.P.R.) [illegible] mileage 89.9, Murray Tp.

19950. Aug. 2.—Amending order 19815, July 17, which authorized City of Regina to build its municipal railway across C.P.R. Arcola Branch and spur by substituting C.P.R. for C.N.R.

19951. July 29.—Authorizing C.P.R. to build road diversion in [illegible]

19952. July 30.—Authorizing C.N. Ontario Ry. to open for traffic the extension of its main line to connect with [illegible] Eastern Ry. [illegible] to 239.

19953. July 30.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to cross Bogart Ave. and Wilkie St., Belleville, Ont., at mileage 78.46 and 78.61 from Glen Tay.

19954. July 29.—Authorizing G.T.R. to build spur for Dowsley Spring and Axle Co., Chatham, Ont.

19955. July 29.—Approving revised location G. T. Pacific Branch Lines Co.'s Tofield-Calgary Branch [illegible] Alta.

19956. Aug. 2.—Approving plan of C.N. Ontario Ry. [illegible] crossing Montreal Park and Island Ry. at Sault au Recollet, Que.

19957. Aug. [illegible].—Amending [illegible] which authorized Toronto Suburban Ry. to cross G.T.R. at Acton, Ont., and authorizing crossing at another point.

19958. Aug. 8.—Authorizing C.P.R. to build its Forsyth St. Branch across certain highways in Maisonneuve, Que.

19959. Aug. 1.—Authorizing C.P.R. to change location of siding across De Gaspe Ave., and to build extension to [illegible] in St. Louis, Montreal.

19960. Aug. 6.—Authorizing C.P.R. to build spur for Imperial Wire & Cable Co. [illegible]

19961. Aug. [illegible].—Approving [illegible] C.P.R. as [illegible] Campbellford, Lake Ontario and Western Ry. (C.P.R.), at Glen Tay, Ont.; and approving location of C.P.R. there.

19962. Aug. 1.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build at grade across 13 highways in Belleville, Ont.

19963. Aug. 8.—Amending order 16913 re crossing of highways by [illegible] Ry. and [illegible] Co. (C.P.R.)

19964. Aug. [illegible].—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) [illegible] bridge over Moira River, at Belleville, Ont.

19965. Aug. 6.—Ordering C.P.R. to provide cattle pass for R. J. Patterson, [illegible], Ont.

19966. Aug. 1.—Authorizing C.P.R. [illegible] additional track across Bloor St., Lansdowne Ave. and Brock Ave., Toronto.

19967. Aug. 5.—Approving clearances of C.P.R. siding at Colonial Wire Manufacturing Co.'s warehouse, Montreal.

19968. Aug. 6.—Authorizing Canadian Northern Ry. to build across certain highways on its [illegible] Line.

19969. Aug. 5.—Ordering Canadian Northern Ry. to erect a standard passenger and freight shelter station and platform at [illegible] within 60 days.

19970. Aug. 6.—Authorizing Canadian Northern Ry. to build spur for [illegible] Donald & Co., near [illegible], Man.

19971. Aug. 5.—Authorizing Canadian Northern Ry. to build across and divert [illegible] between Sec. 36, Tp. [illegible] and [illegible] on its Alsask [illegible]

19972. Aug. 5.—Authorizing [illegible] Northern Ry. to build across [illegible] Brantford Tp., Ont.

19973. Aug. [illegible].—[illegible] proposed [illegible] Toronto [illegible]

19974. Aug. 2.—Amending order 5850 authorizing Toronto and Niagara Power Co. to carry wires over G.T.R. at Davenport Road, Toronto, Ont.

19975. July 30.—Approving Lake Erie and Northern Ry. location from [illegible] Brantford, Ont. [illegible]

[illegible]

19977. Aug. 7.—Authorizing C.P.R. to use certain bridges.

19978. Aug. 7.—Relieving G.T.R. from [illegible]

[illegible] of passenger station.

10081. Aug. 7.—Relieving Windsor, Essex and [illegible]

[illegible] Ry., G.T.R. and C.P.R. to operate trains over [illegible]

[illegible] m., Didsbury, Alta.

19986. Ang. 9.—Approving location of C.P.R. shelter at Hillhead, Ops Tp., Ont.

1998[illegible]. Aug. [illegible]—Dismissing application of Board of Trade, Limerick, Sask., for order direct- [illegible]

[illegible]

10000. Ang. 9.—Authorizing C.P.R. to build [illegible] Richmond St. and [illegible]

[illegible] Toronto.

19994. Aug. 11.—Approving location of C.P.R. Gimli to Riverton Branch, from Gimli northerly to Riverton, Man., mileage 0, to 26.03; and authorizing building across certain highways.

[illegible]

19996. Aug. 12.—Authorizing C.P.R. to build, at grade, additional track across certain highways [illegible] Sask.

19997. Aug. 12.—Authorizing C.P.R. to build, at grade, its ballast pit spur, at Carseland, across [illegible] R. 26, w. 4 m.

19998. Aug. 13.—Approving change in location of C.P.R. station at Putnam, Ont.

[illegible]

20000. Aug. 12.—Authorizing C.P.R. to build extensions to sidings for Dominion Government [illegible] Petewawa, [illegible]

20001. Aug. 13.—Approving location of C.P.R. [illegible] Sask.

20002. Aug. 11.—Authorizing [illegible] kirk and Lake Winnipeg Ry. Co. to build subway [illegible] Branch [illegible]

20003. July 28.—[illegible] within which half interlocking plant was to be installed at Adelaide St., London, Ont., and authorizing C.P.R. to operate trains over cross- [illegible]

[illegible] bia Ry., [illegible] izing G.T.R. to build [illegible] days.

[illegible] Aug. 14.—Amending order [illegible] re C.P.R. crossing of Anderson St., [illegible] Sask.

20019. Aug. 15.—Approving location of C.P.R. station at Rom[illegible], Alta.

20020. Aug. 13.—Approving portion of location of C.P.R. Snowflake westerly branch from mileage 0 to 9.10.

20021. Aug. 13.—Authorizing Toronto, Hamilton and Buffalo Ry. to build bridge across Welland River at Coyle, Ont.

20022. Aug. 14.—Approving change in Campbellford, Lake Ontario and Western Ry. (C.P.R.), to include extra lands required for station grounds at mileage 137.2 from Glen Tay; and approving location of station building there.

20023. Aug. 14.—Authorizing C.P.R. to build across roadway, at grade, in Lot 1088, Kootenay District, mileage 48.69 from Golden, B.C.

[illegible] Aug. [illegible]—Authorizing C.P.R. to build [illegible] Don viaduct, near Donlands, Ont.

20025. Aug. 11.—Recommending to Governor in Council for approval, The Hull Electric Co.'s bylaw 40, and rules and regulations for the government of its employes; and rescinding order 10930 in same connection.

20026. Aug. 13.—Authorizing R. H. Edgar, Bowling Green, Ont., to erect telephone line across C.P.R. at Lot 3, Con. 4, Amaranth Tp., Ont.

20027. Aug. 14.—Authorizing Dominion Atlantic Ry. to build bridge 125.9 at Jordantown Road crossing, N.S.

20028. Aug. 13.—Further extending for six months from date, time within which Esquimalt and Nanaimo Ry. was required to file standard tariff of maximum freight tolls.

20029. Aug. 13.—Authorizing C.P.R. to build bridge 39.4, Toronto Subdivision.

20030. Aug. 14.—Authorizing C.P.R. to build [illegible] subways at [illegible] and Main Streets, and East Kildonan Road.

20031. Aug. 14.—Authorizing C.P.R. to make alterations in foot bridge at Wallace Ave., to carry it over the third track which it is now [illegible] West Toronto.

20032. Aug. 14.—Authorizing C. N. Ontario Ry. to build subway over public road on Lots 81 and 82, Ste. Dorothee Parish, Que.

20033. Aug. [illegible]—Approving location of Canadian Northern Ontario Ry. station grounds at [illegible] Ottawa.

20034. Aug. 14.—Authorizing Canadian Northern Ry. to open for traffic portion of its diverted line, Oak Point Branch, from Sec. 21, Tp. 11, R. 2, e.p.m., 3.27 miles.

20035. Aug. 14.—Authorizing G. T. Pacific Ry. to cross highway at mileage 210.4, Ellice Municipality, Shoal Lake District.

20036. Aug. 15.—Approving location of G. T. Pacific Ry., Prince Rupert, B.C., westerly from mileage 2.25 at Seal Cove, to mileage [illegible]

20037. Aug. 14.—Authorizing G. T. Pacific Ry. to build spur for C. S. Hyman & Co., Calgary, Alta.

20038. Aug. 14.—Authorizing G. T. Pacific Branch Lines Co. to build Third St., under its line at mileage 46.8, Battleford, Sask.

20039. Aug. 13.—Relieving G.T.R. from providing further protection at Brant House crossing, east of Burlington station, Ont.

20040. Aug. 8.—Authorizing certain alterations in Campbellford, Lake Ontario and Western Ry. (C.P.R.), to provide station grounds in Bowmanville, Ont.

20041. Aug. [illegible] for completion of spur for Coquitlam Terminal Co., Vancouver, by C.P.R., across Dominion, [illegible]

20042. Aug. 9.—Authorizing C.P.R. to build branch for General Fire Extinguisher Co., Montreal.

20043. Aug. 12.—Dismissing application of Lethbridge Board of Trade against cancellation of G.N.R. tariff, C.R.C. 720, between stations on various lines in Eastern Canada and Alberta Ry. and Irrigation Co.'s stations.

20044. Aug. 13.—Authorizing C.P.R. to revise portion of its Farnham Subdivision, Que., and to build additional track across Central Vermont Ry.

20045. Aug. 14.—Amending order 19803, July [illegible] C.P.R. [illegible]

20046. Aug. 5.—Authorizing Canadian Northern Ry. to build spur for McKenzie Ellis Co., Prince Albert, Sask.

[illegible] Islington, Ont., from 75c. to 70c. a ton; effective not later than Sept. 1.

20048. Aug. [illegible] order 19916, July 31, re C.P.R. crossing of G.T.R. at Tecumseh [illegible] Toronto.

20049. Aug. 13.—Amending order 1669, Apr. 15, 1908, re Toronto and Niagara Power Co. carrying its wires across C.P.R., in Lot 6, Con. 3, [illegible]

[illegible] bellford, Lake Ontario and Western Ry. (C.P.R.), [illegible]

20051. Aug. 12.—Amending order 19239, May 9, re protection at King St., Cobourg, Ont., pro- [illegible] paid by G.T.R.

20052. Aug. 12.—Authorizing G.T.R. to build two branch lines for Riordon Pulp and Paper Co., Hawkesbury, Ont.

20053. Aug. 14.—Authorizing G.T.R. to renew bridge 5, King St., Toronto.

20054. July 29.—Authorizing G. T. Pacific Branch Lines Co. to cross Harry and Francis Sts., Calgary, Alta.

20055. Aug. 9.—Approving G.T.R. plans and specifications of repairs to Little Creek Drain, in Tilbury North Tp., Ont.

20056. Aug. 12.—Rescinding order 5390, Aug. 13, 1908, re application of A. Pilon, Casselman, Ont., respecting a charge of $3 a car made by G.T.R. for switching.

20057. Aug. 13.—Ordering Canadian Northern Ry. to fence right of way on its Rossburn Branch, Man., from mileage 35 to 40, by Sept. 1.

20058. Aug. 11.—Authorizing W. Alexander, Silverwood, Sask., to build spur across Canadian Northern Ry. to n. e. ¼, Sec. 15, and n. w. ¼, Sec. 14, Tp. 37, R. 5, w. 3 m., Cory Municipality, Sask.

20059. Aug. 7.—Amending order 18616, re public road between Cons. 12 and 13, Chisholm Tp., Ont., by approving diversion shown on plan filed by C. N. Ontario Ry.

20060. Aug. 13.—Authorizing C. N. Ontario Ry. to cross and divert public road in Lot 38, Con. 8, Ferris Tp.

20061. Aug. 13.—Authorizing Canadian Northern Branch Lines Co. to cross 30 highways on its Grosse Isle Branch.

20062. Aug. 13.—Approving location of station grounds of Interprovincial and James Bay Ry., at mileage 9.56, Mercier Parish, Que.

20063. Aug. 11.—Approving terms of Bell Telephone Co. contract forms 1 and 2, in so far as they limit company's liability.

20064. Aug. 13.—Authorizing St. Lawrence Pulp and Lumber Corporation to cross Atlantic, Quebec and Western Ry. in Gaspe County, Que.

20065. Aug. 12.—Authorizing G.N.R. to remove frog and switch at crossing at Crescent, B.C., and to build new switch there.

20066. Aug. 15.—Authorizing C.P.R. to build spur for J. Gunn and Sons, Winnipeg, Man.

20067. Aug. 15.—Authorizing C.P.R. to rebuild bridge 5.7 over Mill St., Norwood, Ont.

20068. Aug. 15.—Authorizing Canadian Northern Ry. to build spur for Manitoba Gypsum Co., near Moosehorn, Man.

20069. Aug. 12.—Authorizing Canadian Northern Ry. to build branch through Block 6, Hudson Bay Reserve.

200070. Aug. 15.—Authorizing G. T. Pacific Branch Lines Co. to cross 14 highways in Battleford, Sask.

20071. Aug. 15.—Approving clearance of coal conveyer on C.P.R. at sidings of Ontario National Brick Co., Toronto Tp., Ont.

20072. Aug. 14.—Authorizing Bell Telephone Co. to erect wires and poles upon 21 streets in Montreal.

20073. Aug. 15.—Approving proposed scale P to Express Classification for Canada.

20074. Aug. [illegible]—Amending order [illegible] to provide charges for cream up to 400 miles, to become effective not later than Sept. 18.

20075. Aug. 15.—Authorizing C.N. Ontario Ry. to build temporary level crossing over public road between Cons. B and 2, Westmeath Tp.

20076. Aug. 14.—Authorizing C.P.R. to build [illegible] St. Roch St., Quebec, to storage yard.

20077. Aug. 15.—Approving location of C.N. Ontario Ry. station grounds at Westmeath, mileage 79.64 from Ottawa.

20078. Aug. 19.—Authorizing C.P.R. to build three extra tracks at grade across Jamieson St., Lacombe, Alta.

20079. Aug. 15.—Authorizing C.P.R. to revise grade of crossings necessitated by double track; and to build additional track across certain highways between mileage 10 and 39.1, London Subdivision, Ont.

20080. Aug. 18.—Approving location of C.P.R. station at Bethany Jct., Ont., mileage 38.66, Toronto Subdivision.

20081. Aug. 18.—Amending order 19939 re Campbellford, Lake Ontario and Western Ry. (C.P.R.), revised location in [illegible] Tp., Ont.

20082. Aug. 16.—Authorizing C.P.R. to build [illegible] and Schreiber Subdivisions.

20083. Aug. 18.—Authorizing C.P.R. to operate over [illegible] near Highlands, Que., without first stopping trains.

20084. Aug. 18.—Authorizing C.P.R. to build [illegible] Chapleau, Nipigon and White River Subdivisions.

[illegible] Aug. [illegible]—Authorizing C.P.R. to [illegible] portion of same within its right of way; and to build road diversion in Sec. 3, Tp. 7, R. 29, w. 4 m., Alta.

[illegible]

[illegible] Aug. [illegible]—Authorizing C.P.R. and G. T.R. to operate over crossing one mile north of St. Johns, Que., at mileage 20.85, without first [illegible]

[illegible] Authorizing C.P.R. and [illegible] to operate over [illegible] without first stopping trains.

Railway Transportation Problems of the Future.

By Henry K. Wicksteed, B.A. Sc., M.Can. Soc. C.E., Chief Engineer of Surveys, Mackenzie, Mann and Company Limited, Toronto.

The article under this title in Canadian Railway and Marine World for September by J. Grant MacGregor raises some interesting questions, although his exact meaning is a little hard to follow. That the operating departments use a low standard of gradients as an excuse for getting rid of their obsolete locomotive power at the expense of the construction departments is hardly a reason for abandoning a low grade standard of road in favor of a high one. It is merely an evidence that they are human and that when extra power is being purchased they prefer to keep the new for themselves and send away the old, but is not the mere possibility of employing the old in useful service, instead of consigning it to the scrap heap, an economy and an argument in favor of instead of against the low grade standards? There can be no manner of doubt that having to climb a hill of a given height, the easier the grade ascent the better, the only doubt is as to how much we can afford to pay in money, extra distance, extra curvature, or rise and fall, to accomplish the flattening, and this is not a question which can be reduced to exact figures or formula, because the data are different in almost every case and they vary even for the same road from time to time. A road may be built primarily for carrying a heavy freight traffic in one direction. A few years go by and it is found that a large and increasing tonnage is being carried in the reverse direction and that the grades opposed to it are altogether disproportionate. The road, too, designed originally as a freight road, begins to develop a large passenger business, high speed becomes an object, and the curvature, which was quite unobjectionable in the case of the slow moving freights, becomes almost prohibitive to the "Flying Limited." That no great degree of excellence can be attained without harmony and cooperation between all departments is unquestionable, but I think things are better in this respect than they have ever been before, and improving. Working men have been as a class diffident about airing their views and opinions, especially in print, before college bred engineers possessed of a greater gift of expression, and the latter have been in the past much too ready to believe that they know it all and that the trackman's advice is worthless because it does not accord with their text books, but this condition of affairs is fast being mended and some of the brightest minds are devoting much of their time to encouraging their subordinates and colleagues to talk and to think, and much of the recent progress and interest is due to this movement.

Mr. McGregor lightly touches on one element of location to which perhaps sufficient prominence has not been given, and that is the endurance or steam capacity of the locomotive. We have been too apt to believe that when we have flattened the grade to the last degree that the topography will allow, and a little below the ruling grade of the division, that we have performed the "whole duty of man" and that the length of the grade is of no consequence. This is a great fallacy, for there are plenty of locomotives which can supply the necessary drawbar pull for a short distance, but which fail in boiler capacity or endurance. We may again have the boiler capacity but not the grate area, and we may have both without the proper fuel to give the best results, and lastly, we may have all three, but the opportunity to develop them is limited by the physical ability of the firemen. It is easy to find cases where a short grade of 1% limits the capacity of the road much less than a long one of two thirds that rate of ascent.

Another question which has perhaps received less attention than it should is the judicious introduction of pusher grades. It seems to the writer that there are many cases where a reduction, not only in capital account but in actual operating cost, could be made by keeping a low ruling grade over the greater part of a road, and then sharply ascending a necessary summit, instead of adopting a somewhat steeper standard for the whole road. An entirely new and most interesting proposition was put to the writer within a few days by an engineer familiar with operating conditions in the far north. It may be put somewhat in this way. Ordinary starting resistances are about equivalent to those caused by a 3-10 to 4-10 grade; therefore we say that this grade on the open road is nearly as good as a level—that is, the drawbar pull is no more. But in our winter weather the starting pull is vastly increased by the freezing of the lubricants and other causes, and owing to increased radiation and condensation the load which the locomotive is capable of hauling on the level at fair speed is greatly reduced. Under these circumstances, while a flat grade is always better than a steep one, the relative value, the amount we can afford to spend in reducing the steep grade to the low standard, is very much reduced. It is notable that the three or four months of extremely cold weather are those during which this road is busiest. This is a notable example of how circumstances alter cases, and it is additional argument for Mr. McGregor in his contention for a central power station or stations and electrical distribution.

The modern locomotive has, we believe, nearly reached its maximum of power and weight. It has increased in height and width almost to the limit, and only in length is further increase possible, hence the great increase in this element, and in order to overcome the difficulties of running the long machines over crooked track, the ingenious but somewhat clumsy devices in articulated boilers and swivelling trucks and universal joints in steam pipe connections have been introduced. These great machines, with their high centres of gravity, are so hard on the track that they are the principal if not the only reason for the enormous expenditures for heavy rails, larger and more numerous ties, increased quantities of ballast, and lastly, for increased cost of maintenance of way and structures, and all this, or nearly all, be it remembered, is to avoid the necessity for the extra locomotive crew and attendance which the use of two locomotives instead of one would necessitate. The big articulated or Mallet locomotives are merely devices for putting two locomotives under the control of one man and here is perhaps the strongest argument for electrical power, that two or more power units can be coupled together in an absolutely flexible train and supported on as many wheels as may be necessary to reduce the axle load to that of the standard box or pullman car and still be under the absolute control of one intelligence. Another is the question of endurance mentioned above. The electric motor does not get tired and can exercise her maximum pull as well at the top of a long grade as at the bottom, and [illegible] as she can get the "juice" freely, almost as well at a speed of 20 miles [illegible] 10. Again the question of radiation of boilers and condensation of steam does not come into anything like the same extent only that of capital cost is opposed to the change, and while the modern locomotive is one of the most wonderful of machines in its flexibility and its independence of outside agencies, it would seem as if the time had almost come when it would be debased to such purposes as switching in yards, and hauling over temporary branch roads where the traffic is light and infrequent and cannot pay interest on the increased capital charge. Particularly is the prospect of change attractive in districts especially numerous in Canada where water power can be substituted for steam, or even where the latter can be used merely intermittently or as an auxiliary in times of drought to the enormous saving in our coal bills. There are other reasons for the change, the superior cleanliness and the fact that the electric motor is essentially a rotary engine, while the steam locomotive, as we know, is as essentially a reciprocating one, and not so well adapted to high speeds, but these are passenger service considerations and hardly come within the scope of Mr. McGregor's article. Certain it seems that many of our trunk roads or portions of them would be glad to try the change if it were not for the enormous capital amounts they have invested in steam locomotives and their accessories, engine houses, repair shops, water supplies, etc., and the temporary disorganization which the change would effect. But all this has little effect on the question of ruling gradients unless it is to emphasize the advantage of flattening them as much as possible. The time was when it was believed that the wheels of an electric locomotive gripped the rail better than those of the steam locomotive, when it was argued that because an electric locomotive could negotiate a grade of 10% it was not economy to spend money to secure a lower standard, but these times have gone by and the change to electricity, whether imminent or not, will not to any great extent affect the principles of railway location as they were laid down 20 years ago by A. M. Wellington, and as they are accepted with more or less modification and reservation, due to the greater flood of experimental light which has been thrown upon them at the present day.

"News" for J. E. Dalrymple.

A "technical" paper, published in Toronto had the following in a recent issue:—

"J. E. Dalrymple, one of the vice presidents of the Grand Trunk Railway, and head of the traffic department at Montreal, has left the service of the G.T.R. to become vice president of the Northern Navigation Co., to which position he has been chosen. Mr. Dalrymple will still have his offices in Montreal."

The idea of Mr. Dalrymple relinquishing the high salaried position of Vice President of the G.T.R. and G.T.P.R. to accept that of a director, to which no salary is attached, of the Northern Navigation Co., a subsidiary of the Canada Transportation Lines, Limited, is rich. The facts were given in Canadian Railway and Marine World for September as follows:—

"J. E. Dalrymple, Vice President (Traffic), G.T.R., and G.T. Pacific Ry., has been elected a director of the Northern Navigation Co., as representing the G.T.R. interests, vice W. E. Davis, deceased.

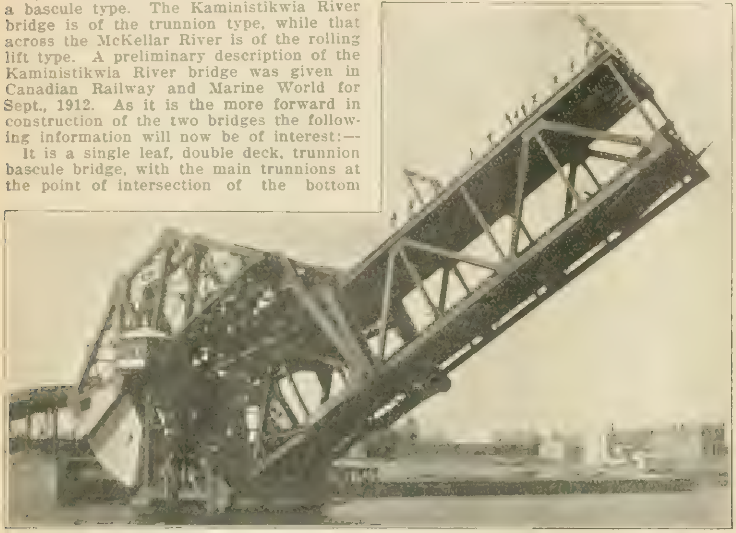
Canadian Pacific Railway Bascule Bridge Over Kaministikwia River.

The C.P.R. is building extensive terminal yards and loading docks on Island no. 1 at Fort William, Ont. In order to reach this island it was necessary to build bridges across the Kaministikwia and McKellar Rivers. Inasmuch as these are both navigable rivers, movable bridges were required, and on account of the rivers being so narrow, it became necessary to use bridges of a bascule type. The Kaministikwia River bridge is of the trunnion type, while that across the McKellar River is of the rolling lift type. A preliminary description of the Kaministikwia River bridge was given in Canadian Railway and Marine World for Sept., 1912. As it is the more forward in construction of the two bridges the following information will now be of interest:—

It is a single leaf, double deck, trunnion bascule bridge, with the main trunnions at the point of intersection of the bottom chord, and the end post of the truss (heel trunnion type), and embraces a 186 ft. movable span, giving a clear channel in the river of 180 ft. and a 40 ft. stationary span or tower. The lower deck carries a double track railway, and the upper deck a 30 ft. roadway, on which are two electric railway tracks. The counterweights are separately mounted on trunnions supported at the top of the tower, and the counterweight trusses, which carry part of the highway floor, are connected to the moving leaf through the counterweight links, which are pin connected both to the counterweight trusses and the bascule trusses. There are long approach viaducts on both sides of the river for the electric railway, to enable it to cross the bridge on the upper deck.

The bridge was erected in the open position by means of an erection tower such as is ordinarily used in erecting this kind of a bridge. The placing of the concrete for the counterweight was carried on simultaneously with the erection of the steel, so as to balance the structure at all times. On account of the size of the structure, the available space for the concrete was small, and it was necessary to make concrete weighing as much per cubic foot as was possible. Iron ore was used in place of stone for this reason, and concrete was obtained weighing about 175 lbs. a cubic foot. This concrete has such great tensile strength that most of the reinforcing ordinarily used in these counterweights was omitted. There was occasion to remove some of this concrete afterward, and it was found to be so tough that the only way it [illegible]

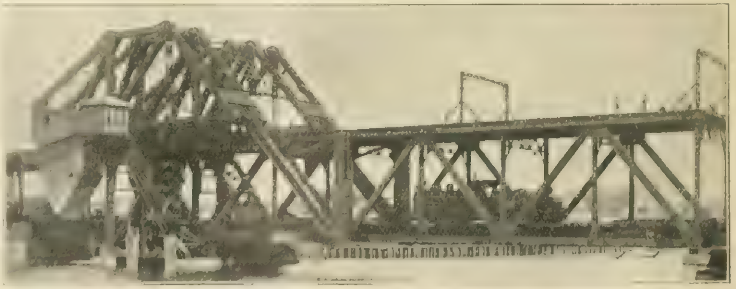
The bridge is operated by electricity obtained from the Kaministikwia Power Co. It has two 85 h.p. motors for raising and lowering, and it is interlocked in such a way that every operation must be performed in sequence, and unless the bridge is actually moving up or down, it is held rigidly in position by a brake operated by an independent 5 h.p. motor.



Kaministikwia River Bridge, Being Opened.

The total weight of steel in the bridge, exclusive of the approaches, is about 2,500 tons. The counterweight weighs about 2,400 tons.

The bridge was designed under the direction of P. B. Motley, M. Can. Soc. C.E., Engineer of Bridges, C.P.R. It was fabricated in the Canada Foundry Co.'s Davenport works, Toronto, and all calculations in regard to counterweight were worked out in that company's engineering department after the shop drawings were made.



Kaministikwia River Bridge, Closed.

It is said to be the largest double track, double deck bascule bridge in the world.

The Great North Western Telegraph Co. has closed its offices at Crystal Beach, Hastings, Rosseau, Royal Muskoka Hotel, Ont., and Little Metis, Que.

Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those for [illegible], from July 1, 1913:

	Gross Earnings	Expenses	Net Earnings	Increase
July	$1,928,800	$1,414,500	$514,300	$19,700
Aug.	1,824,800	1,416,200	408,600	37,800
	$3,753,600	$2,830,700	$922,900	$57,500
Inc.	$ 178,100	$ 120,600	$ 57,500	

The mileage under operation in Aug. 1 was 4,316, against [illegible] in Aug., 1911.

Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those for [illegible], from July 1, 1913:

	Gross Earnings	Expenses	Net Earnings	Decrease
July	$11,[illegible]	$7,[illegible]	$4,116,793 18	$331,383 72
	$11,[illegible]	$7,[illegible]	$4,116,793 18	$331,383 72
Incr.		$ 27[illegible]047 41		
Decr.	$ [illegible]		$ 331,383 72	

Approximate earnings for August, $11,[illegible], against $[illegible] for August, 1912.

Commencing August, the mileage under operation was increased to 11,[illegible].

Grand Trunk Railway Earnings, Etc.

The following figures show the earnings and expenses of the G.T.R., C.A.R., G.T. Western Ry. and D.G.H. & M.R. for July:

A fire which broke out in the residence of PATRICK DUBEE, Secretary-Treasurer, Montreal Tramways Co., and President, Canadian Electric Railway Association, on Arlington Ave., Montreal, on the evening of Sept. 24, damaged the house and contents several thousand dollars.

Railway Development

Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta and Great Waterways Ry.—It is reported from Edmonton, Alta., that among the measures to be submitted to the Alberta Legislature which opened Sept. 16, will be one providing for the building of this projected railway from Edmonton to McMurray, 230 miles, as a government work.

Algoma Eastern Ry.—The section of the line to Goat Island was opened for traffic, Sept. 15. The road is now being operated from Sudbury to Goat Island, at which point a round house and machine shop has been built. A bridge is under construction to connect Goat Island with Little Current, on Manitoulin Island, which it is expected to have ready for traffic Nov. 1. The passenger station and freight sheds will be located at Little Current. (Aug., pg. 376.)

See complete descriptive article on pg. 457 of this issue.

Delaware and Hudson Co.—The Board of Railway Commissioners has authorized the Quebec, Montreal and Southern Ry.,—the D. & H. Co.'s railway in Canada—to operate trains over the bridge across the St. Francois River, between St. Francois du Lac and Pierreville, Que. (Oct., 1912, pg. 501.)

Dominion Atlantic Ry.—The Board of Railway Commissioners has approved of a revised location for the North Mountain Branch between Grafton and Torn Lane, Cornwallis tp., N.S. (Sept., pg. 432.)

Edmonton, Dunvegan and British Columbia Ry.—J. D. McArthur, President, is reported to have stated in an interview Sept. 4, that track had been laid from Edmonton, Alta., northerly for 100 miles, and it was expected to reach the site of the bridge across the Athabasca River at Mirror Landing, mileage 130, before suspending work for the season. Ballasting gangs are following up the track layers, and it was hoped to have the line open to Mirror Landing before the end of the year. Grading and other work beyond the river was being proceeded with, and the bridge across the river was being built. (April, pg. 168.)

Essex Terminal Ry.—Surveys are reported to have been completed for the extension of the line from Sandwich to the site of the new steel plant at Ojibway, Ont., about three miles. The right of way has been secured, and the Board of Railway Commissioners has authorized the building of the extension at grade across several highways. It is expected that construction will be started at once. (April, pg. 168.)

Hudson Bay, Peace River and Pacific Ry.—At the annual meeting in Winnipeg, Sept. 10, the following were elected directors for the current year: R. M. Simpson, D. E. Sprague, D. C. Cameron, F. W. Drewry, F. W. Henbach, R. C. McDonald, R. D. Waugh, W. S. Evans, C. Midwinter. (Mar., 1912, pg. 120.)

Intercolonial Ry.—Tenders are under consideration for the erection of a brick and stone passenger station at Sussex, N.B.; and for the erection of a mechanical coal handling plant at Drummondville, Que.

Tenders are also under consideration for the building of a diversion between Nelson and Derby Jct., and for the building of a second track from St. Romuald to Chaudiere Curve, Que. F. P. Gutelius General Manager, is reported to have stated in Montreal, Sept. 15, that the contract for the latter work had been let to Soper and McDougall. The work to be done covers the construction of a second track from station 173+18 at St. Romuald to station 371+48 at Chaudiere Curve, 3.75 miles, with such sidings as may be directed. The contractor is to do all the excavating and grading, to extend or build new culverts and bridge masonry, construct protection walls and retaining walls, protect embankments with rip-rap, etc. The work is to be completed by July 1, 1914.

The revision of gradients on the Cape Breton section, Mr. Gutelius stated, Sept. 15, would be put under contract as soon as Parliament sanctioned the expenditure. It is intended to undertake the revision of gradients on the whole line.

New station buildings are being erected at Truro, N.S., and Bathurst, N.B. It is also proposed to overhaul many of the other station buildings.

Intercolonial Ry.—J. S. O. Dwyer, M. Can. Soc. C. E., who is in charge of the grade revision surveys in Cape Breton, has obtained a 0.6% gradient compensated for curvature in both directions, east and west from Point Tupper to Grand Narrows, 46.2 miles. The surveys will be continued to Sydney, 45.3 miles farther and it is expected to obtain the same gradient throughout.

Kettle Valley Lines.—We are officially advised that the contract for the line through Coquihalla Canyon to Hope, B.C., 38 miles, has been let to McArthur Brothers Co., New York, who have established headquarters at Hope, B.C., where F. C. Hitchcock, Vice President and General Manager, is now located. The work is very heavy rock and tunnel in a very inaccessible canyon, and extends from the summit of the Coquihalla near Merritt to Hope, where connection will be made with the Canadian Northern Pacific Ry., and by a bridge across the Fraser River with the C.P.R. The contractors made a start on the work at Hope on Aug. 27, C. C. Tinkler and H. A. McClure being in charge for the contractors. The work is being sublet in short sections. A wagon road is being built along the canyon, from the Hope end, as far as possible to facilitate the getting in of supplies. This road will be about 16 miles long and is estimated to cost $200,000. In addition to the heavy rock cutting there will be 12 tunnels on the 38 miles. The contract calls for the completion of the work by Nov. 1, 1914.

The company's engineers started work Aug. 26, making soundings on the Fraser River at Hope to secure a location for the bridge to be built to give connection with the C.P.R.

At Penticton, a large yard is being laid out, and a locomotive house and other buildings are being erected. The locomotive house is 90 ft. by 160 ft. and will accommodate six locomotives. The boiler house and machine shop is 100 ft. by 48 ft. (Sept., pg. 432.)

Lake Erie and Northern Ry.—Track laying is being proceeded with from Galt towards Brantford, Ont., on this line, and ballasting is in progress. Grading has so far progressed that it is not expected there will be any delay in the work of track laying into Brantford. It is expected to have this part of the line completed by Oct. 30. About 10 miles of grading have been completed between Bratnford and Port Dover, and it is expected to finish up the remaining 20 miles by Dec. 31. The whole 53 miles from Galt to Port Dover is expected to be in operation June 1, 1914. The question of the terminal site in Port Dover has not been settled.

Arrangements are being made with the Hydro Electric Commission by [illegible] the [illegible] power line from the [illegible] sub-station into Brantford will be erected along the company's right of way. (Sept., pg. 432.)

London and Port Stanley Ry.—It is said that the ratepayers of London will be asked to vote on Oct. 15 on a by-law providing for the electrification of that line, from London to Port Stanley, Ont. (Sept., pg. 432.)

London to Port Talbot.—London, Ont., press reports state that surveys have been made by S. Wilson for a railway from London to Port Talbot, Ont.

C. M. Stewart, President of the Canadian Stewart Co., and of James Stewart and Co., New York, was in London, Sept. 17, looking over the suggested routes for the entrance of this projected railway into the city. He is reported to have stated that his company is looking for a route which will give a one-half per cent. gradient from Lake Erie to London; the company would provide its own terminal facilities, and build its own line independent of any existing line, and would not seek any bonus; it will be a steam railway exclusively. The lake terminal has not been selected, and everything will depend on the result of the surveys.

New Brunswick and Prince Edward Island Ry.—A new bridge is being placed over the river at Port Elgin, N.B., work being started Sept. 8. The construction is being done by an Intercolonial Ry. gang. (Aug., 1911, pg. 733.)

North Ry.—Press reports state that about 200 miles of the surveys for the building of this projected railway from near Montreal to the National Transcontinental Ry. at Bell River, Que., have been completed, and that the engineers expected to have their field work finished by Sept. 30. The Laurentides will be crossed at a low elevation, and from 25 miles beyond the Gatineau River, the line will run through a comparatively level country for about 150 miles right to Bell River. It is further stated that a contract for the building of the line will be let shortly. (July, pg. 332.)

Northern Pacific Ry.—G. T. Reid, Assistant to the President, is reported to have stated in an interview Sept. 3, that the revision of the line between Seattle and Sumas, Wash., via Snohomish, will not be completed until the spring of 1914. Connection will be made with the Great Northern Ry. at Huntingdon near Sumas and the G.N. Ry. will be used into Vancouver. An agreement is being negotiated with the British Columbia Government for the use of the bridge over the Fraser River at New Westminster. The terminals which the G.N. Ry. is laying out at False Creek, Vancouver, into which the N.P. Ry. trains will run, are expected to be ready in the summer of 1914. (July, pg. 332.)

Pacific Great Eastern Ry.—A. E. Kellett, Superintendent of Construction, reported to the North Vancouver Council, Sept. 6, that it was expected to have the line as far as Dundarane ready for operation by Jan. 1, 1914. This is part of the section of the line from North Vancouver to Newport, on Howe Sound.

Plans have been deposited with the Minister of Public Works at Ottawa, for a wharf and tramway, with trestle approach, at the head of Howe Sound, B.C., in front of D.L. 486, G.I., N.W.D. (Sept., pg. 432.)

Prince Edward Island Ry.—Work has been started on the car ferry terminals at Carleton Point, P.E.I., and at Cape Tormentine, N.B. ——— Fripp is engineer in charge for the Dominion Government. (Sept., pg. 433.)

Quebec Rapid Transit Co.—Unconfirmed press reports state that work will be started in the spring of 1914 on the construction of the projected line to connect Quebec, Charlesbourg, Loretteville, Cap Rouge, Ste. Foye and the Isle of Orleans. A. Taschereau, Quebec, is interested. (Jan., pg. 21.)

St. John and Quebec Ry.—A contract has been entered into between the Dominion Government and the company under the act granting aid to certain railways for the building of the line between Andover and St. John, N.B., 200 miles. This subsidy is in lieu of that granted in 1912, and does not include the building of two bridges, one across the St. John River, and the other across the Kennebecasis River.

Steel is reported to have been laid on about 25 miles between Fredericton and Rothesay, and press reports state that J. H. Corbett and Sons (Inc.), the contractors for the section to Gagetown, have been given a contract for grading the line southerly from Gagetown. The location plans of the route from Centreville northerly to Andover, have not been finally approved by the Government, but press reports state that a contract for the grading of this section has been let to McFarlane and McDonald. (Sept., pg. 433.)

Toronto, Hamilton and Buffalo Ry.—F. L. Somerville, consulting engineer, Toronto, has submitted to the Hamilton City Council a plan for the betterment of the railway entrances into the city, for use in connection with the city's application to the Board of Railway Commissioners for an order directing the T.H. and B. Ry. to abandon its present line on Hunter St. The details of the plan have not been given out, but it is stated that the estimated cost of the new route would be a little over $1,000,000. The object of the city is to have all the steam railways centralized in what is known as the Stuart St. cut. (Aug., pg. 377.)

Vancouver Island-Mainland Bridge.—At a public dinner in Victoria, B.C., recently, the Dominion Minister of Public Works stated that he was looking for an engineer to undertake the work of investigating the conditions of Seymour Narrows, with a view of constructing a railway bridge there. Seymour Narrows is the stretch of water separating the northern end of Vancouver Island from the mainland. In the original survey for what is now the C.P.R., it was marked out as a suitable place for the erection of a bridge. Several projects have been initiated since for the erection of such a structure, but nothing has come of them. (Feb., pg. 84.)

Western Dominion Ry.—Press reports state that work is to be started at an early date on the construction of this line. The projected route is from the International boundary north of Grand Falls, Mont., westerly to the Crowsnest country, tapping the coal fields, thence northely to Calgary, Alta., and then on to the Peace River country. (July, pg. 330.)

Winnipeg, Man.—The Winnipeg, Man., City Council, Sept. 8, passed a bylaw providing for the provision of a water supply for the city from Shoal Lake at a cost of $13,500.000. The report of the engineers on which the estimated cost is based contains the following:—"It will be advisable to provide a standard gauge construction railway from the point where the aqueduct leaves the Grand Trunk Pacific Ry. to Indian Bay, and our estimate includes $1,020,000 which is substantially $12,000 a mile, for the building of such railway. We have also made estimates of the cost of equipping and operating the railway, but instead of stating the sums so estimated separately they have been incorporated into the estimates of the concrete and other items of work."

Traffic Orders by the Board of Railway Commissioners.

The dates given for orders are those on which the hearings took place, and not those on which the orders were issued:—

Classification of Dried Fruit.

20010. Aug. 11.—Re application of Toronto Board of Trade, under sec. 321 of the Railway Act, for a reduction of the freight classification ratings on dried fruit. It is ordered that the application be not granted.

Esquimalt & Nanaimo Ry. Freight Tariff.

20028. Aug. 13.—Re application of Esquimalt and Nanaimo Railway for an order further extending time within which it may be permitted to file a revised Standard Freight Tariff for approval. It is ordered that the time within which the company was required to file the said tariff be further extended for six months from date of this order.

Freight Rates on A.R. & I. Co.'s Railway.

20043. Aug. 12.—Re application of the Board of Trade of Lethbridge, Alta., complaining against the cancellation of Great Northern Ry. tariff, C.R.C. no. 720, applying between stations on various lines in Eastern Canada and stations on the Alberta Ry. & Irrigation Co.'s railway, now known as the Coutts and Cardston subdivision of the C.P.R., and the notice by the Board calling upon the railway companies interested to show cause why the said tariff should not be reinstated since it has neither been superseded nor disallowed by the Board, as provided under sec, 338 of the Railway Act. It is ordered that the application be not granted.

Coal Rate from Port Burwell to Lambton.

20047. Aug. 8.—Re complaint of Interurban Electric Co., of Toronto, that while the C.P.R. charges 60 cents a ton on coal from Port Burwell to Toronto, West Toronto, and North Toronto, and is a party to the same rate from the Niagara frontier, 75c. is charged for the intermediate haul to Lambton, discriminating, therefore, against Lambton and in favor of the points named. It is ordered that the C.P.R. reduce its rate on coal from Port Burwell to Lambton and Islington from 75c to 70 cents per ton; the reduced rate to become effective not later than Sept., 1913.

Switching at Casselman, Ont.

20056. Aug. 12.—Re application of A. Pilon of Casselman, Ont., for an order rescinding order 5390, Aug. 15, 1908, declaring $3 a car to be made by the G.T.R. over and above the company's station rate on brick to be a reasonable charge for the additional service of switching and handling the traffic from the applicant's siding, about 2½ miles west of Casselman Station. It is ordered that 5390 be rescinded.

Cream Rates from British Columbia.

20074. Aug. 12.—Re application of the Shippers' Section of the Winnipeg Board of Trade for an order extending the application of the cream rates, approved by order 17384, Sept. 4, 1912, to permit of shipments of cream from Hubbard, Ituna, Kelliher, Punnichy, Quinton, and Raymore stations, to Winnipeg, on the same scale as approved under the order; and the notice calling upon the express companies to show cause why, in view of the Board's judgment of Oct. 27, 1911, the mileage covered should not be increased to 400 miles. Upon it appearing that the extension of the mileage to 400 miles will remove the discrimination complained of as between Ituna and Goodeve, it is ordered that order 17384 be amended to provide charges for cream up to 400 miles, as follows:

Miles.	Five-gallon cans, each	Eight-gallon cans, each	Ten-gallon cans, each
[illegible]	[illegible] cents	91 cents	96 cents
400	79 cents	101 cents	106 cents

The amended tariff to be made effective not later than Sept. 18,

Milling Corn in Transit.

20106. Aug 15.—Re application of Empire Flour Mills, Ltd., of St. Thomas, Ont., for an order restoring the milling-in-transit arrangement on United States corn, the product of which is shipped from St. Thomas to points on or via the G.T.R. and the C.P.R. It is ordered that the application be dismissed.

Rates on Sugar from Wallaceburg.

20136. Aug. 11.—Re application of Dominion Sugar for a readjustment of the rates on sugar, in carload quantities, from Wallaceburg to Toronto and from Wallaceburg to Hamilton, over the C.P.R., G.T.R., Pere Marquette, and Chatham, Wallaceburg and Lake Erie Railways. It is ordered that the said application be not granted.

Rates on Grain and Grain Products.

General order 109. Aug. 27.—Re complaint of Dominion Millers' Association and the Campbell Milling Co. against the proposed increase in less than carload mileage rates on grain and grain products, published in tariffs of the railway companies, to take effect Sept. 1, It is ordered that the mileage rates on less than carload shipments of grain and grain products, as published in the following schedules, be suspended until further order of the Board, namely:—

Supplement no.	to C.R.C. no.	Railway Company.
10	E-2566........	Grand Trunk
11	E-2385........	Canadian Pacific
1	E-176........	Canadian Northern (Eastern Lines)
2	E-145........	Canadian Northern (Eastern Lines)
1	E-232........	Canadian Northern (Eastern Lines)
1	2022........	Michigan Central
3	1910........	Michigan Central
8	245........	Chatham, Wallaceburg & Lake Erie
3	242........	Chatham, Wallaceburg & Lake Erie
3	115........	Essex Terminal
4	254........	Galt, Preston and Hespeler
2	80........	Schomberg & Aurora
	951........	Ottawa & New York
3	1468........	Pere Marquette
1	218........	Thousand Islands
5	565........	Toronto, Hamilton & Buffalo
3	627........	Wabash
3	102........	Windsor, Essex & Lake Shore

The railway companies were subsequently notified that at the Board's sitting in Ottawa Sept. 16 they would be required to justify the proposed increases in rates referred to in this order.

Lumber Rates for British Columbia.

20245. Aug. 30.—Re Supplement 17 to Tariff C.R.C. no. W1615, filed by the C.P.R., and effective Sept. 3, increasing rate on lumber, shingles, and other articles taking lumber rates, from British Columbia coast and interior mills to points on its Sault Ste. Marie Division. Upon the failure of the railway company to justify the proposed increases to the Board's satisfaction, and in view of the Board's ruling that no increases should be made by railway companies, unless reasons therefor satisfactory to the Board were given, pending the decision in the Western Rates Case, it is ordered that the effective date of the advanced rates in the said supplement be suspended for 30 days from the date of this order; and that the railway company be required to show cause at the sittings of the Board to be held in Ottawa on Sept. 16, why the said increased rates should not be disallowed.

Rattan Furniture Rates from British Columbia.

20246. Aug. 30.—Re Supplement no. 24 to Tariff C.R.C. no. W1713, filed by the

C.P.R., and effective Sept. 7, increasing rates on rattan furniture from Vancouver and Victoria to points in Manitoba, Ontario and Quebec.

The order in this case is precisely similar to order 20245 above.

Coal Rates to Lambton, Ont.

20329. Sept. 13.—Re complaint of Interurban Electric Co., Toronto, that on coal via Port Burwell and from the Niagara frontier it is charged 15c. a ton more to its unloading siding in the proximity of the C.P.R.'s Lambton station, than is charged to Toronto, West Toronto and North Toronto, to which the said siding is intermediate; and that the said excess charge constitutes an unjust discrimination: it is ordered that the Michigan Central Rd., the Toronto, Hamilton and Buffalo Ry., and the C.P.R. jointly be required to reduce their rate on coal, in carloads, from Suspension Bridge, New York, Black Rock, New York, and Buffalo, N.Y., to Islington and Lambton, Ont., from 75c. to 70c. per ton of 2,000 lbs., the said reduced rate to become effective not later than Oct. 27, and it is further ordered that order 20047, Aug. 8, made herein, be rescinded.

Carrying Trunks by Freight.

General order 110. Aug. 21.—Re application of R. DeB. Hovell, of Victoria, B.C., for an order directing railway companies to carry as freight passengers 1st class baggage; and the matter of the notice calling upon the railway companies to show cause why trunks containing wearing apparel and personal effects should not be accepted for carriage by freight service, when securely corded. It is ordered that railway companies be required to accept and carry by freight, trunks containing wearing apparel and personal effects, when securely corded.

Express Rates on Cream.

General order 111. Aug. 20, as amended by general order 112, Sept. 18.—Re application of H. W. Riley, of Calgary, Alta., for a reconsideration of order 17384, Sept. 4, 1912, as amended by order 17492,, Sept. 14, 1912, prescribing express rates on cream and terms and conditions of service in connection therewith, it is ordered: 1. That the application to amend order 17384, in so far as it affects the rate basis, be refused. 2. That the present tariff rates be reduced by 5c. a can by making them exclusive of delivery, and the following rules be substituted for those included in the tariff prescribed by order 17384: (1) Returned empty cans, which were carried full by this company under this tariff, will be charged at the rate of 5c. each to the original point of shipment. (2) The rates shown herein include the collection of full or empty cans at points where the company furnishes a waggon service, but do not include delivery. (3) The consignee may give the company's local agent a written general or continuing notice that until such notice is withdrawn (which shall not be within one month from the date thereof), he desires all his cream delivered by the company's waggons; and on receipt of such notice, and until its withdrawal, the company will furnish the service at an additional charge of 5c. per can. Note—Agent will preserve such notices in his possession for reference, and, if withdrawn, for at least one year thereafter. (4) No reduction from these rates will be made for smaller or partially filled cans. (5) Two 5-gallon cans will not be carried at the rate for a 10-gallon can. (6) Between common points where a competing company may have a shorter line, this company's rates will be based upon the shorter distance.

The East Coast Transport Co. is reported to have been formed for the purpose of operating a gasoline vessel between Victoria and Nanaimo, in the freight traffic.

Railway Finance, Meetings, Etc.

The Buffalo and Lake Huron Ry. Co.'s annual meeting was held at Liverpool, Eng., Sept. 3. The report for the half year ended June 30 states that after providing for the interest on the 1st and 2nd mortgage bonds the available balance, as shown by the revenue account, including the amount brought in from the previous half year, is £15,118 7s. 1d., out of which the directors recommend the usual dividend of 5s. 3d. a share, amounting to £13,784 13s. 3d., leaving a balance of £1,333 13s. 10d. to be carried forward. The company's line is leased to the G.T.R.

Central Ry. of Canada.—A London, Eng., cable Sept. 8, stated that the delay which has arisen in the payment of the coupons due in July on the company's bonds, payable in Paris, France, is owing to the voluntary liquidation of La Banque Alsacienne de Paris, but that arrangement had been made for the payment of the coupons Sept. 15.

Elgin and Havelock Ry.—Following are the officers and directors for the current year:—President, R. E. Harris; Secretary-Treasurer, F. H. Oxley; other director, C. H. Cahan.

Grand Trunk Pacific Ry.—A certified copy of bylaw 13, providing for the issue of $15,000,000 of debentures, authorized by the G.T.P. Loan Act, 1913, was deposited with the Secretary of State at Ottawa, Aug. 2[illegible]

Great Northern Mining and Ry. Co.—A meeting of subscribers was held at Eastern Harbor, N.S., Sept. 5, to approve a contract entered into with Jas. Brodie, Westmount, Que., by the directors, for the transfer to him of all the property and the entire undertaking of the company. A further meeting of shareholders was held Sept. 19, for the purpose of confirming the resolutions passed Sept. 5. The company owns coal mining properties in Inverness County, N.S., and has a charter to build a railway to connect these with a shipping port at Eastern Harbor. No railway construction has been done. The officers of the company are:—President, P. J. L. Fiset; Secretary, P. LeClerc.

Kettle Valley Ry.—A lease dated June 2, of the K.V. Ry. to the C.P.R. Co. has been deposited in the office of the Secretary of State at Ottawa. The K.V. Ry. extends from the International Boundary to Grand Forks, B.C., and is under construction from Grand Forks to the Fraser River at Hope, where a connection will be made with the C.P.R. main line. It also owns a line in the U.S., from the International Boundary to Republic, Wash., and a charter for the building of a line thence to Seattle, Wash.

Kettle Valley Ry.—The Board of Railway Commissioners has recommended the Governor in Council to sanction the proposal to lease the K.V.R. lines to the Canadian Pacific Ry. Co.

Klondike Mines Ry.—Following are the officers and directors for the current year,—President, H. B. McGiverin; Vice President, J. P. Ebbs; Secretary, A. Haydon; other directors, John Latta and C. G. Kekewich.

Mineral Range Rd.—The authority of the Michigan State Railroad Commission has been granted for the issue of notes for $115,000.

New York Central and Hudson River Rd.—A copy of an agreement supplemental to that made Nov. 23, 1912, and dated June 5, 1913, between the Guaranty Trust Co. and the N.Y.C. and H.R. Rd. Co. was deposited with the Secretary of State at Ottawa, Aug. 9. The agreement affects the Canada Southern Ry., the Ottawa and New York Ry., and the other lines in Canada in which the N.Y.C. and H.R. Rd. [illegible]

Quebec and Saguenay Ry.—[illegible] O'Brien, contractor, for $[illegible] [illegible] will come before the courts at the [illegible] sittings.

Thousand Islands Ry.—The annual meeting was held at [illegible], Ont., Sept. [illegible] Following are the officers and directors for the current year:—President, [illegible] W. Rathbun, Deseronto, Ont.; Secretary and Treasurer, H. W. Cooper, Gananoque, Ont.; Manager, [illegible] other directors, [illegible] and S. E. [illegible], M.P., [illegible]

Wabash Rd.—The Receivers have been [illegible] permission to sell $[illegible] certificates for the purpose of taking up the amount of [illegible] maturing Aug. 1. Default was made Aug. 1 in payment of interest on the [illegible] which were made [illegible] which matured Aug. 1, 1911, and which have been extended several times. Interest was last paid on Feb. 1, but the local court is reported to have ordered that the payment which was due Aug. 1 be not made.

Winnipeg and Northern Ry.—Notice has been formally given that the amalgamation of the W. and N. Ry. Co. with the Canadian Northern Ry. Co. has been completed.

Safety First on the Grand Trunk Railway.

Howard G. Kelley, Vice President, has issued the following circular: "Geo. Bradshaw, Safety Engineer, has been engaged to put into effect on this system an organization for the prevention of injuries and damage to property, familiarly known as a safety first" organization. He will inspect the lines, terminals and shops and confer with officers of the various departments on matters pertaining to safety in their jurisdictions and as to the particular plan of organization best adapted to this system. From the information so obtained he will submit a report embodying recommendations which will be followed by a circular for general distribution explaining in detail the plan decided upon and methods of procedure. He will also deliver at all important centres illustrated lectures on safety, showing and explaining in a vivid and impressive manner unsafe conditions and practices responsible for injuries and how to correct or avoid them. Notice of the time and place of these lectures will be given and it is desired that every employe on the system, whose duties permit, shall attend. No employe who considers the importance of his own personal safety can afford to miss the opportunity which these lectures will afford to learn something of real practical value for the protection of his life and limb. We hope to reduce the personal injury record to the lowest possible point and to make our system the safest in the country to work for and to patronize. To accomplish this end every officer, agent and employe is requested to give his earnest and active support and co-operation in the inauguration and prosecution of this campaign for greater safety."

The American Association of Passenger Agents held its annual convention at St. Paul, Minn., Sept. 8 and 9. The chief subjects discussed, were, the field man, and how to increase our efficiency to the public and our employers. After the close of the convention, those present were taken on a trip through the Yellowstone Park, by special train to Gardiner, Mont., and thence by stage, as guests of the Northern Pacific Ry. San Francisco was decided on for the 1914 meeting.

Canadian Northern Railway Construction, Betterments, Etc.

Canadian Northern Ontario Ry.—We are officially advised that on Sept. 9, there still remained about four miles of track to lay, and about 60% of the ballasting to be done on the uncompleted portion of the line between Toronto and Ottawa. The erection of station buildings, roundhouses, etc., has been completed. Owing to the uncertainty of the amount of train filling to be done on several sections, we are informed, it is not possible to fix a date for the completion and opening of the line for traffic.

Sir Donald Mann, Vice President, made a trip of inspection over the line from the Ottawa end to Chaffey's Locks, on the Rideau River, Sept. 11. With the exception of about four miles between Chaffey's Locks and Sydenham, on which trouble is being given by some sink holes, the line is completed. Press reports state that the work of filling these is expected to be completed to permit of the operation of trains through from Toronto to Ottawa, by Oct. 15, but Sir Donald Mann, in an interview Sept. 18, is reported as stating that "six months' deferment of the opening of the line to passengers will allow the tracks to settle down."

Montreal-Ottawa-Port Arthur Line.—We were officially advised Sept. 9, that the portion of work on this line at that date was:—Grading, 60% completed; tracklaying, 42% completed; ballasting, 20% completed; erection of buildings, etc., 5% completed. The work on the line will be continued until completion, as everything is in such a shape that work may be continued regardless of the season. These figures refer to the progress of work on the whole of the line between Montreal and Port Arthur, but they do not indicate the state of completion on various sections. The line between Montreal Island and Hawkesbury is practically finished but for the completion of the bridges at the Montreal end; the section between Hawkesbury and Ottawa is in operation, and the mileage between Ottawa and Rideau Junction, the point where the line to Toronto separates, is also completed, but has not yet been opened for traffic. Between Rideau Jct. and Capreol, Ont., the line is under construction, and we were advised Sept. 17, of the following state of construction on this section: Grading from Ottawa to Pembroke, 56% completed; grading from Pembroke to North Bay, 45% completed; grading from North Bay to Capreol, 86% completed. Track has been laid from Capreol, mileage 313 from Ottawa, easterly for 44 miles to mileage 269, from just west of North Bay, mileage 231, for 19 miles to mileage 250, and from just east of North Bay at mileage 227 to mileage 186, in all 104 miles. Track has also been laid from Rideau Jct., six miles, to mileage 12, and one-half mile of track has been laid to the crossing of the C.P.R. at mileage 33 from Ottawa. The bridge work at Chats Falls, and Riviere des Prairies, is well in hand and it is expected that these will be completed this year. It is not expected to have the Ottawa-North Bay section finished until 1915, but it is expected to have the North Bay-Capreol section completed for operation about Aug., 1914. At Capreol, the line joins up with the line originally built from Toronto to Sudbury. Sudbury is now upon a branch, the line having been extended and it is now in operation to Ruel, 55.6 from the point of junction at Capreol. It is 545 miles from Ruel to Port Arthur, and it is expected to have the track laid through between these points early in January.

Canadian Northern Ry.—A new track has been put in operation at Port Arthur, Ont., for the operation of trains from Fort William. The new track begins at the diamond, and skirts the present C.N.R. yards to the station. Heretofore the trains ran over the freight train track.

The Board of Railway Commissioners has authorized the operation of traffic over the connection between the C.N.R. and National Transcontinental Railway at St. Boniface, Man.

The Winnipeg North Eastern Ry. has deposited with the Minister of Public Works at Ottawa plans of the proposed railway bridge over the Red River, from the foot of Clare Ave., Winnipeg, to south of Harrowby Ave., St. Boniface.

Ballasting is being pushed ahead on the Totogan branch, with a view of bringing it up to a higher standard. The branch is being extended and press reports state that some additional track will be laid before the end of the year.

The Board of Railway Commissioners has approved of location of the extension of the Grosse Isle Branch, which now extends to Inwood, Man., from mileage 74.47 to 80.88.

A start has been made at Yorkton, press reports state, on a line from that point to Wroxton, Sask.

The Board of Railway Commissioners has approved of location plans for the extension of the Alsask Branch from mileage 105.42 to 148.54.

It was reported to the Calgary, Alta., City Council, Sept. 12, that the line from Vegreville would be completed into Calgary within 30 days. The steel has been laid to Drumheller, to which place the line is in operation from Vegreville, but the bridges over the Bow and the Elbow rivers have not been completed. These bridges, however, are at Calgary, and all that is delaying the completion of the line is the ballasting. The gravel for this purpose has to be hauled over 130 miles.

Canadian Northern Pacific Ry.—Track has been laid easterly from Port Mann, B.C., 122 miles, a little beyond North Bend. A large steel bridge is under construction at this point over Stroma Creek, which is expected to be completed early in October. Grading is practically completed to Lytton, and work is well forward as far as Kamloops, where a big bridge is being built across the Thompson River, which will take some time to complete. Grading is well advanced north and east of Kamloops, to within about 28 miles of the work in progress from the Yellowhead Pass. Ballasting is being pushed close behind the tracklaying gangs.

Work on the proposed electric line from Kamloops to Vernon is reported to be under way, after having been suspended for some time.

The trestle work in connection with the Lulu Island Branch has been finished and the line is now ready for operation.

Sir William Mackenzie, President, in an interview Sept. 5, is reported as stating that a large portion of the proceeds of the loans recently placed in London, Eng., will be used for western development. The plans include the shops at Port Mann, terminals at Vancouver, Victoria and New Westminster, and the provision of an entrance into Vancouver by a tunnel. These several projects will be gone on with at once, but the company's entrance into Vancouver does not depend upon the building of the tunnel, an arrangement having been made by which the C.N. Ry. will use the Great Northern Ry. lines for the present.

Plans for the reclamation of the False Creek flats are being prepared, and T. G. Holt, Executive Agent, Vancouver, stated Sept. 9, that they would be sent to Toronto shortly for approval.

Vancouver Island Lines.—The contracts for the construction of the line from the Songhees Reserve at Victoria, to Patricia Bay, in the Saanich Peninsula, are reported to have been let to J. Macdonald and the Littleton-Bruce-Elsbach Co. D. D. Lewis, District Engineer, Victoria, is reported as saying, Aug. 30, that the work to be done covers the building of a line from Patricia Bay to the point at which the line to Alberni starts, mileage 4.7 from Victoria, and a line from that point into the Songhees Reserve. The engineering staff then had everything ready to go ahead as soon as the contractors arrived. The work will be rushed ahead as fast as possible.

Grading on the main line from Sooke Lake to mileage 100 is expected to be completed by Nov. 30, and good progress has been made up to mileage 140. The steel superstructure of the bridges over the Cowichan and the Koksilah Rivers is being put up. (Sept., pg. 427.)

Canadian Pacific Railway Company's Annual Report.

In publishing this report in our last issue some errors unfortunately occurred in showing the liabilities in the condensed balance sheet on page 425. The copy was put in the printers' hands correctly and was also put in type correctly, but in putting the type into the form some lines were transposed. The grand total of the liabilities was unaffected, but the totals of the amount due on mortgage bonds, $13,157,520.00, and of the current liabilities, $30,511,302.73, were transposed, and the amounts of the Algoma Branch first mortgage bonds, and current liabilities were repeated, the former incorrectly. The correct arrangement of figures is as follows,—

LIABILITIES

Capital stock		$ 200,000,000.00
Payments on subscription to new issue capital stock (60,000,000.00 at 175) . . .		63,451,667.50
4% preference stock		74,331,339.79
4% consolidated debenture stock		163,257,224.32
Mortgage bonds:		
First Mortgage, 5% .	34,998,633.33	
Less amount redeemed and cancelled....	21,841,113.33	
		13,157,520.00
Algoma Branch, 1st mortgage		3,650,000.00
Current liabilities:		
Audited vouchers .	14,785,322.70	
Pay rolls	6,549,901.24	
Miscellaneous accounts payable	9,176,078.79	
		30,511,302.73
Interest on funded debt and rental of leased lines:		
Coupons due July 1, 1913, and including coupons overdue not presented	1,208,016.17	
Accrued fixed charges	183,785.05	
		1,391,801.22
Equipment obligations ..		880,000.00
Equipment replacement fund...		2,425,426.02
Steamship replacement fund....		5,061,338.29
Appropriation for additions and improvements.. .		17,912,991.41
Reserve fund for contingencies..		3,569,468.37
Lands and town sites sales.....		63,334,285.19
Surplus		77,597,100.36
		$ 720,531,465.20

Alberta and Great Waterways Ry.—An announcement was made in the Alberta Legislature, Sept. 22, by the Premier that a final settlement had been made with the Royal Bank and others interested, in connection with the difference arising out of the proposal to build this railway, and the subsequent cancellation of the contract by the Government. The contract will be taken over by J. D. McArthur, of Winnipeg, and his associates, and the line will be built.

The Canadian Northern Telegraph Co. has opened offices at Inwood, Man., and Dummer and Hearne, Sask.

National Transcontinental Railway Construction.

We are officially advised that a contract has been let to J. Gosselin, Levis, Que., for the erection of machine and other shops for the N.T.R. at St. Malo, Que. The estimated cost of the shops is $1,500,000. A description of the several buildings covered by the contract appeared in Canadian Railway and Marine World for Sept., pg. 409.

The Minister of Railways returned to Ottawa, Sept. 12, from a trip of inspection over the line westerly from Cochrane, Ont. He is reported as saying that while the section of the line from Cochrane to Lake Superior Junction, to which point it is already in operation easterly from Winnipeg, would not be entirely completed until early in 1914, it can be utilized to prevent a grain blockade if one is threatened. A few sink holes are giving trouble and some bridges to replace temporary structures, have yet to be erected. The Minister made the trip to Winnipeg over the line in company with E. J. Chamberlin, President, and other officers of the Grand Trunk Pacific Ry. At Winnipeg, Sept. 4, Mr. Chamberlin said there were yet about 275 miles of the line between Cochrane and Lake Superior Jct. to be completed, so far as ballasting was concerned. (Sept., pg. 430.)

Grand Trunk Pacific Railway Construction.

E. J. Chamberlin, President, returned to Montreal, Sept. 18, after having made a brief inspection over the G. T. P. Ry. He is reported to have said in an interview that he had been 1,200 miles west of Winnipeg, and found construction work progressing very rapidly. It is hoped to have track laid into Fort George about the beginning of 1914, and to tie up with the construction proceeding easterly from Prince Rupert towards the fall.

The Board of Railway Commissioners have authorized the opening for traffic of the line from Tete Jaune, B 17, mileage 1095.3 to mileage 1189. This is at the second crossing of the Fraser River, where a large bridge is being put in.

On the line east from Prince Rupert the Board of Railway Commissioners has approved of revised location plans through Tibbits Indian reserve, mileage 321.6 to 330.1; and from mileage 459.61 into the Fort George Indian reserve at mileage 466.11. The construction is so far advanced that J. W. Stewart, of the contracting firm of Foley, Welsh and Stewart, stated in Victoria, B. C., Sept. 2, that unless something unforseen occurs, he felt safe in saying that all the track between Edmonton and Prince Rupert will be laid by April or May, 1914. He added that his firm has 20,000 men at work on the line in British Columbia.

G. T. Pacific Branch Lines.—It was announced at the G. T. P. Ry. offices in Winnipeg, Sept. 1, that it was expected that physical connection would be made between the company's Regina-Boundary line, and the Great Northern Ry. branch line early in October. This branch extends from Necho, N.D., northerly to the International Boundary.

Starting from Talmage, on the Regina-Boundary Branch, a line is under construction into Weyburn. Grading has been completed, and on the completion of the bridge across the Souris River, track will be laid. Track will only be laid into Weyburn, mileage 14, this year, but the grading has been carried about a mile farther, to a point to which it is said that the line now being built from Harte to Bandon, Man., will be extended at a future date.

The Board of Railway Commissioners has authorized the opening for traffic of the Biggar-Calgary Branch from Dodsland, mileage 48, to Loverna, mileage 104.06. This line will connect with the Tofield-Calgary line, the operation of trains over which, from Beiseker, mileage 163, to mileage 197.7, was authorized by the Board of Railway Commissioners, Sept. 11.

According to a Calgary, Alta., press report, a G. T. P. Ry. engineer stated, Sept. 3, that the company intended to undertake the construction of a line through Moose Jaw, Medicine Hat, and the Crowsnest country into Southern British Columbia, and that the line now being completed from Tofield into Calgary, will be extended south to connect with it. We are officially advised that this construction has not been decided on, and that the building of further lines is not likely to be undertaken until financial matters improve and the freight rate question has been decided. (Sept., pg. 430.)

Dominion Government Railway to Hudson Bay.

J. D. McArthur, general contractor for building the railway from Pas, Man., to Port Nelson, Hudson Bay, is reported to have stated, while in Montreal, Sept. 10, that it is expected to have 50% of the grading and 125 miles of track laid before the end of October. Alex. McMillan, of McMillan Bros., who are carrying out the grading contract, was in Winnipeg, Sept. 10, arranging for the winter supplies for the camps. He says his firm has over 1,000 men at work on the grading. There is a shortage of men at present, but he hoped to be able to get 2,000 men into the camps for the winter. The grading had been completed for the first 185 miles, and the camps are strung out beyond that point. The track laying is being done by the Hudson Bay Construction Co., which has 400 men at work. The material for the building of a wireless telegraph station at Pas has been delivered, and is in course of erection. This station will be used to secure communication with the Government vessels in Hudson Bay, which are engaged in survey work.

The contractors are operating trains over the line, so far as track is laid, and carrying passengers at 5 cents a mile. Track has been laid to McLaren, 62 miles from Pas, at the end of August. (Sept., pg. 422.)

Great Northern Railway Lines in Canada.

Midland Great Northern Ry.—The Manitoba Public Utilities Commission has decided that the company has power to expropriate land for its proposed spur tracks in the vicinity of Ross and Elgin Streets, Winnipeg. The company entered into an agreement with the city to build these spurs, but the owners of the land refused to sell the portion required for the right of way, and argued that the company could not expropriate.

International Boundary to Peace River.—J. A. Carson, of the engineering department of the Great Northern Ry., was in Edmonton, Alta., Aug. 30, and has been spending his time since in investigating the traffic possibilities of the Peace River country. Press reports state that this investigation is being made in connection with a project for building a line from Grand Falls, Mont., the terminal of a G.N.R. branch, north westerly into the Peace River country, for which the G.N.R. is said to hold a charter. (See Western Dominion Ry., in Railway Development Department.)

Vancouver Terminals.—The west pier of the new G.N.R. dock on Burrard Inlet has been completed, and a start has been made on the sheds. The dock is 450 ft. in length and 360 ft. wide, the approaches being 250 ft. long, and 280 ft. wide. About 250,000 cubic yards of material was used for filling. The sheds, which are being built by Grant, Smith and McDonnell, are expected to be completed by Nov. 1.

L. C. Gilman, assistant to the President, G.N.R., is reported as having stated in Vancouver, B.C., Sept. 8, that it is expected to begin operating trains into the new terminals at False Creek in about a year. The Northern Pacific Ry. will use the same terminals. It is not the company's intention to operate a trans Pacific steamship service, as it is purposed to work in connection with existing steamship lines trading to the port.

The reclamation work at False Creek is being pushed forward by the contractors, Grant, Smith and McDonnell. (Sept., pg. 423.)

Annual Inspection of the Canadian Pacific Railway.

Sir Thos. G. Shaughnessy, President, C.P.R., left Montreal, Sept. 3, on his annual trip of inspection over the system, prior to the annual meeting, which takes place early in October.

He was accompanied by several other directors, including R. B. Angus and H. S. Holt, from Montreal; W. D. Matthews and Sir Edmund Osler, from Toronto; and Sir William Whyte, and George Bury, Vice President, from Winnipeg. On account of the illness of Lady Shaughnessy, Sir Thomas returned to Montreal when the party had reached Moose Jaw, Sask.

The rest of the party made a complete tour of the transcontinental line and several branches, and proceeded from Vancouver to Victoria on the s.s. Empress of Asia, the latest addition to the transpacific fleet, arriving on Sept. 10 and leaving on the following day. After inspecting several of the works in progress on the main land, when they were accompanied by R. Marpole, General Executive Assistant; Hayter Reid, Manager in Chief, Hotel Department; F. W. Peters, General Superintendent, Vancouver, and H. W. Brodie, General Passenger Agent, the party left for the east, arriving at Winnipeg, Sept. 15, and Montreal, Sept. 19.

H. Maitland Kersey, the recently appointed Manager in Chief, Transatlantic and Transpacific Steamships, London, Eng., who has been in Vancouver in connection with the arrival of the new s.s. Empress of Asia, returned to Montreal with the directors.

American Society of Mechanical Engineers.—The railway session of the forthcoming meeting of this association has been fixed for Dec. 3, when steel, and steel underframe box cars will be discussed, a paper on all steel box cars being prepared by W. F. Keisel, Jr., Assistant Engineer, Pennsylvania Rd., and one on steel underframe box cars, by R. W. Burnett, General Master Car Builder, C.P.R., Montreal.

Quebec Transportation Club.—A number of the members made a trip, leaving Quebec, Sept. 14, by C.P.R., to Toronto, thence by R. & O.N. Co.'s line to Lewiston, and on to Niagara Falls, Buffalo, Rochester and Charlotte, thence by R. & O.N. Co.'s line to Montreal, where they disbanded.

Roadmasters' and Maintenance of Way Association.—The 31st annual convention was held at Chicago, Ill., Sept. 9-12. There was an attendance of over 200 members, and a considerable number of manufacturers of track materials had exhibits.

Canadian Pacific Railway Construction, Betterments, Etc.

Eastern Division.—The Board of Railway [illegible] grade of portions of the line from mileage 6.35 at Farnham, northwesterly to mileage 19.89 at St. Johns, Que., and has authorized the opening for traffic of the second track from Farnham, mileage 6.7 to Iberville Jct., mileage 18.7. The first order covers the [illegible] between Farnham and St. Johns, and the second authorizes the use for traffic of the [illegible]

Ontario Division.—C. P. R. engineers arrived in Kingston, Ont., Sept. 12, to examine into the improvement of terminal facilities in that city. It is said that a line will be built from Tete de Pont barracks to the present station, and that a new station will be built on Ontario St. between Brock and [illegible]

The ballasting on the second track from [illegible] Guelph Jct. has been completed [illegible]ille. The concrete work for [illegible] Dixie creeks is being put in, and when the steel work on these is finished this section [illegible] Cooksville the work is making satisfactory [illegible] whole 29 miles of second track in operation by the end of the year. Additional siding [illegible]n is being put in at Dixie and [illegible]lle, and a new station has been erected at Dixie. It is said that when the second [illegible] is opened a new station will be built [illegible]ent town station and the junction station, both of which will be abandoned.

Press reports state that surveys have been made by F. B. Tapley, Resident Engineer at London, for a line to connect the St. Marys and Western Ontario Ry. with the main line running into London. It is also reported that the project for a line from Pottersburg to the downtown sections of London has been abandoned for the present.

Tillsonburg, Lake Erie and Pacific Ry.—The Dominion Government has entered into [illegible]

Lake Superior Division.—The Board of [illegible]en mileage 16.91 and 21.79, [illegible]bdivision. These revisions are [illegible] with the second track now being [illegible]

[illegible]derable improvements are being carried out in the yards at Port Arthur, Ont., [illegible] thereto. In order [illegible]ls, similar to [illegible]tion for the [illegible]

Manitoba Division.—[illegible]

[illegible] hotel which [illegible]

[illegible] the line under construction from Boissevain, on the Souris Branch, to Lauder, Man., Sept. 30.

Saskatchewan Division.—The Board of Railway Commissioners has authorized the opening for traffic of the second track between Chaplin, mileage 54, to Ernfold, mileage 66.5, on the Swift Current Subdivision. Grading has been completed for some distance farther west, and it is expected that the entire second track into Swift Current will be laid by the end of October.

A contract has been entered into between the Dominion Government and the C. P. R., under the act granting aid for the construction of certain railways, for the building of a line from Moose Jaw, Sask., northwesterly for 123 miles. This line has been built and is in operation.

What is known as the Weyburn-Lethbridge branch has been in operation for some time for 115 miles west of Weyburn. The Board of Railway Commissioners, Sept. 4, authorized the opening of a further 30 miles. The line is also being built easterly from Stirling ,Alta., and the link to connect the two sections has been authorized by the management. It is expected to have the entire line in operation by the end of 1914. Divisional points are to be located at Assiniboia and Shunavon.

Alberta Division.—Satisfactory progress is reported to be being made with the grading on the section of the Weyburn-Lethbridge line located in Alberta. The line starts out from Stirling, and will connect at the provincial boundary with the section going west from Weyburn. The line from the east is expected to be graded to the provincial boundary this year. It is expected that a divisional point will be located in Alberta in range four.

The Board of Railway Commissioners has authorized the opening for traffic of the branch line from Suffield westerly to Terrace, mileage 0 to 26.4.

The revised location plans of the Bassano easterly branch from mileage 98.72 to 115.59 have been approved by the Board of Railway Commissioners.

Alberta Central Railway.—A contract has been entered into with the company, by the Dominion Government under the act granting aid to certain railways, for the building of a line from Red Deer to Rocky Mountain House, Alta., 70 miles.

The Board of Railway Commissioners has approved of revised location plans for this line from mileage 10 to 20.

Pacific Division.—The Board of Railway Commissioners has approved of revised location plans for the Kootenay Central Ry., under construction by the C. P. R., from mileage 37.35 southeasterly to mileage 57.19.

The preliminary work for the electrification of [illegible] section of the C. P. R. is being progressed with. The power plant of the West Kootenay Power and Light Co. is being increased to meet the C. P. R. requirements.

The second track work between Mission [illegible] completed. The bridge over the Stave River at Ruskin has been completed, but that over the Harrison [illegible] Feb., 1914. This, however, will not pre[illegible]

Hotel Vancouver.—The [illegible] City Council approved plans for extensions to [illegible] The [illegible]

Grand Trunk Railway Betterments, Construction, Etc.

Southern New England Ry.—Press reports, Sept. 15, state that the various subcontractors on this line from Palmer, Mass., to the interstate line between Massachusetts and Rhode Island, have been directed to resume work. Work has been suspended for some months.

St. Lambert, Que.—A contract is reported let to Roberts and Shaeffer Co., for the building of a 600 ton coaling plant at St. Lambert, Que., at an estimated cost of $17,000.

London Improvements.—H. E. Whittenberger, General Superintendent, stated in London, Ont., Aug. 14, that nothing whatever would be done in the way of reopening the track elevation question in that city until after the work in progress in Toronto had been finished. The tracks will be elevated and a new station built, but it will be some time before anything can be done.

Holmedale Switch, Brantford.—The G.T.R. has announced to the Brantford, Ont., City Council its decision to abandon its intention to build a switch into the Holmedale industrial section for the construction of which an agreement was entered into in 1910. The right of way which was acquired for the spur is being offered for rental. (Sept., pg. 427.)

Yard Limit Rules on Canadian Pacific Railway Western Lines.

The Board of Railway Commissioners issued general order 108 under date of Aug. 11 as follows:—Re consideration of matter of yard limit boards. Upon hearing the matter at the sittings in Winnipeg, May 30, in the presence of counsel for and representatives of the Brotherhood of Locomotive Engineers, the Brotherhood of Locomotive Firemen and Enginemen, the Canadian Pacific, Grand Trunk, Grand Trunk Pacific, and Canadian Northern Railway Companies, and what was alleged; and upon reading the report of the Chief Operating Officer of the Board, it is ordered that the C.P.R. withdraw its special rule F applying to western lines, and hereafter observe the uniform rules of the Board regarding yard limits.

The C.P.R.'s rule F above referred to, in force on lines west of Port Arthur, Ont., is as follows:—Where there are no yard limit boards, the outer main track switches of passing tracks, unless otherwise directed, will be considered the yard limits within the meaning of rule 93."

In giving judgment Chief Commissioner Drayton said:—"As stated by me at the hearing I am still of the view that special rule F of the C.P.R. is in conflict with rules approved by the Board. Uniformity of practice is an essential. What the C.P.R. has found to be good practice in the east, as admitted by the company, may properly be adopted in the west. Therefore I think an order should go directing the company to withdraw its special rule F applying to western lines, and hereafter observe the Board's uniform rules regarding yard limits."

On Sept. 9 the Board passed order 20311 extending to Jan. 1, 1914, the time within which the C.P.R. shall comply with general order 108.

C.P.R. Observation Cars in Europe.—As stated at the inauguration of the C.P.R. observation car service in Austria, the contemplated extension of the route has taken place, the cars now being operated through the Austrian Tyrol to Zurich, Switzerland, over the Swiss Government Railways.

Discontinuance of Cartage Service by the Railway Companies.

[illegible] no jurisdiction in the matter. The Board, however, asked the railway companies to continue the service to Jan. 1, 1914. This the railways have consented to do on the basis of 3c. per 100 lbs. tonnage freight, and 20c. for smalls, the previous rates being [illegible]

The Intercolonial Ry. has issued a circular stating that its cartage service will be continued at Montreal and Ste. Hyacinthe, Que. at [illegible] per 100 lbs.

The railway companies operating west of Port Arthur gave notice recently that the practice of advancing cartage charges on outward shipments and collecting the same from the consignee at destination would be discontinued Oct 1. Until a little over a year ago, the rates to and from Winnipeg included the charge for cartage when performed by the railway companies' cartage agents. If cars were loaded or unloaded on private sidings, or the freight carted by the shippers or consignees themselves, a reduction was made from the rates of 3c. per 100 lbs. on the first four classes, and 2c. per 100 lbs. on 5th class traffic. Upon the reissuance of the class tariffs to western points, brought about by the necessary revision of rates as a result of the decision of the Board of Railway Commissioners in the so called Regina rate case, the rates were published exclusive of cartage, i. e., shippers and consignees were obliged to furnish their own cartage, but although no cartage tariff was published an arrangement was entered into whereby the railways would bill forward, for collection from consignee, the cost of the cartage on outbound business. It is this practice of billing forward the cartage on outbound traffic that the railway companies have now withdrawn. A number of the western boards of trade have memorialized the railway companies to continue the practice above mentioned, as otherwise the shippers will have to pay the outward cartage charges themselves.

Steamship Ticket Agents Association at Vancouver.

The Ocean Steamship Ticket Agents Association has been organized at Vancouver, for business and social purposes, the members being the principal agents in Vancouver handling ocean steamship tickets, including H. G. Smith, C.P. & T.A., Grand Trunk Ry., Chairman; C. E. Lang, C.P. & T.A., Northern Pacific Ry.; John Moe, C.P. A., Canadian Pacific Ry.; G. Coombe, C.T.A., Canadian Pacific Ry.; A. W. Nase, Commercial Agent, C.M. & St. P. Ry.; J. A. M. Faulds, Manager, Passenger Department, D. E. Brown, Hope & Macaulay Co.; C. Millard, D.T.A., Canadian Pacific Ry.; A. Whitnall, C.P. & T.A., Great Northern Ry.; J. C. Irons, General Agent, Canadian Australian Royal Mail Line; V. G. Massi, Managing Director, Italian Commercial Exchange.

The objects of the Association are to outline certain rules for guidance in the mem- [illegible]

Railway Apprentices' Mechanical Drawings at the Canadian National Exhibition.

In the mechanical drawing competition at the Canadian National Exhibition at Toronto this year, drawings entered by appren- [illegible] G.T.R. Stratford, Ont., shops taking five out of the six prizes, and an apprentice from the G.T.R. Montreal shops, the remaining [illegible] three groups, with a first and second prize of [illegible] as follows:

Hydraulic or pneumatic machinery—1st prize, H. Ord, G.T.R., Stratford, accumulator; 2nd prize, L. Ireland, G.T.R., Stratford, staybolt breaker.

[illegible] Tonge, G.T.R., Stratford, locomotive; 2nd prize, J. Lee, G.T.R., Montreal, crane.

Electrical equipment—1st prize, L. Bixon, G.T.R., Stratford, commutator; 2nd prize, W. Dunn, G.T.R., Stratford, motor and generator.

There were 20 entries in this competition and practically every drawing was of such a quality as to reflect great credit not only on the apprentice, but also on the instructors. The judge was J. G. Herring, Consumers Gas Co., Toronto.

Detroit and Huron Railway Co.

E. J. Chamberlin, President G.T.R., G.T.P.R. and Detroit and Huron Ry. Co., has issued a circular stating that the Detroit and Huron Ry., extending from Cass City to Bad Axe, Mich., was opened for operation of freight and passenger service on Sept. 28. The following officers are appointed and have jurisdiction:

TRANSPORTATION DEPARTMENT.—H. G. Kelley, Vice President, in charge of Construction, Transportation and Maintenance, Montreal; U. E. Gillen, General Superintendent, Chicago; J. Caldwell, Superintendent, Detroit.

TRAFFIC DEPARTMENT.—J. E. Dalryple, Vice President, in charge of Traffic, Montreal; R. L. Burnap, Assistant Freight Traffic Manager, Chicago; J. D. McDonald, Assistant General Passenger Agent, Chicago.

ACCOUNTING DEPARTMENT.—W. H. Ardley, General Auditor, Montreal.

All of the officials above mentioned are in the G.T.R. service.

Canadian Ticket Agents' Association.—The 27th annual meeting will be held at Cleveland, Ohio, Oct. 8, 9 and 10. The members and the ladies accompanying them will assemble at Buffalo, N. Y., on Oct. 7, and will leave there at 9 p.m., by the s.s City of Buffalo, as guests of the Cleveland and Buffalo Transit Co. The headquarters in Cleveland will be at the Hollenden Hotel. The party will leave Cleveland on the evening of Oct. 10 on the return trip.

Mainly About Transportation People.

SIR WILLIAM YOUNG, director, G.T.R., [illegible] a tour through Canada.

SIR THOMAS TAIT has rented D. Lorne [illegible] in Montreal for the winter.

H. L. DRAYTON, Chief Railway Commissioner, returned to Canada, from Great Britain, Sept. 20.

[illegible] Commercial Acetylene Co., of New York, died in Toronto, Sept. 10.

A. B. GRAY, Trackmaster, Intercolonial Ry., New Glasgow, N.S., has retired on pension after 47 years service.

J. POWELL, Chief Draughtsman, Motive Power Department, G.T.R., Montreal, has gone to England on a short visit.

WM. CARPENTER SMITH, Chief Engineer of Maintenance-of-way, Northern Pacific Ry., died at St. Paul, Minn., recently.

SIR H. MONTAGUE ALLAN and Lady Allan returned to Montreal, Sept. 5, after spending the summer at Cacouna, Que.

HUGH SUTHERLAND, Executive Agent, Canadian Northern Ry., Winnipeg, left there [illegible]

Miss Hazel Allan, daughter of **ANDREW A. ALLAN**, of the Allan Line, was married in Montreal, Sept. 18, to C. Heubach, of Winnipeg.

C. N. ARMSTRONG, Managing Director, Central Ry. Co. of Canada, returned to Montreal, Sept. 1, after spending the summer in Europe.

G. U. RYLEY, Land Commissioner, G.T. Pacific Ry., Winnipeg, and Mrs. Ryley expect to return to Winnipeg, during October, from a trip to Prince Rupert, B.C.

John Tombs, who died at Montreal, Aug. 29, aged 65, was father of **GUY TOMBS**, General Freight Agent, Canadian Northern Ry. lines east of and including Ottawa.

Miss M. Sutherland, youngest daughter of **J. N. SUTHERLAND**, formerly General Freight Agent, C.P.R., at St. John, N.B., and now of Oakville, Ont., was married there Sept. 15, to W. M. Cruthers, of Peterboro, Ont.

JAMES PLAYFAIR, Vice President and [illegible] succeeding his father, the late John S. Playfair.

K. ELLIOTT, chief clerk to the Assistant Freight Traffic Manager, Western Lines, C.P.R., Winnipeg, was presented with a cabinet of silver, by a number of his associates, recently, on the occasion of his marriage.

Miss M. B. Emmerson, youngest daughter of **HON. H. R. EMMERSON**, M.P., [illegible] Minister of Railways and Canals, was married at Dorchester, N.B., recently, to H. K. Bowes, M.A., of the Railways and Canals Department, Ottawa.

Ottawa press reports state that **HON. M.** [illegible]

[illegible] bed at the Royal Montreal Golf Club, Dixie, Que., Sept. 9, was the youngest son of the [illegible] and was buried there.

Mrs. Ussher, wife of **C. E. E. USSHER**, [illegible] Montreal after spending several weeks in California.

ANDREW STRANG, Collector of Customs at Winnipeg, and a well known western pioneer, who died there Sept. 4, aged 64, was, in 1865 in G.T.R. service in Toronto, and went to Winnipeg in 1868, as representative of a commercial house.

JAMES REID, President, Reid Wrecking Co., Sarnia, Ont., died at Detroit, Mich., Sept. 2. He was connected with the wrecking business on the Great Lakes for over 40 years, and retired from active business about four years ago, on account of ill health.

SCOTT GRIFFIN, European Manager, Canadian Northern Ry. and Canadian Northern Steamships, and Mrs. Griffin, have returned to London, Eng., after spending the summer in Canada, with Mrs. Griffin's parents, Sir William and Lady Mackenzie.

J. M. GRANT, who died at Southsea, Eng., recently, aged 84, was Secretary of the G.T.R. in its early days, serving under three successive Presidents. He retired from the position about 40 years ago and became a member of the London Stock Exchange.

J. E. Duval.

[illegible]

HENRI MENIER, who purchased Anticosti Island, some years ago, and who, in connection with the property, has been carrying on considerable development work there, including the construction of a railway, and the operation of a steamship line to Europe, died at Paris, France, Sept. 8, aged 60.

SIR WILLIAM MACKENZIE, President, Canadian Northern Ry., is reported to have added to his many varied interests, by acquiring control of the Canadian Fish and Cold Storage Co., owning what is stated to be the largest fishing fleet on the northern Pacific, and a large cold storage plant at Prince Rupert, B.C.

E. J. CHAMBERLIN, President, G.T.R. and G.T. Pacific Ry., has been created a Knight of Grace of the Order of the Hospital of St. John of Jerusalem, and **GEORGE BURY**, Vice President, C.P.R., and **H. G. KELLEY**, Vice President, G.T.R., have been created Esquire and Honorary Esquire of the same order, respectively.

JOHN STUART, who died at Toronto, Sept. 15, aged 83, was for several years interested in railway construction, and was one of the promoters, and a director of the Wellington, Grey and Bruce, Hamilton and Lake Erie, and Hamilton and North Western Rys. In 1880 he was a member of the Howland syndicate, which offered to build the C.P.R.

JACOB SERSON, Provincial Superintendent of Bridges for British Columbia and a resident of Kootenay, died in Nelson, B.C., recently, aged 69. He was engaged in construction work on the C.P.R. 38 years ago and was with that company, engaged mostly on bridge work, until eight years ago, when he was appointed to the position which he held at the time of his death.

Lady **SHAUGHNESSY**, who had not been feeling in the best of health for some time, underwent an operation, Sept. 6, at the Royal Victoria Hospital, Montreal, and is reported to be progressing satisfactorily. Sir Thos. Shaughnessy, who was on his annual trip over the C.P.R. system, prior to the annual meeting, returned from Moose Jaw, Sask., by special train immediately on being notified.

ALEXANDER McDONALD, who has been appointed Division Freight Agent, Prince Edward Island Ry., Charlottetown, was born at Vernon River, P.E.I., Nov. 17, 1846, and entered P.E.I.R. service, Apr. 1, 1881, since when he has been, to Oct. 1, 1894, chief clerk to Superintendent, Charlottetown; Oct. 1, 1894, to July 1, 1897, Superintendent, Charlottetown; July 1, 1897, to Sept. 1, 1913, chief clerk to Superintendent, Charlottetown.

J. E. LINAHEN, of the Galena-Signal Oil Co's. expert staff, who has had his headquarters at Richmond, Que., for a number of years, has been appointed Superintendent, Expert Department, in full charge of all matters heretofore pertaining to the office of Manager and with office at Franklin, Pa. E. V. Sedgwick, heretofore Manager, Expert Department, has been assigned to other duties at the New York office.

JOHN L. HODGSON, whose appointment as Master Car Builder, G.T. Pacific Ry., Transcona, Man., was announced in our last issue, was born at Simcoe, Ont., in 1858, and entered G.T.R. service at Brantford, Ont., going from there to Toronto, as Car Foreman in 1884, and to Port Huron, Mich., as Master Car Builder in 1897, in which position he remained until Aug. 21, 1913. On his leaving Port Huron, the local employes presented him with an automobile.

W. R. FITZMAURICE, whose appointment as Assistant Superintendent, Moncton and Ste. Flavie District, Intercolonial Ry., Newcastle, N.B., was announced in our last issue, was born at Bedford, N.S., Mar. 19 1870, and entered I.R.C. service May 21, 1886, since when he has been, to 1889, operator at various stations in Nova Scotia; 1889 to 1897, assistant agent, Springhill Jct., N.S.; 1897 to 1898, agent, Oxford Jct., N.S.; 1898 to Aug. 12, 1913, agent, Amherst, N.S.

W. J. ANDREWS, whose appointment as Locomotive Foreman, C.P.R., Neudorf, Sask., was announced in our last issue, served his apprenticeship, from May, 1895, to Nov., 1901, with the Great Western Ry., Swindon, Eng., and entered C.P.R. service, Mar. 15, [illegible] at Winnipeg. He was, from May 15, 1910, to May 31, 1913, Night Shop Foreman, Winnipeg; June 1 to 16, 1913, Locomotive Foreman, Winnipeg; June 17 to July 31, 1913, Locomotive Foreman, Minnedosa, Man.

J. N. FINLAYSON, for the past year engineer for Waddell & Harrington, consulting engineers, of Kansas City, Mo., on bridge construction for the Canadian Northern Pacific Ry. in British Columbia, has resigned to become Professor of Civil Engineering at Dalhousie University, succeeding Prof. C. D. Howe. Mr. Finlayson was educated at McGill University, and was instructor there for two years. For the past two years he has been with Waddell & Harrington.

J. E. DUVAL, whose appointment as General Superintendent Car Service, G.T.R., Montreal, was announced in our last issue, and whose portrait appears in this issue, entered transportation service, Nov., 1884, as agent and operator, Canada Atlantic Ry., Coteau Landing, Que., and from May, 1885 to 1902, was train dispatcher; 1902 to 1904, Car Service Agent; 1904 to 1906, Chief Inspector, Board of Railway Commissioners; in 1906 he organized the Canadian Car Service Bureau, of which he was appointed Manager, holding that position until Aug. 1, 1913.

WILLIS W. YEAGER, who has been appointed Locomotive Foreman, G.T. Pacific Ry., Wainwright, Alta., was born in Wentworth county, Ont., May 5, 1864, and entered railway service, Mar., 1887, since when he has been, to Dec., 1888, fitter, Northern and North Western Ry., Hamilton, Ont.; Dec., 1888, to Dec., 1893, fitter, G.T.R., Hamilton, Ont.; Dec., 1893, to Mar., 1909, leading hand, G.T.R., Hamilton, Ont.; Mar. to July, 1909, Locomotive Foreman, G.T.R., Hamilton, Ont.; Nov., 1909, to Sept., 1913. Locomotive Foreman, G.T. Pacific Ry., Edmonton, Alta.

In connection with the recent retirement of D. POTTINGER, I.S.O., who was Assistant Chairman of the Canadian Government Railways Managing Board, until its abolition, the Canadian Government Railways Employes Relief and Insurance Association, at Moncton, N.B., of which he had been President since its inception in 1890, has passed a resolution expressing its appreciation of the active interest taken by him in its welfare and its members, and for the manner in which he presided at its meetings, and wishing him many years of well earned rest.

W. ROBERTS DEVENISH, A.M. Can. Soc. C.E., whose appointment as Division Engineer, Canadian Government Railways, Moncton, N.B., was announced in our last issue, was born in County Tipperary, Ireland, Nov. 21, 1882, and entered transportation service in 1903, serving with the C.P.R. for eight years, in various capacities in the Engineering and Maintenance of Way Department, from rodman to Assistant Division Engineer, Lake Superior Division. He was latterly engaged as Assistant Engineer with the National Transcontinental Ry. Investigation Commission.

F. PRICE, whose appointment as Superintendent of Car Service, G.T.R., Montreal, was announced in our last issue, was born at Montreal, June 11, 1864, and entered G.T.R. service in 1879, since when he has been, to 1902, successively, stenographer, clerk to Superintendent, secretary to General Superintendent, chief clerk to Car Service Agent and chief clerk to Manager; 1902 to May 1906, Master of Transportation, Middle Division; May 1906 to Jan. 14 1913, Superintendent of Car Service, Montreal; Jan. 14 to Aug. 22, 1913, Superintendent of Passenger Service, Montreal.

G. A. STOKES, whose appointment as Division Agent, Ontario Lines, G.T.R., Toronto, was announced in our last issue, was born in Nassagaweya Tp., Ont., July 23, 1879, and entered G.T.R. service, Nov. 15, 1897, since when he has been, to Oct. 15, 1898, operator, Listowel, Ont.; Oct. 15, 1898, to Mar., 1899, relieving agent; Mar., 1899, to Apr., 1907, agent, consecutively at Harriston, Wingham, Wiarton and Brantford, Ont.; Apr., 1907, to Nov. 1, 1910, dispatcher, Stratford, Ont.; Nov. 1, 1910, to Sept. 13, 1912, Yardmaster, Don station, Toronto; Sept. 13 to Oct. 25, 1912, General Yardmaster, Toronto Terminals; Oct. 25, 1912, to Aug. 10, 1913, Terminal Superintendent, Toronto.

M. A. FULLINGTON, A. M. Can. Soc. C. E., who has been appointed Assistant Superintendent, District 4, Eastern Division, C.P.R., Ottawa, Ont., was born at Johnson, Vt., May 12, 1880, and entered C.P.R. service Oct., 1904, since when he has been, to Jan., 1905, rodman, Toronto; Jan. to Oct., 1905, transitman, London, Ont.; Oct, 1905, to Apr., 1907, Assistant Engineer, Toronto Terminals; Apr., 1907, to Jan., 1912, Resident Engineer, Districts 1 and 4, Ontario Division, Toronto; Jan., 1912, to Jan., 1913, Engineer, Dominion Atlantic Ry., Kentville, N.S.; Jan. to July, 1913, Assistant Division Engineer, C.P.R., Montreal; July to Sept., 1913, Assistant Engineer, Eastern Lines, C.P.R., Montreal.

J. Murray Gibbon,
General Publicity Agent, Canadian Pacific Railway.

E. S. SANDS, Supervising Engineer, Department of Natural Resources, C.P.R., at Calgary, Alta., has been appointed City Engineer of Houston, Tex. He is a native of Columbia, Ohio, and graduated from the University of Wisconsin in 1900. After spending two years at the university as instructor in civil engineering, he entered the U.S. Reclamation Service, and was connected with it until 1910, preparing plans and estimates and supervising construction work on several projects. For a year he was in other service, part of the time Construction Superintendent for J. G. White & Co., and part of the time Manager of the Upper Columbia Co. He then spent another year with the U.S Reclamation Service, and since April, 1912, has be in the position he now leaves.

LAFAYETTE S. BROWN, whose appointment as Superintendent, Truro, Sydney and Oxford District, Intercolonial Ry., New Glasgow, N.S., was announced in our last issue, was born at Nelson, N.B., Oct. 19, 1864, and entered I.R.C. service, Jan. 15, 1880, since when he has been, to Dec. 20, 1881, cleaning locomotives, and machinist helper, Newcastle, N.B.; Dec. 20, 1881 to Sept. 5, 1882, shunting in Newcastle yard and learning telegraphy; Sept. 5, 1882 to Nov. 25, 1883, assistant agent, Newcastle, N.B.; Nov. 26, 1883 to Oct. 4, 1898, train dispatcher, Moncton and Ste. Flavie District, Campbellton, N.B.; Oct. 4, 1898, to Apr. 30, 1912, Chief Dispatcher, New Glasgow, N.S.; May 1, 1912, to July 31, 1913, Assistant Superintendent, Moncton and Ste. Flavie and Fredericton to Loggieville, N.B., Newcastle, N.B.

COLLINGWOOD B. BROWN, A. M. Can. Soc. C. E., who was recently appointed Chief Engineer, Canadian Government Railways, Moncton, N.B., was born at Ithaca, N.Y., Aug. 27, 1879, and graduated from Cornell University. In the summer of 1898 he was an assistant on U.S. geological survey work in New York, and in the following summer acted as topographer and instrument man on survey for the New York State College of Forestry. He entered C.P.R. service in 1901, since when he has been, draughtsman and rodman, Trail, B.C.; 1902, Assistant Engineer, Bridge Department, Montreal; Assistant Engineer in charge of erection of Red River bridge, Winnipeg, and also of the construction of the annexes to the elevators at Fort William, Ont.; 1902 to 1904, Resident Engineer, District 2, Ontario Division, London; and Resident Engineer, Toronto Terminals; 1904 to 1906, Assistant Division Engineer, Western Division, Calgary, Alta.; 1906 to 1908, Division Engineer, Atlantic Division, St. John, N.B.; 1908 to 1912, Division Engineer, Eastern Division, Montreal; 1912 to July 1913, Principal Assistant Engineer, Eastern Lines, Montreal.

GEORGE SPENCER, who has resigned from C.P.R. service, and is reported to have received an appointment from the Board of Railway Commissioners, was born in London, Eng., Feb. 21, 1865, and entered railway service, July, 1880, since when he has been, to Mar., 1881, assistant agent, Toronto, Grey and Bruce Ry., Dundalk, Ont.; Mar. to July, 1881, agent, same road, Waldemar, Ont.; July, 1881, to Oct., 1882, operator, same road, Toronto; Oct., 1882, to Nov., 1883, dispatcher, same road, Toronto; Nov., 1883, to June, 1884, dispatcher, Ontario and Quebec Ry., (which leased the T. G. & B.R.), Toronto; June, 1884, to Aug., 1887, dispatcher, C.P.R. (which took over the O. & Q.R.), Toronto; Aug., 1887, to Aug., 1889, dispatcher, C.P.R., Smiths Falls, Ont.; Aug., 1889, to Oct., 1891, dispatcher, C.P.R., Toronto; Oct., 1891, to May, 1901, Chief Dispatcher, C.P.R., Smiths Falls, Ont. and in Nov., 1892, the duties of Trainmaster were added, and in Mar., 1898, the position of Trainmaster was abolished; May, 1901, to May, 1903, Chief Dispatcher, Ontario Division, C.P.R., Toronto; May, 1903, to Nov., 1906, Superintendent, District 1, Ontario Division, C.P.R., Toronto; Nov., 1906, to Jan., 1911, Superintendent, District 1, Lake Superior Division, C.P.R., North Bay, Ont.; Jan., 1911, to Sept. 8, 1913, Superintendent, District 1, Lake Superior Division, C.P.R., Sudbury, Ont.

A. COPONY, whose appointment as Master Car Builder, Western Lines, G.T.R., Port Huron, Mich., was announced in our last issue, is a British subject, born in Vienna, Austria, in 1880, where he attended the public and high schools, and graduated from the Engineering College in 1901. From Aug., 1901, to May, 1907, he occupied positions of draughtsman, designer and Department Superintendent with machinery firms in Vienna, and as Chief Inspector, Whitehead Torpedo Works, Fiume, Hungary. He went to the United States in

May, 1907, where he entered the service of the Standard Steel Car Co., Butler, Pa., as draughtsman, and later occupied positions as assistant chief draughtsman, Motor Truck Department, and on the opening of the company's Hammond works, was transferred there, and later appointed Master Mechanic, Passenger Car Department. From Feb. to Oct., 1910, he was in charge of the tool designing for the new passenger car shops of the American Car and Foundry Co., St. Charles, Mo., and engaged in experimental work at the same company's St. Louis shops. He resigned in Oct., 1910, on his appointment as Chief Draughtsman, Car Department, Western Lines, G.T.R., and was shortly after transferred to Montreal as Chief Draughtsman, Car Department, there, which position he held to the date of his present appointment.

T. C. BURPEE, M. Can. Soc. C. E., whose appointment as Superintendent Engineer, Canadian Government Railways, Moncton, N.B., was announced in our last issue, was born at Sheffield, N.B., Dec. 11, 1852, and entered railway service in Aug. 1875, since when he has been, to Nov. 1875, chairman, New Brunswick Ry.; Nov. 1876, to Jan. 1877, levelman, same road; June 1881 to Jan. 1882, rodman, Chicago, Milwaukee and St. Paul Ry., Spirit Lake Branch, Iowa; Nov., 1884 to Jan., 1885, on survey through northern Maine, International Ry.; Aug. 1885 to Jan., 1887, rodman and Assistant Engineer on Maintenance of Way, New Brunswick Ry.; Jan. 1887 to Jan. 1, 1890, Assistant Engineer, lines in New Brunswick and Maine, C.P.R.; June to Aug. 1890, transit man on preliminary survey, Bangor and Aroostook Rd.; Aug., 1890, to Apr., 1891, chief of location party, same road; Apr. 1891 to Jan., 1896, Assistant Engineer of Construction, same road; Jan. to May, 1896, chief of location party, Woodstock and Centreville Ry., N.B.; June to Dec., 1896, Assistant Engineer in charge of construction of yard at Old Town, Me., Bangor and Aroostook Rd.; May to Aug., 1897, Assistant Engineer on canal construction, Cardinal, Ont.; Aug., 1897, to 1899, Chief Assistant Engineer, Intercolonial Ry.; July, 1899, to Aug., 1913, Engineer of Maintenance, same road, Moncton, N.B.

F. BARLOW CUMBERLAND, who died at Dunain, Port Hope, Ont., Sept. 1, was born at Portsmouth, Eng., Aug. 5, 1846. He came to Canada at an early age, and was educated at the Model School, Toronto, Cheltenham College, England, and Trinity University, Toronto, taking the B.A. degree in 1867, and M.A. in 1870. In conjunction with the late Sir Frank Smith, he founded the Niagara Navigation Co. in 1880. For some years he was in the service of the Great Western Ry., and later was Freight and Passenger Agent, Northern Ry., and Traffic Manager, Lake Superior Line Steamships, afterwards amalgamated with the C.P.R. He was responsible for placing the s.s. Campana, the first one on the route, on the Upper Lakes. This was the first vessel to be cut in two in order to pass from the ocean through the St. Lawrence Canals. For several years he conducted a ticket agency in Toronto. During 1903-04, he resided in England, where he represented the Independent Order of Foresters and was President of the Canadian Club in London. He was Vice President of the Niagara Navigation Co., up to the time of its recent absorption and was connected with several financial companies, being elected a director of the Ontario Bank by the shareholders, after the suspension in 1906. Amongst various institutions with which he was connected in an official capacity, are, the St. George's Society, Toronto University, Ontario Historical Society, National Club, Toronto, Sons of England, Trinity University, Toronto, etc. He was a captain in the 10th Royals, and served in the Fenian raid. He wrote the following books: The Northern Lakes of Canada, History of the Union Jack and Flags of the Empire, and The Navies on Lake Ontario in 1812.

JAMES ROSS, M. Can. Soc. C.E., who died at Montreal, Sept. 20, was born in Cromarty, Scotland, in 1848, and was educated in Scotland and England. He spent the early portion of his business career in Great Britain in connection with railway, harbor and water works, and went to the United States in 1868, where he was, from 1870 to 1873, Resident Engineer, and Chief Engineer, Ulster and Delaware Ry.; 1873 and subsequently, Resident Engineer, Wisconsin Central Ry.; Resident Engineer, Lake Ontario Shore Rd., and on coming to Canada, was appointed Chief Engineer, and later, General Manager, Victoria Ry. In 1878-79, he built the Credit Valley Ry., and was subsequently appointed General Manager. He was also Consulting Engineer, Ontario and Quebec Ry., and, in 1883, was in charge of the building of a portion of the C.P.R. west of Winnipeg, completing the construction of the line through the Mountain District in 1885, under the General Manager, Wm. C. Van Horne (now Sir William Van Horne.) In 1886 he was engaged with the C.P.R. location east of Montreal, and looked after the legislation regarding the C.P.R. through Maine. On the completion of this work, he undertook a contract for the remaining portion of the line not provided for, and was also interested in other important contracts elsewhere. He also built the Regina and Long Lake Ry. and the Calgary and Edmonton Ry., and, in conjunction with W. Mackenzie (now Sir William Mackenzie), purchased the Toronto Ry. from the city of Toronto, in 1892, afterwards reconstructing and electrifying it, and he was also concerned in the electrification of the street railways in St. John, Montreal and Winnipeg. He, also associated with Wm. Mackenzie, acquired the tramway system in Birmingham, Eng., and formed the City of Birmingham Tramways Co., in 1896, the system being eventually electrified and taken over by the city. He later became interested in the coal industry in Nova Scotia and obtained control of and reorganized the Dominion Coal Co., later becoming President; and he was also at one time President, Dominion Iron and Steel Co., and between these two companies there was a few years ago a series of disputes, involving a long litigation, which terminated in favor of the former and the practical amalgamation of the two concerns. In 1897, with Wm. Mackenzie, he secured a charter from the Government of Jamaica, for the construction of electric railways on the island. Amongst other companies with which he has been associated in various official capacities are: Mexican Light, Heat and Power Co., Montreal St. Ry. (now Montreal Tramways Co.), Toronto Ry., Montreal Light, Heat and Power Co., St. John Ry., Winnipeg Electric Ry., Dominion Bridge Co., Canadian General Electric Co., Montreal Rolling Mills (now Steel Co. of Canada), Royal Trust Co., Ontario Electrical Development Co., Lake of the Woods Milling Co., Columbia River Lumber Co., Canada Land and Investment Co., etc. He was also interested in the Montreal Art Association, and presented the Ross Memorial Hospital to Lindsay, Ont., besides subscribing liberally to other similar institutions in Montreal and elsewhere. His favorite recreation was yachting, and he only recently returned to Montreal from a cruise in the Mediterranean. He was Commodore of the Royal St. Lawrence Yacht Club and Hon. Lieut.-Col. of the Duke of York's Royal Canadian Hussars.

Discipline of Canadian Government Railways.

F. P. Gutelius, General Manager, issued the following circular Sept. 1.:—"Commencing this date, discipline will be administered as under: It is the intention to insist on a more rigid compliance with the rules and regulations, which are made for the protection of the lives of the public and employes, as well as for the protection of the railway's property. All employes will start with a clean record, beginning this date. Any exceptional service rendered will be credited to the employe's record. A monthly discipline list will be issued. This list will show cause, extent of discipline, or action and extent of reward. Employes will, as heretofore, be subject to summary dismissal for insubordination, drunkenness on or off duty, using intoxicating liquor when on duty, frequenting saloons, or places of low repute, incompetency, dishonesty, failing to carry out train orders and rules respecting train movement. Where previously discipline was meted out by suspension, demerit marks will be placed in the record of an employe. For every repetition of an offence by the employe, the number of demerit marks will be doubled. When the demerit marks against any employe number 60, his services will be dispensed with. For every 12 consecutive months, good service, free from demerit marks, an employe will have 20 demerit marks deducted from those that may stand against his record. Employes will be advised when demerit marks are recorded against them, the same as they have hitherto been advised respecting disciplinary measures in the past."

Department of Railways and Canals, Canada.

Welland Ship Canal.

Section No. 2.

NOTICE TO CONTRACTORS.

SEALED TENDERS, addressed to the undersigned and marked "Tender for Section No. 2 Welland Ship Canal," will be received at this office until 12 o'clock noon on Wednesday, October 15th, 1913.

Plans, specifications and form of contract to be entered into can be seen on or after this date at the office of the Chief Engineer of the Department of Railways and Canals, Ottawa, and at the office of the Engineer in Charge, St. Catharines, Ontario.

Copies of plans and specifications may be obtained from the Department on the payment of the sum of fifty dollars. To bona fide tenderers this amount will be refunded upon the return of the above in good condition.

Parties tendering will be required to accept the fair wages schedule prepared or to be prepared by the Department of Labour, which schedule will form part of the contract.

Contractors are requested to bear in mind that tenders will not be considered unless made strictly in accordance with the printed forms, and in the case of firms, unless there are attached the actual signature, the nature of the occupation, and place of residence of each member of the firm.

An accepted bank cheque on a chartered bank of Canada for the sum of $150,000.00, made payable to the order of the Minister of Railways and Canals, must accompany each tender, which sum will be forfeited if the party tendering declines entering into contract for the work at the rates stated in the offer submitted.

The cheque thus sent in will be returned to the respective contractors whose tenders are not accepted.

The cheque of the successful tenderer will be held as security, or part security, for the due fulfilment of the contract to be entered into.

The lowest or any tender not necessarily accepted.

By order,
L. K. JONES,
Asst. Deputy Minister and Secretary.

Department of Railways and Canals,
Ottawa, 22nd September, 1913.

Newspapers inserting this advertisement without authority from the Department will not be paid for it.—48056.

Railway Rolling Stock Notes.

The Quebec Oriental Ry. has ordered one snow plough from the Canadian Car and Foundry Co.

The Canadian Northern Ry. has ordered three snow ploughs from the Canadian Car and Foundry Co.

The Toronto, Hamilton and Buffalo Ry. has received one rebuilt official car, from the Preston Car and Coach Co.

The Intercolonial Ry. has ordered 250 box cars, 60,000 lbs. capacity, from Canadian Car and Foundry Co.

The Canadian Locomotive Co. has delivered 2 consolidation locomotives to the Canadian Northern Ry., and 2 ten wheel locomotives to the C.P.R.

The G.T.R. has ordered 3 steel mail cars from American Car and Foundry Co., and has received 19 Mikado locomotives, 62 ins. wheel, from Baldwin Locomotive Works.

The G.T. Pacific Ry. has received 20 cabooses, nos. 390120 to 390139, from G.T.R. car shops, Montreal, and 6 dining cars, nos. 4006 to 4011, and 5 tourist cars, nos. 3410 to 3414, from Pullman Co.

The Mond Nickel Co., Coniston, Ont., has ordered one mogul switching locomotive, type 2-6-0, cylinders 20 by 26 ins., 59 ins. driving wheels, 156,000 lbs. total weight in working order, from the Montreal Locomotive Works.

The Corbin Coal and Coke Co., Spokane, Wash., associated with the Eastern British Columbia Ry., has ordered one rotary snow plough, with 17 by 22 ins. cylinders and 10 ft. 7 ins. cut scoop wheel, from the Montreal Locomotive Works.

The Canadian Car and Foundry Co. has received orders for 17 single track snow plough frames and 9 double track snow plough frames, from the C.P.R.; 3 standard snow ploughs from the Canadian Northern Ry., and 1 snow plough from the Quebec Oriental Ry.

The Intercolonial Ry. has received 233 box cars, 60,000 lbs. capacity, and 48 platform cars, from Canadian Car and Foundry Co.; 3 baggage cars from the Preston Car and Coach Co.; 110 box cars from the Nova Scotia Car Works; 25 automobile box cars from its Moncton shops, and 3 sleeping and 2 dining cars, from Pullman Co.

The C.P.R., between Aug. 4 and Sept. 13, ordered the following rolling stock from its Angus Shops,—11 stock cars, 8 freight refrigerator cars, 2 ballast cars, 6 vans, 3 wedge ploughs, 5 flangers, 5 single track flangers, 5 double track flangers, and 16 single track snow ploughs, and 9 double track snow ploughs, from its Angus Shops and the Canadian Car and Foundry Co.

The Canadian Northern Ry., between Aug. 16 and Sept. 15, received the following additions to rolling stock,—8 cabooses from its Winnipeg Shops; 4 second class cars and 60 stock cars from the Crossen Car Co., Ont.; 218 box cars from the Nova Scotia Car Works; 20 box cars and 100 flat cars from the National Steel Car Co.; 60 refrigerator cars and 35 vans from the Mount Vernon Car Co.; 5 switching locomotives from the Canadian Locomotive Co.; 1 consolidation locomotive from Canadian Allis-Chalmers, Ltd.

The C.P.R. between July 31 and Sept. 13, received the following additions to rolling stock,—563 box cars, 13 stock cars, 95 vans, 5 suburban cars, 10 box baggage cars, 1 tourist car, 8 baggage and express cars, 8 class U3 locomotives, 4 class V3 locomotives, from its Angus Shops; 1,527 box cars, 59 steel flat cars, 2 pit cars and 3 first class cars, from the Canadian Car and Foundry Co.; 200 steel frame box cars from the National Steel Car Co.; 8 Jordan spreaders and 2 Industrial wrecking cranes, from F. H. Hopkins and Co.; 40 class P1 locomotives from the Montreal Locomotive Works; 2 class D10 locomotives from the Canadian Locomotive Co.; 741 steel frame box cars and 10 sleeping cars, from Barney and Smith Car Co.; 5 dining cars from the Pullman Co.; and 2 wrecking cranes from the Bucyrus and Industrial Cos.

Following are chief details of the scoop wheel rotary snow plough with 10 ft. 7 ins. cut, which the Corbin Coal and Coke Co. is having built by Montreal Locomotive Works:—

Cylinders	17 by 22 ins.
Wheel base, trucks	4 ft. 6 ins.
Wheel base, total	19 ft 8½ ins.
Weight in working order	148,140 lbs.
Weight on front truck	79,800 lbs.
Weight on back truck	68,340 lbs.
Boiler, type	Belpaire.
Boiler, diar. first ring	60 ins.
Boiler, pressure	190 lbs.
Firebox	92 by 50.
Tubes, no. and diar	212—2 ins.
Tubes, length	9ft. 8 ins.
Heating surface, tubes	1,022.32 sq. ft.
Heating surface, firebox	109 sq. ft.
Heating surface, total	1,131.32 sq. ft.
Grate area	32.63 sq. ft.
Wheels, type	Steel tired.
Wheels, diar.	33 ins
Journals	5½ by 10 ins
Brake	Westinghouse.
Truck, type	Four wheel
Grate, type	Cast iron rocking bars.

Following are chief details of the mogul switching locomotive, type 2-6-0, which the Mond Nickel Co. is having built by Montreal Locomotive Works:—

Cylinder	20 x 26 ins.
Tractive power	31,820 lbs.
Factor of adhesion	4.4.
Wheel base, driving	11 ft. 6 ins.
Wheel base, total	19 ft. 3½ ins.
Wheel base, engine and tender	50 ft 2 ins.
Weight on drivers	140,000 lbs.
Weight on engine truck	16,000 lbs.
Weight, engine and tender	258,000 lbs.
Boiler, type	Straight top.
Boiler, diar. first ring	72 ins.
Boiler, pressure	180 lbs.
Firebox	108 by 41¾ ins.
Crown staying	Radial.
Tubes, no. and diar.	311—2 ins.
Tubes, length	11 ft.
Heating surface, tubes	1,778 sq. ft.
Heating surface, firebox	175 sq. ft.
Heating surface, total	1,953 sq. ft.
Grate area	31 sq. ft.
Wheels, outside diar.	50 ins.
Wheels, kind	Cast iron.
Truck wheels, diar.	30 ins.
Tender wheels, diar.	33 ins.
Journals	9 by 12 ins.
Engine truck journals	6½ by 12 ins.
Tender truck journals	5 by 9 ins.
Journal boxes	Cast iron
Brakes	Westinghouse American
Truck, type	Two wheel with swing centre.
Tank, type	U shape sloping top.
Capacity, water	5,000 U.S. galls.
Capacity, coal	8 tons

Grand Trunk Pacific Railway Inspection.—The annual inspection trip over the system was recently made by A. W. Smithers, Chairman of the Board, London, Eng.; E. J. Chamberlin, President; W. Wainwright, Vice President, and W. M. Macpherson, director. About three weeks was spent in going over the line to the end of steel, stoppage being made at important points to study the country with a view to future developments.

The Board of Railway Commissioners has amended its recent order fixing the express delivery and collection limits for Steelton, Sault Ste. Marie, Ont., by extending the free area to include the triangular portion bounded by Wellington St., John St. and Cathcart St., and on both sides of Wellington St., from John St. to Hudson St.

The Canadian Northern Ex. Co. has opened offices at Lundar, Man., and Dummer and Hearne, Sask.

The Canadian Pacific Railway's Tunnel at Rogers Pass, B.C.

In connection with the building of a second track on the C. P. R., between Calgary, Alta., and Vancouver, B. C., a contract has been let, as stated in a previous issue, to Foley, Welch and Stewart, for the building of a tunnel, about five miles long, at Rogers Pass, B. C. The eastern portal of the tunnel will be at mileage 80.5, and the western portal at mileage 85.5, Mountain Subdivision, and in addition to the boring of the tunnel, the contract calls for the construction of 11.1 miles of double track line approaching the eastern portal, and 2.3 miles of double track line approaching the western portal. This work will reduce the height of the summit at which the line crosses the Selkirks by 537 ft.; will eliminate 4.25 miles of distance, and 2,500 degrees of curvature, and on 15 miles of track the gradient will be reduced from 2.2% to 1% or less. The use of about 4.5 miles of snowsheds will be obviated.

A. C. Dennis, who is in charge of the work for the contractors, states that nothing will be don in the way of starting work on the approaches to the tunnel this year. The camps at the tunnel portals have been erected, and the machinery for boring the tunnel is being delivered and set up.

The tunnel, which will be on a tangent throughout its entire length, will be on a 0.93% gradient ascending west, and will be a single one, carrying a double track 30 ft. wide by 20 ft. high. A new method of construction has been adopted for boring the tunnel. Instead of boring simply from the two ends, it has been decided to bore a pioneer tunnel 7 by 8 ft., parallel with the main tunnel, and cross cut at short intervals, so as to enable several headings to be worked simultaneously.

In boring the Canadian Northern Ry. tunnel under Mount Royal at Montreal, two shafts have been sunk from the ground level nearly 300 ft. in depth to the tunnel level. From these shafts the headings are driven in each direction, and on completion of the tunnel the shafts will be used for ventilating purposes. This method of working is always adopted in driving long tunnels, where the height from the top of the tunnel to the ground level is not too great. In the case of the Rogers Pass tunnel the height of the mountains through which it is to be driven precludes the possibility of vertical shafts being used. The pioneer tunnel will aid in the ventilation of the railway tunnel during its construction. The boring of the pioneer tunnel has been started, and the first cross cuts will be made when these have been driven about 2,000 ft. It is estimated that this part of the work will have been completed by Dec. 31. The plant for boring the tunnels is estimated to cost about $500,000. Mr. Dennis estimates that about 30 ft. of boring will be done per day, and that it will take about three years to complete the bore, from which about 250,000 cubic yards of material will be taken out through the pioneer tunnels.

The contractors are erecting model villages at the two portals of the tunnel, at a cost of $50,000. The floors of the buildings at Glacier are to be 8 ft. above the ground level, with bridges to connect the houses with the work. The buildings were designed by W. S. Painter, of Vancouver.

Dominion Railway Subsidy Agreement.—The Dominion Government, Aug. 25, entered into an agreement with the Tobique and Campbellton Ry. granting aid in the construction of a line from Plaster Rock to Riley Brook, N.B., 28 miles.

Transportation Appointments Throughout Canada.

[illegible]

Algoma Central and Hudson Bay Ry.—See Lake Superior Corporation.

Algoma Eastern Ry.—See Lake Superior Corporation.

Board of Railway Commissioners.—GEORGE SPENCER, heretofore Superintended, District 1, Lake Superior Division, C.P.R., Sudbury, Ont., is reported to have been appointed to a position under the Board of Railway Commissioners, at Winnipeg.

Boston and Albany Rd.—H. M. BRISCOE, heretofore Traffic Manager, has been appointed Vice President, vice J. H. Hustis, resigned. Office, Boston, Mass.

Canadian Government Railways.—R. W. SIMPSON, heretofore on the General Superintendent's staff, has been appointed General Fuel Agent. Office, Moncton, N.B.,

R. A. KLOCK has been appointed General Tie and Timber Agent. Office, Moncton, N.B.

O. CAMERON, heretofore Freight Claim Agent, Intercolonial Ry., has been appointed Freight Claim Agent, Canadian Government Railways. Office, Moncton, N.B.

G. A. FERNLEY, heretofore Soliciting [illegible]

[illegible] E. TIFFIN, heretofore General Traffic Manager [illegible] been stated in the September issue, that he had been appointed General Western Agent, at Toronto, in charge of territory in Ontario, west of Kingston and Sharbot Lake.

See also Intercolonial Ry. and Prince Edward Island Ry.

Canadian Pacific Ry.—[illegible] been in charge of the Publicity Department for a number of years, at Montreal, has [illegible] pany's interests at Ottawa. Mr. Ham has [illegible]

[illegible] Office, Farnham, Que.

[illegible]

[illegible] Soc. C.E., [illegible] Office, Ottawa, Ont.

[illegible] transferred to Lambton, Ont.

[illegible] appointed Assistant District Passenger Agent there. This is a new position.

T. MULLINS, heretofore Assistant City Passenger and Ticket Agent, Toronto, has been appointed City Passenger Agent there.

G. S. BEER, heretofore chief clerk, City Ticket Office, Toronto, has been appointed City Ticket Agent there.

E. H. WOOD, heretofore Car Foreman at Hochelaga, Que., has been appointed Division Car Foreman, Ontario Division, vice F. E. Warren, promoted. Office, Toronto.

W. J. FLYNN, heretofore Storekeeper at Havelock, Ont., has been appointed Storekeeper at Lambton, Ont., vice J. D. Fairbairn.

A. L. SMITH, heretofore Superintendent, District 3, Eastern Division, Montreal, has been appointed Superintendent, District 1, Lake Superior Division, vice Geo. Spencer, resigned. Office, Sudbury, Ont.

G. S. LYTLE, heretofore Inspector of Transportation, Winnipeg, has been appointed Car Service Agent, Manitoba Division, vice F. Walker, transferred. Office, Winnipeg.

[illegible]

W. THOMAS, heretofore chief clerk to General Superintendent, Alberta Division, [illegible] Motive Power, Western Lines, Winnipeg.

F. E. WARREN, heretofore Division Car Foreman, Toronto, has been appointed General Car Foreman, Winnipeg, vice T. G. Arm[illegible]

C. S. MAHARG, heretofore Superintendent [illegible] been appointed Superintendent, District 3, [illegible] Office, Brandon.

[illegible] man at Arcola, Sask., has been appointed [illegible]

R. WALKER has been appointed Loco[illegible]

J. C. PIKE, heretofore Travelling Passenger Agent, has been appointed chief clerk, District Passenger Agent's office, Regina, Sask.

A. G. BROOKER, heretofore Travelling Passenger Agent, Calgary, Alta., has been appointed Travelling Passenger Agent, Regina, Sask., vice J. C. Pike, transferred.

C. D. MACKINTOSH, A.M. Can. Soc. C.E., heretofore Engineer of Construction, Moose Jaw, Sask., has been appointed Division Engineer, Saskatchewan Division, vice T. Martin, transferred. Office, Moose Jaw.

T. MARTIN, heretofore Division Engineer, Saskatchewan Division, Moose Jaw, has been appointed Engineer of Construction, Sask., vice C. D. MacKintosh, transferred.

C. H. BALL, Winnipeg, is reported to have been appointed Chief of Special Service Department, Saskatchewan Division, Moose Jaw, vice H. Wunderling, transferred.

F. WALKER, heretofore Car Service Agent, Manitoba Division, Winnipeg, has been appointed Car Service Agent, Alberta Division, Calgary, vice F. T. Anderson, on leave.

E. HUMPHRYS, chief clerk to Superintendent of Motive Power, Western Lines, Winnipeg, has been appointed Fuel Agent, Calgary, Alta., vice A. Allan, at present on leave of absence, but who will, on his return, be assigned to other duties.

C. A. COTTERELL, heretofore Trainmaster, Vancouver, B.C., has been appointed Superintendent, District 2, British Columbia Division, vice G. E. Graham, resigned, as reported in our last issue. Office, Vancouver.

W. P. MARTIN, heretofore Wharf Agent, Vancouver, B.C., has been appointed Trainmaster in charge of Vancouver Terminals, with jurisdiction extending east to Cambridge St., vice C. A. Cotterell, promoted, as reported in our last issue.

J. ABRAMS has been appointed Wharf Agent at Vancouver, B.C., vice W. P. Martin, promoted.

H. WUNDERLING, heretofore Chief of Special Service Department, Saskatchewan Division, Moose Jaw, has been appointed to a similar position for the British Columbia Division. Office, Vancouver.

The position of Advertising Agent at London, Eng., formerly held by J. M. Gibbon, who has been appointed General Publicity Agent, Montreal, has been abolished, the duties formerly undertaken by him, now being conducted in the European Manager's office, with [illegible] C. Gill in charge.

Central Vermont Ry.—E. DESCHENES, [illegible] has been appointed Auditor, vice W. G. Crabbe, deceased. Office, St. Albans, Vt.

Grand Trunk Pacific Ry.—G. W. ROBB, heretofore Master Mechanic, has been appointed Superintendent of Motive Power, and the title of Master Mechanic has been abolished. Office, Transcona, Man.

D. W. HAY, heretofore Assistant Locomotive Foreman at Wainwright, Alta., has been appointed Locomotive Foreman at Redditt, Ont., vice A. J. Roberts, transferred.

C. E. BROOKS, heretofore Locomotive Foreman at Wainwright, Alta., has been appointed Locomotive Foreman at Edmonton, Alta., vice W. W. Yeager, transferred.

W. W. YEAGER, heretofore Locomotive Foreman at Edmonton, Alta., has been appointed Locomotive Foreman at Wainwright, Alta., vice C. E. Brooks, transferred.

A. J. ROBERTS, heretofore Locomotive Foreman at Redditt, Ont., has been appointed Locomotive Foreman at Edson, Alta., vice A. H. Mahan, transferred.

A. H. MAHAN, heretofore Locomotive Foreman at Edson, Alta., has been appointed Locomotive Foreman at McBride, B.C., vice A. McTavish, assigned to other duties.

The following agents have been appointed:—Barlow, Man., F. D. Livingstone; [illegible] Hill, Sask., A. G. Redford; Wakaw, Sask., J. H. Lewis; [illegible], Alta., F. S. Benyon; [illegible], Alta., D. C. McCready.

Grand Trunk Ry.—K. F. NYSTROM has been appointed Chief Draughtsman, Car Department, Montreal, vice A. Copony, appointed Master Car Builder, Western Lines, at Port Huron, Mich.

*T. CUSHING, heretofore Trainmaster, Richmond, Que., has been appointed Chief Dispatcher, Districts 6 and 7, Belleville Division, vice C. F. French, assigned to other duties.

C. F. FRENCH, heretofore Chief Dispatcher, Districts 6 and 7, Belleville Division, Belleville, Ont., has been appointed a dispatcher there.

The following agents have been appointed:—St. Lambert, Que., F. Crane; Howick, Que., J. E. Birtz; Newtonville, Ont., F. S. Allin; Pickering, Ont., P. C. Brown; Belle River, Ont., R. D. Ralston; Rock Lake, Ont., W. J. McCourt; Essex, Ont., outside, S. Sadler; Parry Sound, Ont., outside, H. P. Foot.

Intercolonial Ry.—J. C. FULMORE, Roadmaster, Halifax to Stellarton District, Truro, N.S., is reported to have been appointed Roadmaster, Sydney to Point Tupper District, at Sydney, N.S., vice W. P. Mills.

C. W. ARCHIBALD, Resident Engineer, Oxford to Sydney District, New Glasgow, N.S., is reported to have been appointed Roadmaster, Halifax to Stellarton District, at Truro, N.S., vice J. C. Fulmore, transferred.

A. H. SOMERS, Roadmaster, Point du Chene to St. John District, Moncton, N.B., is reported to have been transferred to the portion of the National Transcontinental Ry., between Moncton and Edmundston, N.B. which is being operated by the I.R.C.

T. McPHERSON, General Roadmaster, Moncton, N.B., is reported to have been appointed Roadmaster, Point du Chene to St. John District, Moncton, N.B., vice A. H. Somers, transferred.

G. COOPER, acting Roadmaster, Painsec Jct., N.B., to Truro, N.S., District, Moncton, N.B., is reported to have been appointed Roadmaster there.

See also Canadian Government Railways.

Lake Superior Corporation.—I. L. GODFREY, heretofore in Audit Department, Hocking Valley, Ry., Columbus, Ohio, has been appointed Comptroller, Algoma Central and Hudson Bay Ry., Algoma Eastern Ry., British America Express Co., Algoma Central Terminals, Ltd., Algoma Eastern Terminals, Ltd., Superior Rolling Stock Co., Cannelton Coal and Coke Co., Lake Superior Coal Co., International Transit Co., and Trans St. Marys Traction Co. Office, Sault Ste. Marie, Ont.

E. B. BARBER, heretofore Comptroller, Lake Superior Power Co., has been appointed Assistant Comptroller of the companies mentioned in the preceding paragraph. Office, Sault Ste. Marie, Ont.

Michigan Central Rd.—W. O. HOUSTON, heretofore Division Engineer, St. Thomas, Ont., has been appointed Division Engineer, Jackson, Mich., with jurisdiction over Grand Rapids, South Haven and Allegan Divisions, and main line from westerly limits of the Detroit Yards to easterly limits of Niles Yard.

S. D. WILLIAMS, Jr., heretofore acting Division Engineer, Niles, Mich., has been appointed Division Engineer, St. Thomas, Ont., vice W. O. Houston, transferred.

Northern Pacific Ry.—W. P. CLOUGH, heretofore Vice President, has been appointed Chairman of the Board. This is a new position.

J. M. HANNAFORD, heretofore Second Vice President, has been appointed President, [illegible], vice H. Elliott, resigned.

G. [illegible], heretofore Third Vice President, has been appointed Vice President, vice W. P. Clough.

Pere Marquette Rd.—D. CROMBIE, heretofore General Superintendent of Transportation, C.P.R., Montreal, has been appointed for special work in the General Manager's office, P.M.R., Detroit, Mich. No official position has as yet been assigned to him.

G. W. COOK, heretofore Machine Shop Foreman, has been appointed acting Shop Superintendent, St. Thomas, Ont., vice W. G. Griffith, Shop Superintendent, promoted.

J. WILSON, heretofore [illegible], has been appointed Foreman Blacksmith at St. Thomas, Ont., vice J. H. Tanner, who has left the service.

W. G. GRIFFITH, Shop Superintendent, St. Thomas, Ont., has been appointed Master Mechanic, Saginaw, Mich., vice S. A. Chamberlin.

Prince Edward Island Ry.—W. T. HUGGAN, heretofore Accountant and Auditor, has been appointed Divisional Accountant and District Passenger Agent. Office, Charlottetown.

L. S. Brown,
Superintendent, [illegible]
[illegible]

A. McDONALD, heretofore chief clerk to Superintendent, Charlottetown, has been appointed Division Freight Agent there.

See also Canadian Government Railways.

Canadian Locomotive Company's Annual Report.

The report for the year ended June 13 shows manufacturing profits for the year of $377,043.25, compared with $294,323.14 for 1912. The income from investment bonds was $19,842.77. The manufacturing profits and income from investments total $396,886.02, which has been disposed of as follows:—Bond interest, $90,000.00; preferred stock dividend, $105,000.00; adjustment of sundry accounts and loss on investment bonds sold, $12,623.82; transferred to reserve for depreciation, $50,000.00; transferred to reserve for special replacements, [illegible] balance to credit of profit and loss, $114,262.20.

[illegible] sent the output has reached 12 [illegible] tives a month.

The cost of additions to plant for the year amounts to $488,222.58, the funds for which have been provided by the sale of $335,244.39 of the company's investment bonds, and the balance has come out of cash from accumulated profits. Last year's report alluded to the difficulties of manufacturing whilst construction work was going on. Full efficiency from our plant cannot be expected until this work is completed.

[illegible] present, but it has been largely overcome by the erection of a block of workmen's houses by a company which the General Manager promoted.

Grand Trunk Railway Smoke Consumers.

The G.T.R. has been experimenting for some time with smoke consumers for application to locomotives, and has so far met with sufficient success to warrant the equipping of all the yard locomotives at Windsor, Ont., as well as a few others at different points on the system. The type used is very similar to the ones in use by railways in Chicago, where an anti smoke campaign has compelled the railways to use some device that will materially reduce the smoke. Along the side of the firebox, from 16 to 18 ins. above the fire, there are eight 2 in. tube openings through the water leg, 4 on each side. On the outside, back from the side sheet about 5 ins., are small steam jets, one for each opening, located in such a position that the jet at the point of entering the tube completely fills the latter, creating a strong draught, carrying in a volume of air over top of the fire. The brick arch in the front of the fire is built lower than usual, so that the air brought in through these side openings mixes thoroughly with the smoke in the firebox immediately after it is given off from the bed of coals. With a bright fire burning, the smoke is almost completely consumed. In a demonstration which the writer witnessed, several shovels of coal were thrown on a bright fire, resulting in dense smoke being given off. Turning on the steam through these side jets reduced the smoke almost instantaneously, so that the vapor given off at the stack was just slightly colored. The results of the experiments have been so successful that it is not at all unlikely the yard locomotives all over the system will be so equipped. The road locomotives may likewise be so equipped, but the advantages accruing are not considered to be as great as in yard locomotives, where the question of smoke in the atmosphere is of considerable importance to the community.

The G.T.R. is also experimenting with a circular blower in the stack, it consisting of a pipe hoop with holes in the upper side, so placed as to form a draught cone over the exhaust pipe. This is to replace the bent pipe construction heretofore in use. The draught given by the new type is very uniform.

Minneapolis, St. Paul and Sault Ste. Marie Railway Company's Annual Report.

Following are extracts from the report for the year ended June 30, of this company, which is a subsidiary of the C.P.R. The gross earnings, expenses, fixed charges and surplus income are shown in condensed form as follows:

[illegible]

The substantial increase in gross earnings, while partially due to the unusual grain crop of 1912, reflects also the growth and general prosperity of the northwest, including the Canadian northwest and the settlement of the territory adjacent to the company's lines. Three years since, the Soo Line built a line into the Cuyuna Iron Range, located in Aitkin and Crow Wing Counties, Minn. A dock was built at Superior, Wis., to handle ore from this range to lake vessels. The first shipments were made in 1912 and aggregated about 300,000 tons. This season's shipments will be approximately 1,000,000 tons, and next season, unless the iron industry is seriously disturbed, 3,000,000 tons are expected. It is doubtful if any iron range has shown a more rapid development.

The company has in course of construction [illegible] miles of additional main track extending from Ambrose, N.D., west, which will be completed in time to move this season's crop. Additional mileage at this time is not contemplated and will not be until improved financial conditions prevail, or the attitude of the public, as expressed through its various avenues of political activities, assures more reasonable treatment of transportation companies.

Construction of freight terminals in Chicago is progressing satisfactorily and will be completed by Jan. 1, 1914. Funds for the construction of this terminal were fully provided at the initiation of the project. The completed property will be equal, if not superior, to any freight terminal of its size in Chicago. During the year, at a cost of $240,000, this company acquired 2,400 shares of the Belt Ry. Co. of Chicago, thus placing it on a parity with the 12 other lines interested in that company. The Belt Ry. Co. operates extensive switching lines in Chicago. The advantages of thus securing direct connection with the numerous industries adjacent to the Belt Co.'s tracks are obvious.

The consistent growth of the company's business and the more rigid exactions of the public for improved facilities and safety devices require from year to year larger expenditures for additions and betterments to the property, expansion of its shop facilities and liberal additions to its equipment. Over $1,200,000 were expended during the year for additions and betterments. Extensive additions at the principal shops, located at Shoreham, are in progress.

By means of an equipment trust arrangement aggregating $3,806,657.19, issued Jan. 1, 1913, the equipment was increased to the extent of 25 locomotives, 49 steel passenger cars of various classes, 1,700 freight cars, 300 ore cars, 20 caboose cars and 200 ballast cars. In accordance with the company's well established policy, its property and equipment has been maintained to yield its full working efficiency.

General conditions which obtain throughout the northwest at this time seem to assure a satisfactory tonnage during the current year.

Lake Superior Corporation's Annual Report.

Following are extracts from the report for the year ended June 30:—From the operations of all of the subsidiary companies, subject to deductions, $2,514,221.31. Following are the deductions:—Interest on bonds of subsidiary companies, and on bank

[illegible]

and other advances, etc., $1,101,825.45; amounts set aside for sinking fund payments, etc., $102,511.64; paid to Lake Superior Corporation by subsidiary companies as interest on bonds and advances, and as dividends on stocks held by it, $793,148.31; balance of profits undistributed carried forward, $516,735.91. The volume of business has been fully maintained, and in view of the results of the year's operations, and of the continued satisfactory outlook, your directors feel warranted in again paying the full interest on the income bonds for the year.

ALGOMA STEEL CORPORATION.—The mills have been in continuous operation throughout the year. The output as compared with the preceding year is as follows:—

	1911-12.	1912-13.
Pig iron	[illegible] tons	[illegible] tons
Steel rails	[illegible] "	[illegible] "
Merchant mill material	39,4[illegible] "	[illegible] "

The production of pig iron and steel rails is the largest yet attained. The blast furnaces have produced in excess of expectations. In the early part of the year the rail and blooming mills were closed down for two weeks to permit of the installation of blooming and rail mills of greater capacity. This work was satisfactorily accomplished within the time indicated, and the result has been a largely increased production of steel rails. It is estimated that with further slight improvements, which are in hand, the production next year will rise to 1,200 tons of rails per day. Owing to the necessity for diverting most of the steel made to the rail mill, the operation of the merchant mills has been confined to railway material.

ALGOMA CENTRAL AND HUDSON BAY Ry.—Your directors have again to intimate increased earnings for the year. Since the last report the railway has been completed to its connection with the C.P.R., and there are now in operation 195.3 miles, in addition to the Michipicoten and Magpie branches. There is under construction the railway northward from the C.P.R. to the National Transcontinental Ry., an additional 101 miles. Grading on this section has been completed, all track laid, and 59 miles have been partially ballasted. The entire construction should be finished, and the railway ready for operation by the end of the year, when the total main line mileage will be 296.3 miles, with branch lines 37.40, making altogether 333.7 miles. The Algoma Central Ry., when completed, will connect with the Canadian Pacific, Canadian Northern and National Transcontinental Railways. These connections should prove to be of very great benefit to the company. To ensure still further the success of the operations, and to secure independence in the matter of freight rates, the company has purchased two steamers, each of 5,500 tons capacity, for the purpose of ore carrying, and from these very satisfactory results are now being obtained. During the year funds were also provided through a subsidiary company—Algoma Central Terminals, Ltd.—to provide the railway with complete terminal facilities. At Sault Ste. Marie new yards, round house and repair shops of the most modern type have been built, and a coal dock of 100,000 tons capacity a year is in course of construction.

ALGOMA EASTERN RY.—The results as compared with the preceding year show an improvement. Full benefit cannot be derived until this railway is completed and the whole line in operation. The work has been finished with the exception of the swing bridge at Little Current, the completion of which has been delayed on account of non delivery of the structural steel, but the company has a definite promise from the contractors that the bridge will be finished by the end of October. Full provision has been made in the matter of equipping this railway with all terminal facilities and docks at Little Current. The work in connection with these is still under way, and the coal dock in particular will be in readiness for the opening of navigation next year. It is expected that considerable business will be handled over this dock in view of the large coal consumption of the nickel and paper industries in the neighborhood.

INTERNATIONAL TRANSIT CO.; Trans St. Mary's Traction Co.—Both companies report that their earnings have been maintained. Within recent months the International Transit Co. has extended its lines to Bellevue Park. This park has just been opened by the city of Sault Ste. Marie, and should prove a source of increased revenue to the company.

GENERAL.—Throughout the year the corporation has continued its policy of assisting each subsidiary company to develop and strengthen its resources, and in pursuance of this policy the Algoma Steel Corporation has been enabled to acquire a large Pocohontas coal property, which is now operating through the Lake Superior Coal Co. As the Steel Corporation uses equal quantities of Pocohontas and Cannelton coal for coking purposes, and as it already owns and operates the Cannelton Coal and Coke Co., it now has all it requires so far as this particular raw material is concerned.

The necessity of developing the steel plant so as to keep pace with the increasing demand consequent upon the growth of Canada is being kept in view.

London St. Ry.—Gross earnings for August, $28,962.45; expenses $19,661.15; net earnings $9,301.30; deductions $2,450; net income $6,851.30, against $27,551.52 gross earnings; $18,071.52 expenses; $9,480 net earnings; $2,450 deductions; $7,030 net income, for August, 1912. Aggregate gross earnings for eight months ended Aug. 31, $216,802.44; expenses $154,504.95; net earnings $62,072.49; deductions $19,426.84; net income $42,645.65, against $197,565.29 aggregate gross earnings; $138,285.20 expenses; $59,280.09 net earnings; $19,268.50 deductions; $40,011.59 net income, for same period 1912.

Government Grain Elevators in Western Canada.—The Dominion Government has awarded contracts for the construction of one grain elevator at Moose Jaw, Sask., and one at Saskatoon, Sask., to Barnett, McQueen Co., Fort William, Ont., for the total sum of $2,005,620. The capacity of each elevator will be about 3,000,000 bush., but they will be so constructed that additional units may be built as they are required.

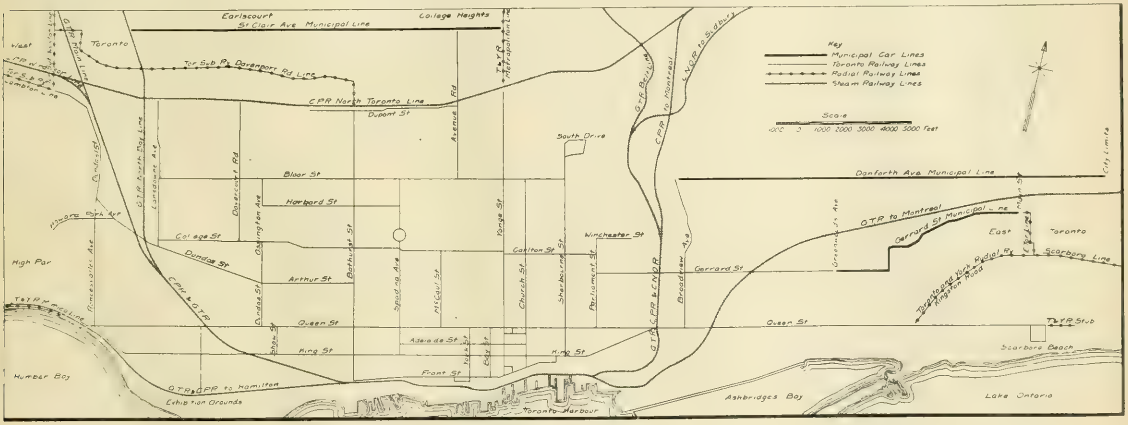
A highway tunnel, planned to be built by the city of Venice, in Italy, will be 11,800 ft. long and will be the largest of its kind. It is to connect the city with the islands Gindicca, San Giorgo and Lido, thus establishing better transportation facilities than are afforded by gondolas.

Electric Railway Department.

Toronto Civic Electric Car Lines.

The Toronto Ry. Co. having decided not to build additional car lines in the outlying districts of Toronto as requested by the city council the city exercised the perogative vested in it by the agreement with the company, to build such lines as it required when the company holding the franchise failed to do so when petitioned. Three such lines were projected in 1910, the city taking up active work on the projects in that year. Of these lines, the Gerrard St. one has been in operation since last autumn, the St. Clair Ave. one was put in operation at the end of August, the Danforth Ave. one is expected to be completed shortly. They are all of the Toronto Ry. gauge of 4 ft. 10⅞ ins.

The Gerrard St. line was the first one completed and put in operation. It extends from the terminus of the Toronto Ry's. Parliament St. line at Greenwoods Ave., along Gerrard St., up Coxwell Ave. to negotiate a jog in Gerrard St., thence along the latter street, terminating at Main St. in the former town of East Toronto, which is now a part of city ward 1, a total distance of 1.85 mile.



Electric Street and Radial and Steam Railway Lines in Toronto, Showing the New Municipal Lines.

The Danforth Ave. line serves the same route as the Gerrard St. line, about ½ mile further to the north. This line extends from the terminus of the Toronto Ry's. Broadview Ave. line at the corner of Broadview and Danforth Avenues straight along Danforth Ave. to the east city limits, in the former town of East Toronto, a total distance of 3.5 miles. This line will, in addition to serving the northerly portions of East Toronto, serve the growing portion of the city northwest of the terminus of the present Broadview line, a distance heretofore unserved by any transportation facilities.

The St. Clair Ave. line runs due west along St. Clair Ave. from Yonge St., the main street of the city, to the tracks of the G.T.R. North Bay line, a total distance of 3.35 miles. At the Yonge St. terminus, the line is 2¾ miles north of the corner of King and Yonge Sts. The Toronto Ry's. Yonge St. line terminates at the C.P.R's. North Toronto line, about ½ mile south of the Yonge St. terminus of the civic line. On Yonge St. north of the C.P.R. tracks the single track standard gauge Metropolitan division of the Toronto and York Radial Ry. is operated. The only line of the T.R. Co. north of the C.P.R. is the Avenue Road line, which extends to St. Clair Ave. on Avenue Rd., which is about half a mile west of Yonge St. This will probably be the main point of juncture, as by the other route, there will be two transfers and three fares. The St. Clair Ave. line will serve the two rapidly growing settlements of College Heights and Earlscourt, the former now depending entirely on the Avenue Road line, and the latter on the Bathurst St. line, which is about three quarters of a mile from the centre of the settlement.

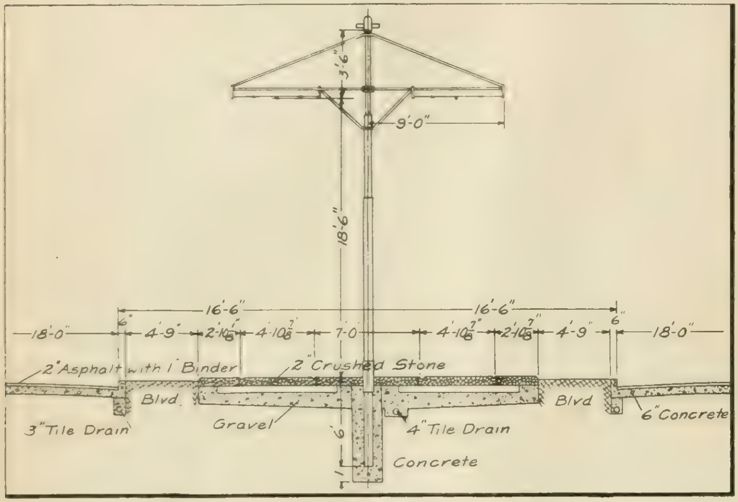
The Gerrard St. line follows a 66 ft. highway its full length, which allows for the normal spacing of the double track lines at 10 ft. 2⅞ in. centres. The substructure work of this line consists of a 12 in. depth of solid concrete, flush with the top of the ties, which are placed at 6 ft. centres, with short 2 ft. sections of ties embedded in the concrete at 2 ft. centres intervening, tie rods being used at intermediate points. Over this base of concrete and ties, there is a layer of sand cushioning, on which are placed granite sets, the full width of the track allowance of 19 ft. This line is laid with 7 in., 80 lb. T rail, Lorain section 335.

The Danforth Ave. line is somewhat similar to the Gerrard St. line, except that the street allowance is 86 ft., but the track allowance of 18 ft. is the same. The substructure work consists of a layer of not less than 6 ins. of concrete, with the ties at a 2 ft. spacing resting on a 2½ in. cushion of 1 in. crushed stone, packed under the ties only. The packed up ties are embedded in concrete and the base of the rail covered over with mortar to a depth of 2 ins. with a ½in. sand and cement cushion over top, on which is laid the pavement of creosoted wood blocks. This line uses 7 in., 90 lb. grooved girder rails of Lorain 392 section, with ⅞ in. rods at 6 ft. centres.

The construction of the St. Clair Ave. line is different from the other two, from the location of the double tracks with regard to the street. At the time the civic line on this street was projected, it was decided by the council that in view of the fact that St. Clair Ave. was one of the few through crosstown streets in the city, it would be advisable to anticipate future requirements by increasing the width beyond that of the standard 66 ft. street., making the increased width greater than that of Danforth Ave., which was increased to 86 ft. From the fact that the section from Yonge St. to Avenue Road was well built up and would involve heavy property damages, it was decided to make that portion of the avenue only 86 ft. wide, and the balance from Avenue Road to the G.T.R. tracks 100 ft., with a central 33 ft. boulevard, on which the trolley line should run, on each side of which will be a 24 ft. roadway. Each of the cross streets has a 24 ft. allowance across the boulevard. The substructure of the line is similar to that on interurban lines. On a gravel bed, the ties at 2 ft. centres are bedded, with rails similar to the Gerrard St. line, i.e., 7 in., 80 lbs. T rails, Lorain 335 section. Between the rails and on each side, the space is filled with 2 in. crushed stone. The construction of the line at the street crossings is similar to the construction of the Gerrard St. line.

The track work and overhead construction of all the lines is very similar. Brazed copper ribbon is used for the bonding, the work being done by the Toronto Ry. Co. for the city. On the Gerrard St. and Danforth Ave. lines, the overhead work is supported on the one side of the street by the municipal hydro electric system's street lighting poles, while the other side uses the standard steel trolley poles. The trolley wire in all the lines is 2.0 hard drawn copper wire. The trolley suspension of the boulevard section of the St. Clair Ave. line is of the central type, with 22 ft. steel poles carrying an 18 ft. cross arm, from which the trolley wire is suspended. This central pole is bedded to a depth of 6 ft. in concrete, and at the ground level, there is a 3 ft. section of tube, projecting a foot above the ground, swedged to the pole to strengthen that portion.

On the Gerrard St. line, leaving the Greenwoods Ave. end, there is a practically level track for about half a mile, beyond which the line commences an ascent on a grade averaging about 2.5% the greater portion of a mile, with a final steep ascent of 4.2% to the higher level entering East Toronto, the terminus of the line. Several curves are encountered, but with the exception of the two corner turns, these are negligible. On the Danforth Ave. line, the gradients are very light, the heaviest being a short section of about a quarter of a mile, where there is an ascending grade from the west of 0.9%, changing through a vertical curve to a 3.0% ascent, dropping off finally to an approximately level stretch the balance of the way. There are no curves on the line. The profile of the St. Clair line is undulating in its character, both ends of the line being at practically the same elevation, whereas the other two lines follow an ascending course. The major portion of the gradients on the St. Clair Ave. line are in the neighborhood of 1.0%, with a maximum short stretch of 3.8%. The majority of the steeper gradients have been eliminated on this line by heavy grading.



Substructure of the St. Clair Avenue Municipal Car Line.

Electrical energy is to be obtained from the Toronto Hydro Electric System, from the several substations most conveniently located to each line. The Gerrard St. line receives power from the East Toronto pumping station on Gerrard St., about 1,500 ft. beyond the end of the railway line. From there to the end of the line, there is a feeder and return line, each 350,000 c.m. The feeder line parallels the railway line to within 1,400 ft. of the city end of the line. The power question for the Danforth Ave. line has not as yet been settled. The St. Clair Ave. line receives its power from the substation on Macpherson Ave. near Avenue Road, a feeder and return, each 500,000 c.m. leading along Macpherson Ave. and up Spadina Road to the line, the feeder extending in each direction from this point.

Along the several lines, the St. Clair Ave. line particularly, there has been some heavy cut and fill work to eliminate grades. On the St. Clair Ave. line, two ravines have been negotiated. All this work, where heaviest, has been carried out in approved railway line methods with steam shovel and dump cars hauled by a dinky engine. In one of the St. Clair Ave. fills, the original plans called for a large concrete culvert, which collapsed and has been replaced by a plate girder bridge over the central part of the fill, the centre span being 100 ft., with two 40 ft. approach spans. The bridge width is 86 ft. This bridge is midway between Spadina Rd. and Bathurst St., near the centre of the line, and will allow of a ravine drive being carried under St. Clair Ave.

There are several small culverts. The Gerrard St. line has two flat top concrete culverts, 2½ ft. square. On the Danforth Ave. line, there are about 6 small corrugated iron pipe culverts under small fills. On the St. Clair Ave. line, there is a 3 by 4 ft. cedar box culvert, and one 6 ft. square flat top concrete culvert.

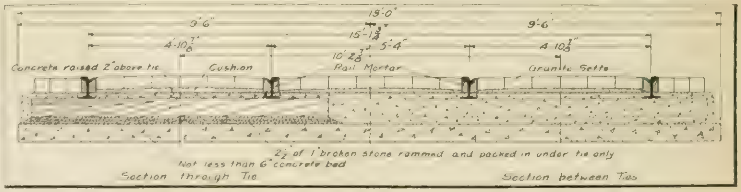
The facilities for handling the equipment are very limited as yet, as the operation of the lines has only recently commenced. The only shed is a small sheet metal shed, of very light construction, on the Gerrard St. line, near its east end, where the four cars operated on that line are stored.

To facilitate the construction work, each of the three lines had its own separate storage yard adjacent to the nearest steam railway line. For the Gerrard St. line, a strip of the G.T.R. right of way a short distance to the west of York station was acquired by the city, and running rights obtained for a narrow gauge line from this yard to the line under construction. For the Danforth Ave. line, a piece of private property on Coxwell Ave., on the north side of the G.T.R. main line, was acquired for the yards. For the St. Clair Ave. line, Station St. at the extreme west end of the line was closed by the city, forming a yard on the east side of the G.T.R. North Bay line.

The cars on the civic car lines are all of the pay as you enter and double end control type, and were built in the United States. The four cars on the Gerrard St. line are 45 ft. long, weighing 46,000 lbs., having a seating capacity for 40. The central seats are cross, with the end ones lengthwise. The cars for the St. Clair Ave. line, 20 in all, are being delivered to the city, and are being assembled as fast as they arrive from the builders. These cars are similar in most particulars to those on the Gerrard St. line, except that the seating capacity is increased to 48, there being 8 cross seats and 4 longitudinal seats at the ends. These cars are mounted on two 11 ton Baldwin trucks, on each of which are two GE 80 railway motors. The controllers are SGE K 28B. Turtle back construction is followed in the car design, and they use straight air control with a GE type CP 27 electrically operated compressor unit. On each end of the cars there is a 6 ft. platform with entrance and exit railing, both vestibules being completely enclosed. The front exit door is operated by a lever in front of the motorman, and the rear entrance and exit doors from double levers in front of the conductor, adjoining his fare box stand. A portable fare box is employed. The opening of each door drops a step, and at the same time an electric light under the vestibule back of the step is lighted in night operation. The new cars for the Danforth Ave. line are to be similar in all particulars to the ones for the St. Clair Ave. line.

The work on these lines has been carried out by the City Works Department, R. C. Harris, Works Commissioner. The design and general supervision of the work came under the charges of E. L. Cousins, now Chief Engineer of the Toronto Harbor Commission, succeeded by C. W. Power, Engineer of Railways and Bridges, while the actual construction work was supervised by A. E. K. Bunnell, succeeded by D. W. Harvey, Assistant Engineer of Railways and Bridges.

The Canadian Autobus Co., which is preparing to operate a service of autobusses in Montreal, is working in conjunction with the London General Autobus Co., London, Eng. G. Poloquin, representing the British company, has arrived in Montreal to arrange for the operation of the first consignment of vehicles for the new service. Duncan McDonald, Montreal, is in London, Eng., looking after the shipment of the buses. It is stated that 350 of these vehicles are being built by the London General Autobus Co., for the Canadian Autobus Co., and that 150 are ready for shipment.



Substructure of the Danforth Avenue Municipal Car Line.

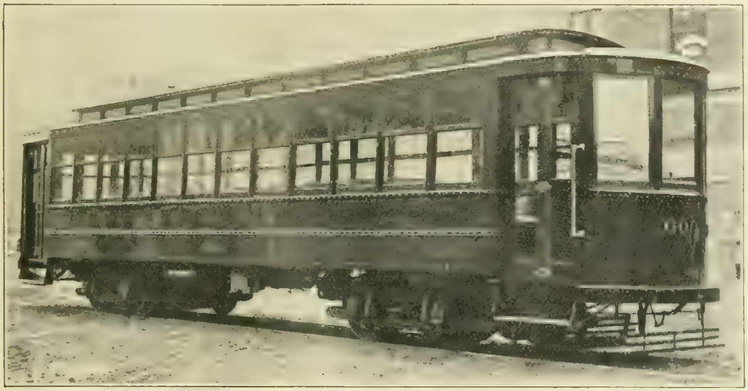
Trolley Traffic in Great Britain.—Board of Trade statistics show that during 1912 the trolley lines of Great Britain carried over three billion passengers. Figures such as this give an impressive sense of the magnitude of modern railway facilities, and the statistics are the more remarkable when it is remembered that this traffic was carried on 2,642 miles of track and in less than 13,000 cars. Significant, also, is the fact that whereas in 1900 there were 37,000 horses employed in hauling street cars, in 1912 there were only 1,500.

Ottawa's Electric Railway Company's New Cars.

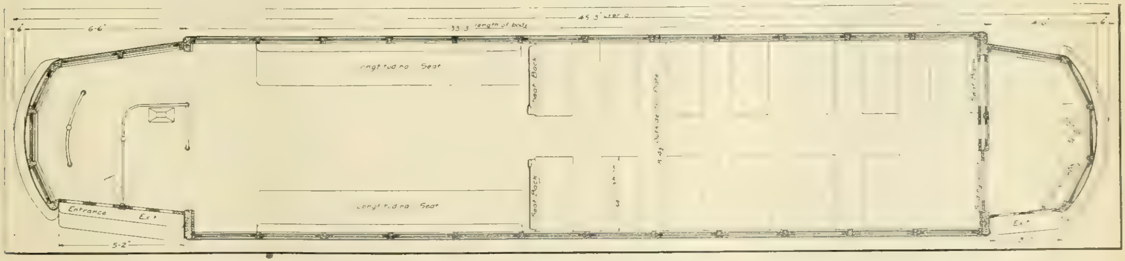
The Ottawa Electric Railway has recently added to its equipment 20 double truck steel cars, with the following general dimensions:

Length over bulkheads	33¼ ft.
Length of front vestibule	4½ ft.
Length of rear vestibule	6½ ft.
Projection of bunters	6 ins.
Total length over bunters	45¼ ft.
Width of body over rubbing strips	8½ ft.
Seating capacity	42 persons.

Construction of body:—The side girder plates are 18 by ¼ in. steel in one piece full length of body, each reinforced at bottom edge with 5 by 3 by ⅜ in. angle, and at top edge with a double beaded bar, which also serves as a rubbing strip. Belt rails are of ⅜ by 2 in. round bevel edge steel bar with pressed steel shoe on which window sash rest. Side posts are faced with 2½ by 3-16 in. steel plates, which are anchored by gusset plates and rivets to top edge of side girder plates. Window head strip or letter board is also of steel 5 by ⅛ in., reinforced at top edge with angle steel 1½ by 1¼ by 3-16 in., and all together is rivetted to the top end of steel post facings. Corner posts are formed up from steel plate 3-16 in. thick. The roof is of wood construction sheeted with ½ in. T. & G. lumber and covered with canvas.



Ottawa Electric Railway Car.



Floor Plan, Ottawa Electric Railway Cars.

The interior finish throughout is of cherry, finished natural color. Seats are of stationary type upholstered in rattan. Curtains are of pantasote material with tin barrel shade rollers and pinch handle fixtures. The trucks are no. 27-FE-1 standard gauge 4 ft. 10 in. wheel base with 4½ in. hot rolled steel axles and 33 in. chilled iron wheels. Motor equipments are quadruple no. 101-B-2 motors with K-35 controller. Air brakes are Westinghouse schedule no. S.M.E. The cars are equipped with H.B. life guards, Consolidated Car Heating and Lighting Co. buzzer signaling systems, and electric heaters and Coleman Fare Box Co.'s stationary p.a.y.e. fare boxes.

It is said that for appearance, as well as for public accommodation, these cars are second to none in their class. They were built by the Ottawa Car Co., Ltd.

Double Deck Cars for Pittsburgh, Pa.

About a year ago, considerable interest was shown in the electric railway field by the introduction of the first double deck street car used on the American continent within recent years for handling city traffic. In most particulars, it differed widely from the conventional design to be found in many places abroad. This original double deck car has been improved upon, so that today, it may be considered to have passed beyond the experimental stages, as several cars of this type were built, and observations of their performances taken under actual service conditions, so that enough data were collected to make possible the construction of a double deck car that could be relied upon to fulfill the desired conditions without any points of failure such as occurred in the original designs.

The Pittsburgh Railways have recently placed in service a double deck car that has been so carefully planned on the data obtained that it appears to meet most requirements, in expeditiously handling dense crowds. The overall length of this is 47 ft. 2 ins., with a width of 7 ft. 10 ins. The car is constructed throughout of steel, and is mounted on trucks of a design that was developed some time ago by the Pittsburgh Railways, and which evoked considerable interest at the time of their first appearance on account of the small size of the wheels, making possible the low setting of the lower deck, which in the case of this double deck car is 28¾ ins. above the rail. These trucks are placed 22 ft. 2 ins. centres. The overall height is 13 ft. 8 ins.

Both entrance and exit are located at the centre, and as the cars of this line are for double end operation, the door arrangement is duplicated on each side of the car. The entrance and exit doors on each side are separated by 7 ft., the object being to avoid confusion at that focal point. The central part of the car is low set, the step into the car being only 13¼ ins. above the ground, followed by a slight ramp of 1½ ins., a step of 12 ins., followed by a 2 in. ramp leading into the ends of the car where cross seats are located in the usual manner. The very end of the rear portion of the car has a curved seat, adding to the seating capacity. Entrance to the car is through the rear one of the side doors, and exit through the front one. At the centre of the car inside the entrance way is the conductor's stand, with the usual p.a.y.e. equipment. Beyond the conductor, along the inner side of the car, and leading backwards, is the stair to the upper deck. The seats in this upper deck are located along the centre, back to back, the under side of the seat forming the head room for the lower deck centre aisle, the seating headway in the lower deck being reduced by the depth of the aisles of the upper deck. From the duplicate operation construction, there are two stairs, the one along the outside of the car being for exit, and vice versa, when operating in the other direction. The only push buttons on the upper deck are at the head of the stairs, so that the passenger must be prepared to descend before giving the signal, thereby not delaying the car, as from that point the conductor can observe the party descending.

Head room is economized to the utmost. The trolley harp is located in a depression in the roof, giving greater head room along the side passage ways.

The total seating capacity is 110, 56 up and 54 below, which with a total weight of car equipped of 38,700 lbs., gives the remarkably low dead weight per passenger of 352 lbs.

Economy of Storage Battery Cars.—The Prussian State Railways, after an experience of many years in the use of storage battery cars have found that, without making any radical changes in the standard railway cars, storage battery propulsion may be applied successfully in respect of both operation and economy. The cost of operating the 200 cars of this type on these railways is reported to work out at only 1.75 cents per horse power per hour.

The Montreal and Southern Counties Ry, has equipped 10 of its cars with Tomlinson automatic air connecting couplers, manufactured by the Ohio Brass Co., for use on four car multiple unit control trains.

Answers to Questions on Electric Railway Topics.

Following are answers to questions in the American Electric Railway Association's question box sent in by officials of Canadian railways. In this lot all the answers are supplied by two of the Toronto Ry.'s staff:—

Single End Operation.—Does single end operation result in more wear on motors, trucks and wheels than double end, and if so, is the item sufficiently large to be taken into consideration in the installation of this method of operation?

W. R. McRae, Master Mechanic, Toronto Ry.—"Several hundred cars on this property are single end operated. There is no excessive wear on any part of the equipment, with this method of operation, where the cost of renewal or reversal of worn parts is not more than compensated for by the lesser number of parts required. Where it is possible to loop and Y cars at route terminals, I strongly recommend single end operation."

Drying Armatures and fields.—When armatures and fields become wet or damp, what is the cheapest effective way of drying them?

W. R. McRae, Master Mechanic, Toronto Ry.—"By drying in an electrically heated oven."

Sliding doors in interurban cars.—What is the most satisfactory an deconomival arrangement for a single sliding door, located between ladies' compartment and rear vestibule, or between ladies' compartment and smoker, in large interurban cars, so as to keep door either open or shut as the case may be, to avoid door sliding back and forth and slamming if car strikes curve or should lean to one side. The arrangement we desire is to be entirely automatic, and so arranged that no lock or latch is to be used, and such that door will not open or close too hard or tight, or too easy and loose.

W. R. McRae, Master Mechanic, Toronto Ry.—"The most satisfactory and economical arrangement for keeping a sliding door either open or closed is to recess the track at both ends to permit of roller dropping into recess sufficiently deep to prevent door moving on curves or turn outs."

Fare Registers and Fare Boxes.—When conductors are transferred from one car to another during their trick of duty, is it good practice to permit them to take the register with them, or is it better to keep the register on the car? In other words, should the register follow the car or the conductor?

F. L. Hubbard, Assistant to General Manager, Toronto Ry.—"We do not use a register, all the fares being collected by the conductor with a portable hand box. The box always follows the conductor, no matter where he goes."

Headlights.—What size incandescent lamp should be used in headlights for city service?

W. R. McRae, Master Mechanic, Toronto Ry.—"Sixteen candle power with white enamel reflectors and bull's eye lense."

Car Cleaning.—How can cars be best cleaned and kept clean? Is the vacuum process too costly for medium sized roads?

W. R. McRae, Master Mechanic, Toronto Ry.—"If varnish and color is in good condition, wash and chamois well. Use a good car cleaner. Clean car frequently. Vacuum process is not costly. Use compressed air from car compressor for both blowing out dust and vacuum cleaning."

Conductors' Deposits.—Is it proper practice to require a deposit from conductors before they are put to work, and if so, what is a proper deposit?

F. L. Hubbard, Assistant to General Manager, Toronto Ry.—"When a student conductor enters training he is required to furnish $10 with which to purchase tickets and to make change, also a uniform cap which costs $1.25, and he is not paid any wages during his training. When he is put at regular work the company furnishes him with $25, ticket and change money. We do not require a deposit and the only protection we have is the amount of money due a man for a period of five or six days while the pay is being made up. We have not had any abuse of this system. We do find, however, that desirable men, particularly married men, are deterred from entering the service because of the $10 and cap money they have to provide during training, and the fact that they receive no wages during that time. We prefer married men and it is significant that the percentage of married men accepted for motormen is nearly double that for conductors, which we believe is largely due to the fact that they are not required to put up any money during training period. We are seriously considering whether we should take a chance and furnish conductors in training with the $10 ticket and change money, with the probability that any abuse of the system would be more than off set by the better class of men we could obtain for the service."

Carnivals, etc.—Should carnivals and other large gatherings be encouraged by railway companies in view of the increased damage charges they bring about?

F. L. Hubbard, Assistant to General Manager, Toronto Ry.—"If this question means whether a company should offer inducements to secure carnivals, as a city company we do not think it should be done."

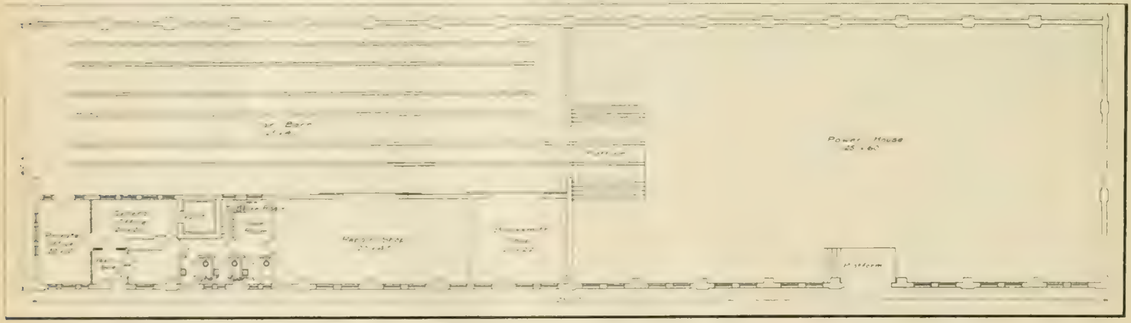
Moose Jaw Electric Railway Car Shops.

The accompanying plan shows part of the layout of the car shops at Moose Jaw, Sask., but does not give the complete layout, omitting a 5 track car barn addition, 125 ft. long, for storage, which has been added this year.

The buildings are of steel, brick and concrete construction throughout. The foundations are all of concrete, on which are built the brick walls, with the roof trussed by steel girders spanning the 62½ ft. width of the shop, these trusses being located at 15 ft. 5⅜ in. centres through the length of the shop. The roof members are composed of 8 in. I beams resting on the trusses.

The front portion of the building contains on one side the offices, the private office 20 by 12 ft., and the general office 20 ft. square. To the rear of these is the vault, cloak room and lavatories, all forming with the offices one main division of the building. To the rear of this section is the repair shop, 20 by 45 ft., connecting with the car barn by wide opening, with sliding fire doors. To the rear of the repair shop is the blacksmith shop. The repair shop has a 2 in. plank floor, but the blacksmith shop is concrete. Alongside these several divisions of the shop is the car barn section, 125 by 40 ft., containing three repair tracks. These tracks have a pit construction beneath, the tracks being supported on 8 by 10 in. beams on 8 in. square supports. Between top of rail and floor of pit, there is 4¾ ft. The clear height in this and the other shops is 20 ft. The store room for the shops is in a room over top of the offices, and approached by stairs in the cloak room. The heating of the shop rooms and offices is by means of two hot air ducts from the power house to the rear, one pipe running along each side wall of the car barn, with connections into the pit. Into the offices and other side rooms there are risers with deflecting heads. The pits contain catch basins for the draining off of the car barn section, the tile pipe running under the shop connecting with the external system.

The power house in the 125 by 60 ft. section of the building to the rear, contains three Diesel oil engines. The two smaller units are each of 204 brake horse power, direct connected to Westinghouse 600 volt railway generators. The third unit is of 500 brake horse power, connected with a 600 volt interpole machine, which is connected up by means of a flexible coupling. The power house and its whole equipment were described in Canadian Railway and Marine World for June, 1912.

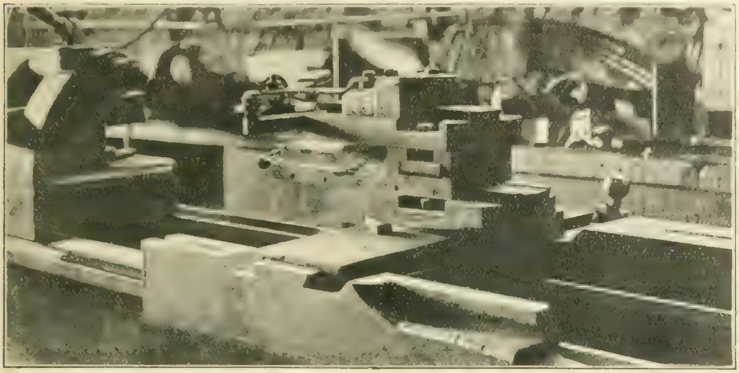


Layout of Moose Jaw Electric Railway Shops.

The operation of electric cars between Winnipeg and Selkirk, Man., on Sundays, was started Sept. 7.

Slotting Commutators at the Niagara, St. Catharines and Toronto Railway Shops.

The unequal wear of copper and mica insulation in electric commutators is one of the most fruitful causes of the shopping of cars. The hard mica, not wearing as rapidly as the copper segments, causes the latter to form a series of grooves, over which the brushes jump, giving rise to a great deal of sparking when the wear is at all noticeable. Arrangements for the removal of this surplus mica are made in nearly all shops, and as there appears to be no special tool in general use, local ingenuity is applied in making up such an appliance.



Lathe Attachment for Slotting Mica Fins from Commutators.

The device in use at the N. St. C. & T. Ry. shops, at St. Catharines, Ont., W. Pay, Master Mechanic, resembles in some particulars the special device in use at the Winnipeg Electric Ry. shops, described in these columns recently, the principal difference being that the N.St. C. & T.R. device can be applied to an engine lathe, and is not a separate and complete machine in itself.

As the accompanying illustration indicates, the slotting device consists of a small carriage attached to the lathe carriage on the tool head. The upper carriage is operated by the handle shown to the rear, which carries, back and forth, parallel to the centre line of the lathe, the narrow tool clamped to the top surface of this carriage. The armature to be slotted is placed between centres, the cutting tool moved up to operating position, and moved back and forth, the armature being revolved the necessary amount between cuts.

Quebec Railway, Light, Heat and Power Company's Annual Meeting.

At the annual meeting at Montreal, Sept. 9, the report for the year ended June 30 was presented by the President, Sir Rodolphe Forget. The gross earnings from operation were $1,524,200, compared with $1,415,825 in 1912, which after adding miscellaneous income $236,881, makes a total revenue from all sources of $1,761,082, an increase of $150,672 over the previous year. The operating and maintenance expenses were $895,180.61 against $734,925.35. Fixed charges and taxes were $792,100, leaving a net surplus of $73,881, which added to the surplus from last year's accounts makes a total surplus of $147,341. Subsidies received from the Dominion Government amounted to $27,641.60, and were applied to the cancellation of $30,000 bonds according to the trust agreement.

The President stated that $91,500 had been expended on maintenance during the year and that the various properties had been maintained at a high state of efficiency.

Questions by shareholders as to the state of the company's bonds, elicited the statement, that the original $10,000,000 bond issue of the Quebec Ry. proper, was secured by all the assets of the company, exclusive of the Quebec and Saguenay Ry., while the bonds issued against the latter have set apart for them the stock, bonds and other properties of the new line.

A revision of the bylaws was authorized, reducing the number of directors from nine to six, Hon. J. P. B. Casgrain, L. C. Marcoux and O. B. d'Aoust retiring.

The following board was elected for the current year,—President, Sir Rodolphe Forget; Vice President, L. C. Webster; other directors, J. N. Greenshields, Hon. Robert Mackay, P. Galibert and D. O. L'Esperance.

Chatham, Wallaceburg and Lake Erie Railway Secured by Mackenzie-Mann Interests.

During the past two years or more there have been continual reports that the Mackenzie, Mann & Co. interests had secured control of the Chatham, Wallaceburg and Lake Erie Ry. The most recent report to this effect received full conformation at the annual meeting of the shareholders at Chatham, Ont., Sept. 3, when the following were elected directors:—D. B. Hanna, A. J. Mitchell, R. G. O. Thomson, F. H. Phippen, K.C., Toronto; D. A. Gordon, Wallaceburg; J. G. Kerr, Chatham. The new directors are with the exception of the Chatham and Wallaceburg representatives, connected with Mackenzie, Mann & Co. D. A. Gordon, who is M.P., for East Kent, has been president of the company for some time.

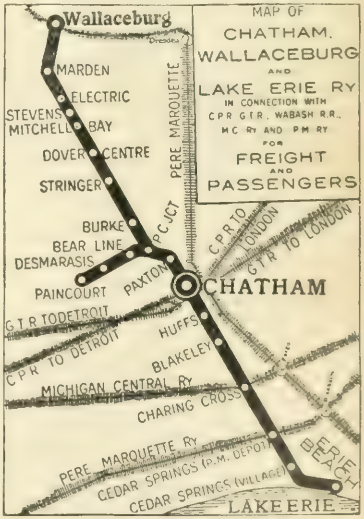
The Chatham, Wallaceburg and Lake Erie Ry. Co. as incorporated by the Dominion Parliament in 1903, to build a railway from Chatham to Wallaceburg; from Wallaceburg to Petrolea; from Chatham to near Rondeau; with branch lines to Dresden, and Blenheim, Ont. The first section of the line to be completed was from Chatham to Wallaceburg, and this was opened for traffic, Nov. 20, 1905. The section from Chatham to Lake Erie was completed in 1908, and with the completion of the subway in Chatham, through traffic between Wallaceburg and Lake Erie was inagurated, Aug. 20, 1908. The branch to Paincourt was built in 1909.

The C.W. and L.E. Ry. extends from Chatham to Wallaceburg, 18.44 miles; Chatham to Erie Beach, 11.11 [illegible] from Paincourt Jct. to Paincourt, [illegible] altogether [illegible] of sidings and turnouts. The line gives connection with the C.P.R. and the G.T.R. at Chatham, with the Michigan Central Rd. at Charing Cross, and with the Pere Marquette Rd. at Cedar Springs, Chatham and Wallaceburg.

The company owned at June 30, 1912, 7 closed and 2 open passenger cars, [illegible] cars and 3 miscellaneous cars. For the year ended June 30, 1912, its passenger cars ran 224,481 miles, carrying 374,816 passengers, and its freight cars ran 39,270 miles carrying 71,347 tons. The financial statement for the year ended June 30, 1912, shows:—Gross earnings from operation, $117,492.00; operating expenses, $70,287.88; net earnings from operation, $42,204.12; deductions from income—taxes, $1,723.08; interest on funded debt, $34,194.00; interest on floating debt, $1,851.00; total, $37,768.08, leaving a net income of $9,436.04. This amount added to the surplus of $9,708.94 brought forward from 1910-11, made a total of $19,144.98 carried forward to 1912-13 account. The capital account at June 30, 1912, showed outstanding:—Common stock, $760,600; funded debt, $800,000; a total of $1,560,600, or $34,726 per mile of railway.

The local officials at Chatham are:—General Manager, Chief Engineer and Purchasing Agent, W. Norris; General Freight and Passenger Agent and Assistant Treasurer, J. E. Richards; Track Foreman, G. Lampman.

Smoking on New York Street Cars.—The Public Service Commission has directed all street railway corporations in the city of New York to prohibit smoking or the carrying of lighted cigars, cigarettes and pipes on the cars or the platforms of cars operated by them, except the open cars having running boards along the sides and having seats accessible directly from such running boards. On such cars smoking will be permitted on the four rear seats of each car, including the seats on the back platform. The order also prohibits smoking or carrying lighted cigars, etc., in the stations, station platforms, station stairways, waiting rooms, waiting cars or shelters. The companies are required to enforce these regulations and to post conspicuously in cars and stations, notices stating that such practices are prohibited.



Electric Railway Projects, Construction, Betterments, Etc.

British Columbia Electric Ry.—Negotiations are reported to be in progress with the Great Northern Ry. for the purchase of the abandoned right of way of the Cloverdale-Blaine line between Hazelmere and the International Boundary at Blaine. The proposed electric line will connect with the line projected by the Stone and Webster Corporation to Bellingham, Wash., and an extension may be built to the mouth of the Campbell River.

The track along Front St., New Westminster, is being raised to conform to the new city street grade. The new 40 car barn at New Westminster will be ready for use as soon as the new switch points and connections are put in place. The yards a little west of the car barns are practically completed. There have been 7.5 miles of track laid, which will give accommodation for 448 cars. (Sept., pg. 442.)

The Vancouver Island Power Co., which is a subsidiary of the British Columbia Electric Ry., has completed the construction of the dam on the Jordan River, in connection with its power plant. The plant originally developed 12,000 h.p., and with the additional storage area now provided additional units will be added to bring the power developed up to 32,000 h.p. Some of the additional units have already been installed. The steam auxiliary power plant at Brentwood Bay, which has a capacity of 5,000 h.p., will now be held as a reserve plant.

Buffalo, Lockport and Rochester Ry.—The Public Service Commission of the Second District of New York State had before it, Sept. 12, the proposals for the reorganization of the Buffalo and Lake Erie Traction Co., which involves the acquirement of the B.L. and R. Ry., and the Canadian American Power Corporation. The minority holders of the B. and L.E.T. Co. have organized to oppose the application. (Sept., pg. 442.)

Calgary Municipal Ry.—The ratepayers of Calgary, Alta., are to vote upon the question of the extension of the electric railway to Shaganappi Park. The promoters of the extension offer to pay for the construction of the line to Spruce Cliff and to guarantee the cost of operation for four years. There is considerable opposition to the proposal. (Sept., pg. 442.)

C.P.R. Electric Line—Hamilton to Niagara Falls.—Press reports state that at a meeting of the St. Catharines, Ont., City Council, Sept. 12, an agreement was drawn up which will be laid before the C.P.R. management at Montreal and, if agreeable, will be incorporated into a bylaw that will be submitted to the people of St. Catharines for approval, which it is expected will be before the end of this year. St. Catharines is to contribute $100,000 towards the construction of a bridge across the old Welland Canal. The company is to commence work within six months of the passage of the bylaw and have the line completed within two years, although it is expected that it will be constructed within one year. A maximum rate of 2c. a mile for passengers was agreed to. M. N. Todd, President Galt, Preston and Hespeler St. Ry., represented the C.P.R. at the meeting and arranged the terms of the agreement. (Aug., pg. 395.)

Dunnville, Wellandport and Beamsville Electric Ry.—Press reports state that arrangements have been completed under which a further amount of bonds has been taken up, and that construction will be renewed at an early date. About 13 miles of grading is reported to have been completed, and ties have been laid, everything being ready for tracklaying. (June, pg. 286.)

Edmonton Interurban Ry.—The Board of Railway Commissioners has authorized the operation of cars across the Edmonton, Dunvegan and British Columbia Ry's. line for construction purposes only, pending the installation of an interlocking plant. It is proposed to operate gasoline electric cars over the line, and it is expected that the first section from Edmonton to St. Albert, Alta., will be opened for traffic at an early date. (Jan., pg. 39.)

Hamilton St. Ry.—An agreement was verbally reached, Sept. 10, with the Wentworth County Council under which the company was to be granted a franchise for the extension of its Main St. line from Kenilworth Ave. to the Bartonville line, but when the formal resolution approving of the same came up for consideration, Sept. 11, an amendment giving the franchise for a single line only was carried. Upon this the company withdrew the application. (June, pg. 286.)

London, Grand Bend and Stratford Ry.—Application is being made to the Ontario Legislature for the incorporation of a company with this title, to build a railway from London, northwesterly through the townships of London, Lobo, East Williams, West Williams, McGillivray and Stephen, including the village of Parkhill, to Grand Bend, thence easterly to Exeter and Stratford, and then westerly to London, and branch lines. Gray and Gray, Toronto, solicitors for applicants.

An office has been opened at Parkhill, by A. E. Beer and C. T. McAllister, representing the promoters, and engineering parties are reported to be going over the projected routes. Those interested in the project are said to have secured a large area of land at Grand Bend, and it is said they will develop it as a summer resort, with hotel, etc., under the title of the Huronic Beach Co. (See Stratford Ry., Sept., pg. 443.)

Medicine Hat, Alta.—We have been officially advised that owing to the difficulty in the way of securing materials it has been found impossible to complete the line for operation this fall. An arrangement has been made with the city council to defer the commencement of actual construction until April 1, 1914. (Aug., pg. 395.)

Melita, Man.—We are advised that the town has granted a franchise for a street railway in connection with a natural gas franchise. It is not expected that borings will be made for natural gas until the spring of 1914. At present there is not the least intention of going into the street railway business. R. E. Denny, Brandon, Man., is interested in the natural gas proposition. (Aug., pg. 395.)

Montreal and Southern Counties Ry.—Press reports state that much of the work on the roadbed for the extension to St. Cesaire, Que., has been completed; and that it is contemplated to extend the recently completed electrification of the Central Vermont Ry. branch from Richelieu to Marieville, Que., four miles. (Aug., pg. 395.)

Montreal Tramways Co.—The tracks on Papineau Ave. have been laid to Craig St., and a new route through that avenue was opened for traffic Sept. 8. A large amount of other work is being done on the other lines in the city, and steel is being delivered for the new lines and intersections. New intersections are being laid at Craig and Beaver Hall Sts. These extend 200 yards on either side, the rails weighing 116 lbs. to the yard. As soon as these are completed new intersections will be laid at St. Catherine and St. Lawrence Sts.; Craig and St. Lawrence Sts.; St. Denis and Craig Sts.; St. Denis and St. Catherine Sts.; Windsor and St. Catherine Sts.; Windsor and St. James Sts.; St. James and McGill Sts. (Sept., pg. 442.)

Niagara, St. Catharines and Toronto Ry.—The Board of Railway Commissioners has approved of location plans of the extension of the line to the lake front on lot 12, con. 1, Grantham tp., Ont., 0.68 of a mile.

A contract is reported to have been let to Newman Bros., St. Catharines, Ont., for the erection of a transformer station in that town. (May, pg. 235.)

Niagara, Welland and Lake Erie Ry.—Work is progressing on the extension to Parkway Heights, and the West Main St. line is nearly completed. The line out East Main St. to Rosedale is being delayed on account of inability to get necessary interlocking apparatus where crossing is made over the G.T.R. Nothing has been done on the Danville extension so far. T. R. Cummings is Engineer. (Feb., pg. 90.)

Press reports stated recently that the company intended using storage battery cars. It appears that this was suggested at a town council meeting, but we are officially advised that the management, after investigating the cost of operating storage battery cars, came to the conclusion that with the cheap Niagara power which is locally available the trolley system is preferable. (June, pg. 286.)

Ontario West Shore Ry.—The Goderich, Ont., town council, has referred to a special committee the question of preparing evidence for submission to the Ontario Railway and Municipal Board, when the enquiry into the condition of the O.W.S. Ry. is again taken up. (Feb., pg. 90.)

Port Arthur and Fort William Electric Ry.—The Fort William, Ont., City Council has decided to have the extension of the line across the Kaministikwia River to Island 2 completed this year. (Sept., pg. 442.)

Sandwich, Windsor and Amherstburg Ry.—A second track is reported as being constructed on Wyandotte St., Windsor, Ont., from Ouellette Ave. to Mercer St. (Oct., 1912, pg. 521.)

Saskatoon Municipal Ry.—The Sutherland, Sask., Town Council, has passed a bylaw granting a franchise for the extension of the Saskatoon Municipal Ry. into Sutherland. The agreement stipulates that the line is to be completed by Jan. 1, 1914. As soon as this section is shown to be paying operating expenses and fixed charges, it is to be extended. The franchise is to extend for 20 years, and is to be renewed unless Sutherland decides to purchase the lines within its boundaries. (July, pg. 345.)

Three Rivers Tramway Co.—We are officially advised that it is not likely that any construction will be done on this projected electric railway before the spring of 1914. The company is still in the formative period, and nothing beyond preliminary surveys have been made. The principal officers are:—President, L. P. Normand; Secretary Treasurer, R. Bournival, Three Rivers, Que. (Aug., pg. 395.)

Toronto Suburban Ry.—Tracklaying is in progress on the line from Lambton to Guelph, Ont., between the C.P.R. at Cooksville and Meadowvale, but it is not expected to have any part of it in operation this year. D. McKenzie, who has been in charge of clearing the right of way into Guelph, is reported to have recently stated that grading operations would be started in that city at the beginning of October, and that it was expected to have the line completed and in operation to that point in the spring. Sir Wm. Mackenzie is reported as stating that the line will be completed to Berlin during 1914. It is not intended to build any further west than Berlin at present, but arrangements will probably be made for building of branch lines to Waterloo and Galt. (Sept., pg. 443.)

Winnipeg Electric Ry.—The Board of Railway Commissioners has passed an order permitting the Winnipeg, Selkirk and Lake Winnipeg Ry., a subsidiary of the W.E. Ry.—to operate its cars for construction purposes on the line to Stonewall, Man., across the C.P.R. Selkirk branch. This will enable construction to be proceeded with, and it is reported that track will be laid into Stonewall by Oct. 30. Application has been filed with the Board of Railway Commissioners for the construction of a subway, the C.P.R. consenting, under the C.P.R. at the point where the above crossing has been made. (Sept., pg. 443.)

New Cars for London Street Railway.

The London St. Ry. is having built by the Preston Car and Coach Co., 6 single truck, single end, p.a.y.e. city cars. They are to be mounted on Brill 21 E trucks, 8 ft. wheel base. The doors on the rear platform will be operated in conjunction with the folding steps by a system of leverage under the control of the conductor. The front vestibule door is to be operated in a like manner. The bodies are to be finished inside and outside in natural cherry. There will be 10 cross seats, 2 longitudinal and 3 stationary seats in each car, giving a total seating capacity of 32 passengers. There will be no bulkheads. The roof will be turtle back.

The under frames will be built entirely of steel, the outside members consisting of 15 by 3-16 in. steel plate reinforced at the lower edge with a 3 by 5 by ⅜ in. steel angle. Two sub sills of 6 I beams will extend continuously from end to end of car body, spaced at proper distances to receive the truck frame. This sub sill will be connected with the outside sill at short intervals by diagonal bracing. The crossings will be of 4 in. channel steeel. The end sills will be made up by rivetting two 3 by 5 by ⅜ in. back to back, and having a ⅜ by 9 in. steel plate sandwiched between them. The outside platform knees will be strong enough to carry the entire platform without having recourse to the use of any centre members. There will, however, be two 4 in. channels placed flatwise underneath the platform and extending continuously from the buffer channel to the end sill, then bent at an angle of about 60° outwards and rivetted to the 6 in. I beam sub sills. These members are for the purpose of taking thrust or draught.

Personal Paragraphs.

JOHN PEARSON, heretofore Assistant Superintendent, Hamilton St. Ry., has been appointed Superintendent, vice Duncan N. Miller, deceased.

DUNCAN McDONALD, President, Canadian Auto-bus Co., is expected to arrive in Montreal with the first consignment of busses from England early in October.

Mrs. Warburton, who died in St. Joseph's Hospital, London, Ont., Sept. 1, aged 84, was mother of W. N. WARBURTON, General Manager, London and Lake Erie Ry. and Transportation Co.

A. S. BALSDEN, chief electrician of the London and Lake Erie Ry. and Transportation Co., was accidentally electrocuted at the company's substation in St. Thomas, Ont., Aug. 28.

I. L. GODFREY has been appointed Comptroller, International Transit Co., and Trans St. Marys Traction Co., subsidiary companies of the Lake Superior Corporation, and E. B. BARBER has been appointed Assistant Comptroller of the some companies.

D. D. McEWEN has been appointed Roadmaster, London Street Ry., London, Ont. He came to Canada from Glasgow, Scotland, in 1911, where he had been in Caledonian Ry. service for about seven years.

Electric Railway Finance, Meetings, Etc.

Brandon Municipal Ry.—Receipts for July, $8,430; operating expenses, $4,430.

British Columbia Electric Ry. Gross earnings for July, $755,943; operating expenses, maintenance, etc., $549,947; net earnings $205,996, against $650,245 gross earnings; $468,277 operating expenses, maintenance, etc.; net earnings $181,968 for July, 1912. Owing to the practical completion of the hydro-electric installation of the Vancouver Power Co., a subsidiary concern, the income of subsidiary companies is now included with that of the railway, instead of estimating the net income, as heretofore.

Cape Breton Electric Co.—Gross earnings for July, $32,543.24; operating expenses and taxes, $17,615.56; net earnings, $14,927.68; interest charges, $4,891.67; balance, $10,036.01; bond sinking and improvement funds, $1,190; net balance, $8,846.01, against $33,115.85 gross earnings; $16,973.96 operating expenses and taxes; $16,141.89 net earnings; $4,495.83 interest charges; $11,646.06 balance; $1,206.67 bond sinking and improvement funds; $10,439.39 net balance, for July, 1912. The construction charges during July, were $14,279.79.

Grand Valley Ry.—J. L. Addison, St. George, Ont., on behalf of himself and other bondholders, has entered an action against A. J. Pattison, W. S. Dinnick, John Firstbrook and other directors of the company for loss occasioned by the alleged malfeasance of the defendants as directors, particularly in connection with the contract for the construction of the railway made with Dill & Co., and the issue and delivery from time to time of bonds to the amount of $3,285,000, and in respect of the improper issue of shares to the amount of $900,000. They also seek to recover $70,000 which they allege was improperly obtained by the directors and retained for their own use. An accounting by the directors of all their dealings with the company's assets is asked for.

Halifax Electric Tramways Co.—Application is being made to the Nova Scotia Public Utilities Commission for power to issue 6,000 additional shares of common stock par value $100 each. The company's representatives explained that the proceeds would be used to redeem $600,000 of bonds due in 1916, and the premium obtained on the stock would be used for extension and betterments to the line. The city of Halifax opposed the application, and the hearing was adjourned.

Hull Electric Co.—The annual meeting of shareholders was held Sept. 3, when the statement of affairs for the year ended June 30 was submitted. W. R. Baker, Secretary, C.P.R., was elected President, and E. W. Beatty, General Counsel, C.P.R., Vice President, for the current year.

Oshawa Ry.—The annual meeting of shareholders was held at Deseronto, Ont., Sept. 8. Following are the officers and directors for the current year,—President, E. W. Rathbun, Deseronto, Ont.; Secretary and Treasurer, H. W. Cooper, Gananoque, Ont.; Manager, J. F. Chapman, Gananoque, Ont.; other directors, D. A. Valleau, Oshawa, Ont., and B. R. Hepburn, M.P., Picton, Ont.

Port Arthur and Fort William Electric Ry.—Committees representing the City Councils of Port Arthur and Fort William, Ont., are discussing the details which have to be worked out in view of each city having its own electric lines. The most important point to be settled is as to the operation of the line connecting the two cities.

Toronto Ry., Toronto and York Radial Ry., and allied companies.—Gross earnings for July, $811,966; operating expenses, maintenance, etc., $401,954; net earnings, $410,012, against $712,456 gross earnings; $329,607 operating expenses, maintenance, etc., $382,849 net earnings for July, 1912. Aggregate gross earnings for seven months ended July 31, $5,467,452; net earnings $2,659,445, against $4,725,175 aggregate gross earnings; $2,418,921 net earnings for same period 1912.

Winnipeg Electric Ry.—Gross earnings for July, $336,821; operating expenses, $183,689; net earnings, $153,132, against $315,362 gross earnings; $163,930 operating expenses; $151,432 net earnings for July, 1912. Aggregate gross earnings for seven months ended July 31, $2,309,195; net earnings $1,030,121, against $2,124,066 aggregate gross earnings; $992,561 net earnings for same period 1912.

Winnipeg Electric Ry.—Sir Wm. Mackenzie is reported to have stated in Toronto, on his return from England, Aug. 31, that what were known as the Reece interests had been taken over by the W.E. Ry. The Reece interests own a charter for the development and distribution of power in Manitoba, and a number of charters and franchises for building electric railways in the more thickly settled territory of the province round Winnipeg.

Electric Railway Notes.

The Dominion Power and Transmission Co. has received one freight car from the Preston Car and Coach Co.

A bylaw is being prepared by the London, Ont., City Council, providing for the operation of a Sunday car service on the London St. Ry. It is said that the ratepayers will be asked to vote thereon, Oct. 15.

The Edmonton Radial Ry. has received 10 steel underframe double truck single end pay-as-you-enter cars, from the Preston Car and Coach Co., making 28 delivered, out of an order of 35. The remainder will not be built until 1914.

The Cape Breton Electric Co. recently ordered three double truck, double ended, closed cars, 44 ft. 4 ins. long, equipped with Baldwin trucks, four 40 h.p. Canadian Westinghouse motors for each car, and Canadian Westinghouse air brakes.

The relatives of the late Duncan Miller, Superintendent, Hamilton St. Ry., are suing the Hamilton City Council, in connection with his death in an automobile accident, alleged to be due to the condition of the road. The council is to defend the suit.

The Nipissing Central Ry., which is operated in connection with the Timiskaming & Northern Ontario, will probably have 2 more cars added in the near future to its present equipment of 6, the matter being under consideration by the T. & N.O.R. Commission.

The Niagara, St. Catharines and Toronto Ry. has installed a derailing switch on the main line between Merritton and Thorold, Ont., where there is a steep grade, in order to prevent possibility of a collision in the event of cars breaking loose, as occurred recently.

The Edmonton, Alta., Radial Ry. employes are asking the city council to grant an increase of 2½c. an hour, and the matter is under consideration. The rates in force under the agreement, which expired Sept. 1, were: First six months, 27½c. an hour;

second six months, 30c.; second year, 35c.; after two years, 37½c.

The number of passengers carried on the British Columbia Electric Ry. cars in Victoria, during August, was 1,202,113, against 978,289 in Aug., 1912. The total passengers for the eight months ended Aug. 31, was 8,802,958, against 7,026,230 during the same period 1912.

During August, passenger traffic on the Berlin and Waterloo St. Ry. increased about 10.8% over the same month in 1912. The number of passengers carried was 99,236, the net profit for August amounting to $945.05. This increase occurred notwithstanding the fact that a temporary track is being operated on the side of the road, during double track construction.

The Guelph Radial Ry. has received one double end, double truck, pay-as-you-enter city car, from the Preston Car and Coach Co. It is mounted on standard truck with rolled steel wheels, Westinghouse 101B2 quadruple motor equipment, Westinghouse SM1 air brake, and the body is finished in natural cherry inside and out, Crouse-Hinds Imperial arc headlight, Providence fenders, and Root scrapers.

The Port Arthur and Fort William Electric Ry., which is now being operated by a joint commission appointed by the two cities, will be separated before the end of the year, each city operating its own section. Steps are being taken to arrange terms of interchange of passengers, and other matters that will arise owing to the separation. It is said that there will be no change in the general service, except that cars will probably be run at shorter intervals.

As a result of arbitration proceedings a two years agreement has been signed between the British Columbia Electric Ry. and its employes. The arbitrators by a majority declined to alter the existing schedule, but made certain recommendations as to alteration of hours, etc. A minority report recommended increases of from 1½ to 3½ cents an hour; together with a schedule for clerks and other employes, whom the majority report would not recognize. The reports were made public Aug. 28, and after some discussion, the company meeting the men on some minor points, an agreement was reached to run for two years, the existing pay schedule to rule.

New Cars for Montreal Tramways Company.

The Montreal Tramways Co. has ordered 25 motor cars and 25 trailer cars, to be built in the United States, for its St. Catherine St. line, on which the trailers will be run from early in the morning until late at night, the attaching and detaching being done at the car house. The travel on the St. Catherine St. line is very heavy, the average headway being a minute and a half. Passengers will enter the motor car by the rear end and the trailers by the front end, and there will be an exit aisle at each entrance platform, as well as at the motorman's end. Delivery of these cars is to be made in December.

Following are their principal dimensions:—seating capacity, 48; bolster centres, length, 21 ft.; length of body, 32¼ ft.; length over vestibule, 44¼ ft.; width over sills, 8¼ ft.; width over all, 8 ft. 4¾ in.; height, rail to sills, 2 ft. 3 13-16 in.; sill to trolley base, 8 ft. 10⅞ in. The body will be wood, with steel sheathing; interior trim, cherry; roof, plain arch; underframe, steel. Among the special equipment are the following:—cables, conduits and junction, boxes, gears and pinions, and motors, Westinghouse; couplers, Tomlinson; destination signs, Keystone; paint and varnish, Murphy.

Judgment Against the Brantford Street Railway Company.

An action brought by the City of Brantford against the Brantford St. Ry. Co., the Grand Valley Ry. Co., E. B. Stockdale, Receiver of the Grand Valley Ry. Co., the National Trust Co. and the Trusts and Guarantee Co., the two latter being respectively mortgagees to secure issues of bonds of the Brantford St. Ry. Co., and the Grand Valley Ry. Co., was tried at the Assizes at Brantford, Ont., in the third week of September. The action was brought for cancellation of the existing franchise, which was granted in 1902 for 50 years. A new franchise was granted in 1907, also for 50 years, which, however, was also to date from 1902. Among the grounds on which cancellation was asked were general failure to observe the contract with the city, non reconstruction of the east ward loop, failure to provide proper cars, not providing distinguishing lights on cars, and failure to pay the city for taxes and work done.

Chief Justice Meredith gave the defendants one month to elect whether judgment shall be entered for forfeiture of the franchise, or whether they will accept the terms imposed, viz., to take one year's time within which to comply with the terms of the contract with the city by completing and rebuilding the railway in the city, placing new rolling stock on it in accordance with the contract and paying up all moneys owing to the city. In any event, the defendants must pay $100 a month damages until they comply with these conditions and the cost of the suit. If they decline the terms, and accept the judgment for forfeiture, there is also judgment for $1,200 damages. W. T. Henderson, City Solicitor, of Brantford, acted for the city.

It came out at the trial that $1,700,000 of bonds had been issued, but it was not known whether they had been sold or simply pledged. They were issued for building a railway from Brantford to Woodstock, and from Brantford to Port Dover, which has not been done.

Advance in Fares on British Columbia Electric Railway.

Prior to making a change in fares on Sept. 18, R. H. Sperling, General Manager, made the following statement:—

"As is well known, there has been a steady increase in the cost of labor and supplies for some years past. Everything the company buys—labor, electrical equipment, rails, rolling stock and material of every kind—has grown in value until a proper relation no longer exists between the cost of a street car ride and the price paid for it. To the people at large the cost of practically every necessary commodity has also advanced, excepting only the street car ride, which has remained the same. On the other hand, the wages of all classes of labor, skilled and unskilled, have increased step by step with the cost of living. No such compensating advantage has come to the company, consequently the margin between operating cost and revenue earned has gradually decreased until the profit earned by the company on its investment is no longer adequate to induce the investor to put fresh capital—so necessary for the development of the territory served by the company—into the concern. Apart, however, from the viewpoint of obtaining additional capital, the company has not earned a reasonable profit on its operations during the past 18 months—certainly no such return as would induce local people to invest their savings in the enterprise.

"The company's investment in British Columbia amounts to approximately $45,000,000, consisting entirely of cash received from its stockholders, which is at present earning about 4½% per year. If the necessary further capital required for the adequate development of the territory served by the company is to be raised on reasonable terms, it is absolutely essential that the company's railway revenue should be increased.

"Although the necessity for abolishing commutation rates has been apparent for some time, we have repeatedly postponed action, hoping for an adjustment in economical conditions, which would render any change unnecessary. No such adjustment has come, and none is in sight. Therefore, to further delay setting the company's affairs in line with conditions as they now exist, and are certain to continue for some time, would be not only unfair to those who have furnished the money for our development, but dangerous and unsound from a financial standpoint.

"The situation which confronts us in British Columbia has been experienced generally along the Pacific coast, and in a number of cases elsewhere has been met by a return to the straight five cents fare. Our company, however, does not intend to go to this extreme, unless a still further increase in operating costs compels us. We propose, therefore, continuing a low rate ticket for workingmen, which will be sold in strips of 10—5 white and 5 green—at 40c. a strip, or 4c. a ride. The white tickets will be good only up to 8 a.m. The other half will be good at any time up to midnight, when the 'owl' rates will come into effect, where 'owl' cars are run. Apart from these tickets the fare will be 5c., but for the convenience of the public, blocks of tickets will be sold, 5 for 25c. School children's rates will remain as before.

The new rates will be effective on and after Sept. 18, and the tickets at present in force will not be sold after Sept. 17."

Winnipeg Electric Railway Power Plant.—Recent press reports stated that the W. E. R. Co. had decided to build a large power plant twelve miles farther down the Winnipeg River than the present plant and that a contract therefor had been let. We are officially advised that the reports are entirely without foundation. The company has been for some time looking for another power site, but nothing definite has been settled. No new site has been arranged for or engineers engaged, nor have any arrangements whatever been made for the erection of a new power plant. The reports stated that the power plant was to be built at the Grand Bonnet Falls, about 12 miles farther down the Winnipeg River than the company's present power plant is located, that the new plant was estimated to cost about $5,000,000, and that a contract had been let for its construction to J. G. White and Co., New York.

The Master Car and Locomotive Painters Association of the United States and Canada held its 44th annual convention at Ottawa, Ont., Sept. 9-12, when reports were received and a number of topics in which the association is interested, were discussed.

At a meeting of the Aylmer, Ont., Board of Trade, Sept. 14, a resolution was passed in favor of building an electric railway from that town to Pond Mill, on the London and Port Stanley Ry., in the event of that line being electrified.

Railway Route Map Approved.—The Minister of Railways and Canals, Aug. 23, approved the route map of the Glengarry and Stormont Ry. from the C.P.R., near St. Polycarpe Jct., to Cornwall, Ont., 28 miles.

Marine Department.

The New Government Dry Dock at Lauzon, Quebec.

Canadian Railway and Marine World for September contained a preliminary description of the Government drydock to be built at Lauzon, two miles east of Levis, Que., near the present Government drydock and nearly opposite the city of Quebec. A plan showing the location of the new drydock with regard to the present one, is given herewith. This shows the layout of the new drydock and the arrangement of docks, buildings and approach slip to be built in conjunction with it.

The dock will have the following dimensions: length from caisson stop to head wall, 1,150 ft.; width of entrance, 120 ft.; depth on sill at ordinary high water spring tides, 40 ft. It will be divided into two parts, 650 and 500 ft. respectively; the outer entrance will be closed by a steel rolling caisson, and a ship or floating caisson will close the inner entrance. The outer caisson will also fit the outer face of the outer sill, so as to facilitate repairs to the rolling caisson when required. The dock will be emptied by three centrifugal pumps, each having a capacity of 60,000 gals. a minute, with direct electric drive, power being derived from three turbo-generator sets receiving steam from 8 water tube boilers with a combined capacity of 3,600 h.p. The rolling caisson is to be operated by electrical means from the same source of power.

The site for the new drydock covers the section of the shore lying principally between the water lines of high and low spring tides, and will involve the making of filled land. For the proper carrying on of the work of construction, the portion of the site in the immediate vicinity of the drydock is to be completely enclosed during operations by the cofferdam shown in the plan. From this protected area, the water is to be constantly drawn off, in order that the work may be expeditiously proceeded with.

The dock walls, floor, portal walls of the outer and inner caissons, the culverts, pump wells, sumps and superstructure of the wharf and bulkhead, will be built of concrete, reinforcing being used in some instances.

The drydock will have a docking length of 1,150 ft., and the inner end, 650 ft. long, can be separated from this length by a floating caisson for the docking of smaller vessels. Most of the excavation for the drydock will be through solid rock, with the exception of a thin earth crust. The excavation is to be carried at the inner end of the dock to a depth of 28.5 ft. below the datum line, the latter being at the level of the low water spring tides. This excavation at the bottom will be 122 ft. wide sloping up to ground level on a 1 to 2½ batter. From the inner end of the dock, the bottom will slope forward on a slope of 1 in 1,000, so that near the forward end, the cutting will be 29.5 ft. below datum.

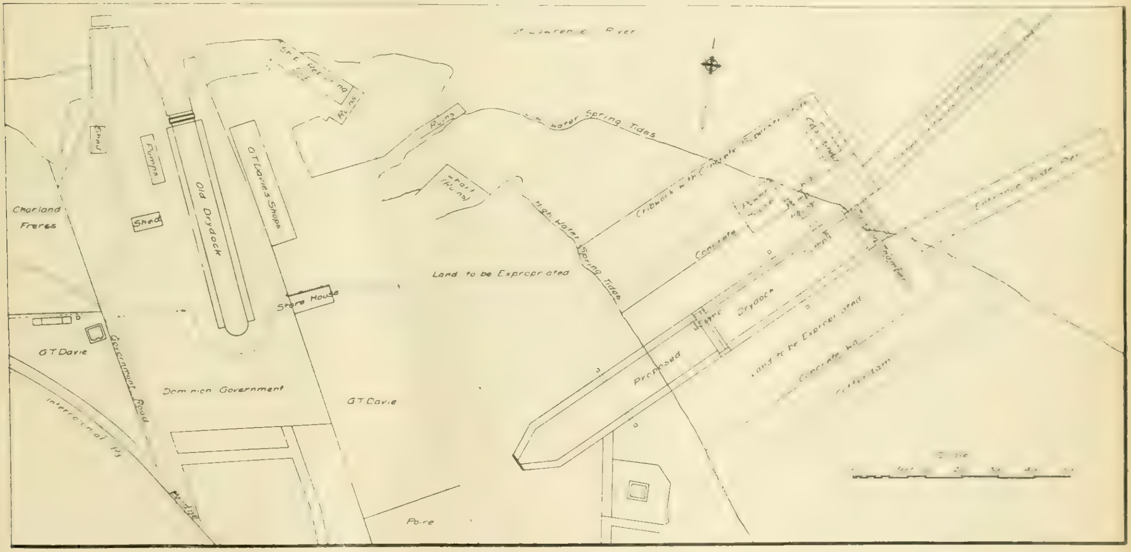
The side walls of the excavation will have the slope mentioned, but the concrete walls are to be stepped, giving an average wall thickness of concrete of about 5 ft. They are to be built in 30 ft. sections leaving ½ in. expansion joints between. Each joint is to have a 1 in. V joint. The ends of the sections are to be moulded with a groove, the whole joint to be filled with grouting on completion.

The flooring of the dock will take the 1 in 1,000 slope of the excavation for drainage purposes. The concrete flooring will be 5 ft. thick, with a 6 in. slope from the centre to the sides, for draining to a 6 by 12 in. gutter along each side. Under the floor and at the back of the side walls, drains are to be provided leading to the pump sumps, so as to prevent any possible hydrostatic pressure that may be produced by the accumulation of water from seepage. The centre of the floor will be provided with three rows of granite blocks 18 ins. thick, the middle row being 4 ft. wide and level, and those on each side of this centre row, 3 ft. wide, and having the slope of the floor. The floor formation is to be in sections similar to the walls, to be grouted on completion.

At the end of each main section, on each side of the dock, 8 points in all, there will be stairs moulded in the concrete of the walls. These steps are to be 12 ins. wide., with a 12 in. rise. Centrally in each wall of both sections, at four points, there will be timber slides, which will be 8 by 12 ft. passages at right angles to the dock walls, sloping back at a sharp angle from the bottom of the dock to ground level. One side of each passage will be floored with granite slabs for the timber slides, and alongside the slide in the passage, will be a stairway to the surface, with 10½ in. tread and 12 in. rise.

The coping of all the altars will be granite blocks, 12 ins. thick and 3 ft. wide. Between the altars, there will be 8 galvanized iron ladders. The coping of the side and caisson chamber walls will also be of granite slabs. On each side of the dock, there will be 12 cast iron bollards, set in concrete blocks, and also located along the side walls, there will also be 9 capstans, but it is undecided as yet whether or not these will be electrically operated.

The keel blocks will be of cast iron in three pieces of a normal height of 4½ ft. The bilge block slides will be located every 16 ft. through the length of the dock. They are to be made of 3 in. white oak, 12 ins. wide. The bilge blocks will be of



New and Old Government Drydocks at Lauzon, Que pitch pine, provided with slide irons and oak slide blocks for clamping to the bilge block slides. The hauling chains are to be of ⅜ in. short link chain, two chains for each block.

The rolling caisson for the outer end of the drydock will measure 123 ft. by 19 ft. 11 ins. It will be made of mild steel, with the side plate rivetted to a steel frame, and the sides of the plates lapped and single rivetted, and the ends covered with butt plates double rivetted, with the bottom of a similar construction. It is designed to withstand a head of 45 ft. It is to be so ballasted that it will float to a depth of 23½ ft. with all the valves closed. At a height of 23 ft. from the bottom, there will be a watertight deck, on which the rising tide will be allowed to enter through side openings of such sectional area that the water covering will rise at the rate of 4 ft. an hour with the flood tide, thus preventing the caisson from floating. The openings in the sides will connect with the top of the deck with steel pipes provided with water tight valves. By closing these valves in winter or when the dock is not in operation, the water will not be allowed on this deck, and the lower part of the caisson will then be filled to counterbalance the flotation, valves in the lower portion being arranged for this purpose. Six water tight steel culverts of an approximate area of 10 sq. ft. each will pass through the caisson for filling the dock.

The water tight deck of this caisson will be of sufficient strength to support a water column of 22 ft. The chamber end of the caisson will have a built up steel drawbar with attached chain. This chain, passing over a pulley, will connect through a worm gearing to a motor drive. The bearing face of the inner side of the caisson will have a green heart timber fitted into angles for the bearing surface, and inside this timber, there will be a 1 in. steam pipe to thaw out the joint when required. The lower chamber of the caisson will also have steam pipe connection to keep it free of ice in the winter and when not in service. The top of the caisson will have a folding bridge with an apron of 4 in. pine standing on the level of the wall copings. Side railings on this bridge will be arranged to fold with the bridge when the caisson is moved back into its chamber. The caisson chamber will be covered over with 4 in. planking.

The caisson chamber will be of similar construction to the side walls, only vertical, 49½ ft. from the top of the wall coping to the roller altars. The chamber width will be 23 ft. On these roller altars on each side of the bottom of the chamber will be mounted in cast iron bearings at 8 ft. centres, 2 ft. flanged wheels, on which will bear medium hard steel strips on the lower face of the caisson. The whole will be of sufficient strength to support the caisson, when filled with ballast, without deflection. The edges of the caisson chamber will be finished with granite blocks.

For the 650 ft. inner end of the dock, there will be a floating caisson made sufficiently strong to withstand the same heads as the rolling caisson. It is to be built with water tight ballast, air and tidal chambers, and will contain enough ballast to be easily handled when afloat. There will be six filling culverts similar to those in the rolling caisson, operated electrically from above. Two centrifugal pumps with bronze impellers, each of a capacity of 5,000 gals. a minute against a 40 ft. head, operated by electric motors of 100 h.p., will be installed in the floating caisson for removing the water ballast from the scuttling tanks. The floating caisson will float on an even keel without any listing. The top deck will be 15 ft. wide and will serve as a bridge across the dock. The closing timbers will be of green heart timber, and will be placed on both sides of the caisson. This caisson will fit against shoulders in the wall of the dock nearly midway in its length. Beyond the outer end of the dock, there will be also similar shoulders, against which the floating caisson can be set when it is required to fix the rolling caisson.

The channel beyond the outer end of the dock is to be dredged to a depth of 30 ft. out into the river channel. On each side of this channel, there will be guide piers 600 by 75 ft., of timber construction with a concrete superstructure. The outer end of the piers will be 300 ft. apart.

Along the north side of the dock, there will be two sumps in the dock bottom, covered with iron grating. These will be located inside each of the caissons. From the inner one, beyond the floating caisson, there will be a 7 by 12 ft. tunnel leading back to near the outer caisson, turning at a right angle into the pump pit. From alongside this turn, the outer end sump will connect with a similar concrete culvert to the pump pit.

The pump house building will be 50 by 70 ft., over top of the pump pit. The pump pit will be built of concrete, on the outer wall of which there will be a ¾ in. coating of asphaltum to render the chamber damp proof. The floor of the pump pit is to be 41 ft. below ground level. The pump house over the pit will have walls of red brick 12 ft. high, with the inside finish of pressed brick. Inside the door of the building there will be a 10 by 12 ft. platform, leading down from which to the pump pit floor there will be a cast iron ladder with 9 in. treads and 7 in. risers. In the pump pit, there will be three 60,000 gal. per min. centrifugal pumps, with 58 in. suction and discharge pipes. Each of these pumps is to be operated by a 1000 h.p. d. c. motor. The pump pit will also contain two drain centrifugal pumps with 18 in. suction and discharge pipes, each direct connected to a 125 h.p. motor.

Alongside the pump house will be located the power house, 100 by 120 ft., divided into two rooms, each 50 by 120 ft. One of these will be the boiler room and the other the generator room. The walls of both, 25 ft. high, will be similar to the pump house construction, except that the walls of the generator room are to be glazed to a height of 6 ft. The generator equipment will comprise three generator sets, of 1,500, 750 and 300 k.w. each, supplying direct current at 550 volts. The motive power will be steam turbines. There is also to be a 100 k.w. 220 volt. d.c. generator for lighting, direct connected to a high speed vertical engine. The generator room will also contain all the switchboard and control apparatus for the electrical equipment.

The steam generating equipment will consist of a battery of eight water tube boilers, six of which will be 500 h.p., and the other two, 300 h.p. each, all arranged in batteries of two and provided with automatic stokers. In addition, there will be the usual equipment of feed pumps, heaters, etc. The power house chimney will be 180 ft. high, with an inside diameter of 12 ft., and 24 ft. outside diameter at the base. It will be built of red brick with an inner shell of fire brick. In the power house, there will be sections for a small store room, 8 by 12 ft., and closets and wash room.

The other buildings of the plant will include a coal shed on the edge of the outer end of the dock, 50 by 100 ft., with 14 ft. walls roofed over.

Canadian Pacific Railway s.s. Princess Maquinna.

The s.s. Princess Maquinna, built at Esquimalt for the British Columbia Coast Service, has been placed in service on the Vancouver Island west coast route in place of the s.s. Tees. She is considerably larger than the Tees, and is the largest one of the type built at Esquimalt. She is built of steel and is classed 100 A1 at Lloyd's. She has 62 staterooms, and dining room accommodation for 65 passengers, with large social hall and smoking room and considerable promenade space. She is equipped with triple expansion engines, and her boilers are arranged to burn oil fuel. In addition to other up to date equipment there is a complete electric light installation, and wireless telegraph apparatus. She was designed for a speed in open water of 12 knots an hour. Following are her chief dimensions:—Length between perpendiculars, 232½ ft.; length over all, 250 ft.; beam, 38 ft.; depth to main deck, 17 ft.; displacement loaded when drawing 14 ft. of water, 1,860 tons. Further descriptive details were given in Canadian Railway and Marine World for June.

Canadian Pacific Ry. s.s. Princess Maquinna.

Capt. Forster, of the C.P.R. s.s. Empress of Ireland, has been appointed Marine Superintendent for the company, at Liverpool, Eng. Capt. Turnbull, of the Mount Royal, has been promoted to the Empress of Ireland; Capt. Murray, of the Monmouth, to the Mount Royal; and Chief Officer O'Reilly, of the Empress of Ireland, to the command of the Monmouth.

Montreal Harbor Commission's Chairman Reports on Grain Transportation.

W. G. Ross, Chairman, Montreal Harbor Commission, visited Port Arthur and Fort William, Ont., recently, and has embodied a large amount of information which he gathered on the trip in a report on grain transportation, elevators, tariffs and grain freight rates which contains a large amount of valuable data.

Mr. Ross had a conference with Dr. R. Magill, Chief Grain Commissioner, of which he says:—"As to means of increasing the movement of grain through Canadian ports, with the present lake marine and elevators, Dr. Magill stated that the cancellation of the Canadian grain certificates on all grain once it crossed the boundary, for export via United States ports, might have for effect the desired result, but before recommending that such drastic action be taken, due consideration would have to be given to the effect of such cancellation upon the market. Notwithstanding the fact that Canadian grain is shipped through the U. S. in bond, upon its arrival at destination seeds not grown in Canada are found mixed with it, and yet it is sold to the European miller bearing the Canadian certificate. The cancellation of the certificate, as suggested, might mean that grain shipped via Canadian channels would command a higher price in the European market, but such an action might be a hardship on the exporter, unless our facilities, etc., enabled him to reach that market with his grain. This question is now receiving the consideration of the Grain Commissioners."

In reference to the grain traffic Mr. Ross says:—Grain exporters with whom the subject was discussed stated that the reasons the St. Lawrence route is not taking care of the entire grain traffic of the Canadian Northwest are because of insufficient Canadian lake vessels, storage capacity at lake, bay and sea ports, and ocean tonnage from Montreal.

"The following table shows that the great leak in the main artery of Canadian transportation is not only still existent, but is increasing. In 1912 44,519,182 bush. of wheat were not only shipped from Fort William and Port Arthur to U. S. lake ports, but all of it excepting 333,829 bush. was transported in U. S. vessels.

Year.	In Can. vessels to Can. lake ports	In Can vessels to U.S. ports.	In U. S vessels to U.S. ports.
1908	37,350,463	1,944,179	14,[illegible]87,978
1909	37,296,735	3,315,646	15,972,860
1910	38,271,487	1,814,153	16,640,800
1911	36,378,535	1,258,469	32,548,065
1912	53,217,861	333,829	44,185,353

"These records show that, whereas the wheat shipments from these lake ports to lower Canadian ports increased slightly over 40% during the last five years, the shipments to U. S. ports have increased 180% during the same period, and whereas in 1908 Canadian vessels shared to the extent of one-seventh in the carrying of the U. S. routed grain, in 1912 their share dropped to the one hundred and thirtieth part of it. Last year 44,519,182 bushels of wheat left Port Arthur and Fort William routed through U. S. channels and the Canadian marine lost its transportation to the U. S. lower ports, which rightly belongs to it, by its scarcity of vessels, a scarcity which a deep water channel to the sea would soon not only make adequate, but would divert to Montreal and other Canadian ports the greater portion of the grain trade which now seeks U. S. ports. Large wheat shipments to Buffalo last year were made notwithstanding the fact that owing to the large grain crop in the U. S., the port was from November continually congested, scores of steamers lying there waiting to be unloaded, a condition of affairs which compelled shipowners to charter for storage cargoes only, and which caused considerable grain to go via Canadian routes which would have gone to Buffalo but for the delay in unloading there.

"Just so long as a bushel of wheat is carried from Canadian lake ports to U. S. lake ports in U. S. vessels, the lake shipping of Canada is inadequate, and until Canada has a west-bound trade, capable of supporting and warranting the building of vessels on a par with U. S. boats, she cannot control the carrying trade from the Canadian upper lake ports. With the development of the package trade westbound on the lakes Canadian vessel owners built steamers to control it, and these carriers have been a factor in making Montreal a large grain shipping port, which can carry grain cheaper than the craft that only gets a one way cargo, and then only at the spasmodic movement of grain sent east which reaches its full volume in spring and fall seasons. Until Canada furnishes a deep water channel to Montreal to tap her eastern coal fields, and supplies heavy westbound freight, which is so essential to the development of the large carrying capacity lake steamers, equal in every respect to the large U. S. craft, and capable of coping with them in rates, the U. S. will control the bulk of the grain shipments.

"Elevator storage capacity is the great and immediate need at every Canadian port on the grain route. The Government last fall endeavored to provide additional storage at Fort William and Port Arthur by suspending the Canadian coastal laws with the object of preventing grain being sent to Duluth and Minneapolis for storage, and also divert it from the U. S. route to the seaboard by allowing U. S. vessels to load storage grain for delivery to Canadian lake ports in the spring, a plan which, however, failed, for the majority of the 39 U. S. vessels which took on grain during the winter delivered their cargoes at U. S. lake ports. Georgian Bay ports were also so congested last spring that vessel owners not only reluctantly chartered to these ports, but insisted upon the insertion of a special guarantee clause, or in other words, the payment of demurrage charges, 3 to 4 days being the average demurrage during May and June. Like congestion also occurred at Port Colborne and Kingston, as may be seen from the following telegrams posted on the Winnipeg Grain Exchange:—

"Port Colborne, June 4, 1912.

"Standard Shipping Co., Winnipeg:

"Yours received. Expect have space for one—possibly two—small vessels this week. Montreal badly congested. Steamers being delayed seriously there which affects us. Prospects very bad until end of next week unless you can supply some tonnage. Met Neebing and Hero.

"(Sgd.) FAWCETT, Supt.

"Standard Shipping Co., Winnipeg:

"Canadian discharged Prescott. Kingston blocked. Notify shippers re insurance.

"(Sgd.) FAWCETT, Supt.

"These telegrams resulted in an attempt to divert the following vessels to Buffalo:—The Neebing, Empress of Fort William Scottish Hero, and T. Daniels, containing 600,000 bushels of grain.

"Whatever congestion there actually was at Montreal at the above date might have been removed before any of these vessels could possibly reach Port Colborne. At any rate, remarks like this should have been confined to Port Colborne, [illegible] to divert grain to U. S. channels.

"In order to help our Canadian [illegible] to handle our crops it is [illegible] that additional elevator storage should be provided at once so as to obtain during the short season of navigation [illegible] results from our ports.

"That vessel owners are naturally anxious not to have any demurrage at Montreal is demonstrated by the verbal suggestion of Mr. Wolvin, of the Mutual and Canadian Interlake Lines,—that the Harbor Commissioners should lease to him 500,000 bush. capacity in the annex to elevator 1 or 2, for which he would be willing to pay the usual elevator rates and such additional operating cost as would guarantee a return of 4 or 4½% on the cost of the leased portion, or a similar arrangement, if it could be worked out, to what is done for the industries desiring wharves, this scheme's purpose being so that a regular schedule of sailings westward could be adopted for the season."

The Crown of Cordova's Collision With the Lady of Gaspe.

The collision between these two vessels in the St. Lawrence River on the night of July 28 was inquired into at Quebec in August by Commander H. St. G. Lindsay, R.D., R.N.R., Dominion Wreck Commissioner, assisted by Captains F. Nash and R. S. Clift, as assessors. The evidence showed that the vessels sailed from Montreal on the afternoon of July 28, the Crown of Cordova in water ballast bound to Quebec to load, and the Lady of Gaspe bound to Gulf ports, with freight and passengers, and continued in sight of each other after leaving Montreal, the Lady of Gaspe being ahead. On passing Three Rivers, the vessels appear to have been about a mile apart, and shortly after this the Lady of Gaspe, seeing that the Cape Magdeleine range lights were obscured by fog, and apparently having lost her bearings on this account, decided to anchor, which was done with the vessel's head still down stream, and also without any regard to the fact that the Crown of Cordova was astern, the result of this action being, the latter vessel, seeing that she was closing in on the stern light of the other, which was then on her starboard bow, immediately stopped her engines. It would appear that the speed of the Lady of Gaspe was such that the anchor when let go, with about 15 fathoms of chain, dragged for some time before it had any effect in swinging her, the helm remaining amidships, so that the Crown of Cordova not being aware that the Lady of Gaspe had anchored, made an attempt to pass her to the northward, or on her own starboard side; but as the Lady of Gaspe was then commencing to swing to the current, with her head to the northward, and opening up her port side, this action was not considered prudent, and as a collision was then seen to be inevitable, the engines of the Crown of Cordova were put full speed astern; but the two vessels came together, the Lady of Gaspe being struck at an angle nearly amidships by the stem of the other vessel. On the vessels clearing each other the Crown of Cordova anchored and sent her boats to assist in taking off the passengers and crew of the Lady of Gaspe, which vessel had been beached on the north shore. Both vessels received considerable damage, which necessitated their being put in dry dock for repairs. The evidence shows that after the collision, the Second Officer and several of the crew, and also several male passengers of the Lady of Gaspe were found to be on the forecastle head of the Crown of Cordova, having climbed on board when the vessels were together, and there is nothing to show what their motive for going there was other than self preservation.

The court, in view of the evidence adduced, is unanimous in its opinion that the Lady of Gaspe is alone to blame for the casualty, inasmuch as she anchored in mid-channel without any regard to the fact that the Crown of Cordova was astern, and appears not to have even taken the trouble to look astern to find out where the other vessel was, nor did she use any of the sound signals prescribed by the Rules of the Road. The fact that the anchor was let go with the speed of the vessel almost unchecked, and with a three knot current astern, and that no effort was made to cant the ship either one way or another with the helm, shows a total lack of seamanship. The court severely criticizes the extraordinary absence of discipline on this vessel, carrying over 130 passengers. It appears that the Lady of Gaspe was being navigated by a man who was signed on the articles as wheelsman,—Elucipe Belanger,—who acted as pilot, lookout, and in charge generally; who steered his courses entirely by the buoys and range lights, and lost his bearings directly the fog and mist shut in the lights ahead, and who did not use the compass. The court therefore severely censures the Master, Cleophas Vezina, for his want of supervision, and in not having a proper watch kept, and lookout set, and properly organized boat stations in case of accidents; but as he took very prompt and proper action in putting his vessel on the bank when he found her sinking, and thereby probably saved the lives of many of the passengers, does not deal with his certificate. The court is of opinion that the cowardly conduct of Joseph Gauthier, the Second Officer of the Lady of Gaspe, in leaving his ship at the time of the accident, shows that he is not a fit and proper person to hold an officer's position. The court therefore cancels his mate's certificate, 5073. The court expresses its approval of the conduct of the master, officers and crew of the Crown of Cordova, and of the efficient manner in which the boats of that vessel were brought into use in the landing of the passengers of the Lady of Gaspe.

New Welland Ship Canal Construction.

The contract for the construction of section 3 of the Welland Ship Canal has been awarded by the Dominion Government to O'Brien and Doheny, Montreal. This section covers the heaviest portion of the whole route, and includes the erection of twin guard gates at Thorold, the single lock 7, the construction of a short stretch of canal below lock 7, and also of the three twin locks 6, 5 and 4 in flight, one flight for downward vessels, and the other for upbound vessels, thus saving long delays in the passage of vessels through the canal. These three locks overcome a descent of 139½ ft. The cutting from sec. 3 will be used in the construction of the breakwater in sec. 1, the Lake Ontario end, which is under contract to the Dominion Dredging Co. It is reported that the amount involved in the contract will approximate $9,500,000.

A full description of the new ship canal route was given in Canadian Railway and Marine World for July, and details of the locks in the September issue.

The number of ocean going steamships arriving in Montreal harbor during August, was 72, against 56 in August, 1912, and the total number of vessels arriving from the opening of navigation to the end of August, was 300, against 245 for the same period 1912.

Lake Shippers Clearance Association Annual Report.

At the annual meeting in Winnipeg, Aug. 28, the following report was presented:—"The operation during the last year has been very successful. We have handled 35,000,000 bushels more grain than last year and 87,000,000 more than the previous year, which is absolute proof that the association is of great benefit to both the vessel owners and shippers, and, further, that every exporting or shipping firm in the Winnipeg Grain Exchange are now members of this association.

"We again show a surplus over expenses. I would like to draw the attention of all the members present to how the surplus was accumulated during the present year, and to the remarks that I made at the last general meeting, 1912, in which I stated that the surplus during that year had been principally obtained from storage saved, and in looking over the financial statement this year you will see that the amount of fees received from the vessel owners and shippers is not enough to cover the running expenses of our association, and we show a deficit. We will be put to a larger expense this year as we have a private wire now betwen the Winnipeg and Fort William offices, and this wire is used by the vessel agents and shippers, and will no doubt be a great saving to them in their telegraph account, also it puts them in direct communication with the Fort William office, and our books are at all times open to the vessel agents to find out as to the loading of their boats and what dispatch they are getting, and in view of the above facts I cannot see how we can in any way reduce the charges that are now being paid by both the vessel owners and shippers. The money that we save on storage is money that entirely belongs to the shippers, and, in fact, it looks as if some of this money would have to be used to cover the operating expenses.

"Our fees for loading boats are based on the dispatch given the boat, and since our last annual meeting a conference was held between your board, representing the association, and representatives of the Dominion Marine Association, at which the basis of charges made for service rendered by this association to boats was completely changed. The Dominion Marine Association apparently felt that in some way the storage saved by this association in the course of its operation was saved at the expense of the boats, and notwithstanding assurances and evidence submitted by your board to the contrary, the marine representatives remained unconvinced. In urging the acceptance of the new schedule based on dispatch entirely, they pointed out that if it was accepted it would definitely clear up the only question at issue between the two associations and that the marine association would not be interested in any way in the question of storage or any surplus obtained by this association from that source. After considerable discussion, although it was felt that the change was a radical one, still as it was being considered as a final disposition of all questions at issue between the two associations, and disposed of any doubt in the minds of the marine interests regarding the question of surplus arising through storage saved by the clearing of documents, the schedule of the Dominion Marine Association was accepted and agreement entered into by the representatives of both associations covering same.

"We recommend that the entrance fee for membership be advanced to an amount commensurate with the increase in the reserve fund."

The Manager submitted the following report:—"I submit for your consideration, auditor's report and statement of the business for the year ended July 31. A ll the balances at the credit of the different firms have been confirmed. The actual warehouse receipts representing the grain held by the association have been confirmed by the elevator companies, and the accounts balanced to a pound, and all carefully checked by the auditors.

"During the past year, the association shipped 1,326 cargoes by vessel. The total quantity shipped of all kinds of grain amounted to 155,335,881 bush. out of the crop of 1912, as against 134,653,000 out of the crop of 1911, 62,065,000 out of the crop of 1910, and 74,440,000 out of the crop of 1909, the quantity shipped this year being over twice as much as the quantity shipped out of the 1909 crop. In addition to the quantity of grain actually shipped, the association handled transfers aggregating 13,698,977 bush. These figures show the appreciation by the trade of the advantage of using the association transfers, and are ample evidence of the advantage of delivering grain by transfer as against delivering actual warehouse receipts. This would be materially increased if the transfers were made deliverable on the option.

"In handling the crop of 1911, a considerable quantity had to be forwarded through Duluth, owing to congestion at the Canadian head of the lakes. The fact that the 1912 crop was a much larger one and the facilities at the Canadian lake ports not materially increased presented a problem that called forth the best efforts of all concerned in the forwarding of the crop. The Board of Grain Commissioners took the matter up energetically. The government was induced to spend a large sum of money in keeping the harbor open until late in the fall, and again in opening it early in the spring. Arrangements were made to have a large quantity of floating tonnage winter at the port available for winter storage, and arrangements also made under which United States boats would have the option of delivering their cargoes at Canadian ports in the spring. These arrangements were taken advantage of by the shippers, and this, combined with the extraordinary work done by the railway companies, resulted in a much smaller quantity of the 1912 crop being forwarded through Duluth than was forwarded of the crop of 1911, notwithstanding the fact that the 1912 crop was a much larger one.

"The facilities for handling the 1913 crop have been materially increased. New terminal elevators, and additions to those in operation a year ago will increase the storage capacity at the head of the lakes to over 40,000,000 bush. The railways have spent enormous sums of money increasing their terminals, rolling stock, etc., and consequently we are facing the problem of handling the present crop much better equipped than we have ever been before.

"The bulk of the grain handled last year was handled under the new schedule of boat charges agreed to between this association and the Dominion Marine Association, and the result shows that the average charge per cargo loaded was only $23.20, a very small charge indeed for the service rendered, when it is considered that a day saved to one of the large boats is worth as much as $1,000. However, since the new schedule has been adopted, we have not had a single complaint from a boat owner, which is a great source of satisfaction.

"Since the last annual meeting, the association has installed a private wire between our offices at Fort William and Winnipeg. This is proving a great advantage to the boats as well as to the shippers. However, this wire will increase the expense of the association about $12,000 a year without any additional charge to the boats, and as the present fees barely cover the operating cost, this expense practically falls on the shippers' end of the association and may very materially effect any future surplus."

The balance sheet showed a surplus of $32,619.58 of income over expenditure. This surplus was obtained chiefly from storage saved, there being a deficit of $3,241.49 on the shipping account, the income thereon being commissions from shippers, $31,027.93; from vessels, $30,781.35; total, $61,809.28. Operating expenses on the same account were Winnipeg, $41,401.41; Fort William, $22,083.38; Duluth, $1,565.98; total, $65,050.77. Other sources of revenue on operating account returned:—Storage, $30,113.32; commission on warehouse receipts, $1,666.70; interest on bank balances, $4,081.05; total, $35,619.58.

STATEMENT OF SHIPMENTS

	Season 1912-13	Season 1911-12
Wheat—	Bush.	Bush.
Vessel	96,118,450.00	83,430,452.00

Following are the directors for the current year:—President, Capel Tilt; Vice President, H. T. Stewart; other directors, A. K. Godfrey, R. M. Wolvin, C. C. Field; Treasurer, Jno. Fleming; Secretary, A. C. Ruttan.

Kenora-Fairmount Collision.

The Dominion Wreck Commissioner, Commander H. St. G. Lindsay, assisted by Capts. F. Nash and J. McGrath, as assessors, investigated the collision between the steamships Kenora and Fairmount, July 12, near the Lachine Canal entrance locks, the stern of the Fairmount being damaged by being hit by the Kenora, which, after glancing off the Fairmount, ran stem on into the dock wall, considerably damaging her stem.

The court found that the cause of the collision was admitted without question to be through a mistake made by the engineer on the Kenora in putting the engine full speed ahead instead of full speed astern, and the court was unanimously of opinion that if the order had been correctly executed, no collision would have occurred. There was nothing in the evidence to show what caused the serious mistake on the part of the engineer, and the Kenora was found to be, alone, to blame for the casualty. Both masters were exonerated from blame. The master of the Kenora having done all he could to avert the accident, he can in no way be held responsible for the mistake in the engine room, and the master of the Fairmount, seeing that he was handicapped by having a light vessel and being obliged to use his anchor to cant his vessel's head, owing to the direction of the wind, could not, under the circumstances, have done otherwise than he did to try and avoid the collision when he saw that it was inevitable. The court is of opinion that some special regulation is necessary to deal with cases of this description, so that each vessel may know which has the right of way into the canal locks, as it considers that the Rules of the Road do not extend to such cases.

The Prince Edward Island Car Ferry's Forward Propeller.

In the description in Canadian Railway and Marine World of September, of the car ferry steamship, which is being built at Newcastle upon Tyne, Eng., to run between Cape Tormentine, N.B., and Carleton Point, P.E.I., it was stated that a feature of the vessel which will be a new one on icebreaking steamships in Canada will be the forward screw, a feature which was first introduced in the Russian icebreaker Ermack. We were aware, however, that the Ermack had been altered, that she had returned to the Tyne, where her forepart was cut away completely, together with her propeller and its tube and that she had been fitted with a new bow, we communicated with Sir W. G. Armstrong, Whitworth & Co., who built the Ermack and who are building the P.E.I. car ferry and they have replied as follows:—

"The Ermack was originally built with a forward propeller, with a view to service in the Baltic, where it was found to be of considerable value in breaking up the pack ice which is always to be found there. After a certain amount of work in the Baltic, it was decided to attack the ice within the Arctic Circle, and on the first voyage in that part it was found that the bow propeller, useful though it was in the Baltic, was a positive hindrance to the vessel when attacking field ice, which often attained a thickness of 14 ft., and was of exceptional density and strength. It was, therefore, decided to take it off and alter the form of the bow.

"The car ferry is not, of course, intended for service amongst ice such as that encountered by the Ermack in the Arctic Circle, but will constantly have to face conditions which are more analogous to those of the Baltic Sea, where the bow propeller was found, not only in the Ermack, but in two later icebreakers—the Sampo and the Tarmo—to be of great value. Apart from this, the special manoeuvring which would be required in this vessel will make a forward propeller extremely useful, especially as we foresee circumstances in which, owing to the jam of ice in the landing ports, it may easily be that the two stern propellers are stopped, and the forward propeller will then be available to extricate the ship from her position and enable her to move out so as to attack the ice again.

"We have had experience of railway work amongst the ice on the large railway ferry steamship Baikal, which—as you are aware—carried the whole of the trains of the Siberian Railroad across the great inland lake, after which it was named, until the railway round the edge was completed. It is this experience upon which we have drawn in designing the car ferry."

The Dominion will be represented at the international conference to enquire into measures for the guarding of life at sea to be held in London, Eng., during November. The Department of Marine has been cooperating with the British Board of Trade in drawing up regulations for such purpose, and Canadian steamship lines have been asked as to what further safeguards ought to be adopted. These will form the chief topic for discussion at the forthcoming conference.

Atlantic and Pacific Ocean Marine.

The White Star-Dominion Line is reported to have ordered two additional [illegible] at Belfast, Ireland, for its Canadian servi It is stated that they will be 590 ft. lon and about 16,000 tons gross. They are larger than the Laurentic and Megantic which th company operates at present on that rout

The s.s. Devon, which sailed from Montreal, May 31, for New Zealand and Australian ports, is reported to have run ashor off Pencarrow Head, near Wellington, New Zealand, and to be considered as a total loss. She was built at Hebburn-on-Tyne, Eng., in 1897, her dimensions being, lengt 420 ft., breadth 54 ft., depth 28½ ft.

The New Zealand Line s.s. Whakatane, which recently grounded in the St. Lawrence, near where the Allan Line s.s. Bavarian was wrecked some years ago, was only slightly injured. She was docked at Levis for repairs, after which she proceeded to Montreal to load for New Zealand, and it was expected that she would be able to sail on her schedule date, Sept. 30.

The recent enquiry by the Dominion Wreck Commissioner, into the cause of the collision between the Elder-Dempster s.s. Bendu and a Dominion Government tug, has been adjourned sine die, owing to the difficulty of obtaining evidence, the captain in charge of the Bendu at the time of the collision having been replaced by another, and was therefore not available as a witness.

The Thomson Line s.s. Cairnross, which recently arrived at Montreal from Middlesbrough, Eng., has propelling machinery, which it is claimed is being used for the first time on a trading vessel. A turbine, such as is used on land in connection with dynamos, is connected to the single screw propeller, with the result that a saving of 15% is effected in the quantity of coal consumed. It is stated that the results have been entirely satisfactory.

Press reports from the Pacific coast state that the C.P.R. has placed a new wage schedule in force on the Transpacific steamships, averaging about $20 a month increase for the officers on its vessels. It is also stated that the bringing of the management of the Transpacific vessels under the one head with the Transatlantic ones, allows of transfers of officers when openings occur for promotion.

The Atlantic Transport Line is having built at Belfast, Ireland, a triple screw vessel, to be called the Minnekahda, which will be 620 ft. long, 66 ft. beam and 16,000 tons register. All outside rooms are to be equipped with hot and cold running water, and there will be an elaborate lounge and verandah cafe. She will make the voyage between London and New York in eight days, and is expected to be in service early in 1915.

The Dundee whaling steamship Scotia, which has been engaged in patrolling the northern Atlantic route, since the early party of the year, with the view of obtaining data as to breaking up of pack ice, and the movement of the ice floes, has been withdrawn from the service, the object for which it was engaged having been attained. It is stated that a lot of interesting and valuable information has been obtained, and the experiment has been a complete success.

It is announced that Pickford and Black, Limited, who have the contract for the mail steamship service between Canada and the West Indies, have chartered the Norwegian s.s. Uller for temporary purposes. The contract called for the addition of two fast steamships to the mail route by July 1, and efforts were made in Great Britain to charter the necessary vessels, but on account of the dearth of suitable tonnage at reasonable prices, the contractors were not successful.

In view of the remarks frequently made and quoted by interested parties, derogatory to the St. Lawrence route, it is interesting to note that in a report recently received in Montreal from the British Board of Trade, several matsers of British vessels, in giving evidence in an enquiry into the rules for the location and disposing of derelicts, stated that the system in vogue on the St. Lawrence, of communicating by wireless telegraphy with all stations and thence to vessels in port or in the vicinity, is the best that could be devised.

Press reports from Vancouver state that the Union Steamship Co., operating the mail steamship service between Canada and New Zealand and Australia, is to be reorganized with a capital of £3,000,000, divided into 3,000,000 shares of £1 each, and that the present company will be taken over, the new company assuming all liabilities, and paying the cost of winding up the present company and of forming the new one. The old name will be retained, the scheme merely being an increase of capital and an enlargement of powers.

On account of the anticipated increase in shipping into, and out of, Halifax, N.S., during the winter season, the transportation committee of the Board of Trade, recently applied to F. P. Gutelius, General Manager, Canadian Government Railways, to place temporary sheds, approaches, etc. on the no. 2 pier, at present under construction, so that two additional berths would be available at once. It is reported that this has been agreed to. About 370 ft. of the total 700 ft. of the pier has been completed, and the foundations of the sheds are finished.

H. Maitland Kersey, the recently appointed Manager in Chief of the C.P.R. Transatlantic and Transpacific Steamships, who was in Victoria recently in connection with the arrival of the s.s. Empress of Asia on her maiden trip from Great Britain, with a party of round the world by the C.P.R. tourists, stated that there was no truth in the report that the C.P.R. intended to dispose of the steamships Empress of India and Empress of Japan. They will remain on their present routes, at any rate, until it is seen to what extent transpacific travel is affected by the new vessels.

It is reported that the Donaldson Line has acquired from the Allan Line, its steamship service between Glasgow and Liverpool, and the River Plate, Monte Video and Buenos Ayres. It was announced some time ago that the Allan Line was to retire from the River Plate trade. This announcement, in conjunction with other happenings associated with the Allan Line, indicate that the anticipated control of the Allan Line by the C.P.R., will shortly be announced as an accomplished fact. In response to enquiries recently, Sir Thos. Shaughnessy is reported to have stated that an announcement of interest in this connection would shortly be made.

In our last issue, we stated that the French Line s.s. La Touraine, between Montreal and Havre, had discontinued the service, owing to lack of freight. It has been pointed out that this is liable to be misconstrued into meaning that the company has abandoned the service entirely. We have been advised that the item referred to is accurate in so far as stating that La Touraine will not return to Montreal this year. The regular monthly sailings between Quebec and Havre are being continued as during the past season, and the company has announced sailings for 1914, showing eight sailings from Quebec and three from Montreal, including La Touraine, during the St. Lawrence season. The company has no intention of abandoning its service on the St. Lawrence route.

Montreal press reports of Sept. 16, state that the scheme for establishing an express service between Great Britain and Australia, by way of Canada, would seem to be making rapid progress, as the contract for the construction of two 25 knot steamships has been awarded, and that work on the railway between Blacksod Bay and Collooney, Ireland, to link up the Irish railway system, was to be commenced in September. In Canada, the reports continue, a harbor is ultimately to be built at Cape Charles, on the southeast coast of Labrador, which will be the terminus of a new transcontinental railway, a very doubtful statement. At first, vessels will run from Blacksod Bay to Montreal in the summer, and to Halifax in the winter, and there will also be a connecting steamship service between Vancouver, or Prince Rupert, and New Zealand and Australia, so that it will be possible to reach Australia within three weeks of leaving London, Eng. The reports do not state to whom the contract for the two vessels has been awarded, nor by whom it has been awarded, and in view of the repeated rumors to the same effect, which have always been followed by denials of all those who could be intimately concerned, and also of the fact that it is extremely unlikely that any definite steps will be taken until, at least, British Government aid is assured, we would hesitate to place any reliance on the statement. A later report states that the contract for two vessels has been awarded provisionally to Swan, Hunter and Wigham Richardson, Wallsend-on-Tyne, Eng.

Maritime Provinces and Newfoundland.

The Dominion Government has awarded contracts for dredging at Cheticamp, N.S., to the Northern Dredging Co., and for an extension to the wharf at Hants Point, N.S., to the Standard Construction Co.

During the construction of an extension to the Souris East breakwater, P.E.I., the light heretofore exhibited from the lighthouse tower will be discontinued, and a temporary fixed red light will be maintained by the contractor, on the outer end of the work. On completion of the extension, the lighthouse tower will be moved to the outer end, and the light again placed in operation.

The lightship, maintained by the Department of Marine, on Lurcher Shoal, off Yarmouth, N.S., was to be removed from her station, Oct. 1, to undergo necessary repairs. During the absence of the lightship the station will be marked by a combined gas and whistling buoy, painted red and showing an occulting white light. It is expected that the vessel will be replaced early in November.

The dredge E. B. no. 1, owned by V. T. Bartram, Toronto, while on her way from Souris to Rustico, P.E.I., sank during a storm, about 12 miles from Rustico, becoming a total loss with her three scows. The crew were saved by the attendant tugs. The dredge was built in the U. S., her dimensions being, length 67 ft., breadth 26.5

ft., depth 5.3 ft., tonnage 139 register. The loss was partly covered.

The Dominion Atlantic Ry. s.s. Prince Rupert, which has been operated in the Bay of Fundy service for several years, is reported to have been sold to a West Indies syndicate for a local West Indies service. She has been replaced by the turbine s.s. St. George, which was recently purchased in England by the C.P.R. for the service, a full description being given in Canadian Railway and Marine World for September.

The Public Works Department dredge P. W. D. 2, has been recently completed at St. John, N.B., and has left for the St. John River, where she will be operated for some time. She is 110 ft. long, 30 ft. beam and 3½ ft. draught. The equipment includes a 15 ins. suction pipe and 16 ins. discharge pipe, centrifugal pumps, triple expansion vertical engines supplied with steam by a Scotch marine boiler 10 by 12 ft., and 30 steel pontoons 30 by 10 ft. will carry the discharge pipe to the shore.

J. T. Ross, President, Quebec Steamship Co., is reported to have stated recently that the negotiations respecting the taking over of the company by Canada Transportation Lines, Ltd., had been completed, and all that remained to complete the deal was the turning over of the securities. The company owns the steamship Cascapedia, which runs between Montreal, Gaspe, Malbaie, Perce, Summerside, Charlottetown and Pictou, and it also operates a steamship service between New York and the West Indies, with the steamships Bermudian, Guiana, Parima and Korona, and during the summer season runs the s.s. Trinidad between Quebec and New York.

Province of Quebec Marine.

The Quebec Board of Trade has addressed a memorial to the Dominion Premier on the question of grain transportation and elevator storage capacity at the various Canadian ports.

It was reported that the level of water in the ship channel at Montreal, Sept. 12, was at the lowest point this season, season, the sounding showing 30 ft. 2 ins. The depth at the lock sill of the Lachine Canal was 14 ft. 10 ins.

The first section of the crib work, 200 by 55 ft., for the building of the new bulkhead pier in the St. Charles River, was sunk at the end of August. This is a portion of the improvement work being carried on in the Quebec harbor.

The Montreal Harbor Commissioners have filed plans at Ottawa for the construction of two freight sheds at a cost of $300,000. One of the sheds will be 275 by 106 ft., and the other, 485 by 112 ft., and each will be two stories high. Their location will be in secs. 24 and 25 of the Commissioners' wharves.

A London, Eng., press dispatch of Sept. 12, states that Canadian Vickers, Ltd., have placed an order with a Glasgow, Scotland, firm, for the construction of a large shipbuilding shed for Montreal, capable of accommodating a vessel 888 ft. long, and that orders have also been placed for ship building machine tools, etc.

The Gaspe Steam Ship Co., Ltd., has been incorporated under the Quebec Companies Act with $100,000 capital and office at Quebec, Que., to build, own and navigate steam and other vessels, and to carry on the business of common carrier, hotel keeper and general merchant. The incorporators are: Ed., F., J. A., and Emile Bouchard, vessel owners, and R. Plamondon, accountant, all of Quebec.

The Montreal Board of Control has made an appropriation of $1,500 for a report by a qualified person, on the proposal to operate municipal ferry steamboats to St. Helens Island. The contract for the existing service expires May 1, 1915, and the report now desired is to cover the type of vessels required, the probable location of docks, etc., and an estimate as to the cost of the whole scheme.

During the construction of an extension to the east pier at the upper entrance to the Soulanges Canal, by the Department of Railways and Canals, the Marine Department has placed a gas buoy, temporarily, off the outer end of the works. The extension runs out about 1,200 ft. from the present end of the east pier, and dredging is in progress north of the present channel at the upper entrance to the canal.

The Conservation Commission, which recently conducted an investigation into the proposal of the Long Sault Development Co. to dam the St. Lawrence River at Barnhart and Sheek Islands, for the development of electrical power, has reported against the proposal. It is stated that the proposed dam would cause a diversion of about 50% of the water from the main navigable channel between Barnhart Island and the U.S. mainland.

Ontario and the Great Lakes.

The Northern Navigation Co.'s s.s. Doric carried the first cargo of this year's grain crop, from the head of the lakes, consigned to Goderich.

The contract for the dredging of the channel between Goat Island and Little Current, Manitoulin Island, has been awarded to the Sault Dredging and Construction Co.

The Dominion Government has awarded the contract for the erection of a double track railway bridge over the Welland Canal, to the Hamilton Bridge Co., for $65,800.

The contract for the construction of the Severn Division of the Trent Valley Canal, has been awarded by the Dominion Government to the York Construction Co., for $130,278.

The s.s. Glenfoyle, which has recently been completed at Londonderry, Ireland, for the Great Lakes trade, is a sister vessel of the Glenmavis, a full description of which, with illustrations, was given in our last issue.

Depot Harbor Elevator Co., Ltd., has been incorporated under the Ontario Companies Act, with $40,000 capital and office at Toronto, to carry on an elevator, storage and warehouse business, and to deal generally in grain and grain products.

Complaint has been made in Buffalo, N.Y., as to the rates charged by the Buffalo and Fort Erie Ferry Co., and the matter has been referred to the International Joint Commission. It is claimed that while at Fort Erie the rate is 40 tickets for $1, single fares at 5c. have to be paid at the Buffalo end.

The large suction dredge Port Nelson, recently built by the Polson Iron Works, Toronto, for Dominion Government work in Hudson Bay, is on the last stage of her journey to Port Nelson, where she is expected to arrive about the middle of October. A heavy risk was assumed by the underwriters for her safe arrival.

Montreal daily papers, Sept. 4, announced that the Richelieu and Ontario Navigation Co. had acquired the s.s. C. A. Jaques, owned by the Jaques Transportation Co. of Ottawa, and operated by the Merchants Montreal line, under the management of G. E. Jaques and Co., Montreal. As an item of news, this is somewhat ancient, the details having been published [illegible] Canadian Railway and Marine World.

A press report from Port Arthur states that on the close of navigation the C.P.R. steamships Alberta and Athabasca will be docked there for the winter and thorough overhauling and general repairs undertaken during the winter. It is stated that both vessels will have new boilers and accessories and a number of improvements, at an approximate cost of $65,000.

The U.S. Lake Survey reports the levels of the Great lakes, in feet above tidewater, for August, as follows:—Superior, 602.74; Michigan and Huron, 581.24; Erie, 573.24; Ontario, 247.31. Compared with the average August levels for the past ten years, Superior was 0.03 ft. above; Michigan and Huron, 0.25 ft. above; Erie, 0.58 ft. above; and Ontario, 0.64 ft. above. It was anticipated that during September, Superior would rise 0.1 ft.; that Michigan and Huron would fall 0.1 ft., Erie 0.2 ft., and Ontario 0.4 ft.

The Dominion Government elevator at Port Arthur, which has recently been completed, was expected to handle its first grain shipments towards the end of September. The structure is of reinforced concrete throughout, except in the walls of the working house, where brick panelling has been used. The machinery will be operated by electricity, a separate motor having been installed for each machine. The normal loading capacity is about 75,000 bush. an hour for vessels. Twenty cars can be unloaded at one time, and the capacity is about 40 cars an hour.

The daily press is again busy with reports that the Canadian Northern Ry. is about to establish a freight and passenger steamship service on the Great Lakes, and it is now stated from Port Arthur that a contract will shortly be closed there for the construction of two passenger vessels for such service, each of which will be larger than any passenger vessel at present operating on the Great Lakes. As pointed out in previous issues of Canadian Railway and Marine World, a steamship service on the Great Lakes is a natural corollary of the completion of the transcontinental line, and no doubt, frequent anticipation will eventually produce the reality. In the meantime the advice to "wait and see," which has frequently been given in political circles, will apply.

The Keystone Transportation Co.'s s.s. Keystorm, which was wrecked in the St. Lawrence last year, and which is lying in deep water near Kingston, Ont., is to be raised. The vessel was abandoned to the underwriters, who have arranged with A. J. Lee, Westmount, Que., to undertake the salvage work. The position in which the vessel is lying, makes the work difficult, as her stern is in 102 ft. of water, and she is on her side. Compressed air is to be used to raise the vessel, and it is expected that as soon as she is buoyant, she can be moved in about three lengths into comparatively shallow water, where further work can be carried on under more favorable conditions. We are advised that the general salvage gear has been arranged for in Quebec, divers engaged in Halifax, N.S., and air locks and compressors will be obtained from New York.

On account of the completion of the deepening of the eastern half of the Ballard Reef channel in the Detroit River, and the commencement of the deepening of the western half, south of the junction with the Livingstone Channel, the buoys marking the improved channel for upbound vessels at Ballard Reef, have been moved about 250 ft. eastward, and upbound vessels now use the eastern half of the channel from Limekiln Crossing to the head of the reef. From the junction with the Livingstone Channel north, the entire width of 600 ft. at Ballard Reef is in use by vessels. Upbound vessels in passing through the east half of the channel will be guided by the buoys and not by the Fort Malden range on the Canadian shore, the latter having been discontinued, temporarily, and upbound vessels are prohibited from meeting downbound vessels at the junction with the Livingstone Channel.

British Columbia and Pacific Coast Marine.

The contract for the construction of a snag boat for the Government has been awarded to the Coquitlam Shipbuilding Co., Port Coquitlam.

The G.T. Pacific Coast Steamship Co.'s s.s. Prince John will probably be taken off her route about the end of October, when she will be overhauled generally, and oil burning apparatus installed.

The Alberta Pacific Elevator Co. has purchased the Brown Howey Co.'s grain elevator at Vancouver, and it is announced that a considerable proportion of the new grain crop will be shipped by the Pacific route.

The Border Line Transportation Co.'s s.s. Despatch, running in conjunction with the s.s. Fulton, between Seattle, Tacoma, Victoria and Powell River, is to be remodelled so as to increase the freight carrying capacity.

The wreck of the Pacific Coast Steamship Co.'s s.s. Curacao, lying submerged off Warm Chuck, Alaska, has been sold to the Vancouver Dredging and Salvage Co., for $4,000, and arrangements also made for salving the cargo on a 75% basis.

Navigation Dredging Co., Ltd., has been incorporated under the British Columbia Companies Act, with $50,000 capital and office at Vancouver, to carry on a general dredging business, and to own and operate steam and other vessels, and act as common carrier.

The Public Works Department will shortly call for tenders for the construction of two piers for the outer harbor works at Victoria. It is also announced that the Department has sent its Purchasing Agent from Ottawa to Victoria, to arrange for the purchase of the site for the proposed Government dry dock at Esquimalt.

The G. T. Pacific Coast Steamship Co.'s s.s. Prince Albert was reported to have been in collision with the Canadian Fishing Co.'s s.s. Flamingo, early in September, in the Johnstone Strait. It was stated that the collision was not a serious one, both vessels being able to proceed without assistance, and with only minor damage.

The Dominion Government quarantine dock at Digby Island, off Prince Rupert, has been completed and handed over by the contractors, Naylor Bros. The contract price for the building was $60,000. It consists of two approaches, one being 910 ft. long, and the other about 700 ft. long, with a dock 500 ft. long by 40 ft. wide at the end.

The second vessel which the C.P.R. recently ordered at Port Arthur, Ont., for its British Columbia Lakes and River Service, has been completed, and is being taken apart and packed for shipment to Nelson, B.C., where she will be reassembled. She is a sister vessel of the Nasookin, details of which were published in Canadian Railway and Marine World for June.

A report from San Francisco states that the Great Northern Ry. intends to offer strenuous competition to the Southern Pacific Co. for the traffic that will result from the completion of the Panama Canal and the opening of the Panama-Pacific International Exposition in 1915. Two 25-knot turbine steamships are being built for the G.N.R. Co. at Philadelphia. With these ships it is expected that the trip from Portland, Ore., to San Francisco can be made in shorter time than by rail, since trains between the two cities must climb the high Siskiyou mountain range. If a traffic agreement between the Hill lines and the Pacific Navigation Co. is entered into, passengers could travel by sea from Portland, Ore., to Los Angeles, Cal., as rapidly as by rail.

A report from San Francisco states that the Great Northern Ry. intends to offer strenuous competition to the Southern Pacific Co. for the traffic that will result from the completion of the Panama Canal and the opening of the Panama-Pacific International Exposition in 1915. Two 25-knot turbine steamships are being built for the G.N.R. Co. at Philadelphia. With these ships it is expected that the trip from Portland, Ore., to San Francisco can be made in shorter time than by rail, since trains between the two cities must climb the high Siskiyou mountain range. If a traffic agreement between the Hill lines and the Pacific Navigation Co. is entered into, passengers could travel by sea from Portland, Ore., to Los Angeles, Cal., as rapidly as by rail.

Toronto Harbor Improvement Contracts.

The Toronto Harbor Commissioners have awarded the contract for dredging in the harbor to the Canadian Stewart Co., Montreal and Toronto, at 19½c a cubic yard, the total of the contract approximating $5,500,000. The work consists of the removal of about 31,000,000 cub. yds. of material, the borings indicate about 70% to be sand and gravel, and 30% a mixture of sand, silt and clay. It is a condition of the contract that each dredge employed in the work must be capable of handling, at least, 600 cub. yds.an hour at the maximum length of discharge. From the source of supply to the point of discharge the maximum distance is about 6,000 ft., the average length of delivery being about 4,000 ft. The direct line of discharge is preferred, but the work may be done in series, or by relays, and continuous operation by day and night will be carried on. The work is to be commenced about March, 1914, and it is estimated that it will take about eight years to complete. The other tenders were as follows: Tilbury Dock and Dredging Co., London, Eng., 24½c a cub. yd., $7,521,500; Sir John Jackson, Ltd., London, Eng., 20½c a cub. yd., $6,293,500; Pearce & Co., London, Eng., and New York, slightly over 20c a cub. yd., about $6,000,000; Sherman, Salter Co., New York, slightly over 20c a cub. yd. for a portion of the work.

The Dominion Public Works Department has awarded a contract for its portion of the improvement work in the harbor, comprising a sea wall from the eastern gap to Woodbine Ave., and a breakwater on the western section of the work to the Humber River, also to the Canadian Stewart Co., the amount of the contract being approximately $5,731,732.12, which is about 10½% below the original approximate estimate for the work.

A. M. Stewart, President, Canadian Stewart Co., stated in Toronto recently that a large plant will be required by his company in connection with the work to be undertaken, comprising four high power sand dredges, bucket dredges, pile drivers, scows, tugs and barges, and orders for such new plant as is required will be placed in Canada, a large portion being probably built in Toronto. He estimates that the plant when operating at full capacity, will deal with from four to five million cub. yds. a year, a large portion of the filling in in Ashbridge's Bay being done with material obtained about 6,000 ft. from the point of discharge. He estimates that work can be proceeded with during about 7½ months in each year, and that the Government portion of the work will be completed in about four years.

The Use of British Manufactures in Canadian Vessel Construction.

In reporting the recent awarding of a contract for the construction of a steamboat for the Department of Marine, the Toronto daily papers stated that a new regulation had just come into force to the effect that hereafter all vessels built in Canada for the Dominion Government must be composed wholly of British products, and gloomy pictures were drawn of the increased cost of construction, and delay in delivery of completed vessels, which would follow on the enforcement of this regulation.

In this connection, we have been officially advised that the Department of Marine has no knowledge of any regulation having been passed under which all vessels built in Canada must be composed wholly of British products, but that it invariably inserts in all contracts for the construction of vessels, that the vessel shall be built, as far as possible, of British or Canadian material, and with a view to seeing that this is done, one of the conditions of a contract is that before any orders are placed for any material whatsoever, the contractor must submit same to the Department for approval.

A Manufacturer's View of Shipbuilding in Canada.

In his address to the Canadian Manufacturers Association at its recent annual meeting in Halifax, N.S., the retiring President, R. S. Gourlay, of Toronto, said:—"The feasibility of building in Canada all or any of our vessels that shall constitute our contribution to the defence of the Empire is a matter which should be left for experts to decide. That we could build them goes without saying, were the question of cost to be left out of consideration. Certain it is, too, that we will never have in Canada naval shipyards worthy of the name unless we sometime make a beginning, and I am sure I am right in crediting you all with a desire to see our country possessed of such equipment at the earliest practicable date. In those industries with which I am familiar, however, the safe and logical development is usually from smaller to greater things, and for this reason I am constrained to believe that Canada would be wise to content itself with the building of smaller vessels and other work incident thereto as a commencement, leaving to the naval yards of England for the time being the task of providing the ships that shall proclaim us a nation."

Marine Diesel Engine Development.—Advocates of the application of the Diesel engine to large vessels, says Dr. L. K. Hirshberg, in Power, are endeavoring to curb to a degree the over enthusiasm of radical supporters, who are prone to claim too much for this type of engine on account of the success of such vessels as the Selandia. The short experience so far obtained with large oil engines on board ships (while eminently satisfactory and encouraging to the builders and owners), makes speculation difficult as yet; and the writer considers that further practical experience for a term of years must be had before accurate figures will be available as to reliability and upkeep.

Wireless Telegraphy on Canadian Inland Waters.

Canadian Railway and Marine World for June, contained details of the bill providing for the compulsory use of radiotelegraphy on Canadian vessels plying on inland waters, then passing through Parliament, in which some changes were subsequently made. Section 4 of the act is as follows:—

"From and after Jan. 1, 1914, no passenger steamer, whether registered in Canada or not, (a) licensed to carry 50 or more persons, including passengers and crew, and going on any voyage which is or which includes a voyage of more than 200 nautical miles from one port or place to another port or place; or, (b) licensed to carry 250 or more persons, including passengers and crew, and going on any voyage which is or which includes a voyage of more than 90 nautical miles from one port or place to another port or place; or, (c) licensed to carry 500 or more persons, including passengers and crew, and going on any voyage which is or which includes a voyage of more than 20 nautical miles from one port or place to another port or place shall leave or attempt to leave any Canadian port unless such steamer is equipped with an efficient radiotelegraph apparatus, in good working order, capable of transmitting and receiving messages over a distance of at least 100 nautical miles by night and by day, and in charge of a person fully qualified to take charge of and operate such apparatus.

"2. The owner, master or other person in charge of any passenger steamer which leaves or attempts to leave any Canadian port contrary to the provisions of this section shall, on summary conviction, be liable to a fine not exceeding $1,000 and costs, and such fine and costs shall constitute a lien upon such passenger steamer.

"3. This section shall not apply to passenger steamers plying on the rivers of Canada, including the River St. Lawrence as far seaward as a line drawn from Father Point to Point Orient, or on the Northumberland Straits, or on the Georgian Bay, or on the lakes of Canada other than Lakes Ontario, Erie, Huron and Superior, and the provisions of paragraph (c) of subsec. 1 of this section shall not apply to steamers making voyages on Lakes Ontario, Erie, Huron and Superior, the regular route for which is not at any point more than seven miles from the shore.

"4. This section shall not apply to steamers calling at Canadian ports solely for the purpose of obtaining bunker coal or provisions for the use of such steamer, or through stress of weather, or for repairs."

The Richelieu and Ontario Navigation Co. has, through H. H. Gildersleeve, Manager, Western Lines, made representations, urging the exemption of the company's Niagara Line vessels, running between Toronto and Lewiston, N.Y., but, up to the present, without success. The vessels which it operates between Toronto and Hamilton, will, however, be exempt from the provisions of the act, as they are said to be never more than 7 miles from the shore.

Canadian Notices to Mariners.

The Department of Marine has issued the following:—

279. Aug. 13. Newfoundland, west coast, St. John Bay, Old Port au Choix, Querre Island, light established.

289. Aug. 14. Ontario, Bay of Quinte, Northport shoal, change in position of gas buoy.

281. Aug. 19. Ontario, River St. Lawrence, Brockville Narrows, east end, Skelton Island, light established, gas buoy withdrawn.

282. Aug. 19. United States of America, St. Clair River, Recors Point light established.

283. Aug. 21. Quebec, River St. Lawrence, Lake St. Francis, upper entrance to the Soulanges Canal, protection works under construction, gas buoy to be placed temporarily.

284. Aug. 21. Ontario, Lake Superior, Victoria Island, light improved.

285. Aug. 25. Nova Scotia, Bay of Fundy, Minas Basin, westward of Cheverie, buoy established.

286. Aug. 25. Prince Edward Island, east coast, extension to Souris east breakwater under construction, light not shown from lighthouse, temporary light.

287. Aug. 25. Prince Edward Island, north coast, St. Peter harbor, change in position of back range lighthouse.

288. Aug. 25. Newfoundland, southwest coast, Cape Ray, erratum in List of Lights.

289. Aug. 27. British Columbia, Sutil Channel, uncharted rock reported off Heriot Island.

290. Aug. 27. British Columbia, Seaforth Channel, uncharted rock northwest of Dall Patch.

291. Aug. 27. British Columbia, Observatory Inlet, Aiskew Island, gas lighted beacon established.

292. Aug. 29. British Columbia, Vancouver Island, southeast coast, Victoria harbor, intended change in position of Shoal Point beacon light.

293. Aug. 29. British Columbia, Dixon entrance, Queen Charlotte Islands, Langara Island, Langara Point, light and fog alarm established.

294. Sept. 2. Quebec, Gulf of St. Lawrence, Gaspe coast, Cape d'Espoir, fog alarm established.

295. Sept. 6. British Columbia, Strait of Georgia, sandheads off Fraser River, submarine bell to be established at lightship.

296. Sept. 6. British Columbia, Cordero Channel, name.

297. Sept. 6. British Columbia, Prince Rupert harbor, Parizeau Point, quarantine wharf.

298. Sept. 10. Ontario, Bay of Quinte, Foresters Island, gas buoy to be established.

299. Sept. 12. Nova Scotia, west coast, Yarmouth harbor, dredging.

300. Sept. 12. Nova Scotia, south coast, St. Mary River, Black Head buoy established.

301. Sept. 12. Prince Edward Island, south coast, Hillsborough Bay, Pownell Bay, buoys established, change in character of buoys.

302. Sept. 12. Prince Edward Island, north coast, Palmer Road, buoy established.

303. Sept. 12. New Brunswick, east coast, Northumberland Strait, Richibucto harbor entrance, buoy established.

304. Sept. 12. Newfoundland, east coast, Bonavista Bay, Newman Sound, Happy Adventure, light established.

305. Sept. 12. Newfoundland, Notre Dame Bay, Bay of Exploits, Mill Point, light established.

306. Sept. 16. Quebec, Richelieu River, below St. Ours Lock, St. Roch range lights established.

307. Sept. 16. Quebec, Richelieu River, Beloeil station, light established on the upper pier above the railway swing bridge.

308. Sept. 16. Quebec, Richelieu River, change in position of Pointe a la Meule range lights.

Proposed Control of Ocean Freight Rates.

In connection with the recent mission undertaken by H. L. Drayton, Chief Railway Commissioner, on his visit to England, on the subject of a possible control of ocean freight rates between Europe and Canada, it is stated that a number of conferences took place with both Government and steamship officials, but no public statement has been made as to the views held on either side.

A steamship official is reported to have said that the discussion at Liverpool, with Mr. Drayton, had for its chief point, the establishment of arbitrary rates across the Atlantic, an object which, when fully explored, would be found to be practically unattainable. The steamship representatives showed that the high rate was due to the difficulty of securing sufficient cargo on the British side, and that it does not pay to send half loaded vessels westward to bring back Canadian grain.

It will be noted that a similar argument is used by W. G. Ross, Chairman, Montreal Harbor Commission, in his report on the grain transportation problem, which is given on another page in this issue.

Shortening Time Between Halifax and Montreal.

The C.P.R. s.s. St. George, recently acquired from the Great Western Ry. of England, for the Bay of Fundy service, has been placed in regular service between St. John, N.B., and Digby, N.S., connecting with the C.P.R. express trains from and to Montreal at St. John, and with the Dominion Atlantic Ry. express trains from and to Halifax, at Digby. This makes the fastest regular schedule between Halifax and Montreal, the time occupied on this route, allowing for the difference between Atlantic and Eastern time, being 23 hrs. 30 mins. westbound, and 23 hrs. 35 mins. eastbound. The time occupied by the C.P.R. all rail route to St. John, thence over the Intercolonial to Halifax is 25 hrs. 30 mins. westbound, and 25 hrs. 35 mins. eastbound, and the Intercolonial Ry.'s time is 25 hrs. westbound, and 25 hrs. 30 mins. eastbound.

Jetty for the Fraser River at New Westminster.

The jetty which the Dominion Government is about to build on the north arm of the Fraser River, New Westminster, B.C., will extend from the dyke at the west end of McMillan Island for 22,300 ft. The channel will be 300 ft. wide and 10 ft. deep at low water, and will extend from mile 15, about opposite the inner end of the jetty through the sandheads to the Gulf of Georgia. The material dredged out of the channel will be deposited over the jetty to form a branch to the south. The jetty will consist of a timber bulkhead starting on the dyke at McMillan Island and extending to station 210. It will have a row of piles driven at least 10 ft. into the ground 8 ft. apart, capped by an 8x8 in. timber, at a height of 11 ft. above low water and faced on the south side by 3 by 12 in. short piling. Brush mattresses, about 2 ft. thick, will be laid on each side of the bulkhead, to a width of three times the height of the bulkhead from the ground to the top of cap. The timber is to be wired with no. 6 galvanized telegraph wire. From station 210 to 223, a distance of 1,300 ft., the jetty is to be built in tiers of mattresses the top layer of which will not be less than 4 ft. thick and 20 ft. wide. The top and slopes are to be covered with loose rock equal to a weight of 100 lbs. per sq. ft. of mattress covered. The material dredged from the channel is to be deposited over the jetty to form a [illegible] as may be directed by the engineer in charge. The work is to be completed within [illegible] months after the signing of the contract.

Telephone Cable to Vancouver Island.

A [illegible] submarine telephone cable has recently been laid in the Gulf of Georgia between Vancouver Island and the British Columbia mainland. From a paper by E. P. La Belle and L. P. Crim, read before the American Institute of Electrical Engineers recently, it appears that this cable is to provide better facilities for Vancouver Island with a telephone service from any point on the island to Vancouver and the other principal towns on the mainland.

In the cable are four conductors, each consisting of 12 small copper wires weighing together 300 lbs. per nautical mile. [illegible] with iron wire closely [illegible] wound 70 turns per inch. The "loaded" conductor is covered with three coats of gutta-percha (300 lbs. per nautical mile). The four conductors are twisted around a centre jute with yarn worming between them. The whole is covered with brass tape, yarn and an armor of 15 galvanized steel wires (0.192 in. diam.). This is served with yarn, tarred and covered by two layers of yarn and preservative. The completed cable has a diameter of about 2 ins. and weighs 17,900 lbs. per nautical mile. The electrical circuit constants (for two conductors per nautical mile in place) are resistance 8 ohms, mutual capacity 0.175 microfarad, insulation resistance 460 megohms. The four wires are worked with a "phantom" circuit so that three simultaneous conversations are carried on. The phantom circuit, however, is much inferior to the two physical circuits through having an electrical capacity twice as great. Speech tests on the cable in place showed an equivalent of 8 miles of standard land cable (no. 12 paper insulated, lead covered) connected by a zero loop at each end, and of 5.75 miles with 12 miles of standard cable at each end to prevent reflection impulses.

This is the only cable of the kind in America. On account of the depth to which it had to be submerged (1,300 ft.), gutta-percha insulation was used, and on account of the excessive electrical capacity it was necessary for good speech transmission to balance this with added inductance or "loading." The continuous loading with iron wire was adopted in place of the insertion of regular Pupin coils at intervals on account of the depth of submersion and the ease of repair. The cable was laid in one day (June 16) between 4 a.m. and 7.30 p.m. The total cost is said to have been about $120,000.

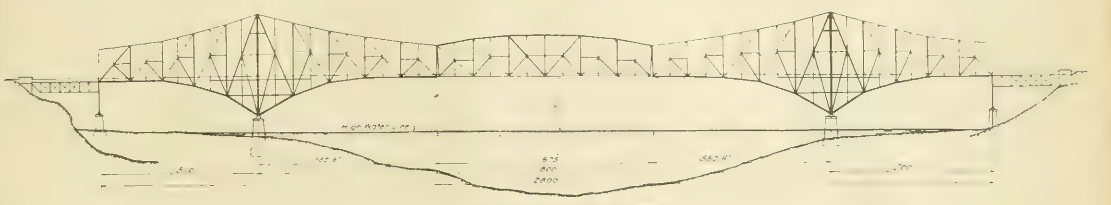
Design of Large Bridges, with Special Reference to the Quebec Bridge.

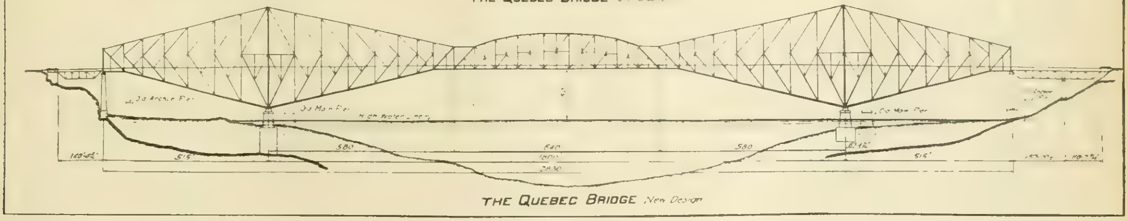
By Ralph Modjeski, C.E., Member Board of Engineers, Quebec Bridge.

Where no limitation is placed by the Government as to length of all spans, the spans should be made of economical length, provided the piers do not reduce the cross section of the river sufficiently to cause an undesirable increase in the current velocity. This economical length may be determined by trials, and will be attained approximately when the cost of the superstructure and of the substructure are nearly equal.

In the case of the Quebec bridge, while the navigation interests fixed the clear height of the structure above high water at 150 ft., the length of span is entirely due to the physical conditions of the crossing. The stream at this point is narrow and deep, the depth in the centre of the stream being about 190 ft. The current velocity at ebb tide is very high—about 9 miles an hour. Very heavy ice runs at times and tends to gorge. The bed rock, as shown by the borings, while accessible near the shore lines, dips rapidly toward the centre of the stream. All these conditions made it imperative to build a span of great length. The information as to bed rock which we now have would indicate that the original project could have been designed with a somewhat shorter span. Yet we should remember that this original project was undertaken by a private corporation, and we should perhaps recognize the value to it of such advertisement as the building of the longest span in the world would obviously afford. The next longest span is that of the Firth of Forth bridge, and is 1,700 ft. long. It is doubtful if a shorter span than 1,700 ft. would have been practicable at the location adopted for the Quebec bridge. I consider it perfectly legitimate to build a more expensive structure than economy of the work itself would call for, if the more expensive structure will afford sufficient advertisement and publicity to compensate for the additional expenditure. Cases also often arise where a purely economical and utilitarian structure would be entirely out of harmony with the surroundings.



THE QUEBEC BRIDGE Old Design



THE QUEBEC BRIDGE New Design

A project to build a large bridge at Quebec, presumably in the same location as the present one, was seriously considered in 1884 and 1885. James Brownlee, A. Luders Light, and T. Claxton Fidler designed a structure with a clear span of 1,442 ft. The description of that project mentions rock foundations. The more complete information we now have, and which was obtained by a costly series of borings, shows that at the present location rock could not have been attained in both piers with any known method of foundation if the piers had been spaced only 1,442 ft. apart, even if the great depth of water could have been overcome.

After the disaster of Aug. 29, 1907, the Dominion Government took up the reconstruction of this bridge. A board of three engineers, including myself, was appointed to design and construct the bridge. After some study of the situation, the board decided that the new bridge should be made wider between trusses and designed to carry heavier loads than those originally contemplated; that, further, none of the old steel work could be used to advantage. It also decided to keep the same location. The final outcome is a double track span 1,800 ft., with a width of 88 ft. between centres of trusses, designed to carry on each track a live load consisting of two E 60 engines placed in any position in a train weighing 5,000 lbs. per foot so as to produce greatest strains. The old piers were not large enough for the new design and could not, therefore, be used. At first the board contemplated building an entirely new pier 57 ft. south of the present north pier, and enlarging the foundation of the south pier by sinking additional caissons adjacent to the old caisson. The necessary span length would then have been 1,758 ft., and it was on that length of span that tenders were asked. It developed later, from the experience of sinking the north caisson, that the method proposed for enlarging the south foundation would not be safe, even if it were practicable, and so an entirely new foundation and pier were decided on for the south shore. The new north pier could not be placed further out in the river because of the sloping bed rock and great depth of water. The south pier could not be placed on the north, or river, side of the old south pier because of the old wreckage, so it was placed 64 ft. 8 in. south of the old pier, or as close as possible to it. Both new piers being placed 64 ft. 8 in. south of the old piers, measured between centres, the new span remains 1,800 ft. long.

Substructure.

The piers are all of granite, backed with concrete. There is an increasing tendency now to build everything of concrete. Certainly, concrete is a most convenient material and quite economical. When it comes, however, to providing supports for a very important and expensive structure, cut stone masonry should be used in preference to concrete, except for backing. There are many varieties of excellent building stone on this continent. I have used granite, some varieties of oolitic limestone, also sandstone, which all show excellent lasting qualities in works constructed many years ago, while concrete presents some uncertainties and requires expert care to give good results. Concrete may in ages prove to be as lasting as stone masonry, but as yet we do not know. We know that well constructed stone masonry will last for centuries. A notable example of this is the great Aqueduct of Gard, built by the Romans in the first century B.C.

TYPES OF SUPERSTRUCTURE.—Having fixed the span lengths of a bridge, the next thing to determine is the type of superstructure to be used. The various types usually applied to long spans may be classified as follows: (1) Arches (steel)—(a) three-hinged; (b) two-hinged. (2) Simple spans. (3) Cantilever structures—(a) with suspended span; (b) without suspended span. (4) Suspension bridges. I have purposely omitted masonry and concrete arches as structures not coming clearly within the scope of this paper. Steel arches have a rational application only where nature has provided natural abutments, as at Niagara Falls, for instance, or where natural surroundings lend themselves to ornamental construction.

Crooked River Arch.—I have recently completed an arch bridge for the Oregon Trunk Ry. in the Crooked River Canyon. It is a two hinged spandrel braced arch. Three hinged arches are now seldom used for a railway bridge because they are less rigid than two hinged arches. They still have a good application in roof trusses which are not subject to heavy and rapidly moving loads. In several large arch spans the central connection offered considerable difficulties. The reason is that the top chords at the centre of a purely two hinged arch are calculated to have stresses in them, due to dead load and temperature, when the span is riveted up and ready to receive the rolling load. These stresses had to be introduced by powerful jacks, or other means, before the final point could be riveted up. To avoid this difficulty, I have proceeded as follows in the Crooked River arch. It was assumed that the dead load and temperature stresses at 60 deg. Fahr. in the top chord at centre are zero. This being the case, the arch acts as a three hinged structure under those conditions—namely, with all dead load in place and at 60 deg. Fahr. The span was, therefore, erected as a three hinged arch, all dead load, or the equivalent, including the decking, was placed thereon, and at a time when the temperature was very nearly 60 deg. the centre panel of the top chord was inserted and riveted up. The calculations were simple. The dead load stresses were calculated as in a three hinged arch, the temperature and live load stresses as in a two hinged arch, and the various results combined.

Types of Span.

A two hinged spandrel braced arch is probably the best type to use for railway traffic, where the natural abutments permit of sufficient rise, which will often be the case where the arch type of bridge is a logical solution. This particular type of arch is more rigid and less subject to vibration than the other types of arch, and presents the advantage of easier erection, which can then be simply performed by treating each half as a cantilever arm held back by suitably temporary anchorages until the centre connection is made. An arch bridge is a somewhat special structure and is rarely used for very long spans, except, as I remarked before, where nature has provided abutments.

SIMPLE SPANS.—Twenty-five or 30 years ago the system of truss most favored for long simple spans was a double intersection Pratt truss with parallel chords. Nowadays the type most used is a single intersection Pratt truss with subdivided panels and curved top chord. The curved top chord is an element of economy. The single system has also a great advantage of more definite stresses. It has its disadvantages, such as for instance, the lack of uniformity in deflection, about which I will speak more in detail in connection with cantilever system. There is no doubt that a bridge composed of simple truss spans is a better bridge than a cantilever system or a suspension bridge, chiefly because of its rigidity. This rigidity results from the fact that a load placed on one span has no lifting action on the adjacent spans as in a cantilever system, or on other portions of the same span, as in a suspension bridge. But long simple spans must be erected on falsework or floated into position. The first method is often admissible on account of the necessity of keeping the channel open for navigation or excessive depth of water combined with navigation requirements, or other local conditions. The floating of a span into position is not only costly but hazardous. It has been successfully performed, but is not always feasible or safe. Then, too, generally speaking, a cantilever bridge is more economical for long spans. These considerations often lead to the adoption of a cantilever design in preference to simple spans. A cantilever span can always be erected without false work, although the adjacent or anchor spans must generally be erected on falsework. Sometimes simple spans are erected without falsework.

The length of simple spans has been growing from year to year. The Cincinnati Southern bridge at Cincinnati, built in 1877, contains a simple span of 515 ft. In 1891 G. S. Morison built the Cairo bridge, connecting a span 518 ft. in length, single track. The Municipal bridge in St. Louis has three simple spans of 668 ft. in length, 110 ft. high at the centre, double track and road ways. The metropolis bridge over the Ohio River, if the present design is carried out, will have a simple span 720 ft. long, double track. This increase is due largely to the use of high grade materials, such as nickel or chrome nickel steel, and to the improvement in shop and field methods.

And here we may say a few words about wind forces. In small spans the action of wind rarely affects the main members of the span, and the wind bracing used is calculated more to make the structure rigid against lateral motion under rapidly moving loads than to take care of actual wind stresses. As the length of span increases, this element of wind becomes more and more important, until in very long spans it may become as important as the moving load. In a simple span the heaviest members, as well as the greatest height of truss, occur near the centre of the span. In other words, the resistance to wind per lineal foot of truss in a simple span is greatest at the centre of the span, and, owing to the overturning moment due to wind, grows in importance with the height. In a cantilever span the greatest height of truss and the heaviest members are near the piers, hence the greatest resistance to wind per lineal foot of truss is near the piers. This remark is sufficient to explain why wind stresses are easier to provide for in a cantilever structure than they are in a simple span of the same length.

Proportions of Simple Spans with Curved Top Chords.

Thebes suspended span...........	15.03	....
Average............	[illegible]	

LONGEST SIMPLE SPAN.—No hard and fast rule can be laid down as to the length at which a simple span becomes uneconomical as compared with a cantilever span. Generally speaking, considering the present knowledge of material, a simple span of 700 ft. may be taken as the practical economical limit, beyond which it is not advisable to go without a thorough investigation and comparison with a cantilever system. Where conditions require unusual methods of erection this limit may be much lower. For instance, in the Thebes bridge it was necessary to erect the 671 ft. channel span without falsework. A simple span would have required the addition of a considerable amount of metal, both in the span itself and in the adjacent spans, to permit of its being erected as a cantilever; this excess of metal would have been useless after the completion of the bridge, and its cost would have made the bridge more expensive than the adopted cantilever design.

DIMENSIONS OF SIMPLE SPANS.—In designing long simple spans the following general principles should be observed. The width, centre to centre of trusses should not be less than one-twentieth of the span, preferably one eighteenth. In double track spans the width required for clearance generally governs, except in very long spans. The height at centre of span, for a Pratt system of truss with subdivided panels, should be from one seventh to one fifth of the length. The table on this page shows the proportions of the width and height to the length of span in some of the curved top chords bridges built recently. The height at the ends should be only sufficient for an effective portal. A rigid mathematical research by Jos. Mayer, Principal Assistant Engineer of the Quebec bridge, leads to a theoretical proportion between the height at centre and length of span equal to 0.18, or somewhere between one fifth and one sixth, for heaviest loads and double track spans.

PANEL LENGTH.—The best panel length is not so easy to determine. Since the economical inclination of diagonals is very nearly 45 deg., it would result that in a Pratt truss with subdivided panels their length should approach one half of the height of truss. This would mean that in a truss with a curved top chord the panels in the centre should be longer than those near the end. This has been done at least in one instance, namely, in the Municipal bridge in St. Louis. The advantages of such an arrangement are a slight economy in the weight of steel and an improved appearance, since the diagonals have nearly the same inclination throughout. The equal panels, however, present, in my opinion, two decided advantages, which may more than offset the advantages of the former system, namely, that, all panels being equal, there is a greater duplication of parts, the floorbeams are all alike, except at ends, the stringers are all alike, the length of bottom chord eyebars is the same throughout; and, further, that the falsework may be built in uniform panels, and the traveller, which is usually designed with a view to have the uprights in proper relation to the panel points, so that the connections may easily be made, preserve its relation to the various panels points as it is moved from panel to panel. For these reasons uniform panels should be preferred in the majority of cases of simple spans.

Maximum Span Lengths.

I have already stated that the greatest practical length of a simple span is about 700 ft. With the use of certain known alloys of steel of greater strength than medium carbon steel this limit may become as much as 750 ft. Beyond this limit the weight of simple spans becomes so great, in comparison with cantilever spans, that the latter must be considered. A mistaken idea sometimes prevails that the weight of steel in a span increases in proportion to the square of the length. This is, in a measure, true for short spans, say 100 to 300 ft. This ratio of increase, however, is not a constant, but increases with the span. A simple span above 1,200 ft. in length increases in weight approximately as the cube of the length, and this exponent increases more and more rapidly until at about 2,000 ft. the weight of carbon steel required to carry the weight of such a span and of a moderate live load becomes infinite. For a span built of nickel steel the weight becomes infinite when the length reaches 2,700 ft. Simple spans much below those liimts, even if possible, would still be very uneconomical until we get down to spans 700 ft. or under.

CANTILEVER SPANS.—This leads us to cantilever spans. I mentioned two types of such spans—one without a suspended span and the other with a suspended span. A remarkable example of a cantilever bridge without a suspended span, which may be called a semi continuous structure, is the Blackwell's Island, or Queensboro bridge, in New York. There seems to be no advantage in omitting the suspended span; on the contrary, the structure differs from a true continuous bridge over several supports only by the introduction of a hinge at the centre of the main span which transmits shears but not moments. The vibrations and deflections of each segment are, therefore, transmitted through those hinges to all the other segments. Furthermore, since the stresses in such a structure depend on deflections, there is more or less uncertainty in the calculations. I do not wish to be understood as objecting to any type of structure seriously, because of the uncertainty of calculations. In any logical construction the calculations can always be made with sufficient accuracy for the safety of the work. It is only when everything else is equal that determinate stresses should be preferred.

Let us consider the usual type of cantilever bridges, the one in which two cantilever arms support a suspended span. We may assume that in bridges requiring the construction of a cantilever span the length of the main span is usually determined by local conditions. The general dimensions to be fixed by the designer are, therefore, the length of the suspended span, the length of the anchorage spans, when these are not determined by local conditions, the height of the trusses at various points and the relative distances and positions of trusses to one another. Let us discuss these various dimensions in connection with the new Quebec design. The Quebec bridge, with its longest span in the world, has justly attracted much attention among engineers and has naturally elicited comment and criticism. It is acknowledged that a discussion of a scientific subject by professional men is often of greater value than an elaborate paper on this same subject by one individual. If I refer to some of the criticisms, let it be considered as a friendly discussion which may be of value to the profession.

New Quebec Bridge.

The new Quebec bridge has been finally designed with two anchor arms 515 ft. long, a suspended span 640 ft. long, and two cantilever arms 580 ft. long. The moving loads finally adopted for the Quebec bridge are: On each track two Cooper's class E 60 engines, followed or preceded, or followed and preceded, by a train load of 5,000 lbs. per foot per track. In addition to the actual dead load of the structure, a load of 500 lbs. per lineal foot on suspended span and 800 lbs. on balance of bridge was allowed for snow.

THE WIND LOADS were taken as follows: A wind load normal to the bridge of 30 lbs. per sq. ft. of the exposed surface of two trusses and one and a half times the elevation of the floor (fixed load), and also 30 lbs. per square foot on travellers and falsework, etc., during erection.

A wind load on the exposed surface of the train of 300 lbs. per lineal foot applied 9 ft. above base of rail (moving load).

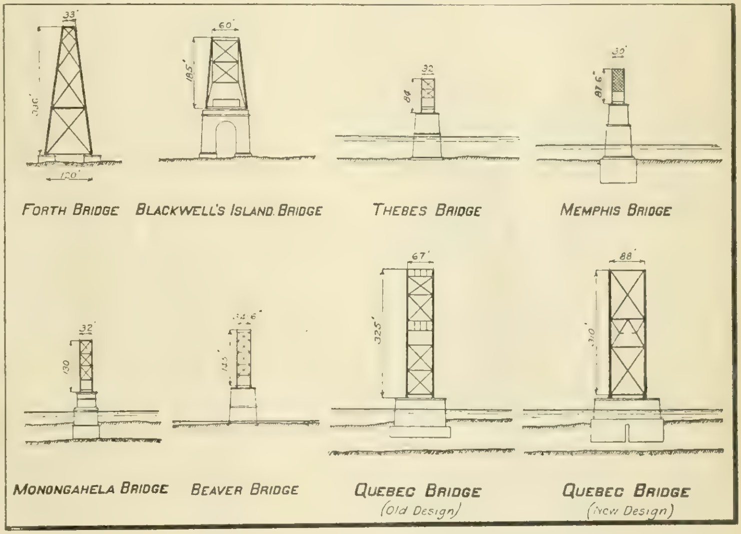
A wind load parallel with the bridge of 30 lbs. per sq. ft. acting on one half the area assumed for normal wind pressure.

In the Forth bridge the enormous wind load of 56 lbs. per sq. ft. was assumed. This load was imposed on the designers by the Board of Trade soon after the Tay bridge disaster. The Tay bridge was not designed to withstand even a 30 lbs. pressure. This assumption of a 56 lbs. wind in the Forth bridge results in a very large addition of metal in the bottom chords through which the wind stresses are transmitted to the piers. The material in those members is distributed as follows:

	Gross tons
Dead load	[illegible]
Live load	[illegible]
Wind load	[illegible]
Total	[illegible]

The metal here provided for the wind is nearly three times that provided for the live load, and is about 47% of the total required. In the new Quebec bridge design the wind pressure is equivalent to about 35% of the uniform live load near the piers and to about 20% of the live load near the ends of the cantilever arms.

A pressure of 30 lbs., according to German experiments with electric cars, would correspond to a wind of a velocity of over 100 miles an hour. Other experiments made at various times on small surfaces show that a velocity of 85 miles would correspond to a pressure of about 30 lbs.



Comparative Height Over Piers of Various Bridges.

The following formula for wind pressures is generally used: P=kv2, in which P= pressure per square foot, v=velocity in miles per hour, and k=a coefficient.

Eiffel's 200 or more experiments show this coefficient to vary from 0.0026 to 0.0032, and the average is 0.0030, which he recommends. Trautwine makes k=0.0050, which seems too high. But, even using the latter, a pressure of 32 lbs. would correspond to a "hurricane" of a velocity of 80 miles. The German experiments agree with Eiffel's. Making k=0.0030, a pressure of 30 lbs. would correspond to a velocity of 100 miles an hour, which, according to Trautwine, is a violent hurricane uprooting "large trees."

With a wind of this velocity there would be no traffic on the bridge—empty freight cars or even light passenger cars would be overturned. Velocities of more than 85 miles may occur in cyclones and tornadoes over restricted areas. Such storms are very rare in Canada; but even should such an extraordinary disturbance happen, causing a wind pressure of as much as 60 lbs. to be applied to the entire Quebec bridge as now designed—the stresses in the truss members would be less than with the maximum live load and a 30 lbs. wind—and although the stresses in the laterals would be increased above the specification limits, they would still remain within the elastic limit of the members.

LENGTH OF SUSPENDED SPAN.—The length of the suspended span does not depend merely upon the most economical distribution of material required for carrying the live loads and the dead load of the bridge after it is completed. Where there are no other considerations beyond the actual working stresses in the finished structure, the most economical length of the suspended span for a total span of 1,800 ft. would be in the neighborhood of 1,000 ft. But to erect a simple span of such unprecedented length, either by floating or by cantilever method, would be impracticable. Furthermore, the cantilever method of erecting a suspended span of even a moderate length always requires additional material, both in the cantilever arms and in the suspended span, to take care of the erection stresses.

The longer the suspended span in relation to the total main span, the greater will be the required addition—so that whether it be contemplated to erect the suspended span by cantilever method or by floating into position, the length of the suspended span finds itself limited not by mere economic considerations of the finished bridge, but by either the excess of material required during erection by cantilever method, and difficulties arising therefrom, or by the difficulties attending the floating of a very long and heavy span into position. These difficulties increase very rapidly with the length of the span to be floated. In the new design the suspended span is the longest which the board considered safe to float, and it fits the entire design very well.

Erection by Floating.

The erection of this span by floating made it possible to design it with the view to greatest economy. Its various members will not be subjected to any greater stresses during erection than they would be in a simple span of the same length resting on two piers. It was, therefore, possible to design this suspended span of as little weight as a well designed simple span would be. It is more important to save weight in a suspended span than in an independent simple span, because each pound in the former requires several pounds in the entire structure to carry it. The importance of economy in the suspended span of the Quebec bridge will be appreciated when it is considered that 1 lb. uniformly distributed over the trusses of the suspended span needs 3 lbs. of metal added to the bridge to carry it, making an addition of 4 lbs. in all. This accounts for curved top chords in the span in question, as well as for the use of nickel steel for the trusses thereof.

LENGTH OF ANCHOR ARMS.—It has been pointed out that the length of the anchor arms is uneconomical—that a shorter arm would have been cheaper. It must not be forgotten that a shorter anchor arm increases the pier reactions, as well as the steel in the anchorage proper. The present anchor piers are founded on rock ledges, which dip rapidly toward the river. To move them nearer to the river would have involved much more expensive foundations.

While an addition of dead load in the main span will require several times the weight of metal to carry it, an addition of dead load in the anchor arm requires no increase of metal to carry it when there is an upward or negative reaction on the anchor pier. This is explained by the fact that any load placed between the main piers or on the main spans increases all moments and shears over all the spans, while any load placed on the anchor arm, if the reaction on the anchor pier is negative, decreases that reaction and consequently the moments in the anchor arm, but has no effect whatever on the main span. For this reason carbon steel will be used mostly in the anchor arm on the new design. The carbon steel unit stresses adopted for the Quebec bridge are generally five sevenths of the nickel steel stresses, the former requiring heavier members. The additional metal in the anchor arm is a source of economy when the relative prices of carbon and nickel steel are considered.

HEIGHT OVER PIERS.—An opinion has been expressed that the height over the piers of the new Quebec bridge is not great enough for economy. Actual calculations show that for economy the height of 310 ft. in the Quebec design is too great by about 20 ft. for the K system of trussing adopted; further, that this height would have been at least 40 ft. too great for the original system of the official design. The height of the Forth bridge towers, while 26 ft. higher than the Quebec bridge, though the span is 100 ft. shorter, is no doubt economical for the form of trussing adopted for it. The economical height is not only a function of the length of the span but also of the panel length next to the pier. This height should be such as to correspond to an inclination of the diagonals not far from 45 deg. A double intersection system with very long panels near the pier, such as adopted in the Forth bridge, would have been economical for the Quebec bridge, except that it re [illegible] important. The 20 ft. excess in height of [illegible] of the bottom chords, which are of consid- [illegible]

STRAIGHT VERSUS CURVED CHORDS.—In long cantilever spans the bottom chords of the cantilever and anchor arms should be straight when possible. With a curved chord the joints must be made at the panel points. These joints are of great importance, as has been shown in the report of the Royal Commission on the Quebec bridge disaster. They should be fully spliced to take care of secondary stresses due to deflections of the span during erection and under the action of live load. It is advisable, therefore, to place them outside of the point of connection with the diagonals and keep them clear of gusset plates. The same objection does not exist in top chords of simple spans, which are of moderate sizes, even in the longest spans known. The economy in simple spans resulting from such curved chords is worth while and quite important, while if any economy were to result from curving the bottom chord of the cantilever and anchor spans, such economy would certainly be of little importance in comparison with the resulting disadvantages. The vertical deflections from live loads are not as great in a straight chord design as in a curved chord design.

Another consideration in favor of the straight chords is that the most important, in fact the bulk, of the wind forces travel to the pier through the bottom chords of the cantilever and anchor arms and the wind bracing, or lateral system situated in their plane. The straight bottom chords carry these stresses direct to the piers without transmitting any appreciable components to the web system of the trusses. Not so with curved bottom chords. At each point where the chord's direction is changed a component stress is transmitted to the web. This means that while a pair of straight chords with its lateral system deflects under the action of the wind in the plane of the chords only, a pair of curved chords, by transmitting shear to the web members, causes the trusses to deflect, the windward truss downward, tending to flatten the curve, and the leeward truss upward, tending to make the curve more pronounced. The rigidity of the straight chord design against lateral deflection and oscillations is therefore greater than that of the curved chord design.

One of the reasons why curved bottom chords were used in the cantilever arms of the original Quebec bridge design was the fact that it was the aim of that design to provide full headroom of 150 ft. on a width of 1,000 ft. The bottom chords of the anchor arms were then made curved also for the sake of symmetry. The width on which the full headroom will be obtained has been reduced in the new design to about 760 ft., which certainly is more than ample to accommodate navigation. Only the highest vessels will be limited to this width of 760 ft., and that only at high water.

The top chord of the Quebec bridge cantilever and anchor arms is straight. The Forth bridge cantilever arms have straight top chords also. While there was good reason for making the Forth bridge top chord straight, there was no serious reason, beyond a slight increase in vertical rigidity, for making it straight at Quebec. The two trusses on the Forth bridge are in planes inclined toward each other at the top. The two top chords are parallel. Had they been made curved they could not have been parallel, since they must necessarily be situated in the inclined planes of the trusses. The appearance of tension chords having a greater distance apart at the centre of the arm than at either end would have been very bad. But there is no such reason at Quebec. The trusses are in vertical planes and the top chords could have been curved without serious inconvenience, but also without any advantage. The board considered that, aside from the additional vertical stiffness, a straight chord will present an appearance of strength which a curved chord would not do.

The foregoing is the first part of a paper read by Mr. Modjeski before the Franklin Institute in Philadelphia. It will be continued in the next issue.

Birthdays of Transportation Men in November.

Many happy returns of the day to —

F. W. Alexander, A.M. Can. Soc. C.E., Division Engineer, Alberta Division, C.P.R., Calgary, born at Fredericton Jct., N.B., Nov. 22, 1878.

J. O. Apps, General Baggage Agent, C.P.R., Montreal, born at Tara, Ont., Nov. 9, 1877.

A. B. Atwater, Assistant to President, lines west of Detroit and St. Clair Rivers, G.T.R., Detroit, Mich., born at Sheffield, Ohio, Nov., 1845.

G. B. Burchell, ex-General Manager, Maritime Coal Ry. and Power Co., Montreal, born at Sydney, N.S., Nov. 1, 1877.

J. R. Cameron, Assistant General Manager, Canadian Northern Ry., Winnipeg, born at Truro, N.S., Nov. 5, 1865.

L. D. Chetham, City Passenger Agent, C.P.R., and District Passenger Agent, Esquimalt and Nanaimo Ry., Victoria, born at Matlock, Eng., Nov. 5, 1869.

F. H. Clendenning, District Freight Agent, B.C. Coast Service and Trans-Pacific Steamships, C.P.R., Vancouver, B.C., born at Montreal, Nov. 9, 1881.

F. Conway, City Freight and Passenger Agent, C.P.R., Kingston, Ont., born at Ernestown, Ont., Nov. 19, 1850.

A. S. Cook, Inspecting Engineer, National Transcontinental Ry., Ottawa, born at Penobsquis, N.B., Nov. 20, 1873.

W. L. Crighton, Advertising Agent, Canadian Government Railways, Moncton, N.B., born at Derby, Eng., Nov. 9, 1871.

W. B. Cronk, ex-General Superintendent, National Transcontinental Ry., Montreal, born at Footville, Wis., Nov. 11, 1862.

W. Downie, General Superintendent, Atlantic Division, C.P.R., St. John, N.B. (on leave), born at Rock Currie, Ireland, Nov. 12, 1850.

Jos. Dubrule, jr., Manager, Canadian Pacific Car and Passenger Transfer Co., and President, Prescott and Ogdensburg Ferry Co., Ltd., Prescott, Ont., born at Spencerville, Ont., Nov. 14, 1872.

R. L. Fairbairn, General Passenger Agent, Canadian Northern Ry., Toronto, born at Stillwater, Minn., Nov. 24, 1880.

P. J. Flynn, Terminals Manager, Winnipeg Joint Terminals, C.N.R., G.T. Pacific Ry. and National Transcontinental Ry., born at Fishers, N.Y., Nov. 22, 1872.

Grant Hall, General Manager, Western Lines, C.P.R., Winnipeg, born at Montreal, Nov. 27, 1863.

John L. Hodgson, Master Car Builder, G.T. Pacific Ry., Transcona, Man., born at Simcoe, Ont., Nov. 15, 1858.

W. M. Hood, Travelling Passenger Agent, Canadian Northern Ry., and Canadian Northern Steamships, Ltd., Toronto, born at Harrow, Ont., Nov. 25, 1872.

W. E. Ladley, Superintendent of Motive Power, Reid Newfoundland Co., St. John's, Nfld., born at Leeds, Eng., Nov., 1875.

J. McGillivray, General Manager, Inverness Ry. and Coal Co., Inverness, N.S., born at Nairn, Scotland, Nov. 13, 1867.

J. McMillan, General Superintendent of Telegraphs, Western Lines, C.P.R., Winnipeg, born at Liverpool, Eng., Nov. 2, 1866.

T. E. Martin, Local Freight Agent, C.P.R., Quebec, Que., born at Beauharnois, Que., Nov. 23, 1852.

A. S. Munro, Commercial Agent, G.T.R., London, Ont., born at Hamilton, Ont., Nov. 10, 1880.

C. Murphy, General Superintendent, Manitoba Division, C.P.R., Winnipeg, born at Prescott, Ont., Nov. 20, 1865.

A. C. O'Neil, Travelling Freight Agent, G.T.R., London, Ont., born at Point Edward, Ont., Nov. 30, 1866.

W. J. Quinlan, District Passenger Agent, Grand Trunk Pacific Ry., Winnipeg, born at Montreal, Nov. 21, 1883.

H. P. Sharpe, General Agent, Dominion Express Co., Toronto, born at Brockville, Ont., Nov. 24, 1864.

G. H. Shaw, General Traffic Manager, Canadian Northern Ry., Toronto, born at Smiths Falls, Ont., Nov. 25, 1859.

F. M. Spaidal, General Manager, Canadian Northern Quebec Ry., and Quebec and Lake St. John Ry., Montreal, born at Gananoque, Ont., Nov. 13, 1858.

J. Sparks, Assistant General Baggage Agent, Western Lines, C.P.R., Winnipeg, born in London, Eng., Nov. 25, 1874.

H. P. Timmerman, Industrial Commissioner, Eastern Lines, C.P.R., Montreal, born at Odessa, Ont., Nov. 6, 1856.

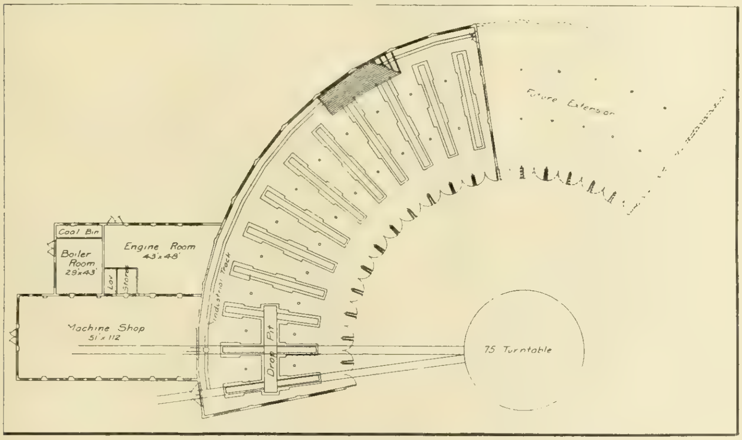
H. E. Whittenberger, General Superintendent, Ontario Lines, G.T.R., Toronto, born at Peru, Ind., Nov. 9, 1869.

C. G. Washbon, Resident Engineer, C.P.R., Winnipeg, born at Morris, N.Y., Nov. 27, 1887.

National Transcontinental Railway Standard Locomotive House.

The latest standard type of locomotive house for the N.T.R. is shown in the accompanying illustrations. In Canadian Railway and Marine World for Sept., 1912, a plan of the standard locomotive house, as then approved, was described, with illustrations, but it was subsequently found that the design then decided upon might be improved in some particulars, resulting in the present design.

In general arrangement, the new design is similar to the former, the principal point of variation being in the shifting of the machine shop and auxiliary buildings from their former location on the outside of the locomotive house, so as to leave the outside track clear for a through connection, the idea being that when a crippled locomotive is brought into the terminal, it may be run on the through track alongside the machine shop by the yard crew, where it may be picked up when convenient by the mechanical department and run in on the pit. In the former arrangement, the dropping off of a crippled locomotive on the turntable side of the locomotive house left the latter blocked, necessitating the immediate removal of the locomotive, which would not always be convenient. The normal handling of the motive power will not be disturbed in the new arrangement.



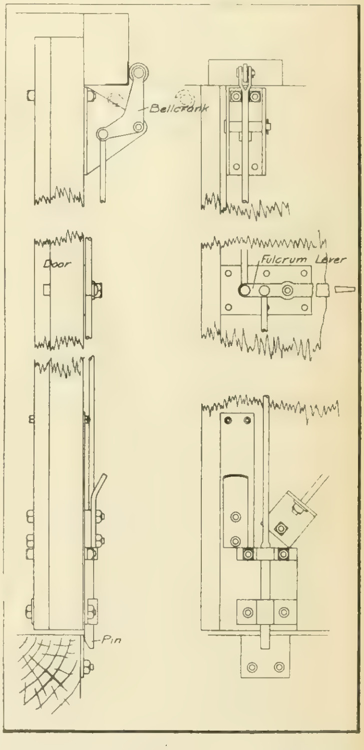
Standard Locomotive House and Shop for National Transcontinental Railway.

The new design is for a 12 stall house, so designed with the auxiliary buildings to one end that future pit extensions may be added without in any way interfering with the original plans, the auxiliary buildings being made of sufficient size to meet the demands of future enlargements to the motive power accommodation. The main building has the stalls, forming chords of a circle, on a central angle of 7 degs. 46 mins., the inside radius of the building to the centre line of the door posts being 114 ft. 5¼ ins., and the outside radius, 205 ft. 5¼ ins., giving a locomotive house depth of 91 ft. In the centre of the circle is a 75½ ft. turntable.

At the lower end of the locomotive house are three drop pits, communicating with each other through a cross pit. The lower one of the three drop pits is on the through track provided in the new arrangement for the reasons explained. The central drop pit track runs through into the machine shop to the rear, a 112 by 56½ ft. building. Adjoining the machine shop are the engine and boiler rooms, 48 and 29 ft. long respectively by 43 ft. wide. All these buildings are to be on concrete foundations up to 4 ft. above the base of the rail, with the remainder of the walls of red brick. The roof of the locomotive house will be supported on wooden columns, girders and beams, with brick walls at the rear and side, and steel columns at the door posts. The roof of the machine shop and engine and boiler rooms will be supported on steel trusses. Over the drop pits and machine shop there will also be skylights.

The pits are to be 60 ft. long, 3¾ ft. wide, and 2ft. 11 ins. deep at the rear, rising to 2¼ ft. at the front from the base of rail to a 3 in. crowning in the bottom of the pit. depression at the rear of the pit will drain off the pit water through a 4 in. cast iron pipe. The pit construction will be concrete throughout, the top of the pit walls being surmounted by two, and in places three, 8 by 12 in. timbers, spiked on rods bedded in the concrete walls, the 80 lb. rails resting on the timbers. The locomotive house will have a 4 in. cinder floor, except around the inner wall, which will be floored with 3 in. planking to the rear end of the pit. Around the inner wall of the house, at 5 ft. centre from the wall, there will be a 2 ft. industrial track, laid with 40 lb. rails, with a turntable between the central drop pit track, leading back into the machine shop.

Around the inner wall, at the end of the pits, there will be a concrete heating duct of varying size, largest at the engine room end, where connection with the heating fans is made. At the end of each pit there will be a 9 in. heating opening, and from the heating duct for each pit there will be a heating pipe running alongside the pit, with three 9 in. openings leading in along one side at equidistant points along the pit length. The drainage of the buildings will be provided for by an 8 in. tile pipe outside the outer wall of the locomotive house, with a 4 in. cast iron connection from each pit, and a 6 in. connection from each end of the cross drop pit, and a 4 in. pipe from the boiler room.



Door Fastening Device for N.T.R. Locomotive House.

The machine shop will have the usual running repair equipment. The engine room will contain air compressors, heating plant and washing plant. The boiler room will contain two boilers, with coal bin to the rear. From the boilers there will be a 4 in. drain, connecting with a drain from the lavatory and thence through a 6 and 10 in. pipe to the main drain before mentioned.

The arrangement of the through track over the lower drop pit, in addition to providing facilities for handling cripples more expeditiously, will also make possible a handier store for heavy material. It is anticipated that it will be possible for the yard crew to shunt in on the through track a car of store material, leaving it on the track adjoining the machine shop until required, when the shop hands can easily pinch bar it into the locomotive house without calling on outside assistance. It is the intention to use the portion of the shop adjoining this through track drop pit for a heavy store.

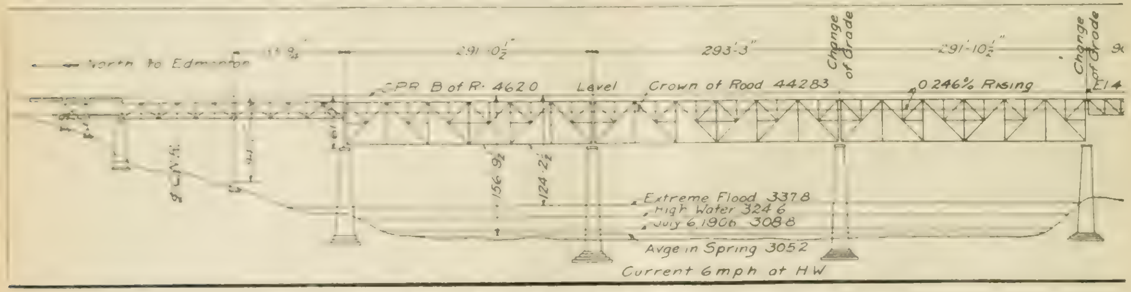
In the design of the building some unique features have been embodied, principal among which is the door fastening device shown herewith. Locomotive house doors have a tendency to warp, and frequently leave large gaps when closed, making the heating of the building difficult, this warping tendency being more pronounced at the top of the door, where it is difficult to apply local pressure. The locking arrangement shown consists of a bell crank pinned to a bracket at the top of the door. The upper end of the bell crank carries a roller that bears on the outside of a steel plate on the door jamb. The lower end of the bell crank connects with a rod, fastened at its lower end to a fulcrum lever, the depressing of which swings the bell crank roller up into engagement, tightly closing the door. The same action depresses a fastening pin at the bottom of the door.

The whole building will be electrically wired, with drop lights in minor positions, and flaming arc lamps in the more important places. The engine room will contain one flaming arc light, the machine shop six, and the locomotive house 12, each being independently controlled. There will also be two flaming arc lights in front of the locomotive house.

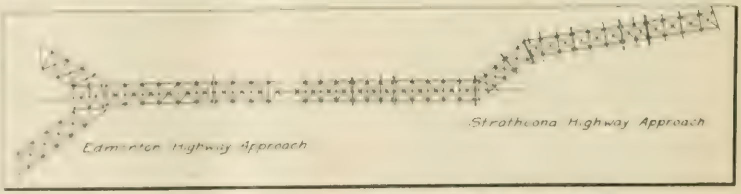
The designs for the whole standard locomotive house, with auxiliary buildings, were prepared under the direction of W. J. Press, M. Can. Soc. C.E., Mechanical Engineer, N.T.R., to whom we are indebted for the information on which this article is based.

Canadian Pacific Railway High Level Bridge at Edmonton.

The valley of the North Saskatchewan River, at the site of this bridge, between Edmonton and Strathcona, is about half a mile wide and 160 ft. deep. Of this width the river occupies from 800 to 900 ft., depending on its stage, the depth varying from about 8 ft. at the deepest point at the time when the ice goes out, to about 40 ft. during flood time. The current is about six miles an hour, and the depth of water is a very uncertain quantity, as the river sometimes rises more than 10 ft. over night after heavy rains. The ground is sticky blue clay, with heavy boulders below the river bed.



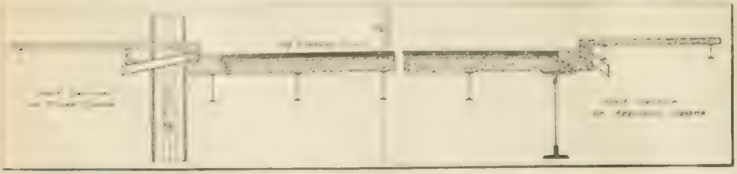
Canadian Pacific Railway Edmonton Bridge—Edmonton End.



Highway Approach and Main Decks on C.P.R. Edmonton Bridge.

The substructure of the bridge is of concrete, and consists of four main or river piers, each about 125 ft. high, and further, of 62 smaller piers which support the viaduct legs which carry the approach spans.

In the superstructure there are three main spans of the Pratt type, with subdivided panels, [illegible] ft. centre to centre of end bearings. Trusses are 50 ft. deep, and are spaced 25 ft. apart centre to centre. The main floor beams are [illegible] ft. long and [illegible]d 4⅛ ft. over the truss [illegible] carried three tracks, a railway [illegible] [illegible]. On the deck of the bridge are the C.P.R. upon the centre line of the bridge, and one electric railway track on each side of the C.P.R. track. The top of roadway is situated 19 ft. 2 ins. below the base of rail, and is of concrete construction, floored with creosote blocks, this combination having a thickness of 14 ins. at the crown. The roadway is carried in the usual manner on steel stringers connected to floor beams, which attach to the verticals at the panel points of the trusses. Two sidewalks, 8ft. in the clear, are carried, one at each side of the bridge at about the level of the roadway, on brackets which fasten to the ends of the roadway floor beams.



Highway [illegible] C.P.R. Edmonton Bridge.

The approach spans consist of seven Pratt truss spans 96 ft. ⅛ in. long, and six similar spans 47 ft. long; the shorter spans are the tower spans, and occur over the towers, which are shown very clearly in the illustration, dated Sept. 30, 1912. There are also in the approach part of the work two Warren trusses, one 131¾ ft. long, and the other 129¾ ft. long. These 15 spans, which form the major part of the approach work, have trusses which are 19 ft. deep and spaced 25 ft. apart centre to centre, and are similar to the large trusses, as regards the arrangement on their decks, while they have their bottom chords immediately under the highway floor and sidewalks.

Near each end of the bridge the roadway and sidewalks curve out from beneath the tracks upon the deck, and from these points of curving to the abutments are supported by a deck plate girder system with rolled I beam stringers and built up floor beams and brackets. The main girders are themselves carried on steel bents.

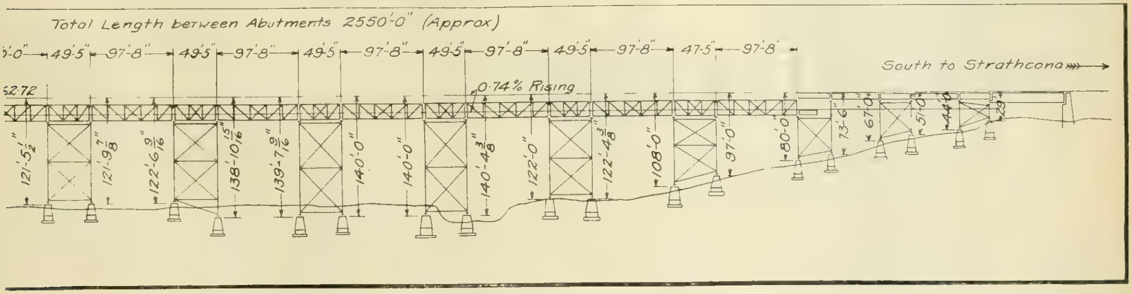
The general diagram shows in detail the arrangement of the highway floor, and gives in general the arrangement of the spans, of the towers, and of the girders and turnouts at the ends of the bridge.

An excellent idea of the method of erection may be obtained from the accompanying illustrations. In the one dated Sept. 30, 1912, the staging is shown complete for one of the 288 ft. main spans, with the span resting upon it. Between the second and third of the high piers may be seen the capped and braced piling, upon which false work similar to that shown between the first and second pier was afterwards erected for the support during the erection of the second of the large spans. This falsework consisted essentially of five strongly braced towers, which support the span at its bottom chord panel points. An excellent idea of the traveller used is given in the illustration dated May 27, 1913. This traveller was arranged to erect not only the main spans, which were set upon falsework, but all the other spans of the structure without the use of falsework. In this illustration, it will be noted that a locomotive had just pushed cars through the under part, and had furnished its outstanding booms with the material which they were to presently put in position.

The work in connection with the steel for the bridge was carried out by the staff and forces of the Canadian Bridge Company, Ltd., of Walkerville, Ont., under the direction of P. B. Motley, M. Can. Soc. C.E., Engineer of Bridges C.P.R. G. E. Roehm is the Canadian Bridge Co.'s Contracting Engineer; C. M. Goodrich is its Designing Engineer, and S. H. Young was in charge of its field work.

An illustration of the completed bridge appeared in Canadian Railway and Marine World for August.

Edmonton Bridge Construction July 29, 1912.



Canadian Pacific Railway Edmonton Bridge—Strathcona End.

Edmonton Bridge Construction Sept. 30, 1912.

Icing Refrigerator Cars.—In replenishing of ice on refrigerator cars in transit, the rule generally observed is that the bunkers shall not sink below half full before refilling. A good rule is to never let the ice fall below the level of the top of the load in the car. In general practice, it is the custom to replenish the ice every 24 to 30 hours, and on long runs the filling stations are so located as to make this possible.

Concrete Telegraph Poles.—Having demonstrated the utility of concrete telegraph poles on its New York Division, the Pennsylvania Rd. is said to be contemplating the placing of this material on its Western Pennsylvania Division, in the expectation that they will serve the purpose as practically in that locality as in the semi tidal swamp districts of the New York Division.

Railway Operating Revenue for June on the large steam roads of the United States amounted to $253,356,489.71, an increase of $15,992,193.36 over June, 1912; operating expenses were $178,394,785.37, an increase of $15,744,779.64; and net operating revenue was $74,961,704.34, an increase of $247,413.72. The operating ratio increased from 68.52 to 70.41%.

First Aid to the Injured on the Canadian Northern Railway.

Canadian Railway and Marine World for Aug., 1912, contained an article describing the activities of the St. John's Ambulance Association in its first aid work on the Canadian Pacific Ry. The Canadian Northern Ry. is also coming along with similar aims in view, under the St. Andrew's Ambulance Association, an organization with headquarters in Glasgow, Scotland, and which outside of Scotland is in friendly rivalry with the first mentioned organization. An understanding exists between the two associations that neither will enter upon the other's home territory, but that abroad the field is equally open to both.

The first seeds of the new work on the C.N.R. were sown in 1911 by recently arrived Scotchmen who had been connected with the Association in the old land, and by whose enthusiasm the work has been brought to the new world, the organization on the C.N.R. being the first on this side of the Atlantic. For the whole C.N.R. system, there is what is called a local committee, with jurisdiction over the work through the entire system. What are termed sections are organized locally for the different shops and terminal yards on the system as desired. As yet, only one section has been put in operation, with the shop section for the Fort Rouge shops at Winnipeg, where the introduction of the work has been attended with a high degree of success, the men taking to it enthusiastically.

To qualify for membership in the association, it is necessary to take a course of instruction, under the direction of a qualified medical man, which takes the nature of lectures and practical work, nine lectures in all. The text book followed is the "Ambulance Hand Book," by Sir Geo. Thos. Beatson. The following is a synopsis of the work covered, outlined according to lectures:

First lecture—Introductory remarks, explanation of the scope and object of lay help in ambulance work, special attention being drawn to the need for it as well as the usefulness and simplicity of it. Short sketch of the principal features of the human anatomy, and a description of the functions of circulation, respiration, excretion, secretion.

Second lecture. Short account of the skeleton, with a brief description of the structure and variety of joints. Fractures, their varieties, causes, symptoms and dangers; their temporary treatment and the apparatus necessary for it. Dislocations, how they differ from fractures, and the first aid in such cases. Illustrations of the temporary treatment of fractures, collar bone, upper arm, forearm, hand, thigh, leg, foot, lower jaw, pelvis, spine.

Edmonton Bridge Construction March 11, 1913.

Third lecture—Practical work, when the members will exercise themselves on the use of the triangular bandage, and the temporary treatment of the different fractures mentioned in the previous lecture.

Fourth lecture—General description of the circulation of the blood and the mechanism by which it is carried on. Distinction between arterial, venous and capillary hemorrhage. Names of the arteries of the body, with their situations. Points were arterial circulation may be arrested by pressure. Dangers of hemorrhage. General treatment of hemorrhage, internal or external. Three kinds of tourniquets for arresting hemorrhage. Showing method of applying tourniquets and making improvised ones, giving illustrations of the arrest of hemorrhage from any part of the body.

Fifth lecture—Practical work, when the members of the class will exercise themselves in the arrest of hemorrhage in various situations, and in the temporary treatment of compound fractures

Sixth lecture —Respiration, its objects and mechanisms. Fainting, its causes, symp- [illegible] apparently drowned, or suffocated by hanging, poisonous gases or choking. First aid in cases of burns and scalds, bites by animals possibly rabid, tears from machinery, crushed and bruised parts, stabs. Show [illegible] treatment of fractured ribs.

Seventh lecture—Practical work when the members will exercise themselves in performing artificial respiration, and in the arrest of hemorrhage from supposed cases of ruptured varicose veins, stabs, tears from machinery, and gunshot wounds.

Eighth lecture—Symptoms and first treatment of shocks and collapse. First aid in cases of those stunned by a fall or injury to the head, convulsions, epilepsy, sunstroke, persons found insensible, suspected poisoning, frost bite, lime in the eye, supposed death.

Ninth lecture—Devoted to transport work, special attention being directed to the proper carrying of the stretcher, manner of placing it, the loading and unloading of it, the position of the patient in it, suggestions as to overcoming difficulties in the road, hints as to conveyance of stretchers by rail and other means of conveyance. General account of the improvised methods of removing injured persons when no stretchers or regular conveyances are available.

Edmonton Bridge Construction May 27, 1913

The above gives a brief survey of the scope of the work touched upon in the first year. There is one such class each year, the lectures extending over nine weeks, a lecture a week. With the Fort Rouge shop section, all the instruction work is conducted by the C.N.R. surgeons, of whom there are three, Dr. C. A. MacKenzie giving the lectures, and the other two assisting in the work of demonstrating the methods followed.

A roll book of the attendance at the lectures and demonstrations is kept, and in order to be eligible to try the examination which follows the course of training, it is necessary to have an attendance at 8 out of the 9 lectures. The examination consists of a thorough questioning on the work covered in the course, and demonstrations on the part of those undergoing the examination on their ability to perform the various first aid methods previously taught. The examination is conducted by an outside surgeon and 50% is necessary to pass. The names of the successful candidates are forwarded to the head office in Glasgow, where they are entered in the the association's books, and certificates of qualification sent to the successful ones.

The member must remain the balance of the year in which he passes without further advancement, but on the expiration of that period he can take a similar course to that previously taken, going more deeply into the subject as the work progresses, and also studying such matter as nerves, digestion, etc. For this there is no prescribed course of training, it being left to the instructor to give more advanced knowledge along the lines already followed. This is followed by an examination as before, in which the candidate must obtain 70%, entitling the successful ones to a bronze medallion. This is as high as the association takes a man. The holder of the bronze medallion must submit himself yearly to an examination along the lines he has already passed in, in order to retain this qualification. Yearly vouchers are issued to the successful retainers of the qualification. A gold medal for long service is issued to all those possessors of a bronze medal who have been connected with a section for 15 years.

The first year men, as they qualify, become members of the local section. These sections are divided up into teams in the different shops and parts of the shop, and the leaders of the teams are as a rule the bronze medallists, who captain the work. Four usually comprise a team.

In the Fort Rouge shops the work is well planned. In the stores department there is kept a large stock of first aid appliances and drugs from which are supplied local first aid kits in the different shops. These local kits contain the following equipment: 9 triangular bandages; 3 each of 1, 1½, 2 and 3 in. roller bandages; packet of gauze; ¼ lb. cotton wool; packet of styptic wool;

packet or boracic wool; 8 oz. bottle each of carbolic acid, salvolatile, carron oil, arnica and olive oil; bottle of smelling salts; box of carbolic salve; box of boracic ointment; card of safety pins; tourniquet; scissors; tweezers; adhesive plaster; boracic lint; needles; eye shade, and small towel. With each kit, there is a stretcher and a full set of 14 splints. In the car department, additional provision is made by having a local store of stretchers, splints, etc., in the office of the general foreman, which is centrally located to all the buildings.

Inspection of C.N.R. St. Andrew's Ambulance Association First Aid Work by the Duke of Connaught.

Demonstration of First Aid Work Before the Duke of Connaught by C.N.R. St. Andrew's Ambulance Association.

At convenient points in each building there are steam connected hot water heaters attached to the columns of the buildings, marked on the outside with a red cross. These hot water connections must only be used for first aid purposes, use for other causes being prohibited.

In each shop, alongside the first aid kit, there is a small blackboard, on which are entered the names of the members of the team who are to use that particular kit. An air whistle alongside is the signal in the case of an accident for those men to instantly drop their work and prepare to render first aid to the injured.

The officers of the Fort Rouge shop section are: President, A. M. McCowan, General Car Foreman; Commandant, D. Mowat, Assistant Foreman Freight Repair Yard; Assistant Commandant S. Angus; and Sec.-Treas. J. Candline, Assistant Foreman Freight Repair Track. Considerable activity is being demonstrated in this section, as in the short time of its existence about 40 members have qualified.

The local committee for the Canadian Northern Ry. has the following officers: Honorary President, Sir Wm. Mackenzie; Honorary Vice President, Sir Donald Mann; President, A. E. Cox, General Storekeeper; Vice President, A. H. Eager, Supt. of Shops; Secretary, E. J. Gillingwater, Chief Clerk to General Storekeeper; Treasurer, J. E. M. Firby, Foreman of Mill; Committee, T. J. Lowe, Chief Clerk to General Manager, O. C. Bishop, Asst. Supt. of Dining Cars, J. Hough, Foreman Machine Shop, G. Lyons, Foreman Upholsterer, W. Clegg, Foreman Air Brake Dept., F. McDowell, Asst. Storekeeper, D. Galloway, General Foreman Locomotive Dept., W. Watt, General Foreman Freight Sheds, and T. A. Musgrave, Foreman Freight Car Repair Tracks. On this committee devolves the work of organizing sections all over the system, several of which are already in contemplation.

The heads of the Canadian Northern are doing their best to encourage the work, many valuable prizes being offered individually and to the teams competing in the general competitions held annually. Among the team prizes may be mentioned a large silver loving cup, presented by D. B. Hanna, Third Vice President, to be competed for annually, and five gold medals extra for the members of the winning team, the donation of M. H. MacLeod, General Manager. These are to be competed for by teams from all over the system, and as the sections at various points expand, some keen competition is to be expected.

The Fort Rouge section is highly elated over the successes of last fall. On the C.P.R., the St. John's Ambulance Association holds sway. The winners of the competitions of the Western and Eastern Lines met last fall, the team from the Western Lines being declared the winners. The C.N.R. Fort Rouge section challenged this winning team, and in the demonstration which followed, proved capable of defeating the champions of the C.P.R. system.

Blende River Viaduct, Canadian Northern Ontario Railway.

The Blende River viaduct, at mileage 24 east of Port Arthur, on the C.N.O.R., recently completed, is the largest of the many steel structures on that line. Although the stream crossed is but a rivulet, the wide and deep valley necessitated a structure of some magnitude to conform to the location and grade adopted, the alternative being a more circuitous route, which would have increased the length of line several miles.

Blende River Viaduct, Canadian Northern Ontario Railway.

The structure is 2,300 ft. long, the maximum height above water level being 130 ft. It comprises 14 spans of 75 ft., 15 towers of 45 ft., with six 60 ft. spans and four 40 ft. towers at the ends. The foundations of the two abutments and end pedestals are on rock; the remaining pedestals are built upon pile foundations.

The structure is designed to Dominion Government Specification, 1908, Class heavy loading—that is, a capacity to safely carry two 180 ton locomotives, coupled together, followed by a train load of 4,750 lbs. per lin. ft.; or, in other words, the structure could safely be loaded from end to end with locomotives, each weighing in working order 180 tons.

The ties used are 10 by 12 ins. by 14 ft., with every fourth tie 18 ft. long, on which is carried on one side of track a foot walk, with substantial hand railing.

The concrete substructure was started May 3, 1912, and finished July 30, 1912. The first span of the superstructure was placed Aug. 20, 1912, and the last span, or most easterly, in position Dec. 28, 1912.

The concrete substructure was built by J. A. Whalen, subcontractors Kennedy Construction Co., the total yardage being about 3,600 cu. yds. About 2,000 piles were used in the foundations. The steel superstructure was built by the Canadian Bridge Co., Walkerville. The weight of steel is about 5,000,000 lbs. The total cost was nearly $350,000.

The viaduct was designed under the supervision of W. P. Chapman, Bridge Engineer, Mackenzie, Mann and Co., Ltd.

Telephone Train Dispatching on the Intercolonial Ry.—F. P. Gutelius, General Manager, Canadian Government Railways, is reported to have stated recently, that a telephone dispatching system will be installed almost immediately on the St. John-Moncton section of the Intercolonial Ry., and that tenders have been asked for the necessary equipment. It is said that at the same time the automatic block signalling system will be installed.

Railway Lands Patented.—Letters patent were issued, during August, in respect of railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

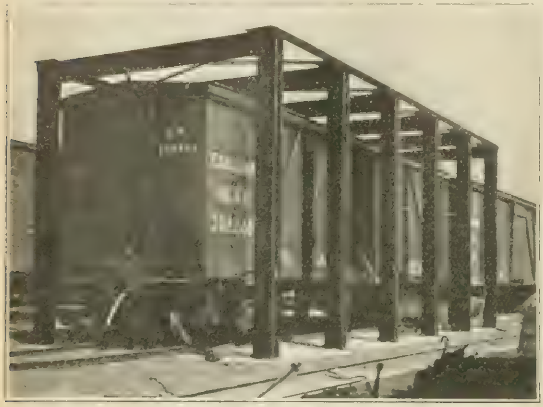
Railway Mechanical Methods and Devices.

Steel Car Straightener at Canadian Pacific Railway West Toronto Shops.

The advent of all steel, and steel frame cars, into modern railway practice has involved a readjustment of the means of handling repairs on such equipment. Whereas, in wooden equipment, when a car became partly wrecked, the members were either left more or less intact, or else completely destroyed, with steel construction, the ability of the members to be distorted without serious injury to the material, other than the necessity of bending back into shape, has made possible the continued use of the same members, the necessary repairs being made thereto without renewal.



Frame for Straightening Bent Steel Cars.

One of the most frequently encountered difficulties with steel equipment in a wreck is that either the sills or frame become sprung, either from a too heavy end blow, or from a side swipe. In wooden equipment, this would require the replacing of the damaged member, but with the steel, if the proper facilities be at hand, the member may be bent back into shape and is then, to all practical purposes, provided it was not cracked in the accident, as good as new.

The C.P.R. has a great many steel frame cars of the outside Z bar frame construction. Many of these are damaged in the course of service, and to facilitate repairs to them, the bending frame shown in the accompanying illustration, is used. The frame shown is in use in the West Toronto shops, and is similar in design, but somewhat larger, than the original one of this type built at the company's Hochelaga, Montreal, shops.

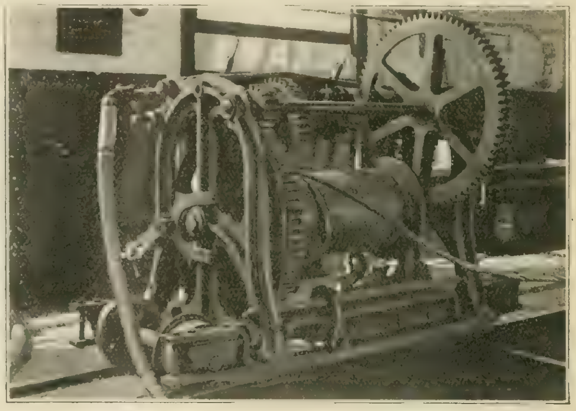
The frame comprises a double row of steel columns at 14 ft. centres, there being 6 pairs, 7 ft. apart. The columns are built up of two 12 by 3 in. channels, 3½ ins. apart, back to back. Rivetted to each channel [illegible] 6 by 3 in. I beam, stiffening the column in both directions. These columns are mounted in a concrete base, 17 ft. wide, and the columns are tied together and diagonally braced at the top. In each column, between the channel backs, there is a cast iron block, 8 ins. deep, on each side the pair being tied together by two ¾ in. bolts. Passing through the pair of blocks is a 2½ in. square thread screw, 24 ins. long, with a pitch of four threads per inch. The inner end of the screws have bearing plates for bearing up against any part of the car, and the outer end is squared for a wrench. By means of the ¾ in. tying bolts, the jack screws may be located in position on the column, so that the sills or any part of the frame may be pressed back into position. In cases where the screws are not sufficiently powerful to press the frame back into shape, the practice is to use a jack between the frame column and the member of the car that is to be straightened.

Not only are the members of steel cars twisted side ways, but it frequently happens that, from an end thrust, the sills are sprung upwards in the centre. To meet this difficulty, provision is made in this straightening frame. Between the end pair of columns, bedded in the concrete base, there are at each end four 1¼ in. eye bolts, spaced 1 ft. each side of the rails. In each eye bolt there is a 10 in. ring. To straighten a sill, it is the practice to tie the car down to these rings by passing a chain from the rings over the body bolster or the middle section of the sills. Then, by placing a jack under the ends of the car and jacking up, it is usually possible to bend the sills back.

At the recent annual meeting of the Great North Western Telegraph Co., at Toronto, the board of directors was elected as follows for the current year:—Z. A. Lash, K.C., President; Adam Brown, Vice President; Jas. Hedley, Hon. J. K. Kerr, Æmilius Jarvis, F. B. Hayes, N. Carlton and J. B. Van Every.

Locomotive Tractor in Grand Trunk Railway Shops.

In the G.T.R. Toronto Shops, E. Logan, General Foreman, the old Northern Ry. locomotive house is used for light locomotive repair work principally, the size of the old stalls precluding its use as a locomotive house for the general run of modern motive power. It is large enough to take in a large locomotive without tender, and it is generally in this unattached condition that the locomotives are brought in. As it is only used for repair work, the locomotives are seldom under steam, and cannot come in under their own power, requiring some other agency. Formerly, it was the custom to bring the locomotive in from the turntable by block and tackle, with a locomotive attached to the rope out in the yard. This was a slow process, and required the assistance of the yard crew. A tractor of the design shown in the accompanying illustration is now employed.



Locomotive Tractor for Drawing in Locomotives.

Turntable, with Tractor Control Rod Jointed.

Motion Reversal Links.

The tractor consists of a cast iron frame mounted on wheels, and carrying a steel wire drum, driven from a small air engine on the back of the frame through a train of gears, the air engine being supplied with air through an air hose from the nearest connection. Around the inside of the outer wall of the locomotive house there is a narrow gauge track on which the tractor operates. In the wall at the head of each of the tracks there is an eye bolt to which the tractor is secured at the head of the desired track, by a clamp on each side of the frame, as shown, each side of the clamp containing a turnbuckle to tighten the tractor back into place. This tractor is found most useful.

Turntable Tractor Control in Grand Trunk Railway Toronto Yards.

No G.T.R. locomotives are held over in Toronto, the Mimico locomotive house, west of the city, being used for all locomotives that must remain over. The motive power facilities in the city are in consequence very limited, consisting principally of a coaling plant, and plant for turning the locomotives, the turntable in the accompanying illustration serving that purpose.

This turntable has an air operated tractor, of a type recently described in these columns. Briefly, it consists of a heavy cast iron plate, for weight, mounted on a wheel running on the outside turntable track, the whole attached to the turntable by a hinge connection. The air operating mechanism consisting of a couple of air cylinders, connecting through a train of gears with the track wheel, is mounted on the back of the cast iron frame.

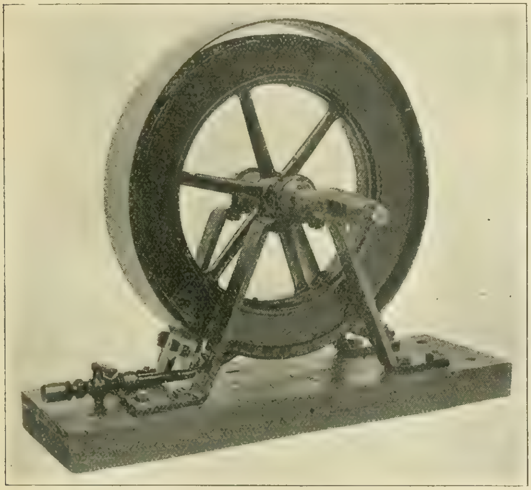
The air connection from external sources comes to the turntable through its centre bearing, and thence to the air motor. The turntable is arranged as to enable operation from either end. Along the side of the turntable there runs a rod, with vertical levers at each end. This rod is broken at the centre, the two portions being connected together through the system of levers shown in the small illustration, which transmit the motion from the one rod to the other in an opposite direction. The object desired in so arranging this rod was that the turntable might be operated positively in either direction, there being no uncertainty as to which direction the table will move when the control lever is swung over. In this arrangement, the swinging of the lever away from the operator at either end causes the table to move in the direction the lever points.

During August, three men were killed and three were injured in the course of railway construction throughout the Dominion. During the same month, 16 were killed and 107 were injured in steam railway service.

Machine for Grinding Angle Cocks at Grand Trunk Railway Port Huron Shops.

In the G.T.R. shops at Port Huron, Mich., there is a small air power machine for grinding in the valves of angle cocks, which is said to be in use in other shops on the system as well. This machine is shown in the accompanying illustration. The propelling means closely resembles the construction of the rotors on impulse turbines. On the periphery of a small wheel there are projecting blades of thin plate, held in place at the sides by annular plate rings secured to the side of the wheel rim. This forms chambers, into which the air blast from the pipe on the left end of the base is directed, this blast striking the forward radial blade, propelling the wheel. Between the supporting members on the wooden base of the machine, there is a section of thin plate, closely fitting up under the rotating wheel, retaining the air blast in the impinging cavity without dissipating. Beyond the end of this piece, and around the balance of the circumference, the rim is protected with a guard strip, as shown.

The valve of the angle cock to be ground is mounted on the end of the air motor shaft, in the manner indicated, and the high speed of the machine rotates the valve in the body of the cock in the usual manner, customarily done by hand or in the lathe.



Machine for Grinding in Angle Cocks.

Lacquer Bake Oven at Canadian Pacific Railway West Toronto Car Shops.

In the passenger car department of the C.P.R. West Toronto Shops, H. R. Naylor, General Foreman, it was necessary recently to build a new lacquer bake oven. As it was required to have the oven of such size as to be able to accommodate all sizes of work, the problem was how to build it to handle all classes of work economically, especially when the major portion of the work is small stuff, requiring small oven space. Consideration had to be given to the best size that would handle all classes of work.

The largest piece that will require to be handled is the long parcel rack over the car seat. These form a very small portion of the total work to be handled. The oven shown in the accompanying illustration is the solution of the problem. On the right is the main oven, lined with galvanized iron, and heated with steam coils in the bottom. The work to be baked is carried on shelves made of smoke box netting. The door is of the vertically sliding type, counterbalanced by weights. For the general run of articles, this small, almost square, oven meets all requirements. To have made it long enough to hold the racks mentioned would have given a greater length than that normally required. To accommodate these long racks, a vertical oven section was built on the left end of the oven as shown, with a swing door in front. This section has no heating coil, but between the main oven and this part there are two sliding doors, which are removed when the long oven is required. This gives a combined oven capable of holding all classes of work, and, at the same time one that requires very little room in proportion to the volume.

Lacquer Bake Oven for General Work, with Vertical End Section for Long Parts.

A Railway Speeder for Fire Protection is in use by the U.S. Forest Service on the San Joaquin & Eastern Rd., which runs through the Sierra National Forest, California. The speeder is a Ford roadster with a wooden rear seat and flanged wheels. It is used to transport fire fighters and fire fighting equipment, as well as supplies from one part of the forest to another. It is also used for patrol purposes. The ranger, or fire guard, who runs the speeder, carries with him an axe, hoe and rake. If he discovers an incipient fire along the right of way of the railway he puts it out by beating the flames or digging a trench surrounding the burning area. Other equipments of this sort may possibly be used in the national forests later on, but there is particular need for the speeder in the Sierra Forest because of the difficulty of transporting fire apparatus by trails and roads there.

The Associated Boards of Trade of Western Canada, meeting at Winnipeg, recently, passed a resolution urging Parliament to take steps to prevent the renewal of charters for the building of railways to companies which did not do a reasonable amount of construction within a specified time, and making it impossible to obtain the renewal of a charter if the line was not put in operation within five years.

The Forging Machine at the Montreal Locomotive Works.

[illegible]

[illegible] spreading the metal [illegible] shape indicated at B, the [illegible]

cross ram grips the two parts, while the end ram forces the metal of the longer piece over on to the short section, welding it together into a homogeneous whole as indicated. The boss thus formed, on being drilled, and the strap likewise drilled for the retaining rivets, is completed.

The next piece to be considered, a boiler brace jaw, is a somewhat more difficult piece of work, being made up of three separate pieces, welded together and upset to the required final form. The base consists of two pieces of flat bar stock as at A in fig. 2, which are first of all welded together at one end to the shape indicated at B, under

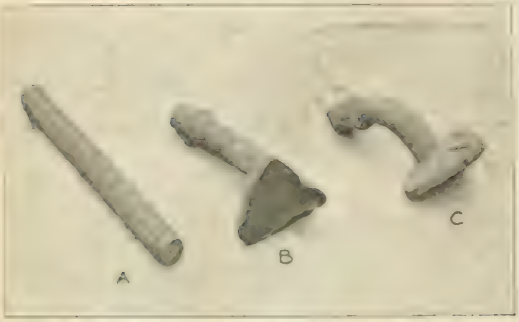


Fig. 1.—Tank Handle Produced on the Forging Machine.

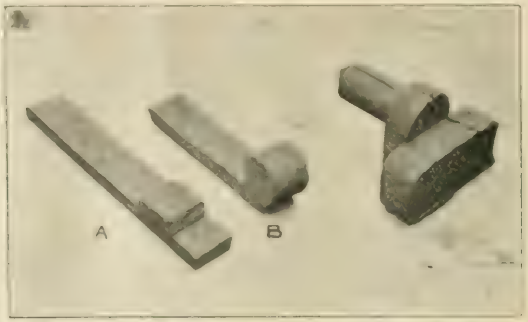

Fig. 2.—[illegible] Produced on the Forging Machine.

[illegible] cated nature as to require a great deal of [illegible]

[illegible] for a certain amount of grinding off of the fins, and the making of the shoulder end fit the pipe of the handle. Before the use of the upsetting machine for the making of such parts, they were usually castings, and when small like this one, were liable to be weak and tend to break. To make them by hand forging would be out of the question, but by the machine they are produced even more cheaply than would be possible by casting. It is of interest to note that a new type of tank handle has been developed as the result of using the forging [illegible]

a Bradley hammer, leaving the near ends of the original flat stock open, and of the [illegible] slipped, making the member ready for the [illegible] shape at C. The shape of each jaw is contained in the stationary and movable jaws and the ram has a projecting blade that [illegible] to the set depth, forms the rounded ends [illegible]

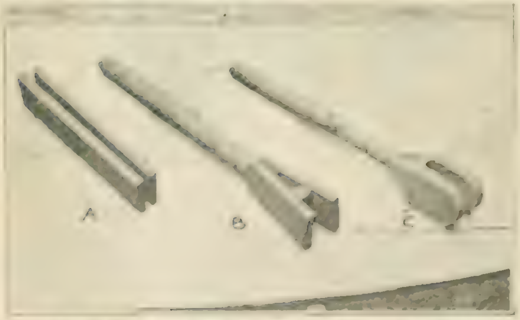

Fig. 3.—[illegible] Produced on the Forging Machine.

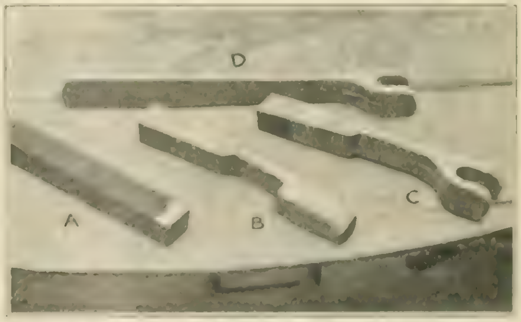

Fig. 4.—[illegible] Produced on the Forging Machine.

[illegible]

tric rod, is made entirely from a single bar of stock, 3½ by 3 ins., without the addition of any further pieces as in the last instance. The original stock piece may be seen at A. The centre of the stock piece is first of all broken down as indicated at B, to the thickness of the final body of the rod, the breaking down being all on one side with regard to the end to be machine forged, the other end being broken down centrally. The next step is the machine forging. The offset broken down part is placed downward in the machine, with the form of the outside part of the jaw contained in the stationary and movable rams, along the lines of cleavage, which may be noted at C in fig. 4. The end ram, with a projecting blade, as in the former instance, is forced into the body of the metal, the metal flowing outward and backward along the blade of the plunger. This is a rather remarkable piece of machine forging, as the end plunger has no assistance in entering as in the last example, having to force its way through the solid metal, displacing the latter into the form of the side plunger, with the ends formed in the face of the end plunger itself. The opposite end to this forged part is next drawn out under the steam hammer to form the part that is attached to the eccentric. The whole is subsequently machined.

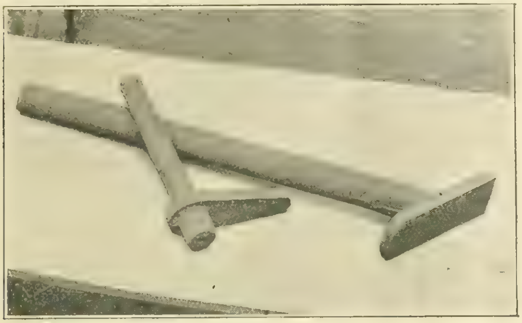

Fig. 5.—Grate Shaker Shaft and Smokebox Brace Produced on the Forging Machine.

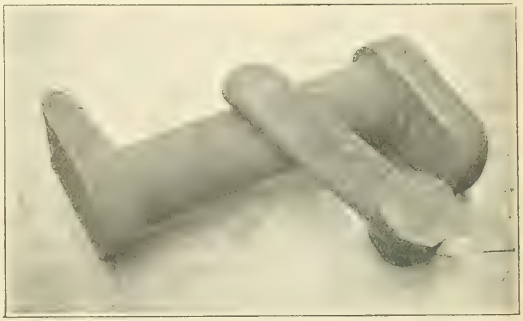

Fig. 6.—Spring Hanger and Rocker Barrel Produced on the Forging Machine.

A very complicated piece of machine forging is shown to the right in fig. 2. This is a link saddle for the Stephenson link motion, and is made in the forging machine, from 3½ by 3 in. stock, in one blow, the stock having first of all been roughly shaped to size under the steam hammer. This being considered a specially fine sample of machine forging, no details of the steps involved could be obtained. It is a most interesting piece of work, and demonstrates probably as well as it is possible to do, the scope of the machine and its possibilities under skilful management.

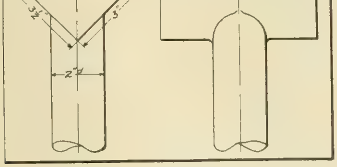

Fig. 7.—Pilot Heel Brace from Forging Machine.

A couple more examples of the forging machine work are shown in fig. 5. The member on the left is a grate shaker shaft, made from a single length of 1¾ in. round stock. The first step in its production is to put a bow in the stock at the point where the offset arm is to be located. The centre of the bar stock at the eccentric point is 3½ ins. from the centre of the main bar centre line. This bend in the stock is given under the steam hammer. The stock at this stage resembles an offset crank shaft. With the offset upward, the stock is placed in the forging machine, the rear face of the offset arm being formed in the cross dies of the forging machine, the end plunger forcing the bent part of the arm up into these side dies, spreading it upward in the die cavity, the front being formed by this plunger, which at the same time upsets the end from 1¾ to 2 ins. in size to the shape shown in this illustration.

The other part shown in fig. 5 is a smoke box foot brace. The original stock is first of all bent at the end at right angles, leaving sufficient stock in this bent end to form the finished foot. The bent stock is then gripped in the cross rams of the machine, which contain the form of the rear face of the foot, the lengthwise ram forcing the metal into the pockets of the side rams, the metal at the same time from the squeezing of the end plunger, floating downward to form the lower part of the foot from the part of the bar that was bent upward.

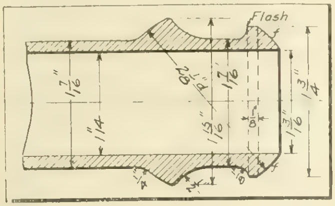

Fig. 8.—Forged End of Schmidt Superheater Tube.

The small spring hanger in fig. 6, the boss of which was formed in the forging machine, is a simple job, the stock being first of all drawn down roughly to shape under the steam hammer and finished by machine forging. The other member in this illustration is a rocker barrel, and serves as a fair sample of the size of work that can successfully be handled in the forging machine. Both ends of the rocker are formed in the machine, without any preliminary preparation under the steam hammer, as in some of the other examples. A straight squeeze of the ram on the end causes the metal to flow upward to form the arms. The ends are formed separately, heating each independently and upsetting. This piece is considered to be probably the most difficult undertaken, on account of its large size.

Another instance of heavy forging machine chine is the pilot heel brace shown in fig. 7. This heavy end forging is upset and formed in one heat in the same operation. The 2 in. round stock is held between the cross dies, the latter containing the form of the rear portion of the brace head, the plunger carrying the four faced form of the end projection. The forward movement of the ram upsets the stock end, forming it out into the final shape.

Another instance of forging machine work on small stock will suffice to illustrate the usefulness of the machine in the railway blacksmith shop. The ends of the superheater pipes in the Schmidt superheater are of the form shown in fig. 8. When first introduced, the end swelling was made on the tubes by shrinking a collar over the end, and then machining down on the outside to the final form. This latter part of the operation was a long and expensive one, as only the ball surface on the very end required a finished surface. These tube ends are now upset in the forging machine, all in one operation. The outer form of the tube end, with the exception of the portion required to be finished, is carried in the cross dies of the machine. On the ram of the machine is a long tit, the internal diameter of the tube, around the shoulder of which is the die formation for the finished end part of the tube. The ram tit prevents the inward collapse of the tube, the end upsetting to the shape shown. Along the edge indicated there is a projecting flash following the upsetting, which is trimmed off in the machine when cold. With this method of forming the end only one surface requires to be machined.

Wireless Train Dispatching.—After a careful investigation the Superintendent of Telegraphs of the Atchison, Topeka and Santa Fe Ry. has come to the conclusion that it is not advisable to install wireless telegraph apparatus along the railway, not only because of the expense of installing and maintaining the stations, but also for the reason that wireless telegraph communication can too easily be interfered with to make it sufficiently reliable for railway use.

As an Adjunct of Car Refrigeration, pre-cooling applied to loaded cars has been in operation for a period of from 2 to 3 years. There are three pre-cooling plants of large capacity in California, and one in Texas, all giving satisfactory results. In addition to these large plants, there are smaller ones operated by individual shippers, giving varying degrees of success. It is claimed that pre-cooling is destined to become an important factor in transportation refrigeration, especially in the case of the more perishable fruits.

20478. Oct. 3.—Amending order 20226, Aug. 29, re C.P.R. spur for H. J. Heinz Co., Leamington, Ont.

20479. Oct. 2.—Authorizing C.P.R. to change grade crossing, necessitated by double track, and to build at grade across road allowance at mileage 18.61, London Subdivision, Ont.

20480. Oct. 3.—Amending order 16874, June 26, 1912, re erection of fences on C.P.R. Mountain Subdivision, B.C.

20481. Oct. 2.—Ordering Canadian Northern Ry. to place caretaker at Sandy Lake, Man., by Oct. 5, to look after passengers and freight.

20482. Oct. 3.—Authorizing C. N. Ontario Ry. to build bridge across Kiosh-Koqui Lake, Pentland Tp., at mileage 186.6 from Ottawa.

20483. Oct. 3.—Ordering that $4,700, deposited in a bank in Fort William, Ont., under order 18908, Mar. 20, re C.P.R. spur at Neebing Ave., Fort William, be paid on request of C.P.R.

20484. Oct. 3.—Approving C.P.R. plans showing location of stairway from Arlington St. bridge to engine house at Winnipeg, Man., and rescinding order 16860, June 22, 1912, in same connection.

20485. Oct. 3.—Authorizing C.P.R. to build second track or siding across road allowance on east boundary of Sec. 5-9-21, w. 4 m., Alta.

20486. Oct. 3.—Relieving G.T.R. from providing further protection at second highway crossing north of Corbeyville, Ont.

20487. Oct. 4.—Authorizing C.P.R. to lay, by means of a bridge, additional track of its main line over road allowance between Secs. 21 and 22, Tp. 18, R. 13, w. 2 m., Sask.

20488. Oct. 3.—Ordering Canadian Northern Ry. to erect a third class station building at St. Gregor, Sask., to be completed by July 31, 1914.

20489. Oct. 2.—Amending order 20009, Aug. 11, re G. T. Pacific Ry. diversion of Toronto St., Moose Jaw, Sask.

20490. Oct. 4.—Authorizing C.P.R. to build spur for Manitoba Cold Storage Co., Winnipeg.

20491. Oct. 4.—Authorizing C.P.R. to use undercrossing during building of Heffernan St. bridge, Guelph, Ont., providing men keep off cars and tops of cars when using same, and approving clearances as shown on plan of false work.

20492. Oct. 4.—Authorizing City of Edmonton, Alta., to open Spadina Ave. across Canadian Northern Ry. at grade within city limits.

20493. Oct. 3.—Authorizing British Columbia Telephone Co. to erect its wires across G.N.R. on Oscar St., Abbottsford, B.C.

20494. Oct. 1.—Authorizing C. N. Ontario Ry. to build spur for Laberge & Sons, Sudbury.

20495. Oct. 4.—Authorizing C.P.R. to build, at grade, spur for Tillsonburg Electric Car Co., Tillsonburg, Ont.

20496. Oct. 4.—Approving Michigan Central Rd. plan showing bridge at mileage 32.98, carrying Little Creek Drain under railway in Tilbury West Tp., Ont.

General Order 108, Aug. 11.—Ordering C.P.R. to withdraw its special rule F applying to western lines and hereafter observe the uniform rules of the Board regarding yard limits.

General Order 109.—Suspending, until further order, mileage rates on less than carload shipments of grain and grain products.

General Order 110.—Requiring railway companies, subject to Board's jurisdiction, to accept and carry by freight, trunks containing wearing apparel and personal effects when securely corded.

General Order 111.—Dismissing application of H. W. Riley, Calgary, Alta., for reconsideration of orders 17492 and 17384, prescribing express rates on cream and terms and conditions of service in connection therewith, and substituting certain rules for those included in tariff prescribed by order 17384.

General Order 112. Sept. 18.—Amending general order 111, Aug. 20, re express rates on cream. General order 111, as amended by 112, was given in full in our last issue, pg. 477.

Model Construction Camp at Canadian Pacific Railway Rogers Pass Tunnel Site.

The model camp illustrated on this page, which Foley, Welch and Stewart are having built at Glacier, B. C., for the accommodation of their employes on the 5 mile tunnel which they are boring for the C. P. R. at Rogers Pass, will cover an area of about 2½ acres, close to the eastern portal of the tunnel. The village is divided into three sections:

No. 1 section will consist of bunk rooms for first and second class workmen, with lounge rooms, writing rooms, lavatories, etc.; and at one end a row of six bungalows for married men. Each bungalow consists of living room, dining room, kitchen, three bedrooms and bathroom. This section will be 360 by 30 ft.

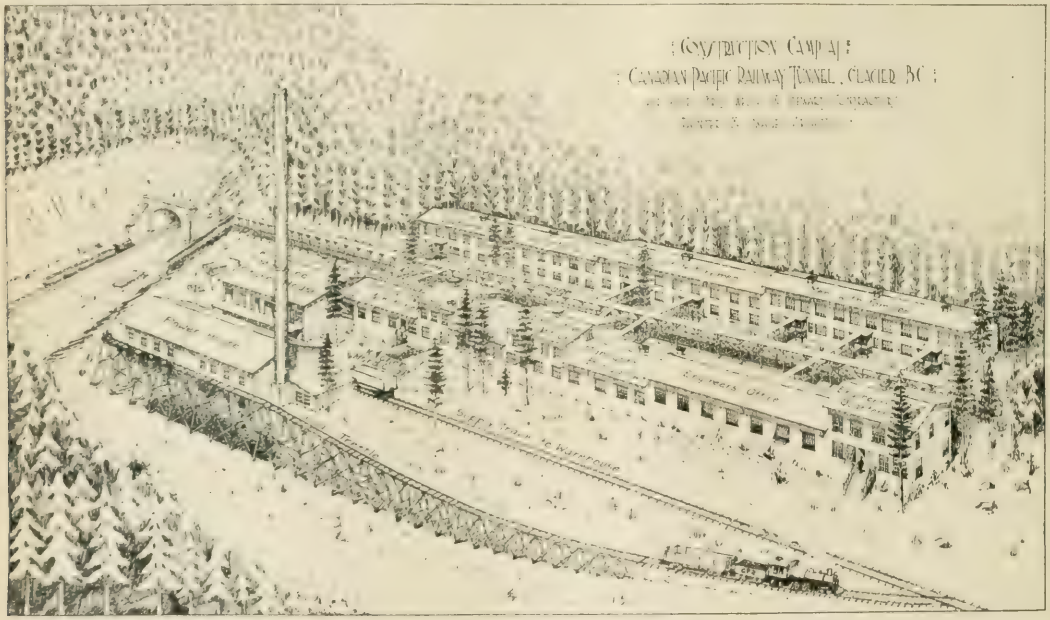
No. 2 section:—The main block will consist of general offices, with offices for Manager, Superintendent, Master Mechanic, Accountant, Paymaster and general clerk's offices. Attached to the office block will be the Manager's bungalow, and officers' dining room. The main kitchen will be in the centre of this block, with foremen's dining room on one side, and general dining room on the other. At one end of this block will be a general dry goods store, connecting off the main stores for the contractors. Above the kitchen will be arranged sleeping accommodation for the kitchen staff and over the general offices will be sleeping accommodation for the clerical staff. Ground space is being left for the accommodation of the C. P. R. engineers, attached to which will be two bungalows for married members of the staff. The whole of this main block will be 396 by 36 ft. These two sections will be placed 50 ft. apart and connected to each other by a central raised, covered walk with side walks leading off to various parts of the camp.

No. 3 section. At the rear of the main block will be the power plant, comprising boiler house containing five 150 h. p. return tubular boilers, and an engine room comprising a 3 stage compressor and generating plant. This is for supplying the air pressure required for the drilling. The camp will be also heated and lighted and supplied with hot water from this source. On one end of the boiler house will be a laundry to be fitted with modern appliances. The dimensions of this section will be about 134 by 45 ft.

The whole of the village will be built upon piles, 12 ft. centres, and the buildings will be timber-framed covered with 12 in. shiplap. The roofs will be covered with ruberoid, and will be constructed to stand the stress of 12 ft. of snow. The floors of the houses will be 8 ft. above the ground level, and will be connected with a covered in, high level walk between the two blocks, down to the right of way at the tunnel portal.

A railway siding is built to the right of way at the portal, and is connected with a coal trestle at the rear of the power house.

The village is designed for the accommodation of 300 men, and for all the necessary office work on the contract. It was designed by W. S. Painter, formerly Chief Architect, C. P. R., Montreal, and now of Painter & Swales, Architects, Vancouver, to whom we are indebted for the foregoing data.



Construction Camp at
Canadian Pacific Railway Tunnel, Glacier BC

Railway Fire Protection Association.—This association was organized at Chicago, Ill., Oct. 7 and 8, with about 40 members representing the fire protection or insurance departments of railways. The chief object is to promote the interest in, and improve the methods of, fire protection and prevention, to obtain and circulate information on these subjects, and secure the co-operation of its members in establishing proper safeguards against loss of property and life by fire, and to standardize practices through the interchange of ideas and experiences with regard to such matters in connection with railway properties. The Secretary-Treasurer is C. B. Edwards, Fire Insurance Agent, Mobile and Ohio Rd., Mobile, Ala.

Railway Finance, Meetings, Etc.

Kettle Valley Lines.—Application is being made to the Board of Railway Commissioners for the sanction of an agreement, dated June 2, made between the K.V. Ry. and the C.P.R. for an interchange of traffic between the lines of the two companies.

Temiscouata Ry.—At the annual meeting at Quebec, Sept. 30, the report showed a considerable increase in gross and net earnings for the year ended June 30. All the fixed charges, covering interest on prior lien bonds, and sinking fund, were met, and a slightly increased interest payment made on the consolidated mortgage income bonds. Following are the officers and directors for the current year:—President, J. H. Walsh; Vice President, E. O. Grundy; Secretary and General Manager, G. G. Grundy; other directors, A. H. Cook, F. Murphy, A. Laurie and W. N. Campbell.

Timiskaming and Northern Ontario Ry.—The act passed last session of the Dominion Parliament, granting a cash subsidy not exceeding $6,400 a mile for 333.45 miles of main line and branch lines, was brought into effect by proclamation, Oct. 16.

Victoria Terminal Ry. and Ferry Co., Victoria and Sidney Ry.—The annual meetings were held at Victoria, B. C., Oct. 8. Following are the officers and directors for the current year:—President, A. H. MacNeill; Vice President, L. C. Gilman; Secretary-Treasurer, A. M. Thomas; other directors, F. Van Sant and F. V. Brown.

Records of a number of similar locomotives showed that for every 0.01 in. wear of the driving wheel axles, the mileage of those made of vanadium steel was 39,145, as compared to 17,019 for those of carbon steel.

A case is on record of a locomotive that under the standard boiler horse power rating would develop 400 h. p., which has developed as high as 1994 h. p., or 398% in excess of its rating.

Canadian Pacific Railway Company's Annual Meeting.

The annual meeting was held at Montreal Oct. 1. In moving the adoption of the report for the year ended June 30, which was published in detail in Canadian Railway and Marine World for September, the President, Sir Thomas Shaughnessy, said:—

With the active business conditions that prevailed throughout the year, your gross earnings reached the high water mark of nearly $140,000,000, but since the turn of the year there has been a decrease, due to the falling off in the movement of westbound traffic, as well as in the building and other trades throughout Canada. However, thus far in the year your gross revenue is larger than it was in 1911, and, with the renewed confidence and courage that will develop everywhere as the result of the bountiful crops and the general improvement in the money market that begins to make itself manifest, there is every reason to anticipate another satisfactory year.

Your issue of additional capital stock early in the year, while it bore rather severely on shareholders who had to find money to meet their calls during the period of stringency that prevailed in Europe and elsewhere, was of great advantage to you, because it enabled you to proceed with important works essential to the future welfare of your property, and it was a distinct boon to the country, providing as it did wages for thousands who would otherwise have been unemployed, and furnishing circulation in a large way when it was most useful.

The constant demand for additional railway mileage, the recurring necessity for providing second tracks, larger stations, shops, yards and more cars and locomotives, to cope with your enormous traffic, involve expenditures that are almost startling, but we cannot afford to stop. In ten years the annual gross income has grown from $43,000,000 to $139,000,000, and if Canada is to meet our expectations in point of population and prosperity, as beyond doubt it will, there should be proportionate increase during the next ten years, provided that we have the roadbed, equipment and facilities to handle the traffic as against all comers. This does not mean that the expenditures for these purposes during the next few years need be anything approaching those of the past, because, when the lines now being built are completed, our construction programme may be substantially modified, and, with the exception of important improvements at one or two points in Eastern Canada where congestion during the busy season is annoying as well as expensive, and the completion of a second track on portions of the main line, we will, by the end of this season, be well ahead of our requirements.

This year the company's bond, debenture and share capital, including the recent issue of $60,000,000, is $283,000,000 more than it was in 1903. Of this, $124,000,000 was expended in the construction and acquisition of additional mileage and the purchase of ocean, lake and river steamships; and the additions to car and locomotive equipment absorbed $101,000,000. The balance of $58,000,000 was used for the general improvement of your property, but this amount was supplemented by premiums on stock issues and appropriations from surplus earnings to the amount of $105,000,000, nearly all of which will have been expended by the end of the current year, so that you will have invested in your property in those ten or eleven years this large sum of $105,000,000 that will represent no capital liability and will consequently make no draught upon your revenue. Only a very small portion of the earnings of your Atlantic and Pacific steamship lines were, during the past few years, included in your net revenue, having been transferred instead to the steamship replacement fund. As this fund now approximates the entire cost of your original Atlantic fleet, it is neither necessary nor desirable to increase it by liberal appropriations hereafter. Your Atlantic fleet has, in recent years, been supplemented by the acquisition of 18 steamships with a gross tonnage of 146,361. The earnings of these steamships have been utilized in reducing their cost, which now stands at about $2,750,000, included temporarily in advances and investments pending a determination of policy. The Transpacific steamships, while useful as contributors of traffic to your railway system, have never been particularly profitable, and, indeed, the Atlantic Ocean traffic varies considerably from year to year in volume and value, but I think that we may, with safety, anticipate an annual net revenue of $2,000,000 from the Transatlantic and Transpacific steamship lines after making due provision for interest on their cost and for depreciation. The formation of a steamship company to acquire the vessels whose cost has not been capitalized, to charter or lease those purchased with the proceeds of securities, and to provide means for the construction or purchase from time to time of additional vessels of a suitable type to maintain the character of the fleet and to strengthen its earning power, is receiving some consideration.

Most of the company's hotels are yielding a fair return, but some of them provided as necessary accessories to tourist traffic during the summer are operated at a loss. However, on the whole your hotel system is reasonably profitable, and hereafter the net profits, which have been used in the past for additions and improvements, will be treated as special income.

Legacies that came to you with acquired lines, the utilization of coal lands, and other circumstances have involved you in a number of enterprises that do not ordinarily come within the province of a railway company. There are mining, smelting and water power interests, of considerable values as compared with what they cost, from which revenue in the current year will be approximately $250,000; coal mines at Bankhead, Hosmer and Lethbridge, from which you received in the year upwards of $300,000, and lumber mill at Bull River, B.C., where ties and timber are manufactured for the company's use, a doubtful commercial enterprise excepting in so far as it serves to keep prices within reasonable bounds.

Railway companies in the United States are required to segregate their railway earnings proper and their income from other sources, and, while there is as yet no similar legal requirement in Canada, we have, as you know, recently made such a change in our system of accounting as to practically conform to the practice of other railway companies, but we still include in the earnings of the railway the returns from commercial telegraph system and our Pacific Coast steamships. In the next annual report the revenue from these sources will be treated as special income, and, of course, there will be a corresponding reduction in the gross and net earnings of the railway.

To prevent large areas of your land from being purchased and held for speculative purposes, regulations were adopted last autumn limiting sales to actual settlers, and, in order that it may be as easy as possible for settlers to purchase and develop lands, only one-twentieth of the purchase price is required to be paid down, and the balance is spread over 20 years with interest at 6%. This policy should have the effect of bringing your lands under cultivation with increased rapidity, and, while the cash installments will be less than heretofore, the deferred payments carrying interest will yield a larger income.

Your ownership of 6,287,250 acres of land in Manitoba, Saskatchewan and Alberta is mentioned in a footnote to the balance sheet, but it plays no part in your accounts, excepting when the lands are sold. With established conditions in Western Canada and the experience of the last few years there would appear to be no difficulty about determining, with a fair degree of accuracy, the present value of this asset. Of course, as the lands are disposed of and the country becomes more thickly populated the market value of the remaining areas will naturally tend upward, but, in order to be quite on the safe side, let us adopt a figure that is somewhat below the average of the last few years, namely, $14 an acre. On this basis your unsold lands are worth $88,021,500, but you have spent a large sum on irrigation works in the Calgary district, with the result that 500,000 acres of the irrigable land should bring an average of $25 an acre above the price mentioned, or $12,500,000 additional. The unsold Esquimalt and Nanaima lands on Vancouver Island, and your residuary interest in other lands acquired with railway lines constituting a portion of your system, will realize at least $7,000,000. Then you have over 600 townsites, including Vancouver, appraised by the officers of the Land Department at $21,500,000. The present estimated market value of these lands and townsites still belonging to the company is, therefore, $129,021,500.

Your directors have been considering the desirability of conveying these lands, townsites and other interests to a company in exchange for all its capital stock, to be held in your treasury and taken into the balance sheet with your other assets, but a conveyance of that description has its disadvantages, particularly with reference to the lands, and it is probable that the same end may be accomplished by the creation of an investment fund to be administered by trustees or by officers of the company specially designated. In any event your directors will endeavor, before the next annual report is published, to devise some plan for reconstructing the special income account and showing your extraneous assets in more definite and tangible form. Meantime, while the present policy in dealing with your land sales will remain unchanged and the proceeds will be conserved as heretofore, it is felt that the cash proceeds of sales in your townsites, which, last year, amounted to $1,409,747.44, may, with propriety, be taken into special income, to be dealt with as the directors deem best.

The report was unanimously adopted.

It was resolved, that the construction and equipment of the following branch lines and extensions of other branch lines which have been authorized be approved:—

A branch from Gleichen to Shepard, Alta., 40 miles;

A branch from Bassano easterly, Alta., 118 miles;

A branch from Snowflake, Man., westerly, 9 miles;

An extension northerly of the Selkirk Branch, Man., 26 miles;

An extension westerly of the Weyburn-Lethbridge Branch, 240 miles.

An extension northwesterly of the Suffield Southwesterly Branch, 27 miles;

An extension northwesterly of the Swift Current Northwesterly Branch, Sask., 175 miles,

and for the purpose of aiding the construction and equipment of the said branch lines and extensions of branch lines, the directors may, from time to time, as may be necessary, and in accordance with the statutory provisions in that behalf, issue and dispose of consolidated debenture stock of the company to such amount as they may deem expedient, not exceeding in the aggregate an amount equal to £6,000 a mile in respect of the Gleichen-Shepard Branch, Bassano Branch, Suffield Southwesterly Branch extension and Swift Current Northwesterly Branch extension, £5,000 a mile in respect of the Weyburn-Lethbridge Branch extension, £4,000 a mile in respect of the Snowflake Branch, and £3,000 a mile in respect of the Selkirk Branch extension.

Resolutions were also adopted authorizing the issue of £1,000,000 consolidated debenture stock at 4%, to pay for the two intermediate class passenger steamships for the Atlantic Service, and two turbine passenger steamships for the British Columbia Coast Service, at present under construction in Scotland; and amending bylaws 40, 44 and 45 relating to stock certificates and transfer books.

The retiring directors, D. McNicoll, C. R. Hosmer, Hon. Robert Mackay and Jas. Dunsmuir were re-elected.

At a subsequent meeting of the board, Sir Thos. Shaughnessy and D. McNicoll were re-elected President and Vice President, respectively, and the following were appointed as the executive committee:—R. B. Angus, D. McNicoll, Sir Edmund Osler, Sir Thos. Shaughnessy, Lord Strathcona and Mount Royal, and Sir William Van Horne.

The Railway Companies and Outward Cartage Charges.

Considerable information on this subject was given in Canadian Railway and Marine World for October. The action of railways operating west of Port Arthur in giving notice that the practice of advancing cartage charges on outward shipments and collecting the same from consignees at destination would be discontinued Oct. 1, having been brought before the Board of Railway Commissioners, Commissioner S. J. McLean gave the following judgment Sept. 25:—

Under date of Aug. 5, the railways in Western Canada issued a notice that, effective Oct. 1, the practice of advancing cartage charges on outward shipments and the collection of same from consignees at destination would be discontinued. The position of the railways in the matter may be taken as set out in the following statement from the Canadian Northern:—"For many years the Canadian Pacific, Canadian Northern, and Grand Trunk Pacific included in their Winnipeg tariff the cost of cartage. This practice was discontinued on May 15, 1913, but during the period when Winnipeg was eliminated from tariffs, including the cost of cartage, important jobbing interests developed in such cities as Regina, Calgary, Saskatoon and Edmonton, and under arrangement with the draymen performing the service in these cities, the cost of cartage on outward business was added to the freight bill and collected from consignee. With the abrogation of cartage in Eastern Canada, Oct. 1, the action was taken to harmonize the practice throughout Canada. Following the discussion respecting the abrogation of cartage in Eastern Canada, the Retail Merchants' Association of Prince Albert appealed to the Board against paying the cost of cartage on shipments received from Winnipeg, Saskatoon, Regina, and other points where this arrangement was in force, and as the Board intimated to them that this practice was irregular we abandoned same."

Various protests against the terms of this notice were subsequently received from the jobbing interests concerned. On the other hand, a strong protest against the continuance of the arrangement was made in a telegram from H. L. Montgomery, of Deloraine, Man., setting out the existing arrangements as unjust to the country merchant, and that the jobbers should "meet the country merchants in the open by adding the cartage to their invoices."

The proposed change comes at an awkward time so far as business is concerned. It is not only a busy season because of the laying in of fall stocks by the consignees; it is also a time when the traffic handled by lake and rail is being rushed forward for Western dealers. It is further represented to the Board that the existing cartage arrangements are dependent upon the arrangement as to advance charges which has been entered into by the railways. The railways state that as a matter of business practice, they cannot agree to look after the advance charges and collection business of every individual drayman, since it would lead to their books being cumbered with a multiplicity of accounts. This plea, from the standpoint of business practice is, however, aside from the question of the legal right of the railways so to act.

The Board has already made clear its position as to the legal status of the matter. It desires that the proper arrangement should take place, and as soon as possible. But in desiring that the proper arrangement should take place as promptly as possible, it at the same time recognizes that, in view of the custom which has in this respect developed, it is in the interest of all concerned that the change should be made with a minimum of dislocation of business in respect of cartage to and from the railway. When the protests against the disturbance of the existing arrangement were received, there were at the time negotiations pending in Eastern Canada regarding the cartage service, cancellation notices in regard to which had been filed, effective Oct. 1. Bearing in mind the tiding over the transition period, the Board suggested to the railways that the existing arrangements as to advance charges and collection in Western Canada might be continued until Jan. 1, 1914.

It has been represented to the Board that the shippers will, at the earliest possible moment, take up with the railways and the cartage companies the question of working out some system which will obviate the present objectionable features. It has not the power, nor is it attempting to exercise power, to change or modify in any way the rights and obligations of the parties to the shipping contract. The question as to whether the consignees should or should not pay advanced cartage to the railway is one entirely of contract between the parties. The Board has nothing to do with it, nor is the work done by the railways in any manner a railway service or facility within the meaning of the Railway Act. Changes of long standing practices always involve more or less inconvenience, dislocation of business, and delay. Oct. 1 is about as bad a time for the proposed cancellation as could well be selected. Under these circumstances, the Board will make no order in this matter until after Jan. 1, 1914.

Dominion Railway Subsidy Contract.—The Dominion Government has entered into a contract with the C. P. R., under the act granting aid in the construction of railways, for the construction of a line from Gimli, Man., to the Icelandic River, at or near Riverton, 30 miles.

The towers for the wireless telegraph station at Pas, Man., have been completed. They are 400 ft. high. The contract for the power house has been let to Boyle and Hughes.

Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those for 1912-13, from July 1, 1913:—

	Gross Earnings	Expenses	Net Earnings	Increase
July	$1,928,800	$1,414,500	$514,300	$19,700
Aug	1,824,800	1,416,200	408,600	37,800
Sept	1,994,900	1,470,000	524,900	101,400
	$5,748,500	$4,300,700	$1,447,800	$158,900
Incr	$ 501,500	$ 342,600	$ 158,900	

The mileage under operation in Sept. was 4,520, against 4,297 in Sept., 1912.

Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those for 1912-13, from July 1, 1913:

	Gross Earnings	Expenses	Net Earnings	Decrease
July	$11,993,062.27	$7,876,269.09	$4,116,793.18	$331,383.72
Aug.	11,434,459.88	7,473,320.64	3,961,139.24	756,786.42
	$23,427,522.15	$15,349,589.73	$8,077,932.42	$1,088,170.14
Incr.		$ 211,577.84	. . . . . .	. . . . . .
Decr	$ 876,592.30		$1,088,170.14	. . . .

Approximate earnings for Sept., $11,887,000, against $11,322,000 for Sept., 1912.

Grand Trunk Railway Earnings, Etc.

The following figures show the earnings and expenses of the G.T.R., C.A.R., G.T. Western Ry. and D.G.H. & M.R. for August:—

Grand Trunk Railway.

Earnings	$4,090,000
Expenses	2,796,100
Net earnings	$1,293,900

Canada Atlantic Railway.

Earnings	$219,000
Expenses	241,200
Deficit	$22,200

Grand Trunk Western Railway.

Earnings	$630,900
Expenses	557,500
Net earnings	$73,400

Detroit, Grand Haven and Milwaukee Ry.

Earnings	$214,200
Expenses	208,000
Net earnings	$6,200

TRAFFIC RECEIPTS OF THE SYSTEM

Aggregate from July 1 to Sept 30:

	1913	1912	Increase
G.T.R.	$11,890,207	$11,359,777	$530,430
C.A.R.	659,164	620,311	38,853
G.T.W.R.	1,877,477	1,781,962	95,515
D.G.H. & M.R.	641,428	615,359	26,069
Totals	$15,077,276	$14,377,409	$690,867

Grand Trunk Pacific Railway Earnings.

Approximate earnings for Sept., $4,870,641, against $4,750,282 for Sept., 1912.

The earnings of the Prairie Section and Lake Superior Branch for September were $756,770, and from July 1 to Sept. 30, $1,738,371.

Western Kootenay Light and Power Co.—C. R. Hosmer, a director of the C. P. R., has been elected President of the W. K. L. and P. Co., succeeding the late W. M. Doult. The other directors are W. R. Baker, F. Paul, E. Hanson, F. F. Benson and J. S. C. Fraser. This company is developing power in the Rossland district of British Columbia, and will supply current to the C. P. R. in connection with the electrification of the Rossland branch.

Leonard Shops, National Transcontinental Ry.—The shops which the N. T. R. is having built in St. Malo, a suburb of Quebec, and which were fully described in Canadian Railway and Marine World for September, are to be called the Leonard shops, in honor of R. W. Leonard, Chairman of the N. T. R. Commission, under whose administration they are being built. The contract for their erection has been awarded to J. Gosselin, Point Levi, Que.

Windsor Street Station and Terminal Yards, Montreal, Canadian Pacific Railway.

The remodelling and extension of the Windsor St. station, Montreal, is now nearing completion, and a portion of the new part has been in service for some months. The trackage arrangements have been completed, the layout at present in use being shown in the accompanying plan of the station and terminal. All the portion of the station and office building south of the division line shown is new. The ground floor is being used for waiting rooms, restaurant, etc., and the other floors for general and local officials' offices. In the old layout, all the portion of the property south of the division line, through the new and old parts of the station, did not belong to the railway, so that all the terminal facilities were to the north of this line. In the former arrangement, there were 6 station tracks, all projecting into the station building about 40 ft. further than in the new arrangement, the latter giving greater concourse accommodation. All the station tracks branched off from the main line just west of Aqueduct St., with none of the station tracks of a greater length than 900 ft.

In the arrangement shown in the plan, and now in use, the number of tracks has been increased from 6 to 11, and their length increased by the acquisition of the property to the south of the old tracks in the station, and the property to the north of the tracks west of Aqueduct St. The northerly of the station tracks has been straightened out to give a clear length of 1,400 ft. at the point where it strikes the main line. With one lead track leading into all the station tracks, the tracks vary from the maximum mentioned down to about 400 ft., giving a total station capacity, making due allowance for locomotive length, of 120 cars, varying in train length from 5 to 14 cars.

In increasing the size of the yard, it has been necessary to build new retaining walls on the south side of the station grounds. Osborne St., on the north side of the station, is on the crest of a hill, which drops off quite rapidly to the south, so that while the station level is that of Osborne St., on the St. Antoine side there are three stores below that level. In consequence, the southerly portion of the yard had to be reclaimed by retaining walls and filling to the lines shown in the plan.

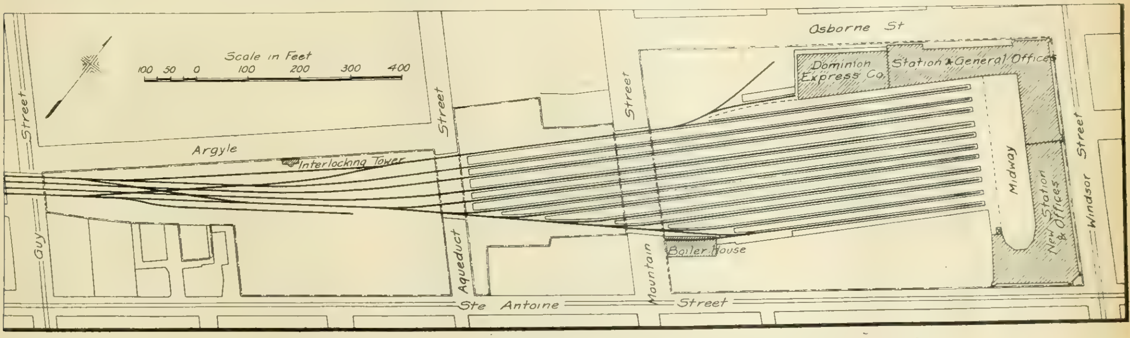
The station crosses two streets on overhead bridges. That at Aqueduct St. is a 5 span bridge, and at Mountain St. a 9 span bridge, both of steel construction, with steel floor, waterproofed deck. The elevation of the rails above the streets on the north side being considerably less than on the south, makes the bridge column heights vary.

The train shed formerly used is being removed, and the newer Bush type used instead. Over the northerly 7 tracks, it will extend to beyond Mountain St., or 1,140 ft., while the shed for the lower four tracks cuts off in pairs 950 and 810 ft. long respectively. The Bush terminal construction calls for a low shed building in spans bridging two tracks, with a longitudinal opening in the roof for the escape of the locomotive gases. This shed is supported on columns between every other track. The longitudinal opening for the escape of gases is encased in concrete, and is in consequence not subject to attack from the fumes.

The passenger platforms are 16 ft. wide, and it is along this platform that the train shed columns are placed. The intermediate platform is 10 ft. wide, and is for baggage handling, this arrangement segregating the passengers from the baggage. The platforms are of concrete, and the track ballast of crushed stone, the track being laid with 85 lb. rails.

The whole switching arrangements of the yard are to be controlled from the interlocking tower shown. The initial installation calls for 70 electrically operated switches, with accommodation for 88 when required.

We are indebted to J. M. R. Fairbairn, M. Can. Soc. C.E., Assistant Engineer, and N. E. Gutelius, Resident Engineer, for the data on which the foregoing article is based.



Plan of Canadian Pacific Railway Windsor Street Station and Terminal Trackage and Approaches, Montreal.

Prohibiting Riding on Pilots of Locomotives.

The Board of Railway Commissioners passed order 20597, Sept. 22, directing the C.P.R. to cause its Western Lines officials to issue a circular to employes similar in terms to circular 34, issued by its Eastern Lines officials and applying to Eastern Lines.

Circular 34 referred to was issued Mar. 20, 1912, by C. Murphy, then General Superintendent of Transportation, Eastern Lines, and reads as follows: "To all concerned. Accident to employes through riding on pilots of engines. The practice of riding on pilots of engines, except when switching in yards, must be discontinued, under penalty of discipline."

A. J. SHAPTER, engine tester, G. T. R., Montreal, in remitting his renewal subscription writes, "I may say that I am very pleased with Canadian Railway and Marine World."

Canadian Ticket Agents' Association's Annual Meeting.

The association's 27th annual meeting was held at the Hollenden Hotel, Cleveland Ohio, Oct. 8, 9 and 10, the members and their guests having travelled from Buffalo, N.Y., on the Cleveland and Buffalo Transit Co.'s s.s. City of Buffalo. At the opening of the meeting addresses of welcome were delivered by the mayor of Cleveland, the President of the Chamber of Commerce and the chairman of the local reception committee. R. W. Wallace, G.P.A., Erie Rd., and C. L. Kimball, A.G.P.A., Pennsylvania Lines, representing the American Association of General Passenger Ticket Agents, and the President and Secretary of the International Association of Ticket Agents, extended fraternal greetings. Among other visitors present were: W. Stitt, G.E.P.A., Canadian Pacific Ry.; W. S. Cookson, A.G.P.A., Grand Trunk Ry; M. G. Murphy, D.P.A., Canadian Pacific Ry., and a number of officials of U. S. lines were also among the visitors, and several of them spoke.

The veteran Secretary-Treasurer and one of the founders of the association, E de la Hooke, presented his annual statement showing the association to be slowly increasing in numbers and the finances to be in a satisfactory position. The President, G. J. Alexander, read an address.

Two papers were read, one by Dr. Shaw, the association's honorary physician, on precautions to be observed by travellers from the standpoint of health, and the other by P. V. G. Mitchell, Passenger Traffic Manage, White Star-Dominion Line, Montreal, on ocean steamship business. A number of questions submitted to the question box were discussed and committees were appointed to deal with some of the subjects. J. A. Mackenzie, of Woodstock, Ont., exhibited his device for filing tariffs.

The officers, etc., were unanimously reelected as follows:—President, G. J. Alexander, Richmond, Que.; 1st Vice President, J. Kidd, Goderich; 2nd Vice President, C. B. Jones, Orillia; 3rd Vice President, J. A. Mackenzie, Woodstock; Secretary-Treasurer, E. de la Hooke, London; Auditor, A. M. Hare, Tillsonburg; Honorary Counsel, J. H. Flock, London; Executive Committee, W. Jackson, Clinton; W. McIlroy, Hamilton; F. W. Churchill, Collingwood; J. P. Hanley, Kingston, and W. Fulton, London. All the officers, etc., except the President, are located in Ontario.

Among the entertainments, etc., was a smoker-concert, and a visit to a daily newspaper office for the men, a tally ho drive and theatre party for the ladies, a motor drive through the city and suburbs for the whole party, as well as a dance.

Mainly About Transportation People.

DR. G. A. KENNEDY, who died at Winnipeg, Oct. 8, was for several years a C.P.R. surgeon there.

G. CONDON, the National Steel Car Co.'s representative at Montreal, sailed from New York, Oct. 4, for Europe on a two months holiday.

Mrs. Macpherson, wife of W. MOLSON MACPHERSON, director G.T.R. and G.T. Pacific Ry., died at Quebec, Que., Oct. 7, after a prolonged illness.

A large statue of LORD MOUNT STEPHEN, the first President of the C.P.R., is to be placed in the waiting room of the Windsor St. Station, Montreal.

JOHN TOWNSEND, baggage master, Michigan Central Rd., St. Thomas, Ont., who has been in the company's service for 41 years, retires under the provisions of the pension fund, Nov. 1.

Lady SHAUGHNESSY, who underwent an operation in the Royal Victoria Hospital, Montreal, a few weeks ago, returned home at the end of September, and was reported to have completely recovered.

A. D. DAVIDSON, Land Commissioner, Canadian Northern Ry., has bought the Wells property, on the escarpement facing Davenport Road, near Walmer Road, Toronto, the house on which he will replace by a modern one.

G. R. G. CONWAY, Chief Engineer, British Columbia Electric Ry., and Chairman of the Vancouver branch of the Canadian Society of Civil Engineers, delivered the opening address at the first meeting of the winter session in Vancouver, October 13.

F. C. SALTER, European Traffic Manager, G.T.R., London, Eng., with Mrs. Salter and their younger son, arrived in Canada Oct. 11. While he is engaged with the executive heads of the company in Montreal, Mrs Salter is visiting friends in California.

Lieut. F. A. Wanklyn, of the Royal Field Artillery in the British Army, has been gazetted as Captain, and has been appointed Adjutant of the Royal Flying Corps. He is a son of F. L. WANKLYN, General Executive Assistant, C.P.R., Montreal.

T. A. GORHAM, County Judge of Halton, Ont., who died at Milton, Ont., Oct. 4, aged 59, was in C.P.R. service from 1882 to 1885, rising to the position of Assistant General Superintendent at Winnipeg. He resigned in 1885 to recommence legal practice.

R. J. TAIT, formerly Freight Agent, Pere Marquette Rd., London, Ont., who resigned in the early part of the year on account of ill health, died there, Oct. 20, aged 55. He was born at Shelburne, Ont., and commenced his railway service with the Great Western Ry., now a portion of the G.T.R.

D. POTTINGER, I.S.O., who recently retired from the position of Assistant Chairman, Canadian Government Railways Managing Board, with Mrs. Pottinger, are on a trip to the Pacific Coast. They hope to spend the winter in Ottawa and return to their summer home at Shediac, N.B., in the spring.

The estate of the late JAMES ROSS, M. Can. Soc. C.E., whose death was announced in our last issue, has been valued at from $12,000,000 to $15,000,000. The public bequests approximated $400,000. It is said that he owned 25,000 C.P.R. shares, and that he was the largest individual shareholder in the company.

J. B. LAMBKIN, formerly District Passenger Agent, Intercolonial Ry., Halifax, N.S., and GEO. SKEFFINGTON, formerly in the I.R.C.'s police service at Moncton, N.B., have been appointed to exercise control over the ocean ports and railways in Eastern Canada, in connection with the suppression of the white slave traffic.

EDMUND DESCHENES, Jr., whose appointment as Auditor, Central Vermont Ry., St. Albans, Vt., was announced in our last issue, was born there Sept. 7, 1878, and entered C.V.R. service as messenger Mar., 1893, since when he has been, clerk on freight accounts, Travelling Auditor, chief clerk on passenger accounts, and chief clerk to Auditor.

C. S. CUNNINGHAM, who has been appointed a member of the Michigan State Railroad Commission, was formerly in G.T.R service, holding positions as Superintendent at London, Ont., St. Thomas, Ont., acting Superintendent and Superintendent, Western Division, Detroit, Mich., resigning in Jan., 1913, when the official staffs of the various divisions were reorganized.

JOHN L. HODGSON, whose appointment as Master Car Builder, G.T. Pacific Ry., Transcona, Man., was announced in a recent issue, was born at Simcoe, Ont., Nov. 15, 1858, and entered G.T.R. service Aug. 1, 1888, carpenter at Brantford, Ont.; Apr. 1 to Sept. 1, 1888, Car Inspector, Toronto; Sept. 1, 1888, to Mar. 1, 1897, Car Foreman, Toronto; Mar. 1, 1897, to Aug. 12, 1913, Master Car Builder, Western Division, Port Huron, Mich.

W. G. Robb.
Superintendent of Motive Power, Grand Trunk Pacific Railway.

H. D. MACKENZIE, who has been appointed District Master Mechanic, District 4, Intercolonial Ry., Stellarton, N.S., was born at Churchville, N.S., July 22, 1864, and entered I.R.C. service, July 24, 1881, since when he has been, to Sept. 1, 1897, machinist apprentice; Sept. 1, 1897, to Oct. 16, 1899, charge hand at Moncton and Stellarton, N.S.; Oct. 16, 1899, to Feb. 1, 1909, Mechanical Foreman, Stellarton, N.S.; Feb. 1; 1909, to Sept. 30, 1913, General Locomotive Foreman, Moncton, N.B.

F. E. WARREN, whose appointment as General Car Foreman, C.P.R., Winnipeg, was announced in our last issue, was born at Chelsea, Que., Aug. 29, 1872, and entered C.P.R. service Dec., 1897, since when he has been, to Dec., 1902, carpenter at Farnham, Que.; Dec., 1902, to Dec., 1905, charge hand, Farnham, Que.; Dec., 1905, to Oct., 1909, Assistant Foreman, Farnham, Que.; Oct., 1909, to Mar., 1912, Car Foreman, Hochelaga, Que.; Mar., 1912, to Aug., 1913, Division Car Foreman, Ontario Division, Toronto.

W. B. GAIR, who is stated to be a director of the Great Central Ry., of England, was in Canada recently with a view, as stated in press reports, to acquiring knowledge of methods of handling of passengers and freight on this side, and for this purpose, travelled considerably on the G.T.R. and C.P.R. We have no official knowledge as to Mr. Gair's position with the Great Central Ry., but it is not generally thought requisite in England, that a director should acquire knowledge as to the handling of either passengers or freight.

WALTER MAUGHAN, whose appointment as Assistant District Passenger Agent, C.P.R., Toronto, was announced in our last issue, was born at Toronto, Sept. 4, 1876, and entered C.P.R. service, Mar., 1892, since when he has been, to Sept., 1892, Assistant Agent, York St. office, Toronto; Sept., 1892, to July, 1895, assistant agent, Hamilton, Ont.; July, 1895, to July, 1897, ticket agent, York St. office, Toronto; July, 1897, to Mar., 1898, in Advertising Department, Toronto; Mar., 1898, to Sept., 1913, City Passenger and Ticket Agent, Toronto.

J. R. SPRAGGE, who died at Toronto, Oct. 10, aged 64, commenced his railway career with the old Northern Ry. as a fireman, and was later promoted to locomotive driver. On the construction of the Credit Valley Ry. he entered that service, and ran the first train over the line. On the absorption of the Credit Valley Ry. by the C.P.R. he remained with the latter company, and subsequently held the positions of Master Mechanic, Atlantic Division; Master Mechanic, Ontario Division, and District Master Mechanic, Toronto Jct. He left the service in 1912 on account of ill health.

CHARLES H. TILLETT, who has been appointed Supervisor of Signals, G.T.R., Montreal, was born at Peru, Ind., Dec. 8, 1885, and entered transportation service in Aug., 1907, since when he has been, to Dec., 1907, signal repair man, Pennsylvania Rd., Fort Wayne, Ind.; Apr. to Nov., 1908, interlocking work, Great Northern Ry., Seattle, Wash.; Nov., 1908, to Feb., 1910, interlocking maintenance, Cascade Division, G.N.R.; Feb., 1910, to July, 1913, Signal Inspector, Chicago and Eastern Illinois Rd., Chicago, Ill.; July to Oct., 1913, Chief Draughtsman, Signal Department, G.T.R., Montreal.

T. G. ARMSTRONG, whose appointment as Assistant Master Car Builder, Western Lines, C.P.R., Winnipeg, was announced in a recent issue, was born at Waterloo, Que., Apr. 30, 1863, and entered railway service Apr., 1888, since when he has been, to 1895, successively, bridge foreman, C.P.R., Orford Mountain Ry., and Quebec Central Ry., during construction; 1895 to 1902, in private business as general contractor and builder; 1902 to 1906, Foreman, C.P.R., Farnham, Que.; 1906 to Feb. 1, 1908, Car Foreman, C.P.R., Winnipeg; Feb. 1, 1908, to July 3, 1913, General Car Foreman, C.P.R., Winnipeg.

R. A. KLOCK, whose appointment as General Tie and Timber Agent, Canadian Government Railways, Moncton, N.B., was announced in our last issue, was born at Aylmer, Que., and was educated there, at Ottawa, and graduated from McGill University, Montreal, in arts, and later took a short military course at Kingston, Ont. He was, at one time, Tie and Timber Inspector, Atlantic Division, C.P.R., St. John, N.B., and prior to his present appointment had been engaged by the Government to inspect and ship hard pine dimension timber from Louisiana and Texas to Port Nelson on Hudson Bay.

KARL FRITJOF NYSTROM, whose appointment as Chief Draughtsman, Car Department, G.T.R., Montreal, was announced in our last issue, was born in Sweden, Sept. 2, 1881, and entered transportation service on this continent, in 1905, since when he has been, to 1908, draughtsman, Pressed Steel Car Co., Pittsburgh, Pa.; 1908 to 1909, draughtsman, Pullman Co., Chicago, Ill.; 1909 to 1911, designing engineer, Southern Pacific Co., San Francisco, Cal.; 1911 to 1912, Assistant Mechanical Engineer, American Car and Foundry Co., St. Charles, Mo.; 1912 to Oct., 1913, Mechanical Engineer, Acme Supply Co., Chicago, Ill.

ERNEST HUMPHRYS, whose appointment as Fuel Agent, Alberta Division, C.P.R., Calgary, was announced in our last issue, was born at Hull, Eng., Sept. 24, 1869, and entered C.P.R. service Aug., 1897, since when he has been, to Sept., 1898, clerk in Mechanical Department, Donald, B.C.; Sept., 1898, to Aug., 1899, stenographer, Mechanical Department, Vancouver, B.C.; Aug., 1899, to May, 1904, chief clerk to Master Mechanic, Revelstoke, B.C.; May, 1904, to Jan., 1908, chief clerk to Assistant to Second Vice President, Winnipeg; Jan., 1908, to Aug., 1913, chief clerk to Superintendent of Motive Power, Western Lines, Winnipeg.

E. H. WOOD, whose appointment as Divisional Car Foreman, Ontario Division, C.P.R., Toronto, was announced in our last issue, was born at St. John, N.B., Dec. 30, 1880, and entered C.P.R. service July 4, 1899, since when he has been, to Nov. 7, 1899, car repairer, St. John, N.B.; Dec. 4, 1899, to Apr. 30, 1900, car repairer, West St. John, N.B.; May 24, 1900, to July 31, 1903, car repairer, St. John, N.B.; Aug. 1, 1903, to Jan. 31, 1904, Car Inspector, St. John, N.B.; Feb. 1, 1904, to June 23, 1911, Car Foreman, St. John, N.B.; Jan. 24, 1911, to Apr. 8, 1912, Assistant Car Foreman, Hochelaga, Que.; Apr. 9, 1912, to Sept. 4, 1913, Car Foreman, Hochelaga, Que.

COLIN D. MACKINTOSH, A.M. Can. Soc. C.E., whose appointmemnt as Division Engineer, Saskatchewan Division, C.P.R., Moose Jaw, was announced in our last issue, was born at Auckland, New Zealand, Sept. 24, 1882, and served his apprenticeship and student years, from 1900 to 1905, with Kyle, Denni son and Laing, Civil Engineers, and at the Glasgow and West of Scotland Technical College, Glasgow, Scotland. He entered C.P.R. service in 1905, during which year he was on location survey, Toronto; 1905 to 1909, transit man; 1909 to 1910, Resident Engineer; 1910 to 1911, Locating Engineer; 1911 to Aug., 1913, Assistant Engineer on construction of double track, all on Western Lines.

W. U. APPLETON, who has been appointed General Master Mechanic, Intercolonial Ry., Moncton, N.B., was born there, Jan. 29, 1878, entered I.R.C. service as a messenger, and was transferred to the locomotive shops, serving an apprenticeship to Dec., 1899, since when he has been, to Apr., 1901, clerk in Mechanical Superintendent's office; Apr. to Sept., 1901, machinist; Sept., 1901, clerk in 1902, clerk to Superintendent of Machinery and Rolling Stock; Oct., 1902, to May, 1903, clerk in Master Car Builder's office; May, 1903, to May, 1904, clerk in General Superintendent's office; May, 1904, to Mar., 1909, chief clerk to Superintendent of Motive Power; Apr., 1909, to Sept., 1913, Assistant to Superintendent of Motive Power.

G. W. ROBB, whose appointment as Superintendent of Motive Power, G.T. Pacific Ry., Transcona, Man., was announced in our last issue, entered transportation service in 1880, since when he has been, to 1885, car repairer and apprentice, G.T.R., at Montreal, Brockville, Ont., and Point Levi, Que.; 1885 to 1886, improver, Northern Ry., Toronto; 1886 to 1888, machinist and leading hand, C.P.R., Winnipeg and Broadview, Man.; 1888 to 1889, night foreman, G.N.R., Breckenridge, Minn.; 1889 to 1891, day foreman, G.N.R., Willmar, Minn., and Glasgow, Mont.; 1891 to 1893, Locomotive Foreman, Chicago and Great Western Ry., South Des Moines, Ia.; 1893 to 1895, Shop Foreman, Canada Atlantic Ry., Ottawa; 1895 to 1907, General Foreman, Canada Atlantic Ry., Ottawa; 1907 to 1909, Assistant Master Mechanic, G.T. Pacific Ry., Rivers, Man.; 1909 to Oct., 1913, Master Mechanic, G.T. Pacific Ry., Rivers, Man.

F. E. Warren,
General Car Foreman, Manitoba Division, Canadian Pacific Railway.

JAMES ROSS, who died in Montreal recently, is said to have left an estate of about $13,000,000. He bequeathed about $400,000 to hospitals and other public institutions. Mrs. Ross receives $100,000 in cash and an annuity of $75,000 a year for life, together with the Montreal house, its contents, etc. The only son, J. K. L. Ross, and Mrs. J. K. L. Ross, get $50,000 each in cash. $1,000,000 is also to be paid the son to enable him to carry on any industry in which he may now be interested. He is also to get an annuity of $75,000 a year, and when 40 years old is to get the residue of the estate. A number of legacies and annuities are left to relatives and friends, including the following: To Mr. Ross's only sister, who is the wife of Jas. Grace, Secretary, Toronto, Esq., $10,000 a year for life, the annuity to be continued to her daughter; Granville C. Cunningham, formerly of Toronto and Montreal, and now of London, Eng.; F. L. Wanklyn, General Executive Assistant, C.P.R., Montreal; Phelps Johnson, Vice President and Managing Director, Dominion Bridge Co., and G. H. Duggan, General Manager, Dominion Bridge Co., get $5,000 each.

F. W. FORSTER, Agent, C.P.R. and Dominion Ex. Co., Liverpool, Eng., who died at Blundellsands, Liverpool, Eng., Oct. 7, was born at Sunderland, Eng., in 1871, and entered transportation service in the office of Culliford, Clark and Co., Liverpool. Prior to the opening of the Manchester Ship Canal in 1894, he moved to Manchester, and, until 1896, was in charge of the Neptune Navigation Co. there, leaving to join Elder, Dempster and Co.'s Liverpool staff. He was appointed Traffic Agent, C.P.R., Bristol, in Oct., 1903, and Agent, C.P.R. at Liverpool in July, 1911. He was a brother of Lieut Forster, R.N.R., who has recently resigned from the command of the C.P.R. s.s. Empress of Ireland on his appointment as Marine Superintendent for the company at Liverpool. A circular announcing the death, issued by G. McL. Brown, European Manager, reads as follows: "In the passing of Mr. Forster, the company loses one of its most promising officers. Conscientious and able, his devotion to duty was apparent in all his actions, and his upright character, his kindly heart and delightful personality endeared him to all with whom he came in contact."

GUY SEBERN LYTLE, whose appointment as Car Service Agent, Manitoba Division, C.P.R., Winnipeg, was announced in our last issue, was born at Denison, Iowa, Sept. 23, 1878, and entered railway service Sept. 1, 1891, since when he has been, to Feb. 1, 1893, messenger, Seattle and Northern Ry., Anacortes, Wash.; Feb. 1, 1893, to Jan. 7, 1897, agent, Seattle and Northern Ry., and Seattle, Lake Shore and Eastern Ry., at various points in Washington; Jan. 7, 1897, to May 2, 1898, operator and clerk in Superintendent's office, Seattle, Lake Shore and Eastern Ry., Seattle, Wash.; May 2, 1898, to Mar. 31, 1901, dispatcher, Seattle and International Ry., and Northern Pacific Ry., Seattle, Wash.; Mar. 31, 1901, to Feb. 16, 1907, dispatcher, Northern Pacific Ry., Tacoma, Wash.; Feb. 16, 1907, to Sept. 1, 1909, dispatcher same road, Missoula, Mont.; Sept. 1, 1909, to May 16, 1911, Assistant Chief Dispatcher, same road, Missoula, Mont.; May 16, 1911, to Sept. 5, 1912, Inspector of Train Dispatching, same road, St. Paul, Minn.; Sept. 5, 1912, to Apr. 9, 1913, Chief Dispatcher, same road, Missoula, Mont.; Apr. 9 to Aug. 25, 1913, Inspector of Transportation, C.P.R., Winnipeg.

Railway Subsidies in Alberta.

The Alberta Legislature was asked by the Premier, Oct. 18, to extend the guarantee of bonds for the construction of return lines of the Canadian Northern Ry., and of the Grand Trunk Pacific Branch Lines Co. These lines are either under construction, or their construction has been authorized, and the present extension of time is necessary to enable them to be completed.

Another resolution was submitted guaranteeing the Central Canada Ry. bonds to the extent of $20,000 a mile, for the building of a line from a point on the Edmonton, Dunvegan and British Columbia Ry., to Peace River Crossing, about 100 miles. At least 50 miles is to be constructed before Dec. 31, 1914, and the line completed and ready for traffic before December 31, 1917. Specifications are to be the same as those of the Edmonton, Dunvegan and British Columbia Ry.

Another resolution was for the purpose of encouraging the building of light railways into parts of the country away from the main lines, similar to the Blindman Valley, near Lacombe, as branches of the main lines. The resolution provided for making of grants of $2,000 a mile, towards the construction of such lines as may be from time to time approved by the Government.

The measures setting out in detail the lines affected, and the conditions of the grants, were subsequently submitted to the Legislature.

Telegraph, Telephone and Cable Matters 554

Grand Trunk Pacific Railway Company's Annual Meeting.

The G.T.P.R. Co.'s adjourned annual meeting was held in Montreal Sept. 25. The directors' report is not made public, the reason therefor, officially given, being that the line is still under construction. The following statement has, however, been supplied for publication:—

"The construction of the main line to the Pacific has reached mile 1204 west of Winnipeg, and from Prince Rupert eastward construction has reached mile 305, leaving a section of 236 miles in British Columbia on which the grade is to be completed and the track laid, when the steel will be connected through to the Pacific Ocean. This work is being rushed forward vigorously, and it is expected that the last spike in the construction of the main line will be driven at some point in British Columbia probably within the next nine months. After this is accomplished, however, considerable work will still remain to be done along the line to put it in suitable condition for daily train service. As the line is nearing completion, interest in the vast undeveloped country through which it runs, particularly in British Columbia, is increasing, and there is every prospect that the rapid settlement of the country will take place as soon as adequate transportation facilities are provided.

"Good progress is reported on the company's chain of hotels being built across the continent as an adjunct to its transportation business. It is expected that the Fort Garry hotel at Winnipeg will be completed, ready for opening, the end of November. The construction of the Qu'Appelle hotel, which was recently commenced in Regina, Sask., at a cost of $1,000,000, is making good progress. The Macdonald hotel, under construction at Edmonton, Alta., occupies one of the finest situations in the city, overlooking the Saskatchewan River and surrounding country for many miles. It is expected that it will be completed so that it may be opened within the next twelve months. Other hotels, of the most modern architecture and equipment, are projected for attractive resorts along the line in the Rocky Mountains, and the excavation for a large hotel at the terminal at Prince Rupert was also recently commenced.

"Traffic along the line is being carried in ever increasing volume each year, and there is every prospect that the prime object for which this vast undertaking is being executed will not be lacking at any period in the company's future history."

The directors for the current year are:—E. J. Chamberlin, President; W. Wainwright, M. M. Reynolds, Vice Presidents; A. W. Smithers, Sir Henry M. Jackson, J. A. Clutton Brock, Lord Welby, H. G. Kelley, W. H. Biggar, E. B. Greenshields, R. Dandurand, W. M. Macpherson, Hon. G. A. Cox, E. R. Wood, and J. R. Booth. The officers were re-elected.

Canadian Pacific Railway Electrification in British Columbia.

Sir Thos. G. Shaughnessy visited his birthplace, Milwaukee, Wis., on his way to Winnipeg recently, and one of the enterprising individuals who provide the daily press with fairy stories telegraphed a report which was published with big headlines, stating that Sir Thomas had announced that the company's experiments with electrification in British Columbia were only preliminary to the electrification of the entire system, should the experiment prove successful. Of course, the report telegraphed was an absolute invention by the press correspondent, and was not taken seriously by transportation men. On Sir Thomas' arrival at Winnipeg, where he was interviewed about it, he laughed at the story and said that if the electrification of the Rossland subdivision, which was decided on some time ago, and the electrification of Rogers Pass tunnel proved satisfactory, the mountain section of the main line between Field and Revelstoke, B.C., would also probably be electrified.

A good deal of preliminary information about the electrification of the Rossland subdivision was given in Canadian Railway and Marine World for May, 1912, and Aug., 1913. As previously stated, an order for electric locomotives and the electric machinery was given some little time ago to the Canadian General Electric Co. We have already published general dimensions, etc., of the locomotives, of which four are said to have been ordered, and which we learn will have a regenerating electric braking device.

American Railway Bridge and Building Association.

The 23rd annual convention was held at Montreal, Oct. 21-23, this being the second time the convention has taken place in Canada, the last time being at Quebec, ten years ago. The members were welcomed by the President, A. E. Killam, formerly Inspector of Bridges and Buildings, Intercolonial Ry., and W. McNab, Principal Assistant Engineer, G.T.R., and about 100 new members, chiefly Canadians, were elected. A number of reports were received and discussed, the one dealing with the association's finances, being especially satisfactory. The entertainments included a drive round Mount Royal, a trip to the Lachine Rapids, inspection of the two bridges crossing the St. Lawrence, and a visit to Ottawa by special train provided by the C.P.R.

Railway Route Maps Approved.

The Minister of Railways has approved railway route maps as follows:—

Alberta Central Ry.—Oct. 15.—Revision of line from Tp. 26, r. 23, w. 3 m., to Tp. 27, r. 25, w. 3 m., about 14 miles;

Canadian Northern Quebec Ry.—Oct. 10.—From St. Michel to Bout de l'Isle, about 8.25 miles;

Canadian Northern Ry.—Oct. 10.—Revision of line between Sturgis and Hudson Bay Jct., Man., 47.71 miles;

Canadian Pacific Ry.—Oct. 10.—Revision of Swift Current Northwesterly line near Empress, Sask., 23.2 miles;

Montreal and Southern Counties Ry.—Oct. 10.—From St. Cesaire to Granby, Que., about 14.5 miles.

Canadian Northern Ry. Organization.—Charles Hine, who recently resigned his position at Tucson, Arizona, as Vice President and General Manager of the Southern Pacific Rd. of Mexico, and of the Arizona Eastern Rd., two subsidiaries of the Southern Pacific Co., to take up expert railway work along organization and efficiency lines, with headquarters in New York, N.Y., has been retained by the Canadian Northern Ry. executive for a limited period to go over its system and make suggestions in regard to organization, etc. He has already been over the eastern lines and will now go over the western ones.

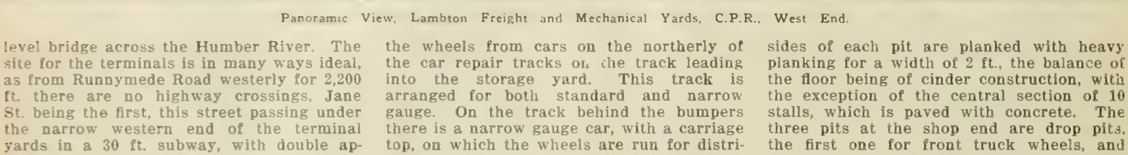
There are five possible methods for the abatement of smoke from locomotives: 1. The use of comparatively smokeless coals; 2. The use of air jets; 3. The use of mechanical stokers; 4. The instruction of the men operating the locomotives and the supervision of their work; and 5. The elimination of the steam locomotive.

Lambton Freight and Mechanical Yards, Canadian Pacific Railway.

The C.P.R.'s terminal facilities at West Toronto having become overtaxed recently, it was decided, as mentioned in these columns at the time, to build new facilities to the west of those then in use. The site selected is on the north side of the main line to Detroit, near Lambton, just beyond the city limits, which are at Runnymede Road, as shown in the accompanying plan. The terminals extend from Runnymede Road on the east to Chadwick Ave. on the west, which is near the approach of the high level bridge across the Humber River. The site for the terminals is in many ways ideal, as from Runnymede Road westerly for 2,200 ft. there are no highway crossings, Jane St. being the first, this street passing under the narrow western end of the terminal yards in a 30 ft. subway, with double approaches on the St. Clair Ave. end. Scarlett Road, further west, also passes under the line in a 44 ft. subway. At the eastern end of the terminals, the layout has been hampered to a certain degree by the presence of Runnymede Road, which made it impossible to make the yards double ended. This street is carried under the tracks at that end of the yards in a 56 ft. subway, which has at present a 6 track crossing, but the abutments are built for an additional 6 when traffic conditions warrant.

The main line from Toronto, and beyond these new terminals, is double tracked. The westerly entry to the terminals leaves the main line at Chadwick Ave., from which point into the yard ladders there are two leads 2,000 ft. long for arriving and departing trains. These will accommodate 55 car trains. The main part of the yard is double ended, and is divided into two sections for arriving and departing trains, each with a capacity of 500 cars. The arriving yard is the southerly of the two, and extends from Jane St. to the easterly end. The outgoing yard extends the full length of the yards, from the Lambton Station. The combined yards have 20 tracks, located at 13 ft. centres.

Panoramic View, Lambton Freight and Mechanical Yards, C.P.R., West End.



Plan Lambton Freight and Mechanical Yards, C.P.R., West End.

To the north of the east end of the yards there is a 12 track freight car repair yard with capacity for about 150 cars. It is arranged with two leads from the north side of the main yards, the central tracks having a car capacity of 22, with the outside tracks accommodating only three or four. Between every other pair of tracks there is a 2 ft. service track, connecting at the east end by turntables to a track running along behind the earth bumpers. The wheel storage tracks are at the north end of this track, in the open space opposite Ryding Ave., where four sets of storage tracks are being installed. At the south end of the locomotive house there is a pneumatic jib crane over the service track for unloading the wheels from cars on the northerly of the car repair tracks on the track leading into the storage yard. This track is arranged for both standard and narrow gauge. On the track behind the bumpers there is a narrow gauge car, with a carriage top, on which the wheels are run for distribution throughout the yard. The car foreman's office is in the building to the east of the repair track yard, and in the same building are housed the car stores and a small blacksmith shop of one forge. The front of the building is planked, and against the building are material bins for rough car stores. The car stores in the building are contained in 4 tiers of double bins. The building also contains an oil room, lunch room for the men, lavatory and tool room. This yard is not intended for the handling of very heavy repairs, these being handled for the most part in the main shops at West Toronto. The average capacity is 100 pairs of wheels and 100 long sills per month. The yard is in charge of J. J. Bannon, Car Foreman.

The new locomotive house and motive power handling facilities form the main part of the new terminals. The locomotive house is built entirely of concrete, and has 30 stalls, the building being divided into three sections. It opens to the southwest, the entering tracks coming from the west, there being provision for the addition of a further 10 stall unit when required. This locomotive house handles all the power formerly accommodated in the old building adjoining the locomotive shops in West Toronto.

In the centre there is an 80 ft. turntable, operated by an air motor tractor. The inner radius of the locomotive house is 95 ft., and the outer radius, 180 ft., giving a depth of 85 ft. As mentioned, it is of concrete construction, with large window area in the outer wall. The roof is of 2 by 4 in. planking, laid on edge, and covered with fireproof sheeting. It is supported on the walls and two intermediate circular rows of concrete columns. Over the forward end of each track there is a Johns-Manville asbestos smoke jack.

Each locomotive house track has a 65 ft. concrete pit, with convexed bottom, sloping to the inner edge for drainage, a pit for this purpose and for the piping being located at the forward end of the pits, passing around the building just inside the inner wall. The sides of each pit are planked with heavy planking for a width of 2 ft., the balance of the floor being of cinder construction, with the exception of the central section of 10 stalls, which is paved with concrete. The three pits at the shop end are drop pits, the first one for front truck wheels, and the next two for driving wheels. The intervening space between these pits at the shop end is floored with heavy planking, on which the wheels can be run from the wheeling tracks, and then into the machine shop.

Alongside each smoke jack, at about 8 ft. centres, there is suspended a light trolley with a 6 ft. rod attached thereto, the tracks being about 36 ft. long. This length covers the locomotive forward of the cab, and is found most useful in the handling of the exterior locomotive fittings such as the bell stand, etc., without the necessity of slinging a block and tackle over a beam. A block and tackle is attached to the trolley to be used, and can be moved along the length of the locomotive at will. The trolley capacity is about 1,000 lbs., which is ample for the handling of such light fittings as would come under running repairs. Only light repairs are handled here, the heavy ones being sent to the nearby locomotive shop in West Toronto.

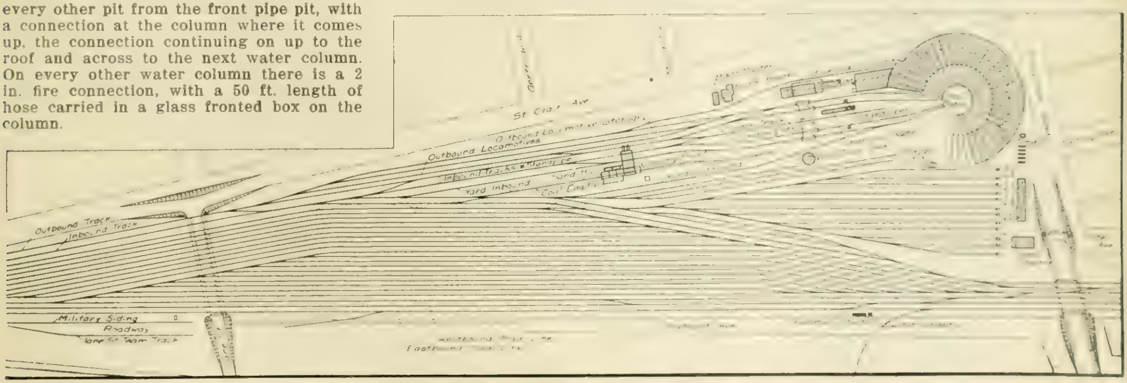
The general lighting of the locomotive house is by clusters of three 32 c.p. incandescent lamps suspended from the roof near each of the columns. These lights are controlled from a central switchboard panel in groups of 3 pits. In addition to this general lighting, there are incandescent lamp sockets around the walls, and in each pit there are two lamp cord connections.

The indirect system of heating is employed throughout the locomotive house by means of batteries of pipes in the pits and along the walls. In the pits along each wall there are four lengths of pipe, with similar units along the outer wall. Exhaust steam is employed, supplied through a pipe in the circular pit. The pit also contains a 2 in. steam main, 3 in. water main, and a 1½ in. air main. These all have connections to the columns between the pits.

Panoramic View, Lambton Freight and Mechanical Yards, C.P.R., East End.

Near the entrance from the locomotive house into the machine shop there is a Miller washout plant which is found very useful. Three sets of piping run from this plant, suspended from the roof, to a column between every other pit. All the column connections are 2 in., branching from 4 in. mains. Through these connections, the blow off water can be drawn off to the washout plant, where it is held in one compartment of the large tank, and is used over again for washout purposes, one line being provided for this purpose. The third line is for filling the locomotive boiler with clear water at about 200 degrees. The temperature of the washout water is automatically regulated to 125 degrees for convenience of the men in handling.

On every water column there is an air connection for blowing purposes, this connection coming up through the floor between every other pit from the front pipe pit, with a connection at the column where it comes up, the connection continuing on up to the roof and across to the next water column. On every other water column there is a 2 in. fire connection, with a 50 ft. length of hose carried in a glass fronted box on the column.



Plan Lambton Freight and Mechanical Yards, C.P.R., East End.

In addition to the foregoing special facilities, in the shop end of the locomotive house there is a small forge for general work, with iron rack adjoining. These are both located in the space between adjoining pits. Here are about 100 expanded metal lockers for the employes in the building, ranged along the partition walls.

The machine shop is contained in a 50 by 90 ft. addition to the west end of the locomotive house. The south side of this building is separated from the machine shop, and contains the offices for the locomotive foreman and his staff, and a room for the men to register trips. This section of the machine shop building is only half the height of the shop, and over the offices, open to the machine shop, there is an air brake testing department, and accommodation for the electricians.

The machine shop contains the following equipment: 16 in. double punch and shear, small press, large press, 2 in. bolt machine, heavy drilling machine, small drilling machine, 26 in. shaper, 18 and 36 in. lathes, grindstone and double emery. The tool room for the shop is in the V corner, adjoining the door into the locomotive house. In the opposite corner is the power equipment, consisting of a small vertical high speed engine for shop drive, and a 16 by 16 by 9 in. air compressor. The westerly section of the shop is divided off for the boiler room, containing three 120 h.p. locomotive boilers carrying 120 lbs. of steam. Outside the boiler room there is a 95 by 10 ft. stack. Adjoining the stack there is a standard C.P.R. air storage tank, with a similar one at the opposite end of the locomotive house for supplying air to the freight car repair yards, which are piped for air. The pressure carried is 100 lbs.

To the west of the machine shop is the stores building, equipped in the usual manner with racks, etc., for the accommodation of the stock material, and a Bowser equipment for the oil, with storage tanks in the basement. The floor is on a level with that of a car, with a platform along two sides of the building for unloading stores. At the east end of the platform there are stores bins for the rough supplies.

The west end of the stores building is used by the locomotive department, a room in the southwest corner of the building containing racks for the enginemen's clothes and tool boxes. An adjoining room contains the enginemen's oil cans, etc. Both these rooms are in the charge of an attendant. This man's duties also consist in recording departures, detentions, etc., a system that has been found valuable in locating the cause of delays. Along the west wall in this building there is a bench room for the ashpit men and in the southwest corner of the building there is a room used as a general storing room by the locomotive department in which are kept winter doors out of season, patterns of buffer beam and other parts, curtains, and such material.

Charcoal is employed for lighting fires, and is contained in a frame building to the southeast of the stores building. The east end of this building is a window sash storing room, in which all the double windows of the locomotive house are stored in summer, all the windows in the plant being provided with double storm sashes. The charcoal house portion, which comprises the westerly three quarters, is divided into two equal rooms, both of which have a storage capacity of about one carload of charcoal. The practice followed is to draw from the one room at a time, completely emptying it before commencing on the second. In this manner, better check is kept on the material, and the charcoal is kept in a better form for use than if it were constantly being trampled over as in a single room store.

To and from the locomotive house, there are 2 inbound and 4 outbound tracks, with four immediate tracks connecting with the turntable pit. For the handling of the ashes on the locomotives there are two Ord ash handling plants of the type described in Canadian Railway and Marine World, Oct., 1911. Over each there are two tracks, with a blind track between for spotting ash cars. In the accompanying panoramic view of the mechanical terminals a locomotive is shown on the left dumping ashes.

The coal handling plant is of the C.P.R. standard type, consisting of a chain of buckets raising the coal from lower hoppers to hoppers over the service tracks. The plant is of 300 tons capacity, and has four chutes. Coal cars come into the plant up a ramp, which is continued 9 car lengths beyond the plant. A string of cars can thus be fed through the plant as required from the stub end without assistance from the yard crew, once the train of 10 cars is run up the ramp. Adjoining the coaling plant there is a sand storage bin, from which the sand is elevated into hoppers on the coal hopper frame for feeding into the locomotive.

Locomotive water is obtained from the city service, there being a 60,000 gal. tank on the grounds. Between each of the pairs of ashpit tracks, and between two of the coaling plant tracks, as well as on one of the tracks passing the tank, there are water spouts, so that a locomotive can be watered on any one of 7 tracks.

On the St. Clair Ave. side of the yards there is an old house, now used by the locomotive department as a bunk house for the locomotive drivers and firemen. In the rear of the bunk house there is a well equipped kitchen where the men may cook meals, and the centre room is for dining. The front room of the house is fitted up for a reading room, with current railway technical literature, as well as books and general periodicals. This room also contains a series of air brake charts that are handy for the men's reference. The upstairs section of the house has a chain of bedrooms, containing 12 beds. Below stairs is a register book for the men's calls.

The Locomotive Foreman of this new locomotive terminal is F. Ronaldson, to whom we are indebted for the data on which this article is based.

Construction of the Alberta and Great Waterways Railway Arranged For.

After considerable difficulty, political and legal, for over three years, the Alberta Legislature has passed a new act, which is expected to settle all the difficulties which have arisen, and which provides for the building of the line under new auspices. The act repeals the one passed in 1910, by which the funds of the A. and G. W. Ry. Co. were declared to be part of the general funds of the province; ratifies the provincial guarantee of $7,000,000 of bonds, authorizes the Provincial Treasurer to deliver the bonds to the trustees for the bondholders, in exchange for the interim bonds issued, authorizes the banks to pay over the money now held to such banks as the province shall appoint; and authorizes the building of the line, the work to be started by Dec. 31.

In introducing the measure the Premier announced that the line would be built by J. D. McArthur, the Winnipeg contractor, who is President of the Edmonton, Dunvegan and British Columbia Ry. The offer made by Mr. McArthur was dated Sept. 22, and the main sections of the bill were drawn on the lines of the offer. The work is to be done on the general lines laid down in the original guarantee act, and the railway is to be finished by Dec. 31, 1915.

During the discussion on the bill, which continued every day for nearly three weeks, in the House and in Committee, a large number of amendments were considered. The principal one of these dealt with an offer put in by Janse Brothers and associates, to build the line at $16,766 a mile, which is less than the McArthur offer. This was defeated by a considerable majority.

The original act was passed Mar. 1909, and provided for the guarantee of bonds for $20,000 a mile for the construction of the main line from Edmonton to Lac la Biche and Fort McMurray, 350 miles; and an additional amount of $400,000 to provide terminals at Edmonton. The country through which the line will run is reported to be rich in minerals and the railway would give connection between Edmonton and the great waterways of the Mackenzie River basin, on to the Arctic ocean.

Railway Transportation Problems of the Future.

By J. Grant MacGregor, M. Can. Soc. C.E., Assistant Engineer, Construction Department, Canadian Pacific Railway Red Deer, Alta.

It is to be hoped the writer may be excused if he again refers to a subject which, although by no means a dead issue, can only be dealt with summarily in the columns of a technical journal. Mr. Wicksteed's reference to the subject in Canadian Railway and Marine World for October and his able elucidation of some of the more salient points referred to under the same heading in the September issue, suggest to the writer means by which his views can be expressed more fully on certain points, calculated otherwise to remain obscure or misinterpreted. For instance, in discriminating between the advantages of the operation of easy and steep grade standards of roads, regard should be had to the fact that, as the former has been constructed, or perhaps reconstructed, at apparently greater cost than the latter, every opportunity should be afforded the more expensive line to earn revenue proportionate to its cost, and where the volume of traffic is unlimited, this can only be done by equipping the road to its fullest capacity with modern equipment.

Generally speaking, the main object of grade reduction would be to provide for a prospective increase of business, the rate of which may be already taxing the efforts of the mechanical and operating departments to their utmost limits. But, for economy in operation, there should be a certain limit to the number of trains necessary, and in order to handle an increased volume of business with the same number of train units, lower grades and heavier train loads are sought. Again it is evident that if we assume that the modern steam locomotive has attained its highest degree of efficiency, a perpetual saving on cost of train mileage operated can only be looked for in the direction of grade reduction and curve elimination. It is this perpetual saving in cost of operation of an easy grade standard line that often fails to be appreciated to the fullest extent, when the line is turned over for operation. The remark is often made that lines with continuous stretches of low ruling grade are harder to operate than a line with broken grades, some of which may be steeper than the ruling grade. The reason should not be hard to find, nevertheless the idea is apparently a fallacious one, that it is impossible for a locomotive of the proper type, i.e., with sufficient boiler capacity and grate area, etc., to keep up a uniform speed over long stretches of low ruling grade. Experiments made by the various railways with mechanical stokers have, to a large extent, proved the fallacy of this idea, and locomotives of the proper type should no longer be held responsible for a defect which is apparently a physical one on the part of the fireman. The minimum speed of 10 miles an hour usually given on speed diagrams is no doubt too low, and tractive power should be provided for a speed of not less than 15 or 20 miles an hour on divisions where long stretches of ruling grade are developed. The writer's contention, however, is not to the end that it is necessary for all these ideal conditions to exist, and that obselete locomotives should be consigned to the scrap heap, otherwise the business of a railway must be run at a loss, but rather that they are factors and possibilities which sooner or later must be counted upon, and should now enter into all calculations for future development.

In dealing with new location, or grade reduction problems, it is wise, no doubt, as Mr. Wicksteed's remarks would appear to indicate, to have due consideration for the imperfections and frailties of our present means of operation, providing that what can be accomplished under those conditions is a step in the right direction. The writer is aware of the menace to the operating department of the type of profile certain topographical features will develop, but would be sceptical about the advantage of taking an occasional jump over a summit, if at all in excess of the ruling grade, unless, of course, in cases where momentum is a factor. Pusher grades of proper length, however, can very profitably be introduced at places where convenient for operation, such as at divisional points, but generally speaking they are unsatisfactory in the quick handling of passenger trains.

It would be interesting to know to what extent the practice of locating for future grade reduction is carried on throughout the Dominion. By this practice the results obtained are extremely gratifying, on account of the light character of profile obtained for immediate construction and the enormous saving in the cost of future grade reduction. By locating important lines, capable of future development, with this end in view, right of way, bridges, townsites, etc., need not necessarily be abandoned during reconstruction.

Mr. Wicksteed has treated the question of the comparative advantages of steam and electric motive power in a very interesting manner, but unfortunately leaves us without a ray of hope as to the future, because of the enormous capital already invested in steam power equipment. The change, of course, must be a gradual one, but if a systematic start were once made, and a practicable method of interchange instituted for the carrying on of the two systems simultaneously, it is possible that great strides could be made by the time the steam locomotive now being built at the shops is relegated to service on some unimportant branch line.

Canadian Railway Club.—Consequent on the removal of C. Murphy, formerly General Superintendent of Transportation, C. P. R., from Montreal to Winnipeg, as General Superintendent, Manitoba Division, C. P. R., and the removal of D. Crombie, formerly General Superintendent of Transportation, G. T. R., from Montreal to Detroit, Mich., in Pere Marquette Rd. service, L. C. Ord, General Car Inspector, C. P. R., Montreal, has been elected Second Vice President, Canadian Railway Club, vice C. Murphy; C. Manning, secretary to Superintendent of Motive Power, G. T. R., Montreal, has been elected a member of the Executive Committee, vice D. Crombie, and H. Osborne, Assistant Superintendent of Motive Power, C. P. R., Montreal, has been elected a member of the Executive Committee, vice L. C. Ord.

W. M. DUNLOP, chartered accountant, Ottawa, in renewing his subscription to Canadian Railway and Marine World, writes: "I enclose express order to cover my annual subscription to your valuable paper, and may just say it is quite worthy of due appreciation for its useful information."

Appointments and Territcrial Divisions for Canadian Pacific Railway Atlantic and Pacific Steamship Lines.

The following appointments and territorial divisions for the Transatlantic and Transpacific Steamships Services, have been announced, effective from Oct. 1: –

St. John, N. B., District Passenger Agent, W. B. HOWARD, with territory covering Nova Scotia, New Brunswick, Prince Edward Island, Quebec, St. Charles and east, except on Intercolonial Ry. from Quebec to New Brunswick boundary; Newfoundland, and Maine from eastern boundary to and including Bangor.

Montreal, General Agent, Passenger Department, W. WEBBER, with territory covering Quebec west of St. Charles, and Megantic along Intercolonial Ry. from Quebec to New Brunswick boundary; C. P. R. main line east of Port Arthur and Sault Ste. Marie, Ontario, east of Kingston, including Kingston and Pembroke Ry. north of Sharbot Lake; C. P. R. between Richport and Newport inclusive, and Boston and Maine Rd. between North Derby and Newport inclusive, also Oswego, Sackett's Harbor and ports along the St. Lawrence in New York State.

Toronto, District Passenger Agent, M. G. MURPHY; Assistant District Passenger Agent, I. E. SUCKLING, with territory, Ontario west of and including Kingston and Sharbot Lake to Windsor, and south of Sudbury and North Bay; Buffalo and points in New York State along Niagara River.

Winnipeg, General Agent, Passenger Department, J. S. CARTER, with territory covering the Canadian West, from Port Arthur and Fort William to British Columbia boundary.

Vancouver, General Agent, Passenger Department, J. J. FORSTER, with territory covering British Columbia and Alaska.

Boston, Mass., General Agent, Passenger Department, F. R. PERRY, with territory covering Connecticut, except N. Y., N. H. & H. Rd. coast line between New York and Woodmont; Rhode Island,- Massachusetts, Vermont, excepting C. P. R. between Richford and Newport; and Boston and Maine Rd. between North Derby and Newport; New Hampshire and Maine, as far east as, but not including, Bangor.

New York, N.Y., General Agent, Passenger Department, W. H. SNELL, with territory covering Connecticut along N. Y., N. H. & H. Rd. coast line from New York to Woodmont; New York, except Buffalo and points along Niagara River and Oswego, Sackett's Harbor and points along St. Lawrence River; New Jersey; Pennsylvania, east of a line drawn from Hyndman, Altoona and Clearfield north to Pennsylvania line and along Buffalo, Rochester and Pittsburgh Ry. main line; Delaware, Maryland, east of Cumberland, Virginia; North and South Carolina, Georgia, Florida and Washington, D. C.

Pittsburgh, Pa., General Agent, Passenger Department, C. L. WILLIAMS, with territory, Ohio, east of a line drawn from Marietta to Newark, up to but not including Mansfield, Akron and Youngstown to the Pennsylvania line; Pennsylvania, west of a line drawn from Hyndman, Altoona and Clearfield north to Pennsylvania line and along Buffalo, Rochester and Pittsburgh Ry. main line; Maryland, Cumberland and west, and West Virginia.

Cincinnati, Ohio, General Agent, Passenger Department, M. E. MALONE, with territory, Ohio, except portion east of line drawn through Marietta to Newark up to Mansfield, Akron and Youngstown to Pennsylvania State line and north thereof; Indiana except portion on and north of Wabash Rd.; Kentucky, Tennessee, Alabama, Mississippi and Louisana.

Detroit, Mich., District Passenger Agent, A. E. EDMONDS, with territory covering lower peninsula of Michigan and Lake Shore and Michigan Southern Ry from Toledo to Sandusky, Ohio, and portion of Ohio east and north of line drawn from Sandusky to Bucyrus,' thence east through Mansfield, Akron and Youngstown to Pennsylvania State line.

Chicago, Ill., General Agent, Passenger Department, G. A. WALTON; Assistant General Agent, H. M. MacCALLUM, with territory covering, Illinois; Iowa, southeast of Chicago, Milwaukee and St. Paul Ry.; and Northwestern Line from McGregor to Sheldon, Sheldon to Sioux City (Sioux City neutral with Minneapolis District); on and north of wabash Rd. in Indiana and portion of South Dakota west of Missouri River; Missouri, Oklahoma, Arkansas, Texas, Mexico, except Lower California and Sonora; Kansas, Nebraska, Colorado, New Mexico, Utah, Wyoming and Wisconsin as far north as line drawn from Kawaunee through Wausau, Marshfield and Merrillan to La Crosse, excluding Green Bay and Fort Howard.

Minneapolis, Minn., General Agent, Passenger Department, H. M. TAIT, with territory, northern Michigan, Wisconsin north of line from Kewaunee through Wausau, Marshfield and Merrillan to La Crosse; Minnesota. North and South Dakota.

Los Angeles, Cal., General Agent, Passenger Department, A. A. POLHAMUS, with territory, California, Bakersfield, Santa Barbara and south; Arizona, and Sonora, in Mexico.

* San Francisco, Cal., General Agent, Passenger Department, G. M. JACKSON, with territory, California, north of Bakersfield and Santa Barbara, and Nevada.

Portland, Ore., General Agent, Passenger Department, F. R. JOHNSON, with territory covering Oregon west of line drawn southerly from Hood River on Oregon-Washington Rd. and Navigation Co.'s line not including Hood River, to California-Oregon State line, including Southern Pacific Line and branches; Washington south of Kalama on O. W. R. & N. Co.'s line, G. N. and N. P. Rys., and west of White Salmon on Spokane, Portland and Seattle Ry.

Seattle, Wash., General Agent, Passenger Department, E. E. PENN, with territory covering Washington west of line drawn northeasterly from Kalama on G. N. and N. P. Rys. and O. W. R. & N. Co.'s line, including Kalama, through Ellensburg on N. P. and Chicago, Milwaukee and Puget Sound Rys., thence northerly through Leavenworth on G. N. R. to International boundary, not including Ellensburg and Leavenworth.

Spokane, Wash., General Agent, Passenger Department, T. J. WALL, with territory covering, Montana and Idaho, and Washington east of and including White Salmon, Ellensburg and Leavenworth, Oregon east of and including Hood River.

W. G. ANNABLE is General Passenger Agent, Transatlantic Steamship Service, and C. E. BENJAMIN is General Passenger Agent, Transpacific Steamship Service, both with offices at Montreal.

To obtain from modern locomotives the average power required from them, it is necessary to consume fuel at the rate of about 100 lbs. of coal per sq. ft. of grate per hour, and to obtain the maximum power required, it is necessary to increase this amount to 150 lbs., and at times, even in excess of this amount.

Halifax Ocean Terminals, Intercolonial Ry.

Tenders are under consideration by the Railways Department for contract 3 of the first work of the docks, etc., to be built at Halifax, N.S., in connection with the new ocean terminals for the I.R.C. The work covered by the contract will be situated along the west shore of Halifax harbor, and will extend from the northern boundary of His Majesty's lumber yard southwesterly to the northern boundary of the Royal Nova Scotia Yacht Squadron's property, a distance of 3,200 ft. The works will include the following quay walls and quays:—North return end of bulkhead passenger landing quay, 83 ft.; bulkhead passenger landing quay, 2,006 ft.; north quay of basin no. 1, 1,208 ft.; west quay of basin no. 1, 95 ft.; north quay, pier A, 1,250 ft.; east quay, pier A, 320 ft.; south quay, pier A, 1,250 ft.; west quay, basin no. 2, 320 ft.: the dredging of the harbor or front, north and east of the bulkhead passenger landing quay, to give a minimum depth of 45 ft. at low water of ordinary spring tides, and in basins 1 and 2 to give minimum depths varying from 30 to 35 ft. at low water of ordinary spring tides; filling and grading to such levels as may be required for quays and sheds, and of all such areas as may be required behind the quay walls to complete the filling and grading of the whole terminal area to be reclaimed from the harbor for the first work of the ocean terminals; the construction of sewers; concrete and timber piling and concrete foundations and substructures for passenger and cargo transit sheds and buildings to be erected on the bulkhead passenger landing quay, north quay of basin no. 1, and north and south quays of pier A. Prior to starting any new work the contractor is to clear the site, and to remove therefrom existing buildings, wharves and structures.

All the works north of the cope line of the north quay of pier A are to be completed by May 1, 1916, and the remainder by May 1, 1917. The whole is to be carried out under the direct charge of Jas. McGregor, M. Can. Soc. C.E., Superintending Engineer, F. W. Cowie, M. Can. Soc. C.E., being Consulting Engineer, both acting under F. P Gutelius, M. Can. Soc. C.E., General Manager Canadian Government Railways.

The C.P.R.'s Operations in Austria.—During October, following charges against S. Altman, Agent, C.P.R., Vienna, Austria, for alleged breaches of the emigration laws in assisting persons liable for military service to emigrate, the C.P.R. offices throughout Austria were raided and closed, as also were the offices of the Uranium Steamship Co. It would appear that the Austrian Government fears that owing to the increasing numbers emigrating to Canada, and to the unsettled condition in the Balkan States, the numbers from whom the reserves would be drawn for active service, would be depleted. The matter has become entangled with politics, and a number of charges have been made involving members of the Government and others. A rigid investigation is promised.

Electrification of London and Port Stanley Ry.—The ratepayers of London, Ont., on Oct. 22, approved by a vote of 2,820 to 2,074, a bylaw providing $700,000 for the electrification of the London & Port Stanley Ry. between London and Port Stanley, Ont., 24 miles, which is operated by the Pere Marquette Rd. under a lease, which is about to expire. It is said that the work of electrification will be started as quickly as possible, and that it is expected to have it completed by July 1, 1914. A London dispatch says that the city council will name a commission of five, of which the mayor will be one, to equip, maintain and operate the line.

Transportation Appointments Throughout Canada.

[illegible] entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our [illegible] by advising us.

Algoma Central and Hudson Bay Ry., Algoma Eastern Ry.—G. A. MONTGOMERY, heretofore Superintendent, Algoma Central and Hudson Bay Ry., Sault Ste. Marie, Ont., has been appointed General Superintendent, A.C. & H.B.R. and A.E.R. Office, Sault Ste. Marie, Ont.

Algoma Central and Hudson Bay Ry.—A. J. DONEGAN, heretofore Assistant Superintendent, Hawk Jct., Ont., has been appointed Superintendent, Agawa, Northern and Michipicoten Divisions. Office, Hawk Jct., Ont.

Canadian Government Railways.—G. R. JOUGHINS, Superintendent of Motive Power, has had his title changed to Superintendent Rolling Stock. Office, Moncton, N.B.

E. P. CRONK, formerly Superintendent, National Transcontinental Ry., Edmundston, N.B., has been appointed City Freight Agent, Toronto.

See also Intercolonial Ry.

Canadian Northern Ry.—C. WHEATON, heretofore Car Foreman, Edmonton, Alta., has been appointed Car Foreman at Port Arthur, Ont., vice J. Grant transferred.

J. GRANT, heretofore Car Foreman, Port Arthur, Ont., has been appointed Car Foreman, Dauphin, Man., vice C. R. Stokes, transferred.

The position of Travelling Dining Car Conductor, heretofore held by P. ACKERMANN, has been abolished.

C. H. WORBY has been appointed Inspector of Sleeping and Dining Cars, vice G. S. Andrews, resigned. Headquarters, Winnipeg.

G. H. CULLINGFORD and A. E. KNIGHT have been appointed Inspectors of Sleeping and Dining Cars. Headquarters, Winnipeg.

C. R. STOKES, heretofore Car Foreman, Dauphin, Man., has been appointed Car Foreman, Saskatoon, Sask., vice C. A. Abbott, transferred.

C. A. ABBOTT, heretofore Car Foreman, Saskatoon, Sask., has been appointed Car Foreman, Edmonton, Alta., vice C. Wheaton, transferred.

Canadian Pacific Ry.—H. R. NAYLOR, heretofore General Car Foreman, West Toronto, Ont., has been appointed Division Car Foreman, Eastern Division, vice G. E. Smart, resigned to enter Canadian Government Railways service. Office, Montreal.

F. W. FOX, heretofore assistant to G. H. Ham in the Publicity Department, has been appointed editor of the Press Bureau, which is now part of the General Publicity Department, under J. M. Gibbon, General Publicity Agent.

W. K. THOMPSON, heretofore Superintendent, District 1, Ontario Division, has been appointed Superintendent, District 3, Ontario Division, vice W. Coulter transferred. Office, Toronto.

W. J. UREN, heretofore Superintendent, District 2, Alberta Division, Calgary, has been appointed Superintendent, District 1, Ontario Division, vice W. K. Thompson transferred. Office, Toronto.

JAMES COWLEY, heretofore Foreman, West Toronto shops, has been appointed acting Car Foreman, Toronto, vice G. G. Gagnon, transferred to Hochelaga, Que., as announced in our last issue.

W. H. POLLEY has been appointed Assistant City Passenger Agent, Toronto.

A. R. LAUDER has been appointed acting District Master Mechanic, District 2, Lake Superior Division, vice J. H. Brooks, who is acting as a member of the examining board visiting different points on the Eastern Lines, examining firemen for promotion as locomotive drivers. Office, Chapleau, Ont.

S. A. SIMPSON, heretofore Superintendent, Sleeping, Dining and Parlor Cars and News Service, Alberta Division, Calgary, has been appointed Superintendent, same department, Manitoba Division, vice A. W. Porter, transferred. Office, Winnipeg.

A. J. MEGRUND, Roadmaster in charge of double track construction west of Brandon, Man., on Broadview Subdivision, and who has also been acting Roadmaster, Broadview Subdivision, will return to the Brandon Subdivision with headquarters at Winnipeg, during November, when double track will be discontinued for the season.

T. M. FRASER, heretofore Roadmaster, Winnipeg, has been appointed Roadmaster, Broadview Subdivision, vice A. J. Megrund, who has been acting during the absence on sick leave of M. Lillis. Office, Broadview, Sask.

A. W. PORTER, heretofore Superintendent, Sleeping, Dining and Parlor Cars and News Service, Manitoba Division, Winnipeg, has been appointed Superintendent, same department, Saskatchewan Division, vice D. S. Fraser, transferred. Office, Moose Jaw.

H D Mackenzie.
Master Mechanic, District [illegible], Intercolonial Railway.

W. WHITTAKER has been appointed Inspector, Investigation Department, Saskatchewan Division, Moose Jaw, vice H. O. Wunderling, transferred to the British Columbia Division at Vancouver.

P. F. WEISBROD, heretofore acting Superintendent, Calgary Terminals, has been appointed Superintendent, Calgary Terminals. Office, Calgary, Alta.

D. S. FRASER, heretofore Superintendent, Sleeping, Dining and Parlor Cars and News Service, Saskatchewan Division, Moose Jaw, has been appointed Superintendent, same department, Alberta Division, vice S. A. Simpson, transferred. Office, Calgary.

E. OFFICER, heretofore in General Passenger Department, Winnipeg, has been appointed Travelling Passenger Agent, Calgary, Alta., vice A. G. Brooker, transferred to Regina, Sask., as announced in our last issue.

H. O. WUNDERLING has been appointed Inspector, Investigation Department, British Columbia Division, Vancouver, and not Chief of Special Service Department for that division, as stated in our last issue.

T. McNEIL, heretofore Agent, Antwerp, Belgium, has been appointed Agent, Liverpool, Eng., vice F. W. Forster, deceased.

W. D. GROSSET, who is reported to have been chief assistant in the General Offices in London, Eng., has been appointed Agent at Antwerp, Belgium, vice T. McNeil, transferred to Liverpool, Eng.

Appointments and territorial divisions relating to the Transatlantic and Transpacific Steamship Service will be found under a separate heading on another page of this issue.

Grand Trunk Pacific Ry.—W. CASH has been appointed Car Foreman, Fort William, Ont., vice H. E. Jell, transferred.

E. HACKING, General Car Foreman, has had his office moved from Melville, Sask., to Transcona, Man.

R. MOORE, heretofore Car Foreman, Melville, Sask., has been appointed Car Foreman, Rivers, Man., vice E. C. Ferguson, transferred.

W. MILLS, formerly Master Car Builder, Algoma Central and Hudson Bay Ry., Sault Ste. Marie, Ont., has been appointed Car Foreman, G.T.P.R., Melville, Sask., vice R. Moore, transferred.

H. E. JELL, heretofore Car Foreman, Fort William, Ont., has been appointed Car Foreman, Biggar, Sask., vice J. Robby, assigned to other duties.

E. C. FERGUSON, formerly Car Foreman, Rivers, Man., and subsequently transferred to Edson, Alta., in a similar position, having left the service, C. A. MUNROE has been appointed Car Foreman at Edson.

G. A. NICHOLL, heretofore Superintendent, Prince Rupert, B.C., has been appointed Commissioner, Colonization and Industrial Department. Office, Prince Rupert.

The following agents have been appointed:—Raith, Ont., D. R. Rorke; G.T.P. Jct., Man., H. McCreadie; Uno, Man., C. E. Fletcher; Lazare, Man., G. A. Swan; Spy Hill, Sask., W. Harte; Birmingham, Sask., A. J. Cantin; Balcarres, Sask., V. D. Sibbald; Duff, Sask., C. McMahon; Northgate, Sask., S. Anderson; Frobisher, Sask., R. J. Wilson; Minard, Sask., M. E. Evans; Dodsland, Sask., W. R. Stockdale; Loverna, Sask., R. W. Pearsall; Trochu, Alta., A. G. Sinclair; Mile 145, B.C., A. W. Bennett.

Grand Trunk Ry.—THOMAS RODGER, heretofore Inspector of Telegraphs and Telephones, has been appointed Supervisor of Plant, with jurisdiction over all matters appertaining to telegraph and telephone traffic, and his former title has been abolished. Office, Montreal.

C. H. TILLETT, heretofore Chief Draughtsman, Signal Engineer's Office, Montreal, has been appointed Supervisor of Signals, vice R. A. Becker, resigned. Office, Montreal.

The following agents have been appointed:—St. Hyacinthe, Que., F. C. Bouvette; Chaudiere Jct., Point Levi and Quebec (Freight), Que., E. Fournier; Levis, Que., A. J. Roy (Pass.); Concord, Ont., A. G. Mortson; Aurora, Ont., W. J. Buchanan; Powassan, Ont., T. A. Wickett; Milton, Ont., J. E. Bell; Glen Huron and Nottawa, Ont., J. B. Snowden; New Hamburg, Ont., W. A. Cober; Mandaumin, Ont., S. P. O'Neil (Pass.); Brussels, Ont., S. E. Smith.

Intercolonial Ry.—W. U. APPLETON, heretofore Assistant to Superintendent of Motive Power, has been appointed General Master Mechanic, in charge of all engine houses and shops, except Moncton shops, locomotives and machinery, and will perform such other duties as proper authority may direct. Office, Moncton, N.B.

A. C. BARKER has been appointed Inspector of Stations, Trains and Train Dispatching, including the instructing of all employes in Standard Code Rules. Office, Moncton, N.B.

G. E. SMART, hertofore Division Car Foreman, Eastern Division, C.P.R., Montreal, has been appointed Master Car Builder in charge of all car shops, and will be responsible for maintenance, repair and cleaning of all cars and efficient and economical operation of shops, and will perform such other duties as proper authority may direct.

J. C. FULMORE, heretofore Roadmaster, Halifax, Truro and Stellarton District, Truro, N.S., has been appointed Roadmaster, Point Tupper to Sydney District, vice W. P. Mills, promoted. Office, Sydney, N.S.

A. E. WELLWOOD, heretofore Inspector, Point Tupper to Sydney District, Sydney, N.S., has been appointed Roadmaster, Stellarton to Mulgrave District, vice A. B. Gray, retired on the pension fund. Office, New Glasgow, N.S.

H. D. MACKENZIE, heretofore General Locomotive Foreman, Moncton, N.B., has been appointed District Master Mechanic, District 4. Office, Stellarton, N.S.

W. P. MILLS, heretofore Roadmaster, Point Tupper to Sydney District, Sydney, N.S., has been appointed Bridge and Building Master, Truro to Sydney District. Office, Sydney, N.S.

C. W. ARCHIBALD, heretofore Resident Engineer, Truro to Sydney District, New Glasgow, N.S., has been appointed Roadmaster, Halifax, Truro and Stellarton District, vice J. C. Fulmore, transferred. Office, Truro, N.S.

G. COOPER, heretofore section foreman, has been appointed Roadmaster, Painsec Jct. to Truro District, vice W. J. Lockhart, retired on pension fund. Office, Moncton, N.B.

W. E. BARNES, heretofore Division Master Mechanic, Moncton, N.B., has been appointed District Master Mechanic, District 13. Office, Moncton.

JOSEPH GRAHAM, heretofore Foreman of Erecting Shop, has been appointed Superintendent Locomotive Shops, vice H. D. McKenzie, General Locomotive Foreman, transferred. Office, Moncton, N.B.

T. McPHERSON, heretofore General Roadmaster, Moncton, N.B., has been appointed Roadmaster, Point du Chene to St. John District, vice A. H. Somers, transferred. Office, Moncton, N.B. The position of General Roadmaster has been abolished.

A. H. SOMERS, heretofore Roadmaster, Point du Chene to St. John District, Moncton, N.B., has been appointed Roadmaster on the National Transcontinental Ry. section between Moncton and Edmunston, which is being operated by the I.R.C. Office, Edmunston, N.B.

T. W. HENNESEY has been appointed District Master Mechanic, District 2. Office, Campbellton, N.B.

H. W. SHARPE, heretofore acting Division Master Mechanic, Riviere du Loup, Que., has been appointed District Master Mechanic, District 1. Office, Riviere du Loup, Que.

See also Canadian Government Railways.

Michigan Central Rd.—With reference to the appointment of S. D. WILLIAMS, Jr., as Division Engineer, St. Thomas, Ont., vice W. C. Houston, transferred to Jackson, Mich., as announced in our last issue, we were officially advised, Oct. 15, that though he had been appointed as stated, he had not then taken charge of the office, but was still acting Division Engineer, Niles, Mich.

Prince Edward Island Ry.—See Canadian Government Railways.

Southern New England Ry.—R. D. GARNER has been appointed Engineer of Construction. Office, Grosvenor Bldg., Providence, R.I.

Traffic Orders by the Board of Railway Commissioners

Rattan Furniture Rates from British Columbia.

20415. Sept. 24. Re Supplement 24 to Tariff C.R.C., no. W-1713, filed by C.P.R. Co., and effective Sept. 7, increasing rate on rattan furniture from Vancouver and Victoria to points in Manitoba, Ontario, and Quebec; and order 20246, Aug. 30, suspending the effective date of the advanced rates in the said supplement for 30 days from the date of the order. It is ordered that the said order 20246 be rescinded.

C.P.R. Local Standard Passenger Tariff.

20457. Sept. 30.—Re application of C.P.R., under sec. 331 of the Railway Act, for approval of its Local Standard Passenger Tariff L. 48, being C.R.C. no. E 2279, cancelling C.R.C. no. E 6644 and C.R.C. no. W. 38 and supplements thereto. It is ordered that the maximum tolls to be charged for passengers for all distances on C.P.R. lines in Canada now in operation or under construction, as specified in the company's Standard Passenger Tariff C.R.C. no. 2279, Aug. 12, become effective Sept. 1, viz., 3c. a mile east of and including the company's railway between Macleod, Calgary, and Edmonton, Alta., and 4c. a mile west of and including Macleod and Calgary, the said tariff being a consolidation of the company's approved Standard Passenger Tariffs C.R.C. nos. W. 38 and E 664, be approved, subject to the provisions of subsec. 2 of sec. 327, and subsec. 1 of sec. 331 of the Railway Act.

Mill Feed Rates from Lethbridge.

20462. Oct. 2.—Re complaint of A. Robertson, of Keremeos, B.C., that the combination of the Canadian Pacific and Great Northern Railway Companies' local rates now paid on mill feed, in carloads, from Lethbridge to Keremeos, viz., C.P.R., 27c.; G.N.R., 38c.; total, 65c., if routed via Nelson; and C.P.R., 37c.; G.N.R., 27c.; total, 64c., if routed via Grand Forks; as against the rate of 42c. through the United States, hitherto charged, is excessive. It is ordered and declared that the joint tariff of the Alberta Ry. and Irrigation Co. C.R.C. no. 165 is lawfully in effect; and that Supplement 16 thereto, filed by the C.P.R., to take effect Aug. 18, be disallowed. That the Board will be prepared to consider an application for the annulment of the said C.R.C. no. 165 on the publication and filing by the C.P.R. of local and joint tariffs of rates from Lethbridge, and from points on the Alberta Ry. and Irrigation Co.'s line via Lethbridge, which shall not be greater than those shown in the said C.R.C. no. 165, via Coutts, to points in British Columbia on the Great Northern and Canadian Pacific Railways to which the rates of the said C.R.C. no. 165 are now lower than via C.P.R. from Lethbridge, having regard to the provisions of the Railway Act.

Canadian Government Railways

TENDER

SEALED TENDERS addressed to the undersigned and marked on the outside, "Tender, Diversion of Line, North Sydney to Leitches Creek," will be received up to and including Monday, November 10th, 1913, for the construction of a line of Railway from North Sydney to Leitches Creek, N. S.

Plans and specification may be seen at the office of the undersigned at Ottawa, Ont., at the Station Master's Office, North Sydney, N. S., at the Office of the Resident Engineer, at New Glasgow, N. S., and at the Office of the Chief Engineer, Moncton, N. B., where forms of tender may be obtained.

All the conditions of the specification must be complied with.

L. K. JONES,
Assistant Deputy Minister and Secretary
Department of Railways and Canals.
Ottawa, Ont., Oct. 24th, 1913.

Department of Railways and Canals, Canada.

WELLAND SHIP CANAL.

Section No. 5.

NOTICE TO CONTRACTORS.

SEALED TENDERS addressed to the under[illegible] "T[illegible] No. 5, W[illegible] until 12 o'clock noon on Tuesday, November 18th, [illegible]

P[illegible] entered into can be seen on or after this date at the [illegible] Department [illegible] Ottawa, [illegible] the Engineer in Charge, St. Catharines, Ontario.

[illegible] may [illegible]tained from the Department on the payment of the sum of fifty dollars. To bona fide tenderers this amount will be refunded upon the return of the above in good condition.

Parties tendering will be required to accept the [illegible] by the Department of Labour, which schedule will form part of the contract.

Contractors are requested to bear in mind that tenders will not be considered unless made strictly in accordance with the printed forms, and in the case of firms, unless there are attached the actual signature, the nature of the occupation, and place of residence of each member of the firm.

An accepted bank cheque on a chartered bank of Canada for the sum of $100,000.00 made payable to the order of the Minister of Railways and Canals, must accompany each tender, which sum will be forfeited if the party tendering declines entering into contract for the work, at the rates stated in the offer submitted.

The cheque thus sent in will be returned to the respective contractors whose tenders are not accepted.

The cheque of the successful tenderer will be held as security, or part security, for the due fulfilment of the contract to be entered into.

The lowest [illegible] necessarily accepted.

By order,

L. K. JONES,
Assistant Deputy Minister and Secretary
Department of Railways and Canals.
Ottawa, 20th October, 1913.

Newspapers inserting this advertisement without authority from the Department will not be paid for [illegible]

The Commissioners of the Transcontinental Railway

NOTICE TO CONTRACTORS.

Tenders for the Installation or Completion of Electric Wiring System for the N. T. Ry. Car Shops, Transcona, Manitoba.

SEALED TENDERS, addressed to the undersigned and marked on the envelope: "Tender for Electric Wiring System," will be received at the office of The Commissioners of the Transcontinental Railway, at Ottawa, Ontario, until 12 o'clock noon of the 4th day of November, 1913, for the furnishing and installing of the Electric Wiring Systems required in connection with the equipment of the National Transcontinental Railway Car Shops at Transcona, Man., about six miles east of Winnipeg.

Plans may be seen and forms of tender and specifications obtained at the office of Mr. W. J. Press, Mechanical Engineer, Ottawa, Ont., and at the office of Mr. H. H. Pinch, Assistant Engineer, Transcona, Manitoba.

Persons tendering are notified that tenders must be made on the forms supplied by the Commissioners, and that each tender must be signed and sealed by all the parties to the tender, and witnessed, and be accompanied by an accepted cheque on a Chartered Bank of the Dominion of Canada, payable to the order of The Commissioners of the Transcontinental Railway, for a sum equal to five per cent. (5 p.c.) of the amount of the tender.

The cheque deposited by the party whose tender is accepted will be deposited to the credit of the Receiver-General of Canada as security for the due and faithful performance of the contract according to its terms. Cheques deposited by parties whose tenders are rejected will be returned within ten days after the signing of the contract.

The right is reserved to reject any or all tenders.

By Order,

P. E. RYAN,
Secretary
The Commissioners of the Transcontinental Railway.
Dated at Ottawa, October 8, 1913.

Newspapers inserting this advertisement without authority from the Commissioners will not be paid for it.—49048.

Electric Railway Department.

The Proposed Sale of the Toronto Railway to the City.

Following on the recent negotiations between the City and the Toronto Ry. Co. regarding the proposed purchase by the former of the physical assets, franchises, etc., of the Toronto Ry. and its subsidiary company, the Toronto Electric Light Co., and including such portions of the Toronto and York Radial Ry., and Toronto Suburban Ry., as are within the city limits, Mayor Hocken, at a meeting of the City Council, Oct. 13, brought down the reports prepared by B. J. Arnold, Chicago, Ill., assisted by J. W. Moyes, Toronto, regarding the railway portion of the proposal, and R. A. Ross and Co., Montreal, regarding the Toronto Electric Light Co.

In commenting on the report, the Mayor related the history of the negotiations leading up to the engagement of experts to report on the physical assets and the conditions of a tentative agreement, which would form the basis of a definite proposal to submit to the ratepayers for approval or rejection, and also dealt with the condition of affairs in which the city was involved in providing efficient transportation for a large and expanding city, especially in view of the peculiar nature of the terms of the franchise granted to the company, in connection with which there has been continuous litigation for several years, all more or less of an unsatisfactory nature so far as the city is concerned. The situation has to a certain extent been complicated by the construction and operation by the city of three disconnected lines serving outlying portions, each of which is being operated at a loss. The net operating loss on these three lines for the remaining portion of the Toronto Ry. franchise, which expires in 1921, is estimated at $1,341,772.72.

After considerable negotiations, Sir William Mackenzie, President, Toronto Ry., expressed his willingness to arrange for the city to acquire the physical assets of the Toronto Ry. Co., comprising track, substructures and all underground conduit work, overhead trolley, feeder system, rolling stock, including electrical equipment, being all rolling stock in operation, head office property, power house and equipment at Frederick and Front Sts., substations and equipment, storage batteries, carhouses and barns, carbuilding shops, motor equipment shops, warehouse for stores, repair parts in stores, foundry, carpenter shops, stables, and all real estate and other physical assets held by the company and used or intended for use in connection with the railway; the physical assets of the Toronto Electric Light Co., comprising land, wharves and docks, buildings, steam and electric plant, incandescent light plant, storage batteries, overhead and underground lines and feeders, motors, meter boards and equipment, motors, lamps and installations, tools and equipment. To avoid any misunderstanding as to the physical assets proposed to be transferred, it is stated that with respect to the two foregoing companies the following assets are not included:—Stocks, bonds, securities of companies, bills, notes, claims and accounts receivable, monies, and any interest the Toronto Ry. Co. may have in the property known as Scarboro Beach, held by the Scarboro Securities, Ltd.

In addition to the foregoing items which the city may acquire are all cars in course of construction and equipment therefor, and all material on hand for new tracks, overhead construction and extensions, paving the actual cost thereof in addition to the consideration agreed upon; so much of the tracks, substructures, underground and overhead construction apperatining to such tracks as are built upon the streets, roads and highways, except crossings thereof within the present city limits, the property of the Toronto and York Radial Ry. Co., on its several divisions, viz., the Metropolitan division, Toronto and Mimico division, and Toronto and Scarboro division; so much of the tracks, substructures, underground and overhead construction appertaining to such tracks as are built upon the streets, roads and highways, except crossings thereof within the city limits as are the property of the Toronto Suburban Ry. Co., and so much of the light, heat and power wires and poles and appurtenances belonging thereto, the property of the Toronto Suburban Ry. Co., and forming part of the lighting system within the city limits; so much of the franchises of the respective companies as may be necessary to enable the city to operate the assets, tracks, etc., purchased, and to carry on within the city the business appertaining thereto; the Toronto and York Radial Ry. Co. and the Toronto Suburban Ry. Co. shall be granted rights and facilities for connecting their overhead wire and cable lines with the lines and central stations of the Toronto Power Co. and the Toronto and Niagara Power Co., and with their own terminals in the city, for transmitting electricity over the said lines and cables for all purposes, and also the right to erect wires to connect their telephone systems with the said power stations or terminals in the city; the purchase price is to be $30,000,000, which is arrived at by allowing $8,000.000 for the assets, etc., of the Toronto Electric Light Co., and $22,000,000 for those of the Toronto Ry. Co. and other companies mentioned, the amount to be paid as follows:—The city to make an issue of debentures amounting to $30,000,000 with interest at 4½% per annum, payable half yearly, maturing in 30 years, with an adequate sinking fund; these debentures to be specially secured by mortgage of trustees covering the assets acquired, and to be a general obligation of the city, the terms of these debentures and the trust mortgage to be mutually agreed upon; of the purchase price, $8,090,000 is to be paid in cash, and the balance in debentures at par, forming part of the issue mentioned; the city to assume bonds as follows:—Toronto Ry. Co., $3,659,000, secured upon its lines; Toronto Electric Light Co., $1,000,000, secured upon its properties, and Toronto and York Radial Ry. Co., $1,640,000, secured upon its lines, etc., including the portions within the city limits, and to deposit with trustees its debentures to an equal amount to provide for the redemption of these bonds, or for getting them in by exchange, and so far as the portions of the Toronto and York Radial Ry. within the city limits are concerned, so that such portions may be released from their charge, meantime any transfers to be made out subject to such charge, and when so released any balance of debentures to be handed over; the city is to assume and carry out all lighting and power contracts of the Toronto Electric Light Co., and the Toronto Suburban Ry. Co. within the city limits, and all contracts of the Toronto Ry. Co. and Electrical Development Co., which run to Sept. 21, 1921, subject to renewal on the terms of the contract, the city to give three years' notice in writing if it does not desire renewal; also to assume all contracts between the Toronto Electric Light Co. and the Toronto and Niagara Power Co., of Jan. 30, 1903; and after Nov. 13, 1919, being the first period of the contract, the city agrees through the Hydro Electric Commission of Ontario, to purchase from the Toronto and Niagara Power Co. not less than 30,000 horsepower per annum for 30 years from the latter date, under the terms of the existing contract, the power companies agreeing that during such contract they will only sell power in the city, to the city through the Hydro Electric Commission, but nothing contained in this clause shall be construed as to prevent the companies mentioned from supplying power to the railway companies for their purposes; the city will collect arrears and current accounts under the lighting and power contracts, and account to vendors and pay them their share, and will honor passenger tickets outstanding, the Toronto Ry. to redeem from the city at sale prices its honored tickets over the parts of their lines within the city limits; the parts of the radial lines taken over by the city are to be double tracked by the city, standard railway gauge to be adopted so as to permit of the operation of Toronto and York Radial cars thereon, the city to put down a third or composite rail if it desires to operate over these parts in connection with the city system; the radial companies are to have running rights over the portions taken over by the city, including the double tracks laid by the city, upon the wheelage basis for maintenance, and without charge for capital expenditure, and the right to connect the double tracks with the companies' car barns and terminals or property acquired for such purposes, but shall not, except on terms to be agreed upon, have the right to take up local passengers on the lines within the city limits, that is, passengers destined from one point on these lines in the city to another point on these lines in the city; the companies to have the right to carry express and light package freight over these tracks to their present terminals within the city limits, including the necessary property for terminals and station for the Toronto and York Radial Ry., adjacent to the C.P.R. at or near Yonge St., the classes of such express and freight to be settled by the Ontario Railway and Municipal Board; neither the Toronto Ry. Co., nor either of the other companies shall, except under the agreement for running rights, operate railways along streets within the present city limits, and should these limits be extended, the city to have the right to acquire so much of their lines, etc., as may be built upon streets, roads and highways, but not the crossings thereof within the extended limits, and in estimating the value of the lines so acquired compensation to be allowed to the companies for the franchise and for depreciation, if any, similar double tracking and running rights to be provided for as previously mentioned.

It will thus be seen that the city desires to acquire the whole street railway system within the city limits, as at present defined, and also within any future extensions, and in order to do this it has been found necessary to acquire also the assets of the Toronto Electric Light Co., a subsidiary of the railway company, and by so doing the city will be enabled to control the transportation and light and power delivery within the city with some slight reservations on behalf of the power companies concerned. Although the Toronto Ry. Co., should the city carry out the scheme, will maintain its corporate capacity, more or less as a holding concern for other allied concerns, all rights to build and operate railways on any streets within the city limits will be obliterated under the city's agreement to purchase.

The valuation placed on the Toronto Ry. Co.'s physical assets by the experts engaged for the purpose is $9,894,482, and for the intangible assets, consisting chiefly of the franchise rights to operate surface railways exclusively, in Toronto, $10,713,553. The value of those portions of the radial lines within the city limits is placed at $411,447, including $193,649 for an exclusive franchise on a part of Yonge St., and the value of the assets of the Toronto Electric Light Co. is placed at $6,132,754. The actual value thus placed on the total physical assets, which the city desires to take over, is $16,245,034, thus leaving $13,754,966 difference between the value of the physical assets, and the price proposed to pay, viz., $30,000,000, as representing the value of the total intangible assets. So far as the railway proper is concerned, the valuators have estimated the net surplus earnings of the company up to September, 1921, to be worth $10,713,533, based on the present earning capacity, with the operating cost kept to 55% of the gross earnings. It cannot of course be claimed that the city could operate at so low a figure as 55% of the gross earnings, but allowing 65% of the gross earnings for operation, and with the estimated loss on the present civic lines, for the same period, viz., $1,341,772.72, practically the same figure is reached. The remaining difference, apart from $193,649 for the exclusive radial franchise on a part of Yonge St., would therefore represent the value to the city of the goodwill of the Toronto Electric Light Co.'s business, and the extinguishing of competition in the lighting and power business, as well as creating a monopoly of street railway transportation for the city.

Following are the valuation figures as summarized in the report laid before the city council:

In connection with the radial lines within the city limits, the Metropolitan Division of the Toronto and York Radial Ry. is valued at $64,354, and the Toronto and Scarboro Division at $27,300, with $193,649 as the value of the exclusive franchise for operating on a part of Yonge St. The value of the portion of the Toronto Suburban Ry. proposed to be acquired is fixed at $51,144, thus making $20,944,482, the value of the railway properties in question, including physical assets, franchises, etc., and which, added to the value placed on the Toronto Electric Light Co., of $6,132,754, totals, $27,077,236. The value of the Toronto and Mimico Division of the Toronto and York Radial Ry. is not included in the figures above quoted, nor is it dealt with in the valuators' report, as such valuation has already been dealt with by arbitration under the Ontario Railway and Municipal Board, and the value fixed at, approximately, $75,000.

It has been decided to have a report from a firm of accountants on the commercial value of the proposition, and John Mackay and Co. have been engaged for the purpose. H. H. Couzens, General Manager, Toronto Hydro Electric system, has also been instructed to report on the actual utility of the physical assets of the Toronto Electric Light Co., and to what extent they can, with advantage, be incorporated with the civic Hydro Electric system. When these reports are received a special meeting of the council will be called to deal with them.

SUMMARY OF EXHIBITS, TORONTO RAILWAY CO. REPORT.

	Net cost new	Eng. % added	Total	Net present value	Eng. % added	Total	Net cost new	Depreciation	Net present value

Recapitulation: Net cost new and engineering organization, etc., added $13,532,992.99; Net present value and engineering organization, etc., added $9,894,482.66; Net depreciation $3,407,204.01.

Report on Proposed Municipal Electric Railways by the Ontario Hydro Electric Power Commission.

The engineers of the Hydro Electric Power Commission of Ontario have prepared a report and estimate of the proposed municipal hydro electric railway for the district north east of Toronto, as requested by the different municipalities in that territory, as mentioned in previous issues of Canadian Railway and Marine World. In May, 1913, the councils of the townships of Scarboro, Markham, Uxbridge, Pickering, Whitby and Reach and some of the towns and villages in that district forwarded resolutions to the Commission requesting a report and estimates on a municipally owned electric railway to connect that district with Toronto. The Commission's engineers were instructed to obtain the necessary information, and prepare estimates showing the traffic that might be expected, the capital cost, operating revenue, and expenses of the proposed line. This has been accomplished most thoroughly, and very detailed information is given in the report.

Briefly speaking, as every point on the proposed line is within 45 miles of Toronto, and the service given by the steam lines is said to be insufficient to meet the requirements for purposes of best development, it is believed that a good portion of the existing traffic might be diverted to the proposed line, which with new traffic that an electric line always develops, is expected to make the project a profitable one. The agricultural section of the country traversed is said to be the equal of any in Ontario, with the exception of from 15 to 20 miles, and is one of the most thickly settled portions of the province. The ability of an electric line to stop at frequent intervals, such as cross roads, would, it is claimed, give it a marked advantage over steam railways with their infrequent stops. The layout of the steam lines radiating from Toronto, makes necessary in many cases a roundabout trip to go a short distance across country, which the electric line proposes to ameliorate in several sections of the district to be traversed.

A survey party was organized to run preliminary lines, and from data secured, it was decided to make a study of three different routes from the north east boundary of Toronto to Unionville. From this point both easterly and northerly, the route was more or less fixed by the centres of population, and the contour of the country. The surveyed lines are all shown on the accompanying plan, but these lines were only run for trial and estimating purposes, and may be deviated from in the event of actual construction.

Of the three parallel routes at the Toronto end, the easterly one was run to pass through the centre of Scarboro Tp., but was found unfavorable for actual construction, the middle route offering almost equal service, with a much lower construction cost. As it is anticipated that a considerable portion of the district traversed by the westerly line will be annexed by Toronto within the near future, and it is controlled by three large estate companies, the financing of their portion would be simplified. The construction of this line would be less than either of the others, and while half a mile longer, it brings the line 1½ miles nearer the centre of the city. Estimates on the westerly and middle routes were prepared, but in view of the disadvantages of the easterly route, it was not considered in the report.

From Toronto north to the height of land at Goodwood, there is a difference in elevation of 700 ft., giving an average ascending grade of 0.5% that cannot be avoided. All grades have been kept below 2%, with a maximum curvature of 5 degrees. The soil throughout the entire district, with the exception of a sandy stretch in Uxbridge Tp., is a light loam, with gravel present in sufficient quantities near the trial lines to ensure an ample and cheap supply of ballast. The estimates on track construction have been prepared on a 14ft. roadbed, 80 lb. rails, 6 by 8 in. by 8 ft. cedar ties spaced 3,000 to the mile, gravel ballast, 8 bar woven wire fence with gates, cattle guards, etc.

All culverts have been designed to carry

100 ton locomotives, to meet the requirements of intercommunication with steam lines. Plate girder bridges on concrete abutments would be used in most cases, but some steel viaducts would be required. Following the practice of the steam lines in the district, all overhead railway crossings were estimated on crossing two tracks. Half interlocking plants would be used for the protection of all grade crossings, to be operated by such employes as would have other duties in the vicinity. These plants would consist of a small central tower with interlocking machine controlling home and distant signals on the steam lines, and derails and home signals on the electric line. The electric line signals would be located close to the crossing, to be conveniently operated by conductors when the regular attendants were not on duty.

Routes of Proposed Municipal Hydro Electric Lines from Toronto

The estimates include the cost of brick passenger and freight stations at important towns, and shelters, with small loading platforms, at the most important road crossings. It is proposed to have a car barn and shops of brick construction located near Markham, at the junction of the Uxbridge and Port Perry lines, and galvanized iron shelters on steel frames and concrete footings at termini, for housing cars over night. Sub stations would be provided by fireproof station additions at Markham and Brooklin.

The 2,400 volt d. c. system has been used in figuring the cost of the electrical equipment, but the layout and traffic would give very similar results with single phase a. c., or 1,200 volt d. c. These systems, while more expensive in first cost and operating expenses than the lower voltage d. c. systems, for short lines, are necessary for a line of this type, in order that holiday traffic may be properly handled without the capital cost being raised to an amount that would cause unusually heavy expenses for normal operation. These systems have also been chosen so that the line may be able to take care of freight traffic and be extended short distances without installing additional sub station equipment and trolley feeders. Should it be decided to construct only a short portion of the complete line, it would be possible to use the low voltage d. c. until such time as extensions warrant the system figured on. The single catenary bracket arm type of construction has been the basis of computation, with 35 ft. wooden poles spaced at 150 ft. intervals, with 7-16 in. steel messenger, and 4-0 grooved copper trolley wires.

Heavy double truck cars would be used for the through service, with lighter cars on the suburban traffic. The car equipment would be quadruple 100 or 125 h. p. motors, hot water heaters, automatic air brakes, pantograph trolleys and double end multiple control. The cars would have smoking and baggage compartments in addition to the passenger section. Main line cars would be capable of operating up to 60 m. p. h., with schedule speeds of from 25 to 35 m. p. h., the stops varying from 4 per mile to one every 2 miles. Trailer cars would be operated on holidays and during the rush hours on a reduced schedule. Express cars for milk and light freight traffic would be equipped with large motors, capable of shifting or hauling freight cars short distances. The locomotives considered would weigh up to 60 tons, and would be capable of hauling from 6 to 20 freight cars, or 3 or 4 passenger trailer cars for excursion business. Quadruple 100 or 150 h. p. motors with multiple control would be the probable equipment. Standard steam line freight cars would be required for feight and express business, and it is planned to have sidings between stations, so locating the loading and unloading points as to reduce team haulage on large shipments. ,

In estimating the probable capital costs, the cost of the right of way was obtained from information obtained in the field. It is said that the costs will probably be less than estimated, as several owners have expressed a willingness to give a free right of way through their property. Information on the cost of bridges over grade and level railway crossings, signalling, interlocking plants, etc., was obtained from the present railways in the district. Sufficient data and costs were also obtained from manufacturers of bridges, rails and track fittings, interlocking plants, cars, electrical equipment for rolling stock and sub stations, etc., to enable accurate figures to be prepared on the capital cost of the line. Plans and profiles have been prepared of the lines surveyed, and the quantities of grading, draining, etc., figured for the different sections. To all this has been added an overhead charge of 7% to cover engineering, interest during construction, and bond discount.

The total revenue of the proposed line has been divided between passenger, freight, milk, express and mail business, and the sum deduced under each of these headings has been checked with statistics obtained from electric lines operating through a somewhat similar territory. The similarly situated electric lines of which data are given are the Brantford and Hamilton Electric Ry., Chatham, Wallaceburg and Lake Erie Ry., Hamilton Radial Electric Ry., Niagara, St. Catharines and Toronto Ry., Toronto and York Radial Ry., and Windsor, Essex and Lake Shore Rapid Ry. Of these several lines, statistics for 1912 are tabulated: Showing length, passenger number and revenue, freight tonnage and revenue, express revenue, advertising revenue, and operating expenses. From these figures, some interesting comparisons can be drawn.

As a further comparison of probable revenue, the estimated revenue obtained by the steam lines operating in the Toronto northeastern territory from the centres of population along the lines has been obtained from reliable sources, for the different classes of traffic that are to be handled. The places considered are Agincourt, Milliken, Unionville, Markham, Stouffville, Uxbridge, Locust Hill, Brooklin, Myrtle and Port Perry, and where the place is served by more than the one line, separate estimates are tabulated. From these several centres, the estimated total passenger revenue is $92,500; milk, $16,300; freight, $340,000; express, $21,000; with a total combined revenue obtained by the steam lines from this territory of $469,800. Basing the estimated revenue on the conditions existing in similarly situated electric railway territory, using the estimated revenue of the steam lines to obtain a detailed analysis of the probable revenue, the following table has been compiled:

Passenger revenue 900,000 at 4 cts.	$36,000	
Passenger revenue—600,000 at 40 cts.	240,000	
		$276,000
Freight revenue—60,000 tons at $2.25		135,000
Milk Revenue—150,000 cans at 20 cts.		30,000
Express and mail revenue		8,000
Advertising revenue		1,500
Total revenue from operation		$450,000

Further checks on the estimated traffic that might be expected from the district were made. For the passenger traffic, a study of interurban lines, on the basis of a return per head, shows that this varies under local conditions from $8 to $14 per head. Using the 1911 Dominion census as a base, in those portions of the townships of York, Scarboro, Markham, Uxbridge, Pickering, Whitby and Reach affected by the proposed lines, and in the towns of Stouffville, Markham, Uxbridge, Port Perry and Whitby, there is an estimated tributary population of 18,219, with an average population per square mile of territory affected in the country districts of 63. Taking into consideration the local conditions and average width of territory served, it has been estimated that the per capita return would be $12, which for the 18,219 tributary population, would give a passenger return of $219,000. To this must be added the suburban receipts, which for an estimated number of 900,000 at 4 cts., would give $36,000, bringing the passenger total to $255,000. As these figures are based on the present population, it is a safe assumption that the passenger revenue on the completion of the line would be as estimated.

The estimated freight traffic of the steam lines was obtained from reliable sources. From this, and from data obtained in other towns surrounding the city, it was ascertained that more than one half the freight revenue within a radius of 50 miles of Toronto, results from traffic to and from the city. An average freight rate between Toronto and the Markham-Stouffville district would be 17 cts. per 100 lbs., so that the estimated average rate of 11 cts. per 100 lbs. should be conservative. It is assumed that a subsidiary cartage company would be formed in Toronto to handle the city deliveries, and considering the frequency and rapidity of an electric service specializing in local business, it is believed that the proposed line could secure at least one half the present freight business, as well as developing new business.

In checking up the milk business, the inadequacy of the steam lines in being able to pick up milk at frequent points, makes it appear certain that an electric line, with collection points at almost every cross road would be able to get a lot of new business as well as much of the present.

The big difference between the estimated express revenues of the present steam and proposd electric lines, is accounted for by the consideration given to the fact that a large amount of the steam railway express traffic is for service rendered outside the Toronto district, for which the electric line could not compete. Consideration is also given to the fact that the fast schedule possible on electric lines tends to reduce the express traffic, the latter going as freight, which has nearly as quick a schedule as observations on other lines have shown.

In estimating the operating expenses, the number of car crews necessary to give the service desired, was estimated from train sheets prepared on the schedule planned. The number of station and repair men was determined from the requirements of other steam and electric lines. The cost of maintenance and repairs of track and rolling stock is more or less standard. All operating expenses were deduced from comparisons with roads operating under similar conditions. To cover annual charges of interest and sinking fund on the cost of the line, 6.3% of the capital investment has been added to the other operating expenses.

In order to examine the project with regard to the effect of adding to or reducing the length of the line, five separate estimates have been made, considering primarily the complete line, and this line with certain sections omitted.

Scheme 1. This is the main estimate, including the following lines: Toronto to Markham, 16 miles; Markham to Uxbridge, 20 miles; Markham to Brooklin, 16 miles, and Port Perry to Whitby, 19 miles; total, 71 miles.

Scheme 2. This considers the same line as scheme 1 with the exception of the line between Brooklin and Whitby. Total, 64 miles.

Scheme 3. This considers the line from Toronto through Markham to Uxbridge, without connection to Brooklin, Whitby or Port Perry. Total, 36 miles.

Scheme 4. This considers a line from Toronto through Markham to Stouffville only. Total, 24 miles.

Scheme 5. This considers a line from Toronto to Markham only. Total, 16 miles.

Provision has been made in the shorter schemes for extending the system at some future date to the full 71 miles, and where possible, portions of the ultimate equipment are figured upon, but this has not always been possible. In scheme 5, the 16 miles is planned to be operated at least partially by long distance equipment, necessarily giving a proportionately higher overhead operating cost than would result if the equipment were selected for the shorter line only.

In estimating the effect of each section of the road on the operating revenue, credit was given to each for the travel between sections that each would induce, recognition being given to the fact that the further a person resides from the city, the less frequent will it be used by him. The following gives the division of the 600,000 passengers among the various sections:

	Passengers.
Toronto-Markham	[illegible]
Markham-Stouffville	[illegible]
Stouffville-Uxbridge	88,500
Markham-Port Perry	[illegible]
Brooklin-Whitby	[illegible]
Total	[illegible]

In the table below are shown the net results of the detailed estimates on the five schemes, for capital cost, operating revenue and operating expenses:

Scheme	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
Mileage	71	64	36	[illegible]	[illegible]
Capital cost, total	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
Per mile	[illegible]	35,800	34,800	[illegible]	[illegible]
Operating revenue	450,500	446,200	300,800	[illegible]	137,500
Operating expenses*	396,660	[illegible]	[illegible]	[illegible]	[illegible]
Surplus	[illegible]	[illegible]	68,020	[illegible]	[illegible]
Deficit	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]

* Including interest and sinking fund.

In order to compete with a service which the steam lines might feel forced to give under competition, it was necessary to figure on the quadruple 100 to 125 h. p. motor equipment. With these motors, it would be possible to travel between Toronto and Uxbridge in 1½ hour, and to Port Perry, some 8 miles further, in from 10 to 15 minutes more time because of the fewer stops. The present analysis does not make provision for limited cars, as the estimated traffic between centres would n t warrant their use, but the same equipment might be used for this service if it should be found advisable to inaugurate such a service.

A study of the accompanying map will show that the section east and north of Brougham and Greenwood is served by the main lines of three steam railways and one electric railway, and on this account the municipalities within this district may not see the necessity of the enterprise. This will not affect the scheme greatly, as an examination of the estimated revenue from the section between Brougham, Brooklin, Myrtle and Whitby has purposely been made small, as the traffic developed must be divided between five other lines that are in a position to give direct and fast service to the city. The bulk of the electric traffic would be local, with small fares. The township of Whitby [illegible] of the district outlined, has requested a report [illegible] ed above not desire the service.

If all the municipalities that requested the report desire to have the line constructed through their districts, the line as laid forth on the accompanying map is recommended [illegible] in the event of any changes being desired by reason of the section to the east and south of Brougham not desiring to be served, there are two alternative plans of connecting the Uxbridge and Port Perry districts: First. Toronto to Unionville, Unionville to the vicinity of Cashel and Almira, north west from Cashel to Newmarket, eastward from Cashel through Stouffville and Altoona to Glen Major, Glen Major to Uxbridge, Glen Major to Port Perry, and Unionville to Locust Hill. Second. Toronto to Markham, Markham to Stouffville to Newmarket, Markham to Glen Major via Locust Hill and Greenwood, Glen Major to Uxbridge, and Glen Major to Port Perry.

To build a line as set forth in the report, with the omission of the Brooklin-Whitby section, would mean a line 64 miles long, whereas either of the lines just outlined would only be from 55 to 60 miles long. The new routes would also pass through a greater section of unserved territory, and probably cross the height of land to Uxbridge and Port Perry at a lower elevation.

The report concludes by stating that schemes 1, 2 or 3 would be the only ones that could be profitably built, as the revenue estimated for the shorter schemes 4 and 5 appears too small to warrant the outlay.

The lines as outlined are estimated on a Toronto terminal in the northeastern section of the city, but it is desired that at some time, a terminal be secured in the heart of the city, and with that object in view, it is the intention to approach the city authorities. It has been suggested that the proposed line use a street to the north of and parallel to Danforth Road to the Don ravine, crossing the latter on the lower deck of the new bridge projected at that point, reaching the centre of the city by way of Ontario, Gerrard, Jarvis and Mutual Sts., giving a route close to the business and financial districts, also providing access to the market districts at the lower end of Jarvis St.

The report is followed by complete detailed estimates of the five schemes, which have of necessity been omitted from this summary from lack of space.

The report was prepared by W. G. Hewson, Assistant Engineer to the Commission, under the direction of F. A. Gaby, Chief Engineer, to whom we are indebted for the data on which this article is based.

The Municipal Railway Tax Association is the name of an organization consisting of a union of counties and townships in Ontario, which interviewed the Provincial Government recently with a view to effecting a change in the matter of taxation of railways within the province. It is suggested that the assessment act be amended to provide for the assessment at a specific value per mile of the structures, substructures, rails, ties, poles and other property.

Trailer Operation by Montreal Tramways Company.

Traffic on St. Catherine St., the Montreal Tramways Co.'s main cross town line, has become so great that it was recently realized that to increase its density by the addition of more individual units would only increase the congestion and not relieve the situation. The St. Catherine St. cars, through the main section of the district, operate on an average headway of a minute and a half, with additional radiating lines using the tracks through a section of the more congested district. The traffic on this through line is such that at all hours of the day the traffic density is very uniform, which has been an important factor in evolving a solution of the problem of providing additional accommodation for the overtaxed line. Trailer operation has been used with success in other cities in Canada, principally Toronto, but the system adopted in the latter employs trailer cars only during the rush hours, the trailers being attached at the car shed just prior to the period of maximum traffic, and removed immediately after. This has the objection of congesting traffic at the car shed.

Consideration of the conditions existing on St. Catherine St. led the General Manager, J. E. Hutcheson, to the conclusion that not only would intermittent trailer operation not be satisfactory, but the uniformity of the traffic density during all hours of the day would make advisable the use of trailers from early morning until late at night, leaving them in operation all day. The congestion at the car sheds, which reaches its maximum during the rush hours, will be relieved to this extent. The steady use of trailers will eliminate one of the principal objections to trailer operation.

In adopting trailer operation, it was decided to have the trailer design follow that of the motor car as closely as possible, resulting in the combination shown herewith. The distinctive type of car most recently developed in Montreal was described in detail in Canadian Railway and Marine World for Mar., 1912. This is the model practically followed in all subsequent designs, there being more recent changes that do not involve any radical departure in the car design such as occurred between that design and its predecessors. A small order of cars delivered to the company early this year departed from the fundamental design by using a monitor instead of a decked roof. This has been followed in these new cars, and forms one of principal points of difference in design.

In the original cars of this design there were 10 cross seats, arranged along a central aisle, near the centre of the car. This has been found to cramp the interior capacity of the car by bottling all the standing passengers in the rear end during the rush hours. In consequence, many of these cars had the cross seats rearranged so as to give a very short longitudinal seat at the forward end of the car, with long seats, extending nearly half the length of the car at the rear end, increasing the useable standing room materially. This change has been retained in motor trailer cars.

A novel departure in the design of these cars has been made in having motor and trailer of practically identical design, the only difference between the two being in the vestibule design. In both the body length is 32¼ ft., with the overall length of the motor car 44¾ ft., and of the trailer 44 ft. The width over sills of both is 8¼ ft., and overall 8 ft. 4¾ ins. The height to car floor from rail is 36½ ins., height overall, 11 ft. 2½ ins. The trucks in both are at 20 ft. 8 ins. centres.

Reference to the accompanying illustration will show that the motor and trailer are of almost identically similar arrangements, the trailer being the reverse of the motor. The reason for this is apparent. For centralizing the control, it was desirable to have the entrances to both cars as close together as practicable, and this has been secured in this design by having the entrance at the rear of the motor and at the front end of the trailer, both entrances within view of the forward conductor.

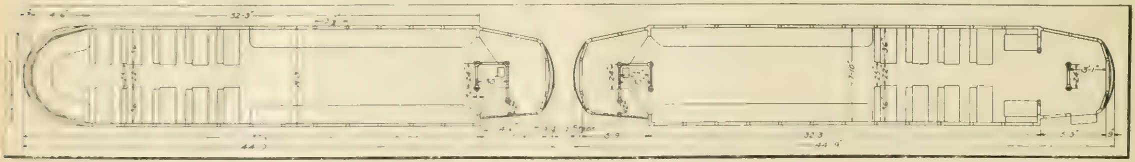
The motorman's platform of the new cars is very nearly the same as formerly, with the exception that instead of the partition separating him from the back portion of the front vestibule, in the absence of the front bulkhead dispensed with in the former design, there is only a guard rail separating his section from the remainder of the front vestibule. The front door is of the folding type, controlled by the motorman as in the former cars.

The rear vestibule is shorter by about 2 ft. than formerly, largely made possible by the elimination of the back bulkhead. This rear vestibule of the motor is similar to the front vestibule of the trailer. The conductor's railing is similarly located to the former design, but in order to have the interior of the car visible to the conductor from his stand, in order to secure the full benefit of the bulkhead removal, the floor of the vestibule at the conductor's stand is raised to that of the car body from the 28 in. level of the vestibule. The shortening of the vestibule has necessitated the removal of the rear rail behind which smoking passengers were allowed to stand.

The conductor's vestibules of both motor and trailer have double folding doors, one each for entrance and exit respectively, the former being that nearest the car end. These double doors are controlled from swing handles in the rail in front of his stand. The steps for the vestibule fold and operate in unison with the car doors, operated by the conductor.

The front end of the trailer is the only entry and exit end, the rear end being blind. The longitudinal seats in the front end of the trailer are slightly longer than in the motor, setting the cross seats back in the car to the rear of the body. The rear vestibule end is on a level with that of the car body and is shorter than at the other end. This end is rounded off, and contains a circular seat, giving an increased seating capacity over the motor by that amount.

In the preliminary description of these cars in the last issue of Canadian Railway and Marine World, it was explained that while the underframing of the cars will be steel, the bodies will be of wood construction, sheathed in steel. The interior trim will be cherry. Among the special equipment are the following:—Cables, conduits and junction boxes, gears and pinions, and motors, Westinghouse; couplers, Tomlinson; destination signs, Keystone. Delivery of the 25 motor cars and 25 trailers included in the order is expected in December. We are indebted to E. Blair, Superintendent of Rolling Stock, M.T. Co., for the information on which this article is based.



Motor and Trailer Car for Operation by Montreal Tramways Company.

Double Deck Car Barn for British Columbia Electric Railway.

The Vancouver City Council, Oct. 7, authorized the drawing up of an agreement with the B. C. E. R. Co. relative to the building of a double deck car barn on Quebec St., between 13th and 14th Avenues. The lower deck will have an entrance from Main St., and the entrance to the upper deck will be from Quebec Ave. The estimated cost of the building is $300,000.

Referring to the project the Vancouver World says: The company has two barns of a temporary type on the north half of the block. The new car barn will take up the entire south half and be of the double deck or two story type, entrance to the lower floor being made from Main St., and to the upper story from Quebec St., and to the possible by reason of the difference in grades of the two streets. The new barn will have a frontage of 132 ft. on Main and Quebec Sts., and extend along Fourteenth Ave. for over 300 ft. On Main St. the height will upper story from Quebec St., this being The estimated cost of over $300,000 for an open structure of this size may seem somewhat large, but the company's engineers state that it is intended to have the building of a permanent and thoroughly fireproof type, the reinforced concrete type of construction being probably followed. The barn will be 45 feet back from the property line on either street, thus making it possible for a considerable portion of the entrance trackage to be located on the company's property. The elevations on the two streets will be of an ornamental character.

It is expected that work on the barn will be started as soon as the agreement is signed.

Traffic Regulation in Halifax.

The Halifax, N.S., City Council has added the following regulation to the city ordinance relating to streets:

"OVERTAKING TRAM CARS."

"56A. The driver of every vehicle, including a motor vehicle, coming up with or overtaking any tram car, and intending to pass on the left side thereof shall, if the tram car is at a standstill or about to come to a standstill or stop, bring his vehicle to a standstill in the rear of said tram car until after the tram car is again in motion."

Regina Municipal Railway Finances.

At a meeting of the Street Railway Committee of the Regina, Sask., City Council held Sept. 20, upon consideration of the accounts of the municipal railway for the eight months ended Aug. 30, it was decided to adopt certain altered methods of bookkeeping. In accordance with these recommendations the City Treasurer and City Auditor prepared a new statement, which was submitted to the Committee, Oct. 4. They add that while the original statement, which has not been published, was a certified one, the present statement, although the operating accounts are the same, is not. The statement is as follows:—

Income.	
Fares	$113,022.50
Advertising	1,840.79
Miscellaneous	1,029.41
	$115,892.78
Expenditure.	
Maintenance of way and structure	$3,573.63
Maintenance of rolling stock	4,327.74
Conducting transportation	56,135.30
Power	29,729.80
Salaries, insurance and miscellaneous	8,649.34
	$102,015 81
Surplus of operation carried forward	13,276.97
	$115,892.78
Income.	
Surplus on operation brought forward	$13,276.97
Interest on monthly capital credit balances from Jan. 1 to Aug. 31	4,936.93
	$18,213.90
Deficit after providing for capital charges	$31,872.34
	$50,086.24
Expenditure.	
Capital expenditure to be provided out of revenue, debenture and consolidated stock services.	
Proportion of interest due:	
Jan. 1, 1913	$ 9,750.00
Jan. 1, 1914	23,500.00
July 1, 1913	9,750.00
(Provided for in revised estimates approved by Council.)	
Sinking Fund:	
Proportion of contribution for 1913	13,145.08
	$56,145 08
Deduct amount to be charged against property sales receipts, 1912	9,750.00
	$46,395.08
Interest for eight months at 6% on $92,278, being amount expended on construction out of property sales receipts	3,691.16
	$50,086.24

It shows the road to have now a deficit of $31,872 34, which is slightly more than $10,000 less than in the Auditor's certified report.

Windsor, Essex and Lake Shore Rapid Railway Annual Meeting.

The report presented at the annual meeting at Windsor, Ont., Oct. 9, showed a gross revenue for the year ended June 30, of $147,813.39, with operating expenses of $82,991.22, leaving $64,822.17 as net operating revenue. Taxes were $1,871.31, interest on bonds, $37,500 and other interest $17,696.19, leaving a net income of $7,837.37.

A. Eastman, heretofore General Manager, was elected a director, the board for the current year being constituted as follows:—President, W. C. Crawford, Tilbury, Ont.; Vice President and General Manager, A. Eastman; Second Vice President, John P. Pigott, Chatham, Ont.; Secretary, W. R. Phillimore, Chatham, Ont.; Treasurer, J. W. McCall, Toronto; other director, E. G. Stevenson, Toronto. J. T. Baird, of Kingsville, Ont. has been appointed Assistant Secretary Treasurer.

The same interests have organized the Mettawas Co., Ltd., to build a summer hotel at a cost of about $20,000. Its directors are W. C. Crawford, President; A. Eastman, Vice President and General Manager; J. L. Baird, Secretary Treasurer.

Large Single Truck Cars for Toronto Railway.

The Toronto Ry. built in its shops, and has had in use in regular service since the middle of the summer, a single truck car that, in carrying capacity and size, in all probability exceeds anything ever built in Canada. M. Power, Master Car Builder, having seen a non parallel axle truck, as made in the United States, prevailed upon the management to have a single truck car built, utilizing this truck, as, by its means, a much longer body might be employed. This was done, a single car being built for experimental purposes.

Essentially the car is in almost all particulars the same as the company's latest double truck cars, the body being an almost exact duplicate in design and size, the only differences being in making the platforms at each end slightly shorter, with the space between the cross seats at the end, when used as an open car, closer together than in the double track car. These changes shorten the car slightly, without affecting the seating capacity, making possible a double truck car body on a single truck.

The overall car length is 40 ft., made up of a body length of 29 ft., 5 ft. platforms at each end, and 6 in. bumpers. The overall width is 7 ft. 11 ins. The body contains 14 cross seats, ranged in pairs, back to back, at 4 ft. 2 in. centres, giving a seating capacity of 70. The truck wheels are at 12 ft. centres, and each pair of wheels has a G80 motor, operated from a K10 controller. The truck is equipped with standard air brake apparatus. The car weight complete is 17½ tons.

This car has proved its abilities in service to date, riding very smoothly, and taking sharp curves without trouble. Its experimental use in regular service is to be continued through the winter to demonstrate its worth under those conditions, and if its operation is satisfactory, it will doubtless be followed by additional cars of the same type.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and Allied Companies.—Gross earnings for August, $770,628; operating expenses, maintenance, etc., $566,541; net income, $204,087, against $675,272 gross earnings; $480,341 operating expenses, maintenance, etc.; $194,931 net income for Aug., 1912. Aggregate gross earnings for two months ended Aug. 31, $1.526.571; net earnings $410,083, against $1.325.517 aggregate gross earnings; $376,899 net earnings, for same period 1912.

A prospectus was issued in London, Eng., recently offering £650,000 4½% perpetual guaranteed deventure stock of the Vancouver Power Co., Ltd., guaranteed unconditionally as to principal and interest by the B. C. Electric Ry. Co., and ranking identically, when fully paid, after Jan. 9, 1914, with similar stock quoted at the date of the prospectus at 92 to 94. The price of issue was 88.

A resolution was passed by the Vancouver City Council, Oct. 9, that overtures be made to the company, with a view to purchasing the lines in the city. The proposition is of a general character, and does not disclose any basis of negotiation.

Cape Breton Electric Co.—Gross earnings for August, $33,454.18; operating expenses and taxes, $17,299.94; net earnings, $16,154.24; interest charges, $4,891.67; balance, $11,262.57; bond sinking and improvement funds, $1,190; net balance, $10,072.57, against $31,598.38 gross earnings; $16,100.77 operating expenses; $15,497.61 net earnings; $4,495.83 interest charges; $11,001.78 balance; $1,206.67 bond sinking and improvement funds; $9,795.11 net balance, for Aug., 1912.

Grand Valley Ry.—Brantford St. Ry.—An adjourned meeting of shareholders was called for Oct. 31, to consider a report of a special committee. It is said that the committee decided to recommend that an appeal be made against the recent judgment as to the Brantford St. Ry., and that no offer for the settlement of the company's affairs with the city of Brantford be made.

Halifax Electric Tramways Co.—The Nova Scotia Public Utilities Commission has decided that there is no reason why the company should not pay off its bond issue by the issue of shares as proposed, but it decided not to grant the application to issue $600,000 new capital, on the ground that sufficient evidence had not been produced as to the propriety of the proposed method of financing.

Lethbridge Municipal Ry.—Earnings for September, $4,675; and for nine months ended Sept. 30, $44,242.02. Number of passengers carried in September, 112,266.

Montreal and Southern Counties Ry.—Following are the officers and directors elected for the current year at the recent annual meeting:—President, W. Wainwright; Vice President and Treasurer, F. Scott; Secretary, J. A. Yates; other directors, W. H. Biggar, K.C., and W. H. Ardley. W. B. Powell is General Manager.

Montreal Tramways Co.—The second call of $10 a share upon the new stock issued April 15 is due Nov. 3.

Montreal Tramways Co.—There has been listed on the New York stock exchange, $13,335,000 of first and refunding 30-year 5% collateral trust notes, series A, falling due in 1941.

Regina Municipal Ry.—Passenger receipts for Sept., $17,950.65. The number of passengers carried was 439,993, and including transfers, 502,898.

Toronto Ry., Toronto and York Radial Ry., and allied companies.—Gross earnings for August, $850,222; operating expenses, maintenance, etc., $411,300; net earnings, $438,922, against $727,925 gross earnings; $325,519 operating expenses, maintenance, etc.; $402,406 net earnings, for Aug., 1912. Aggregate gross earnings for eight months ended Aug. 31, $6,317,674; net earnings, $3,098,367, against $5,453,100 aggregate gross earnings; $2,821,327 net earnings, for same period 1912.

Gross earnings for Toronto Ry. for September, were $549,859.35, against $496,359.70 for Sept., 1912. The percentage paid to the City in Sept. was $43,988.75, and in Sept., 1912, $39,788.78.

Windsor, Essex and Lake Shore Rapid Ry.—The annual meeting was held at Windsor, Ont., Oct. 10. Following are the officers and directors for the current year:—President, W. C. Crawford; First Vice President and General Manager, Albert Eastman; Second Vice President, John Piggott; Secretary, W. R. Philmore; Treasurer, J. W. McCall; other directors, E. G. Stevenson and W. T. Piggott; Assistant Secretary-Treasurer, J. L. Baird.

Winnipeg Electric Ry.—Gross earnings for August, $340,507; operating expenses, $184,335; net earnings, $156,172, against $303,764 gross earnings; $162,431 operating expenses; $141,333 net earnings for Aug., 1912. Aggregate gross earnings for eight months ended Aug. 31, $2,649,702; net earnings, $1,186,294, against $2,427,830 aggregate gross earnings; $1,133,895 net earnings for same period 1912

Electric Railway Projects, Construction, Betterments, Etc.

British Columbia Electric Ry.—We are officially advised that the company has not entered into any negotiations with the Great Northern Ry., for the purchase of the abandoned right of way of the Cloverdale-Blaine line, as recently reported in daily papers.

The extension from Victoria Road to Joyce Road, on Kingsway, Vancouver, 1.5 miles, was opened for traffic, Oct. 1. (Oct., pg. 494.)

Dominion Power and Transmission Co.—An announcement is reported to have been made, Oct. 21, by W. C. Hawkins, Managing Director, that work will be started as soon as possible on the construction of a steam power plant on the site of the old power plant on Guise St., Hamilton, that the new plant will be laid out to generate 27,000 h. p., that it will cost $1,350,000, and that provision will be made so that additional units can be added so as to permit the production of 90,000 h. p. The cost of the fully completed plant is estimated at $3,500,000. Plans have been completed, we are officially advised, for the erection of sheds to be placed on the same location as those which were burned in Hamilton some months ago. The estimated cost is $15,000, and bids for the work have been asked.

We are also advised that nothing further has been done in regard to the projected extension of the Hamilton and Brantford Ry. to Galt, Ont. (July, pg. 344.)

Edmonton Interurban Ry.—Press reports stated recently that it was expected to start a car service on the first section of this line from Edmonton to St. Albert, Alta., early in October. We have no information that the line has been opened for traffic. (Oct., pg. 494.)

London, Grand Bend and Stratford Ry.—Press reports state that an intimation has been given to the London, Ont., City Council that if the city will guarantee bonds for $1,000,000 there will be no difficulty in finding the capital to build the lines proposed, and an additional one to Sarnia.

The lines proposed are: London to Bryanstown, Granton, Woodham, St. Marys, Mitchell and Stratford, looping back to London; London to Ailsa Craig, Parkhill, Grand Bend, Dashwood and Goderich. These are included in the proposed charter of the L., G.B. and S. Ry., and the third line, for which there is a charter in existence would serve London, Lobo, Coldstream, Strathroy, Arkona, Forest and Sarnia. (Oct., pg. 494.)

Medicine Hat Tramways, Ltd.—We are officially advised that when construction is started on the electric railway in Medicine Hat, Alta., early in 1914, it will be in charge of J. B. D'Aeth of the Montreal Engineering Co.'s staff as Superintendent of Construction. (Oct., pg. 494.)

Melita, Man.—The bylaw passed by the town of Melita grants to R. E. Denny, Brandon, Man., a franchise for 30 years for a lighting, heating and power plant, a waterworks system, and a street railway system. The principal reason for which the bylaw was passed was for the purpose of obtaining light, as there are good indications of natural gas in the vicinity. Mr. Denny proposed to make tests, and to install a lighting system, and the other franchises were included. It is not expected that anything will be done about waterworks or a street railway for some years. (Oct., pg. 494.)

Montreal and Southern Counties Ry.—The Montreal City Council has passed a resolu- on granting the company permission to ex- d its car line across McGill St., east on ville Square to St. Peter St., and north on St. Peter St. to Youville Square, and thence west again on the Square to McGill St.

The Board of Railway Commissioners has authorized the opening for traffic of the electrified portion of the Central Vermont Ry. between Richelieu and Marieville, Que., and has given the M. & S.C.R. permission to use the C.V.R. station yards, etc., between these points. The distance from the terminus in McGill St., Montreal, to Marieville is 24 miles. The completion of the line from Marieville to St. Cesaire is near at hand and it is expected to have the line ready for operation by the end of the year.

Contracts are reported let for the building of a bridge across the Yamaska River on the St. Cesaire extension. It is said that the concrete substructure will consist of four piers and two abutments, which will be put in by John Ross, Montreal, and the steel work will be erected by the Dominion Bridge Co. It is reported that a contract has been let to Ross and McComb for grading and other work on the extension of the line through Granby, Que. It is expected that the entire line will be completed into Granby early in the summer of 1914.

Tenders are being asked for the erection of a power substation at Rougemont. (Oct., pg. 494.)

Montreal Tramways Co.—A press report states that the M.T. Co. proposes at an early date to open negotiations with the Montreal City Council with regard to the construction of underground lines in the city, which it has power to build. The company's franchise for surface lines in the city has about nine years to run. It is stated that the proposed underground lines would be built so as to relieve congestion on the surface lines, and to give accommodation to outside areas which at present are not adequately served. It is further stated that the double fare question, the snow removing difficulty, and differences about street paving would be taken up during the proposed negotiations.

J. E. Hutcheson, General Manager, made a statement as to the work in progress on the lines, Oct. 18. He is reported to have said that in the early part of the year $3,750,000 had been appropriated for betterments. Of this $3,000,000 has already been expended. Since the work started seven miles of new track have been laid, and 20 miles of track renewed. On the renewed track the old 87 lb. steel has been replaced with 116 lb. steel. There have been other improvements carried out on the lines, and the work of betterment will be carried on as long as the weather will permit. (Oct. pg. 494.)

Morrisburg and Ottawa Electric Ry.—The annual meeting of shareholders was held at Ottawa Oct. 13, when it was reported that $20,000 had been expended on surveys, etc., during the year; that there was $40,000 on hand, and $100,000 immediately available for construction. About 25% of the arrears on calls had been paid by the shareholders. The President stated that the company's affairs were progressing satisfactorily and that construction had actually been started. Following are the officers and directors for the current year: President, J. G. Kilt; Vice President, R. J. Biggar; other directors: J. W. Bogart, Morewood, Ont.; A. H. Coplan; Secretary-Treasurer, R. A. Bishop; Auditor, G. L. Blatch; Chief Engineer, L. Von Sydow. With the one exception, above named, the directors and officers live in Ottawa.

Niagara, St. Catharines and Toronto Ry.—Press reports state that the line from St. Catharines to Niagara on the Lake was practically completed Oct. 1. The line starts from Geneva St., St. Catharines, and is built partly on the highways and partly on private right of way. At Ten Mile Creek, which will be the entrance to the new Welland Canal, there is a spur to the lake front. The track is laid with 85 lb. rails to this point, and with 65 lb. rails for the remainder of the distance. An additional transformer station is being equipped at St. Catharines and a 750 k.w. rotary converter at Niagara on the Lake, where a freight yard is being laid out, and a connection will be made with the Michigan Central Rd. (Oct., pg. 494.)

Ottawa and St. Lawrence Electric Ry.—Press reports state that a contract has been let to a Toronto construction company, of which J. A. Morden is President, for the building of this line, which is to connect Ottawa, Morrisburg, Brockville and Arnprior, Ont. The contracting company is taking over the entire bond issue of the company. The company's offices are to be removed to Toronto. (Aug., pg. 395.)

Porcupine Rand Belt Line Ry.—Application is being made to the Ontario Government to subsidize the building of 100 miles of electric railway, either by a bond guarantee or a land grant. The proposed line would extend along the Ontario-Quebec boundary from Abitibi Lake to Haileybury, with branches connecting with or crossing the Timiskaming and Northern Ontario Ry., north of Swastika, near Porcupine, and at other points; and a connection with the Canadian Northern Ontario Ry. at Flying Post. (Jan., pg. 20.)

Port Arthur and Fort William Electric Ry.—The Fort William, Ont., City Council has deposited with the Public Works Department, Ottawa, plans of a 500,000 c.m., 556 volt direct current subaqueous armoured cable for conveying electrical energy for the operation of its electric railway extension, from the Kaministikwia Power Co.'s supply across the Kaministikwia River to Island 2.

The new belt line in Port Arthur was expected to be ready for operation Oct. 30. It leaves the main line at Clavet St., runs up that street to Alberta, along Alberta to Shuniah St., along Shuniah and across the city property to Balsam Ave., thence to Senico, and Bromlow, and along High St. to River St., down River St. to Pine St., where it connects with the Arthur St. line. (Oct., pg. 494.)

Regina Municipal Ry.—H. Doughty, Superintendent, in a recent report said: "This year's construction includes 23,700 ft. of single track laid with 60 lb. rails, 5,110 ft. laid with 80 lb. rails, 2,050 ft. single track of better construction laid with 80 lb. rails, 18,600 ft. of double track permanent construction laid with 80 lb. rails, or a total of 64,460 ft. in all. This does not include the Country Club line or about three miles still to be constructed. The cost to date this year is $637,000. Four miles of single track was replaced with double track permanent construction. The whole system now comprises: 63,000 ft. 60 lb. rails, single track, gravel construction; 5,110 ft. single, 80 lb. rails, gravel construction; 13,300 ft. single track, 80 lb. rails, concreted and partly paved; 32,150 ft. double track, 80 lb. rails, partly paved. This makes a total already constructed and exclusive of the Country Club line of 145,710 ft. or 27.75 miles. There is still about three miles to be constructed and this with 3.25 miles of the Country Club line will make a total of 34 miles." (Sept., pg. 442.)

St. John Ry.—Press reports state that construction on the extension to East St. John, N.B., is well advanced, and that it is expected to have this loop line in operation at an early date. (May, pg. 235.)

Sandwich, Windsor and Amherstburg Ry.—Application is being made to the Ontario Railway and Municipal Board to direct specific performance of an agreement between Tecumseh Tp. and the Essex, Windsor and Tecumseh Ry., now leased to the S. W. and A. R. Under the agreement the E. W. and T. R. was to make extensions when the line became profitable. The Board is being asked to decide whether the time has come when these extensions have to be made. (Oct., pg. 494.)

Saskatoon Municipal Ry.—The City Electrical Engineer notified the Saskatoon, Sask., City Council, Oct. 7, that the electric railway from Saskatoon to Sutherland, 4.5 miles, would be completed and ready for the city to take over very shortly. It was decided to take over the line as soon as the engineer certified that it was fully completed, and to put it in operation as soon as the new cars arrived. (Oct., pg. 494.)

Sudbury-Copper Cliff Electric Ry.—A bylaw granting a franchise for an electric railway in Sudbury, Ont., has been approved by the ratepayers. (June, 1912, pg. 310.)

Thorold, Ont.—The Town Council of Thorold, Ont., Oct. 8, decided to submit a bylaw to the ratepayers in January to raise $20,000 by debentures to build a street railway connecting with the factories at the south end of the town.

Winnipeg Electric Ry.—The Manitoba Public Utilities Commissioner has ordered the company to provide the necessary appurtenances and equipment for crossing the C.P.R. on Selkirk Ave.

The Assiniboine Municipal Council is asking the Manitoba Public Utilities Commissioner to order the company to move its tracks to the middle of the road throughout the municipality.

The extension of the car line to St. Vital was opened for traffic, Oct. 8. The line, which is three miles long, extends from the corner of Marion and Tache Sts., St. Boniface, to the south of Windsor park. (Oct., pg. 495.)

Electric Railway Notes.

The British Columbia Electric Ry. has ordered three standard single truck snow sweepers from the Ottawa Car Co., for delivery by Nov. 15.

During August, three men were killed and four were injured in the course of their employment in the operation of electric railways in the Dominion.

The Ottawa Electric Ry. has ordered two standard locomotive type, steel double truck snow sweepers from the Ottawa Car Co., for delivery about Nov. 15.

The average daily number of passengers carried on the Brandon Municipal Ry. during September was 2,500, against 2,776 in August. The car mileage averaged 900 miles a day.

The Montreal Tramways Co. has decided to obtain the ruling of the highest court, if necessary, in order to test its powers over passengers who refuse to comply with the company's antismoking regulations.

The Manager of the Port Arthur and Fort William Electric Ry. reported to the joint board of management, Oct. 6, that the line was paying too much for its power in comparison with what was charged other city utilities.

A number of residents along the Hamilton, Grimsby and Beamsville Ry. route, recently applied to the Ontario Railway and Municipal Board, for an order to fix certain additional stops for passengers. The matter was adjourned to enable the Board to go over the route.

The Montreal Tramways Co. is operating 775 cars on its various lines, about 100 in excess of those in service in 1912. New cars are being delivered at the rate of four a week, and it is said that there are still 250 on order.

The Montreal City Treasurer, in his annual report, recently compared the amounts paid to the cities of Montreal and Toronto by the street railways. The amount received by Montreal for 1912 was $411,001.69, against which was quoted the amount received by Toronto in 1911, viz., $772,108.64.

The Nipissing Central Ry., operated by the Timiskaming and Northern Ontario Ry. Commission, we are officially advised, is considering the matter of ordering two additional cars, but that if by the arrangement of a new schedule a certain end can be effected, the cars will not be ordered.

The Lethbridge, Alta., City Council is reported to have adopted the following schedule of wages for motormen and conductors on the municipal street railway:—First 6 months, 25c. an hour; second 6 months, 28c.; second year, 30c.; third year, 32c. On public holidays time and a half will be paid, and on Sundays 9 hours' pay will be given for 7½ hrs. work.

American Electric Railway Association's Convention.

This convention, which was held at Atlantic City, N.J., Oct. 13 to 17, was one of the most successful in the Association's history, the attendance of electric railway officials, etc., being very satisfactory, although not quite so large as at Chicago in 1912. A number of meetings were held of the American Electric Railway Association, and its subsidiary associations, accounting, engineering, claims agents, transportation and traffic, at which papers were read and discussed as well as reports of committees. The supply exhibits were on a larger scale than ever before.

The Canadian Electric Railway Association was officially represented by Patrick Dubee, President, and Acton Burrows, Secretary-Treasurer. It had its headquarters in the American Electric Railway Association's space at the entrance to the exhibit pier, and held a separate registration for Canadians attending, which was much appreciated.

The Ontario Railway and Municipal Board was represented by D. M. McIntyre, Chairman; A. B. Ingram, Vice Chairman; H. N. Kitson, Commissioner; and H. C. Small, Secretary. The Province of British Columbia was represented by W. Rae, Inspector of provincial railways there.

Among the Canadian electric railway officials attending were the following:—J. Anderson, Manager, Sandwich, Windsor and Amherstburg Ry.; R. A. Baldwin, Master Mechanic, Ottawa Electric Ry.; H. H. Beasley, Purchasing Agent, Toronto Ry.; D. E. Blair, Superintendent Rolling Stock, Montreal Tramways Co.; J. A. Burnett, Electrical Engineer, Grand Trunk Ry.; F. D. Burpee, Superintendent, Ottawa Electric Ry.; A. S. Byrd, Superintendent Power Plants, Montreal Tramways Co.; D. Campbell, Inspector, Toronto Ry.; W. P. Cooke, Chairman, Public Utilities Commission, Port Arthur, Ont.; H. Cowan, Chief Night Inspector, Toronto Ry.; W. Craig, Master Mechanic, Hull Electric Co.; H. Doughty, Superintendent, Regina Municipal Ry.; Patrick Dubee, Secretary-Treasurer, Montreal Tramways Co.; F. S. Easton, Engineer Hydro Electric Construction, British Columbia Electric Ry.; R. W. Ennis, Assistant Master Mechanic, Toronto and York Radial Ry.; A. L. Farquharson, Superintendent Street Railway Construction, Fort William, Ont.; A. Gaboury, Superintendent, Montreal Tramways Co.; G. Gordon Gale, General Superintendent, Hull Electric Co.; W. F. Graves, Chief Engineer, Montreal Tramways Co.; D. W. Harvey, Assistant Engineer, Toronto Ry.; J. B. Holder, Foreman Carpenter, Kingston, Portsmouth and Cataraqui Electric Ry.; G. K. Hyde, Storekeeper, Toronto and York Radial Ry.; W. M. Kirkwood, Superintendent, Galt, Preston and Hespeler Street Ry.; T. H. McCauley, Manager, Calgary Municipal Ry.; V. S. McIntyre, Superintendent, Berlin and Waterloo Street Ry.; J. S. Mackenzie, Purchasing Agent, Winnipeg Electric Ry.; W. R. McRae, Master Mechanic, Toronto Ry.; W. H. Munro, Local Manager, Peterborough Radial Ry.; H. C. Nickle, General Superintendent, Kingston, Portsmouth and Cataraqui Electric Ry.; O. A. Oakes, Foreman, Kingston, Portsmouth and Cataraqui Electric Ry.; L. Palk, Claims Agent, Winnipeg Electric Ry.; H. E. Phillips, Superintendent Power Station, Winnipeg Electric Ry.; Wilson Phillips, Superintendent, Winnipeg Electric Ry.; M. O. Robinson, General Manager, Port Arthur and Fort William Electric Ry.; G. C. Royce, Manager, Toronto Suburban Ry.; H. G. Salisbury, Architect and Structural Engineer, Toronto Ry.; A. E. Shaw, Chief Claims Agent, Montreal Tramways Co.; J. M. Smith, Comptroller, Toronto Ry.; M. F. M. Werth, Assistant Mechanical Superintendent, British Columbia Electric Ry.; C. L. Wilson, Assistant Manager, Toronto and York Radial Ry.; J. A. Wilson, Chief Draughtsman, Ottawa Electric Ry.

Among the Canadian supply men in attendance were H. C. Anderson, Sales Department, John Millen and Son, Ltd., Toronto; H. D. Bayne, Special Agent, Canadian General Electric Co. and Canadian Allis-Chalmers Co., Toronto; G. Broughall, Secretary, and F. Erickson Brown, General Manager, Northey-Simmen Signal Co., Toronto; D. M. Campbell, General Manager, Preston Car and Coach Co.; W. A. Chapman, Manager, Rail Joint Co. of Canada, Montreal; J. A. Dawson, Dawson and Co., Ltd., Montreal; P. A. Hinds, District Sales Agent, Eastern Canada, Ohio Brass Co., Toronto; W. K. Jeffrey, General Manager, Ottawa Car Co.; A. C. Lewis, Vice President, Templeton-Kenly and Co., Toronto; F. D. Lyman, Manager, Railway Supply Co., John Millen and Son, Ltd., Montreal; G. Shenton, Salesman, Railway Supply Department, John Millen and Son, Ltd., Montreal.

The Canadian Westinghouse Co. sent a large delegation, including P. J. Myler, Vice President, N. S. Braden and H. U. Hart, Hamilton; C. F. Medbury, A. B. Brown and H. E. Blatch, Montreal; J. F. Dryden, Toronto; W. A. Duff, Winnipeg; R. A. Davis, Calgary, and J. R. Read, Vancouver.

Comparative Salaries on an Electric Railway.—During the recent hearings in Boston, Mass., to take evidence on the controversy between the Boston Elevated Ry. Co. and its carmen the following facts were brought out in regard to the salaries of the various officers: The salaries are: President, $36,000 a year; First Vice President, $20,000; Second Vice President, $15,000; Treasurer, $12,000; Real Estate Agent and Asst. Secretary, $10,000; Clerk, $10,000; General Auditor, $7,500; General Counsel, $25,000; Assistant Counsel, $15,000; Publicity Agent, $4,000; Chief Engineer, $9,500.

The storage bin annex of the C.P.R. elevator at Transcona, Man., on Oct. 18 sank about 20 ft., the cupola of concrete slipping off and the bins remaining at an angle of about 26 degrees. There were about 900,000 bush. of wheat in storage, which it was expected would be removed and shipped without damage.

Marine Department.

Additional Car Ferry for the Intercolonial Railway's Strait of Canso Service.

The Intercolonial Ry. has called tenders for a new car ferry [illegible] for transport-[illegible] the Strait of Canso, from the mainland of Nova Scotia to Cape Breton Island on the Truro-Sydney line. The new ferry is to be similar to the present ferry Scotia as far as practicable, the principal point of difference being an additional [illegible] of [illegible] ft. The principal dimensions will be as follows:—Length overall, 300 ft.; length between perpendiculars, 276 ft.; breadth over fenders, 48 ft.; moulded breadth on deck, 46 ft.; breadth at load water line, 43½ ft.; moulded depth, 19 ft.; draught when laden with 1,400 tons of car load and 150 tons of coal, water and stores, 14 ft.; and [illegible]

[illegible] ram in front of bow propeller to break ice. [illegible] strengthened at the water line fore and aft [illegible] bulwarks on the sides and a small pilot [illegible] Mess room accommodation is to be provided [illegible] propeller is to have an independent triple [illegible] to be capable of indicating about 3,000 h.p. [illegible] 100 A1 single deck, and to comply with the British Board of Trade requirements. Spe-[illegible] to be specially framed to support the weight of locomotives of class "special heavy" of the Dominion Government specification on [illegible]

[illegible] plates, connected to the propeller posts at [illegible] up the face of the [illegible] with [illegible] the [illegible] floor [illegible]

[illegible] th no [illegible] girders will be connected at the bottom to the side keelsons, and the top to intercostal plates running fore and aft and connected to the beams and deck plating. The main deck is to be formed of steel plates, sheathed with 2½ in. pitch pine overall. The under side of the deck over the engine and living rooms is to insulated by providing air spaces and insulating materials, to eliminate air condensation with a maximum outside temperature of 20 degrees below zero.

The coal bunkers are to be arranged to carry 75 tons or more if practicable, to be loaded by chutes from the centre track. Four coaling doors are called for in the bunker sides to suit the boiler firing.

A close steel bulwark, 8½ ft. high, is to extend along both sides and stern, with portable wrought iron stanchions in the bow. The bulwark is to have a steel bulb angle stiffening rail along the top, and is to be stayed every 6 ft. with a bulb plate. 80 lb. rails will be used at the standard 4 ft. 8½ in. gauge, supported on elm runners on a steel girder formed of two steel angles. Scupper holes will be cut in the girders for drainage. Oak fenders, 10 by 12 ins., will be fitted all around the vessel, between steel angles, and protected on the outside by thick plate of steel, 10 ins. deep.

There is to be a steel pilot house 7½ ft. high, arranged for the steering standard and a wheel for the steam steering gear, and other pilot house fittings. The pilot bridge, of 2½ in. pitch pine, carried on a steel frame from the sides of the vessel, is to be placed forward on the vessel. It is to be of sufficient width to afford a passageway in front of the pilot house, and will be reached by two steel ladders. A combined hand and steam steering gear is to be connected to the rudder, working directly on the quadrant, and fitted with all necessary fittings, to be controlled from the pilot house by geared rods.

There will be four steam warping capstans for working the anchor cables and mooring ropes, all but the capstan heads to be placed below the deck, and to be operated by levers on the deck. Wooden chain lockers will be conveniently located as regards the capstans. Two anchor davits, complete with blocks and falls, etc., will be [illegible] near the cable capstans. There will also be six pairs of mooring bitts with necessary mooring pipes, with hawse pipes for the cables formed of heavy castings securely fastened to the deck.

Four rooms will be provided for the [illegible] rooms for the day and night captains, and two for the chief engineers. There will [illegible] fitted in a comfortable manner. The crew's [illegible] All these rooms will be sheathed in white wood, and [illegible] condensation. The galley will be conveni-[illegible] will be conveniently located, with necessary fittings, and a connection to the galley.

The vessel will be equipped with two 24 ft. life boats and an ice boat. The inside and outside of the vessel will receive 3 coats of oil paint, finished in appropriate colors. The officers' quarters will be painted in colors and varnished, and the crew's quarters painted only. The bottom of the vessel will be coated with Portland cement. The floors of the crew's lavatory will be cemented, and the lavatories of officers and passengers will be finished in tile.

The engines will be of the triple expansion, inverted, direct acting, surface condensing type, working on three cranks, each set of engines being a duplicate one of the other in the working parts. They are to be designed so that they will stand, without injury, the sudden stoppages of the screws when working amongst ice. One surface condenser will be fitted to both sets of engines. The machinery will be so placed that by the introduction of a short length of shafting between the two engines, one can be arranged to work both propellers, and the other can be disconnected from the shafting when desired. A starting valve is to be fitted, working from the starting platform. The reversing gear will be of the latest direct acting hydro steam type, with hand gear and handles conveniently arranged, with the weight shaft supported on long bearings.

The general purpose pump will be connected to the condenser for use when required. The circulating pump will be of the twin centrifugal type, driven by a single cylinder engine, taking steam from the auxiliary steam pipe and exhausting directly to the condenser. It will be arranged to draw from the ice box and bilges, and to discharge through the condenser overboard. The air pump will be of the twin independent vertical type, having single acting air pumps worked from either end of a beam actuated by a single steam cylinder, the working barrel of brass to draw from the bottom of the condenser and deliver to the feed pump control tank. The main feed pump is to be of the independent duplex direct acting type, fitted with tank having a float and automatic control gear, the pump to be capable of dealing with the water from both engines when working at full speed. It will draw from the control tank, and also from the sea and fresh water tanks and discharge to the boilers. There will also be a general purpose pump, capable of discharging 90 tons of water an hour, to draw from the bilges and from the sea, and discharge overboard and into wash deck and service pipes. An auxiliary feed pump of the duplex type will draw from the sea, from the fresh water tank and from the control tank, and discharge into the boilers, on deck and overboard, and also arranged to circulate water in the boilers when getting up steam and to discharge through the condenser.

The electrical equipment will comprise a complete installation of electric lights, with two separate 25 k.w. 80 volt multipolar generators direct connected to [illegible] vertical [illegible] compound Bellis and Morcom engines, approximating 350 to 400 r.p.m. There will be a separate switchboard for each generator, containing the necessary control and recording apparatus. There will also be a feeder panel for the searchlight, arc lamp and incandescent lamp circuits. The search light will be of the 15,000 c.p. pilot house type, supplied with the necessary gear and connections in the pilot house.

The size of the vessel precludes the possibility of builders on the Great Lakes bidding on the proposition, as they are limited in production to the capacity of the St. Lawrence canals.

Lake Shippers' Clearance Association.

Canadian Railway and Marine World for October contained the President's address and the General Manager's report at this association's annual meeting in Winnipeg, Aug. 26.

The following resolution was adopted:—"Seeing that both shippers and vessel owners are quite satisfied with the present conditions, that the existing rates be continued for the coming season, and that the new board, at an early date, consider the disposal of any surplus made after $75,000.00 is reached as a reserve."

It was decided to raise the entrance fee from $1,000 to $1,500.

The profit and loss account showed balance from previous year $5,289.45, balance from operating account, $32,619.58; total, $37,909.03. Of this $30,000 was transferred to reserve.

SCHEDULE OF VESSEL TARIFF.

(a) Vessels up to 125,000 bush. of wheat capacity—30c. per 1,000 bush. for loading within 24 hours of arrival, loading weather.

(b) Vessels of 125,000 to 200,000 bush. of wheat capacity—30c. per 1,000 bush. for loading within 48 hours of arrival, loading weather.

(c) Vessels of 200,000 or over bush. of wheat capacity, as follows:—40c. per thousand for loading in 24 hours, 30c. per thousand for loading in 48 hours, 20c. per thousand for loading in 60 hours, 10c. per thousand for loading in more than 60 hours.

If above time limits are exceeded in classes (a) and (b) the charge is to be 10c. per thousand bush.

If delay is caused by non-surrender of documents, the shippers are to be penalized by the Lake Shippers' Clearance Association to the extent of the estimated loss of revenue to the Association by reason of such delay.

Sample cargoes to be loaded at 15c. per 1,000 bush. straight.

After Nov. 25 and until the close of navigation, the charge to be 20c. per 1,000 bush. flat on all boats loaded.

Time shall start from time of arrival ready for loading, if such time is prior to 4 p.m. on a working day. If after that hour, time shall start at 7 a.m. on the following morning, if elevators not working during the night.

John Corbett on the Ocean Freight Rate Question.

John Corbett, of Montreal, who was for 28 years Foreign Freight Agent, C.P.R., writes as follows:—I should be favored if you could find space for this letter, which expresses my views as a practical business man, on the ocean freight rates agitation, which after a tenuous and querulous existence, appears at last to have nearly exhausted itself. Born of personal interest, and sustained by ignorance, misconception and misstatements, it has not been able to withstand the searchlight of hard facts.

The first mistake its initiators made was that they sought to violate one of the first principles of the commercial world, and one which before now has been upheld by the highest courts of the empire, viz., the undeniable right of the private trader to conduct his legitimate affairs without interference. In spite of the fact that the conference system has given us advantages and facilities which otherwise would not now be in force, the agitators have allowed themselves to put before the public a picture of the conference, as a bloodsucking monopoly of the worst type. One of the worst monopolies that we have to endure at present in this country is that of the millers. As was pointed out in an evening paper the other day, Canadian flour is much cheaper in London than in the industrial centres in Canada. This fact should be specially interesting to consumers in the Dominion, and should make them ask themselves what is the reason? There is an old saying "that people who live in glass houses should not throw stones."

A prime mistake made by the agitators was the attempt to institute comparisons between railway rates and ocean rates. A little consideration would have shown them that railways were chartered with certain privileges, and had practically a monopoly in the districts they served, whereas there are no privileges on the ocean, which is open to any steamship owner of any nationality who can obtain a freight.

A very interesting statement of the fluctuations in ocean freight rates was published in one of the leading shipping papers some time ago. That statement, which was illustrated by a diagram, took the boom year of 1900 as a basis for its remarks. As is well known to everyone, the high rates prevailing in 1900 were not the result of an increase in trade, but of a spasmodic increase due to the large requirements of tonnage of all kinds by the British Government in the South African affair. From 1884 to 1889 trade was steady, and very little variation in rates took place, but from 1889 to 1895 rates again fell, till in the latter year they were 40% less than in the former. Unsettled political conditions had again had an effect on rates, which rose to within 9% of the basis of 1900. When the British Government were finished with the large amount of tonnage employed by it, the effect of so many vessels being replaced on their regular trades was seen by a fall of 26% in that year. Rates remained so unremunerative that shipowners refrained from building new vessels until in 1911 a natural increase in the demand for tonnage having taken place, the supply available was overtaken, and rates began again to move upwards to a paying basis. The great coal and transport workers' strike of that year in Great Britain had a very serious effect on freight rates, tying up thousands of tons of steamships, and resulting afterwards for a short period in a fictitious rise in rates for the time being, in order to overtake lost time. As is well known, a marked improvement has taken place in the class of tramp steam ships. They are better built, better equipped, and therefore they can be handled more expeditiously and economically than was formerly the case with that class of vessel. That, besides being of advantage to the owners, is of great benefit to the shippers and merchants.

The report of the British Royal Commission on shipping rings and rebates states the case fairly and temperately. While it is admitted that there are weaknesses in the system, it is shown that such weaknesses could be dealt with and eradicated by simple means, and it completely repudiated the right of the state to interfere with an industry to which it granted neither a trading monopoly nor a guarantee of profit.

Government Wharf at Burrard Inlet, Vancouver.

A contract has been let by the Department of Public Works, Ottawa, to Henry, McFee and McDonald, Vancouver, B.C., for the construction of a wharf on Burrard Inlet, between Salisbury and Commercial Drives, Vancouver. The work to be done consist of excavation in earth and rock to a depth of 35 ft. at low tide over the slips on each side of the wharf, and 36 ft. over the area covered by the cribs, or such other depth as may be ordered; the construction of lines of timber cribs sheathed with reinforced concrete, and filled with stone ballast with a mass of concrete superstructure forming a wharf 800 ft. by 300 ft.; construction of two bulkheads of timber cribwork sheathed with reinforced concrete with a mass of concrete superstructure at the shore end of the wharf, each 40 ft. long; the filling in between the two lines of cribs to the level of the coping of the mass concrete superstructure and at the back of the bulkheads to the railway right of way; and to deposit layers of rubble and broken stone and level the same to receive the cribs.

The total quantity of rock excavation is approximately 108,000 cubic yards, plan measurement, of which 100,000 cubic yards, it is assumed, may be used as ballast in cribs and for foundations, and the remainder used in other parts of the work as may be approved by the engineer.

The sides and outer end of the wharf are to be built of timber cribs, 100 ft. long, 37 ft. wide, and 39 ft. high, so that when sunk the tops shall stand four feet above low water at spring tides. The cribs are to be built on platforms constructed of 18 by 12 in. timbers 39¼ ft. long, all the pieces bolted to each other every three feet by one inch round drift bolts, each 24 ins. long. The platform and sides of the cribs to be rendered watertight by being caulked with oakum. The cribs are to be towed into place, and then to be sheathed to a thickness of 2 ft. on the outer face, and 1 ft. thick on the other three faces, with reinforced concrete, and sunk into position by being filled with rock ballast. The bulkheads at the inner end of the wharf shall consist of one crib each, of similar construction and proportionate size to the cribs in the main pier. The superstructure will consist of a concrete mass, finished with granolithic concrete 6 ins. thick. The area enclosed by the concrete walls and at the back of the bulkheads is to be filled with approved material, with a top filling of broken stone and fine gravel 1 ft. thick, the whole made compact by being rolled with an 8-ton steam roller. On the outer face of the wharf and bulkheads there shall be placed two walings of B.C. fir, 15 by 18 ins.

The contract calls for the employment of Canadian labor, the use of Canadian material, and the completion of the work in two years. Its estimated cost is $1,250,000.

The Steamship Whakatane's Collision with a Wharf in the St. Lawrence.

Commander H. St. G. Lindsay, R.D., R.N.R., Dominion Wreck Commissioner, gave the following decision Oct. 17, which was concurred in by Captains F. Nash and R. S. Clift, assessors:—The British steamship Whakatane, official no. 11648, on a voyage from Cardiff, South Wales, for Montreal via Sydney, N.S., and apparently well manned and equipped in every respect, arrived at Father Point, Gulf of St. Lawrence, on the afternoon of Sept. 12 and took on board a licensed pilot and proceeded at once on her voyage towards Quebec and Montreal. Fine weather was experienced during the trip up the river until shortly after passing St. Jean light, Orleans Island, which was abeam at 3.20 a.m. of Sept. 13, when slight mist or smoke lying close to the water was met with, and the pilot, who appears to have been in full and complete charge of the navigation of the vessel, ordered the speed to be reduced to half speed and shortly after that to slow. At 3.50 a.m. St. Laurent light was abeam, and the light on Beaumont Shoal buoy, almost opposite on the south side of the channel, was also observed quite distinctly, and the vessel, according to the evidence, although no bearing was taken, passing about midway between these two lights, and the course was then altered by the pilot about half a point to the westward. After proceeding on this course for about 5 or 10 minutes, the course was again altered with the intention of passing to the southward of West Point light at the usual distance off, viz., about half a mile. Shortly after this the master called the pilot's attention to some lights on the south shore, being, as he thought, rather close aboard, and the pilot gave orders to alter the course a quarter of a point to the westward, which was done, and some minutes after the look outs reported something right ahead, which ultimately proved to be a portion of a wrecked steamer lying on the south bank of the river. Orders were at once given to put the helm aport, full speed astern on the engines, and let go the anchor; but the ship's head had barely started to swing to starboard, under the influence of the port helm, when she ran with great force into Gilmour's wharf at Indian Cove, remaining aground there for some 13 hours, when she was pulled off at high water by tugs and [illegible] Basin, Quebec, and from there to the Levis drydock, where temporary repairs were effected.

The court, after carefully considering the evidence, which, in some particulars, appeared [illegible] a conflicting nature, is unanimous in its opinion that both the master and pilot are to blame for the casualty, inasmuch as the master did not take sufficient interest in the navigation of his vessel after leaving Father Point, leaving it almost entirely in the pilot's hands, and [illegible] appears to have been followed by the officers, as it would appear that no particular attention was given to the steering, the navigating of the ship being carried [illegible] on the steering compass in the wheelhouse, instead of on the standard compass, and if the times given in the [illegible] no one seems to have [illegible] making into consideration, between the various [illegible] it would appear that instead of six knots, which the court was informed was the supposed speed of the vessel when passing St. Laurent light, it appears by the time given in the log book to be nearer 12 knots. The time from abeam of St. Laurent light to the time of the stranding is given as 33 minutes, and the exact distance being six miles between these points, shows in itself how much reliance the court can put on either evidence or log book entries. The court, therefore, not wishing to deal with the certificate of J. H. Squires, the master, taking into consideration his want of experience as master, and his seeming ignorance as to the regulations connected with the St. Lawrence pilotage, severely reprimands him for his unfortunate lack of initiative pertaining to the safe navigation of his vessel, and the court hopes that this reprimand may prove beneficial to him in the future. With respect to the actions of L. T. Delisle, the pilot, which, in the court's opinion are inexplicable, as the courses steered and given by him in his evidence after leaving St. Laurent light, put the ship exactly where she struck the wharf, and even if he had been misled by the wheelhouse compass being locally affected, which is quite possible, the fact of being able to see the lights on both sides of the river some time before the accident, makes it more difficult for the court to understand how he allowed the vessel to get so far out of her proper course without noticing that fact in time to avert the accident. The court therefore suspends his license for the balance of the present season of navigation, and also orders that he pay all costs and personal expenses pertaining to himself with respect to this inquiry. The court, in taking into consideration the number and similarity of accidents occurring in the St. Lawrence within the last 12 months, cannot but recognize the fact that the masters do not seem to realize that, although a pilot is on board, the responsibility for the safety of the ship still rests with them, just as if no pilot were engaged, as only the payment of pilotage dues is compulsory, and not the employment of pilots. This is clearly set forth in sec. 473, chap. 113, of the Revised Statutes of Canada, 1906, and if those in charge of vessels navigating in Canadian pilotage waters were to live up to this, especially in the St. Lawrence trade, there would be fewer accidents of the like nature. The court also severely criticizes the fact of the pilot leaving the vessel when he did, instead of standing by her to assist in getting her afloat.

Work on Panama Canal.

By the blowing up of the Gamboa Dyke, the signal for which was given by telegraph from Washington, D.C., by the U.S. President, Oct. 10, the water was let into the Culebra cut, and practical connection made between the Atlantic and Pacific Oceans. The work of excavation was first commenced on the Culebra cut Jan. 20, 1882, by the original French company, and the amount of material removed by it and its French successor was approximately 17,000,000 cu. yds. The U.S. Government took over the work May 4, 1904, and continued the use of the equipment left by the old companies, until it could be replaced by more modern machinery. The first modern steam shovel was put into use Nov. 11, 1904, and the last of the old equipment was displaced by June 16, 1905. Since the U.S. Government undertook the work, 97,049,601 cu. yds. of material have been removed from the Culebra cut, the maximum output being in 1911, when 16,596,891 cu. yds. were dealt with. Considerable trouble has been experienced with earth slides, and the removal of these will be dealt with as a regular part of the dredging work of keeping a clear channel. The total length of the canal [illegible] 47 miles.

Vessels will not proceed through the canal under their own steam, but will be towed through by electric locomotives, specially designed for the work. A series of tests took place recently, with a sample locomotive, with a view to detecting defects and making the necessary modifications and alterations. As a result, 40 locomotives have been ordered from the General Electric Co., at a net cost of $13,217 each. The first locomotive is to be delivered in seven months from the date of the order, and the remainder at the rate of four a month.

Proposed Dry Dock and Shipbuilding Plant for Sault Ste. Marie.

The project for the establishment of a dry dock and shipbuilding plant at Sault Ste. Marie, Ont., has been before the local authorities for some time, and a bylaw was passed by the ratepayers in 1909 confirming an agreement with J. O'Boyle for the construction of such works, by him or a company formed for the purpose, at an estimated cost of $500,000. The dimensions of the dock were to be:—Length from sill to head of dock, 620 ft.; width on floor, 53 ft.; width at level of sill, 70 ft.; width at top, 85½ ft., with a depth of water over the sill of 17½ ft. under normal conditions. The city was to pay an annual subsidy of $5,000 a year for 20 years, the first payment becoming due when $100,000 had been expended on construction work, and the second payment being due when the dock was completed and ready for operation. A company was formed to undertake the work, under the name of the Sault Ste. Marie Dry Dock and Shipbuilding Co., and in 1911 the city agreed that the terms of the agreement with J. O'Boyle were binding with the company. Nothing was done by the company in connection with the project, and in March, 1912, it was announced that the charter had been acquired by F. H. Clergue, who was formerly connected with the Lake Superior Corporation, and some associates, and that construction would be proceeded with at once, that plans had been deposited with the Dominion Public Works Department, and that $1,500,000 would be spent on the plant. No steps were, however, taken towards commencing the work, and it was recently stated that the charter had lapsed, and that the whole scheme had fallen through.

Fresh proposals were placed before the city council, Oct. 6, by which the city is asked to give a bonus of $20,000 a year for 20 years, with exemption from all taxes, except school taxes for the first five years, a fixed assessment of $250,000 for the next five years, and a fixed assessment of $500,000 for the next ten years. It is proposed to build a plant to cost approximately $2,000,000, to employ 1,500 men when in full running order, and capable of handling vessels of 15,000 tons displacement. F. H. Clergue, Sault Ste. Marie, and F. H. Bromwich, London, Eng., are interested in the scheme, and are reported to have stated that funds are available for the commencement of the work as soon as the city assents to the terms. The Mayor, at a meeting of ratepayers, Oct. 8, stated that the promoters had agreed to deposit $25,000 with a local bank as evidence of good faith, and had undertaken that construction commence not later than Apr. 1, 1914, and that the plant would be ready for operation in two years from that date. The sum deposited in the bank was not to be released until $100,000 had been spent on construction, and taxes would be paid on a fixed assessment of $500,000 for 15 years, instead of as originally suggested. It is also stated that the contract will be undertaken by Sir Douglas Fox and Partners, London, Eng. A bylaw is in course of preparation for submission to a vote at an early date.

Dominion Government Steamboat for St. Lawrence Light and Buoy Service.

The Dominion Government has awarded the contract for the construction of a single screw steamboat for the Department of Marine, for use on the St. Lawrence light and buoy service, to Polson Iron Works, Toronto, for $173,399.

The principal dimensions are, length between perpendiculars 155 ft., length over all 164½ ft., depth moulded 30 ft., coal capacity full supply, about 100 tons, accommodation, officers and men, 24.

The vessel will be built of steel throughout, except where specially specified, under Government survey and classed 100 A1 at Lloyd's under its special survey. There will be six main transverse watertight bulkheads and a watertight flat at the bow and stern, which, with the bulkheads adjoining, will form trimming tanks. She will have a straight stem and cruiser stern, and lower, main, bridge and forecastle decks. The steel and other materials, equipment, auxiliaries and stores used in the construction and completion of the vessel, are to be of Canadian or British manufacture throughout. The draught with 183 tons of dead weight on board is not to exceed 9½ ft.

The propelling machinery will consist of one single screw, inverted triple expansion engine, jet condensing, with cylinders 14, 22½ and 38 ins. diar. by 24 ins. stroke, working on cranks at 120 degrees, to develop 900 i. h. p. during a 6 hrs. trial when running at about 185 r. p. m. under a steam pressure of 180 lbs. Steam will be furnished by two Scotch marine boilers of the single ended type arranged to work under Howden's patent system of forced draught.

The auxiliary equipment will include, one 15 ton derrick crane, two 4 ton derrick cranes, two life boats, engine room telegraphs, complete electric light installation, including search light, air, bilge feed, fresh water, sanitary, ballast and general service pumps, windlass, boat hoist, heavy derrick winch, small derrick winch, steam and hand steering gear, etc. The general crew's quarters will be located on the lower deck forward, and the officers' quarters on the main deck, aft.

Delivery is to be made at Prescott, Ont., in nine months from the awarding of the contract, after satisfactory progressive speed trials from six knots upwards, with 100 tons dead weight on board, for six hours.

Government Dry Dock at Lauzon, Quebec.

The dry dock which has been placed under contract by the Dominion Government, to be built at Lauzon, Que., and which was fully described in Canadian Railway and Marine World for October, will, when completed, be the largest dry dock in the world. Engineering News, in commenting on this, refers to the three largest dry docks, the first two of which are under construction and under design, respectively, the third one being in operation. The dimensions of the three are as follows:—Lauzon, Que., 1,150 ft. clear length, 120 ft. width, 45 ft. maximum depth; Boston, Mass., 1,150 ft. clear length, 120 ft. width, 35 ft. maximum depth; Gladstone Dock, Liverpool, Eng., 1,020 ft. clear length, 120 ft. width, 46 ft. maximum depth.

The press report that E. A. Hoare, M. Can. Soc. C.E., Quebec, has been appointed to supervise the execution of the construction work is, we are officially advised, incorrect.

Grounding of s.s. Mount Temple.

The Dominion Wreck Commissioner, Commander H. St. G. Lindsay, assisted by Capts. F. Nash, John Mitchell and Joseph Ostens, as assessors, investigated recently the cause of the grounding of the C.P.R. s.s. Mount Temple in Montreal harbor, Sept. 24. The evidence showed that the vessel left her loading berth with a general cargo, drawing 26 ft. 10 ins. forward and 27½ ft. aft, under the direction of Pilot L. Z. Bouille. The weather appears to have been fine and clear, and everything worked satisfactorily while proceeding to the ship channel, and the engines were ordered full speed ahead, with the vessel proceeding down the river. On account of the range lights astern being obscured by smoke from the town and factories, the vessel, after passing the Tarte pier, was being navigated by the buoys marking the south side of the channel, and grounded about 500 ft. below buoy 181M and remained fast until the morning of Sept. 26, when she was pulled off after discharging part of her cargo. She was later drydocked at Montreal, and it was found that considerable damage had been done to the bottom of her hull. The evidence tended to show that the vessel is slow in answering her helm, but this peculiarity was well known to those in charge of the bridge at the time of the accident. The court was unanimous in its opinion that the cause of the grounding was due to an error in judgment on the part of the pilot in not altering his course to port, knowing that the vessel was slow in answering her helm, and bringing buoy 177M on his starboard bow before getting abreast of buoy 181M, which, in the court's opinion, was passed too close for safe navigation under the circumstance, taking into consideration the speed of the vessel, about 15 knots, and the proximity of the bank to starboard, on which she grounded. Pilot L. Z. Bouille was therefore severely censured. The court attached no blame to the master or officers of the vessel, but considers that the manner in which the entries are written in the engineer's log book is open to criticism. With regard to the positions of buoys 191M and 193M, which were found to be incorrect, the court did not consider that this had any bearing on the stranding, as the pilot having buoy 181M almost alongside and buoy 177M plainly in sight ahead, he had no reason to depend on the buoys westward to assist him in keeping his vessel in the channel.

Canadian Notices to Mariners.

The Department of Marine has issued the following:—

309. Sept. 18.—Ontario, St. Clair River, lower end, southeast bend, lights established.

310. Sept. 19.—Quebec, Gulf of St. Lawrence, north side, off Great Mekattina Island, Flat Island, lighthouse established.

311. Sept. 19.—Quebec, Gulf of St. Lawrence, north side, St. Mary Island, lighthouse established.

312. Sept. 22.—Nova Scotia, Cape Breton Island, east coast, Sydney harbor entrance, off Cranberry Head, Cran Rock, gas and bell buoy to be established.

313. Sept. 22.—Quebec, Gulf of St. Lawrence, Magdalen Islands, Alright Island, extension to Pointe Bass wharf.

314. Sept. 22.—Quebec, Richelieu River, St. Denis, lighted buoy established.

315. Sept. 22.—Quebec, River St. Lawrence, ship channel between Quebec and Montreal, Varennes Traverse, change in character of buoy, Ile aux Vaches Traverse, change in character of buoy.

316. Sept. 25.—Quebec, Ottawa River, Lake of Two Mountains, Hudson, buoy established.

317. Sept. 25.—Ontario, Lake Ontario,

The Dominion Government's Projected Canal Improvement at Sault Ste. Marie, Ont.

In previous issues of Canadian Railway and Marine World very full information has been given in connection with the construction of the proposed Welland ship canal, which work, though of very great importance in itself, would not possibly reach its full height of usefulness in the navigation of Canadian waters from the head of the lakes to the ocean, unless it was followed by considerable improvements to the canal system on either side. This was made perfectly clear by the Minister of Railways and Canals at Sault Ste. Marie, Ont., recently, when he stated that the new Welland Canal, to be of the greatest use to Canada, must be followed by improvements in the other waterways at other points, and that it would be foolish to carry out the Welland Canal work, if it was not intended [illegible] to improve the Sault Canal.

In order to be prepared to take up the work at the proper time and with the view of saving expense, the Government is expropriating certain land in the vicinity of the Sault Canal, with the ultimate object of building a new canal, or altering and enlarging the present one. Matters relating to the nature of the work to be undertaken, the extent of new proposed equipment, etc., are as yet to be considered, and any dimensions mentioned in the daily press from time to time are merely conjectural.

The Revolving Ship is one of those inventions which, although they are obviously impracticable, seem to have a fascination for the inventor which is rather difficult to explain. Several years ago there was built and tried in Toronto a boat of the revolving type which reached a stage at which it was launched and an attempt was made unsuccessfully to propel it. According to a despatch from London, a Paris inventor is now busy upon another of these craft, and judging from the meagre description given, the inventor is following along the lines that were proved to be altogether impracticable several years ago.

The first terminal elevator to be built and operated by the Dominion Government received its first shipment of grain at Port Arthur, Ont., [illegible]. The storage capacity is about [illegible] bush.

Sault Ste. Marie Canals Traffic

[illegible]

Atlantic and Pacific Ocean Marine.

The Norwegian s.s. Bjorgvin, bound from Pugwash, N.B., ran ashore near Charlottetown, P.E.I., Oct. 5, during a heavy fog, and it is feared will become a total loss.

G. M. Bosworth, Vice President, C.P.R., is reported to have stated in Montreal, Oct. 3, that the company would withdraw entirely from the North Atlantic Conference, which regulates steamship passenger traffic between Europe and America.

During September, 65 ocean going vessels arrived in Montreal harbor, compared with 57 in September, 1912, and from the commencement of the St. Lawrence season to Sept. 30, 366 vessels arrived, against 302 for the same period 1912.

The Union Steamship Co. of New Zealand, operating the Canadian-Australian mail line, will, it is reported, place an order shortly for another vessel for the service, of a similar type to the s.s. Niagara, a recent addition, but larger, possibly about 16,000 tons.

The C.P.R. s.s. Mount Temple, which recently grounded in the St. Lawrence just outside Montreal harbor, was docked in the Canadian Vickers dry dock at Montreal for examination and repairs Oct. 3. A number of plates were found to be damaged, but the whole of the work was done in the dock, and she resumed her service a few days later.

Promoters of the scheme for establishing a fast steamship service between the west coast of Ireland, and Cape Charles on the Labrador coast, were reported to have been in Ottawa recently to urge the proposal on the Government and to request a bond guarantee or other aid. It is stated that a request has been made for a bond guarantee for $15,000,000.

The s.s. Imperator, the largest steamship afloat, which is scheduled to sail from Hamburg for New York Nov. 1 on her last trip of the season will, on her return to Europe, be docked at Liverpool for a general overhauling. It is stated that the decision to dock her at Liverpool has been arrived at because there is no other dock available of sufficient dimensions for a vessel of her size.

The s.s. Ceranus, under charter to the Dominion Government for the carrying of supplies, etc., to Port Nelson on Hudson Bay, was reported, Oct. 1, to have been wrecked within a short distance of her destination. The vessel and cargo is said to be a total loss. As the wireless telegraph equipment for the station connecting with the one at Pas, Man., was on board, it is stated that the inauguration of a wireless telegraph service between these two points will be delayed nearly a year.

The Royal Mail Steam Packet Co.'s new s.s. Cardiganshire is announced to sail from London, Eng., Dec. 20, for Victoria, B.C., and other North Pacific ports by way of the Suez Canal and the Orient. She will be followed by other vessels of similar type, now under construction, and which will be placed in service as they are completed. In the same service, the s.s. Monmouthshire was scheduled to sail from London, Oct. 25, to be followed, Nov. 22, by the s.s. Glenroy.

In dealing with the C.P.R. annual report for the year ended June 30, at the annual meeting Oct. 1, the President, Sir Thomas Shaughnessy, announced the issue of £1,000,000 consolidated debenture stock at 4%, in part to pay for the two steel twin screw passenger steamships of the intermediate class for the Atlantic Service. These vessels will be about 500 ft. long, with beam about 64 ft., and a moulded depth of about 41 ft., and will be equipped with quadruple expansion engines, and have a tonnage of about 11,600. These vessels, details of which we have already given, are under construction at Glasgow, Scotland.

The C.P.R. has decided that during the forthcoming winter its steamships Empress of Britain and Empress of Ireland will make Halifax, N.S., their terminus, and will not, as hitherto, merely call there to disembark passengers and mail. When interviewed on the subject recently, Sir Thomas Shaughnessy is reported to have stated that the call at both Halifax and St. John involved undue risk in making the trip between the ports in all sorts of weather, and that as the company's other vessels would continue to go to St. John, which was the company's winter port, and in view of the large number of other vessels using this port, he considered the facilities would be overtaxed if the Empresses were added. The arrangement is only a tentative one, and subject to revision when the St. John harbor and wharf facilities are arranged so as to accommodate the ocean traffic naturally tributary to the port.

Maritime Provinces and Newfoundland.

It is reported that work will be commenced shortly on the construction of a marine slip at Southport, P.E.I., an appropriation of $2,500 for which was included in the last parliamentary estimates. The slip will be built between Hillsboro bridge and the wharf.

The Department of Public Works has completed the dredging of a channel 333 ft. wide in the harbor at Yarmouth, N.S. It extends for 1,800 ft. inside of Bunker Island southwest light, locally known as the Bug light. In the channel there is a patch with 18½ ft. of water immediately eastward of Sollows rock, and 60 ft. from the east edge of the channel, which will be removed before the close of the season, but there is no danger to any vessel in midchannel.

The Department of Marine announces the establishment of a lighthouse on Ferolle Point, on the west coast of Newfoundland, in the Gulf of St. Lawrence. It is situated one third of a mile northward of the extremity of the point, about 350 ft. back from the water edge and 39 ft. above high water mark. The structure consists of a hexagonal tower, with six buttresses and a circular lantern. The tower is white, 64 ft. high from base to lantern vane, and the light is of the third dioptric order, burning petroleum vapor under an incandescent mantle of 40,000 candle power, and is visible for 15 miles from all points of approach by water.

Province of Quebec Marine.

Capt. Wotton, of the Canadian Northern s.s. Royal Edward, demonstrated his patent boat releasing gear before the Montreal Harbor Commissioners recently.

It was stated recently by H. Driver, Secretary, Canadian Vickers, Ltd., Montreal, that it was expected the whole of the work of reclaiming and making the land on the site of the dry dock in Montreal harbor would be completed by the end of the season, or that only a negligible portion would be left over to be completed in the spring.

The construction of the grain elevator on the Louise Embankment at Quebec is proceeding rapidly, and it is expected that the building itself will be completed during November, and the machinery installed ready for operation by the opening of navigation next spring. It has been designed for a storage capacity of 3,000,000 bush., the first unit now approaching completion having 1,000,000 bush. capacity.

The Marine Department has established a telephone line for the protection of shipping between the life saving station on the west side of Devil Island and the Nova Scotia Construction Co.'s office near Halifax, N.S. There is a land line on Devil Island, a cable from the Island to the mainland, and a land line from the company's office, which are connected with Dartmouth and Halifax.

The Marine Department has placed in operation on the southerly summit of Flat Island, in the Gulf of St. Lawrence, a lighthouse showing a white flashing light of the fourth dioptric order, 15,000 c.p., burning petroleum vapor under incandescent mantle. The tower is 34 ft. from the base to the vane of the lantern, and the light is visible for 14 miles all around the horizon. A similar one has also been established, of 25,000 c.p., and a range of visibility of 16 miles, on St. Mary Island, in the Gulf of St. Lawrence.

Ontario and the Great Lakes.

The second of the two dredges under construction at Collingwood for the Dominion Government was launched there Oct. 6.

Press reports from Winnipeg state that the C.P.R. has sold its elevators A and C at Fort William, Ont., to James Richardson and Sons, Ltd., Kingston, and granted long leases of the sites occupied.

The s.s. Prince Rupert, owned by the Calvin Co., Garden Island, Ont., and the s.s. W. D. Rees, owned by the Wilson Transit Co., Cleveland, Ohio, collided just above the Canadian canal at Sault Ste. Marie Sept. 30. Both were considerably damaged.

The Richelieu and Ontario Navigation Co.'s s.s. Bickerdike, which ran ashore in Lake St. Louis, Oct. 13, was floated the next day, after having had a considerable portion of her cargo of grain removed by the Montreal Harbor Commissioners' floating elevator.

The U.S. Lake Survey s.s. Surveyor, which has been carrying out operations in the east end of Lake Ontario, has developed a minimum depth of but 8 ft. below water datum on the Big Bar shoal, south of Amherst Island. At the chart plane of standard low water, the depth is 7 ft.

The Ontario Car Ferry Co. is preparing plans for a car ferry to operate between Cobourg and the south shore of Lake Ontario as an addition to the service now being performed by its car ferry Ontario No. 1. Press reports to the effect that a contract for its construction has been awarded are incorrect.

The Minister of Marine, while in Prescott, Ont., Oct. 2, stated that additional property had been secured for the enlargement of the Government lighthouse depot there, and that a considerable amount of the material for lights and buoys, now being imported, would, in future, be manufactured at the enlarged depot.

The Dominion Government dredge Port Nelson, which was built by Polson Iron Works, Toronto, for work in the Port Nelson harbor, Hudson Bay, and which has been fully described in previous issues, arrived at Port Nelson, Sept. 27, after its long voyage from Toronto, in tow. The time occupied between Sydney and Port Nelson bar was 20 days and 6 hours.

The s.s. City of London, owned in Chicago, Ill., which was sunk near Pelee Island, in Lake Erie, by collision with the s.s. Joseph S. Morrow recently, is considered a total loss. It is said that the wreck will probably be left until removed by the Dominion

Government. She was built in 1891, her dimensions being:—Length, 297, ft.; breadth, 41 ft.; depth, 23 ft.; tonnage, 2,005 gross, 1,675 register.

The Dominion Dredging Co., contractors on section 1 of the Welland Ship Canal, commenced dredging operations, Oct. 9, placing a dredge and two tugs about 2,000 ft. from the shore, where the new Lake Ontario entrance will be. Quinlan and Robertson, subcontractors under O'Brien and Doheney, general contractors for section 3, have commenced operations with one steam shovel at Thorold, and have another nearly ready for work.

The name of the s.s. Chili, which has been purchased in Chicago, Ill., and transferred to the Canadian register, has had its name changed to Sarnian. She is a steel vessel, built in 1895, equipped with triple expansion engines with cylinders 20, 33 and 54 ins. diar. by 40 ins. stroke, supplied with steam by two Scotch boilers, each 12½ by 11½ ft., at 170 lbs. Her dimensions are:—Length, 324 ft.; beam, 42 ft.; depth, 27 ft.; tonnage, 2,584 gross, 1,845 register.

Tenders for the removal of a triangular section of the west bank of the Detroit River, in order to widen the approach to the Livingstone Channel, are under consideration of officers of the U.S. War Department at Detroit, Mich. It is stated that the lowest tender is $1.90 a cub. yd. for material excavated, and 60c a sq. yd. for clearing and sweeping a small portion of the area. The estimated quantity of rock to be removed is quoted as 43,500 cub. yds., widening the approach about 200 ft., the estimated cost of the work being $200,000.

The United States Lake Survey reports the levels of the Great Lakes in feet above tidewater for September as follows:—Superior, 602.83; Michigan and Huron, 580.93; Erie, 572.76; Ontario, 246.74. As compared with the average September levels for the past ten years, Superior, Michigan and Huron were 0.05 ft. above, Erie 0.33 ft. above and Ontario 0.46 above. It was anticipated that Superior would remain stationary during October and that Michigan and Huron would fall about 0.2 ft., and Erie and Ontario about 0.3 ft.

The St. Lawrence and Chicago Steam Navigation Co. is issuing $140,000 capital stock, being the balance of an authorized $1,000,000. It is offered to shareholders of record on Nov. 15 at par in the proportion of one new share to six shares held. The amounts are payable, 25% on Dec. 15 and the balance on Jan. 5, 1914. The amount realized will be used to pay for an additional steamship of the same capacity as the s.s. James Carruthers, and it will be built at Collingwood. The new vessel will probably be ready for service by the fall of 1914.

The Montreal Transportation Co. is acquiring the s.s. Prince Rupert, and the barges Burma and Ceylon from the Calvin Co., Garden Island, Ont., for operation on the Great Lakes and St. Lawrence route. The Prince Rupert was built at Dumbarton, Scotland, in 1908, and is screw driven by engine of 170 n.h.p. Her dimensions are:—Length, 249 ft.; breadth, 43 ft.; depth, 19.5 ft.; tonnage, 1,908 gross, 1,172 register. The Burma was built at Garden Island in 1901, her dimensions being:—Length, 183.6 ft.; breadth, 39.5 ft.; depth, 15 ft.; 885 tons, and the Ceylon was built at Garden Island in 1891, her dimensions being:—Length, 205.4 ft.; breadth, 36.3 ft.; depth, 15.2 ft.; 908 tons.

The Northern Navigation Co. has practically decided to remodel its s.s. Huronic, so far as the cabin accommodation and upper works are concerned, so as to make her equal in accommodation to the company's steamships Hamonic and Noronic. It is not the intention to have this work carried out during the forthcoming winter, as the time is too short in which to obtain the necessary material, and have the vessel ready for service on the reopening of navigation next spring. The present intention is to carry out the alterations without lengthening the vessel. The matter will be taken up in time next year, and tenders will probably be called for during the summer for carrying out the alterations during the winter of 1914-15.

The attempt to raise the Keystone Transportation Co.'s s.s. Keystorm, which is lying in deep water near Kingston, will be watched with considerable interest, as, owing to the position occupied by the wreck, and being in very deep water, it is considered that, if successful, it will be one of the most remarkable achievements in the use of compressed air in salvage work. All the work will have to be done under water, such as covering hatches, connecting air hose and placing air locks, etc., after which the real work of the air men will commence. They will descend through the air-locks to the holds, repair any breaks and reclaim as much of the hold space as possible. Each hold will thus be worked separately until sufficient buoyancy is obtained to float the vessel, when air will be put on all the holds and an attempt made upper works are concerned, so as to make to bring her to the surface. So far, in the use of compressed air for salvage purposes, there has been no failure, but the present case is considered an extreme one, and A. J. Lee, Westmount, Que., who has undertaken the work, is doing it chiefly with the view of developing certain theories of his own in this line.

Manitoba, Saskatchewan and Alberta.

The Winnipeg Harbor Commissioners have drawn up a comprehensive scheme of harbor development, and it is reported that the Dominion Government will be asked to include $100,000 in the next estimates, for a series of docks on the Red River.

British Columbia and Pacific Coast Marine.

The Dominion Government has awarded the contract for the construction of a wharf in Victoria harbor, at a cost of $15,124.40, to Macfarlane, Pratt and Hanley.

Navigation on the Yukon River for points north of Dawson, was announced to close for the winter by the sailing of the steam boat Norcott from Dawson, Oct. 17.

The Dominion Government is reported to be having plans prepared for the construction of a dredge for use on the interior waters, at an approximate cost of $100,000. The dredge is being designed by Cartwright, Matheson and Co., consulting engineers, Vancouver.

Press reports from Vancouver, state that O. L. Dickeson, President, White Pass and Yukon Ry., has announced there, that the company will start a direct passenger steamship service from Vancouver to Skagway, Alaska, using vessels which will be built at a cost of about $1,000,000 each.

The All Red Line, Ltd., operating the s.s. Selma out of Vancouver, in the coast trade has transferred its vessel from the British, to the Canadian, register. The Selma, which was formerly known as Santa Cecilia, and was built at Glasgow, Scotland, in 1881, is screw driven by engine of 80 n.h.p. Her dimensions are, length 141.8 ft., breadth 22.1 ft., depth 11.6 ft.; tonnage 203 gross, 96 register.

The s.s. Rupert City, owned by the Marine Transportation Co., Vancouver, has been sold to United States purchasers and has been transferred to the U. S. register. She was built at Barrow in Furness, Eng., in 1886, and is screw driven by engines of 300 n.h.p. Her dimensions are, length 310.3 ft., breadth 38.1 ft., depth 25.2 ft.; tonnage, 2,536 gross, 1,640 register.

A press report from Victoria states that the Dominion Public Works Department will shortly award contracts for the equipment of all its tugboats and dredges with the necessary apparatus to enable them to use oil as a fuel. It is stated that there are about 15 of such vessels in operation on the Pacific coast, some of the dredges being very powerful vessels consuming large quantities of coal. It is also stated that reservoirs for oil will be built at Victoria and Vancouver to act as bases of supply.

The C.P.R. s.s. Princess Maquinna has resumed her service to the west coast of Vancouver Island, after having undergone repairs necessitated by grounding while on her recent trip to Alaska ports with members of the Geological Convention. The C.P.R. is asking the Dominion Government to provide better wharfing accommodation at ports on the west coast touched by this vessel, and it is reported that should nothing in the way of improvement there be done, the Princess Maquinna may be withdrawn from the service.

It is reported that the C.P.R. s.s. Beaver, which has been run on the New Westminster-Chilliwack route for several years, has been withdrawn from the service on account of having been operated at a loss since the opening of the British Columbia Electric Ry. line between the points named. She was built at Victoria in 1898, and was originally intended for the Yukon trade during the Klondyke gold rush of that year, but was taken over by the Canadian Pacific Navigation Co., which was later absorbed by the C.P.R.

Sir Thomas Shaughnessy, President, C.P.R., in dealing with the report for the year ended June 30, at the annual meeting, Oct. 1, announced the issuing of £1,000,000 consolidated debenture stock at 4%, in part to pay for the two first class steel two compartment turbine passenger steamships, for the British Columbia Coast Service. These vessels will be about 395 ft. long with beam 54 ft., and moulded depth of 20 ft., and will be propelled by two independent sets of Parsons compound steam geared turbine engines, and will have a tonnage of about 5,000. They have already been dealt with in Canadian Railway and Marine World and are under construction at Dumbarton, Scotland.

British Columbia and United States papers have recently renewed the reports which have been circulated at regular intervals during the past two years, to the effect that the Canadian Northern Ry. has awarded contracts for the construction of two turbine steamships, to be named Duke of Connaught and Duke of Clarence, for a service between Port Mann, Vancouver and San Francisco, with possible calls at Victoria. The older reports are amplified by the statement that the vessels have been actually ordered, and are in fact now being built at Glasgow, Scotland. In connection with these reports, Canadian Railway and Marine World has had occasion frequently to state that no doubt when the C.N.R. line is completed, a coast steamship service will naturally follow, but we are officially advised that no such order as that mentioned has been placed.

As announced in our last issue, under Canadian Notices to Mariners, the Department of Marine has installed a submarine bell on the light ship stationed on the Sandheads off the Fraser River in the Strait of Georgia. It is probable that this installation will be followed by others if a sufficient number of steamships operating on the Pacific will supply themselves with the necessary receiving apparatus. The Department has a number of these installed along the Atlantic, and on inland waters, and it is expected that the number will be materially increased during next year. Experience has shown that bells placed on stands on the bottom, and bells electrically connected with the shore cannot be kept in operation with sufficient reliability to be satisfactory, and the Department's later installations are now placed from a light ship, where they can be raised for examination and overhaul without delay, or they are attached to a buoy and rung by the action of the waves alone.

The Burning of the s.s. Volturno.

The s.s. Volturno, which was burned at sea Oct. 10, when a number of lives were lost, was owned by Canadian Northern Steamships Ltd., Toronto, and operated under charter by the Uranium Steamship Co., a British concern, on a line between Hamburg, Halifax and New York. D. B. Hanna, Second Vice President, Canadian Northern Steamships Ltd., Toronto, is representative of the Uranium Company in America. The Volturno, which was bought about the end of 1909, on the incorporation of Canadian Northern Steamships Ltd., was built at Glasgow, Scotland, in 1906: She was of steel construction, and of the following dimensions:—length 340 ft., breadth 43 ft., depth 20.7 ft., tonnage 3,581 gross. She had accommodation for about 1,300 third class passengers and about 24 cabin passengers. The absolute necessity of having all transatlantic passenger steamships equipped with wireless telegraph apparatus was again demonstrated by the success which attended its use in this case, as within a comparatively short time of the distress signals being dispatched, sufficient help was at hand, though the heavy seas hampered the work of removing the passengers. Another interesting detail of this work is undoubtedly the use of oil in calming the sea. A large quantity was poured from an oil tank steamship, and there is no doubt that this enabled a greater number of lives to be saved than would otherwise have been the case.

Great Lakes Navigation and the Montreal Route.

A deputation representing navigation companies operating on the Great Lakes waited on the Ministers of Marine and of Trade and Commerce in Ottawa Oct. 17 to discuss a number of matters. The chief subject dealt with was the coasting regulations. Last year the coasting regulations were suspended in order to allow U.S. vessels to load grain at Port Arthur and Fort William, where they were to remain for the winter, and then proceed to a Canadian port on the opening of navigation in the spring. This was done with the view of obviating congestion at the head of the lakes, and providing additional storage accommodation for grain during the winter. At the time, the Dominion Marine Association opposed the suspension of the regulations in this respect, but did not press the matter very vigorously, as it was designed to relieve an abnormal condition, but it is now presenting a vigorous opposition to a renewal of the suspension for the coming winter. The ground taken by the Association is that if the Dominion Government allows such a suspension this year, it should only be done on the condition that the U.S. Government should abrogate its dues and limitations so as to allow free entry to U.S. ports of Canadian shipping in a similar manner. On this matter, the Minister of Trade and Commerce stated that no decision had been reached or considered.

The question of rates between the head of the lakes and Georgian Bay ports was also discussed. It had been stated that these rates were higher than those of U.S. vessels from the same ports to Buffalo, and it is contended that this is not so, figures being quoted to show that on the general average the Canadian rates are as low as those on the U.S. route. The Minister of Trade and Commerce, in dealing with the matter, stated that in 1912 over 40% of the wheat from the west went out by way of Buffalo, and this year the proportion promises to be larger, and it is believed that the question of rates has a material bearing on the subject. Figures compiled by the Railways and Canals Department show the Canadian lake rate to be higher than the U.S. rate; the rate from Fort William to Buffalo being 0.103, and from Fort William to Georgian Bay ports 0.163 per ton per mile. We stated that shipping men are inclined to place the blame for the divergence of traffic on the Montreal end, alleging a lack of facilities there, and maintaining also that a large factor is more favorable insurance rates at U.S. ports. Another influence is the uncertainty of ocean tonnage from Montreal.

Wreck Commissioner's Judgment Reversed in the Lake Manitoba Case.

The Dominion Government has reversed the judgment of the Wreck Commissioner, Commander H. St. G. Lindsay, re the grounding the C.P.R. Lake Manitoba on the Isle of Orleans, July 28, by which judgment, A. Lachance, the pilot, who is President of the Corporation of Pilots of Quebec, was suspended until the completion of the present season of navigation. After hearing the evidence in the case, the Wreck Commissioner, assisted by two assessors, came to the conclusion that the casualty was entirely due to the negligence of the pilot, inasmuch as he totally disregarded the rule of the road in porting for a bright light on his port bow, and also in not being aware of the exact position of his vessel with regard to the land. The pilot has now been reinstated, the reason as published, being that he has always been regarded as an efficient officer, and that it has been urged that as conditions of navigation in the river are constantly changing, a pilot under temporary suspension would have no knowledge of the changes when he resumed his calling, and it is stated that the reinstatement is regarded as being in the interests of navigation.

It is a question whether it is good policy to interfere with a judgment to the extent of practically reversing it, especially when neither the evidence nor the finding is questioned. The grounds quoted for the reinstatement of the pilot have no connection with either the evidence or the judgment, but are quite outside all the points concerned, and such a decision can only mean, to carry the thing to its logical conclusion, that in future no sentence of suspension can be passed on any pilot. In view of this the Pilotage Act should be amended forthwith, and the pilot of the New Zealand Shipping Co.'s s.s. Whakatane, who was recently suspended, should be immediately reinstated. At least, one of the weak points of the reason given for Pilot Lachance's reinstatement is that he has already been under suspension for nearly three months, and the navigation season has only another month to run, so if any loss of knowledge of the condition of affairs in the St. Lawrence was likely to occur, it has already taken place, and any further problematical loss of knowledge for the remainder of the season would not much matter.

The matter has given rise to considerable comment in marine circles, and a number of suggestions have been made to obviate what is becoming a ridiculous state of affairs. Some of these cover the entire removal of wreck investigations from the jurisdiction of the Marine Department, making the Wreck Commissioner's Court subsidiary to the Department of Justice, and depriving the Marine Department of any right to revise judgments and sentences, and also fining only of pilots for errors of judgment, etc., which result in the damage to, or loss of, a vessel, grading such fine according to the gravity of the offence, and extending payments over a stated period, by deducting a percentage from fees due the pilot for services rendered to each vessel during that period. There are certainly some good points in the suggestions mentioned, especially the bringing of the Wreck Commissioner's Court under the Department of Justice, leaving one of the superior courts of justice to be the final court of appeal in all matters pertaining thereto. In all cases where a pilot has committed any offence under the Pilotage Acts, in addition to a fine, the conviction should be endorsed on his license.

Since the foregoing was put in type, we have been officially advised that the Minister of Marine made a full and careful enquiry into all the facts of the case, and having satisfied himself that the period for which the license in question was suspended might be shortened, he so ordered and the license was accordingly returned to the pilot forthwith.

This confirms our opinion, as previously expressed, that decisions of the Wreck Commissioner should not be subject to reversal by the political head of a government department, on whom political influence may be brought to bear, but should be only appealable to a judicial body.

Welland Ship Canal Contracts Awarded.

The contract for section 2 of the Welland Ship Canal is reported to have been awarded to Baldry, Yerburgh and Hutchinson, a British firm with a branch at St. Catharines, Ont. The amount of the contract is approximately $5,500,000. Section 2 extends from bridge 2 to bridge 5, about 4½ miles, and includes locks 2 and 3. Lock 3 will be located immediately north of the present canal, and at its head on the east side will be an equalizing basin or pond of 150 acres. Below lock 3 there will be a heavy cutting through Homer village to the bed of Ten Mile Creek above Carleton St., St. Catharines, and just below Carleton St., lock 2 will be located. The canal at the head of lock 2 will be at an elevation of 335½ ft. above sea level. Full details of the complete work, including lock construction, were given in Canadian Railway and Marine World for July and August.

The contract for section 3 was awarded to O'Brien and Doheney, and Quinlan and Robertson, Montreal, jointly, and not to the first named firm only, as mentioned in our last issue.

The Edward Sinclair Lumber Co., Newcastle, N.B., have been given a contract for 41,000 ties for the construction railway in connection with the new canal.

The Department of Public Works will receive, to Nov. 17, tenders for the construction of a pile protection work at Rainy River, Thunder Bay and Rainy River District, Ont.

Telegraph, Telephone and Cable Matters

T. G. Galbraith, heretofore chief clerk to Superintendent, Ontario Division, C.P.R. Telegraphs, Toronto, has been appointed Inspector, C.P.R. Telegraphs, Ontario Division, Toronto.

R. N. Young, heretofore Superintendent of Telegraphs, Saskatchewan Division, C.P.R., has been appointed Superintendent of Telegraphs, Alberta Division, vice D. Coons, who has been appointed Superintendent of Telegraphs, Saskatchewan Division.

The Canadian Northern Telegraph Co. has opened offices at Algar, and Vista, Man., and has closed its office at Birch River, Man. Telephones have been installed at Hafford, Speers and Richard, Sask., and messages are accepted for these places, via Denholm, Sask.

The report of the Marconi Wireless Telegraph Co. of Canada for the year ended June 30 was presented at the annual meeting at Montreal Oct. 1. The statement shows a considerable improvement over the previous year, there being a profit of $62, against a net operating loss of $5,467 for 1911-12. The balance sheet shows assets of $5,573,959. The directors were re-elected.

D. H. Bowen, heretofore Assistant Superintendent, Ontario Division, C.P.R. Telegraphs, Toronto, has been appointed Superintendent, Lake Superior Division, C.P.R. Telegraphs, Sudbury, Ont., vice F. T. Jennings, resigned to enter private business. The position of Assistant Superintendent, Ontario Division, C.P.R. Telegraphs, has been abolished.

The erection of the steel tower for the Universal Radio Syndicate's wireless telegraph station at Newcastle, N.B., is practically complete. The steel arrived from England Oct. 2. The plant will occupy about 54 acres, and there will be the steel tower 506 ft. high, and 6 wooden towers, each 300 ft. high, all on concrete foundations. It is stated that it will have a 40 kilowatt station, with a voltage of 1,000, and that it will be the most powerful station in the world.

The Dominion Government wireless telegraph station at Pas, Man., which will be operated chiefly in connection with a similar station to be erected at Port Nelson on Hudson Bay, is practically complete. Owing to the wreck of the vessel in Hudson Bay, which was carrying the construction material and equipment for the Port Nelson station, all of which is entirely lost, the completion of the station at the latter point will be delayed, possibly for a year.

Among the Express Companies.

The American Ex. Co. has closed it offices at Port Hope and Cobourg, Ont.

W. F. Campbell has been appointed acting agent, Dominion Ex. Co., Charlottetown, P.E.I., vice G. Waller, resigned.

The Board of Railway Commissioners has extended the collection and delivery area for express companies in Ottawa by including the Isolation Hospital.

W. C. McGonegal, heretofore agent, American Ex. Co., Cobalt, Ont., has been appointed agent at North Bay, Ont., vice H. C. M. Parritt, transferred to Toronto.

The Board of Railway Commissioners has established express delivery and collection limits for Knowlton, Que., and Kelowna, B.C.

The Canadian Northern Ex. Co. has opened offices at Algar and Vista, Man. The office, which it was announced would be opened at Gravelburg, Sask., will not be opened.

The American Ex. Co. and the National Ex. Co., which, as stated in our last issue, had for many years carried on their business in Montreal under a joint arrangement with the Canadian Ex. Co., in the latter company's offices, commenced their operations apart from the Canadian company, at new offices, 231 St. James St., Oct. 1. J. B. Davies has been appointed General Agent, American and National Ex. Cos., A. B. Howard will be in charge of the financial departments, and G. H. McGrane of the foreign freight department, as heretofore.

The Canadian Ex. Co.'s receipts and expenditures in the United States, for April, as reported to the Interstate Commerce Commission, show total receipts from operation, $276,922; express privileges, $121,473; total operating revenue, $155,488; total operating expenses, $130,814; net operating revenue, $24,634; taxes, $3,000; operating income, $21,634. As compared with the same month of 1912, there is a general increase, that for the total receipts from operation being $17,814, and for the net income $3,466.

Book Reviews.

Any of the books reviewed may be obtained through Canadian Railway and Marine World at the published price.

SAFETY FIRST—By Geo. Bradshaw. 130 pages, 5 by 7½ ins., 99 illustrations, paper covers. McGraw-Hill Book Co., New York. 50c.

Coming at a time when the subject of safety in all walks of life is receiving so much consideration, this book is particularly valuable. For the purpose intended, it leaves little to be desired, as the information contained is set forth in such a concise and interesting manner as to make it acceptable to all classes of railway employes. A great many men will not wade through a lengthy discourse on a subject, but if the same subject is outlined for them graphically, it is rarely that an unappreciative reader is found. In this book, the 99 illustrations graphically depict unsafe conditions as they actually exist, and in some instances the remedy for the condition is also illustrated. The reading matter is confined to a short paragraph (with few exceptions), accompanying each illustration, making the persual of the book most interesting. About two thirds of the book is devoted to general railway conditions, the balance covering special shop conditions. While the book primarily covers railway conditions, there will be found in it many valuable suggestions that may be applied to other lines of industry.

BLUE BOOK OF AMERICAN SHIPPING—367 pages, 10 by 7¼ ins. Price $5. Penton Publishing Co., Cleveland, Ohio.

The 1913-14 edition, which is revised to date, lists all the U.S. vessels on the Atlantic and Pacific coasts and the Great Lakes and western rivers, ship owners, ship, engine and boiler builders, manufacturers of gas and gasoline engines, naval architects, marine engineers, admiralty lawyers, ship chandlers, wrecking companies, etc. The Canadian section contains a list of vessels on the Great Lakes, names of shipping officials, and leading particulars of the Dominion Government graving docks, and of the canal system. In addition, there is a quantity of general information and statistics relative to seaboard and inland marine, and particulars of the various associations associated with the marine interests. While a considerable amount of the matter quoted relates to naval and seaboard matters, special attention seems to have been given to shipping and general traffic on the inland waters, which is of more immediate concern to those for whom the book is intended.

A Safety Exhibit Car for use in connection with the work of the safety department of the New York Central Lines has recently been put in service. It will serve as an instruction car, in teaching the principles of safety first to the employes. Along each side of the car are models of the machines used in the different shops to safeguard the workmen against injury. By means of photographs arranged on the walls, the safe and the unsafe methods of doing various kinds of work are depicted. Other framed pictures show how it comes about that, annually, over 10,000 trespassers are killed and injured on railways in the U. S.

The Department of Trade and Commerce is asking for tenders to Nov. 5 for the construction of a grain elevator with a capacity of 1,500,000 bush. at Port Nelson, Hudson Bay.

Canadian Railway and Marine World.

December, 1913

The Railway Viaduct Along the Toronto Waterfront.

By Frederick H. Moody, B.A.Sc.

Most of the trains entering Toronto come in on the Esplanade, along the waterfront, crossing most of the streets in the central portion of the city at grade. This has been a menace to street traffic which the city has been agitating for years to have remedied. This, in conjunction with a new union station, which it was desired to have built at the same time, was considered by the Board of Railway Commissioners early in 1909, and the Board passed an order in June, 1909, ordering the elevation of the tracks along the waterfront, as well as the building of a new station for the joint use of the G.T.R. and C.P.R. The time limit set by the board was two years, the cost to be borne equally by the two railways and the city.

This original order called for a four track viaduct from west of John St. to near Berkeley St., with three tracks each side of the viaduct on the Esplanade level, with all necessary crossovers, the centre line of the viaduct to be located on the southern boundary of the Esplanade, the work to be undertaken jointly by the G.T.R. and C.P.R. with the city. Independently of this, the C.P.R. was ordered to elevate two tracks from the easterly end of the foregoing viaduct to near Queen St., with necessary viaducts over intervening streets. The corresponding section of the G.T.R. line was also ordered elevated on a two track viaduct from the same point to Logan Ave., crossing the intervening streets on viaducts. All the tracks in this whole length of viaduct as ordered, with the exception of the two crossings at John St. and Spadina Ave., which cross on bridges, have the streets passing beneath the tracks. The city was ordered, in addition to paying one third of the cost of the viaducts, both the joint and the separate, to bear the same proportion of the expense of elevating the C.P.R. passenger car yard, the G.T.R. Don sorting yard, the bridges at Spadina Ave., John St., and Eastern Ave., and the substructures for the new union station. In addition to these liabilities on the part of the city, the latter could collect no damages for city property taken for the proper carrying out of the project. Any question of damages between the two companies was to be taken before the Board for adjustment.

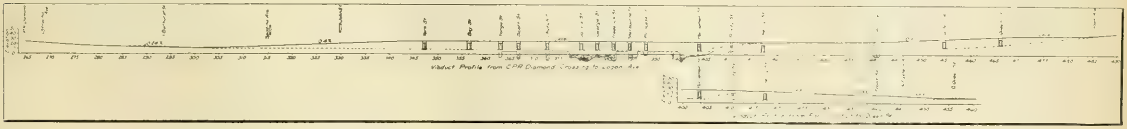
At that time, the C.P.R. management spoke of removing a large portion of its passenger service to a union station to be built in conjunction with the Canadian Northern Ontario Ry. in the northern section of the city, on its West Toronto-Leaside line, and thus release itself from the congestion and crossing troubles in the lower part of the city. In view of this, the C.P.R. took exception to being included in the viaduct and union station project, and appealed the matter to the Board, which in May, 1912, again ordered the viaduct to be built under the original order, with a further extension of two years for its completion, the original two years having by then expired. At the same time, the board approved the G.T.R. plans as the more desirable, and ordered that they be followed, instead of the plans submitted by the C.P.R. for the same proposition. These plans, as ordered to be followed, were described in detail in Canadian Railway and Marine World for Aug., 1912.

Last year, the Toronto Harbour Commission was formed to take over all the waterfront properties of the city and formulate plans for a comprehensive harbour scheme. As the proposed viaduct would follow the waterfront through practically its full length, this commission was vitally interested in the manner in which the railways would develop that section, and in consequence the two railways, the city and the commission decided to consult each other in formulating of plans that would, in the combined opinion of the four parties, make for a better viaduct scheme. The result of a series of conferences was the preparation of an entirely new set of plans which it was considered would meet the city's requirements more satisfactorily and work in with the general harbour scheme then being evolved by the commission. The scheme as developed was approved by the four parties, an agreement, dated July 29, 1913, being drawn up on the basis of the new plans.

These substitute plans were presented to the Board of Railway Commissioners, and as it appeared that the works agreed to be undertaken by the four contracting parties of the agreement would be performed on the terms and in the time specified therein, and as all the parties were making application to the board for their approval, the board passed order 19926, July 31, 1913, giving full effect to the agreement and authorizing and approving the construction and maintenance of the works provided in the agreement. Briefly, the order approved the substitution of the new plans for the viaduct for those accompanying the original order 7200, ordering that the work be completed within three years from July 29, 1913. Also, all questions reserved for ultimate determination under former orders 7200, 13568, 16019 and 17033, as well as the necessity for amendments to or recission of the whole, were reserved for further consideration by the board on hearing the parties. All changes in the plans as may be required must be approved by the board.

The plans as approved are shown in the accompanying sectional illustrations, which show the scope of the work, from the C.P.R. diamond crossing west of Bathurst St. on the west, to Logan Ave. on the east. The grade separation work in the west end of Toronto, undertaken by the G.T.R. in 1910-12, terminates at the C.P.R. diamond crossing west of Bathurst St., which is the ruling point on that section of the work, the diamond remaining at its former elevation. From that point easterly the tracks through the city will be elevated, with a consequent rearrangement of many of the yard tracks and spurs.

The principal variation in the route through the city from that laid down in the former plans, is in the section from Yonge St. easterly to the Don River, which will follow a straight line, instead of the sweep northerly along the Esplanade. To do this, a large portion of the land south of the present right of way will have to be expropriated, and as the new line will run across water lots, there will be a great deal of filling. The principal advantage in the new route will be the facility offered to the construction parties in carrying forward the work uninterrupted from the necessity of maintaining the regular train service as would be required if the former right of way were followed. As the route at present followed is comparatively narrow, with both sides occupied through the greater part of the route by buildings where it would be impossible to secure temporary space for use during construction, it would be practically an impossible task to elevate the tracks and at the same time maintain the service without serious interruptions. With an entirely new right of way through the more difficult section, this phase of the work is simplified. Another advantage to the new line is that the through tracks will follow a tangent from Spadina Ave. on the west to Parliament St., nearly 1¾ mile.

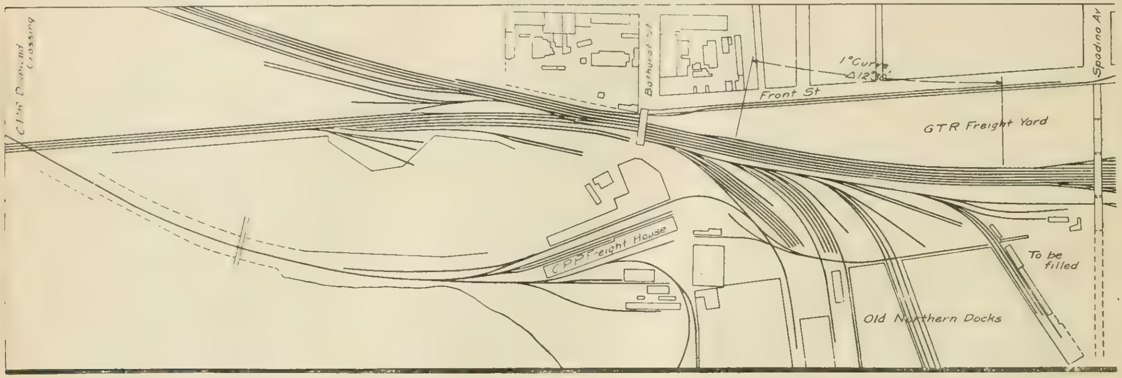


Profile of Viaduct Scheme, Including Independent Eastern End Viaducts.

From the west, the grade revision completed to that end of the city, brings the tracks on a descending grade of 0.25% to the C.P.R. diamond crossing, continuing on the present grade to a point midway between Strachan Ave. and Bathurst St. From this point to near Bathurst St., the line is through the old cutting, with no change from the present conditions. In consequence, the bridge across the tracks at Strachan Ave. will not be done away with, but it is said that the present wooden bridge will be replaced by a more modern steel structure, but this will be apart from the viaduct proposition. From there to just east of Bathurst St., there will be no change in existing conditions, the steel bridge across Bathurst St. remaining.

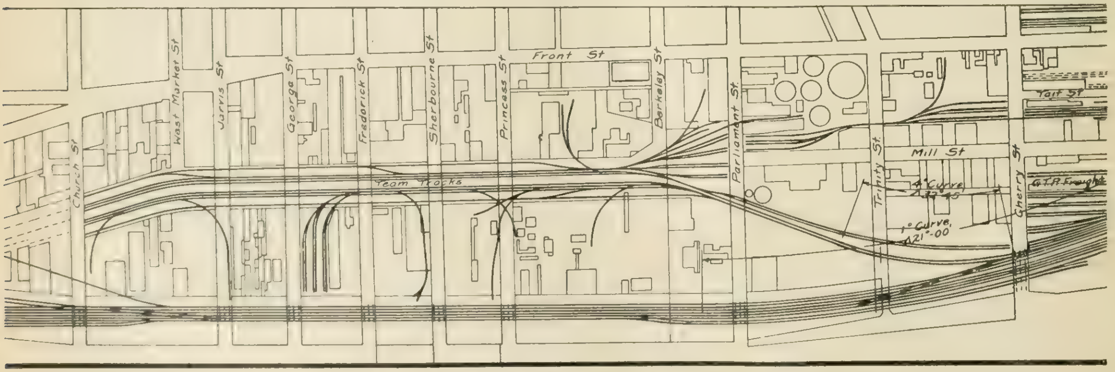
To this point the line will be a tangent, changing there to 1 degree curve through 12½ degrees, terminating at Spadina Ave., from which point the line will be again tangent. From the point of curvature at Bathurst St., the line will commence to ascend to the viaduct on a 0.4% grade, reaching elevation 26.5 at York St., from which point easterly to the Don River the line will be level at an elevation of 18 ft. above the present base of rail.

From Strachan Ave. to Bathurst St. there are four tracks, but just west of Bathurst St., the G.T.R. old main line and the C.P.R. main line join from the west, there being 7 tracks under the bridge. East of this the lines will diverge to the different yards and sidings, requiring long highway bridges to carry Spadina Ave. and John St. over the tracks. The present G.T.R. freight yard and shop arrangement to the north of the tracks between Bathurst and John Sts. will require rearrangement, the plans for which have not yet been drawn. To the immediate north of the tracks between Spadina Ave. and York St. the new scheme calls for an elevated passenger car yard for the G.T.R., consisting of 12 tracks, approached by a ladder track from each end. From Bathurst St., along the south side of the viaduct, there will be a surface track leading to the old Northern Ry. docks and the different industries located along the harbor front.



Plan of Viaduct Scheme from C.P.R. Diamond Crossing to Spadina Avenue. (Section 1.)

Under the existing arrangement, the Spadina Ave. bridge, which is 700 ft. long, only crosses the yard tracks to the north of the through tracks, which, as in the new scheme, pass along the south side of the yards. The ascending grade of the viaduct will necessitate the raising of this bridge 5 ft., and it will be extended to span the full width of the tracks, eliminating the steep ramp from the south side of the bridge to the grade over the through tracks. This new arrangement will call for a complete change at this point, as the old arrangement of crossing the tracks at grade was necessitated by the slip at the foot of the street coming right up to the tracks, making impossible an overhead bridge approach at that end under existing conditions. The new bridge will be about 770 ft. long, leading off from the higher ground to the north at practically the same level, and descending on the south on a light ramp, filling in the slip of the city wharf to the south. This extended roadway will connect with the Lake St. extension, which the city proposes to put through in conjunction with the scheme. The John St. bridge will not require to be extended, but as the viaduct level is to be 11 ft. above the present level at that point, the bridge will be raised that distance, the approaches from the south connecting to the Lake St. extension.



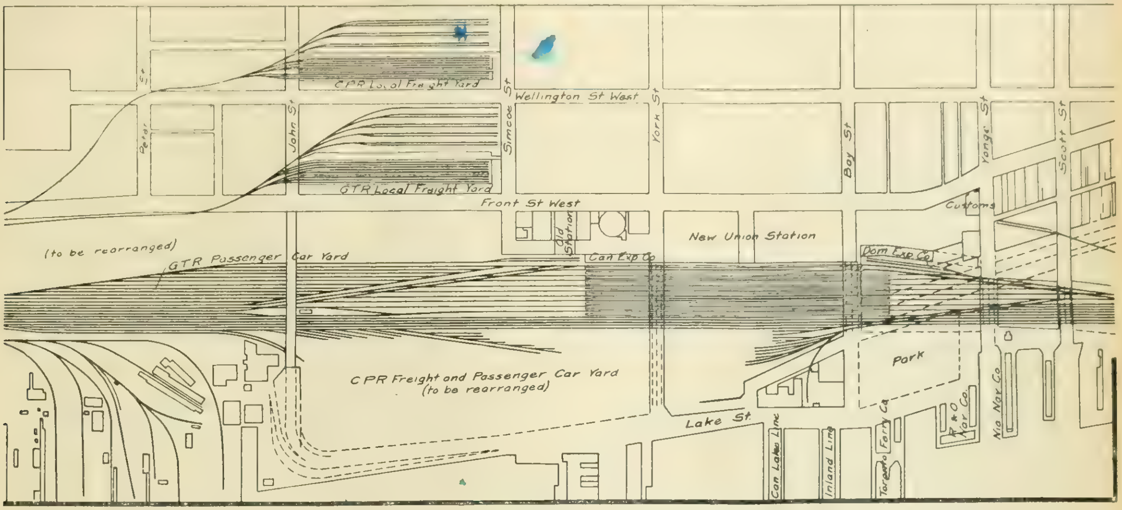
Plan of Viaduct Scheme from Between Scott and Church Streets to Don Freight Yards. (Section 3.)

At John St., between the through tracks and the G.T.R. passenger car yard, the station tracks will lead off in a double ladder, the plans calling for 10 passenger and 2 freight tracks through the station. At John St. also the leads to the C.P.R. freight and passenger car yards will branch off to the south. This yard will be on the same level as the viaduct. The plans for the elevation and rearrangement are not yet outlined, but can be cared for apart from the general scheme. Various considerations entered into the reasons for elevating this yard. In the first place, such an arrangement is undoubtedly more convenient for making up the trains, with no ramps to negotiate, but the principal reason lay in the disposing of York St., which will be carried under the tracks in a long subway. Under this scheme, all the tracks at York St. will be carried over the street. Were the yards on the level, all the tracks leading into the yard from the east would be crossed at grade, reducing the effectiveness of the whole grade crossing elimination project. The shunting of cars in the making up of trains would be a constant source of danger, and from the railway standpoint, the yard accommodation would be materially reduced by the breaking up of trains at the crossing.

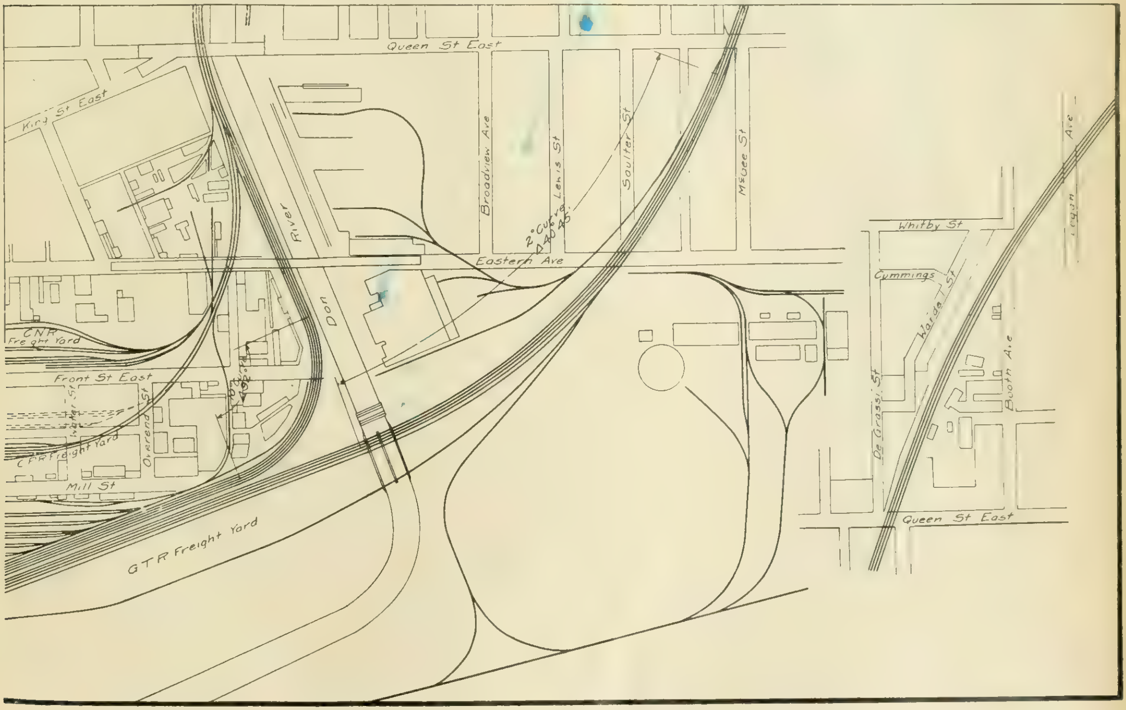
The double ladder leading into the station will be approached from the through tracks by crossovers to the west of the ladder approach. To the south of the station there will be 4 through tracks. The Canadian Express Co.'s present building on the north side of the station tracks at the foot of York St. will be approached by a ramp along the north side of the G.T.R. passenger car yard, requiring a concrete retaining wall along that side, as the building is on the ground level.

Bay St. will be carried under the easterly end of the station tracks and the through tracks, in a subway, the tracks for the C.P.R. freight and passenger car yards branching off on the viaduct at this point.

From Bay St., the station tracks will converge through double ladders to the northerly of the through tracks at Church St., east of which there will be crossovers. The only portion of the entire viaduct to be built



Plan of Viaduct Scheme from Spadina Avenue to Between Scott and Church Streets. (Section 2.)



Plan of Viaduct Scheme from Don Freight Yards to Eastern Ends. (Section 4.)

with concrete retaining walls will be between Yonge and Scott Sts., the balance will all be earth embankments. From the station east there are to be 6 through tracks, crossing all the streets on viaducts

It is from the station easterly that the new viaduct plans differ from those originally ordered, the line instead of following the general trend of the Esplanade, striking across the wharves to where the old lines looped south at Cherry St. The right of way secured across these water lots is 230 ft. wide, as compared to 200 ft. of the present right of way. Through this new right of way there will be 6 tracks, with an embankment width at the top of 85 ft. The property damages under normal conditions to expropriate this property would be enormous, as practically the whole wharf frontage will be rendered useless. But this seemingly wanton destruction of property works in admirably with the harbor improvement scheme of the Toronto Harbor Commissioners. It is proposed to fill in the slips, and extend the bulkhead line considerably further out into the harbor, this arrangement making possible a better wharfage arrangement.

From Parliament St., the line will follow a 1 degree curve through an angle of 21 degrees, again following a tangent to the Don River. At Cherry St. the old G.T.R. right of way will be again struck, the through tracks following the south side of the former right of way, as the new arrangements provide for a new Don exit for the C.P.R. line. In the existing arrangement, the G.T.R. and C.P.R. diverge at Berkeley St., the G.T.R. sweeping southerly to the Don River, and the C.P.R. following approximately a straight line through to the northerly turn at the Don River. In the new arrangement, the two lines will continue together to near the Don, the C.P.R. branching north along the west bank at that point. As mentioned, the right of way between Cherry St. and the Don will be slightly south of the present one, as the C.P.R. has its own line from Cherry St. east, there being crossovers from the common line just west of Cherry St.

To the south of the parallel sets of tracks will be the G.T.R. Don freight yard, from which the additional width for the right of way will be taken. It is proposed to rearrange this yard, but plans have not yet been prepared.

The 2 track C.P.R. line will sweep to the north on a 10 degree curve through 92 degrees, along the west side of the Don, following the right of way of the old G.T.R. Belt Line to its former right of way just south of Queen St. The line will commence to descend at Cherry St. on a 0.44% grade, easing to 0.09% around the curve, increasing to 0.45% to the former grade at Queen St. Queen St. is at present carried over the tracks on a bridge, and at Eastern Ave the plans call for an overhead bridge, probably of the same type as that at Queen St., bridging the river, through tracks, and freight yard approach tracks to the west.

The 5 G.T.R. tracks will continue across the Don River, south of the former right of way, crossing the river on a 120 ft. double girder, slab floor bridge, carrying 18 tracks, to accommodate the freight yard approach tracks as well as the through line. From the Don bridge, the line will swing to the north as far as Queen St. through a 40¾ degree angle on a 2 degree curve, thence on a short tangent to a reverse curve. From the Don, the line will ascend on a 0.4% grade to Queen St., from which point it will be level to Logan Ave., where it will again reach its former grade. Both Eastern Ave. and Queen St. will be carried under the tracks, the street level at Queen St. being slightly depressed. From Queen St. north the line will have only 4 tracks.

The two companies at present have most of their team freight tracks along the Esplanade. Under the new scheme this team track accommodation will remain about the same as at present, the abandoned through tracks being retained for this purpose. The Board of Railway Commissioners' original order expressly prohibited all grade crossings west of Church St., and in consequence the old tracks have been stopped off at that street. Entrances to the two fruit markets at Yonge St., one on the north side and the other on the wharf to the south, are to be made over trestle approaches from the viaduct. The trackage along the Esplanade east of Church St. is to be rearranged, and while the Yonge St. to Church St. portion is being removed, this rearrangement will make a trackage equal to that at present provided there. This arrangement of trackage will also provide access to all the industrial sidings along the old line. The approach to the viaduct will be over the old G.T.R. right of way, up a ramp that reaches the C.P.R. separate tracks where they diverge at Cherry St. All the tracks in this district will cross the streets at grade, with the exception of Trinity St., on the ramp approach, which will be carried under the tracks. With the exception of the approach tracks, all the tracks along the Esplanade will be stopped off at Parliament St., and in order that the grade crossing feature may not present its objectionable feature, the Board's original order provided that on all surface tracks there should be no movement of cars except during specified hours at night, or, if the freight be perishable, when the train was preceded by a brakeman on foot. This Esplanade team track arrangement will have decided advantages over the accommodation provided in the last plans drawn up. In that there were three tracks at grade on each side of a concrete retaining wall viaduct to serve as team tracks and approaches to the present industrial sidings. The closeness of the surface tracks to the mouth of the subways would make them a menace to the public crossing.

From the C.P.R. line at Queen St. there will remain the present C.P.R. entrance, which will be used solely for entering the C.P.R. and Canadian Northern Ontario Ry. east end freight sheds. To serve industries located along the present line between the freight sheds and the Esplanade, there will be a single track line crossing the intervening streets. It will thus be seen that except for a little shunting of cars there will be no train movement on the level.

Most of the street crossings will be by subways. As mentioned, Bathurst St., Spadina Ave., Eastern Ave. and Queen St. will pass over the tracks on bridges. Yonge and Bay Sts. will have 80 ft. subways; York, Scott, Church, Jarvis, George, Frederick, Sherbourne, Princess, Parliament and Cherry Sts., 66 ft. subways, and Trinity St., two 30 ft. subways. The design of the subways has not been completed, but they will likely be of steel, with concrete abutments, facings and deck.

An estimate of the work places the quantity of earth filling for the viaduct at about 3,500,000 yds., and the total cost of the completed project, including the union station, at about $14,000,000. The plans for the new station are in course of preparation, but nothing definite has been decided in this connection pending the formation of the new terminal company.

The viaduct plans have been prepared under the direction of H. R. Safford, Chief Engineer, G.T.R., and J. M. R. Fairbairn, Assistant Chief Engineer, C.P.R. Eastern Lines, by J. R. W. Ambrose, M. Can. Soc. C.E., who was in charge of the G.T.R. grade separation work through the southwest portion of Toronto, and who has been appointed Engineer of Grade Separation for the two companies. We are indebted to Mr. Ambrose for the data on which this article is based, and to Messrs. Fairbairn and Safford for authority to secure the same and for copies of the plans.

The Passing of Sir William Van Horne's Old Office.

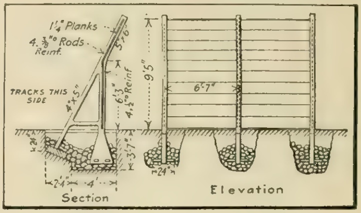
The old room at the Canadian Pacific offices in Montreal, in which Sir William Van Horne as, successively, General Manager, Vice President and President, sat and pored over the map of Canada and drew his plans, and thought out great undertakings, is being knocked out of all rememberable shape of its former self to correspond with the great scheme of reconstruction.

In this room Sir William used to receive his visitors, varied as to importance and distinction. The great ones of the earth have foregathered in the old room which has almost an historic significance. Men like Sir Henry Irving, Matthew Arnold, Lord Alverstone (as Sir Richard Webster), Lord Iveagh, Prince Arthur, His Royal Highness the Duke of Connaught and many others belonging to the old world aristocracies and Illuminati, have chatted in the old room where Sir William, getting down the maps before him, used to evolve his policies of extension and consolidation — when he had time to think of more general things than the paying of the wages—in the early days.

Some of the older officials, who remember the room so well, and the many times they have appeared before the President to discuss large things with him, as well as to enjoy his epigrams (when he had a moment to spare for them), feel a little sentimental regret that its glory has departed.—From the daily press.

Reinforced Concrete Snow Fences.

Snow fences for the Italian State Railways have been built of reinforced concrete along the Termoli-Campobasso line on the east coast of the peninsula. This branch is in mountainous country subject to heavy and continuous snow fall, which fills up the cuts beyond the power of the equipment to remove. About five years ago a start was made toward the construction of snow fences along the most unprotected sections of the line, following the design shown in the accompanying illustration. Since then the whole line has been so protected, with great success.



The fence comprises reinforced concrete standards spaced 6 ft. 7 in. c. to c., with an intervening fence made up of 3 in. pine plank, fitting into grooves in the standards. Each standard is of the size and slope shown and is founded on rock ballast filled into a pit dug for the purpose. The reinforcement of the posts is made up of four round rods tied together with ⅛ in. wire.

The fence is designed to resist safely a uniform horizontal thrust of 20 lb. per sq. ft., or a concentrated, horizontal thrust of 660 lbs. at the top of each section of the fence.

Tank Locomotives of the 2 : 12 : 2 Class have been built for the Java State Railways, and are said to be more satisfactory than Mallet duplex ones of the 2 : 6 : 6 : 0 class, being less liable to slip on account of the large number of wheels coupled into one group. The locomotives can operate on curves of 460- and 500-ft. radius, the track guage (3½ ft.), being widened a little over 9-16 in. for the former and ¾ in. for the latter. The original trial order was followed by an order for a considerable number. The design was at first for a 2 : 12 : 0 class, but the trailing axle was added in order to allow of increasing the capacity of the coal bunker behind the cab. The length of driving wheelbase is 20½ ft., and special provision is made for lateral movement of the axles on curves. On the sharpest curves this movement may be as much as 1 3-32 ins. for the first driving axle, and 3⅞ to 2⅛ ins. for the truck axles, the latter having radial axle boxes. All the wheels have flanged tires, but the flanges are smaller than usual on the two middle driving axles.

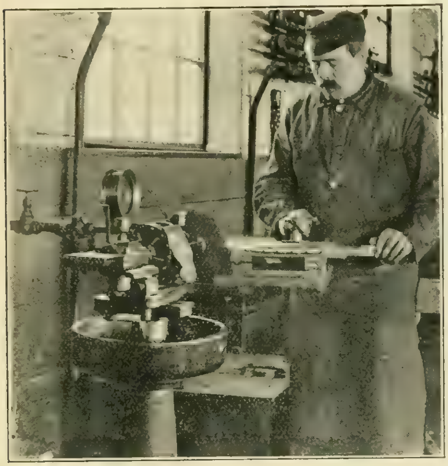
Railway Mechanical Methods and Devices.

Air Motor Grinder at Grand Trunk Railway Toronto Shops.

The G.T.R. Toronto shops are used almost exclusively for the manufacture and repair of track parts, such as frogs, switches and points. In the working of these parts, the saw forms a very important piece of equipment, and requires special means of sharpening to keep in condition. The machine shown in the accompanying illustration is used in these shops for saw sharpening, and is located alongside of the horizontal miller which is used for sawing the rail parts.

The power end of the grinder consists of a small air turbine, mounted on a bell topped grinder stand, with the shaft of the motor carried in bearings on either side of the motor casing, the bearings being an integral part of the grinder frame. A valve in the air pipe to the rear regulates the air, and varying speeds may be obtained by changing the applied pressure, as recorded on the gauge shown.

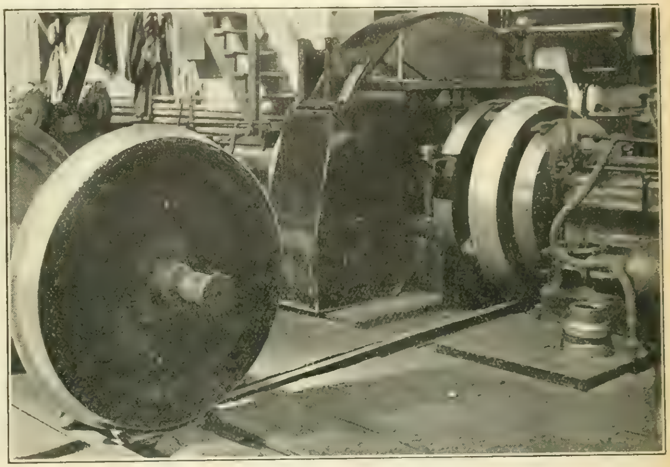
The jig for sharpening the saw is attached to an arm projecting from the grinder frame alongside one of the grinding wheels. The jig consists of a flat table, level with the centre line of the shaft, this table having ribs on its under side fitting into the frame of the jig, guiding the table in a path which may be either across the face of the grinding wheel or at a slight angle to it, the position of the jigframe being adjustable. The saw to be sharpened is attached to the face of the table by a clamp, and adjusted to sharpen each tooth of the saw. E. Logan is General Foreman of these shops.



Air Motor Grinder for Sharpening Rail Saws.

Mounting Wheels in Lathe at Canadian Pacific Railway West Toronto Shops.

In the C.P.R. passenger car shops at West Toronto the passenger car wheel lathe is fitted with an attachment for quickly mounting the wheels in the lathe for turning. In front of the lathe there is a narrow gauge track, served by a small car fitted for carrying the pairs of mounted wheels, the wheels being run on the car from the storage tracks nearby. Running into the lathe, there is a standard gauge on which the wheels are run from the small service track car as shown in the accompanying illustration. These two rails of the standard gauge track are secured at the service track end, the other ends being attached to the upper end of air cylinder pistons, the cylinders being bedded under the lathe. The wheels to be turned are run into position in the lathe on the tracks, and by means of the air cylinders, the inner ends of the rails are raised, lifting the wheels in line with the lathe centres, which are then run into position. The rails are then lowered to normal position. This attachment makes possible a quick mounting of the wheels in the lathe.



Attachment for Mounting Wheels in a Wheel Lathe.

Vanadium steel castings differ in composition from ordinary steel castings only by the presence of from 0.16% to 0.25% of vanadium.

Blue Flag Stand at Canadian Northern Railway Winnipeg Shops.

In view of the widespread interest that has lately been fostered in the safety first movement, any little devices that will promote this movement are in demand. The use of the blue flag in repair yards, for protecting the ends of standing cars while undergoing repairs, is general on all lines in Canada and the U.S., and has proved most efficacious in preventing yard locomotives and shunting trains from bumping the ends of cars that are undergoing repairs, or under which workmen may for the time being be working. This has reduced one of the most prolific causes of accident.

The difficulty in the use of the blue flag has been in the careless manner in which workmen whom the blue flag is to protect, place it at the end of the car or string of cars that are being worked on. It not infrequently happens that the flag is placed in the rung of the car ladder, where a breeze, or a workman climbing to the top of the car, might quite easily knock it to the ground, where it would in all probability not be seen by an approaching train or locomotive. Again, it is often stuck in the ground at the end of the car, where it is easily knocked over with a like result. Numerous accidents have occurred from this very cause. When repair car accidents occur, and an enquiry is being conducted to ascertain the cause, cases have been known where the train crew of the offending train have deliberately knocked down the flag after the accident in order to make a false claim that the flag was down as the train approached, and that in consequence, they were not responsible for the accident.

Realizing all these difficulties, A. McCowan, General Car Foreman, Canadian Northern Ry. Shops, Winnipeg, devised the flag stand shown in the accompanying illustration. The base of the stand consists of a couple of pieces of ⅜ by 1½ in. bar stock, formed to fit the head of the rail at the lower ends, and drawn out and curved at the tops to fit around the end of a 1¼ in. wooden rod, the two pieces being hinged together with ¼ in. rivets as shown. Connecting the two hinged arms, there is a ½

Tire Mounting Shed at Canadian Pacific Railway West Toronto Shops.

The C.P.R. passenger car shop at West Toronto has recently installed a plant for mounting passenger car wheels, to the design of H. R. Naylor, General Foreman, the details of which are shown in the accompanying illustration. The plant is installed in a small frame building outside the pas-

Tire Heating and Mounting Shed [illegible]

[illegible] wheel repairs are made, combining conveni- [illegible]

The frame building [illegible] two bays, that on the left for storage, and that on the right for the tire mounting operations. The tire mounting bay con- [illegible] come from the back of the shed to about a third of the shop depth from the front. Just in front of the near end of the raised rails there is a vertical air cylinder, buried in the ground, used to raise the mounted wheels. In the channel sides of the near end of the raised rails there are slotted bars, free to move about 6 ins., which, when the wheels are raised on the air jack, can be pulled out, and the axle lowered thereon. The T head of the rail ends is cut away so that the upper surface of the end pieces is flush with the rail top, the axles as lowered on the projecting ends being run along the raised rails.

Forming a U loop from the rear of the shed over top of the standard gauge rails and looping around the near end, there is a rail suspended from the roof, on which a small trolley operates. At the rear of the shop, to the left of the raised rail, there is a tire heating furnace of a type recently described in these columns, the tires being mounted in a pile and encircled by a sheet of metal, an oil flame being directed down through the centre of the pile, thereby heating them in batches of about 6. From this pile of heated tires the tires can be lifted on the overhead trolley, and transported to the awaiting wheel centre for mounting. The whole layout of the plant makes for convenience and speed in operation.

Diesel Electric Motor Cars on Swedish State Railway.

Diesel electric motor cars have been in operation on the Swedish State Railways for about a year past. Two such cars were built. The power equipment of each car is a 75 h.p. Diesel engine running at 700 r.p.m., driving a direct-current dynamo of 50 k.w., producing 440-volt current. Two 30 h.p. motors are connected to the main or driving axles, although a third axle is fitted under the machinery compartment, which is at the extreme end of the car. The Diesel engine is a four stroke machine with six cylinders and eight compressor cylinders. Besides driving its own fuel pumps, etc., the engine also drives a small compressor for the air brakes. The engine is started with compressed air stored in steel containers. The engine exhaust goes through a muffler under the car and then to an exhaust pipe over the roof. The cooling water is taken from a tank on the ceiling of the baggage room (just behind the engine compartment) and after going through the engine is carried through a copper radiator on the roof, being circulated by a small pump geared to the engine. Two oil tanks in the engine room provide fuel capacity for about 800 miles of run with two trailers. The fuel consumption is stated to be about 0.8 lb. of oil per mile for the motor car alone and about 1.2 lb. per mile for the motor car with 30 ton trailer, at an average speed of 20 to 30 miles an hour. The car is geared for a maximum speed of 40 miles an hour, and as to tractive power is designed for two 30 ton trailers, the motor car itself weighing 26 tons. Current for illumination is supplied by a 28 cell accumulator under the car, which also furnishes current for a small motor used for [illegible] the governor of the Diesel engine for different speeds of car. Heating in cold weather is done by passing the circulation water of the engine through radiators in the car. These cars are said to be giving satisfactory service. They were built in 1911, and were put into service in the summer of 1912.

It is said that [illegible] fired locomotives operate with only from one third to one tenth the amount of smoke produced by hand fired locomotives.

Power Interlocking and Signalling at Windsor Street Station, Montreal, Canadian Pacific Railway.

As the extension to the C.P.R. terminal at Windsor St., Montreal, is nearing completion, a question of general interest to railway men, and one of great importance in the efficient operation of the terminal, is that of the scheme of signalling employed. As in all similar cases, owing to the extent of track area to be controlled, and to the necessity for quick and safe handling of traffic, power interlocking was decided upon. The accompanying plan shows the terminal tracks as signalled by C. W. Parker, Signal Engineer, C.P.R., under whose specification and supervision the work is being executed.

The interlocking cabin, which is located on the north side of the plant, about 400 ft. beyond the train shed, was built by the railway company, and is a three story brick structure of 30 by 18 ft. floor area. Owing to its being located on the side of the track elevation, opportunity is given for the three stories without having it unduly high, and without the cost of excessive excavation. The basement is used for the power apparatus, storage batteries and a small repair shop; the middle floor, which is on the track level, for relay room and office, and the top floor for the operating room, making a very satisfactory arrangement.

As will be seen by reference to the track plan entrance to the terminus is on one inbound main track up to signal 1, at which point, by means of signals 1 and 2 and their consequent signals, selection is made to any of the 11 station tracks.

The signals on the plant are all three position upper quadrant, non automatic, except nos. 68 and 69, which are controlled jointly with the advance signal 3, and are slotted through the intervening track, and signals 70 and 71, which are two position, operating from horizontal to 45° only. With the exception of signal 1, which controls a relatively high speed inbound movement, all movements on the plant are treated as slow speed and are controlled by dwarf signals. This method, not only affords all necessary protection, but does away with expensive overhead bridge construction, and allows, by keeping within the equipment clearance lines, the placing of the signal close to the switch controlled. The signals located in the train shed are of the suspended type, and are fixed to the steel arch directly above the track governed.

Plan of Signalling Installation, Windsor Street Station and Yard, Canadian Pacific Ry., Montreal. Not to Scale.

Each of the station tracks within the train shed is divided into two track sections, and the third or 90° position of the entering signal is secured only when the entire track is unoccupied. In other words, if a train is standing in the farthest section of a station track the entering signal for that track will let a train in only on 45°, or caution, indication. The remainder of the plant is divided up into a number of independent track sections, so arranged as to secure the necessary detector locking, viz., the prevention of operation of any switch within a definite track section when same is occupied by a train. It is used to replace the familiar mechanical method of detector bars, as it is more positive in its operation, gives uninterrupted protection over any predetermined length of track, and affords a means of indicating the exact position of any train within the interlocking limits.

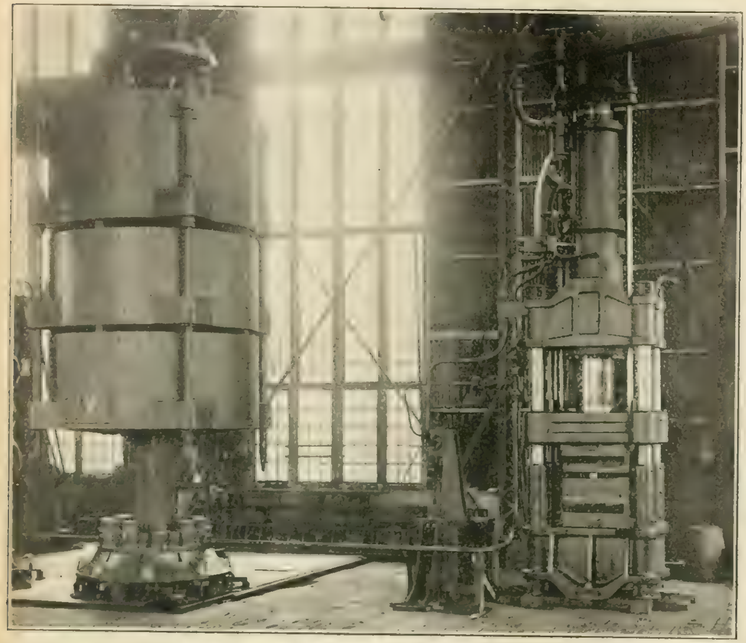
Each track section has a 4 ohm relay, either carried directly into the interlocking cabin, if the distance is not over approximately 500 ft., or repeated into the cabin by means of an indicating relay. All the levers in the interlocking machine controlling the switches are equipped with electric locks, which must be energized before movement of the switch can be made in either direction. Now by energizing all the locks on the switch levers of a given section through the track relay, or its repeater, for that section, it is readily seen that when a track is occupied by a train its relay is deenergized, and therefore the energizing circuit on the switch lever locks is cut off, thus locking all the levers for that section. This is detector locking.

Again, if current is supplied through the energized contacts of these track relays, or their repeaters, to independent lamps, an indication is given of the occupancy of any track section, if the lamp is burning the track is unoccupied. This is what is done in the illuminated track diagram. This device is a metallic case about 12 ft. by 3 ft. high, placed behind and above the interlocking machine in plain view of the operator. The front of this case is opaque, except in a broad outline of the actual track arrangement. Small electric lamps are assembled in reflectors and mounted inside in sets, corresponding each to its track section on the ground. When the whole diagram is lighted the clear outline of the tracks is visible and when a train enters the interlocking limits the diagram becomes dark, corresponding to the section occupied. By this diagram the operator is able to set up for movements with the least loss of time, since, when the signal governing the route has been put normal, releasing the mechanical locking between levers, he may change his switches as soon as they light up again behind a train.

The track sections, relays, repeating indicators and lever locks are all energized from two sets of six cells of storage battery of 120-A.H. capacity, one set feeding relays and locks and the other the track circuits. In supplying the track the continuous track loop is used, which means that both the positive and negative sides of battery are led out over the entire plant to the feeding points and back to its own side again. This is done to afford additional safeguard against interruption by broken track circuit, since, should a break occur between battery and a given track circuit, there is always a second path for the current round the other side of the loop. Taps, of course, are taken off both positive and negative loops at each feeding point. Variable resistances are placed in these track taps to allow for the necessary track voltage adjustment.

The interlocking machine, which is installed in the upper floor of the cabin is the all electric unit lever type made by the General Railway Signal Co. and has a capacity of 74 working levers, and 14 spare spaces. As above mentioned, all the switch levers are equipped with locks. The interlocking machine in an all electric system is merely a series of switches mechanically interlocked and controlled by the necessary indications and safety magnets.

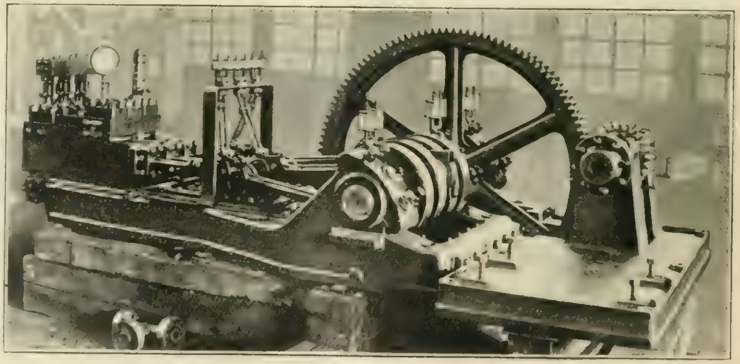
Battery is supplied on buss bars on the machine from storage battery at 110 volts, and is led through the lever controllers or switches to the functions to be operated by rubber covered insulated wire, each signal blade and pair of switch points being operated independently by a motor through a suitable gear.



500 Ton Hydraulic Forging Press with Accumulator.

In an electric interlocking system, inasmuch as there is no manual force needed to operate the various functions, nor any rigid connection between the lever and the part operated, as in mechanical interlocking, it is necessary to make special provision that the function moves in accordance with its lever, and also that a switch must have completed its movement and been locked before the controlling lever can complete its stroke and, therefore, release the locking between levers. The first of these essentials is secured by a reversible switch or pole changer located out at the switch and operated by the switch movement, so that the normal or reverse control contacts must be in agreement with the normal or reverse contacts on its controlling lever. The last is obtained by means of the indication current and magnet.

When a switch motor finishes its stroke and the locking plunger is through the lock rod, the operating current is cut off and the motor continues to run a few revolutions, due to its own momentum, and acts as a generator. The current thus generated returns to the interlocking machine over the indication wire and energizing the indication magnet, releases the lever and allows the stroke to be completed. The indication current comes from the function being operated and only after it has finished its stroke and is locked. In the case of a signal an indication is given only when it returns to the normal or position of greatest protection.



Three Plunger Motor Driven Hydraulic Forging Press Pump.

In order to prevent the operation of a signal or switch from any incorrect source, due to crosses in the wires between the interlocking machine and function, cross protection is provided by means of polarized relays mounted on a terminal board below each lever and also by the circuit breaker on the operating switchboard. These relays are so connected that the operating current from the proper source tends to hold the contacts closed, and current from any improper source opens the contacts and releases the circuit breaker on the operating switchboard, cutting off all operating current from the buss bars, until the cross has been removed.

The switch mechanisms used are the General Railway Signal Co.'s model 4, and the signal mechanisms are all the model 2A motor type. Power for the operation of the interlocking plant is furnished from 57 cells of storage battery of 120-A.H. capacity.

It is proposed to instal a system of intercommunication between the operating room in the interlocking cabin and each station platform.

Power is supplied from the city circuit at 220 volt, 60 cycle, 3 phase, and is transformed to 12 volts for lighting the track diagram and signals. The signals are all equipped with 5 watt tungsten lamps. The commercial current is also used for driving the motor generator sets for charging the storage battery.

The charging switches are mounted on a panel in the power room, with the necessary voltmeters and ammeters, and so arranged to permit flexibility in the charge and discharge of the two low voltage sets. The high voltage battery can be charged, of course, without interruption to the operation of the interlocking plant. In case of failure of the commercial current the signals can be lighted from the 12 volt lock battery.

The wires are run to all the functions in wood trunking above the surface of the ground, and are enclosed in conduit inside the train shed. Insulated copper wire is used throughout.

The contract is being carried out by the General Railway Signal Co. of Canada, Ltd., Lachine, Que., of which V. I. Smart is Vice President and General Manager, and R. G. Gage is Chief Engineer.

Hydraulic Forging Press in the Canada Forge Company's Plant.

In the Canada Forge Co.'s plant at Welland, Ont., there is a hydraulic forging press of a design that is unique in this country, and which is shown in one of the accompanying illustrations. It is of German design, built on the Astfalck system by the Wm. Tod Co., Youngstown, O. The unique feature of the press is the size of the work that can be handled, and the speed with which it operates.

The press is of 500 ton capacity, and has a 30 in. plunger that operates at from 80 to 120 strokes a minute on billets up to 32 ins. diameter, the supplied hydraulic pressure being 3,000 lbs. It is of the one lever type, that is to say one lever movement controls the movements of the plunger. The tremendous pressures handled make necessary the design of all the parts particularly strong. The valve design is interesting from the fact that both wearing parts of the valve are made of hardened steel, as the effect of the high pressure water passing over the mating surfaces causes the latter to become badly scored. The accumulator for maintaining a uniform supply of high pressure water is shown adjoining the press. It is of the pick up weight design, of a steel construction throughout. The pick up device is capable of quick adjustment, and enables the press to be operated at various pressures as required by the work.

The pump shown herewith is of the horizontal three plunger type, driven by a 110 h.p. direct connected electric motor mounted on the base attached to the pump base.

The cylinder portion of the pump is novel, consisting of a solid steel forging, in which the three cylinder bores, as well as all the valve seats, have been machined from the solid. It delivers at a 3,000 lb. pressure. The weight of the press is 90,000 lbs., and the installation complete, without the accumulator weighs, 200,000 lbs.

Gas Electric Car on Victoria and Sidney Railway.

Canadian Railway and Marine World for September and November contained some brief particulars of a gas electric car which has been placed in operation on the Victoria and Sidney Ry. on Vancouver Island. This line, of 16.26 miles, runs from Victoria to Sidney, from which point there is a ferry service to the British Columbia mainland. It traverses the Saanich Peninsula, a particularly picturesque and fertile portion of the lower east end of the island, which is becoming closely settled and requires a more frequent service than was possible with steam operation. The car is said to be averaging 110 miles a day, and on two days a week a 30 ton trailer is handled.

The Great Northern Ry. ordered two of these gas electric cars, which are shown in the accompanying illustration. One of them is being operated on the Victoria and Sidney Ry., and the other on a G.N.R. branch line in the State of Washington. They made the journey from Chicago to the Pacific Coast with their own power.

Each car is of the combination passenger, smoking and baggage compartment type. It measures 71 ft. 8 ins. long over bumpers, 10 ft. 5 ins. wide, and is partitioned into four compartments: one 27 ft. 11 ins. long for passengers; a smoking section, 12 ft. 5 ins. long; a baggage room, 10 ft. 11⅞ ins. long; and the engine cab, 11 ft. 11 ins. long, containing the power plant apparatus. The net weight of the car is approximately 51½ tons, and it has a total seating capacity for 86 passengers. A centre vestibule with side entrances runs crosswise between the passenger and smoking compartments. There is also a rear platform entrance leading into the passenger compartment. The smoking section provides for 26, and the passenger compartment for 60 of the total seating capacity. The car is essentially a locomotive and car combined in one unit. The motive power centres in an internal combustion engine, generator and the motors. But one motorman and one conductor are required to operate the car.

All steel construction, except the interior finish, prevails throughout. The frame consists of steel I beams and channels, strongly cross braced, and steel plates form the outside sheathing. The underfloor is of wood, sheathed with sheet iron on the lower side. Between this and the floor proper a heavy felt lining is inserted, and the car sides are also interlined with felt. The interior trim is of mahogany, highly finished, and the ceiling is sheathed with three ply wooden veneer, painted straw yellow with green stenciling and gold striping. The exterior of the body is finished in green. The windows are fitted with plate glass; the seats are made long enough to accommodate three persons, are covered with friezette plush in the passenger compartment and with genuine Spanish leather in the smoking room, and the entire car is lighted with electric incandescent fixtures.

The generating unit is located above the floor line of the cab, free from dust and dirt and under immediate observation of the engineer. It consists of an 8 cylinder, 4 cycle gas engine of the V type, direct connected to a 600 volt, commutating pole electric generator, designed to meet the special conditions the service demands. Flexibility of control and economy of operation are assured through electrical transmission of the power. Starting the engine is effected by compressed air taken from the main reservoirs of the air brake system, which are built with surplus capacity for this purpose. The main air compressor is driven from the crank shaft of the main engine, and is fitted with an automatic governor which maintains a constant pressure. The engine can rotate at normal speed, irrespective of the speed of the car, and deliver its maximum power, a feature of great advantage on grades, in the case of snow storms, or in the event of emergency conditions. An auxiliary equipment is also provided, consisting of a 2 cylinder, 4 cycle gas engine, direct connected to a single cylinder air compressor and lighting generator. The function of this set is to supply an initial charge of air for starting the main engine and to deliver power for lighting the car. This set is started by hand.

The method of control is simple, substantial and similar to that of any standard electric trolley car. The car is equipped with motors of 200 h.p. capacity. Mounted on the axles of the forward truck are two GE 205, 600 volt, box frame, oil lubricated, commutating pole railway motors of 100 h.p. each. By means of a special controller they are placed progressively in series and parallel connection.

Energy is transmitted directly without the intervention of mechanical change speed gearing. The voltage is governed by varying the strength of the generator field, which is accomplished by the movement of a single handle on the controller, and the resultant speed changes of the motors produce a smooth and rapid acceleration without rheostatic power losses or gear changes. Separate handles are provided for throttling the engine and for reversing the car. The latter is accomplished instantly by changing the motor connections in the usual manner, without stopping the engine, which always rotates in the same direction. This allows the car to be brought to a halt quickly, independently of the brakes in an emergency. All the levers are located within convenient reach of the operator. The radiators are placed on the roof and circulation for cooling the engine is maintained by the thermo siphon system.

The controller is also arranged for governing the motors by shunt field control. This auxiliary method of control assures greatly increased operating efficiency through uniform saving of power, economy effected by decrease in the weight of the equipment and an available increase in the service capacity. Two extra points are provided in the controller for final speed acceleration in parallel, whereby the motor fields are shunted and weakened. The resulting higher armature speeds permits the use of smaller pinions, and full utilization of the power input is secured throughout the entire speed range, from start to full speed.

The trucks are of the heavy swing bolster type with elliptic bolster and coil equalizer springs. The bearings, treads and flanges of the wheels and axles conform to M.C.B. standards. The brake equipment includes hand brakes in addition to the combined straight and automatic air brakes. A high power incandescent headlamp and reflector, an air whistle and a pneumatic gong are provided; and a hot water heater, coal fired, is installed for heating the car. To prevent freezing in cold weather when the car is lying idle, the heater circulation may be connected to the engine cooling system. A 150 gallon gasolene supply tank is suspended underneath the car. While the car is running, the gasolene is pumped automatically by the engine; and when first starting, by a hand pump.

Both the cars referred to were built by the General Electric Co. at Schenectady, N. Y. They are of the same type but larger than the gas electric car which has been operated on the Quebec and Lake St. John Ry. during the last two years. The dimensions of the last mentioned car, which will be interesting for comparison, are as follows:—Length, 58½ ft., width, 10 ft. 5 ins. It has the same number of compartments, viz., general passenger, 25½ ft. long; smoking, 10 ft. long; baggage, 6 ft. long, and engine cab, 12 ft. long. The net weight is 39½ tons, and the seating capacity 76 people.

Gas Electric Cars Built for Great Northern Ry., One of Which is Operating on Victoria and Sidney Ry.

Union Stock Yards, St. Boniface, Man.—These yards, which are operated by the Canadian Pacific, Grand Trunk and Grand Trunk Pacific Railways were fully described in Canadian Railway and Marine World for September, when a ground plan of them was given. A photograph was not then available, but has since been secured, and two illustrations made therefrom are given on pages 568 and 569.

Canadian Northern Railway Company's Annual Report.

The following directors' report, over the signature of Sir Wm. Mackenzie, was submitted at the annual meeting on Toronto, Nov. 24.

The results of the company's operations for the fiscal year ended June 30 are as follows:—

GROSS EARNINGS

From passenger traffic	$3,749,498.35
From freight traffic	18,561,026 90
[illegible] sleeping cars, interest and profits from elevators and other subsidiary companies, investments, premiums, etc.	2,216,953.22
	$24,527,478.47
WORKING EXPENSES, (including taxes etc.	17,503,610 57
Net earnings	$7,023,867.90
Deduct fixed charges	5,190,924.12
Surplus	$1,832,943.78
From this deduct interest at 5% per annum paid on income charge convertible debenture stock outstanding	988,214.49
Net surplus for year	$ 844,729.29

The gross earnings show an increase of $3,417,384.84, or 16.38%, and the net earnings of $892,822.79, or 15.18%, over the preceding year. The working expenses were 74.64% of the gross earnings of the railway proper and 72.10%, including taxes, of the gross earnings from all sources, compared with 73.82% and 71.81% respectively last year.

During the year 236 miles of newly constructed tracks were added to the system, the average mileage operated being 4,297 miles.

Land sales during the year were 19,755 acres for $291,193.18, an average of 14.74 an acre, after making certain adjustments in respect to sales in previous years. The actual average price per acre during the current year was $15.36, compared with 55,111 acres for $836,084.37, an average of $15.17 the preceding year. Whilst your directors have not made any special effort to sell its own lands, the policy of colonizing Dominion Government farm lands has been continued, and over two million acres were entered upon by settlers. The effect of this policy is now being seen in the increased movement of agricultural products of all kinds.

Favorable weather having prevailed during the ripening and harvesting period, it is confidently expected that the 1913 crop in the provinces of Manitoba, Saskatchewan and Alberta will exceed that of any previous year in point of quality and abundance of yield. The marketing of grain from the territories served by your railway has commenced considerably earlier than last year, and the quantity of uniformly high grade grain shipped to the lake ports at the date of this report is very much in excess of any previous year at the same date. This early return in cash to the farmer is already being reflected in increased activity in the industrial centres, with corresponding satisfactory [illegible] figures to your company. Recognized authorities conservatively estimate the yield for the three provinces as follows:—Wheat, 220,000,000 bushels; oats, 224,000,000 bushels; barley, 34,000,000 bushels; flax, 15,000,000 bushels.

The earnings derived by your company from this great crop would have been very greatly increased if its transcontinental line was in operation, and your directors have the satisfaction of reporting that excellent progress has been made during the year in its construction and are now able to state that by the close of the present year connection will have been established at Port Arthur with the eastern lines, and that the last link in the chain, namely, the line through the Rocky Mountains will be connected early in 1914. A second transcontinental railway between the industrial east and the fertile west is not only an event of importance to your company but marks an interesting era in the history of Canada. The fact that commerce and business interests between eastern and western provinces continue to grow in satisfactory volume, the assured prospect of increased immigration in the future and the knowledge that the territory through which the new railway is built abounds in valuable natural resources waiting only railway facilities for development, guarantees to your company a very large measure of traffic in the immediate future.

Four per cent. perpetual consolidated debenture stock to the amount of £1,438,356 was sold during the year and five per cent. income charge convertible debenture stock to the amount of £2,057,612 was also sold, the proceeds of both issues being applied to the construction, improvement and equipment of the line.

The Dominion Parliament granted during the year to the C.N. Ontario Ry. and the C. N. Alberta Ry., parts of the C.N.R. system, a cash subsidy of $15,640,000, which with those previously granted have been or will be expended on construction, improvement and equipment. All moneys also received from the sale of land grants or raised by securities have been expended in the same manner. The increase of $7,000,000 in the capital stock represents the amount issued to the Dominion Government under the terms of the subsidy above mentioned.

The following statement shows in concise form the company's growth during the past ten years:—

	1903	1913
Mileage operated	1276	4552
Passenger traffic	$ 389,170 00	$ 3,749,500 00
Freight traffic	1,896,380 00	18,561,026 00
COMMODITIES		
Flour (sacks)	332,096	3,047,478
Grain (bushels)	12,367,110	59,380,957
Live stock (head)	23,775	239,133
Logs of lumber (feet)	85,551,000	448,351,000
Coal (1909) (tons)	326,591	1,111,865
General merchandise (tons)	173,379	1,371,927
EQUIPMENT PURCHASED		
Locomotives	73	534
Sleeping and dining cars	1	76
Passenger cars	22	376
Baggage, mail and express cars	10	135
Freight cars, all kinds	2,507	23,759

Having regard to the mileage operated, the development of traffic, the necessarily heavy and continued expenditures for the betterment of the service in every department, including the purchase of equipment of all kinds, these figures are submitted as testimony of the wisdom shown in the location of your various lines.

The Canadian Northern Ontario Ry. has been connected between Toronto and Ottawa, and a regular service will soon be established between Toronto, Ottawa, Montreal and Quebec. The completion of this section, together with the section connecting with the Western Lines at Port Arthur in a few months, will enable your company to retain a large volume of traffic originating on its lines in the east and west which it is now compelled to hand over to other companies, and it will also open up a large traffic producing territory which, while of first importance to the Canadian Northern Ontario Ry., will be of substantial advantage to the system as a whole.

Your directors are pleased to report very satisfactory progress in the construction of the tunnel through Mount Royal, which is to give the lines of your railway and other allied companies access to the centre of the city of Montreal. When completed—it is hoped concurrently with the inauguration of a transcontinental service between Montreal and Vancouver—your company will enjoy a terminal situation in Montreal second to no other railway company.

The accounts and statistical tables appended were submitted by D. B. Hanna, Third Vice President:—

CONDENSED GENERAL BALANCE SHEET

ASSETS

Cost of railway and equipment		$221,257,996.74
Acquired securities (cost)		8,294,006.87
Advances to other companies		3,344,896.97
Advances to lines under construction		9,590,268.47
Value of material and supplies on hand	$3,286,680.10	
Due from agents, station balances, etc	987,868.19	4,274,548.29
Deferred payments and accrued interest on land sales	7,834,174.42	
Cash with National Trust Co., account of land sales	2,962,310.93	10,796,485.35
Cash Account—		
With Dominion Government	836,579.12	
With province of Manitoba	18,830.61	
With province of Saskatchewan	805,218.40	
With province of Alberta	1,142,100.02	
Cash on hand	2,507,029.06	5,309,757.21
		$262,867,959.90

In addition to the above assets, the company owns approximatelo 850,000 acres of land in Manitoba and Saskatchewan.

LIABILITIES

Capital stock		$77,000,000.00
Bonds and stock (guaranteed by government)		54,633,824.53

Total $	1.75.49	1.51.77

SUMMARY OF EQUIPMENT

	June 30,	
	1913	1912
Locomotives	534	430
Sleeping and dining cars	76	64
Passenger cars	376	307
Baggage and mail and express cars	135	99
Business cars	16	14
Freight, refrigerator and stock cars	23,759	18,675
Conductors' vans	396	257
Boarding, tool, auxiliary cars, steam shovels and snow equipment	701	594

The total mileage owned and operated, including leased lines at June 30 was 4,552.76, located as follows:—Ontario, 356.60; Manitoba, 1,833.75; Saskatchewan, 1,851.56; Alberta, 467.15; Minnesota, 43.70. The average mileage operated during the year was 4,297 miles.

Birthdays of Transportation Men in December.

Many happy returns of the day to:—

E. T. Agate, M. Can. Soc. C.E., District Engineer, Canadian Northern Ontario Ry., Sudbury-Port Arthur Line, Sudbury, born at Pittsford, N.Y., Dec. 7, 1874.

E. Alexander, Assistant Secretary, C.P.R., Montreal, born in Yorkshire, Eng., Dec. 8, 1862.

J. H. Barber, M. Can. Soc. C.E., Engineering Department, C.P.R., Montreal, born at Cobourg, Ont., Dec. 20, 1856.

H. E. Bissell, Right of Way and Claims Agent, Grand Trunk Pacific Ry., Winnipeg, born near Noyan, Que., Dec. 31, 1867.

N. E. Brooks, M. Can. Soc. C.E., Engineer of Maintenance of Way, Western Lines, C.P.R., Winnipeg, born at Sherbrooke, Que., Dec. 25, 1866.

Harold Browning, steamship agent, etc., Windsor, Ont., born at Stamford, Lincolnshire, Eng., Dec. 2, 1864.

T. C. Burpee, M. Can. Soc. C.E., Superintending Engineer, Canadian Government Railways, Moncton, N.B., born at Sheffield, N.B., Dec. 11, 1852.

W. W. Butler, Vice President, Canadian Car and Foundry Co., Montreal, born at Danville, Ohio, Dec. 9, 1862.

M. M. Campbell, Building Inspector, G.T.R., Montreal, born at Bridgeton, N.B., Dec. 17, 1879.

H. Foster Chaffee, Passenger Traffic Manager, Richelieu and Ontario Navigation Co., Montreal, born at Knowlton, Que., Dec. 18, 1868.

A. H. Chave, Purchasing Agent and Assistant to First Vice President, Canadian Car and Foundry Co., Montreal, born at Williamsbridge, N.Y., Dec. 26, 1872.

W. H. Gardiner, City Freight Agent, C.P.R., and District Freight Agent, Esquimalt and Nanaimo Ry., Victoria, B.C., born there Dec. 6, 1859.

H. H. Gildersleeve, Manager, Western Lines, Richelieu and Ontario Navigation Co., Toronto, born at Kingston, Ont., Dec. 15, 1865.

A. S. Goodeve, member Board of Railway Commissioners for Canada, born at Guelph, Ont., Dec. 15, 1860.

A. J. Gorrie, ex-General Superintendent, Canadian Northern Quebec Ry., Quebec, born at Raith, Kirkcaldy, Scotland, Dec. 10, 1868.

R. S. Gossett, Auditor of Disbursements, Canadian Northern Ry., Toronto, born there, Dec. 28, 1879.

W. H. Grant, Manager of Construction, Mackenzie, Mann and Co., Ltd., Toronto, born at Acton, Ont., Dec. 8, 1858.

F. P. Gutelius, M. Can. Soc. C.E., General Manager, Canadian Government Railways, Moncton, N.B., born at Mifflinburg, Pa., Dec. 21, 1864.

D. B. Hanna, Third Vice President, Canadian Northern Ry., Toronto, born at Thornliebank, Scotland, Dec. 20, 1858.

J. J. Hennigar, General Agent, Richelieu and Ontario Navigation Co., Hamilton, Ont., born at Topeka, Kan., Dec. 21, 1884.

E. W. Holton, General Passenger Agent, Northern Navigation Co., Sarnia, Ont., born at Belleville, Ont., Dec. 15, 1872.

S. P. Howard, ex-General Freight Agent, Eastern and Lake Superior Divisions, C.P.R., Montreal, born there, Dec. 30, 1865.

A. J. Isbester, Assistant District Engineer, Port Arthur District, Canadian Northern Ry., Port Arthur, Ont., born at Ottawa, Dec. 18, 1879.

R. Johnson, Night Locomotive Foreman, C.P.R., Sortin Yard, Montreal, born at Quebec, Que., Dec. 24, 1863.

B. B. Kelliher, M. Can. Soc. C.E., Chief Engineer, Grand Trunk Pacific Ry., Winnipeg, born in Ireland, Dec. 26, 1862.

J. T. McGrath, ex-Superintendent of Motive Power and Equipment, Chicago and Alton Rd., Bloomington, Ill., born at Toronto, Dec. 6, 1869.

A. T. McKean, City Freight Agent, C.P.R., Winnipeg, born at St. John, N.B., Dec. 18, 1886.

A. E. Macdonald, General Claims Agent, Canadian Northern Ry., Winnipeg, born at Woolwich, Eng., Dec. 11, 1870.

L. Macdonald, Division Freight Agent, G.T.R., Toronto, born at Montreal, Dec. 10, 1871.

A. D. MacTier, General Manager, Eastern Lines, C.P.R., Montreal, born at Blairgowrie, Scotland, Dec. 27, 1867.

J. Niblock, ex-Superintendent, C.P.R., Victoria, B.C., born in York County, Ont., Dec. 21, 1849.

A. Price, Assistant General Manager, Eastern Lines, C.P.R., Montreal, born at Toronto, Dec. 6, 1861.

G. D. Robinson, Assistant Export and Import Freight Agent, C.P.R., Toronto, born at St. John, N.B., Dec. 7, 1877.

Collingwood Schreiber, C.M.G., Hon. Mem. Can. Soc. C.E., General Consulting Engineer to Dominion Government, Ottawa, Ont., born at Bradwell, Essex, Eng., Dec. 14, 1831.

F. P. Smith, Secretary, Richelieu and Ontario Navigation Co., Montreal, born there, Dec. 23, 1873.

C. E. E. Ussher, Passenger Traffic Manager, C.P.R., Montreal, born at Niagara Falls, Ont., Dec. 29, 1857.

H. H. Vaughan, M. Can. Soc. C.E., Assistant to Vice President, C.P.R., Montreal, born at Forest Hill, Essex, Eng., Dec. 26, 1868.

R. C. Vaughan, Assistant to Third Vice President, Canadian Northern Ry., Toronto, born there, Dec. 1, 1883.

A. P. Walker, M. Can. Soc. C.E., Division Surveyor, Ontario Division, Toronto, born at West Hartlepool, Eng., Dec. 9, 1860.

E. H. Wood, Division Car Foreman, Ontario Division, C.P.R., Toronto, born at St. John, N.B., Dec. 30, 1880.

W. Wood, Locomotive Foreman, C.P.R., Sortin Yard, Montreal, born at Montreal, Dec. 6, 1863.

New Locomotive Design.—Another radical departure in locomotive design is being made in a large locomotive under construction for the Erie Rd. This unique locomotive is articulated in three parts, the weight of the tender being utilized as one section. The locomotive proper has a pair of pilot wheels, followed by two sets of four pairs of drivers, with the wheel arrangement under the tender the same as the leading locomotive section reversed. The intermediate section carries a pair of high pressure cylinders, with low pressure cylinder pairs on the front section and the tender. Locomotive and tender will weigh 800,000 lbs., and will develop 160,000 lbs. tractive force. The weight on one of the locomotive section drivers will be 480,000 lbs., and on the other, 260,000 lbs.

Thermal cracks exist commonly, if not invariably, in brakeshoes, and as the conditions of exposure of the shoe and tire are the same for the time being, under brake application the same tendencies necessarily exist for the formation of thermal cracks in each, but more accentuated in the shoe.

Canadian Pacific Railway Lake Superior Division Shops at North Bay.

The C.P.R. divisional shops at North Bay, Ont., having become inadequate to meet the requirements of the heavy traffic, the company set about enlarging the shops and mechanical yards to meet the new demands. This work was commenced last spring, and its extent is shown in the accompanying plan.

The shops prior to this change consisted of a 23 stall locomotive house, with small machine and blacksmith shops attached to the west end, and a freight car repair shed separate from these other buildings, some distance to the west. All these old buildings are shown in light or dotted lines, indicating the old shops that have been left or removed.

The locomotive house and machine shop annex have been retained, but to the west of them there is being added a combined machine and erecting shop, served by a transfer table running along the west frontage of the shop. The erecting shop will be 70 by 208 ft., and 43 ft. high, of a steel frame construction with brick walls, the whole resting on concrete foundations. The width of the shop is spanned by steel trusses, resting on columns at 20 ft. centres. The shop will have a 5 ton travelling crane serving the full length of the building. The runways will be composed of 15 in. I beams with 56 lb. rails on top. The roof will be of mill construction, with 8 by 14 in. purlins at 8 ft. centres carrying a 3 in. plank roof surfaced with tar and gravel.

There will be 10 tracks in the shop, each equipped with a locomotive pit, with one of the pits provided with an electric locomotive lift. Over the main walls of each pit the flooring will be of heavy 6 in. planking, about 3 ft. wide, to provide a solid jacking surface under the sides of the locomotive. The balance of the floor will be covered with 3 in. planking laid on cedar sills. The machine shop, to the rear of the erecting shop, and of the same length, 208 ft., will be 80 ft. wide, and 23 ft. high, of a similar construction to the erecting shop, except that steel I beams on steel columns at 26 ft. centres will be used. The floor will be of 3 in. planking on cedar sills. The shop will have all the necessary equipment in the way of tools, machines, and other mechanical devices, most of which will be mounted on concrete foundations.

One of the erecting shop tracks will extend through the machine shop and connect with the existing blacksmith shop track, while another will run longitudinally through the machine shop, connecting with the outside yard tracks through turntables. Both these tracks will facilitate the handling of parts through the shop. The new machine shop will be connected with the existing blacksmith shop and the present machine shop by means of a triangular annex. The present machine shop will be remodelled so as to provide additional boiler accommodation, as well as a new tool room and lavatory. Electric lighting and a hot air fan with heating ducts will be installed in both the new erecting and machine shops.

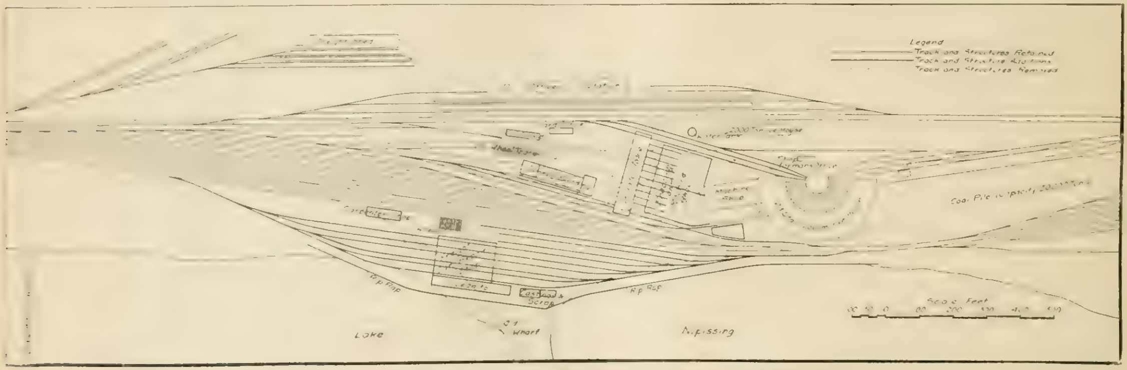
The transfer table along the front of the erecting shop will connect with the several erecting shop tracks with the main inbound track from the locomotive house and the yard runaround track, so that locomotives may be brought in from either side of the yard. The track alongside the stores building will also continue to the transfer table, facilitating the handling of the material to the machine and erecting shops. The transfer table will run on four tracks. The side walls of the transfer table pit will be composed of 8 in. square timbers resting on sills, and the ends of 2 in. planking and round cedar posts.

The old stores building will be moved to the new location shown, remodelled and placed on concrete foundations, with an extension added to the west end. The extended building will be 170 by 40 ft., with a basement the full length of the building. There will be an 8 ft. platform along the track side, with a 38 ft. platform on the side nearest the erecting shop.

The changes in the buildings around the locomotive house necessitated the removal of the old water tank to the new position to the north of the former location. The additions to the locomotive department buildings necessitated the removal of the car department buildings to a new site, which was formed along the south side of the yards by the reclamation of a portion of the frontage on Lake Nipissing, all the tracks in the lower portion of the yard, shown in heavy lines, being laid on made ground. The new freight car repair building will be 156 by 120 ft., and 30 ft. high, with a leanto annex 237 by 30 ft., and 13½ ft. high. The walls will be of frame construction, composed of 2 by 6 in. studs and lined on the outside only, and set on cedar sills. The main posts carrying the wooden trusses rest on solid concrete foundations. The shop will be divided into three 40 ft. bays, with the trusses at 19½ ft. centres. The roof will be of mill construction, composed of heavy purlins, with 2 by 3 in. planks laid on edge and finished with a 4 ply tar and gravel roof. The flooring will be of cinder. Electric lighting will be used, and hot air for the partial heating of the building, from a fan and engine located in the boiler room leanto.

There will be 6 standard gauge tracks in the shop, two in each bay, running the full length of the car repair yard, and connected by ladder tracks at each end to the main yard. Between each pair of these tracks, there will be a 2 ft. gauge service tracks connected together and to the wheel storage yard by small turntables and cross tracks. The repair yard tracks will be equipped with air, steam, and water pipes, and will be electrically lighted. The leanto will contain offices and auxiliary rooms.

The data on which the foregoing article is based was supplied by J. W. Orrock, Principal Assistant Engineer, and R. McKillop, Assistant Engineer, through the courtesy of J. M. R. Fairbairn, Assistant Chief Engineer.



Plan of Shops and Mechanical Yards, Canadian Pacific Railway, North Bay, Ont.

Car Failures.—A writer in a contemporary sums up his observations on the reasons for and manner of overcoming freight car failures by suggesting the following means of relief: 1. Reinforcing the older types of cars that will not stand the expense of a steel underframe, with a long metal draught arm that extends through and over the body bolster; this in turn to be reinforced or backed up with good heavy compression timbers. 2. On such cars as will permit of the expenditure, the application of a carefully designed steel underframe. 3. In all cases apply the draught gear that will destroy the greatest amount of shock with the entire elimination of recoil. 4. The adoption of a standard specification for the testing of draught gear to determine its shock absorbing capacity and amount of recoil, before purchasing. 5. Substitute for the wooden roof an all metal one as soon as it has been determined what the proper construction should be.

In general, the cost of oil in the tank, coal in the bin, or natural gas delivered, is used as the sole criterion of the economic status of a shop furnace plant; but the fallacy of this is demonstrated when it can be shown that the fuel cost is only a part of the total cost of successful burning, the labor charges in the different processes varying. Comparing oil and producer gas in a fair sized plant, the net cost of the heat units generated from producer gas are twice as costly as from oil, on account of the greater labor costs in the former.

Extension to Canadian Pacific Railway West Toronto Passenger Car Shops.

The four track addition to the existing C.P.R. passenger car repair shop at West Toronto, built last year, has in the short intervening time proved entirely inadequate to the requirements, calling for a further extension, which is now under way. The last addition was made to the north end of the existing shop, extending the shop to the northerly limit of the C.P.R. property. Along the front of this extended portion and the older portion, there is a transfer table, making possible the building of a further shop unit across from the present shop.

The addition now under way is being built on the north end of the transfer table, directly across from the last addition. It is a five track building, 114 by 137 ft., facing the narrow way on the transfer table frontage. The front portion, 105 ft. deep, will be for passenger car repairs, and the rear portion, 32 ft. deep, will house the bench work for all the shops, relieving the present mill building to that extent, as the latter is overcrowded.

The tracks are at 24 ft. centres, entered by jack knife doors in front. The roof is 24½ ft. high at the front, sloping back to 16 ft. over the bench work section. Over each of the four southerly tracks there is a 60 by 10 ft. monitor, equipped with ventilators. The building itself is of a red brick construction on concrete foundations. The roof is carried on the walls and 8 cross rows of 10 in. square wooden columns, at 15 ft. centres, the depth of the shop. The location of the columns is unique; in place of the usual location centrally between the tracks, making necessary the addition of light columns to which the adjustable platforms are attached, the main columns are placed in the location of the usual platform columns, dispensing with central ones, the adjustable platforms being secured in the usual manner to these columns. While the columns are larger than would be required for platform purposes alone, it leaves the central alley clear, and as far as shop space is concerned, the large columns occupy no more room and have the additional advantage of a clear alley. At the rear of the main part of the shop building there is a cross service track, over which the material from the mill is brought into the shop. This leads out a side door, and over a service track along the south side of the building to the transfer table. Mastic flooring is used throughout.

This new addition will increase the total capacity of the West Toronto shops to 20 cars. With this accommodation the shop capacity will be in the neighborhood of 80 cars a month. H. R. Naylor is General Foreman of the passenger car repair shop.

Pacific Great Eastern Railway Company's Annual Report.

Following are extracts from the report presented by J. W. Stewart, President and Chairman of the Board, at the annual meeting in Vancouver, B.C., recently:—

On June 28 last, an agreement was entered into with West Vancouver Municipality and with the property owners along the north shore of Burrard Inlet, and the English Bay, for the inauguration of an interurban service between Lonsdale Ave. and Dundar Ave. during the present year and a continuation of such service as far as Horseshoe Bay, on Howe Sound, before July 1, 1914.

By an agreement dated Nov. 7, 1912, the Howe Sound and Northern Ry. was acquired, the total capital stock being transferred to your company, which nominated the following directorate:—D'Arcy Tate, K.C., A. H. Sperry, A. H. Douglas, R. L. Reid, K.C., and D. S. Wallbridge. It is the intention that the Howe Sound Co. be wound up in due course, and absorbed into your company, as soon as separate corporate existence of that company becomes unnecessary.

During the past summer the Lieutenant-Governor, the Premier of British Columbia, the Attorney General, the Minister of Lands and the members for Vancouver in the Provincial Legislature made a trip of inspection of your line of railway from Vancouver to the crossing of the Cheakamus River and looked over the situation at the head of Howe Sound, where your railway from the north first meets tide water. They all expressed their satisfaction with what they had seen of the condition and progress of the undertaking. It is deemed worthy of mentioning the interest evinced in your project by the visit of John Scrimgeour, a London financier, who through the courtesy of P. Welch, in placing at the disposal of our local Vice President his private yacht, was enabled to make the trip up Howe Sound to Newport (as the place is now called). Mr. Scrimgeour was also shown over your property and the holdings of the development company at the head of the Sound and appeared to share your directors' expectations for the future development of that port.

On March 13 last, in pursuance of authority given at a special general meeting of shareholders, your fiscal agents in London brought out an issue of £1,000,000 4½% first mortgage guaranteed debenture stock at £99%, which was well received. On June 10 last, upon the recommendation of your fiscal agents in London, your directors authorized a further issue by private sale of £500,000 stock, of which to date £300,000 has been sold at prices ranging from £97 to £98.3%. When the sale of the balance authorized, viz., £200,000 has been effected, there will remain of the above stock £1,736,345, which will form the subject of a new issue.

Your directors have pleasure in reporting most satisfactory progress in the work of construction being prosecuted by the general contractor, P. Welch, and there are now between 3,000 and 4,000 men and a large plant engaged on the work. We have the contractor's confident assurance that it will be finished well within contract time. Your Chief Engineer has completed the location of the line between North Vancouver and Clinton, about 210 miles, and he now has four locating parties in the field between Clinton and Fort George. Lands have been secured, and it is proposed to establish yards and terminals at the head of Howe Sound and on the north shore of Burrard Inlet.

The Canadian Pacific Railway's Dining and Sleeping Car Departments.

One of the passenger department's bulletins states the company has 4,000 men employed in its sleeping and dining car departments. The bulletin says:—"The company takes especial care of its dining and sleeping car employes, and in many respects has gone further in this direction than any other line on the continent. All possible precautions are taken to see that all these employes are physically healthy and clean, and, with this end in view, a chain of homes for the men has been established across the continent. The C.P.R. is the only railway corporation today which provides this class of employes with free lodging and bed when away from their own homes. At all the large terminals, such as Toronto, Winnipeg, Moose Jaw, Calgary and Vancouver, the men are housed by the company, and the system is such that the company is able to positively assure the public that the men are free from disease, being subjected to periodic medical examination, and it being impossible for a dining or sleeping car employe to go out on his run without having first taken a bath and had his clothes freshly cleaned and pressed, absolutely without cost to himself.

"One of the most difficult problems which confronts the dining car department is the securing of sure and permanent sources of supply for its provisions, etc.; partly to attain this end, and also to show the farmers in various districts what could be done with their land if worked scientifically, demonstration farms have been established at various points, and the supplies regularly obtainable from these farms are constantly increasing in quantity. Soon the company will be able to secure fresh milk and cream in whatever quantities it desires—the milk and cream are not handled in bulk, but, after being pasteurized, are placed in sealed bottles with the date of milking shown thereon, and these bottles are opened only in the presence of the passenger. Sufficiently large numbers of poultry can be kept to supply all fowls and eggs possibly required for the table; to ensure fresh eggs for the dining cars, the eggs as gathered from the nest are stamped with the date, packed in cartons and sealed for the commissary stores, to turn over to the dining cars as needed. Other demonstration farm products are handled with equal care.

"It has been decided to establish a chain of C.P.R. bakeshops at such terminal points between Halifax and Vancouver as will ensure a complete restocking of dining cars with fresh bread, cakes and pastry every 15 hours—Montreal, Toronto, Winnipeg, Moose Jaw, Calgary and Vancouver will be among the points provided for in this way."

Edison Uses His Old Telegraph Instrument Again.

At the meeting of the old time Telegraphers' Historical Association of the United States at Mount Clemens, Mich., recently, T. A. Edison sent a message over the wire to President Wilson. The occasion was of special interest, because Mr. Edison stood upon the same site where he stood when he sent his first message as a telegraph operator, and used the same instrument he used 51 years ago when, as a boy of 14, he sent his first message over the G.T.R. lines.

Back in the pre-telegraphic days, when Edison was only a newspaper boy on the G.T.R., he showed his youthful enterprise by printing and selling a small newspaper containing the news along his route. He kept a little font of type in the baggage car and printed the paper on the train, so its items were strictly up to the minute. It was during this period that a trainman lifted him by the ears, later causing the deafness that now blurs his hearing.

Renewals of Crown Stays or Stay Bolts.—The Board of Railway Commissioners has issued the following circular:—"In connection with order 14,115, re inspection of locomotive boilers, it is found on checking over reports received, that few of the reports show renewals of either crown stays or stay bolts, as per question 8 of the monthly and 17 of the annual reports. As the intent of these questions is to show how these repairs are being kept up, it is important that all these renewals be shown when made either at the time of inspection or repair."

Orders by Board of Railway Commissioners for Canada.

Panoramic View of Union Stock Yards, St. Boniface, Man. See opposite page.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the hearings took place, and not those on which the orders were issued. In many cases orders are not issued for a considerable time after the dates assigned to them.

20497. Oct. 4.—Authorizing G. T. Pacific Ry. to build spur and sidings for Pembina Coal Co. in Sec. 19 and [illegible]-53-7, w. 5 m., Alta.

20498. Oct. 6.—Extending express collection and delivery area in Ottawa.

20499. Oct. 6.—Authorizing C. N. Ontario Ry. to build bridge across Ottawa River at Fitzroy Harbor, mileage 37.32 west of Ottawa.

20500. Oct. 1.—Authorizing C. N. Ontario Ry. to cross, at grade, Metcalfe, John, Harvey, Bourke, Jane, Durrill, Copeland, Bell, William, McIntyre, Timmons and Nipissing Sts., North Bay, and certain streets and avenues by subways; to build across and divert Marion St.; closing of Cedar St. to be conditional on the extension of McLaren St. from Klock Ave. to Home Ave.; the closing of Fraser St. to be conditional on the building of a subway [illegible] ft. clear width and 8 ft. high through station and under tracks; station to be located in centre of Fraser St., of similar design to the one at Belleville, and company to be responsible for any damages property owners affected may be legally entitled to recover, and all subways to be satisfactorily drained.

20501. Oct. 6.—Extending, to Dec. 31, time within which C.P.R. was required to build subway at Dundas St., Woodstock, Ont.

20502. Oct. 6.—Approving revised location of C.P.R. double track, Moose Jaw Subdivision, Sask., from mileage 59.6 to 60.45; and authorizing it to build road diversion across Blocks 147, 148, 149 and [illegible] and across Sec. 27-18-15, w. 2 m., and to build at grade across same and town crossing.

20503. Oct. 6.—Authorizing Saskatchewan Government to build highway across C.P.R. Swift Current Northwesterly Branch.

20504. Oct. 7.—Amending order 20190, Aug. 26, re location of C.P.R. station at Conrad, Alta.

20505. Oct. 6.—Approving location of Campbellford, Lake Ontario and Western Ry. (C.P.R.) station [illegible] east of Fox St., Port Hope, Ont., mileage 125.70 from Glen Tay.

20506. Oct. 6.—Approving location of C. N. Ontario Ry. station grounds at Master, mileage 111.05, and Kathmore, mileage 115.5, from Ottawa.

20507. Oct. 6.—Ordering C.P.R. to build additional track to present siding for Dodge Mfg. Co., West Toronto; to be completed within 60 days.

20508. Oct. 7.—Authorizing C.P.R. to build, at grade, spur to Broadacres ballast pit across highway between Secs. 7 and 8, Con. 36, R. 21, w. 3 m., on its Kerrobert Northeasterly Branch.

20509. Oct. 7.—Authorizing C.P.R. to use bridges 27.4 and 13.9, St. Stephen Subdivision, N.B.

20510. Oct. 7.—Authorizing C.P.R. to build bridge 15.6, for double track, over Eagle River, Shuswap Subdivision, B.C.

20511. Oct. 7.—Authorizing C.P.R. to use bridge 30.5, Gibson Subdivision, N.B.

20512. Oct. 7.—Extending, to Dec. 31, time within which G.T.R. shall install interlocking plant at Paris [illegible], as approved by order [illegible], Feb. 18.

20513. Oct. 7.—Authorizing, temporarily, G. T. Pacific Branch Lines Co. to carry traffic over portion of its Cutknife Branch between Battleford and Rossman station, mileage 0 to 33.6, Sask.; speed of trains not to exceed 15 miles an hour.

20514. Oct. 6.—Ordering Michigan Central Rd., within 60 days, to install illuminated electric sign and improved type of automatic electric bell at highway crossing at Townsend station, Ont., 20% of cost of installation to be paid out of the railway grade crossing fund.

20515. Oct. 7.—Approving revised location of Canadian Northern Ry. Delisle-Alsask Branch in s. e. ¼ Sec. 9-26-17, w. 3 m., Sask., mileage 62.5.

20516. Oct. 6.—Amending order 19731, July 3, to provide that Winnipeg, Selkirk and Lake Winnipeg Ry. operate its cars across C.P.R. from 6 a.m. to 11 p.m., instead of 9.45 a.m. to [illegible] p.m. and 12.30 a.m. to 6.30 a.m.

20517. Oct. 7.—Authorizing C. N. Ontario Ry. to build bridge over White's Creek, mileage 64.9 from Toronto.

20518. Oct. 11.—Approving G. T. Pacific Ry. station site and station of G. T. P. Ry. at Fort Fraser, mileage 372.8, Prince Rupert East, B.C.

20519. Oct. 9.—Authorizing G. T. Pacific Branch Lines Co. to build its Tofield-Calgary Branch across highway at mileage 196.6, South Alberta District.

20520. Oct. 14.—Authorizing G. T. Pacific Ry. to build across 2 highways at mileage 370 and 373, Prince Rupert East, B.C.

20521. Oct. 8.—Amending order 20402, Sept. 24, by substituting G. T. Pacific Branch Lines Co.'s Regina-Boundary Branch for G. T. Pacific Ry., re highway to be built by Saskatchewan Government.

20522. Oct. 7.—Authorizing G. T. Pacific Branch Lines Co. to operate its trains over crossing of C.P.R. Calgary to Edmonton Branch, in Calgary, Alta., pending installation of interlocking plant.

20523. Oct. 9.—Authorizing G. T. Pacific Ry. to build across highway and make road diversion, mileage 15.8, Round Valley Rural Municipality 410, Sask.

20524. Oct. 8.—Authorizing C.P.R. to use bridges 36.5, 43.8, 43.4, 43.3, 34.4, 34.8, 30.7 and 32.2, Farnham Subdivision, Que.

20525. Oct. 6.—Authorizing C.P.R. to operate its trains over crossing of London St. Ry., at Adelaide St., London, Ont., without previously stopping.

20526. Oct. 7.—Authorizing C.P.R. to build double track across St. Francois-Xavier and Jacques Cartier Sts., Farnham, Que.

20527. Oct. 11.—Authorizing C.P.R. to build crossing over its line at Ensign, Alta.

20528. Oct. 8.—Authorizing C.P.R. to open for traffic portion of double track between mileage 70 and Herbert, mileage 81.9, Swift Current Subdivision, Sask.

20529. Oct. 10.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to divert road in Lot 26, Con. 1, Bedford Tp., between Cons. 1 and 2, to a crossing at mileage 23.71, authorized under order 16758, June 15, 1912, work, with exception of fencing, to be done by Bedford Tp. and completed by July 31, 1914.

20530. Oct. 14.—Approving location and revised location of C.P.R. Weyburn-Stirling Branch, from mileage 24.74 to 64.34.

20531. Oct. 14.—Authorizing C.P.R. to build bridge 19.8 over Chambly Canal, St. Johns, Que.

20532. Oct. 14.—Extending, to May 1, 1914, time within which C.P.R. shall build spur for Coquitlam Terminal Co., Vancouver, B.C.

20533. Oct. 14.—Authorizing C.P.R. to build at grade its gravel pit spur at Waldeck, Sask., across two highways.

20534. Oct. 7.—Authorizing C.P.R. to build spur for Calgary Stock Yards Co., Calgary Alta., and rescinding order 19472, June 4, in same connection.

20535. Oct. 9.—Authorizing C.P.R. to build siding for D. L. Streight at Islington, Ont.

20536. Oct. 8.—Authorizing C.P.R. to use bridges 35.8, 26.6 and 28.8, Farnham Subdivision, Que.

20537. Oct. 9.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build bridge over Smithfield Creek, near mileage 93.7, Ont.

20538. Oct. 14.—Approving location of Campbellford, Lake Ontario and Western Ry. (C.P.R.) station in Clarke Tp., at mileage 143.03 from Glen Tay, Ont.

20539, 20540. Oct. 10, 9.—Authorizing C.P.R. to build spurs for City of Moose Jaw, Sask., and for J. K. McInnis, Regina, Sask.

20541. Oct. 10.—Authorizing C.P.R. to build bridge 117.42, Shuswap Subdivision, B.C.

20542. Oct. 10.—Authorizing C.P.R. to build spurs for Imperial Oil Co. and Calgary Brewing and Malting Co., Bassano, Alta.

20543. Oct. 13.—Authorizing C.P.R. to build at grade its passing track and leg of Y across road allowance between Secs. 35 and 36-14-13, w. p. m., Minnedosa Subdivision, Man.

20544. Oct. 6.—Authorizing C.P.R. to build at grade, extension to town siding at Ekoba, across public road, McDonald Tp., Algoma District, Ont.

20545. Oct. 9.—Approving C.P.R. plan, as amended by the Board's Chief Engineer, showing interlocking plant to be installed on temporary trestle at Pitt River, bridge 109.7, Cascade Subdivision, B.C.

20546. Oct. 13.—Authorizing Esquimalt and Nanaimo Ry. to open for freight traffic portion of its line from McBride Jct., to Courtenay, Vancouver Island, 8.5 miles; speed of trains limited to 12 miles an hour.

20547. Oct. 8.—Authorizing Canadian Northern Ry. to open for freight traffic its line from St. Albert, westerly to mileage 22, 2[illegible] miles, Alta.

20548. Oct. 14.—Approving clearances as shown in plan of Moose Jaw Cold Storage Co.'s building on C.P.R. at Moose Jaw, Sask., subject to conditions that men keep off sides of cars; and that speed of cars on siding be limited to 4 miles an hour.

20549. Oct. 6.—Approving location of C.P.R. station at Uptergrove, mileage 55.64, Port McNicoll Subdivision, Ont.

20550. Oct. 14.—Authorizing Osgoode Tp., Ont., to build highway crossing over C.P.R. gravel pit spur in Lots 27 and 28, Con. 1.

20551. Oct. 9.—Authorizing Toronto, Hamilton and Buffalo Ry. to open for traffic portion of second track from Welland River to Fenwick Station, mile-

20552. Sept. 18.—Dismissing complaint of certain residents of March and Torbolton Tps., Ont., against location C.N. Ontario Ry. station at mileage 22 from Ottawa, approved by order 17342, Aug. 27, 1912.

20553. Oct. 11.—Extending, to Dec. 1, time within which British Columbia Electric Ry. shall complete work at crossing of Esquimalt and Nanaimo Ry. near Russell, B.C., as required by order 18733, Feb. 18.

20554, 20555. Oct. 10.—Relieving Red Mountain Ry. (G.N.R.) from fencing certain portions of its right of way from International boundary, south of Patterson, to Rossland, B.C., and relieving Vancouver, Victoria and Eastern Ry. and Navigation Co. (G.N.R.) from fencing certain portions of its right of way from Midway to International boundary, west of Bridesville, B.C.

20556. Oct. 10.—Authorizing Edmonton, Dunvegan and British Columbia Ry. to build across 15 highways in Alberta.

20557. Oct. 9.—Ordering G.T.R. to build farm crossing to C. [illegible] Lot [illegible], [illegible] Rainy, Rainy Tp., Ont.

20558. Oct. 13.—Authorizing G.T.R. to [illegible] bridge 278, at mileage [illegible], District 13, over Nottawasaga River, near Beeton, Ont.

20559. Oct. 14.—Authorizing G.T.R. to [illegible] ing for Canada [illegible] Co., [illegible]quesing Tp., Ont.

20560. Oct. 13.—Authorizing G.T.R. to [illegible] bridge [illegible], at mileage [illegible], District 3[illegible], Ottawa Division, Ont., over Joe Creek.

20561. Oct. 10.—Authorizing G.T.R. to operate over swing bridge across Welland Canal and railway crossing at Port Colborne, Ont., without their first stopping trains.

20562. Oct. 14.—Authorizing C.P.R. to take all that portion of s.e. ¼ Sec. 8, Tp. 12, r. 19, w. 2 m., for building a reservoir.

20563. Oct. 13.—Approving location of Campbellford, Lake Ontario and Western Ry. (C.P.R.) station northwest of Beech St. and east of Brock St., W[illegible]by, mileage [illegible] from Glen Tay, Ont.

20564. Oct. 8.—Rescinding order [illegible]45, Aug. 30, re Supplement 17 to Tariff C.R.C. W-1615.

20565. Oct. 9.—Authorizing C.N. Ontario Ry. to build across and divert Second Ave., North Bay.

20566. Oct. 6.—Relieving Michigan Central Rd. from maintaining cattle guards at crossing of Plymouth Road, Welland, Ont.

20567. Oct. 15.—Extending to Dec. 1, time within which C.P.R. shall install bell at highway crossing, mileage 0.91 from St. Martins Jct., Que., as required by order 19005, July 25.

20568. Oct. 8.—Approving location of Campbellford, Lake Ontario and Western Ry. (C.P.R.) station at Overton, mileage 53 from Glen Tay, Ont.

20569. Oct. 7.—Approving location of C.N. Ontario Ry. station grounds at Remi, Que.

20570, 20571. Oct. 8.—Establishing Dominion Ex. Co. collection and delivery limits in Kelowna, B.C., and Knowlton, Que.

20572. Oct. 15.—Authorizing C.P.R. to make diversion in Sec. 30-22-26, w. 3 m., Sask.; and to build its Swift Current Northwesterly Branch across same at mileage 90.13.

20573. Oct. 15.—Authorizing C.P.R. to build at grade across Government Road, in Lot 2567 (Provincial Government Survey), Kootenay District, B.C., at mileage 42.37.

20574. Sept. 11.—Approving location of C.P.R. station at Empress, Sask.

20575. Oct. 7.—Authorizing C.P.R. to build siding for Canadian Connecticut Cotton Mills Co., Sherbrooke, Que.

20576. Oct. 7.—Authorizing C.P.R. to relocate siding for J. A. Villemaire, Campbell Tp., Que.

20577. Sept. 23.—Amending order 16671, re G.T.R. Cannon St. yard, Hamilton, Ont.

20578. Oct. 14.—Authorizing Kettle Valley Ry. to build bridge over Fraser River at Hope, B.C.

20579. Oct. 7.—Authorizing Quebec, Montreal and Southern Ry. to build siding for Mount Royal Brick Co., Varennes Parish, Que.

20580. Oct. 15.—Approving City of Toronto plans 28 and 31, showing viaduct carrying Bloor St. across C.P.R., C.N.R. and G.T.R., authorized by order 20437, Sept. 23.

20581. Oct. 8.—Authorizing Canadian Northern Ry. to connect with Manitoba and Saskatchewan Coal Co.'s spur near Bienfait, Sask.

20582, 20583. Oct. 15.—Approving deviation of Lake Erie and Northern Ry. between stations 745 and 793, Townsend Tp., and authorizing it to build across highways between stations 771+97.5 and 772+60.5, and at station 613.3.

20584. Oct. 16.—Suspending, pending determination of matter by Board, cancellation as from Nov. 1 of inter-warehouse arrangement for completion of carload shipments of grain, notice of which is given by Supplement 28 to C.P.R. Tariff C.R.C. E[illegible], and Supplement [illegible] to G.T.R. Tariff C.R.C. E[illegible].

20585. Oct. 16.—Approving [illegible] Lake Erie and Northern Ry. [illegible] Ave., [illegible], Brantford, Ont.

20586. Oct. 16.—R[illegible] 191[illegible], in so far as it authorized crossing by C.N. Ontario Ry. of [illegible] St. Laurent Parish, Que.

20587. Oct. 16.—Extending to Nov. 18, time within which C.P.R. shall install bell at Miller crossing, [illegible] mile west of K[illegible] [illegible] Oct. 30, time within which bell at crossing of river road, about 3 miles east of Kingsbury, between Melbourne and Windsor Mills, Que., be installed.

20588. Oct. 16.—Approving Canadian Northern Ry. plan of Sept. 10, substituted for plans approved by order 20058, authorizing building of spur across n.e. ¼, Sec. 15, and n.w. ¼, Sec. 14-37-5, w. 3 m., Sask., and ordering that order 20058, Aug. 11, be amended accordingly.

20589. Oct. 15.—Authorizing C.P.R. to build siding for Canadian Wire Co., Ltd., Montreal.

20590. Oct. 4.—Authorizing G.T.R. to rebuild bridge 202, over Big East River, mileage 150.75, District 12, near Huntsville, Ont.

20591. Oct. 16.—Authorizing G.T. Pacific Ry. to build across and divert highway in Charles Indian Reserve, mileage 317, Prince Rupert East, Coast Dist., B.C.

20592. Oct. 16.—Approving location C.N. Ontario Ry. station grounds at Isle Jesus, mileage 38.95, Hawkesbury East, Que.

20593. Oct. 17.—Authorizing C.P.R. to use Canadian Northern Ry. spur to Government Elevator at Port Arthur, Ont.

20594, 20595. Oct. 17.—Authorizing C.P.R. to build at grade an extra track across road allowance between Secs. 27 and 34-21-31, w.p.m., at Langenburg, Sask., and to build ballast pit spur at grade across road allowance in north half of Sec. 5-7-19, w. 4 m.

20596, 20597. Oct. 17.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build bridge 121.29 across road allowance between Lots 22 and 23, Con. A, Hamilton Tp.; to build across Sinclair St., Cobourg, by an undercrossing, at mileage 120.6, and rescinding order 19093, Apr. 19, in so far as it authorizes crossing of Sinclair St. at grade.

20598. Oct. 15.—Ordering G.T. Pacific Ry., within 10 days, to build crossing opposite Lot 384, Queen St., Fort William, Ont.

20599. Oct. 16.—Ordering Canadian Northern Ry. to move loading platform at Bryant station, Sask., to a point convenient to west end of yard, and to grade driveways to loading platform.

20600. Oct. 17.—Approving plan and specifications of Fleming-Wigle drain, to be built under Windsor, Essex and Lake Shore Rapid Ry.

20601. Oct. 18.—Authorizing G.T.R. to build temporary additional track across road allowance between Cons. 1 and 2, Brantford Tp., Ont.

20602. Oct. 18.—Removing speed restrictions of 20 miles an hour over portion of C.P.R. Kerrobert Northeasterly Branch, Sask., from mileage 0 to 25, and of 15 miles an hour from mileage [illegible].

20603. Oct. 18.—Approving location of G.T.R. station at Seagrave, Ont., to replace one burnt.

20604. Oct. 8.—Approving C.N. Ontario Ry. plan D 29-1 of subway to be built at Wylde St., North Bay.

20605. Oct. 17.—Authorizing G.T.R. to rebuild bridge 58, at mileage 146.42 from Black Rock, 2.11 miles east of Clinton station, Ont.

20606. Oct. 18.—Approving location of Esquimalt and Nanaimo Ry. station at Qualicum Beach, Vancouver Island, B.C.

20607. Oct. 18.—Authorizing C.P.R. to build spur for Continental Oil Co., Winnipeg, Man.

[illegible] B[illegible] W[illegible] [illegible] to [illegible]

20609. Oct. 1[illegible].—Approving [illegible] Campbellford Lake Ontario and Western Ry. (C.P.R.), Glen Tay to Cobourg Line; rescinding [illegible] tion; authorizing it to take portions of C.N. Ontario Ry. right of way tracks; authorizing City of Belleville to lay water pipe under C.N.O.R. at foot of M[illegible].

20610. Oct. 17.—Amending order 20318, Sept. 1[illegible], [illegible] Ma[illegible].

20611. [illegible] C.P.R. [illegible] temporary interlocking appliances, until June 30, 1914, [illegible] at mileage 18.81 from Farnham, Que.

20612. Oct. [illegible] Regina, Sask., to build its municipal railway over C.P.R. Bulyea and Colonsay Branch at intersection of 4th Ave., Eastview, Regina.

20613. Oct. 17.—Authorizing Ancaster Tp., Ont., to build Broadway Ave. across Toronto, Hamilton and Buffalo Ry. in West Hamilton, Ont., and dismissing application as to other crossings.

20614. Oct. 17.—Authorizing G.T. Pacific Ry. to build spurs across Vickers St., Fort William, Ont., to its proposed freight yards and approving location [illegible].

20615. Oct 17.—Amending order 19248, June 4, re Lake Erie and Northern Ry. construction.

20616. Oct. 21.—Authorizing Hamilton St. Ry. to operate over Toronto, Hamilton and Buffalo Ry. crossing at intersection of Main and Trolley Sts.; interlocking plant to be installed by Nov. 30.

20617. Oct. 18.—Authorizing G.T.R. to operate jointly with C.P.R. the latter's branch to Canada Foundry Co., north of Royce Ave., Toronto, G.T.R. to pay a yearly rental equal to [illegible] per annum, on half the cost of construction [illegible] and maintenance.

20618. Oct. 21.—Ordering G.T.R., within three months, to install gates to cover all tracks and sidings at crossing of first highway east of Clarkson station, Ont., to be operated by day and night watchmen; apportionment of cost reserved for further consideration; if gates are not in operation within three months, expense of watchmen employed will be borne by G.T.R. until gates are installed.

20619. Oct. 17.—Authorizing G.T.R. to build siding for Quinlan & Robertson on Lot. 10, Con. 9, Huntingdon Tp., Ont.

20620. Oct. 21—Ordering G.T.R. to install, within 90 days, improved type of automatic electric bell at crossing on Third line, immediately west of Etobicoke River, between Lots 5 and 6, Con. 2, south of Dundas St., Toronto Tp.; 20% of cost to be paid out of the railway grade crossing fund.

20621. Oct. 18.—Ordering G.T.R. to build siding for St. Marys Portland Cement Co., Blanshard Tp., Ont., and to connect same with existing siding and spurs, and rescinding order 19365, May 21, in same connection.

20622. Oct. 21.—Authorizing C.P.R. to build diversion in s.w. ¼ Sec. 6-5-17, w. 4 m., at McNabb, Alta.

20623. Oct. 21.—Extending, to Dec. 15, time within which C.P.R. shall install electric bell at crossing of Main St., Milverton, Ont.

20624. Oct. 22.—Relieving C.P.R. from providing further protection at crossing known as Cote du Sud, mileage 11 from Place Viger station, Montreal.

20625. Oct. 16.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build tracks, for nine months from date, over portion of forced road running through Lot 24, Con. 8, Camden Tp., at mileage 46.3.

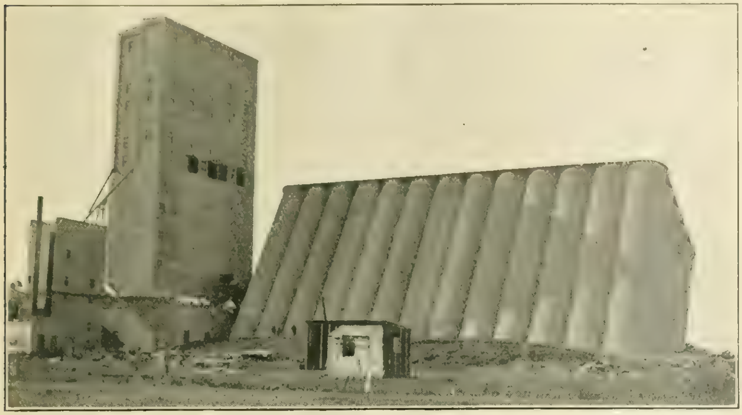
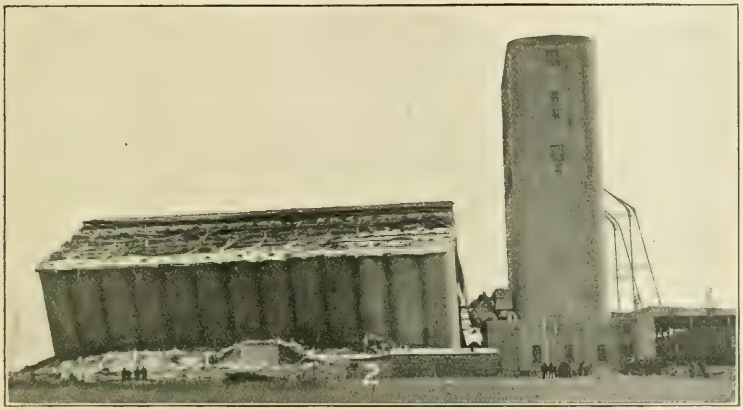
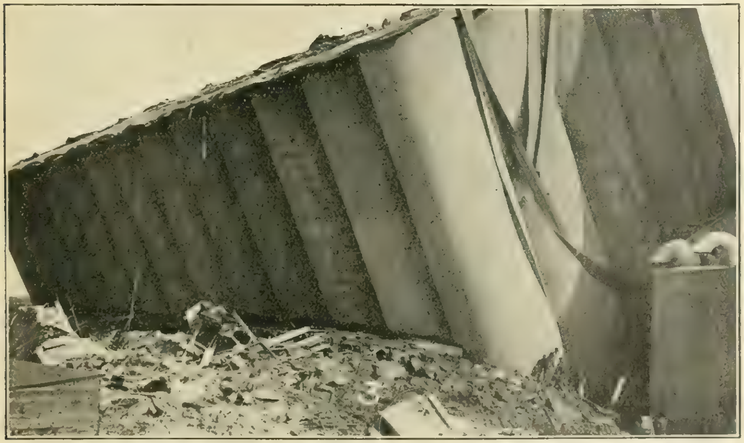
The Failure of the Canadian Pacific Railway's Grain Elevator at Transcona.

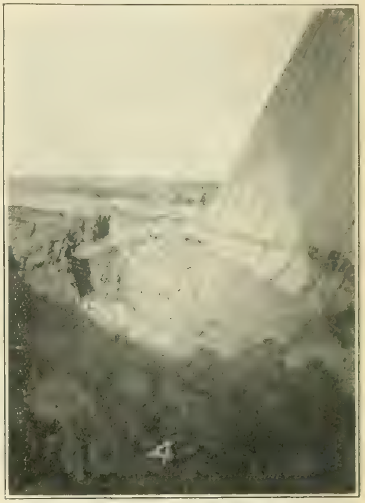






The failure of the C.P.R.'s. grain elevator at Transcona, Man., by which the reinforced concrete bin house settled into the ground, by the crushing out of the foundation subsoil, and at the same time tilted to the position shown in the accompanying illustrations was briefly referred to in Canadian Railway and Marine World for November. On Oct. 18, between 11 a.m. and noon, the elevator then being practically full, movement was noticed on the bridge between the working house and the binhouse. By 1 p.m. the binhouse had settled about 1 ft. The ground for 25 to 30 ft. on the north, west and east sides of the binhouse heaved up 1 or 2 ft. In the afternoon the settlement became a little more rapid on the west side, producing a list to the west. The building continued to settle and list for about 24 hours, until noon, Oct. 19. Its final position is at an angle of about 28° from the vertical. The east side of the house is raised about 5 ft. above normal level, while the west side is some 30 ft. below normal. The conveyor cupola and roof structure slid off the binhouse when the tilt became too great, which occurred about midnight Oct. 18. The structure of the binhouse shows practically no damage in its visible part, except for a few small hair cracks. The displacement of the underlying strata of earth is well shown by the upheaved ridges of earth around the elevator. The detail view, no. 4, gives some idea of the surface disturbance. This shows the ridge along the east of the binhouse, seen sharply outlined in view 1.

The elevator was built in the summer of 1912. It consists of a working house, seen in the views standing undisturbed just south of the displaced structure, and a reinforced concrete binhouse. The latter consists of 65 circular bins of 14 ft. 4 in. inside diameter and 90 ft. deep, arranged in 5 rows of 13 bins each (5 along the working house, 13 in the direction at right angles to it). The 48 interspaces between the circular bins were also used for grain storage. The binhouse was 10 ft. north of the working house, and structurally distinct from it, being connected with it only at the conveyor level, just above the top of the bins, where the conveyor which operates in the low cupola over the binhouse is carried across to the working house. The principal machinery floors of the working house are above the conveyor level.



The soil at the site is soft clay ground. Rock is 45 to 50 ft. below the surface. The binhouse was founded on a reinforced concrete slab, 77 by 195 ft., about 12 ft. below the surface of the ground. In excavating for the construction of this foundation, the upper 5 or 6 ft. of ground were found rather soft. Below this, however, a fairly stiff clay was struck. Load tests were made at the time, and they indicated that the soil was well able to bear a load of 4 to 5 tons per sq. ft. The maximum loaded weight of the binhouse averaged a little over 2½ tons per sq. ft. The foundation was put in during July, 1912, and the soil was perfectly dry, with no indication of water. Barnet-McQueen Co., Ltd., of Minneapolis, designed and built the elevator.

Rafts or floating foundations of the kind used in this case are commonly used for elevator foundations in the Winnipeg territory. The working house of the present elevator rests on a similar slab foundation.

The question of saving the grain in the elevator occupied first attention. The binhouse held nearly its full capacity of 1,000,000 bushels. The bins were tapped through the sides and a temporary conveyor erected alongside for taking the grain to railway cars, and the removal when started progressed at the rate of about 40 carloads a day, the whole of the grain being removed by Nov. 10. It was feared at first that ground water would enter the bins at the bottom and would wet the lower part of the grain. This was found not to be the case, and the absence of water is held to indicate that the accident is not chargeable to wet condition of the subsoil.

The foregoing facts have been compiled from information kindly furnished by J. G. Sullivan, Chief Engineer, C.P.R. Western Lines, to whom we are indebted for the photographs from which the accompanying illustrations have been made.

View 1 is taken from the southwest. It shows the working house undisturbed, though only 10 ft. from the binhouse. The ridge of earth in front is the result of the subsurface flow of oil. View 2 shows the west side of the elevator, with the bin tops exposed, after the cupola slid off. There is a 30 ft. subsidence on this side, the whole length of the binhouse having settled practically uniformly. View 3 shows the southwest corner of the binhouse, with the wreckage of the cupola and roof lying at its foot. View 4 shows the east side, with the adjacent soil upheaved.

Traffic Orders by the Board of Railway Commissioners.

The dates given for orders are those on which the hearings took place, and not those on which the orders were issued:—

G.T.P.R. Freight Rates in British Columbia.

20441. Sept. 27.—Re application of G.T. Pacific Ry., under sec. 327 of the Railway Act, for approval of its Standard Freight Mileage Tariff C.R.C. no. 19, cancelling C.R.C. 17 approved by order 19866, to apply between stations in British Columbia, Prince Rupert to Siding 9, mile 301, inclusive. It is ordered that the said tariff be temporarily approved, pending judgment in the inquiry into rates charged generally by railway companies in British Columbia.

Rates on Lumber, Shingles, Etc.

20564. Oct. 8. Re Supplement 17 to Tariff C.R.C. no. W-1615, filed by C.P.R., effective Sept. 3, 1913, increasing rates on lumber, shingles, and other articles taking lumber rates, from British Columbia coast and interior mills to points on its Sault Ste. Marie Division; and order 20245, Aug. 30, 1913, suspending effective date of the said advanced rates for 30 days from date of the order: it is ordered that order 20245 be rescinded.

Inter Warehouse Arrangements for Grain Shipment.

20584. Oct. 16. Re Supplement 28 to C.P.R. Tariff C.R.C. no. E-2141, and Supplement 18 to G.T.R. Tariff C.R.C. No. E-2374, cancelling as from Nov. 1, 1913, the inter warehouse arrangement for completion of carload shipments of grain:—Upon reading the application of the Toronto Board of Trade protesting against the proposed cancellation, and asking that the railway companies file their reasons therefor, and that the Board suspend the supplements pending justification by the companies, it is ordered that the cancellation be suspended, pending the hearing and determination of the matter by the Board.

Montreal and Southern Counties Ry. Passenger Fares.

20659. Oct. 23. Re the application of the Montreal and Southern Counties Ry., under sec. 331 of the Railway Act, for approval of its standard tariff of maximum passenger tolls, C.R.C. No. 4, on the basis of 2½c. a mile, to apply between stations south of the St. Lawrence River, it is ordered that order 19702, June 27, 1913, be rescinded; that the company's standard passenger tariff above mentioned be approved.

Sand, Gravel and Concrete Material Rates.

20660. Oct. 24. Re application of Clifton Sand, Gravel and Construction Co. for an order reducing, adjusting and fixing the rates on sand, gravel and concrete material between Stamford, Ont., and surrounding points in Ontario, including Niagara Falls, Chippewa, Welland, Port Colborne, Thorold, Merritton, St. Catharines, Hamilton and Toronto and intermediate points, it is ordered that the application be dismissed.

Rates from Estevan to C.N.R. Stations.

20681. Oct. 27. Re application of Board of Trade, Estevan, Sask., for an order directing Canadian Pacific and Canadian Northern Railway Companies to establish a through tariff on goods destined from Estevan, via Midale, to C.N.R. stations to which the companies have published and filed a through traffic from Weyburn, via Midale, it is ordered that, pending the extension and operation of the C.N.R. to Estevan, the C.P.R. publish and file a through freight tariff of class rates from Estevan, via Midale, to those points on the C.N.R. to which through class rates, via Midale, are published and filed by the C.P.R. from Weyburn, Sask., the said through rates from Estevan not to exceed the sums of the published and filed local rates of the C.P.R. to Midale and of the C.N.R. from Midale to the said Weyburn destinations; provided that, so long as Midale Transfer continues a non agency, the C.P.R. be permitted to consolidate less than carload shipments by holding them at Estevan until they approximate a carload of 20,000 lbs. in weight for transfer to the C.N.R. without breaking bulk, and that the said tariff be made effective not later than Nov. 20, 1913.

Week End Fares in British Columbia.

20686. Oct. 27. Re application of Port Hammond and District Improvement Association, Port Hammond, B.C., for an order requiring the C.P.R. to put into effect the same or similar week end fares from Port Hammond to the coast cities as are now in effect from Vancouver to Port Hammond, it is ordered that the application be refused.

Oxygen and Acetylene Gases Freight Rates.

20739. Nov. 4. Re application of L'Air Liquide Society of Montreal for an order reducing the less than carload rating of oxygen gas from the 2nd class of the Canadian Freight Classification to the 3rd class, and providing a carload rating of 5th class, it is ordered that the carload rating of 4th class provided in the Canadian Freight Classification for blaugas and carbonic acid gas be provided, also for oxygen and acetylene gases in carloads; that the application for a reduced less than carload rating of oxygen gas be refused.

Signal Installations on the Grand Trunk Railway.

The interlocking plant at St. Lambert, near Montreal, in connection with the new Southwark yard, was completed and put in service Nov. 12. It is an all electric plant, the signals being semaphore type, upper quadrant, top post mechanisms. This installation is said to be the largest electric power installation in Canada. The apparatus was supplied and installed by the General Railway Signal Co. of Canada.

A contract for automatic signalling on the Victoria Jubilee Bridge, Montreal, has been let to the Union Switch and Signal Co., This system will be the normally clear, alternating current, 3 position, upper quadrant semaphore type. Signals on the bridge will be supported by brackets specially designed. The signal layout and materials will represent the most modern practice of automatic signalling.

The Eastern Terminal Elevator Co., Ltd., has been incorporated under the Manitoba Companies Act, with $250,000 capital and offices at Winnipeg, to build, own and operate grain elevators, warehouses, etc., and to deal in grain and other products, and in connection therewith to operate wharves, docks, piers, etc. The provisional directors are, J. A. Richardson, A. C. Ruttan, H. Gauer, F. G. Davies, and D. J. McGillivray, Winnipeg.

Canadian Northern Town Properties Co., Ltd., is the name of a company allied with the Canadian Northern Ry., which has been incorporated under the Dominion Companies Act, with $10,000,000 capital, and offices at Toronto, to deal with townsite properties. The incorporators are all connected with the C. N. R. legal staff.

Powdered coal as a fuel has been used in a locomotive frame forging furnace, reducing the hourly consumption from 650 to 350 lbs., as well as heating 20% faster.

TENDERS.

TENDERS addressed to the undersigned, at Ottawa, and endorsed on the envelope "Tender for Steamer," will be received up to noon of the

EIGHTH DAY OF JANUARY, 1914,

for the construction of a Steel Twin Screw Ice-breaking Steamer of the following leading dimension:—

Length B.P.	275 feet	0 inches.
Breadth extreme	57 "	6 "
Draft Mean	10 "	0 "
Indicated Horse Power	8,000	

to be delivered at the King's Wharf in the City of Quebec.

Plans, tender forms and specifications of this steamer can be seen at the office of the Purchasing Agent of the Marine and Fisheries Department, Ottawa, at the offices of the Collectors of Customs, Toronto, Collingwood and Port Arthur, and at the Agencies of the Department of Marine and Fisheries at Montreal, Quebec, St. John, Halifax and Victoria, B.C.

All tenders must be made with the distinct understanding that the steamer must be built in Canada.

Plans, tender forms and specifications can be procured upon application from the Purchasing and Contract Agent, Ottawa.

The tender form is embodied in the specification.

Each tender must be accompanied by an accepted cheque on a chartered Bank equal to 10% of the whole amount of the tender, which cheque will be forfeited if the successful tenderer declines to enter into the contract prepared by the Department or fails to complete the steamer in accordance with the contract.

Cheques accompanying unsuccessful tenders will be returned.

The Department does not bind itself to accept the lowest or any tender.

Newspapers copying this advertisement without authority from the Department will not be paid.

ALEX. JOHNSTON,
Deputy Minister of Marine and Fisheries.

Dept., Marine and Fisheries,
—50306. Ottawa, October 25, 1913.

Railway Development

Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta and Great Waterways Ry.—Surveys have been started on this line near Edmonton, Alta., the work being in charge of W. R. Smith, Chief Engineer, Edmonton, Dunvegan and British Columbia Ry., which is also being built by J. D. McArthur. Under the arrangements made with the old company, it is proposed to follow a portion of the route originally laid down, and to start construction on this early in 1914. The act of the Legislature came into operation by proclamation Oct. 31. (Nov., pg. 534.)

Alberta Proposals for Light Railways.—An act has been passed by the Alberta Legislature to encourage the building of light railways, connecting with existing lines, and open up territory in which there is not traffic to justify the building of ordinary lines. The Government is authorized to give a subsidy of $7,000 a mile in aid of such lines, which are not to exceed 75 miles in length. A section was inserted in the measure in its passage through the Legislature, limiting the total mileage which may be aided before the next session to 200 miles.

The first line to be built under this act will, it is said, be one from Bassano through the irrigated belt to Richmond, on Red Deer River. Grading is reported to have been started, and press reports state that the line will be completed in the spring. The press reports state that this line will be built by the Bassano and Bow River Ry. Co. The only company incorporated with anything like this title is the Bassano Electric Ry. Co., which was incorporated by the Alberta Legislature, Feb. 12, 1912, with power to build a line from Bassano southerly to Bow River; from Bassano northerly for 40 miles, and also within the town of Bassano. (See Oct., 1912, pg. 520.)

Athabasca Valley Ry.—The Alberta Legislature has extended the time for the building of the projected railway from Independence on the Edmonton, Dunvegan and British Columbia Ry., or from Edmonton to Fort Assiniboine, on the Athabasca River. The company was incorporated at the 1911-12 session of the Legislature, with J. D. McArthur, J. K. McLellan, R. A. Hazleton, D. W. Campbell and W. P. McDougall, all of Winnipeg, as provisional directors. (Jan., 1912, pg. 21.)

Burrard Inlet Tunnel and Bridge Co.—Sir Richard McBride, Premier of British Columbia, in an interview at Vancouver, B. C., on his return from London, Eng., Nov. 5, is reported to have said: "I met Sir John Wolfe Barry, engineer for the proposed Second Narrows bridge, and discussed the question of construction with him. I may announce that the provincial cabinet will discuss the proposal that the province take over the building of the Second Narrows bridge from the inter-municipal company of Vancouver within a short time." (Sept., pg. 432.

Calumet and Northern Ry.—The Quebec Legislature is being asked for an extension of time for the building of the projected railway from Calumet to St. Jovite, Que. Campbell, McMaster and Papineau, Montreal, solicitors for applicants. (Feb., pg. 83.)

Canada Coal Co. is the title of a company incorporated under the New Brunswick Companies Act, with a capital of $150,000 to acquire the interests of George Sergeant, Jr., formerly the proprietor of the Canadian Coal Corporation of New Brunswick. The company is authorized to build and operate railways, for the carriage of passengers and freight, and for this or any of the other purposes for which it is incorporated, may acquire shares or bonds of other companies. The company's offices are at Chipman, N. B., and the provisional directors are:—G. Sergeant, Jr., R. McClain, W. F. Williams, M. B. Davis, New York; W. G. Conklin, Ardsley, N. Y.

Canadian Alberta Ry.—Application is being made to the Dominion Parliament for the incorporation of a company with this title, to build a line from one mile west of Blairmore, Alta., on the C. P. R., northerly and westerly through townships eight and nine, range four west of the fifth meridian, for 14 miles to the centre of Sec. 20, tp. 9. Taylor, Harvey, Grant, Stockton and Smith, Vancouver, B. C., solicitors for applicants.

Canadian North Eastern Ry.—New York press reports state that arrangements are being made for the financing of construction of an extension of the existing line from Stewart to Bear Creek, 14 miles, to the Groundhog Mountains, and on to a junction of one of the Canadian Northern Ry. lines into Edmonton, Alta. The reports state that a large portion of the capital secured will be devoted to the opening up of coal mines on the Groundhog Mountain in order to provide traffic for the line. Sir Donald Mann, who is in his private capacity, the principal owner of the line, is said to be negotiating with the British Columbia Government for the purpose of securing the guarantee of an issue of bonds for construction purposes. In this connection it is stated that provision would be made for a line running to Dawson, Yukon, and that connection would be made with a line or lines from the International boundary line, to be built under U. S. auspices. The Premier of British Columbia in a recent speech suggested the possibility of provincial guarantees being given to a north and south line through British Columbia which would connect Alaska and the United States.

Another point in connection with this project is a report that arrangements are being made in London, Eng., for the organization of a company to develop large coal areas on Groundhog Mountain, and in connection with the project to build a railway from Stewart, B.C., to the collieries. (Oct., 1912, pg. 511.)

Cape Breton Coal, Iron and Ry. Co.—We are officially advised that grading has been in progress since Dec., 1912, on three miles of line extending from the present colliery line, which connects with the Sydney and Louisburg Ry. The new mileage starts one mile east of the colliery and extends to Round Island, Mira Bay, N.S. The contract provides for grading only. Lynch and Fane, Sydney, N. S., are the contractors. It is not contemplated to do anything further at present, owing to the fact that while the company had an assurance from the Dominion Government, that a breakwater would be erected to protect the proposed shipping pier at the terminus of the railway, nothing has yet been done. C. J. Coll, Broughton, N. S., is General Manager. (July, pg. 331.)

Central Canada Ry.—The Alberta Legislature has authorized the government to guarantee the company's bonds for $20,000 a mile for building a line from the Edmonton, Dunvegan and British Columbia Ry., for 100 miles. (April, pg. 168.)

Central Canada Ry.—The Dominion Parliament is being asked to incorporate a company with this title to build a railway from Winnipeg, northwesterly, via Yorkton, Saskatoon, and Battleford to Edmonton, Alta. Pringle and Guthrie, Ottawa, solicitors for applicants.

Chicago, Milwaukee and St. Paul Ry.—U. S. press reports state that that line, or its subsidiary, the Chicago, Milwaukee and Puget Sound Ry., has purchased the Graner ranch on the southwest corner of Sea Island, near Eburne, at the International boundary, that a number of other properties adjoining were purchased by the same interest recently, and that negotiations are being carried on for some properties on the Canadian mainland, just opposite. These purchases are said to be for the purpose of building a line to connect Seattle, Wash., and Vancouver, B. C. The company has an arrangement by which it can run over the Great Northern Ry. lines into Vancouver, and use the new terminals being laid out on False Creek. (Oct., pg. 470.)

Companie des Pouvoirs d'Eau de Valleyfield Limitee.—Application is being made to the Dominion Parliament for an act confirming the charter and letters patent of this company, and authorizing it among other things, to build a railway from Salaberry de Valleyfield southwesterly across Beauharnois and Huntingdon Counties to the International boundary; a line from Salaberry de Valleyfield southeasterly to the provincial boundary line in Huntingdon; and from Salaberry de Valleyfield northeasterly across the St. Lawrence River and through Soulanges and Vaudreuil Counties to the Lake of Two Mountains, and branch lines. Z. Boyer, Valleyfield, Que., Secretary.

Edmonton, Dunvegan and British Columbia Ry.—It is expected that track will be laid to the Athabasca River, 131 miles from Edmonton, Alta., early in December. A start has been made on the building of the bridge across the river at Mirror Landing, which it is expected to have completed early in the spring.

The Board of Railway Commissioners has approved of location plans for this line from mileage 1556.11 to 238.89, Alta. (Oct., pg. 475.)

Esquimalt and Nanaimo Ry.—It is reported that the work of constructing the bridges and trestles on the line between Victoria and Wellington, B. C., has been completed with the exception of the timber trestle at Arbutus Canyon, the material for which is being delivered. Ten miles of new steel have been laid at the north section, thus completing the replacing of the old 52 lb. with 60 lb. steel. R. Marpole, Vice President, completed a trip of inspection over the line, Nov. 7.

Steel has been laid on the Courtenay extension as far as the Little Qualicum River, a temporary bridge having been built across French Creek. The permanent steel trestle, which is one of the largest structures on the line, is being built by the Dominion Bridge Co. It is expected to have steel laid to the crossing of the Big Qualicum River by the end of the year. The grading from this point into Courtenay is well advanced. There are two large bridges on this section of the line, viz., at the crossing of the Tsable and Trent Rivers. It is expected, however, that the entire work will be completed so as to enable trains to be run into Courtenay by June 1, 1914.

The terminals being laid out on the Songhees Reserve, Victoria, consist of four substantial concrete and brick structures, erected at a cost of about $150,000 by E. R. Doe and Brother. The locomotive house will at present accommodate 10 locomotives, but it can be enlarged when required; the other buildings which will be used as machine, repair and car shops, are being equip-

[illegible] Welland, [illegible] as well as with some new plant. The buildings also comprise a 15,000 gal. oil tank, and a service tank for feeding the locomotives, which are fitted for burning oil instead of coal. (Sept., pg. [illegible])

Essex Terminal Ry.—We are officially advised that a contract [illegible] for the grading of an extension from the present terminus in Sandwich, Ont., southerly to the northerly limit of Ojibway, about a mile. Should the conditions continue favorable it is expected to have this portion of the railway open for traffic by January. Owen McKay, M. Can. Soc. C. E., Walkerville, Ont., is chief engineer. The contractor for the grading on the extension to Ojibway is J. J. Dewhurst, South Woodslee P. O., Ont. The company will do all the other work, with the exception of the building of a 16 ft. bridge, the construction of which has not yet been arranged. (Oct., pg. 475.)

Erie, London and Tillsonburg Ry.—According to statements credited to G.T.R. officials it appears that the surveys recently made by S. Wilson, and the visits made by representatives of the Canadian Stewart Co. to London, and points on Lake Erie south of London, were in the interests of that company. Mr. Wilson, in a recent interview, is reported to have stated that the surveys made show that a satisfactory route can not be obtained between London and Port Talbot, but that a 1.5% gradient can be got between London and Port Burwell. On this route only one bridge would be required.

The G.T.R. controls the charters of the E., L. and T. Ry., which was originally secured by J. H. Teall, Tillsonburg, Ont., who was formerly connected with the Tillsonburg, Lake Erie and Pacific Ry., now owned by the C.P.R. (See London to Port Talbot, Oct., page 475, and E.,L. and T. Ry., Dec., 1912, pg. 605.)

Fredericton and Grand Lake Coal and Ry. [illegible] service has been put in operation from Fredericton [illegible] Norton. [illegible] from Minto to Norton is that formerly operated by the New Brunswick Government, under the charters of the New Brunswick Coal and Ry. Co., and the Central Ry. of New Brunswick. (Sept., pg. [illegible])

Glengarry and Stormont Ry.—A meeting of the shareholders has been called to be held at Montreal, Dec. 1, to authorize an issue of first mortgage, [illegible] gold bonds, for $750,000, to provide for the construction of the projected line from Polycarp, on the C. P. R., to Cornwall, Ont. W. J. [illegible], Montreal, is Secretary.

The Board of Railway Commissioners has approved of location plans for this projected railway. Mileage 0 to 24.05. (July, pg. 331.)

Ha Ha Bay Ry.—Application is being made to the Quebec Legislature to extend the time [illegible] authorized by Chap. 107 of the Statutes of 1908 may be built. [illegible] Roberval and Saguenay Ry.)

Kettle Valley Lines.—[illegible]

the line from Coldwater summit to Osprey lake, which it is said will save a long detour and open up some new territory. Track has been laid for seven miles westerly from Penticton, and a considerable mileage of grading has been done.

Grading has been started out of Hope, on the section towards the Coquihalla summit, the men being spread over the first six miles. The right of way is being cleared beyond that point, and good progress has been made with cutting out the supply road.

In an interview at Vancouver, Nov. 10, it was stated that the bridge to be built across the Fraser River will be 1,000 ft. long and will cost about $1,000,000.

We are officially advised that while the line is leased to the C.P.R., it will not be taken over by that company until construction is completed. (Oct., pg. 475.)

Lake Erie and Northern Ry.—The terminal facilities for this line in Galt, Ont., are being laid out, with a view of having everything ready for the opening of the section from Brantford, early next spring. The buildings consist of a brick station, and freight house, and six tracks are being laid in the yard. About 14 miles of grading has been completed between Brantford and Galt, some miles of steel have been laid, and a ballasting gang is working from the Galt end.

Considerable progress has been made in Brantford, where some heavy work is being done at Jubilee Terrace and Lorne Bridge. The bridge is to be raised seven feet. A good deal of the trstle work through the city has been completed.

Good progress is being made with construction on the line from Brantford to Port Dover. The Board of Railway Commissioners, Oct. 10, granted the company the right to use the G. T. R. harbor at Port Dover. (Oct., pg. 475.)

A contract was entered into, Nov. 8, between the Dominion Government and the company, under the provisions of the act granting aid to certain railways, for the building of a line from Galt to Port Dover, Ont., not exceeding 58 miles.

Magdalen River Valley Ry.—The Quebec Legislature is being asked for an extension of time for the building of this projected railway from Magdalen River Roman Catholic Church to a junction with the inland section of the Atlantic, Quebec and Western Ry. F. Murphy, Quebec, is solicitor for the company. (May, 1908, pg. [illegible])

Midland Continental Ry.—Press reports state about 40 miles of line between Wimbledon and Jamestown, N.D., have been completed and put in operation, and that surveys have been made for an extension from Wimbledon to Grand Forks, Minn. It is said that further construction will be undertaken in the spring. The object of the company is said to be to secure a through line from Winnipeg, Man., to the Gulf of Mexico. (June, 1912, pg. 301.)

Moncton and Northumberland Strait Ry.—The Board of Railway Commissioners has approved of location plans for a line from Richibucto to Buctouche, N.B., 19 miles. The M. and N. S. Ry. is the new title of the Buctouche Ry. and Transportation Co., which took over the old Buctouche and Moncton Ry., or as it was often called the Moncton and Buctouche Ry. (See Buctouche Ry. and Transportation Co., Aug., pg. [illegible])

Norton to St. John, N. B.—Press reports state that surveys have been made for a railway from Norton, through Salt Springs, [illegible] Village and Loch Lomond to St. John, N. B. The report further states that C. P. R. engineers have been over the route, and have been looking into the traffic possibilities. The C. P. R. by the leasing of the Fredericton and Grand Lake Ry., and the New Brunswick Coal and Ry. Co.'s line, has a line to Norton, and this proposed line would provide it with an entrance into St. John, on the east.

Ontario Lake Front Terminal Ry.—Application is being made to the Dominion Parliament for the incorporation of a company with this title to build a line from between Havelock and Central Ontario Jct., on the C. P. R., southeasterly via Campbellford to Cobourg, and from near Campbellford to Brighton, Ont. C. Pringle, Ottawa, solicitor or for applicants.

Regina to Saskatoon, Sask.—The Saskatchewan Legislature is being asked to incorporate a company to build a railway from Regina to Saskatoon. Anderson, Bagshaw and Amyott, Regina, solicitors for applicants.

P. M. Anderson, in an interview, Nov. 5, is reported to have stated that the company will be named the Central Saskatchewan Ry. Co., and that in addition to the line to Saskatoon, it is proposed to ask for power to build lines from Regina to Prince Albert, thence northeasterly to the Saskatchewan-Manitoba boundary, and from Regina easterly to the Saskatchewan-Manitoba boundary, and that the interests behind the project are prepared to spend large sume in order to develop the lines.

Ottawa and Ungava Ry.—The Dominion Parliament is being asked to extend the time within which the company may build the line authorized by Chap. 102 of the Statutes of 1909-10, and Chap. 94 of the Statutes of 1912, and for power to build a line eastward from the main line north of the 49th circle of latitude, by the most feasible route and crossing the Ashwapmuchuan, Mistassini, Peribonka, Bersimis, Outarde, Manicuagan, Pentecote, Ste. Marguerite, Moisie, Romaine, Natashkwan Rivers, to Lake Melville, or to the boundary between the province of Quebec and Labrador in the vicinity of St. Lewis Inlet or of St. Charles River, with spurs northward and southward. A. T. Genest, Ottawa, is Managing Director. The company was incorporated in 1909-10 as the Gatineau and Ungava Ry., but its name was changed as above in 1912. (June, 1912, pg. 300.)

Owen Sound to Meaford.—A deputation from Owen Sound and Meaford, Ont., waited on the Provincial Government recently to urge the granting of aid for the building of a railway to connect these two towns. Consideration was promised. There have been several attempts made within the past ten years to secure the building of this line; two or three charters have been granted, and Dominion aid has been voted, but beyond surveys nothing has been done.

Prince Edward Island Ry.—Press reports state that construction of a spur line to Carleton Point, where the car ferry terminal will be situated, has been practically completed. The line is about 2.5 miles long, and runs on a tangent from the Cape Traverse branch. The cuttings and fills have been built for standard gauge. As soon as completed the line will be used for taking in material for the construction of the terminals. Roger Miller, representing the contractors for terminals, and — Downing, engineer in charge of construction of the spur line, inspected the work, Nov. 14. (Oct., pg. 475.)

Pacific Great Eastern Ry.—D'Arcy Tate, Vice Pesident, stated in Vancouver, Nov. 8, that grading was finished between Dundarave and North Vancouver, and that track was being laid. It was expected that a suburban train service will be put on this section of the line early in the next year.

Considerable progress has been made

with construction on the line along the Squamish Valley, beyond the point to which track was laid on the old Howe Sound and Northern Ry. It is expected that a train service will be put on this section at the beginning of 1914.

Squamish Indian Reserve at Newport, B. C., has been acquired by the P. G. E. Ry. The reserve contains 988 acres, of which 40 are reserved by the tribe and each member of the tribe is to receive a 50 ft. lot. The price paid is $150,000 for the land and $5,000 for the timber. The land is to be used for terminal and townsite purposes. (Oct., pg. 475.)

Pacific, Peace River and Athabasca Ry.—Application is being made to the Dominion Parliament for the incorporation of a company with this title to build a railway from the mouth of the Naas River on the Pacific Coast, B. C., easterly 225 miles to the height of land between the Naas and Skeena Watersheds, thence to the North Tacla Lake, through Hogan Pass to the Omineca River, and the Findlay branch of the Peace River, along the Peace River to the Athabasca River, and Fort McMurray, thence to Prince Albert, Sask., a total distance of 1,500 miles. Pringle, Thompson, Burgess and Cote, Ottawa, solicitors for applicants.

Peace River Tramway and Navigation Co.—Application is being made to the Dominion Parliament for the incorporation of a company with this title, to build a railway from Smith's Landing on Peace River, to Fort Smith on the northern boundary of Alberta; a line from Vermillion Rapids easterly along the northern bank of the Peace River to Vermillion Falls, with branch lines, and to operate steamships on the Peace, Slave and Mackenzie Rivers. Pringle, Thompson, Burgess and Cote, Ottawa, solicitors for applicants.

Quebec Central Ry.—The work of locating the route for the projected extension from St. Sabine to St. Pamphile, Que., of which F. H. Burpee, has been in charge, has been completed for the season. The final location of the 25 miles from St. Sabine to English Lake, has been completed, and grading has been done on the first ten miles. P. J. Wolfe, Sherbrooke, Que., having the contract. Track is reported to have been laid to St. Camile, five miles from St. Sabine, on the extension, and a train service is expected to be put in operation on it by the end of the year. (Dec., 1912, pg. 605.)

Quinze and Blanche River Ry.—Application is being made to the Dominion Parliament for an extension of time for the building of the lines authorized by Chap. 123 of the Statutes of 1906-07, and by Chap. 127 of the Statutes of 1908-09. Orde, Powell and Lyle, Ottawa, solicitors for applicants. (July, 1909, pg. 481.)

Roberval and Saguenay Ry.—The Quebec Legislature is being asked to extend the time for the building of the lines already authorized; to authorize the building of a line of 250 miles from the Ha Ha Bay Ry. to the St. Maurice River or one of its tributaries, and to continue and complete the branches of any railway the lines of which may have been acquired. Lapointe and Langlois, Chicoutimi, Que., solicitors for applicants. (Dec., 1912, pg. 605. See also Ha Ha Bay Ry.)

St. John and Quebec Ry.—We are officially advised that considerable progress has been made with construction on the 120 miles, between Gagetown and Centreville, N. B., for which contract was let in May, 1912. The grading, which in many places north of Fredericton, and immediately north of Woodstock, was very heavy, is about completed. Track laying is under way north and south from Fredericton, and north and south of Woodstock; about 45 miles of steel has been laid, and about 30 miles of ballasting has been completed. It is expected to complete the ballasting between Fredericton and Gagetown, 33 miles, and between Woodstock and Centreville, 27 miles, before winter. Track laying will be continued until the whole 120 miles have been laid. Station buildings are being constructed, and the Dominion Bridge Co. will begin the erection of the steel superstructures of the bridges shortly.

Final location plans have been approved for a further 23 miles, south of Gagetown to the Kings County line, and a contract for its construction has been let, we are advised, to Jas. H. Corbett and Sons, Que., which firm will start work immediately. It is expected the final location plans for the line from Centreville to Andover, 26 miles, will be approved at an early date, and a contract for grading will be let immediately thereafter. The location of the line from the Kings County line into St. John, has not been decided. (Oct., pg. 476.)

Sudbury, Kepawa and Bell River Ry.—Application is being made to the Dominion Parliament for the incorporation of a company with this title, to build a railway from Sudbury, Ont., to the south end of Lake Timiskaming, thence north easterly to a junction with the National Transcontinental Ry. at the crossing of Bell River, Que. Jno. Thompson, Ottawa, solicitor for applicants.

Timiskaming and Northern Ontario Ry.—We are officially advised that the question of the electrification of the several branch lines has been under consideration for some time, and it has been decided to proceed with the work on the Kerr Lake branch next spring. This branch extends from Cobalt to Kerr Lake, 3.9 miles. Engineers are making a thorough investigation of the other branch lines with a view to their electrification. (Oct., pg. 470.)

Toronto, Hamilton and Buffalo Ry.—The second track from Welland to Fenwick Station, Ont., about 6.50 miles, has been completed and is now being operated. The last section to be passed by the Board of Railway Commissioners for operation extends from Welland to Welland River, mileage 0.49 to 1.35. (Oct., pg. 476.)

Ungava Ry.—Application is being made to the Dominion Parliament for the incorporation of a company with this title, to build a railway from the Hudson's Bay Co.'s post at the mouth of Great Whale River, or between the Great Whale River and the Nastasoka River, on the eastern coast of Hudson Bay, easterly and south easterly to Aylmer Sound, or some other convenient point on the Gulf of St. Lawrence between the 50th and 51st parallels of north latitude. Pentland, Stuart, Gravel and Thomson, Quebec, solicitors for applicants.

Victoria, B. C. The City Council recently received tenders for the supply of 555 gross tons of 20 lb. steel, in 20 ft. lengths, together with the necessary splice bars, bolts and track spikes for 10.700 miles of line. The city is to lay eight miles of single track to Goldstream; 1 1-8 miles to Fitzgerald, and 8 2-3 miles to Cooper Cove wharf, in connection with certain works about to be undertaken.

Welland Canal Construction Railway.—In connection with the railway being built for the getting in of supplies for the construction of the new Welland ship canal, we are advised that a contract has been let by the Dominion Government to The Hamilton Bridge Works, for the erection of a double track swing bridge across the canal near lock 11. The bridge will be 170 ft. long over all, calculated to carry heavy railway traffic. It will be somewhat similar in design to the double track bridge on the G. T. R. main line where it crosses the old canal, a short distance east of Merritton, Ont. The contract covers the furnishing and erection of the steel work, at an estimated cost of $65,800.

Winnipeg, Man.—The Winnipeg City Council has given a general notice that it will invite tenders early in 1914 for the works necessary for the delivery of water from Shoal Lake to the Greater Winnipeg water district, at an estimated cost of $13,500,000. The works include the construction of 85 miles of railway, the estimated cost of which is $12,000 a mile, or $1,020,000. The cost of rolling stock is included in the general cost of the works. Location and profile plans and other particulars may be obtained of M. Peterson, Winnipeg, acting Secretary of the Administration Board of the Greater Winnipeg Water District.

The railway will follow the right of way of the pipe line for the water supply, and will be used entirely for construction purposes. The line will cross the Canadian Northern Ry. between Winnipeg and Nairn, and will proceed easterly, bearing southerly, passing by Plympton, Meadowvale, Monomento, north of Old Lake and crossing the Whitmouth, Boreli and Brokenhead Rivers, to Indian Bay, an inlet of Shoal Lake, which itself is an inlet of the Lake of the Woods. Four survey parties are reported to be in the field completing the location of the route. One of the largest structures will be the viaduct across the Brokenhead River Valley. (Oct., pg. 476.)

Papers on Steel Frame and Steel Underframe Box Cars.

In connection with the American Society of Mechanical Engineers' annual meeting, to be held in New York Dec. 2 to 5, there will be a railway session on Dec. 3. Two papers will be presented, one on steel frame box cars, by R. W. Burnett, General Master Car Builder, Canadian Pacific Ry., and one on steel underframe box cars, by G. W. Rink, Mechanical Engineer, Central Rd. of New Jersey.

Mr. Burnett, in his paper on steel frame box cars, will consider the development of this type of car and outline some of the factors which have been responsible for it. The practice on the C.P.R., particularly in reference to the repairs, and the advantages of this type of car, will be considered and special attention will be directed to the methods of selecting and treating the lumber for the sheathing and lining.

Mr. Rink will present tables showing the practice of a number of roads regarding the dimensions of various parts of box cars. These tables were prepared with a view to making it possible to select a design which would render the best practice. Mr. Rink believes that further steps should be taken toward adopting standards for use on the box cars of the railways generally, and suggests that a committee representing the different roads should be appointed to develop a standard box car.

This is the first time that the merits of these two types of cars will have been discussed so thoroughly by a technical association. Both of the papers will cover the subjects which they deal with comprehensively. A number of railway officers have been invited to participate in the discussion, and it is expected that much good material will be brought out.

J. A. M. Faulds, Manager Railway and Steamship Department, D. E. Brown, Hope & MacCauley, Ltd., Vancouver, B.C., writes: "I think Canadian Railway and Marine World is an excellent work. It should be read by every man in the railway and steamship business."

The Canadian Pacific Railway's New Bridge Across the St. Lawrence at Lachine.

The bridge which the C.P.R. has built across the St. Lawrence River at Lachine, Que., to replace the single track structure that was built in 1886, is shown in the accompanying illustration. The original bridge had 17 spans from the Lachine end, as follows: 3 shore girders 80 ft. long and 7 ft. deep; 8 river spans 240 ft. long and 35 ft. deep; flanking span 270 ft. long; 2 cantilever spans 407 ft. long; flanking span 270 ft. long; and 1 girder span 240 ft. long and 35 ft. deep. While this bridge was of sufficient strength to handle light traffic, it was rapidly approaching the day when the heavy rolling stock would tax it to a point that was considered unsafe for modern conditions. This, in spite of the fact that the bridge when built was considered one of the engineering marvels of the time. The spans of the old bridge have been used in the new bridge built by the company at Outlook, Sask., which was described in Canadian Railway and Marine World for June, 1913.

Since its inception, the constantly increasing size of rolling stock and the rapid development in the volume of traffic to be handled, made it imperative that the Lachine bridge be not only rebuilt, but also double tracked. The new bridge, descriptions of which have appeared in Canadian Railway and Marine World for Feb. and Aug., 1912, contains steel spans as follows: six 80 ft. long; sixteen 120 ft.; four 270 ft.; two 122 ft.; eight 240 ft.; four 270 ft.; and four 480 ft., making the total length of the bridge in spans 3,138 ft. The new design is entirely different from the former construction, the latter comprising long light spans, while all the new spans are heavier and shallower, following more modern practice. To reduce the length of the old spans to make possible the use of shallow girders, the four old 240 ft. spans have been replaced by eight 120 ft. spans, these all being on the Lachine end. The double tracking of the new structure made possible the simplification of the work of maintaining the traffic without interruption, the old bridge being retained in portions while the new spans have been put in place alongside. The presence of the old spans also facilitated the actual work of construction.

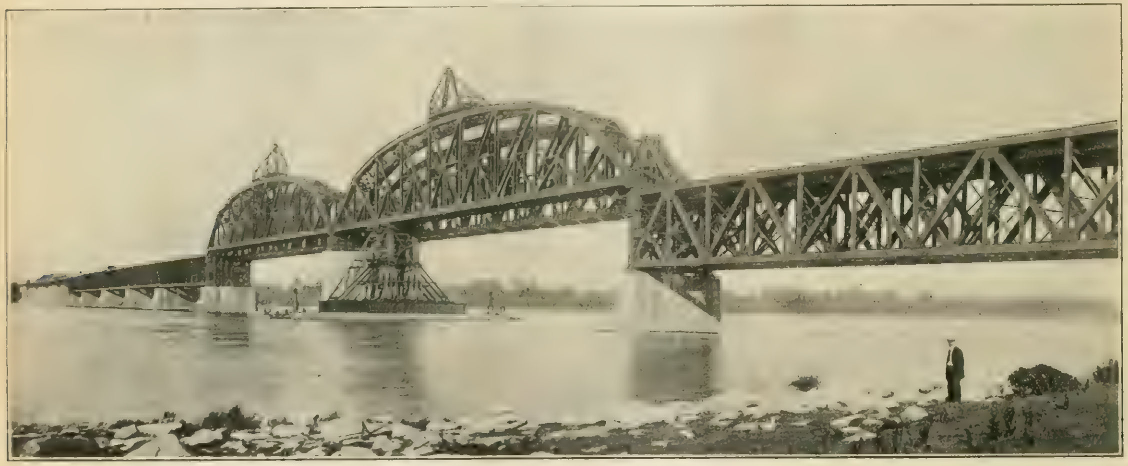
In the new bridge there are 28,072,252 lbs. of steel. The 80 ft. lengths run to 110,000 lbs.; the 120's, 226,000 lbs.; the 240's, 960,000 lbs.; the 270's, 1,324,138 lbs.; and the 408's, 2,600,000 lbs.

The C.P.R. is carrying out this work at a cost of about $3,000,000 in pursuance of its policy of ultimately double tracking the whole of its main transcontinental line. This bridge is on the line between Montreal and St. John, N.B., and is a few miles southwest of Montreal. The necessity of double-tracking this unit in preference to some other portions is accounted for by the joint use of this section of the line from Montreal to Adirondack Jct., which is just south of the river, by the New York Central Lines entering Montreal, which also handle a heavy traffic.

This work was carried on under the direction of P. B. Motley, M. Can. Soc. C.E., Engineer of Bridges, with J. H. Barber, M. Can. Soc. C.E., in charge of the erection.

The bridge was officially completed Nov. 4, when D. McNicoll, Vice President, tightened up the last bolt in the track and officially opened the bridge for traffic in the presence of Phelps Johnson, Vice President Dominion Bridge Company; G. H. Duggan, General Manager Dominion Bridge Company; A. D. MacTier, General Manager Eastern Lines C.P.R.; P. B. Motley, Engineer of Bridges C.P.R.; H. H. Vaughan, Assistant to Vice President C.P.R.; J. M. R. Fairbairn, Assistant Chief Engineer Eastern Lines C.P.R.; J. K. McNeillie, Superintendent Montreal Terminals C.P.R.; W. Cowie, Chief Engineer Montreal Harbor Commission; S. P. Brown, Chief Engineer Mount Royal Tunnel; C. N. Monserrat, Chairman Quebec Bridge Commission; and G. Hodge, General Superintendent Eastern Lines C.P.R.

At a luncheon given subsequently at the Mount Royal Club, P. B. Motley, Engineer of Bridges, C.P.R., said that it had taken three years to build the bridge. There are really two bridges, each of single track, and by well considered methods the structure was erected in sections, traffic being shifted from up stream to down stream until the bridge was finished clean across the river. By June, 1910, the steel and masonry was going on together, and the first half of the bridge was completed between June, 1910, and March, 1912. Last spring, after desultory work during the winter, the old spans that remained were taken down and the last of the channel spans installed. Between April 21 and October 21, the last five old spans —two 270 ft., two 408 ft., and one 120 ft.— were taken out and five new spans of similar length erected, this work being accomplished in six months, which is said to be a record time for the moving of four thousand tons of steel, during which traffic was passing all the time. In connection with the work 3,500,000 rivets were used. Only two men lost their lives during the work. One fell off a scow into the river and could not swim, and another fell off a locomotive derrick in the yard. Mr. Motley complimented the Caughnawaga men on the part they had taken in the work. The bridge is five eighths of a mile long as against the Victoria bridge of two miles and a half. The floating in of the third and fourth channel spans was accomplished in record time. The third took 22½ minutes actual time, while the fourth was placed into position in 15 minutes, which was certainly a remarkable achievement, and he congratulated the Dominion Bridge Co. on the excellent work. It required 3,450 cars to handle the material used for the bridge.



The Canadian Pacific Railway Bridge at Lachine, Que.

Construction Camps in Selkirk Mountains.—Canadian Railway and Marine World for November contained an illustrated description of the model construction camp being erected by Foley, Welch and Stewart, at Glacier, B.C., for their employes on the tunnel which they are boring for the C.P.R. at Rogers Pass. We are advised that another model camp is under construction at the other portal of the tunnel. The camps are identical, except that the one at Glacier is being equipped with offices, etc., for all business connected with the tunnel construction. Both camps are rapidly approaching completion.

Railway Lands Patented.—Letters patent were issued during September in respect of railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres.
Canadian Northern Alberta Ry.	560.15
Canadian Northern Ry.	1,186.67
Canadian Pacific Ry. grants	469.30
Canadian Pacific Ry. roadbed and station grounds	12.09
Grand Trunk Pacific Ry	286.02
Grand Trunk Pacific Branch Lines Co...	16.58
Qu'Appelle, Long Lake and Saskatchewan Rd and Steamboat Co	3,574.56
Total	6,105.37

Canadian Pacific Railway Construction, Betterments, Etc.

Eastern Division.—The C.P.R., we are officially advised, has signed the agreements with the city which will enable progress to be made with the laying out of new terminals in Quebec, which will be utilized by all railways entering the city. The signature of the Minister of Railways has also been appended to the document, thus completing a matter which has been the subject of negotiation for some years.

Plans and book of reference for a revision of location of the line at Delari, Bolton tp., have been deposited in the office of the Supreme Court for the district of Bedford, Que.

We are officially advised that a contract has been let to John S. Metcalf Co., Montreal, for the extension of the Glen Arch, Westmount, Que., to provide for a width of four tracks. The estimated cost is $50,000.

The new Lachine bridge was completed and opened for traffic Nov 4.

Ontario Division.—The second track work east of Toronto is intended to extend from near Agincourt, when the new Campbellford, Lake Ontario and Western Ry., from Glen Tay, makes a connection into Toronto. The line from Montreal is double track to Glen Tay, and from this point to near Agincourt, there will be two single track lines—the original main line through Peterboro, and the new line to Belleville, and along the lake front. Thence into Toronto. We are officially advised there is no present intention of any further second track work on the Montreal-Toronto line.

Considerable progress has been made with the viaduct in North Toronto, which has been under construction for over a year. It will extend from east of Yonge St., to west of Dufferin St., and will have accommodation for five tracks. It will be used by the C.P.R. and the Canadian Northern Ry., and is expected to be completed during 1914. A station is to be built at North Toronto for the joint use of the two lines, as a part of the project.

The new second track from west of Islington was put in operation as far as Erindale, about 11 miles, Nov. 2. It is expected that it will be completed to Streetsville Jct., Dec. 1, and the remaining mileage to Guelph Jct., by Dec. 31. The only thing likely to delay it is the steel work for the bridges. Press reports state that the second track work will be continued through from Guelph Jct. to London, in 1914, and that a line will be built from near Guelph Jct. to connect with the Sudbury line at Bolton Jct. In connection with the first of these reports it is stated that negotiations are in progress for the purchase of considerable land at Woodstock, with a view of increasing the yard accommodation and adding to the terminal facilities there.

A down-town yard has been laid out on Main St., Galt. Eight tracks have been laid, and a freight shed and offices built.

Owen Sound press reports, Nov. 14, state that a project has been under consideration for the building of a line from Owen Sound, via Meaford and Collingwood to Orillia. A gang of men started work at Collingwood, Nov. 8, and local reports state that they are engaged on the preliminary work for the line from Collingwood to near Baxter, on the Sudbury line. This line is what is known as the Collingwood Southern Ry., the charter for which is held by the C.P.R., and surveys for which were made by H. D. Lumsden.

Lake Superior Division.—The bridge over Current River, east of Port Arthur, Ont., was finished Nov. 10, completing the final link on the second track work, easterly to Navilus. East of this it is proposed to build a division in order to secure a better gradient for the double track. Preliminary surveys have been made, and the final location survey is now being made.

Manitoba Division.—The new bridge across the McKellar River, Fort William, Ont., connecting Island one and two, was opened for traffic Oct. 30. Trains are being operated to the new coal dock and the new freight docks.

Plans have been approved by the Winnipeg City Council for alterations to be made at Main St. subway. The level is to be raised so as to make the approaches easier, and the superstructure is to be widened to allow the laying of two additional tracks.

The Board of Railway Commissioners has authorized the opening for traffic of the second track from Kemnay, mileage 8.2, to Griswold, mileage 24.8, Broadview subdivision.

Saskatchewan Division.—The Board of Railway Commissioners has authorized the operation of trains over the second track on the Broadview subdivision, from mileage 25.5 to 28; on the Moose Jaw subdivision from Pilot Butte, mileage 84.7 to Regina, mileage 92, and on the Swift Current subdivision from Ernfold, to mileage 70. The second track is reported to be in operation to Hebert, 81 miles west of Moose Jaw. It is expected that the grading for the second track will be completed as far east as Broadview by Dec. 31. Second track is expected to be laid for six miles east of Swift Current by Dec. 31, which will leave about 12 miles to complete the work to Hebert.

The extension of the line from Swift Current northwesterly, from Cabri to Prussia about 54 miles was put under the operating department, Oct. 28. A route map has been filed with the Department of Railways, for a revision of route in the vicinity of Empress, at the Saskatchewan-Alberta boundary.

The Weyburn line is being operated as far as Assiniboia, 111.4 miles, and it is expected that track will be laid to Shaunavon, a further distance of 118.6 miles, by Dec. 31. This will bring the line to the Saskatchewan-Alberta boundary, near where the section being built easterly from Stirling will be met.

Alberta Division.—The new double track bridge over the Saskatchewan River at Medicine Hat, Alta., has been completed. It is said to weigh about 2,300 tons, and to have cost about $400,000. Construction was started in the spring, and has been carried on continuously, traffic not having been delayed more than eight minutes at any one time.

The Board of Railway Commissioners has authorized the opening for traffic of the branch line under construction from Stirling, to meet the line running westerly from Weyburn, from Stirling to mileage 49.2. It was expected to have track laid to Foremost, Nov. 30. Grading is progressing to the Alberta-Saskatchewan boundary. It is proposed to establish a divisional point on sec. 24, tp. 5, range 6, at mileage 110, and 40 miles east of Foremost.

The Board of Railway Commissioners has authorized the operation of trains over the extension of the Lacombe branch of the Calgary and Edmonton Ry. to Monitor. The line is to connect at Kerrobert with the line from Moose Jaw northwesterly.

At the annual meeting of shareholders the directors were authorized to construct a line from near Swift Current, Sask., on the main line, via Coronation, to Sedgewick, Alta., west of Hardisty, on the Calgary and Edmonton Ry., at Wetaskiwin, 290 miles, and for the completion of the line from Weyburn, westerly to Stirling, which will have a total length of 436 miles, in Saskatchewan and Alberta.

Pacific Division.—The Kootenay Central Ry. is in operation 40 miles from Golden to Spallumcheen, and for some miles northerly from Fort Steele, B.C. Between these points construction has been in progress all summer. It was recently reported that on the 143.5 miles between Golden and Fort Steele, 63.5 miles of track had been laid, and that practically all the grading had been completed.

The three track bridge over the Coquitlam River was reported recently to be practically completed. A three track bridge is under construction across the Pitt River near the same place, and when this has been put up, the second track work east of Vancouver to Mission City will have been completed. The second track work from Mission City to Ruby Creek is practically complete.

Considerable progress is reported to have been made with the erection of the steel work on the new passenger station at Vancouver. The mason work is also being progressed with, and it is expected that the eastern portion of the building will be ready for occupation by February. The raising of the passenger tracks to the level of the new station, five feet above the present height, is being carried out. (Oct., pg. 480.)

Applications to Parliament.—The C.P.R. and a number of its subsidiary companies have given notice of applications to be made to the Dominion Parliament at the next session for power to build certain lines and for extensions of time within which to build lines already authorized. Full particulars of the various applications are given in the several companies official notices on pg. 602 of the reading matter section, and on pg. 36 of the advertising section of this issue.

Grand Trunk Railway Port Huron Shops Destroyed by Fire.

A press report from Port Huron, Mich., Nov. 26, states that block one of the G.T.R. car shops there was destroyed by fire that morning, the fire starting from an unknown source, and gaining rapid headway, due to lack of water, the pumps having been shut down to repair a water main. The buildings reported to have been burned include the main building, 800 ft. long, which contained the general offices, stores department, machine shop, passenger car shop, draughting and record rooms, paint shop and upholstery shop. Most of these departments were at the general office end of the building, with the machine shop next, and the passenger car shop occupying the whole of the other end of the shop.

In the different shops there are said to have been 14 passenger cars and 50 freight cars, which were totally destroyed, adding to the general loss. The 586 men on the pay roll will be temporarily out of employment. New electrical equipment for the power house was to have been installed shortly, but fortunately had not been delivered. A dispatch credits G.T.R. officials there with stating that the plant will be immediately rebuilt. Damage to the extent of about $50,000, caused by the recent heavy storms on the Great Lakes, was done to the plant, which is located directly at the mouth of the St. Clair River, and repairs were nearly completed prior to the fire.

The Canadian Northern Ex. Co. has opened offices at Inwood, Man.; Dinsmore and Elrose, Sask., and Hanna, Olyen and Youngstown, Alta.

National Transcontinental Railway Construction.

A press dispatch from Cochrane, Ont., Nov. 17, states that the last section of track has been laid easterly from that point, connecting with the track laid westerly from Quebec, thus completing track laying on the entire line of the N.T.R. from Moncton to Winnipeg, 1804 miles. The last of the steel was laid near Nellie Lake, about 15 miles east of Sunday River, and about 200 miles east of Cochrane. This does not mean that the line is completed, for the bridge work is yet to be finished and the ballasting, etc., to be done. The most important bridge work yet to be done is the building of the bridge across the Megiskan River valley, about 190 miles east of Cochrane. This bridge will be 500 ft. long. The abutments are in place and the steel will be put in position during the winter. The valley is at present spanned by a temporary trestle.

West of Cochrane the line is reported to be in excellent shape as far as Superior Jct., whence the G.T. Pacific Ry. branch line is in operation to Fort William. The trestle work on this section is now reported to be filled in and the bridge work practically completed. It is expected that the entire line will be ready for operation by the end of next summer.

Work is being proceeded with on the car ferry slips at Quebec and Levis, Que., and these are expected to be ready about the same time.

The section of the line from Cap Rouge, Que., for 50 miles west, was finally completed Oct. 30, and is ready for traffic. The section from Levis to the boundary of New Brunswick is expected to be finally completed in July. G. Grant, Chief Engineer, completed a trip of inspection over the section south of the St. Lawrence River to the New Brunswick boundary, Nov. 9. The contract on both these sections has been carried out by M. P. and J. T. Davis.

In connection with the terminal plans at Quebec a terminal is to be built from Lampson's cove to St. Malo, near the site of the shops. This tunnel will obviate the original plan of building a line along the already congested water front.

Tenders will be received by the Commissioners to Nov. 4 for the installation of an electric wiring system for the car shops at Transcona, Man. (Oct., pg. 479.)

Grand Trunk Pacific Railway Construction.

Collingwood Schreiber, General Consulting Engineer for the Dominion Government, completed an inspection of the line, Nov. 5, and in an interview at Winnipeg, is reported to have stated that from the present stage of progress he is of opinion that grading will be completed by the end of April, and that track laying will be completed, by the gangs working westerly and easterly, in the vicinity of Fort Fraser, B.C., by the end of next summer.

Press dispatches, Nov 12, state that it is expected that steel will be laid westerly into Fort George, B.C., early in December. A train service is being operated to Kidd, about 411 miles west of Edmonton, Alta., and it is expected that this will be extended into Fort George early in 1914. On the construction work coming east a train service is being operated from Prince Rupert to mileage 301, just east of Rose Lake, B.C., by the contractors, and the company is operating a regular train service to Smithers, 227 miles east of Prince Rupert. At Smithers, which is the divisional point between Prince Rupert and Fort George, a contract has been let for the laying out of the yard, which will necessitate the shifting of about 30,000 cubic yards of earth.

Grand Trunk Pacific Branch Lines.

The Board of Railway Commissioners has authorized the building of a double track branch from the main line at Empire Ave., Fort William, Ont., northward along what was formerly known as James St., and easterly along the city limits to Thunder Bay. The spur will be three miles long and will open up and serve a large industrial area as well as give the company access to the new government elevator.

The Board of Railway Commissioners has authorized the point of junction of the Brandon branch with the main line at Harte, Man., and a slight change in the location, about half a mile, on the line at the Brandon end. Construction is being carried on at the bridge at Brandon, but the grading is being held up owing to some right of way difficulties, which it is hoped to clear out of the way by Dec. 31.

The branch line from Regina to the International boundary, Sask., was opened for traffic, Nov. 10. Connection is made at Northgate, the boundary station, with the Great Northern Ry. branch from Niobe, N. D. The plans for the company's station at Regina have been submitted to the city council for approval. The estimated cost of the building, which will include a power house, laundry and train shed, is $1,000,000. It will have a ground area of about 8,000 square feet, at the corner of Albert St. and Sixteenth Ave., about half a block from the hotel. The building will be two stories high, the upper story being devoted to the company's divisional offices. Ross and McDonald are the architects.

An order was made, Nov. 4, by the Board of Railway Commissioners for the provision of temporary terminal facilities in Moose Jaw, Sask. Work was started, Nov. 11, on a short spur track, and the grading of land south of the track east of Main St., to provide the necessary facilities. It is said that negotiations are in progress with the Canadian Northern Ry. for the provision of a union station in the city. The Board of Railway Commissioners has authorized the opening for traffic of the line from Moose Jaw north westerly to Maver, Sask., 47.3 miles.

Surveys have recently been made to locate a site for the bridge across the South Saskatchewan River, over which the company's line from Young will enter Prince Albert, Sask. It was expected that track laying on the branch would be completed to the southern bank of the river by Nov. 30.

The Cutknife branch, extending from Battleford to Rossman, Sask., 33.6 miles, has been opened for traffic.

A train service has been put in operation over the Biggar-Calgary branch, as far as Loverna, 105 miles from Biggar, Sask. This branch will ultimately be extended to a junction with the Tofield-Calgary line in Alberta.

The Alberta Legislature has increased the guarantee voted in 1909 for the building of the line from Tofield to Calgary, from $13,000 to $15,000 a mile. No alteration has been made in the conditions upon which the guarantee was made. A train service has been in operation into Calgary since Sept. 29, a temporary station having been provided west of Twelfth St. East. The line has not been finally completed between Irricana and Calgary, but it is expected that the finishing up will be completed by the end of the year. The provision of permanent terminal facilities will be taken in hand early next year, it having been stated that the increased subsidy, which amounts to $420,000, was granted largely in order that these might be provided. (Oct., pg. 479.)

Railway Finance, Meetings, Etc.

Canadian Northern Ry.—A prospectus was issued in England, Oct. 31, by Lloyds Bank, Limited, offering for subscription £1,500,000 five per cent. land mortgage debentures due June 1, 1923, part of a total authorized issue limited to £3,500,000, the issue price being 95%. They are a direct obligation of the C.N.R., both as to principal and interest, and are secured by a trust deed constituting them a specific charge on the whole of the debenture stock and capital stock of the Canadian Northern Town Property, Ltd., and upon the C.N.R. Co.'s land grant and deferred payment on land already sold.

Canadian Northern Railway.—At the annual meeting in Toronto, Nov. 24, the report printed on pages 564 and 565 of this issue was adopted. The directors for the current year, who were re-elected, are as follows:—Sir Wm. Mackenzie, President; Sir Donald Mann, Vice President; Z. A. Lash, Senior Counsel; R. M. Horne-Payne, director representing company in Europe; Frederic Nicholls, Toronto.

Canadian Pacific Ry.—The New York Stock Exchange gave notice, Nov. 18, that a further $60,000,000 of common stock of the C. P. R. would be listed after Dec. 3 on official notice of issuance and payment in full. The common stock now listed in New York amounts to $260,000,000.

Central Vermont Ry.—The following officers were elected for the current year, at the recent annual meeting of the directors: Excutive committee, E. J. Chamberlin, E. C. Smith and E. H. Baker; Chairman, E. J. Chamberlin; President, E. C. Smith; Vice President, C. W. Witters; Treasurer and Clerk, W. H. Chaffee; Auditor, E. Deschenes, Jr.

Grand Trunk Ry.—It is announced that $2,500,000 4½% equipment trust notes have been sold to Blair and Co., New York. Part of this issue is offered in London, Eng., showing a yield of 5¼%.

London and Port Stanley Ry.—A special meeting of shareholders has been called to be held in London, Ont., Dec. 9, to lease the line to the City of London upon terms to be agreed. The line is practically owned by the city, and is at present leased to the Lake Erie and Detroit River Ry., the Canadian subsidiary of the Pere Marquette Rd. A bylaw has been approved by the citizens providing for the electrification of the line, on the termination of the present lease, which expires in a few months.

Temiscouata Ry.—A dividend of 1¼% has been declared on the provisional certificates in respect of profits earned during the year ended June 30, as compared with 1% for the previous year.

Net earnings for August, $5,849, against $7,086 for Aug., 1912. Aggregate for two months ended Aug. 31, $10,434 against $16,027 for same period 1912.

White Pass and Yukon Route.—Gross earnings from Jan. 1 to Oct. 14, $985,799, against $1,049,348 for same period 1912.

East End Incline Ry., Hamilton.—A landslide at this incline railway at Hamilton, Ont., Nov. 3, completely wrecked the line. The City Engineer proposed a plan for the reconstruction of the line, at a meeting of the Board of Control, Nov. 8, and the matter is being discussed with G. F. Webb, the owner of the old incline. The City Engineer has practically completed plans for the building of a new incline railway at Sherman Ave., at an estimated cost of $125,000. No definite action will be taken until the owners of the incline at Wentworth St. have decided what to do with their damaged property.

Victoria and Sidney Ry. Gas Electric Car 563

Railway Rolling Stock Notes.

The Intercolonial Ry. has received 10 box cars, 60,000 lbs. capacity from the Nova Scotia Car Works.

A press report from Moncton, N.B., states that it is probable that during the next few weeks some substantial orders for rolling stock for the Intercolonial Ry. will be placed.

The G.T.R. has received 20 Mikado type locomotives, nos. 550 to 569, from the Montreal Locomotive Works; 537 box cars from the Canadian Car and Foundry Co.; and 220 box cars from the Eastern Car Co.

The Dominion Dredging Co., St. Catharines, Ont., contractors on section 1 on the Welland Ship Canal, has ordered 3 six wheel switching locomotives from Montreal Locomotive Works.

The C.P.R., between Oct. 13 and 31, ordered the following rolling stock from its Angus Shops,—1 flanger, 1 superintendent's business car, 190 steel frame box cars, 3 refrigerator cars, 17 stock cars, 2 vans and 1 pile driver.

The Grand Trunk Pacific Ry. has received the following additions to rolling stock,—6 parlor cafe cars, nos. 3905 to 3910, and 10 first class cars, nos. 2054 to 2063, from Pullman Co.; and 10 second class cars, nos. 1021 to 1030, from Canadian Car and Foundry Co.

The C.P.R., between Oct. 13 and 31, received the following additions to rolling stock,—137 steel frame box cars, 14 vans and 4 class U3 locomotives, from its Angus Shops; 114 steel frame box cars from Canadian Car and Foundry Co.; 2 class D10 locomotives from Canadian Locomotive Co.; 1 class N3 locomotive from Canadian Allis-Chalmers Ltd., and 499 steel frame box cars from Barney and Smith Car Co.

The Canadian Northern Ry. between Oct. 14 and Nov. 13, received the following additions to rolling stock, 16 cabooses from its Winnipeg Shops; 75 steel ore cars from Nova Scotia Car Works; 30 stock cars, from Crossen Car Co.; 110 box cars and 15 steel underframe flat cars from National Steel Car Co.; 3 combination passenger cars from Preston Car and Coach Co.; 5 switching locomotives from Canadian Locomotive Co., and 3 consolidation locomotives from Canadian Allis-Chalmers Ltd.

With reference to the item in our last issue stating that the Pacific Great Eastern Ry. was in the market for locomotives and cars, we were officially advised, on Oct. 30, that the rolling stock to be purchased was, approximately, 4 locomotives, 45 box cars, 75 flat cars, 18 ballast cars, 3 refrigerator cars and 4 cabooses. A press report from Vancouver of Nov. 8, stated that D'Arcy Tate, Vice President, P.G.E.R., had announced that two locomotives had already arrived from the East and another two were on the way, and that other rolling stock had been ordered and would arrive in Vancouver.

Following are chief details of the consolidation locomotive which the Dominion Coal Co. is having built by the Montreal Locomotive Works, as mentioned in our last issue:—

Cylinders, diar. and stroke	21 by 26 ins.
Tractive power	39,000 lbs.
Factor of adhesion	4.1
Wheel base, driving	15 ft.
Wheel base, total	23 ft.
Wheel base, engine and tender	51 ft. 6½ ins.
Weight in working order	179,000 lbs.
Weight on drivers	160,000 lbs.
Weight on engine truck	19,000 lbs.
Weight, engine and tender	272,000 lbs.
Boiler, type	Straight top
Boiler, diar. first ring	72 ins.
Boiler, working pressure	200 lbs.
Firebox, length and width	96 by 72 ins.
Crown staying	Radial
Tubes, no. and diar.	368—2 ins.
Tubes, length	13 ft. 11 ins.
Heating surface, tubes	2,665 sq. ft.
Heating surface, firebox	150 sq. ft.
Heating surface, total	2,815 sq. ft.
Grate area	48 sq. ft.
Wheels, driving, diar.	50 ins.
Wheels, material—Driving, cast steel; others, cast iron	
Axles, engine truck journals	6 by 10 ins.
Wheels, engine truck, diar.	30 ins.
Wheels, tender, diar.	33 ins.
Axles, driving journals	9 by 12 ins.
Axles, tender truck journals	5 by 9 ins.
Journal boxes	Cast steel
Brake	Westinghouse American
Engine truck	Two wheel radial
Tank, type	U shape, sloping top
Capacity, water	4,000 U.S. galls.
Capacity, coal	8 tons

All Red Line Ry.—Application is being made to the Dominion Parliament to incorporate a company with this title to build a railway from near Cape St. Charles on the Atlantic coast, westerly north of lat. 52, to Lake Ashunipi, then southerly to the southern end of Lake Mistassini, and intersecting the projected Ottawa and Ungava Ry., thence crossing the Nottaway, and Harricanaw Rivers, to the Quebec-Ontario boundary, reaching the Albany River at Martin's Falls, then on westerly to the mouth of Lake Winnipeg, crossing the Dominion Government Railway to Hudson Bay at Cormorant Falls, Man., keeping north of Montreal Lake, Sask., and south of Lac de la Biche to Athabasca Landing, Alta., thence north of Lesser Slave Lake to Peace River Landing, then on to Parsnip River, and continuing via. Fort Fraser to a terminus at the head of Dean's Channel, on the Pacific Coast. Power is also being asked to build branch lines from Martin's Falls to Winnipeg, thence back to the main line near Moose Lake, Sask.; from the Peace River Valley to the Yukon Territory; and via. the Peribonka River Valley to Quebec City. J. K. Dowsley, Prescott, Ont., solicitor for applicants.

Forty Locomotives Converted to Burn Oil have been put in service this month on the C.P.R. between Vancouver and North Bend, B.C., 129.1 miles. The change has been made on passenger, freight and yard engines, and oil depots have been established at intervals along the subdivision. The work of converting locomotives for oil consumption is now under way for the entire British Columbia division between Vancouver and Field, 510.1 miles, it is reported, and the new fuel will be in use at an early date. East of Field the use of coal will be continued. Crude petroleum from California is worth about $1 per 42 gal. barrel in Vancouver, and it is estimated that coal costs the railway about $3 a ton. The use of oil fuel removes the necessity for maintaining a fire patrol along the railway, which is required of coal burning roads by provincial statute.

Dominion Railway Subsidy Agreement.—The Dominion Government has entered into an agreement with the Lake Erie and Northern Ry. under the act granting aid for the construction of railways, in respect of a line from Galt to Port Dover, Ont., not exceeding 58 miles.

The G.T. Pacific Ry. machinists and boiler makers have applied to the Minister of Labor for the appointment of a conciliation board to enquire into their application for higher rates of wages and improved working conditions, and have named J. T. Murray as their representative. It is understood that a complete board will be appointed.

The arbitration board appointed to deal with a new schedule between the C.P.R. and its maintenance of way employes, consists of Chief Justice R. M. Meredith, of the Court of Common Pleas of Ontario, Chairman; Wallace Nesbitt, K.C., for the C.P.R., and H. Irwin, Portage la Prairie, Man., for the employes.

Mainly About Transportation People.

R. B. ANGUS, director, C.P.R., has resigned the presidency of the Bank of Montreal.

Mrs. Peart, wife of J. W. PEART, agent, G.T.R. and Wabash Rd., St. Thomas, Ont., died there, Nov. 5.

J. K. L. ROSS has been elected a director of the Canadian General Electric Co., in place of his father, the late James Ross.

J. J. H. RENSHAW, agent, G.T.R., Blair, Ont., was found dead in the station there, Nov. 4, as the result of drinking carbolic acid.

SIR WILLIAM VAN HORNE, K.C.M.G., addressed the Canadian Club, Toronto, on the public's attitude towards railways, Nov. 17.

Mrs. G. R. Pattullo, who died at Woodstock, Ont., Oct. 31, was a sister of W. H. BIGGAR, K. C., General Counsel, G. T. R., Montreal.

W. D. REID, President, Reid Newfoundland Co., who has been suffering from congestion of the lungs and bronchitis, is reported to be convalescing.

A statue, 9 ft. high, of LORD MOUNT STEPHEN, first President of the C.P.R., has been placed in the new waiting room of Windsor St. station, Montreal.

FRANK D. LYMAN, Manager, Railway Supply Department, John Millen & Son, Ltd., Montreal, was married at Bridgeport, Conn., recently, to Miss E. S. Wilson.

A. S. MAYNARD, Commissary Agent, Sleeping, Dining and Parlor Cars and News Department, C.P.R., Montreal, is reported to have resigned to enter private business.

J. A. TWOHEY, an attorney, of Washington, D.C., who has acted in Interstate Commerce Commission cases, for the C.P.R., committed suicide in an hotel at Ottawa, Ont., Nov. 21.

Mrs. Tiffin, wife of E. TIFFIN, General Western Agent, Canadian Government Railways, Toronto, returned, Nov. 4, from England and Ireland, where she spent some months.

The engagement of Miss M. P. Wainwright, daughter of W. WAINWRIGHT, Vice President, G.T.R. and G.T. Pacific Ry., Montreal, to R. D. Bell, Staten Island, N.Y., is announced.

Mrs. Baker, wife of W. R. BAKER, Secretary, C.P.R., and Assistant to the President, sailed from New York early in November for Europe, to spend the winter in Italy and the south of France.

W. G. CHACE, M. Can. Soc. C. E., of Kerry & Chace, Ltd., Consulting Engineers, Toronto, has been appointed Chief Engineer for the construction of the Greater Winnipeg water supply system.

J. G. KERR, a G.T.R. dispatcher at London, Ont., was run over by a train and instantly killed, near Lobo, Ont., Nov. 10. He was repairing some telegraph lines which had been blown down.

W. E. MULLINS, General Manager, United Fruit Co., of Costa Rica, with jurisdiction over the company's railway system, and formerly in G.T.R. service in Canada, visited his old home in London, Ont., recently.

C. M. PIKE of the Audit Department, Canadian Northern Quebec Ry., Quebec, was presented with a travelling bag by a number of the local staff, on his leaving the service for a position in the Provincial Crown Lands Department.

W. C. CHISHOLM, K.C., formerly of Toronto, who was appointed some months ago General Solicitor of the G.T.R. with headquarters at Montreal, has taken up his residence, with his wife and family, at 35 Aberdeen Ave., Westmount.

ALEX. JEFFREY, who died at Montreal, Oct. 30, aged 78, was a well known contractor, having in addition to a number of works in connection with the Lachine Canal, built the Mount Royal Incline Railway, as well as the cars used thereon.

JOHN PRICE, who died at Toronto, Nov. 7, aged 82, was for many years in the G.T.R. Baggage Department, retiring from the service about 20 years ago. He was father of A. Price, Assistant General Manager, Eastern Lines, C.P.R., Montreal.

T. C. KEEFER, C. M. G., Honorary Member Canadian Society of Civil Engineers, Honorary Member of the Institute of Civil Engineers (Eng.), and a past President of the American Society of Civil Engineers, has been elected an Honorary Member of the latter society.

G. A. Montgomery,
General Superintendent, Algoma Central and Hudson Bay Ry., and Algoma Eastern Ry.

The estate of the late ROBERT REFORD, of the Robert Reford Co., steamship agents, etc., who died at Montreal recently, has been valued for probate at $2,912,486. With the exception of some charitable bequests, the estate is divided amongst the widow and children.

SIR THOMAS TAIT, President, Fredericton and Grand Lake Coal and Ry. Co., addressed the Canadian Club at Montreal, Nov. 10, on a number of questions relating to the Empire, and gave experiences of his stay in Australia, where he was for some time Chairman of the Victorian Railway Commission.

A. R. HOWARD, General Yardmaster, C. P.R., Vancouver, B.C., who was recently accidentally shot whilst on a hunting trip, was born July 25, 1881, and from 1904 to Oct. 1911, was in C.P.R. service at Vancouver, B.C., as yard man, yard foreman and Yardmaster, and since the latter date, as General Yardmaster.

ALEXANDER HILTON, who has recently been appointed Passenger Traffic Manager, St. Louis and San Francisco Rd., St. Louis, Mo., was born at Hamilton, Ont., and entered railway service in 1878, as clerk on the Great Western Ry., now a portion of the G. T. R. Since 1880 all his railway service has been in the United States.

Mrs. Chipman, wife of C. C. CHIPMAN, who was for some 20 years prior to 1912, Commissioner, Hudson's Bay Co., at Winnipeg, died at London, Eng., Oct. 26 Since Mr. Chipman's retirement from active service, he has made his home in England. With Mrs. Chipman, he was in Canada recently, and only returned to England three weeks before her death.

J. W. STEWART, railway contractor of Foley, Welch and Stewart, Vancouver, B.C., is reported to have purchased a large tract of land in Sutherlandshire, Scotland, from the Duke of Sutherland. Mr. Stewart already holds a considerable quantity of property at Assyut, in that county, where he was born, and the present purchase practically doubles his holding.

A. C. BRADY, Assistant Superintendent, Montreal Terminals, C.P.R., who died at Montreal, Nov. 20, was born there Nov. 18, 1875, and entered C.P.R. service in 1889. He had been successively, agent at Farnham, Que., Magog, Que., Newport, R.I., and Outremont, Que., and Inspector of Montreal Terminals. He was the only son of F. P. Brady, General Superintendent, Canadian Government Railways, Moncton, N.B.

AUBREY CECIL BAKER, who has been appointed Inspector of Stations, Trains and Train Dispatching, Canadian Government Railways, Moncton, N.B., was born at Lacadie, Que., Aug. 5, 1878, and entered railway service, Oct. 1, 1895, since when he has been, to Apr. 1900, agent and operator, at various points, Eastern Division, C.P.R.; May 1900 to Oct. 1913, dispatcher and Chief Dispatcher, consecutively, Lake Superior Division, C.P.R., Chapleau, Ont.

THOMAS WILLIAM HENNESSY, whose appointment as District Master Mechanic, District 2, Intercolonial Ry., Campbellton, N.B., was announced in our last issue, was born at Truro, N.S., Nov. 22, 1862, and entered I.R.C. service Nov. 22, 1882, since when he has been, to Feb. 28, 1888, fireman at Truro, N.S.; Feb. 28, 1888 to Dec. 29, 1902, locomotive driver at Truro; Dec. 29, 1902 to Apr. 9, 1904, Mechanical Foreman, Truro; Apr. 9, 1904 to Sept. 30, 1913, locomotive driver, Truro.

PERCY G. GALBRAITH, whose appointment as Inspector of Telegraphs, Ontario Division, C. P. R., Toronto, was announced in our last issue, was born at Toronto, Aug. 2, 1879, and entered C.P.R. telegraph service, July 19, 1892, since when he has been, to Dec. 1, 1899, consecutively, messenger, collector, clerk and relief operator, Toronto; Dec. 1, 1899, to May 1, 1905, clerk and stenographer, Superintendent's office, Toronto; May 1, 1905, to Oct. 1, 1913, chief clerk to Superintendent, Toronto.

F. B. TAPLEY, who has been appointed Assistant Engineer Maintenance of Way, Eastern Lines, C.P.R., Montreal, was born at St. John, N.B., Oct. 17, 1876, and entered C.P.R. service, July, 1903, since when he has been, to Apr., 1905, rodman, St. John N.B.; Apr., 1905 to Apr., 1907, transit man, St. John, N.B.; Apr., 1907, to July, 1908, acting Resident Engineer, Belleville Jct., Ont.; July, 1908, to Dec., 1911, Resident Engineer, Belleville Jct., Ont.; Dec., 1911 to Oct., 1913, Resident Engineer, London, Ont.

GEOFFREY S. ANDREWS, who has been appointed Agent, Sleeping and Dining Cars, Canadian Northern Ry., Duluth, Minn., was born at Montreal, Apr. 5, 1890, and entered transportation service, Jan., 1909, since when he has been, to 1910, sleeping and dining car storekeeper, C.P.R., Fort William, Ont.; 1911, assistant chief clerk to dining car department, C.P.R., Winnipeg; 1912 to 1913, dining car conductor, G.T. Pacific Ry., Winnipeg; Oct. 1 to Nov. 1, 1913, Inspector, Sleeping and Dining Cars, Canadian Northern Ry., Winnipeg.

DAVID PATTERSON, who has been appointed Superintendent, Union Stock Yards, St. Boniface, Man., was born at Waldemar, Ont., Sept. 13, 1870, and entered transportation service, June 1, 1887, since when he has been, to Sept., 1894, telegraph operator and ticket agent, C.P.R., Toronto; Sept., 1894, to May, 1896, agent, C.P.R., Caledon, Ont.; May, 1896, to Dec., 1901, agent, C.P.R., Woodbridge, Ont.; Jan., 1902, to Dec., 1906, agent, Brampton, Ont.; Dec., 1906, to July, 1912, agent, Woodstock, Ont.; July, 1912, to Nov., 1913, agent, C.P.R. Stock Yards, Winnipeg.

The Toronto Mail and Empire recently stated that "there is no foundation for the report that CHARLES MURPHY, Superintendent, C.P.R., Toronto, has been or is to be appointed to the Railway Commission. No vacancy exists on that body, nor has Mr. Murphy been appointed to its staff." It might also have added, "nor is he Superintendent, C.P.R., Toronto." He is General Superintendent, Manitoba Division, C.P.R., Winnipeg, and was Superintendent, District 2, Ontario Division, Toronto, about six years ago, and has held several different positions in the interval.

J. D. McAULEY, who has been appointed City Freight Agent, G.T. Pacific Ry., Vancouver, B.C., was born at Plantagenet, Ont., June 11, 1884, and entered railway service, Oct. 1, 1903, since when he has been, to Aug. 1, 1908, in the local Freight Department, Bonaventure Station, G.T.R., Montreal; Aug. 1, 1908, to May 1, 1910, in Freight Claims Agent's Office, same road, Montreal; May 1, 1910, to May 1, 1911, Inspector, Canadian Freight Association; May 1, 1911, to July 1, 1913, in General Foreign Freight Agent's Office, G.T.R., Montreal; July 1, to Sept. 1, 1913, Soliciting Freight Agent, G.T. Pacific Ry., Montreal.

GEORGE EDWARD SMART, whose appointment as Master Car Builder, Intercolonial Ry., Moncton, N. B., was announced in our last issue, was born at Edinburgh, Scotland, Dec. 23, 1873, and entered railway service in 1892, since when he has been, to 1897, in various positions in car shops, G. T. R., Montreal; 1897 to 1904, Car Inspector, G.T.R., Montreal; 1904 to 1906; General Inspector, Heating and Lighting, Eastern Lines, C.P.R., Montreal; 1906 to 1909, General Car Inspector, Eastern Lines, C.P.R., Montreal; 1909 to Sept. 30, 1913, Division Car Foreman, Eastern Division, C. P. R., Montreal.

H. R. NAYLOR, whose appointment as Division Car Foreman, Eastern Division, C.P.R., Montreal, was announced in our last issue, was born at Hull, Eng., Aug. 30, 1885, and educated at the Municipal Technical School, there. He served an apprenticeship in the North Eastern Ry. shops at Hull, and came to Canada in 1907, since when he has been, from Dec., 1907, to Feb., 1909, pattern maker, Angus Shops, Montreal; Feb., 1909, to Mar., 1911, draughtsman, Angus Shops, C.P.R., Montreal; Mar., 1911, to Apr., 1912, Steam Heat Inspector, Eastern Lines, C.P.R., Montreal; Apr., 1912, to Oct., 1913, General Car Foreman, Passenger Car Shops, Toronto.

A. J. RODGERS, for 12 years Superintendent of the Carborundum Co.'s plant at Niagara Falls, N. Y., who died there recently, as a result of an accident, was born in Albany, N.Y., in 1872. Previous to going to the Carborundum Co., he was Superintendent of the Eddy Electrical Co. of Hartford, Conn. He was a member of the American Chemical Society, Engineers' Society of New York, Chemists Club, Niagara Club, University Club and Country Club of Niagara Falls, and several other scientific and social organizations. His funeral was attended by several hundred members of the Carborundum Co., members of the clubs mentioned at Niagara, and other friends.

W. D. GROSSET, whose appointment as Agent, C.P.R., Antwerp, Belgium, was announced in our last issue, was born at Glasgow, Scotland, and was for many years in C.P.R. service there, and also with J. J. Roxburgh and Co., ship owners and brokers. In 1906 he was appointed chief assistant to Allan Cameron, then General Traffic Agent, C.P.R., London, Eng., and now Superintendent, Land Branch, Department of Natural Resources, C.P.R., Calgary, Alta.; he continued in the same position on the appointment of G. McL. Brown as General Traffic Agent, London, Eng., and on Mr. Brown's appointment as European Manager on the death of Archer Baker in 1910, he became chief assistant to the European Manager.

R. N. Young,
Superintendent of Telegraphs, Alberta Division,
Canadian Pacific Ry.

R. NELLES YOUNG, whose appointment as Superintendent of Telegraphs, Alberta Division, C. P. R., Calgary, was announced in our last issue, was born at Cayuga, Ont., Sept. 4, 1870, and entered transportation service, Oct. 1889, since when he has been, to Oct. 1890, telegrapher, Michigan Central Rd., between St. Thomas, Ont., and Buffalo, N.Y.; Nov., 1890, to Nov., 1902, operator and dispatcher, Western Lines, C.P.R.; Nov., 1902, to Nov., 1903, Circuit Manager, Pacific Division, C.P.R.; Nov., 1903, to Mar., 1907, Inspector of Telegraphs, Central Division, C.P.R.; Mar., 1907, to July, 1910, Assistant Superintendent of Telegraphs, C. P. R., Winnipeg; July, 1910, to Aug., 1913, Superintendent of Telegraphs, Saskatchewan Division, C. P. R.

ALBERT E. LOCK, who has been appointed Commercial Agent, Toronto, Hamilton and Buffalo Ry., Hamilton, Ont., was born at Albany, N.Y., July 14, 1879, and entered railway service, Dec. 1, 1896, since when he has been, to Sept. 1, 1897, telegraph operator and relief agent at various points, Lehigh Valley Rd.; Sept. 1, 1897, to July 1, 1902, tower man, telegraph operator, relief agent, ticket clerk, assistant agent, etc., Mohawk and Adirondack Divisions, New York Central and Hudson River Rd.; July 1, 1902, to Aug. 15, 1903, City Ticket Agent, same road, Lake Placid, N.Y.; Aug. 15, 1903, to Sept. 15, 1904, Travelling Passenger Agent, New York Central Lines, Saranac Lake, N.Y.; Sept. 15, 1904, to Nov. 1, 1913, Travelling Passenger Agent, New York Central Lines, Montreal.

JAMES MELVILLE ROBERTSON, Assoc. M. Inst. C.E., Assoc. M. Can. Soc. C.E., who was accidentally killed by the discharge of a rifle at Sylvan Lake, Alta., Canada, a short time ago, was 27 years old and the only son of Jas. Robertson, of Bonneybridge, Stirlingshire, Scotland. He received his earlier education and training for engineering in Glasgow. He was a graduate of the Glasgow West of Scotland Technical College, and afterward a pupil of Wharrie & Colledge, civil engineers, Glasgow. His experience subsequently had been principally on Canadian railways, and at the time of his death was Resident Engineer on the construction of part of the Alberta Central Ry. (a subsidiary of the C.P.R.), which included the building of the large bridge across the North Saskatchewan River at Rocky Mountain House, Alta.

T. McNEIL, whose appointment as Agent, C.P.R., Liverpool, Eng., was announced in our last issue, entered transportation service Aug. 22, 1892, and to Nov. 19, 1897, served as apprentice and junior chartering clerk, Walter Runciman and Co., Newcastle upon Tyne, Eng.; Nov. 22, 1897 to 1900, in service of Elder Dempster and Co., Liverpool, Eng., and in 1900, he succeeded the late F. W. Forster, whom he has now succeeded in the C.P.R. service, as Manager of the Freight Department, Beaver Line, which had been acquired by Elder, Dempster Co., in which position he continued until Apr. 1903, when he resigned, and was, from Apr. 1903 to Sept. 1, 1910, Manager, Freight Department, Manchester Liners Ltd., and from Sept. 1, 1910 to Oct. 1913, Agent, C.P. R., Antwerp, Belgium. In addition to being Agent for the C.P.R. at Liverpool, he is Agent for the Dominion Express Co. there.

JAMES M. MACARTHUR, who has been appointed Trainmaster, District 1, Alberta Division, C.P.R., Medicine Hat, was born at Toronto, Dec. 8, 1885, and entered C.P.R. service July 16, 1902, since when he has been, to Sept. 30, 1902, stenographer, Division Engineer's Office, Toronto; Oct. 1, 1902 to Mar. 1, 1903, stenographer, Chief Dispatcher's Office, Toronto; Mar. 1 to June 30, 1903, secretary to Superintendent, Moose Jaw, Sask.; July 1, 1903 to Aug. 8, 1907, chief clerk to Terminal Superintendent, Toronto; Aug. 9, 1907 to Aug. 1, 1909, clerk, General Superintendent's Office, Toronto; Aug. 1, 1909 to Aug. 1, 1910, assistant chief clerk, Vice President's Office, Winnipeg; Aug. 1, 1910 to Oct. 1, 1911, chief clerk, Vice President's Office, Winnipeg; Oct. 1, 1911 to Feb. 21, 1912, assistant chief clerk, Vice President and General Manager's Office, Winnipeg; Feb. 22, 1912 to Oct. 2, 1913, chief clerk to General Superintendent, Manitoba Division, Winnipeg; Oct. 3 to Oct. 28, 1913, acting Trainmaster, District 1, Alberta Division, Medicine Hat.

GEORGE A. MONTGOMERY, whose appointment as General Superintendent, Algoma Central and Hudson Bay Ry., and Algoma Eastern Ry., Sault Ste. Marie, Ont., was announced in our last issue, was born at Bradford, Ont., Feb. 11, 1871, and entered railway service, Sept. 1, 1886, since when he has been, to Sept., 1887, assistant to agent, Northern Ry., Newmarket, Ont.; Sept., 1887, to Mar., 1889, agent, G.T.R., Powassan, Ont.; Mar. 1889 to Mar 1890, freight clerk, C. P. R., North Bay, Ont.; Mar., 1890, to June, 1893, chief clerk, Freight Department, C. P. R., Sudbury, Ont.; June to Aug. 31, 1893, relieving agent, C. P. R., North Bay, Ont; Aug. 31, 1893, to June, 1900, chief clerk to Superintendent, District 1, Lake Superior Division, C. P. R., North Bay, Ont.; June, 1900, to Aug. 28, 1902, chief clerk to General Superintendent, Algoma Central and Hudson Bay Ry., Sault Ste. Marie, Ont.; Aug. 28, 1902, to Aug. 15,1910, Superintendent, Algoma Eastern Ry., Sudbury, Ont.; Aug. 15, 1910, to Mar. 1, 1911, Superintendent, A. C. & H. B. R., Michipicoten Harbor, Ont.; Mar. 1, 1911, to Oct. 15, 1913, Superintendent, A. C. & H. B. R. and A. E. R., Sault Ste. Marie, Ont.

W. C. BROWN, President, New York Central Lines, New York, has resigned on account of defective hearing. He was born in Herkimer County, N.Y., in 1853, and commenced railway work at the age of 16, as a section hand and fireman on the Chicago, Milwaukee and St. Paul Ry., during which period he learnt telegraphy and was made an operator. After two years he transferred to the Illinois Central Rd. as dispatcher, and later served in a similar capacity on the Chicago, Rock Island and Pacific Rd., and the Chicago, Burlington and Quincy Rd. In 1880 he was Chief Dispatcher on the latter road, and in 1881, Trainmaster; 1884, Assistant Superintendent; 1887, Superintendent; 1890, General Manager, Hannibal and St. Joseph and Kansas City, St. Joseph and Council Bluffs Rds., both parts of the Burlington System. In 1891 he was also appointed General Manager, Chicago, Burlington and Kansas City, and St. Louis, Keokuk and Northwestern Rds., and in 1896, General Manager, Chicago, Burlington and Quincy Rd. In July, 1901, he was appointed Vice President and General Manager, Lake Shore and Michigan Southern Ry., and was later given direct charge of that road. Shortly after his appointment as Vice President and General Manager, L.S. & M.S. Rd., he was also appointed Vice President, New York Central and Hudson River Rd., and later his jurisdicton was extended over the New York Central Lines, and in 1909 he was appointed President.

PETER ALEXANDER PETERSON, who died at Montreal, Nov. 21, after a long illness, was born at Niagara Falls, Ont., Nov. 8, 1839, and educated at the University of Toronto. He entered engineering service in 1859 as an articled pupil with T. C. Keefer, Hon. M. Can. Soc. C.E., and remained with him as student and assistant until May, 1867, during which time he was engaged on the Hamilton and Port Dover Ry., Hamilton waterworks, a survey for a Georgian Bay canal, and on dam construction on the Grand River at Paris and Brantford, Ont., and also carrying on a general consulting engineer's business in Toronto. In 1867 he was engaged on the Great Western Ry., now a part of the G.T.R.; from 1867 to 1869, Resident Engineer, New York, Oswego and Midland Ry.; 1869 to 1872, Division Engineer, Bathurst Division, Intercolonial Ry.; 1872 to Sept., 1875, Chief Engineer, Toronto waterworks; 1875 to Oct., 1881, Chief Engineer of lines between Quebec and Montreal, and Montreal and Ottawa, built by the Quebec Government, and now part of the C.P.R.; 1881 to 1890, Chief Engineer, Eastern and Ontario Divisions, C.P.R., including the construction of the bridge across the St. Lawrence River, at Lachine, Que., which has just been rebuilt as a double track bridge; 1890 to Feb., 1902, Chief Engineer, C.P.R. On his retirement he was given the honorary title of Consulting Engineer, and later acted as Chief Engineer of the Guelph and Goderich Branch, which was completed in 1908, since when ill health has kept him from any active work. He was a Member of the Canadian Society of Civil Engineers, from 1887, a councillor in 1887-88-90-91; a Vice President in 1889-1892 and 1893, and President in 1894. He was also a Member of the Institute of Civil Engineers (Eng.), and a Member of the American Society of Civil Engineers, of which he was a Vice President in 1896.

Grand Trunk Railway Betterments, Construction, Etc.

Southern New England Ry.—J. S. Murdoch, Vice President, informed the Providence, R.I., City Council, Nov. 13, that the bridge at Elmwood Ave., which was left unfinished when construction was stopped on the line in 1912, will shortly be completed.

Work has been resumed on the grading of the line between Palmer, Mass., and the Rhode Island boundary, according to official advices received, and a recent statement credited to E. J. Chamberlin, President, G.T.R., is to the effect that financial arrangements have been made for the grading of the line through Massachusetts.

Lachine, Jacques Cartier and Maisonneuve Ry.—Application is being made to the Dominion Parliament for an extension of time for the building of the line authorized by sec. 1, chap. 104, statutes of 1911. One of the matters, and probably the main one now unsettled, is the purchasing of the right of way. The Smythe estate, part of which is being acquired, is taking the matter to court, the difference in valuation being considerable. The price offered by the company works out at 17 cents a square foot, while the owners ask $1.25 a square foot.

Track Elevation in Montreal.—The City Engineer of Montreal has submitted an estimate to the Board of Railway Commissioners showing that the proposed elevation of the G.T.R. tracks in the city could be carried out for $5,500,000. The cost of the work between Bonaventure Station and Point St. Charles, as estimated by the G. T.R. engineers, is $5,760,000. It is expected that the Board will shortly reach a conclusion on the matter, and decide the proportion which shall be paid by the city. The city has already power to contribute $2,000,000 to the cost, but the company asks that this be raised to $2,800,000, on account of the great increase in the cost of material and labor since it was decided upon.

E. J. Chamberlin, in a recent interview, referring to the matter, said it was doubtful if the track elevation at Montreal and the building of a new station which was involved, could be carried out at the same time as the building of the viaduct and the provision of a new union station at Toronto. There would be too much dislocation of traffic, even if the money for the two works was available.

St. Catharines' Freight Sheds. — The freight sheds just west of the station at St. Catharines, Ont., were destroyed by fire, Nov. 3, the loss being estimated at $50,000.

The Detroit and Huron Ry. extends from Cass City to Bad Axe., Mich., 18.25 miles. It was completed during this year, we are officially advised, by the D. and H. Ry. Co., a subsidiary of the G.T.R. The construction was light, the country through which the line runs is a typical farming one, and is especially adapted for the cultivation of sugar beets and beans. The contractors started work in Aug., 1912, a train service was put in operation, Sept. 9, 1913, and construction was finally completed Oct. 15. (Oct., pg. 480.)

Dominion Government Railway to Hudson Bay.

According to an interview with J. D. McArthur, general contractor for this line, at Ottawa, Nov. 5, grading has been completed for 150 miles from Pas, Man., and it is expected to have track laid for 130 miles by Dec. 31. Grading from mileage 150 to Thicket Portage, mileage 200, is practically completed. Track laying had been delayed on account of the delay in getting steel in. Supplies and construction material are being got in to the construction camps, and it is expected, provided there is no shortage of labor, to have the grading finished to Fort Nelson by the end of 1914.

Work was started Oct. 31, at Pas, in laying out the terminals for the line, and on the section of line which will connect the Canadian Northern Ry. with the government line. It is expected that everything will be completed this year or that construction of the locomotive house and other buildings can be gone on with early in the spring.

L. G. Denis, a hydro-electric engineer, recently reported to the Dominion Government that he had completed surveys of the water powers along, and in the vicinity of the route of the line. While there are many water powers, economic conditions of development are not at present practicable. To be profitably developed there should be a continuous market for the power, and in view of the economic potentialities of the district, he does not see any prospect of such a market being developed. The cost of developing power at such points as would be necessary for the operation of the line by electricity would be such that it would not pay.

The Grain Growers' Grain Co.'s annual meeting was held in Winnipeg, Nov. 11. The report for the year showed a net profit of $170,000, after paying a loss of $30,000 on the operation of the Manitoba Government elevators for the season. The company's paid up capital is $645,000, the net profits showing more than 25%. Dividends of 10% have been paid for the year. The total amount of business handled exceeded $50,000,000. The President announced that the Manitoba Government had cancelled the company's lease of the elevators as from Aug., 1914.

The Morrison Construction Co., Ltd., has been incorporated under the Dominion Companies Act, with $100,000 capital and office at Ottawa, Ont., to carry on a general contracting business, including the construction of railways, tramways, harbors, shipping places, wharves, etc. K. A. Morrison, who has been awarded the contract for the diversion of the Intercolonial Ry. between Nelson and Derby Jct., N.B., is chiefly interested in the company.

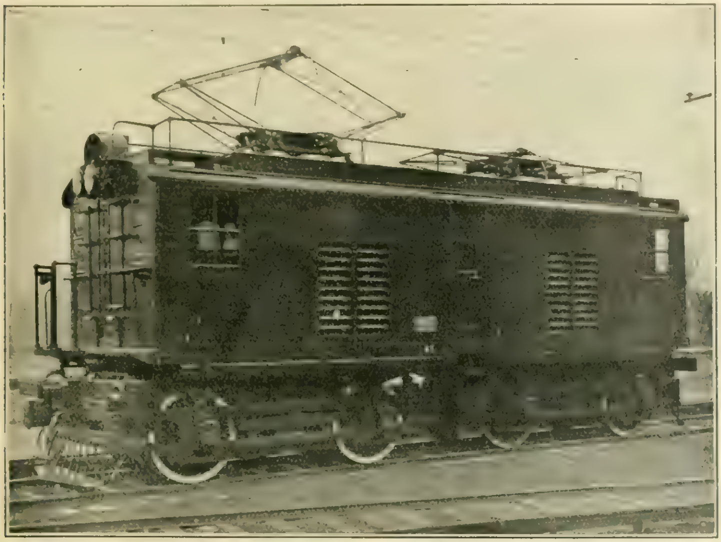
Jones, Girouord and Co., Ltd., has been incorporated under the Ontario Companies Act, with $50,000 capital and office at Ottawa, to carry on a general contractors' business. A. M. Jones and E. C. Girouord, two of the incorporators, have a contract on C.P.R. second track work between Islington and Guelph Jct., Ont., and have done other railway contracting work.

The National Association of Purchasing Agents has been organized in New York with the object of collecting and disseminating ideas and information amongst purchasing agents. E. B. Hendricks, P. O. Box 1406, New York, is temporary secretary.

J. H. Tromenhauser Co., Ltd., has been incorporated under the Dominion Companies Act, with $100,000 capital and offices at Toronto, to carry on the business of engineers and general contractors.

Electric Locomotives for Mount Royal Tunnel, Canadian Northern Railway.

Some general information in regard to the principal electrification features of the Mount Royal Tunnel, Montreal, supplied by W. C. Lancaster, Electrical and Mechanical Engineer, Canadian Northern Montreal Tunnel and Terminal Co., was published in Canadian Railway and Marine World for November. The following fuller details in regard to the electric locomotives, six of which have been ordered, has since been received. As before stated they will be designed for an operating potential of 2,400 volts direct current, with vertical trolley construction. Two of them, operated and controlled as a single unit, will have ample capacity and suitable speed requirements for handling the heavy transcontinental passenger trains—1,130 tons trailing load—within the Montreal terminal zone. A single locomotive will successfully handle the freight trains—1,000 tons trailing—and the local passenger service—550 tons trailing.



Electric Locomotive of Similar Type to those ordered for Mount Royal Tunnel.

The general type of locomotives to be used is that known as the box cab articulated running gear. The estimated weight of the complete locomotive is 83 tons. The locomotive will have four axles, with all of the weight of the locomotive upon the eight driving wheels, thus securing the maximum adhesive weight on drivers. The running gear will consist of two four wheel trucks, articulated together by a heavy hinge. The equalization of the trucks will be accomplished by a heavy locomotive type semi elliptic leaf spring, over each journal box, connected through spring hangers to the frame and to the equalizer bars. Practically a three point suspension will thus be supplied through the side equalization of one of the trucks and both side and cross equalization of the other truck. With friction draft gear mounted in the end frame casting of the truck, this type of construction will, it is claimed, restrict the hauling and buffing stresses to the truck side frame and articulated joint, instead of through the cab centre plate, thus relieving the cab and apparatus from the effect of severe shocks.

Both the box cab and platform will be built of plates, sheets, angles and heavy channels, and will be thoroughly reinforced throughout. The box cab will be divided into three compartments; the apparatus compartment in the centre and the two operators' compartments at the ends. Each operator's compartment will have a full complement of apparatus, consisting of controller, control switches, meter, air brake control apparatus, air gauges, pantagraph control and heaters, thus providing the locomotive with a complete double end control. All apparatus subject to 2,400 volt potential will be located in the centre apparatus compartment and screened to protect against accidental contact. The location and general arrangement of this apparatus will be such as to provide easy access from all sides for inspection, cleaning and repairs.

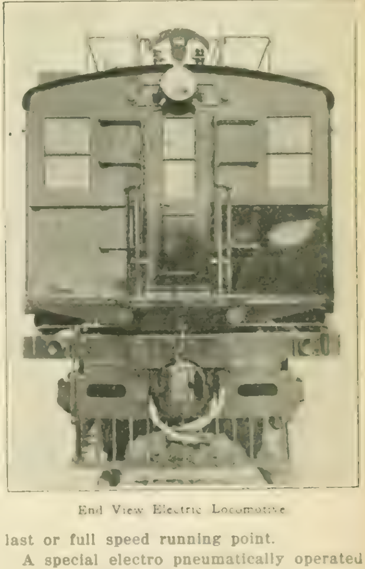
The Sprague-General Electric type M multiple unit double end control equipment is proposed for the locomotives, all the control points being proportioned and adjusted so as to secure a smooth and even acceleration, at all times, corresponding to a current consumption near the slipping point of the wheels. The transition between series and series-parallel will be effected by a special electro pneumatically operated changeover switch and the motor fields will always be on the ground side of the armature.

A motor generator set will supply 125 volt energy for the operation of the control and a 2,400 volt air compressor of 100 cubic feet free air piston displacement will be provided as part of the air brake equipment. Two air operated roller pantagraphs and a properly insulated bus line will be located upon the roof. The bus line will supply power to two or more units from the pantagraphs of any of these units.

The motor equipment will consist of four C.G.E. 229 commutating pole type motors wound for 1,200 volts and insulated for 2,400 volts, so that two may be connected permanently in series and operated on a 2,400 volt circuit. These motors will be geared to the axles through twin gears, there being one pinion on each end of the armature shaft. These motors are especially designed for locomotive service and will be provided with forced ventilation by a blower located in the apparatus compartment. The locomotives will be geared for a free running speed on tangent, level track of approximately [illegible] miles an hour and will be operated as two speed machines with ten points in series and nine points series parallel.

The air brake equipment will be the straight air and automatic type, so as to combine the desirable features for train operation through an equalizing reservoir and the independent operation of the brakes upon the locomotive. Provision will be made for the multiple operation of the compressors upon all locomotives when operating in multiple, so as to distribute the duty upon all the compressors in the train.

The motors will be operated in series and series-parallel by the Sprague-General Electric type M two speed control. The external regulating resistance will be divided into two parts, each part being directly connected to a pair of motors permanently connected in series. The two pairs of motors, with their resistances, will all be connected in series on the first point of the control, the resistance being varied through the first nine points on the controller and finally short circuited on the tenth, or running point. The two pairs of motors will then be similarly operated in series parallel and all resistances cut out on the last or full speed running point.



End View Electric Locomotive

A special electro pneumatically operated changeover switch will be used, to make the transition between series and series parallel so that there will be no appreciable reduction in tractive effort during the change. A smooth transition between all points, both rheostatic and transitional, will insure motor operation close to the slipping point of the wheels and a steady, gradual acceleration at all times.

The motors will have sufficient capacity to slip the wheels, the slipping point serving as a current limit to prevent overload

[illegible]

[illegible]

[illegible]

Provision will be made for automatically opening the control circuit and cutting off all power from the locomotive, in case the engine driver overruns a signal set against him. At the same time a special valve will be opened which will set the emergency air brake.

Following are the approximate general dimensions of the locomotives: Length [illegible] over all, 10 ft.; total wheelbase, 26 ft.; rigid [illegible] ins.; minimum radius of curvature, 150 ft.

The locomotives, as well as the rest of the electrical equipment, have been ordered from the Canadian General Electric Co.

The illustrations on this page are of a locomotive built for the Butte, Anaconda and Pacific Ry., and we are advised that the ones for the Mount Royal Tunnel will be precisely similar.

Canadian Northern Railway Construction, Betterments, Etc.

Canadian Northern Montreal Tunnel and [illegible] pleted Dec. 15. A contract for the electrification [illegible] lines has been let to the Canadian General [illegible]

[illegible] has authorized the making [illegible] Nov. 10, is [illegible]

Montreal-Ottawa-Port Arthur Line.—[illegible]

[illegible]

[illegible]

[illegible] with press reports to the effect that the company proposed to erect a car repairing plant at Port Arthur, Ont., at a cost of $30,000, we are officially advised that it is not contemplated to do so.

It was reported in Port Arthur, Nov. 10, that the company has for some time past [illegible] section of the old Port Arthur and Duluth Ry., from Stanley to the International boundary. A large number of new ties are said to have been put in; a lot of additional ballast distributed, and several new station buildings erected.

Press reports state that considerable progress [illegible] opposite Fort Frances, Ont., with 80 lb. steel.

[illegible] Rue des Menrous, St. Boniface, Man. The building is to be of concrete and brick. Benoit and Co., St. Boniface, have the contract.

Notice has been given by the company that it intends to apply for an order to per[illegible] along the route held a meeting at South [illegible] for an order directing that [illegible]

[illegible] was put in [illegible]

[illegible]

[illegible]

company's legal department, and J. A. Foley, of the engineering staff, were in Medicine Hat recently, completing the agreement with the city council. This is one of the lines, for the building of which the Alberta Legislature has guaranteed the company's bonds. The Vegreville-Calgary line, which has been in operation as far as Drumheller, is reported completed and ready for traffic as soon as the official inspections have been made.

The Board of Railway Commissioners has authorized the opening for traffic of the extension of the line from Macrorie to Tichfield, Sask., six miles, and of the branch from between those two points to Elrose, 50 miles.

Press reports state that track laying has been completed on the short line from Blaine Lake to Denholm, Sask., which will permit of the operating of traffic by a shorter route than at present from Prince Albert to Edmonton.

The Board of Railway Commissioners has approved of revised location of the line from Maryfield, Sask., westerly, from mileage 194.82 to 224.58. This line is projected to extend to Lethbridge, thence northerly to Calgary, Alta. Press reports from Lethbridge state that grading is in progress on the section of the line from Calgary southerly to Barons, at which point the line will part, one branch going to Macleod, and the other to Lethbridge.

The Alberta Legislature has increased the guarantee of bonds granted in 1909 for the building of certain branch lines from $13,000 to $15,000 a mile.

The Alberta Legislature has authorized the government to guarantee bonds of the Canadian Northern Western Ry. for $25,000 a mile, for a line from the point where the line crosses the Calgary and Edmonton Ry. near Blackfolds, for not exceeding 115 miles, on cancellation and delivering up of bonds of the same amount now outstanding.

Construction is being proceeded with on the branch line into the Brazeau River country. Owing to the large number of trestles to be erected it is not expected that track will be laid as far as the coal fields until Dec. 30.

The Board of Railway Commissioners has authorized the opening for freight traffic of the line from St. Albert, Alta., westerly, for 22 miles.

It was expected that track laying would be completed in Alberta, on the main line to Vancouver, by Nov. 20. West of the provincial boundary the line is known as the C. N. Pacific Ry., but the construction to the Alberta summit is being carried on under the supervision of the company's staff working westerly. Eighty miles of grading have been completed beyond the summit, and it is expected that track will be laid on this mileage by the end of the year. Beyond this point to the Alberta summit, grading and bridge work is reported to be well advanced.

Canadian Northern Pacific Ry.—A regular [illegible] have been completed [illegible] At this [illegible] line is [illegible] line, we are officially advised, has been com pleted, and everything is ready for construction, but tenders have not yet been invited. Grading has been completed to about 100 miles westerly from Kamloops, and 86 miles of track has been laid.

Vancouver Island Lines.—The Premier of British Columbia is reported to have stated, Nov. 10, that track had been laid for the greater part of the 140 miles from Victoria to Port Alberni, and the line would be completed by the end of next summer.

Plans for the bridge across the Selkirk water, connecting the terminals on the Songhees Reserve to the gully under the gorge bridge, have been filed. They show a bridge of the bascule type, at a height of 23 ft. above extreme low water. There will be two openings in the bridge, 60 ft. and 25 ft., respectively, to permit of the passage of small vessels.

Survey parties are reported to be in the field in the districts north of Alberni Canal, and also north of North Sound, locating a line from Port Alberni to the extreme north of the island. (Oct., pg. 478.)

Grading and Track Laying in 1913.—We have been favored with the following official particulars of grading and track laying done in Manitoba, Saskatchewan and Alberta. The figures for grading are up to Sept. 30, and for tracklaying up to Oct. 31. A great deal of the track laid this year is on grading done in 1912. The figures represent miles:—

Delisle Jct., westerly, graded this year, 13.80; track laid on 1912 grade, 31.48.

Delisle, southerly, track laid on 1912 grade, 5.61.

Bienfait-Estevan, graded this year, 8.10.

Blackfalls, westerly, graded this year, 24.70; track laid on 1912 grade, 32.55.

Camrose, southeast, graded this year, 44.60.

Edmonton to Yellowhead, main line, graded this year, 33.40; track laid on 1912 grade 111.51, on 1913 grade 13.40, total 124.91.

Deerfield Spur, track laid on 1912 grade, 12.50.

Canora, north, graded this year, 1.90.

Greenway extension, graded this year, 2.94, track laid on 1912 grade 12.25, on 1913 grade 3.08, total 15.33.

Grosse Isle, northerly, graded this year, 13.40; track laid on 1912 grade, 7.62.

Moose Jaw, southerly, track laid on 1912 grade, 1.

Oakland, northerly, track laid on 1912 grade, 11.48.

Onaway, northwest, graded this year, 6; track laid on 1912 grade, 30.40.

Prince Albert-Battleford, graded this year, 1.15; track laid on 1912 grade, 46.

Avonlea, westerly, graded this year, 7.15; track laid on 1912 grade, 48.70, on 1913 grade, 7.15, total, 55.85.

Saskatoon-Calgary, track laid on 1912 grade, 25.92.

Vegreville-Calgary, track laid on 1912 grade, 12.64.

Vonda, north, graded this year, 8.20.

Winnipeg-Fort Alexander, graded this year, 7.40.

Wroxton-Yorkton, graded this year, 2.

The total grading done this year to Sept. 30 was 174.74; track laid on 1912 grade, 389.66; on 1913 grade, 23.63; total track laid to Oct. 30, 413.29.

Railway Mechanical Conventions.— The Master Car Builders Association and the American Railways Master Mechanics Association will hold their 1914 conventions at Atlantic City, N.J., the former on June 10 to 12, and the latter on June 15 to 17.

It is said that in an investigation a few years ago, it was shown that frame failures constituted 20% of the cost of locomotive maintenance.

Transportation Appointments Throughout Canada.

[illegible] official sources, is compiled with the greatest care, so as to ensure absolute accuracy. [illegible] error in our announcements [illegible] a favor by advising us.

Canada and Gulf Terminal Ry. — J. E. PINAULT, heretofore Superintendent, has been appointed General Superintendent, exercising all duties and authority formerly assumed by Rene Dupont, Traffic Manager. Office, Matane, Que.

Canadian Government Railways.— A. C. BARKER, whose appointment as Inspector of Stations, Trains and Train Dispatching, was given in our last issue, as relating to the Intercolonial Ry. only, has jurisdiction also over the Prince Edward Island Ry. His office is at Moncton, N.B., and he was formerly Chief Dispatcher, District 2, Lake Superior Division, C.P.R., Chapleau, Ont.

Canadian Northern Ry.—F. J. CREIGHTON has been appointed City Ticket Agent, Winnipeg.

John L. Hodgson,
Master Car Builder, Grand Trunk Pacific Ry.

J. F. McGUIRE has been appointed Travelling Passenger Agent, Winnipeg.

J. HONAN, heretofore Shop Foreman at Kamsack, Sask., has been appointed Locomotive Foreman, Kindersley, Sask., vice W. Toll, transferred.

I. L. BOOMER, heretofore acting Superintendent, District 3, Western Division, has been appointed Superintendent, vice J. G. Entwistle. Office, Edmonton, Alta.

J. W. CRANE has been appointed Trainmaster, District 3, Western Division, with jurisdiction over Battle River and Calgary Subdivisions, and Camrose cutoff and Brazeau line, when taken over. Office, Big Valley, Alta.

W. TOLL, heretofore Locomotive Foreman, Kindersley, Sask., has been appointed Locomotive Foreman, Hanna, Alta., a new position.

G. S. ANDREWS, heretofore Inspector, Sleeping and Dining Cars, Winnipeg, has been appointed acting Agent, Sleeping and Dining Cars, Duluth, Minn.

Canadian Pacific Ry.—F. B. TAPLEY, heretofore Resident Engineer, London, Ont., has been appointed Assistant Engineer, Maintenance of Way, Eastern Lines. Office, Montreal.

WALTER MAUGHAN, heretofore Assistant District Passenger Agent, Toronto, has been appointed Assistant General Passenger Agent, Eastern Lines. E. J. Hebert and F. O. Hopkins remain as First Assistant General Passenger Agent and Assistant General Passenger Agent, Eastern Lines, respectively. Office, Montreal.

D. A. WALLACE has been appointed Resident Engineer, District 1, Eastern Division, vice H. T. Ruhl, resigned to enter Intercolonial Ry. service. Office, Farnham, Que.

H. J. MAIN, heretofore Dispatcher, Ottawa, Ont., has been appointed Chief Dispatcher, District 2, Eastern Division, Montreal, vice W. W. Cook, appointed a dispatcher at Smiths Falls, Ont.

E. F. L. STURDEE, heretofore chief clerk to General Passenger Agent, Eastern Lines, Montreal, has been appointed Assistant District Passenger Agent, Toronto, vice Walter Maughan, promoted.

R. V. CARLETON, heretofore Assistant General Car Inspector, Eastern Lines, Montreal, has been appointed General Car Foreman, Passenger Car Shops, West Toronto.

F. S. ROSSITER, heretofore Resident Engineer, Cranbrook, B.C., has been appointed Resident Engineer, London, Ont., vice F. B. Tapley, promoted.

J. MORTON has been appointed Locomotive Foreman, Kenora, Ont., vice J. H. Wilson, transferred.

JAMES CLIFFORD, heretofore District Engineer, Illinois Central Rd., Chicago, Ill., has been appointed Assistant Engineer, Maintenance of Way, Western Lines, C.P.R., Winnipeg.

E. D. COTTERELL, heretofore Chief Dispatcher, New York Central and Hudson River Rd., New York, has been appointed Inspector of Transportation, Western Lines, C.P.R. Office, Winnipeg.

W. J. ANDREWS, heretofore Locomotive Foreman, Neudorf, Sask., has been appointed Locomotive Foreman, Minnedosa, Man., vice J. F. Rugg, resigned.

R. M. BINNEY has been appointed Roadmaster, Brandon Subdivision, vice T. M. Fraser. Headquarters, Winnipeg.

J. DUNCAN, heretofore section foreman, Arden, Man., has been appointed acting Roadmaster, Arborg and Winnipeg Beach Subdivisions. Headquarters, Winnipeg.

F. E. RUTLAND, heretofore chief clerk, Local Freight Department, Winnipeg, has been appointed Agent, C.P.R. Stockyards, Winnipeg, vice D. Patterson, resigned.

E. H. RIDER, heretofore storekeeper at Broadview, Sask., has been appointed storekeeper at Hardisty, Man., vice J. H. Perkin, resigned.

J. T. TURNER has been appointed station master at Moose Jaw, Sask., vice E. L. Barrett, who has left the service.

W. G. McPHERSON, heretofore Locomotive Foreman, Alyth roundhouse, Alta., has been appointed Locomotive Foreman, Moose Jaw, Sask.

G. O. JACKSON, heretofore temporary storekeeper at Swift Current, Sask., has been appointed storekeeper at Broadview, Sask., vice E. H. Rider, transferred.

H. McHARDY has been appointed Locomotive Foreman, Neudorf, Sask., vice W. J. Andrews, transferred.

D. H. JOHNSON has been appointed Roadmaster, District 1, Alberta Division, in charge of Lemsford Subdivision. Headquarters, Cabri, Sask.

F. WALKER, heretofore Car Service Agent, Alberta Division, Calgary, has been appointed Superintendent, District 2, Alberta Division, vice W. J. Uren, appointed Superintendent, District 1, Ontario Division, Toronto, as announced in our last issue. Office, Calgary.

J. G. SUTHERLAND, heretofore Chief Dispatcher, Medicine Hat, Alta., has been appointed Car Service Agent, Alberta Division, vice F. Walker, promoted. Office, Calgary.

W. J. READER, heretofore storekeeper at Alyth Roundhouse, Calgary, Alta., has been appointed Foreman of Stores, Ogden Shops, Calgary, Alta.

E. A. BARNWELL has been appointed Locomotive Foreman, West Calgary Roundhouse, Alta., vice J. Reed, transferred.

H. ALLEN has been appointed Locomotive Foreman, Alyth Roundhouse, Alta., vice W. G. McPherson, transferred.

J. REED, heretofore Locomotive Foreman, West Calgary Roundhouse, Alta., has resumed his former position as Shop Foreman, Alyth Roundhouse, Alta.

E. J. BURKE has been appointed storekeeper at Alyth Roundhouse, Calgary, Alta., vice W. J. Reader, promoted.

J. E. GILES has been appointed Shop Foreman, Lethbridge, Alta.

A. A. SMITH, heretofore Trainmaster, District 1, Alberta Division, Lethbridge, has been appointed Trainmaster, District 1, Alberta Division, Medicine Hat, vice J. E. Ryan, assigned to other duties.

J. M. MACARTHUR has been appointed Trainmaster, District 1, Alberta Division. Office, Medicine Hat. There are two trainmasters at Medicine Hat.

J. E. RYAN, heretofore Trainmaster, District 1, Alberta Division, Medicine Hat, has been appointed Chief Dispatcher, District 1, Alberta Division, vice J. G. Sutherland, assigned to other duties. Office, Medicine Hat.

H. O. WHITNEY, heretofore Roadmaster, Lethbridge, Alta., has been appointed Roadmaster, Medicine Hat, Alta., vice M. P. Fitzpatrick, transferred.

W. H. GORDON, heretofore Trainmaster, District 2, Alberta Division, Strathcona, has been appointed Trainmaster, District 1, Alberta Division, vice A. A. Smith, transferred. Office, Lethbridge.

M. P. FITZPATRICK, heretofore Roadmaster, Medicine Hat, Alta., has been appointed Roadmaster, Lethbridge, Alta., vice H. O. Whitney, transferred.

C. W. FISHER has been appointed Trainmaster, District 2, Alberta Division, vice W. H. Gordon, transferred. Office, Strathcona.

G. M. KEATES has been appointed storekeeper at Strathcona, Alta., vice G. R. Blake, transferred.

D. G. McDONALD has been appointed Locomotive Foreman, Macleod, Alta., vice J. A. Maddick, transferred.

W. M. ANSLEY, hertofore Trainmaster, Grand Forks, B.C., has been appointed Trainmaster, Macleod, Alta., vice W. S. Hall, transferred.

J. A. MADDICK, heretofore Locomotive Foreman, Macleod, Alta., has been appointed Locomotive Foreman, Crowsnest, B.C.

W. S. HALL, heretofore Trainmaster, District 3, Alberta Division, Macleod, has been appointed Trainmaster, District 3, Alberta Division, vice C. Hood, transferred to British Columbia Division. Office, Cranbrook, B.C.

C. HOOD, heretofore Trainmaster, District 3, Alberta Division, Cranbrook, B.C., has been appointed Trainmaster, District 3, British Columbia Division, vice W. M. Ansley, transferred to Alberta Division. Office, Grand Forks.

C. E. WISE has been appointed storekeeper at Kamloops, B.C., vice L. Norman, transferred.

L. NORMAN, heretofore storekeeper at Kamloops, B.C., has been appointed storekeeper at Coquitlam, B.C. This is a new position.

W. WOODHOUSE, heretofore Coach Yard Foreman, Vancouver, B.C., has been appointed Shop Foreman, there, vice L. L. Hannah, deceased.

F. REEVE, heretofore coach carpenter, Vancouver, B.C., has been appointed Coach Yard Foreman, there, vice W. Woodhouse, promoted.

W. McINNES, heretofore Yardmaster, Vancouver, B.C., has been appointed General Yardmaster there, vice A. R. Howard, deceased.

E. F. RALSTON, heretofore Night Yardmaster, Vancouver, B.C., has been appointed Yardmaster, there, vice W. McInnes, promoted.

F. CLINE, heretofore acting Yardmaster, Vancouver, B.C., has been appointed Night Yardmaster there, vice E. F. Ralston, promoted.

A. E. VOYSEY has been appointed chief assistant to the European Manager, C.P.R., London, Eng., vice W. D. Grosset, appointed Agent at Antwerp, Belgium.

Central Vermont Ry.—E. C. SMITH, a former Governor of the State of Vermont, has been elected President, C.V.R., vice E. J. Chamberlin, who retains the position of chairman of the Board.

Grand Trunk Pacific Ry.—H. WISMAR has been appointed Assistant to Solicitor, Winnipeg, Man., vice A. Hutcheon, Assistant Solicitor, resigned to engage in private practice.

W. C. SCHNEIDER, heretofore Chief Car Draughtsman, Motive Power and Car Department, has been appointed Chief Draughtsman, Car Department. Office, Transcona, Man.

O. J. ROWE, General Yardmaster, Transcona, Man., is reported to have been transferred to a similar position at Edmonton, Alta.

J. D. McAULEY, heretofore Soliciting Freight Agent, Montreal, has been appointed City Freight Agent, Vancouver, B.C., vice R. N. Card, resigned on account of ill health.

The following agents have been appointed,—Uno, Man., E. A. Neupert; Duff, Sask., J. W. Le Gallais; Lewvan, Sask., F. H. Williams; Griffin, Sask., F. C. Scheppelle; Mirror, Alta., J. I. Scott; Tete Jaune, B.C., J. S. Dobie; New Hazelton, B.C., F. R. Law; Hazelton, B.C., F. A. Wildmoyer; Smithers, B.C., H. H. Boggs; Rose Lake, B.C., M. K. Thayer. The station at Morricetown, B.C., has been closed.

Grand Trunk Ry.—The following agents have been appointed,—Ste. Rosalie Jct., Que., H. E. Coderre (Pass); St. Constant, Que., W. J. Marchand; Hemmingford, Que., E. E. Bourdon; Henrysburg, Que., J. E. A. Berriault; Sundridge, Ont., J. E. Bailey; Milton, Ont., G. Williamson; Petersburg, Ont., I. C. Laschinger; Sarnia, town, Ont., W. J. Meredith; Windsor, Ont., J. E. Laughlin; Vittoria, Ont., A. J. Simmons; Tara, Ont., W. H. McPhail; Shallow Lake, Ont., C. Dopher; Gowanstown, Ont., C. S. Smith; South Indian, Ont., J. O. Prefontaine; Glasgow, Ont., A. H. Johnston; Edgington, Ont., H. Wolfe; Durham, Ont., outside, W. Calder.

Hudson Bay Railway.—J. W. PORTER, heretofore Assistant District Engineer, District B, National Transcontinental Ry., has been appointed Chief Engineer of the Dominion Government railway to Hudson Bay, vice John Armstrong, resigned. Office, Winnipeg. The report that the office had been moved from Winnipeg to Pas, Man., is premature. We are officially advised that it is the intention to do so, as soon as it can be arranged.

Intercolonial Ry.—H. T. RUHL, heretofore Resident Engineer, District 1, Eastern Division, C.P.R., Farnham, Que., has been appointed Resident Engineer, I.R.C., Truro, N.S.

E. SAVAGE has been appointed Bridge and Building Master, Moncton-Ste. Flavie Division, including branches. Office, Newcastle, N.B.

A. B. McDONALD, heretofore General Car Foreman, has been appointed Superintendent Car Shops, Moncton, N.B.

Toronto, Hamilton and Buffalo Ry.—A. E. LOCK, heretofore Travelling Passenger Agent, New York Central Lines, Montreal, has been appointed Commercial Agent, T., H. & B. R., Hamilton, Ont., vice J. D. Dewan, who resigned some time ago to enter Kansas City Terminal Ry. service at Kansas City, Mo.

Union Stock Yards, Winnipeg.—D. PATTERSON, heretofore Manager, C.P.R. Stock Yards, has been appointed Manager, Union Stock Yards, St. Boniface, Man., vice J. W. Backpit, resigned.

Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those for 1912-13, from July 1, 1913:—

	Gross Earnings	Expenses	Net Earnings	Increase
July	$1,928,800	$1,414,500	$514,300	$19,700
Aug.	1,824,800	1,416,200	408,600	37,800
Sept.	1,994,900	1,470,000	524,900	101,400
	$5,748,500	$4,300,700	$1,447,800	$158,900

D G H & M R . . .	891,902	854,500	37,402
Totals	$20,128,377	$19,282,720	$845,657

Grand Trunk Pacific Railway Earnings.

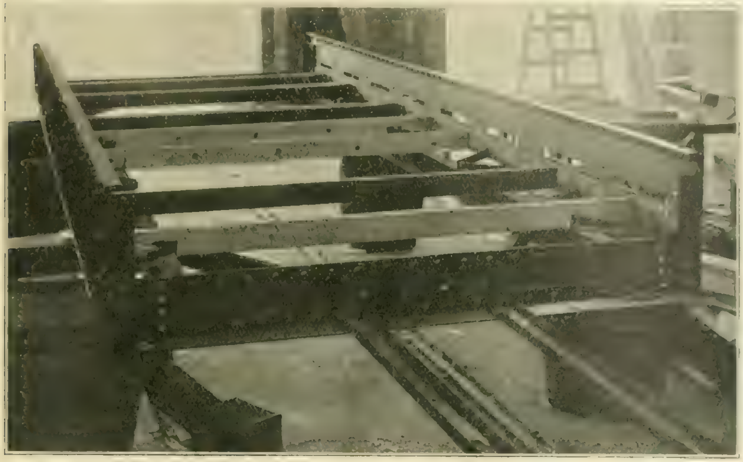
The approximate earnings of the Prairie Section and Lake Superior Branch for October were $994,303, and for 4 months ended Oct. 31, $2,732,674.

C. P. R. Operations in Austria.—After a debate lasting several days, the sub committee appointed by the Austrian Parliament to investigate the questions which recently arose as to the working of the emigration business from that country, unanimously passed a resolution approving the policy of the Ministry of Commerce in granting the C. P. R. a concession, and found that the increase in emigration was due to economic conditions, and that if there were abuses in this business, no company could be spared. In dealing with this matter, G. McLaren Brown, European Manager, visited Vienna, to look into conditions personally, and it is reported that the services of the British Foreign Office were utilized.

Electric Railway Department.

Pay-As-You-Enter Cars for London Street Railway.

The 6 single truck, single end, p.a.y.e. cars for the London Street Ry., partly described in the last issue of Canadian Railway and Marine World, are illustrated herewith. They will have 10 cross seats, 2 longitudinal and 3 stationary seats, giving a seating capacity of 32. The underframing will be entirely of steel, the main members consisting of 3-16 in. plates, 15 ins. deep, one on each side of the car, reinforced at the bottom with an angle. They are to be 33 ft. 4 ins. long, with a body length of 20 ft. 8 ins. They will be 8 ft. 2 ins. wide over the sheating. The centre aisle will be 1 ft. 11½ ins. wide, with cross seats on each side at 2 ft. 6½ ins. centres. The longitudinal seats at the forward end will be 2 ft. 4 ins. long, and at the rear end, 4 ft. 4½ ins. long, leaving the greater standing room at the rear end, where it is most required. The stationary cross seat at the forward end will be on the platform level, backing against the motorman's section. The latter will be separated from the exit path by a chain stretched across from the partition to the front vestibule end.



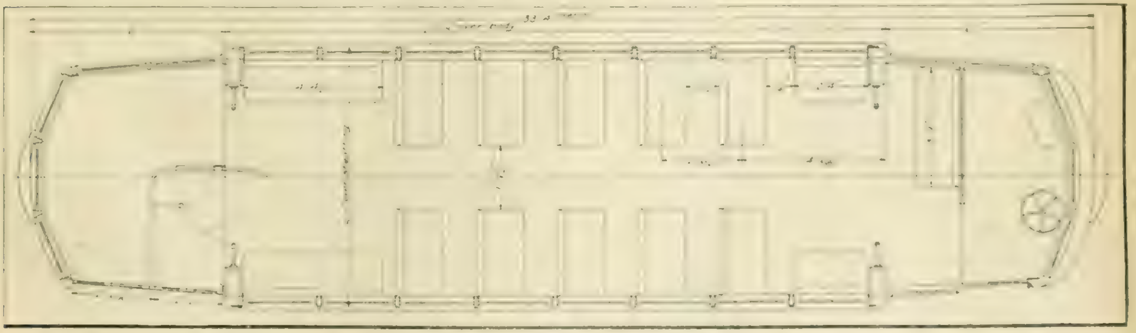
Steel Underframing of London Street Railway Cars.

In designing the steel frame, to which the Manager of the London St. Ry., C. B. King, has given special attention, it was the desire to obtain rigidity in the car posts in all directions, and, at the same time, make the vestibule supports so strong and rigid that there would be no possibility of the vestibule sagging. The possibility of collisions was borne in mind by giving the frame sufficient strength to resist either end or cross impact. The 6 in. I beams, together with the longitudinal angles and steel plates, are calculated to support the ends of the cars without sagging. The side steel plates are just high enough inside the car so that the end of the cross seats will fit over the steel plate, thereby providing a maximum amount of aisle space. The strong end sills, when securely fastened to the side plates and angles, will make it practically impossible for the side plates to become distorted. The intermediate cross channels offer a great deal of resistance in the event of side collisions, but, fearing this might not prove ample in that portion of the frame where the distance between the cross sills is greatest, diagonal braces are used for bracing the outside angles and the I beams.

The window posts are held in position by bolting them to angle irons rivetted to the outside of the side plates. These angle irons not only offer the maximum of support for the posts, but they make possible the use of a lighter section for the side plates.

As there will be no large timbers in the lower frame, such repairs as are necessitated from time to time can be made without removing the whole side of the car. With this steel frame, a large part of the repair work resulting from damages, may be made from underneath the car without requiring to touch the side of the car at all. However, in the event of a serious collision, when the side members of the car are seriously bent, it will still be necessary to remove the whole side of the car to straighten the injured members.

A maximum seating capacity was aimed at in the design, so that it may appear that the entrance and exit are somewhat crowded by the seats. As it is believed that these passage seats will not be used very much, this will minimize such an objection. The desire to utilize every available foot of space was responsible for the moving forward of the motorman's position as far as possible, making room for a seat for 3, and standing room for as many more on the front vestibule, which is of the same size as the rear vestibule.



Floor Plan of London Street Railway Cars.

Wages on Lethbridge Municipal Railway.

A new wage schedule went into effect on Lethbridge Municipal Ry. recently, as follows:—First 6 months, 25c. an hour; second 6 months, 28c. an hour; commencing 2nd year, 30c. an hour; commencing 3rd year, 32c. an hour; pay day to be on the 5th and 20th of each month.

All motormen and conductors are to be paid time and a half for the following public holidays:—New Year's Day, Good Friday, Victoria Day, Dominion Day, civic holiday, Labor Day, Christmas Day and Thanksgiving Day, and the pay for Sundays is on a basis of nine hours' pay for 7½ hours' work. Work after 24 o'clock to be paid for on time and a half basis.

Sherbrooke Railway and Power Companys' Annual Report.

Following are extracts from the report for the year ended June 30, submitted at the annual meeting in Montreal Sept. 22:

The business has continued to grow at a very satisfactory pace, and the gross earnings show an increase of $34,058.93, or nearly 37%, and the net earnings, including the income from real estate investments and after charging renewals show an increase of $19,080.09, or 58% over the preceding year. The increase in business was principally in the lighting and power branches of the company's system.

$32,000 of bonds and $32,000 of stock were issued and sold and the proceeds of the same expended in extensions and betterments. The full benefit, however, of these extensions will not be derived until the winter months.

While the increase in earnings has been large, it has not been up to expectations, as two of the company's largest consumers of power were unable to take their requirements as early as expected. One which had contracted for 500 h.p. has so far only taken 200 h.p. and this during a small part of the year. The other company, whose contract amounts to 700 h.p., expected to have its plant in operation in Oct., 1912, but on account of the late delivery of plant and machinery, only started to operate a portion of its plant in the month of June. Shortly afterwards, owing to an accident, the company's transformers were badly damaged, and being of special design they had to be shipped away for repairs. It is now expected that this plant will be in operation the latter part of October. If these contracts had come into operation during last year, the net earnings would have been increased by at least $12,500.00.

During the summer your directors have been successful in locating two large industries in Sherbrooke. Both will be large consumers of power, and the company has already entered into contracts with them for their entire power requirements. These two contracts, together with those referred to above, should increase the annual net revenue, when in operation, by over $21,750.00.

In regard to the light and power business in the districts controlled by your company, your directors beg to state that a very satisfactory rate of increase has been shown, especially in Lennoxville, Stanstead, Beebe Plain, Derby Line and Derby Centre. During the past year the company's lighting system has been extended to four villages, and the revenue from these villages is increasing at a steady rate.

The properties have been maintained in a proper state of efficiency, and a considerable amount of money has been spent in the upkeep of the tracks and rolling stock which has been charged to operating account. The power plant, electric light system and buildings are in excellent condition.

The company has decided, so as to have the highest operating efficiency on the street railway, to increase the wages of motormen and conductors during the coming year. The company has had no trouble in connection with its employes, but it has decided that this is a good policy to adopt so as to keep men as long as possible in the service.

Your directors have considered it advisable to insure all the company's properties against fire, accident and liability of all kinds. These public liability policies protect the company against accidents to the public from the power and distribution systems, and also against accidents to persons and vehicles on the street railway.

Your management feels confident that during the coming year the earnings, exclusive of the power contracts already referred to, will show satisfactory increases.

N. C. Pilcher,
General Manager, Sherbrooke Railway and Power Co.

The city of Sherbrooke continues to expand at a rapid rate. The continuance of building activity is very gratifying to note in spite of the financial stringency which Canada experienced during the past year. There is no question that if this condition had not existed all through the Dominion as well as the United States, several other U.S. manufacturers, who have been considering locating branches in Sherbrooke, would have commenced the construction of plants there this year.

Your directors take pleasure in expressing their appreciation of the services rendered by N. C. Pilcher, General Manager, and the officers and staff.

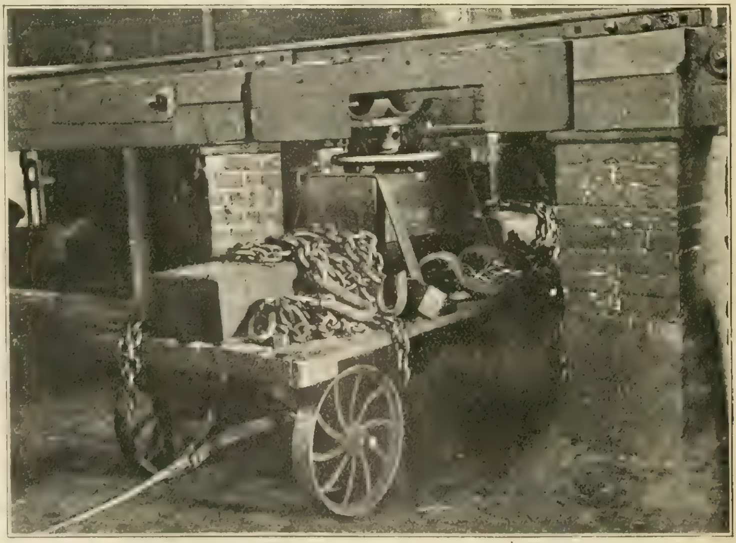
	1912	1913
Proportion of operating expenses to gross earnings	84.80%	77.22%
Proportion of net earnings to gross earnings	15.20%	22.78%
Car mileage	423,200	448,144
Gross earnings per car mile	10.143 cts.	10.746 cts.
Operating expenses per car mile	8.601 "	8.299 "
Net earnings per car mile	1.542 "	2.447 "
Passengers carried, including deadheads	1,064,003	1,115,038
Transfer passengers carried	197,988	220,869

The officers are:—President, C. J. McCuaig; Vice President, S. H. Ewing; Secretary-Treasurer, Grant Johnston; General Manager, N. C. Pilcher; Power Superintendent, J. B. Woodyatt.

Wheel Truck in Niagara, St. Catharines and Toronto Railway Shops.

The N., St. C. and T. Ry. shops at St. Catharines, W. Pay, Master Mechanic, are rather unique, the floor level being below the level of the surrounding ground at a depth equivalent to that of the depth of the usual repair pit, with all the machinery located on this lower level. The cars (there is room for two) enter at one end, and the rails are carried on heavy wooden beams supported on short brick piers, this track being along one wall, with an open space between the track and the other wall for the machinery and repair floor space. The fitting, repair and inspection of the cars is simply carried out from the same level as the shop floor.

A short section of each rail, with supporting timber, is removable for the dropping of the car wheels for turning, etc., the car being blocked up for this operation in the usual manner. For the removal of the wheels from under the car, a handy truck, shown in the accompanying illustration, is employed. This is of a familiar construction, with central hand power jack screws for lowering the wheels for removal to the wheel lathe or other repair point.



Wheel Truck, Niagara, St. Catharines and Toronto Ry. Shops.

The general shop design, with the floor on a level with the pit, should recommend itself to all who intend building a small

The Winnipeg River Power Company.

The Winnipeg River Power Co. has been incorporated under the Dominion Companies Act, with a capital of $1,000,000 and offices at Winnipeg, to develop water powers, and distribute electric energy. The provisional directors are E. Frith, C. W. Campbell, A. P. Scott, E. Beadle, R. Siderfin, Winnipeg. This company will undertake development work at the Big Bonnet falls of the Winnipeg River, the rights to which were originally held by C. W. Chamberlain, for Chicago people, and subsequently came under the control of R. R. Muir, by whom they were assigned to Sir William Whyte, the assignment being filed at Ottawa, Oct. 26.

We are officially advised that the Winnipeg Electric Ry. will take the full output of the plant, which will be installed at these falls, and operated by the subsidiary company above named. The distance from the W.E.R. Co's. present plant to the proposed new plant is about 12 miles. The Big Bonnet falls are estimated to be capable of providing from 80,000 to 100,000 h.p. It is the intention of the subsidiary company to start development work at once, and a late press report states that a contract has been let to J. G. White and Co., Inc., New York city, for the work.

The Toronto and York Radial Railway North Toronto Diversion.

The Judicial Committee of the Imperial Privy Council has dismissed the Toronto and York Radial Ry. Co.'s appeal against the judgment of the Ontario Court of Appeal in favor of the City of Toronto, in the matter of the proposed diversion of the line off Yonge St., in North Toronto.

On June 17, the Ontario Railway and Municipal Board made an order authorizing the Metropolitan Ry., one of the component companies of the T. & Y. R. R. Co., to deviate its line from Yonge St. to a private right of way from Farnham Ave. to a new terminal 800 ft. west, and north of the C.P.R. The location of the proposed deviation showed the crossing of several streets on the level, and the speed of cars was limited to six miles an hour, the Board holding that it was not reasonable to compel the line with its earnings, to spend $500,000 in grade separation, more especially as the municipalities refused to contribute anything. The company commenced clearing part of the site, July 1, and about the same time the city notified the company of its intention to appeal against the order.

The city's appeal was dealt with by the Court of Appeal in February, and was allowed, upon which the City Council took steps to stop the construction of the deviation, which was then about half completed. The company then entered an appeal to the Judicial Committee of the Privy Council, which, upon hearing the appellant company's case did not think it necessary to call on the city to reply, and eventually dismissed the appeal.

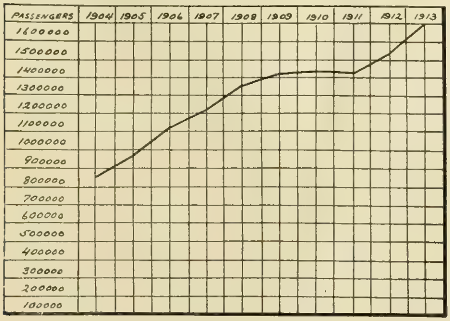
H. G. Matthews,
General Manager, Quebec Railway, Heat and Power Co.

Quebec Railway Light, Heat and Power Company's Annual Report.

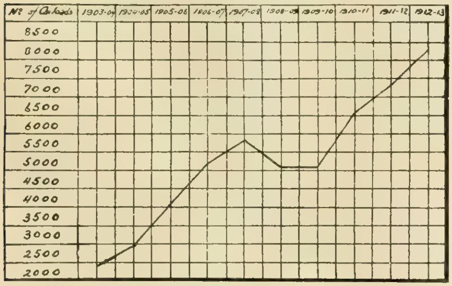
Following are extracts from the report for the year ended June 30, presented at the annual meeting, Sept. 9:—

The gross earnings from operation were $1,524,200.71, compared with $1,415,825.38 in 1912. Adding miscellaneous income of $236,881.78, makes a total revenue from all sources of $1,761,082.49, an increase of $150,672.65. The operating and maintenance expenses were $895,180.61, against $734,925.35. The fixed charges and taxes of all kinds were $792,100.17, leaving a net surplus of $73,801.71, which added to last year's one leaves a total surplus to date of $147,341.16. $27,641.60 was received from the Dominion Government on account of subsidies. This has been applied to the cancellation of $30,000 bonds according to the trust agreements.

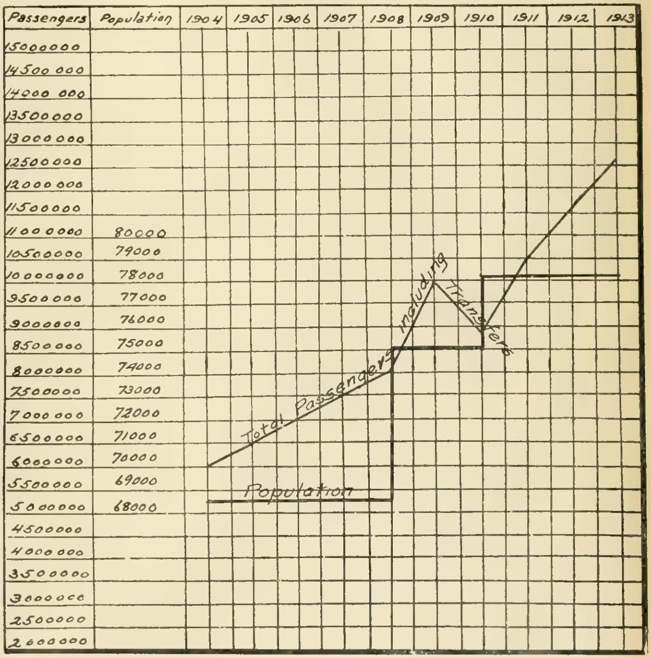
The officers are:—President, Sir Rodolphe Forget; Vice President, L. G. Webster; General Manager, H. G. Matthews; Treasurer and Comptroller, W. J. Lynch; Secretary, P. Hamel.



Car Loads of Freight Hauled on Montmorency Division, Quebec Railway, Light and Power Co.



Passengers Carried on Montmorency Division, Quebec Railway, Light and Power Co.



City Division, Quebec Railway, Light and Power Co. Passengers Carried, Including Transfers; Also Population.

The Ontario West Shore Railway Muddle.

Prior to 1906, certain persons in Goderich procured a charter for an electric railway to run through various parts of Huron and adjoining counties. They tried for some time to float the company, without success. In 1906, they got in contact with J. W. Moyes, of Toronto, who is said to have represented that he was an expert in electric railway matters; that he had built and operated the Metropolitan Ry. from Toronto up Yonge St., and that he was in a position to finance the road. He undertook to do so, and as part of his scheme he outlined the building of a dam across the Maitland River for the purpose of securing power, not only to operate the railway, but to supply Goderich, Clinton and other municipalities with electricity. He first decided to make a start by building a line from Goderich to Kincardine. He applied to the towns of Goderich and Kincardine and the townships of Colborne, Ashfield and Huron to guarantee the railway company's bonds. Four of the corporations passed bylaws, but the bylaw in Colborne township was defeated. The town of Goderich guaranteed bonds for $150,000, payable in 30 years, with interest at 5 per cent., Kincardine $50,000; Huron $75,000, and Ashfield $125,000, a total of $400,000. A trust company was appointed to act as trustee, and a mortgage was executed as security for the guaranteed bonds, and also unguaranteed bonds to the extent of $200,000, which was the total amount that the 33 miles from Goderich to Kincardine could be mortaged for. The guaranteed bonds realized about $385,000. The work was proceeded with, and all of the funds realized from the guaranteed bonds were paid out, with the exception of about $30,000. The railway company claims, and the certificates of the engineer show, that $639,000 was expended.

The building of the road started in Colborne Township, just outside of Goderich, and the right of way was purchased from the farmers whose land fronted on the east side of the highway. Certain construction was done, and the road was said to be completed to Kintail, about 16 miles. No ballasting was done, but the road was considered safe for construction trains travelling over the 16 miles. From Kintail to Amberley, about 6 miles, grading was done, and the road was ready for the rails, which were placed along the side of the highway, but nothing further was done. From Amberley for several miles towards Kincardine rails were placed along the side of the road and still remain there; no work whatever was done. The work referred to was all done by The Huron Construction Co., which is said to be owned by Mr. Moyes, who promoted the railway, in fact it is said that he owned both concerns.

For the first two or three years the interest on the guaranteed bonds was paid. The last three payments have been made by the corporations guaranteeing them. There is, apparently, no chance of Mr. Moyes completing the road, and it looks as if the corporations would be obliged to complete it or lose their investment. The $200,000 of unguaranteed bonds are said to be held by a banking institution which advanced, so Mr. Moyes claims, certain monies to him. The corporations are, naturally, very much dissatisfied, and want to know what became of their money. They employed H. W. Middlemist, Engineer of the Ontario Railway and Municipal Board, to go over the road and make an estimate. His report claims that not more than $260,000 has been expended and that it will take several hundreds of thousands of dollars to complete the road. If his report is accurate, then it is quite clear that there is something radically wrong in the reports furnished by the engineer in charge, and on whose certificates the money was paid out by the trust company. Mr. Moyes claims that the reason why he was not able to go on with his schemes is because of the appearance of the Hydro-Electric Commission on the scene, and the probability of it taking over his water power; and further, that owing to this it was impossible for him to finance the power scheme. No matter how the result has been brought about, the municipalities have been placed in a most unfortunate position. The Ontario Railway and Municipal Board, at the instance of the municipalities, started an investigation, some time ago, but it was blocked by failure to procure Mr. Moyes' attendance. All of the books and papers which should be in the company's office at Goderich were, it is said, sent to him. The only evidence given was that of the engineer. He had no books or papers, and the examination was adjourned to get Mr. Moyes and also to enable the engineer to make up statements. A subpoena was issued for Mr. Moyes on Sept. 25, but at the end of October the Sheriff of Toronto wrote the solicitor who is acting for the municipalities interested, that he had been unable to serve it, although he had every available bailiff employed and had had officers who knew him personally wait outside his house in Toronto for several hours on different days. The Sheriff added that he was of the opinion that Mr. Moyes was evading service. Early in November, however, he was located and service effected. Mr. Moyes has recently been employed by the City of Toronto as one of the "experts" to report on the projected purchase of the Toronto Ry.

Mr. Moyes appeared before the Board for examination during the third week in October, but practically no information of any value was elicited from him, and up to the time of writing this it has not been possible to obtain the company's books, papers, etc.

The Electric Railway Situation in Montreal.

The question of the extension of the Montreal Tramway Co.'s lines throughout the city, continues to be a live one. After several lengthened discussions, G. Janin City Engineer, submitted to the Board of Control, Nov. 5, a map showing the extensions which they considered necessary in order to relieve congestion, and to give accommodation to the outlying parts of the city. The principal extensions suggested are in the northeast of the city; the extensions being divided into two classes, those most important, and those less necessary. This report was referred back to the two engineers for further consideration, and a recommendation as to the minimum which would satisfy requirements. It was stated that the lines asked for would involve the construction of 14 subways and overhead bridges, and would cost at least $3,500,000.

E. A. Robert, President M. T. Co., in a letter to the city council, subsequently pointed out that it was useless to consider all the demands of the city for new lines in the outlying territory, until better facilities were secured in the down town areas. The new lines would only make the present congestion worse.

A further report was submitted to the Board of Control, Nov. 7, by G. R. MacLeod, and approved by G. Janin, showing the lines urgently required, and those which should be discussed with a view to future requirements.

The City Council has requested the Board of Control to ask the company for suggestions as to the best way of relieving the congestion in the centre of the city, and it is said that the company has suggested the construction of an underground line along the whole of St. Catherine St., and an underground line from Bonaventure Station to the Courthouse, thence northerly along either Bleury or St. Lawrence St.

On Nov. 11, the City Council referred all the plans and reports back to the Board of Control with a request that the negotiations be gone on with, so that the basis of an agreement for the solution of the whole matter may be reached.

A Montreal press dispatch of Nov. 18 says that the Canadian Autobus Co. has intimated that it is prepared to build underground lines to serve both the down town and up town districts.

The formal offer of the company was laid before the city Nov. 14. The letter of G. A. Robert, President, points out that "as a transportation problem is so intimately bound up with general traffic requirements of this city, both pedestrian and vehicular, some means must be devised for giving more facilities for three classes of traffic." The agreement, the company suggests, would provide for:—a 40 year franchise; a new avenue between Place Viger and Victoria Square or Windsor Station; a boulevard from Craig St. to Mount Royal or Van Horne Avenue on Back River; subways under steam railway tracks and Lachine Canal at two points; subway from Craig St. to Mount Royal or Van Horne Ave., between Bleury and St. Denis Streets; subway east and west, probably under St. Catherine St.; subway under Notre Dame or St. James St., between Courthouse and Victoria Square or from Hochelaga to Victoria Square; motor bus service on Sherbrooke St.; the widening of Vitre St. from St. Denis to Bleury Street or Victoria Square. The company will agree to pay half interest and sinking funds after the foregoing works are completed; the city to guarantee the mortgage securities to be issued by the company for building subway system; two experts to be appointed to decide as to the location of subways; the right to operate a freight service at night to be conceded; the company will pay to the city 4% on all gross traffic earnings on the surface lines.

London St. Ry. and Hydro Electric Power.—A London, Ont., press dispatch of Nov. 14 says:—The contract between the Water Commission of London and the London St. Ry. for the purchase of hydro electric power at $36 per horsepower has been received in the city after having been signed by President Everett, of Cleveland, for the railway company. The city will install a rotary converter and supply direct current power, the company having the privilege of a flat rate or a meter rate, both based on peak load. The company will take a minimum of 1,000 h.p., and this will reduce the cost of the power to the city. Further reductions in the cost will be shared by the company, and the agreement will run to the end of the franchise in 1925.

Sandwich, Windsor and Amherstburg Ry.—A press dispatch from Windsor, Ont., recently, stated that the city council had taken up the question of buying out this company, so as to prevent competition with the municipal hydro electric system. We are officially advised that the matter has not been taken up with the company in any way.

The Board of Railway Commissioners has approved the Montreal and Southern Counties Ry. standard tariff of maximum passenger fares on the basis of 2½c. a mile between stations south of the St. Lawrence River.

The Proposed Purchase of the Toronto Railway.

The main points covered by the reports on the proposal for the acquirement of the Toronto Ry. and the Toronto Electric Light Co., as prepared by B. J. Arnold, Chicago, Ill., and also signed by J. W. Moyes, Toronto, in regard to the Toronto Ry., and as prepared by R. A. Ross, Montreal, in regard to the Toronto Electric Light Co., were dealt with in Canadian Railway and Marine World for November. Since these reports have been received, the matter has on various occasions come before the City Council, but no definite steps were taken, as it had been decided to have reports from John Mackay, chartered accountant, Toronto, as to the commercial value of the scheme, and from H. H. Couzens, General Manager, Toronto Hydro Electric System, as to what extent the T.E.L. Co.'s plant might with advantage be incorporated with that of the city. At the council meeting, Nov. 11, these latter reports not having been received, it was, after some discussion, decided to instruct the Corporation Counsel to draft an agreement for purchase on the lines of the reports presented and the correspondence connected with them, such draft agreement to be submitted to the President of the Toronto Ry. Co., the Ontario Government, and the Ontario Hydro Electric Commission, for approval, so that the result may be reported to the council by Dec. 8, in order that the by-law may be submitted to the ratepayers on Jan. 1, and in the event of the agreement not being submitted in time, a synopsis be prepared for submission to the ratepayers instead.

Since that meeting, John Mackay's report has been received. In regard to the proposal regarding the Toronto Ry., the report states that making allowance for all charges and the construction of an enlarged system of 283 miles in 1921, with corresponding increases in car capacity, etc., and operated as a single system on a single fare basis, the net annual surpluses, after paying the city upwards of $13,000,000 in respect of traffic receipts, to which it is entitled under the agreement with the Toronto Ry., should amount to approximately $11,500,000 by Sept. 1, 1921. On a stationary traffic from 1921, the net receipts should, after bearing all charges and paying $2,300,000 a year into the city treasury in continuation of the existing arrangement with the company, leave a surplus of over $2,000,000 a year. This surplus could be applied to the reduction of fares to 3 1-3c. Failing the completion of purchase, the net loss on the existing civic car system, together with additional losses involved in adequate extensions, will amount, excluding the provision for sinking funds, to about $3,750,000.

The proposals, if carried out, involve the immediate expenditure of $30,000,000 and the obligation to expend additional capital in large amounts from time to time. The purchase price of the railway properties has been fixed at $22,000,000, and the physical assets have been valued at a little over $10,000,000, leaving something less than $12,000,000 as applicable to the franchise rights that would be surrendered to the city. The principal franchise, that of the Toronto Ry., expires Sept. 1, 1921, and others of the radial lines proposed to be dealt with, in 1921 and 1929, subject to varying terms of renewal. The purchase price of the Toronto Electric Light Co. has been fixed at $8,000,000, and the physical assets have been valued at $6,045,000, leaving $1,955,000 as the price payable for the surrender of the company's franchise rights, which are practically perpetual.

After having gone most carefully through all the intricacies of the proposed deal, Mr. Mackay has no hesitation in declaring his full confidence as to the outcome, provided the basic conditions as outlined are observed by those concerned.

London and Port Stanley Railway Electrification.

At a meeting of the London, Ont., City Council, Nov. 17, resolutions were passed finally passing the bylaw for the electrification of the line from London to Port Stanley; providing for the appointment of a commission to supervise the expenditure of the $750,000 voted; and instructing the mayor to vote on behalf of the city in favor of the lease of the line by the city council, at the special meeting of the shareholders to be held Dec. 9.

In an interview, Nov. 5, Mayor Graham is reported to have said he had just returned from Detroit, Mich., where he had had conferences with officials of the Michigan Central Rd. and the Pere Marquette Rd. The latter, he said, would submit an offer for operating over the line from the expiration of its present lease until the electrification was completed. If an arrangement could not be made with the P. M. Rd., the M. C. Rd. would be prepared to operate the line.

The plans for the electrification are practically completed and will be submitted to the Board of Railway Commissioners for approval at an early date.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and allied companies.—Gross earnings for September, $734,283; operating expenses, maintenance, etc., $560,888; net earnings, $173,395, against $688,069 gross earnings; $483,562 operating expenses, maintenance, etc.; $204,507 net earnings, for Sept., 1912. Aggregate gross earnings for three months ended Sept. 30, $2,260,854; net earnings, $583,478, against $2,013,586 aggregate gross earnings; $581-406 net earnings for same period, 1912.

British Columbia Electric Ry.—The Vancouver City Council has asked the company to state on what basis it would be willing to dispose of the car lines in the city, and it is said that on receipt of the statement of terms a vote of the ratepayers will be asked on the general question of purchase. The city council has authorized the City Comptroller to arrange for an audit of the company's books to ascertain the amount of cash taken in by the company on which the city receives a percentage.

Cape Breton Electric Co.—Gross earnings for September, $32,515.62; operating expenses and taxes, $16,955.73; net earnings, $15,559.89; interest charges, $4,891.66; balance, $10,668.23; bond sinking and improvement funds, $1,190; net balance, $9,478.23, against $34,363.62 gross earnings; $15,777.26 operating expenses and taxes; $18,586.36 net earnings; $4,495.84 interest charges; $14,090.52 balance; $1,206.66 bond sinking and improvement funds; $12,883.86 net balance for Sept., 1912.

Halifax Electric Tramways Co.—The Nova Scotia Public Utilities Commission, Nov. 7, authorized the company to issue 6,000 shares of ordinary stock at par. The additional capital is to be devoted to the retirement of certain bonds, and in extending and improving the system.

London and Lake Erie Ry. and Transportation Co.—In the course of a discussion at a recent meeting of a committee of the St. Thomas, Ont., City Council, W. N. Warburton, General Manager, is reported to have stated that the time is not far distant when the company's head offices will be transferred from London to St. Thomas, that the dispatching is already being done from St. Thomas, and that the General Manager and his staff will be located there We have been officially advised that Mr. Warburton made no such statements.

London St. Ry.—Gross earnings for September, $31,547.30; expenses $19,988.56; net earnings $11,558.74; deductions $2,380.40; net income $9,178.34, against $29,541.07 gross earnings; $17,656.01 expenses; $11,885.06 net earnings; $2,371.25 deductions; $9,513.81 net income for Sept., 1912. Aggregate gross earnings for nine months ended Sept. 30, $248,349.74; expenses $174,493.51; net earnings $73,631.23; deductions $21,807.24; net income $51,823.99, against $227,106.36 aggregate gross earnings; $155,941.21 expenses; $71,165.15 [illegible] earnings; $21,639.75 deductions; $49,525.40 net income for the period 1912.

Nelson Street Ry.—A press dispatch from Nelson, B.C., says that at a conference between the city council and the company's directors municipal operation of the street railway, with the stockholders retaining their interest in it on a proportionate partnership basis was decided on. Reorganization of the company involves increasing the capital from 50,000 shares to 75,000 shares in order that the city may be given 40,000 shares, by which it will have control. The city will issue bonds to pay off the company's debt and provide working capital.

Quebec Ry., Light, Heat and Power Co.—Supplemental letters patent under the Dominion Companies Acts, dated Nov. 6, authorize the company to enter into any agreements relating to any corporation whose capital stock is owned or controlled by or for the Q. R. L. H. and P. Co., "and relating to acts, steps and things to be done or taken or agreed to or assented to by any such corporation, and relating to or respecting the undertakings, contracts, stocks, securities, liabilities, bonds, mortgages, charges, assets, operations, revenues and profits of any such corporation, whether such agreements, undertakings, guarantees and arrangements may be entered into with such corporation itself or otherwise."

Saskatoon Municipal Ry.—Receipts for Oct. were $12,336.20, an increase of $972.63 over the previous month. Details of the receipts show, cash $4,349.30; tickets $7,792.55; advertising $81; police $17.50; postmen $41.65; chartered cars $15; miscellaneous $69.20. The mileage operated was 58,858; traffic receipts per car mile, a little over 21c.; operating expenses per car mile, 25.3c.; number of passengers carried per car mile, 4.6; wages $7,409.65; interest on capital expenditure $2,083; sinking fund, $743.

St. Thomas, (Ont.) Electric Ry.—It was reported to the committee having charge of the line, Nov. 3, that the present bonded indebtedness is $85,000, and that since the City took over the line from the company nearly $250,000, including the purchase price, has been laid out upon it.

Toronto Ry., Toronto and York Radial Ry. and allied companies.—Gross earnings for September, $865,796; operating expenses, maintenance, etc., $411,159; net earnings, $454,637, against $767,944 gross earnings; $404,171 operating expenses, maintenance, etc.; $363,773 net earnings for Sept., 1912. Aggregate gross earnings for nine months ended Sept. 30, $7,183,470; net earnings, $3,553,004, against $6,221,044 aggregate gross earnings; $3,185,100 net earnings, for same period, 1912.

Winnipeg Electric Ry.—Gross earnings for September, $331,732; operating expenses, $181,652; net earnings, $150,080, against $309,722 gross earnings; $162,870 operating expenses; $146,852 net earnings for Sept.,

1912. Aggregate gross earnings for nine months ended Sept. 30, $2,981,434; net earnings, $1,336,374, against $2,737,552 aggregate gross earnings; $1,280,748 net earnings for same period, 1912.

The Montreal Tramways Company's Fares, Service, Etc., in Mount Royal Ward.

Peter Murphy, of Mount Royal Ward, Montreal, complained some little time since to the Quebec Public Utilities Commission, of an increase in fares charged by the company in that ward, which was formerly Notre Dame des Neiges municipality; also charging discrimination as compared with other sections of the city. The matter was referred to the President of the Commission, who, with F. C. Laberge, M. Can. Soc. C.E., another member of the Commission, heard the matter on November 7. The company filed an exception to the Commission's jurisdiction. The change in fares complained of by Mr. Murphy was the abandonment of the practice of selling 6 tickets for 25c and the putting in force of a cash fare.. It was shown that on Feb. 20, 1911, the Board of Railway Commissioners for Canada made an order governing the fares to be charged upon the Montreal Park and Island Ry., and authorizing the cash fare mentioned, but President Hibbard held that that order had ceased to be in effect as the Board of Railway Commissioners had ceased to have any jurisdiction over the Montreal Park and Island Ry, which is now a part of the Montreal Tramways Co.'s system. He therefore recommended as follows:—

That an order be issued directing the city of Montreal and the Montreal Tramways Co. to show cause why the commission should not consider and for the interest and convenience of the public require the extension of the railway from the present authorized limit of the Guy St. and Cote des Neiges line to such point within the limits of Mount Royal Ward as will be of convenient access to persons living in that ward and its immediate vicinity, as a means of reaching the central portions of the city, subject to such reasonable conditions as to right of way, construction, operation and rates as may be provided in the contract between the city and the company, or it may be within the jurisdiction of the commission to direct:

That the question of rates or tolls to be charged be not finally disposed of until such time as any questions arising upon the foregoing order are dealt with; that in the meantime the company be directed to restore the issue of 6 tickets for 25c. (the cash fare of 5c. to be still optional with passengers), children's tickets and other matters affecting tolls and transfers as were in effect before the adoption of the uniform 5c. cash fare now being required to be paid.

The commission subsequently passed an order carrying out the President's suggestions.

Fares on Saskatoon Municipal Ry.—In response to a request from workmen, limited tickets are now being issued at [illegible] for 25c., available only between 6 and 8 a.m. Other tickets are sold as follows:—Regular tickets, 6 for 25c., available at all hours; school tickets, for children under 14, 8 for 25c., available 8 a.m. to 5 p.m.; children's tickets, for children under 12, 8 for 25c., available at all hours. The cash fare is 5c.

The Montreal and Southern Counties Ry. is reported to be in the market for 12 cars, 57 ft. long, or 7 ft. longer than those at present in service, and with through platforms. It is said they are to be of the multiple unit, single control type, with toilet accommodation. It is also stated that some baggage cars are required.

Electric Railway Projects, Construction, Betterments, Etc.

Alberta Metropolitan Ry.—A meeting of shareholders was held at Calgary, Alta., Nov. 5, to elect directors, authorize the issue of capital stock, and approve of contracts for the construction of the projected railway. W. J. C. Madden, 114 Ninth Ave. E., Calgary, was chairman of the provisional directorate. The company was incorporated by the Alberta Legislature in 1912, to build a railway from Calgary to Shepard, Alta., to arrange with other companies for the operation of the line, and to lay out amusement parks.

Berlin and Northern Ry.—Press reports state that a contract has been let for the elimination of a curve on the existing line, and that the work includes the building of a 1,300 ft. culvert, and abutments. (May, pg. 235.)

Brandon Municipal Ry.—We are officially advised that a report is being prepared for submission to the City Council of Brandon, Man., respecting extensions to the line which it may be necessary to make in 1914. The principal extension talked of is one of four miles to the Experimental Farm, the Industrial School and Lake Percy. The city is to get a park from the farm and school around Lake Percy, on condition that a line be built to it. The land required for the park will be surveyed as soon as the river and the lake freeze over, and then the agreement will be discussed and definitely decided upon. J. Antonisen, Brandon, is Superintendent. (Aug. pg. 395.)

British Columbia Electric Ry.—The building of an extension from Boundary Road, along Hastings St., Vancouver, for two miles, was expected to be completed by Dec. 1.

Plans have been approved for the building of a line on 43rd Ave., South Vancouver, from Bridge St. to Main St., and it is said that construction will be started early in 1914. This is an extension of the new line from Kerrisdale to Point Grey.

Work has been started on the construction of the station at the south end of Granville St., as a terminal for the Lulu Island line. The substructure, consisting of heavy pile and timber work supporting the platform on the level of the bridge, was built during the summer. The contract for the superstructure has been let to Campbell Bros., and it is expected that the station will be completed early in 1914. The platform on which the station is to be built is 188 by 140 ft., and the station building will be 115 by 30 ft. It will contain waiting rooms, refreshment room, and offices for the operating staff. There will be five tracks to accommodate the regular traffic and to provide storage for cars, etc. The cost of the building is estimated at $40,000.

We are officially advised that Westinghouse, Church, Kerr and Co., have been engaged to act as consulting engineers in connection with the erection of the double deck car barn in Vancouver, a description of which was given on pg. 542 of our November issue. This barn is estimated to cost $330,000, and will give accommodation for 120 cars. The same firm is also acting as consulting engineers in connection with the erection of new shops in Burnaby municipality on the easter boundary of Vancouver, which will probably cost about $250,000. Their construction work will probably be started early in 1914. Plans are being prepared.

Tenders are under consideration for the construction of an interlocking signal tower at the crossing of the Esquimalt and Nanaimo Ry. on Esquimalt Road. (Nov., pg. 544.)

Calgary Municipal Ry.—The ratepayers of Calgary, Alta., by a considerable majority have refused to approve of an arrangement for taking over a line to Shaganappi Park, which it was proposed to build privately, and hand over to the city for operation, the promoters guaranteeing the cost of operation for a short term. As a result of the vote the City Commissioners, Nov. 7, recommended the City Council to pass a resolution providing that in the future the City shall not entertain any proposition from private individuals to establish public utilities within the City limits.

Press reports state that the City Council has under consideration plans for extending the municipally owned electric railway, totalling over four miles. (Oct. pg. 494.)

Cape Breton Electric Co.—Press reports state that among the new work proposed to be carried out during 1914, is the building of a new substation at Reserve Jct., N.S., and an addition to the machine shops. (July, pg. 344.)

Dominion Power and Transmission Co.—It was reported in Hamilton, Nov. 13, that the directors had decided to undertake the immediate construction of a steam auxiliary plant at an estimated cost of $1,000,000. We have since been officially advised that designs are being prepared for a steam supplementary plant of a capacity of 6-10,000 k. w. turbine, of which capacity the company is now engaged in developing two of the units. The plant will be equipped with water tube boilers for 200 lbs. pressure with 160 degrees of superheat. The plant is designed on the unit plan. Work will be proceeded with as rapidly as possible, and it is expected to have the first units in operation within a year. The plant is not designed merely for emergent or peak use, but is intended to be operated continuously. (Nov., pg. 544.)

An official is reported recently as stating at Brantford, that there is no intention of extending the line westerly from that town, but that a branch line will be built to Galt. The right of way for this branch has been purchased, and it is possible that construction will be undertaken in 1914. There is, he added, absolutely no foundation for the press reports that the present line from Hamilton to Brantford will be made into a double track one. The traffic between the two points will not warrant a second track for some years to come. (Nov., pg. 544.)

Dunnville, Wellandport and Beamsville Electric Ry.—A bonus has been voted in aid of the building of this electric railway by Gainsboro township, and press reports state that bonds are being sold to provide for the building of the line from Dunnville to St. Anne, Ont. (Oct., pg. 494.)

The Edmonton Interurban Ry. has built a single track line from the city boundary of Edmonton, Alta., to St. Albert, about 5 miles, and has been operating a self-propelled gasoline electric car between the two termini three times a day, but it has had no connection with the Edmonton Radial Ry., which is operated by the city. On Nov. 6 an agreement was entered into between the company and the city and we were subsequently officially advised that the 1.5 miles of track to give connection between the city lines and the company's southern terminal were expected to be completed by Nov. 20, when a through service between Edmonton and St. Albert was to be started. It is said that the company has ordered three more cars in England. The car already in use is equipped with the Hele-Shaw system of transmission, which consists of oil motors and fittings. H. Warner, Edmonton, is Chief Engineer. (Nov., pg. 544.)

It is reported that the company will soon begin the construction of a carhouse on Algonquin Ave., Edmonton.

Estevan Transit and Power Co.—Application is being made to the Saskatchewan Legislature for the incorporation of a company with this title to develop power, and in connection therewith to build railways from the s. w. ¼ of sec. 13, tp. 2, range 8, west of the 2nd meridian, near the crossing of the Canadian Northern Ry. by the C.P.R., along the Government road allowance, and by a fully described route to sec. 11, and along the south side of the Souris River valley, to the road allowance between sections 11 and 12. The provisional directors named in the application are H. J. McNeil, W. J. Perkins, E. C. Hillborn, D. C. Dunbar, Estevan, Sask.

Forest Hill Electric Ry.—Application has been made to the Ontario Railway and Municipal Board for sanction to proceed with the construction of the projected line north of Toronto. (Sept., pg. 442.)

Frontier Electric Ry.—Press reports state that it is not proposed to start construction of this projected three track railway from Buffalo to Niagara Falls, N.Y., until the spring. J. S. Simmons, Niagara Falls, N.Y., is Vice President.

Imperial Traction Co.—Press reports state that it is proposed to begin construction early in the spring on the proposed lines from Bridgeburg to Smithville, and from Hamilton to Toronto, and that a connection will be provided between Smithville and Hamilton. (July, pg. 344.)

Kingston, Portsmouth and Cataraqui Elec. Ry.—Press reports state that a second track is to be laid on Princess St., Kingston, Ont., during next summer. (Apl. pg. 185.)

We have been officially advised that it is the company's intention to lay a second track on portions of King and Princess Streets in the early spring, provided the city is in a position to undertake the paving of the same, and that on the completion of the second track the company will operate a limited ten minute service all the year round.

London, Grand Bend and Stratford Ry.—C. J. McAllister in an interview at London, Ont., Nov. 4, is reported as stating that surveys had been completed and application was being made to the several municipalities through which the line would pass, for franchises. The lines for the building of which arrangements are said to be being made are:—From London to Grand Bend, via Hyde Park and Parkhill; and from Grand Bend via Exeter to Stratford. The line may eventually be carried on to Berlin. (Oct., pg. 494.)

London St. Ry.—A conference between the company's officials and the London, Ont., City Council, was held Nov. 8, on the condition of the lines in the city. The Council is desirous that cars be run on Sundays, but T. H. Smallman, Vice President, stated that the company would not pay a cent or grant anything in the way of concessions for the privilege of running cars on Sunday. The City Engineer had presented a report suggesting new routes, additional lines, additional cars, and some concessions as to fares. The company will consider this report and make suggestions thereon.

An agreement was reached Nov. 3, under which it is said that the company will take a minimum of 1,000 h. p. from the Hydro-Electric Commission. The price is $36 per h. p., and the contract is to run for twelve years from Dec. 15. (July, pg. 344.)

Medicine Hat Tramways, Ltd.—Application was made to a court at Calgary, Alta., Nov. 21, by E. G. Fagan, of Medicine Hat, for an order quashing the resolution of the council granting an extension of time to the Montreal Engineering Co. for the construction of an electric railway in the city. (Nov., pg. 544.)

Moncton Tramways, Electric and Gas Co.—Press reports state that it is not intended to extend the line to Sunny Brae, N. B., via. Church St., Moncton, until early in 1914. (Feb. pg. 90.)

Montreal and Southern Counties Ry.—We are officially advised that contracts have been let as stated in our last issue for the building of a bridge across the Yamaska River, and the extension of the line through Granby, Que. In connection with this line a route map from St. Cesaire to Granby, 14.5 miles, has been approved by the Board of Railway Commissioners. We are further advised that a contract has been let to A. F. Byers & Co., for the building of a sub power station, and a passenger station at Rougemont, and that they have started the work. (Nov. pg. 544.)

Moose Jaw Electric Ry.—The South Hill belt line has been completed and was put in operation Nov. 8. (July, pg. 344.)

Niagara Gorge Rd.—Press reports state that the company is preparing to erect additional car houses at Niagara Falls, N.Y.

Niagara, St. Catharines and Toronto Ry.—Plans are being prepared for a passenger station and freight house at Niagara-on-the-Lake, the terminal of the recently completed 11 mile branch from St. Catharines, Ont. (Nov., pg. 544.)

Port Arthur and Fort William Electric Ry.—Tenders are under consideration for a brick addition 260 by 30 ft. to the Walsh St. car barn, Fort William.

The only work necessary for the completion of the line to the industrial plants on Island no. 2, Fort William, is the building of 100 ft. of trestle work on the island side of the bascule bridge. This is being put up by the C. P. R., and is expected to be completed by the end of the year, when the extension will be put in operation. (Nov., pg. 544.)

Regina Municipal Ry.—We are officially advised that it has been decided to postpone the building of the line into the C. P. R. annex, Regina, Sask., until the spring. The extension on Young St., to the new power house has been completed. During the construction season now completed there have been built and reconstructed 21 miles of single track. This includes about 11 miles of paved single track. The approximate expenditure on this was about $550,000. H. Doughty is Superintendent. (Nov., pg. 544.)

Prince Albert, Sask.—At a meeting of the Prince Albert, Sask., Board of Trade, Oct. 30, a resolution was passed urging the City Council to grant a franchise for an electric railway in the city, to a company. It is said that a proposal will be submitted to the City Council at an early date.

Quebec and Island of Orleans Ry.—Application is being made to the Quebec Legislature to authorize an extension of the projected lines connecting with the Isle of Orleans, from Quebec to Montreal, as far as possible along the north shore of the St. Lawrence River. G. Maillet, Quebec, is Secretary. (May, 1911, pg. 455.)

St. John Ry.—Rapid progress has been made with the extension to the One Mile House and to Kane's Corner, on the extension of the St. John, N.B., Ry. Track has been laid to One Mile House, part of the line ballasted, and part of the overhead work completed. It is expected to have the extension in operation early in December. An arrangement has been made with the City Council providing for a further extension from Kane's Corner, along the Marsh Road. (Nov., pg. 544.)

St. Thomas Street Ry.—The City Engineer was instructed by the St. Thomas City Council, Nov. 3, to prepare an estimate for putting the line throughout into proper condition, and for the laying of a second track upon Talbot St. (July, pg. 345.)

Sudbury, Copper Cliff Suburban Electric Ry.—A bylaw has been passed by the Town Council of Sudbury, Ont., granting a franchise to the company for the building of a street railway, to be operated by any power except steam, on the following streets and avenues: Regent, Lorne, Elm, Durham, Monk, College, Kathleen, Teetman, Morin, Notre Dame, Lisgar, Larch, Cedar, Station, Nelson, John, Elizabeth, McNaughton, and Annie. By consent other streets may be substituted; rights on the streets may be granted to other street railway companies, and the company may utilize a private right of way connecting with the lines on the streets. The agreement also contains sections as to the class of cars to be provided, and provides for the making of regulations as to the operation of the same. (Nov. pg. 545.)

Three Rivers Tramway Co.—Press reports state that the proposed electric railway from Three Rivers to Berthier and Portneuf, Que., is again under consideration, with a view of construction being started in 1914. (Aug. pg. 395.)

Toronto Suburban Ry.—Construction on the line from Lambton Mills to Guelph, Ont., has practically been closed down for the season. The grading is almost finished into Guelph, and nearly all the ties have been delivered at Cooksville, where they are stored on the right of way. Some right of way difficulty has developed between Lambton and the crossing of Mimico Creek, on which section of the line no grading has been done. Efforts are being made to settle these matters.

Owing to a difficulty raised by the Village Council of Weston, the line to Woodbridge has not been put in operation. The Board of Railway Commissioners has ordered the reconstruction of the subway, about which the difficulty arose, and the division of the cost between the village, the company and the G. T. R.

It is expected that both the above lines will be completed and put in operation early next summer. (Oct., pg. 494.)

Winnipeg Electric Ry.—After several conferences between the City Council, representatives of the company and R. M. Fenstel, the street car traffic expert, who recently made a report on the electric railway in the city, a special committee was appointed to act for the City in further negotiations with the company on the report. As the result of the conference alterations were made in the routing along several lines. The Public Utilities Commission made an order, Nov. 4, that the cost of the investigation made by R. M. Fenstel, should be divided between the city and the company, each paying $2,637. (Nov., pg. 545.)

Grand Valley Ry.-Brantford St. Ry.—An extension of time to Nov. 23 was given the company to elect whether or not it would comply with the conditions imposed by the court as the result of the recent action brought by the city of Brantford, Ont., for the cancellation of the franchise. If the conditions are not complied with the city is to take possession of the streets, but not of the company's assets.

Electric Railway Notes.

The Dominion Power and Transmission Co. has received one freight car from the Preston Car and Coach Co.

The Regina Municipal Ry. has received one double truck snow sweeper from the Preston Car and Coach Co.

The Regina Municipal Ry. has purchased from the Preston Car and Coach Co. 18 double truck cars and one double truck snow sweeper, and has had a motor haulage car and some other rolling stock built in its own shops.

The Niagara, St. Catharines and Toronto Ry. Co. recently presented E. F. Purdon, an operator, with a gold watch and chain for bravery in preventing a collision when two freight cars broke loose from a train on the company's line in August.

H. C. Nickle, Superintendent of the Kingston, Portsmouth and Cartaraqui Electric Ry., is repoted as stating that after Oct. 1, 1914, a ten minute service will be given between 11 a. m., and 7 p. m., all the year round. At present a ten minutes service is given between these hours, during the summer.

The Montreal and Southern Counties Ry. has ordered six motor passenger cars, two trailer cars and two motor combination passenger and baggage cars, all 54 ft. 2 ins. long over buffers, with straight platforms. and equipped with all the most modern improvements, from the National Steel Car Co.

With reference to the statement in the daily press that the Toronto and York Radial Ry. is building an extension to its car barn on its Scarboro Division, we are officially advised that a storage switch has been built at the west side of the car barn, which is no doubt responsible for the report.

The Denver City Tramway has instituted what is called a "skip stop" service on one of its lines, as a means of relieving the traffic, and speeding up the schedule. Under this system, the cars stop at every other street travelling in one direction, and at the intermediate streets in the other direction, so that all streets have a stop in one or other direction.

The Toronto Suburban Ry. has given notice of an appeal to the Privy Council against the decision of the Appellate Division of the Supreme Court of Ontario, which upheld the application of the City of Toronto that the company shall pave the track allowance on which it operates on Bathurst St. and Davenport Rd. The company claims that under the agreement it is not compelled to do this work.

It was stated recently that the Montreal Tramways Co. had decided to obtain the ruling of the highest court, if necessary, in order to test its powers over passengers who refuse to comply with the company's antismoking regulations. We are advised that the company has had several cases before the recorder's court under the bylaw prohibiting smoking, and that it secured a conviction in each case. None of the cases have been appealed.

The Hull Electric Co. is in the market for four double truck trailer cars. The design of the car bodies will be the same as that in use for the company's motor cars, as illustrated in an article on its two car trains in Canadian Railway and Marine World for September, page 441, and the arrangement of the entrance and exit will be similar to that shown on the trailer car in the same illustration. The general dimensions of the cars will be, length over bumpers, 43 ft.; height from bottom of sill to top of roof, 8¾ ft.; width over side sheathing, 8½ ft.; seating capacity, 54 persons.

The Cape Breton Electric Co. has made a change in regard to the collection of fares on its local lines. Ever since commencing operation fares have been collected without the use of fare boxes, but fare registers have been used. On Nov. 1, the company started the use of portable hand fare boxes on its local lines in Sydney, North Sydney, Sydney Mines and Glace Bay, but it is continuing the old plan of fare collection on the interurban lines between Sydney and the colliery districts, using a fare register as in the past.

Proposed Municipal Interurban Electric Railways in Ontario.

In connection with the project for the building of an electric railway from Toronto to Port Perry, Ont., which was fully dealt with in Canadian Railway and Marine World for November, a meeting of representatives of municipalities interested was held in Toronto, Oct. 29. It was decided that support would generally be given to what is described as route 1, viz., from Toronto to Whitby, passing through Markham, Uxbridge, Brooklin and Port Perry, 71 miles. It was further decided that the Hydro-Electric Commission should draw up a contract for the building and operation of the line, which should be submitted to the municipalities for discussion. The financing of construction was also discussed, and the opinion was expressed that the Provincial Government should grant subsidies in favor of this and other similar lines.

A project has been started in Guelph to build a line to follow the Hydro-Electric Commission's power transmission lines from Hespeler through Guelph to Elora, Fergus, Arthur, and Mount Forest, and on through the Beaver Valley to Meaford or Thornbury. The Owen Sound Board of Trade, Oct. 30, passed a resolution favoring the Guelph project, but advocating the continuance of the line to Owen Sound.

A survey has been made of the County of Huron by engineers acting for the Hydro-Electric Commission, and preliminary plans for routes laid out. As soon as the necessary reports on these are received by the Commission, it is proposed to arrange for meetings to be held in Goderich, and other centres in the county to discuss the whole question. (Nov., pg. 539, and Sept., pg. 442.)

Port Arthur and Fort William Electric Ry.—At a meeting of the Fort William, Ont., City Council, Nov. 1, a resolution was passed deciding to take over the control of the part of the electric railway system within the city limits. At present the line is operated as a joint undertaking by a commission, but each city undertakes the construction of extensions within its own borders. Under the present agreement a through service between the two cities is carried on. A committee was appointed to arrange with Port Arthur the necessary details for the change. The suggestion is that the line shall be operated as at present by a joint board, but that it shall be run as two separate units, each city having control of its own lines, while a neutral zone will be provided, where the cars from each city will switch and turn.

The present joint commission was appointed in 1908 for four years, which terminates, it is claimed, in December. The commission decided, Nov. 6, to employ an outside man to assist the commission and the officers of the line in making up the final reports and to advise as to the future management.

Personal Paragraphs.

N. W. PATTERSON has been appointed Chief Inspector, Regina Municipal Ry.

THOMAS PENNY, formerly President International Ry. Co., which controls the Niagara Falls Park and River Ry. in Canada, has resumed practicing law in Buffalo, N. Y.

C. J. McCUAIG, stock broker, Montreal, who is President of the Sherbrooke Railway and Power Co. has been appointed honorary lieutenant colonel of the 53rd regiment, which has its head quarters at Sherbrooke.

PATRICK DUBEE, Secretary-Treasurer Montreal Tramways Co., and President Canadian Electric Railway Association, has been elected a member of the American Electric Railway Association's committee on taxation matters.

London and Lake Erie Ry. and Transportation Co.—G. B. Woods, Vice President, is reported to have stated in an interview at St. Thomas, Ont., Nov. 19, that the company had under consideration proposals for the extension of the line to Ingersoll, and to Aylmer. In reference to the latter proposal a deputation from the Aylmer district told Mr. Woods that a right of way would be provided to Aylmer, along or near the 7th concession of Yarmouth, if the company would agree to that route. Mr. Woods is reported to have stated that he personally favored a route along Talbot St. If the line was built in all probability a branch would be built to Sparta, five miles in length if the Talbot St. route was adopted, and four miles if the 7th concession route was selected. The route for the proposed line to Ingersoll would be a direct one. Since the present company took over the line, added Mr. Woods, about $150,000 had been expended upon improvements. (Aug., pg. 395.)

Co-operative Insurance for Employes has been arranged by the Fourth Avenue Ry., of New York, with an insurance company. The proposed policies are to be issued in lieu of a death benefit of $250 under the mutual benefit association affiliated with the company. For members of the association the average annual cost is to be about $11, but this rises to $12 for employes not members. The association will pay $4 of each member's premium and the remainder will be paid through the company, being deducted in weekly installments from wages. The payment of 75c. a year additional secures accident benefits varying from $250 for loss of thumb and index finger to $1,000 for the loss of both hands or feet, etc. Anyone leaving the company's employ may continue the insurance on paying the published rate for his age; the additional accident benefit may be secured after leaving the company's employ for an annual fee of $1.25.

Toronto, Barrie and Orillia Electric Ry.—At a meeting of the Barrie, Ont., Town Council, Nov. 17, a committee was appointed to confer with the company with a view to having an agreement for a franchise submitted to a vote of the ratepayers in January.

This company was originally incorporated by the Ontario Legislature as the Monarch Radial Ry., having power to build a railway from Toronto to Barrie and Orillia. An extension of time for construction, and authority to change its name to the T.,B. and O.E. Ry., was granted in 1912. (Feb., 1912, pg. 91.)

The London St. Ry. has received six single end single truck pay-as-you-enter city cars from the Preston Car and Coach Co.

The Board of Railway Commissioners has established express delivery and collection limits of Owen Sound, Ont.

Marine Department.

The Shipping Disasters on the Great Lakes.

What is, without doubt, the greatest disaster, or series of disasters, which has ever taken place in connection with the navigation of the Great Lakes, occurred chiefly during Nov. 9, when a severe storm swept the lakes from end to end. Though practically no part of the Great Lakes escaped some evidence of the storm, it seemed to have been most severe in Lake Huron, so far as damage to vessels and loss of life are concerned, but whether such damage and loss are due entirely to the storm, or to a possible bunching of vessels in the narrower parts of Lake Huron, thus restricting the area within which vessels might have run for safety, and making for possible collisions, is at present a matter for conjecture. Although a full enquiry will be made into all possible causes of the disaster, it is, unfortunately, impossible to obtain any very clear details of what actually happened, as any evidence which could be given and which would have any real value in clearing up many of the clouded points, could only be given by men who went down with the vessels. It is to be hoped, however, that much will be learnt, which if put to its proper use, should make for a general betterment of navigation conditions on the Great Lakes.

Note:—The dimensions given above are in feet, representing length, breadth and depth in the order named; the tonnage shows gross and registered tons.

Of the Canadian vessels involved in the disaster, four have been absolutely lost, and little or no wreckage has been discovered, while a fifth, the Canadian Lake and Ocean Navigation Co.'s s.s. Turret Chief, was driven ashore in such a position that it is doubtful if she can be salved. The officers and crew of this latter vessel got ashore, but those of the other four vessels were all lost. The largest individual loss was the St. Lawrence and Chicago Steam Navigation Co.'s s.s. James Carruthers, an illustration of which is given herewith. She was the largest freight carrying steamship engaged in the Canadian lake trade, and was only launched at Collingwood, Ont., May 22. Of the Canadian vessels lost, she was the only one built in Canada, all the others having been built in Great Britain. The loss of United States vessels is considerably heavier, both as to number and value.

Capt. W. H. Wright, who had been master of the James Carruthers since her first trip at the commencement of the season, has been master of most of the vessels of the St. Lawrence and Chicago Steam Navigation Co.'s fleet. He was promoted from the command of the E. B. Osler, which, until the launching of the James Carruthers, was the largest of the company's vessels. On the recovery of his body, it was taken to his home at Toronto, the funeral taking place Nov. 17, when Capt. Crangle and J. H. G. Hagarty, director and Secretary-Treasurer of the company attended. The steamships Wexford and Leafield were in charge of Capt. B. Cameron and Capt. C. F. Baker, respectively, both of Collingwood, and the Regina, of Capt. E. H. McConkey, of Barrie, Ont. None of the bodies of the last three has been recovered at the time of writing.

In addition to total losses, there were a number of strandings, with consequent damage, these including the following Canadian vessels:—A. E. McKinistry, owned by Canada Interlake Line, Ltd., Toronto, near Brighton, in Lake Ontario; Acadian, owned by the same company, at Thunder Bay, Lake Superior; Huronic, owned by Northern Navigation Co., Sarnia, Ont., at Whitefish Point, Lake Superior, all of which were released without actual damage. The following U.S. vessels were also damaged by stranding, etc., but the extent of such damage is, at the moment, in most cases, unobtainable:—Fred. G. Hartwell, Mutual Steamship Co., Duluth, Minn., ashore at Iroquois Point; Chas. L. Hutchison, H. Wineman, Jr., Detroit, Mich., aground at Iroquois Point; G. J. Grammer, Seither Transit Co., Cleveland, O., aground at Lorain, Lake Erie; H. B. Hawgood, Acme Transit Co., Cleveland, O., aground off the St. Clair River, in Lake Huron; H. P. McIntosh, Wilson Transit Co., Cleveland; J. M. Jenks, Acme Transit Co., Cleveland, O., aground near Midland, Ont.; Lafayette, J. J. Freitus, Buffalo, N.Y., ashore near Calumet, Mich.; Major, W. H. Gratwick, Buffalo, N.Y., reported abandoned near Whitefish Point, Lake Superior; Manchester, Milwaukee Western Steamship Co., Milwaukee, Wis.; Mathew Andrews, Kinsman Transit Co., Cleveland, O., aground on Corsican Shoals, Lake Huron.

The following table shows the names of the vessels lost, their owners, dimensions, etc., and their approximate value and insurance. With the exception of the James Carruthers, the amount mentioned as insured is intended to represent that the vessel is insured for its full value, and not necessarily the actual amount for which it is insured. In the case of the James Carruthers, the owning company a few years ago adopted the policy of insuring only a proportion of the risk under a modified form of insurance policy, and crediting an insurance fund with the amount of the premiums saved in each year. The report for 1912 showed that there was at the credit of this account $109,290.47, and the directors stated that it was their intention to continue this policy until insurance could be obtained at what they considered reasonable rates and on reasonable terms. The amounts insured for the U.S. vessels cannot be ascertained, but it may be taken for granted that they are all well covered. It is not intended that this table should be taken as correct in every detail, as owing to varying circumstances, discrepancies are likely to appear, but it is believed to be correct.

In addition to the vessels mentioned, the U.S. Lightship no. 82 was driven from its moorings off Point Abino, Lake Erie, and lost, and the barges Halstead and Plymouth, and tug Martin were also reported lost. The number of lives lost has been estimated at about 250, but in this there is a certain amount of guess work as, so far as the Canadian vessels are concerned, the numbers of the crews on their last voyage is not definitely known in several cases.

Labor troubles at various ports in Great Britain and Ireland during the present year have interfered considerably with the St. Lawrence trade. Five of the Head Line steamships are reported to be tied up on account of the Dublin strike.

The Dominon Government Customs Patrol Steamship Margaret.

The steel twin screw patrol steamship which is under construction at Southampton, Eng., for the Dominion Government Customs Department, will be of the following dimensions,—length between perpendiculars, 185 ft.; breadth, moulded, 32 ft.; depth, moulded to main deck, 16 ft.; draught, forward and aft, 10½ ft.; deadweight on foregoing draught, 175 tons; coal, full supply, 200 tons; indicated horse power, 2,000; complement, officers and crew, 32; armament, two 6-pounder quick firing guns.

She will have a ram stem and cruiser stern, and five main transverse water tight bulkheads, all extending to the main deck. The shafting will be housed in the hull, the plating and frames being bossed out for the purpose.

The propelling machinery will consist of two sets of inverted, vertical, direct acting, triple expansion, surface condensing engines, each set having three cylinders working on separate cranks at angles of 120 degrees with each other in sequence of high, intermediate and low when the engines are going ahead. The engines will be capable of developing not less than 2,000 i.h.p. on a trial of 6 hours when running at about 180 revs. a minute with 220 lbs. of steam pressure in the boilers. There will be two boilers of the water tube type, each being used independently of the other, and each fitted with Howden's patent forced draught system made in accordance with plans furnished by Howden & Co. The total heating surface will be 5,500 sq. ft. with a total grate area of about 100 sq. ft.

There will be three decks, viz.,—lower, main, and boat and forecastle. On the lower deck will be located two state rooms, bath room and toilet, engineers' quarters and general crew's accommodation; on the main deck, two state rooms, dining saloon and officers', stewards' and wireless operator's quarters; on the boat deck, the day cabin, captain's quarters, wheel house, etc.

The auxiliary machinery will consist of windlass, capstan, boat hoist, refrigerating engine, steering gear, etc., and there will be a complete electric light installation with search light, and a wireless telegraph equipment.

The Dominion Government Fisheries Protection Steamship Malaspina.

The first of the two vessels built in Dublin, Ireland, for the fisheries protection service, was expected on the Pacific coast, where she will be stationed, towards the end of November. The severe trials through which vessels for this service are put, were carried through successfully without mishap. With the specified dead weight on board a speed of 14.7 knots was obtained as a mean of six hours run on the measured mile.

She has been built for the highest class at Lloyd's for both hull and machinery, and she is of the flush deck type with the machinery amidships, a top gallant forecastle and long bridge or awning deck amidships, with chart room at the forward end with navigating bridge, house and pilot's room above. The captain's and officers' quarters are located under the bridge deck forward, and under the after end of the bridge deck are the wireless telegraph and operators' rooms, with the engineers' quarters immediately below under the main deck. The general crew's quarters are immediately under the forecastle deck, and on the lower deck forward are the petty officers' quarters connected by a companion way with the main deck.

The hull is divided by transverse and longitudinal bulkheads into 20 water tight compartments, and she is fully equipped with lifeboats, mechanical lowering equipment, etc., steam steering gear, steam windlass and steam warping winch. There are also a complete electric light installation with searchlight, refrigerating plant and cold storage, wireless telegraph installation, steam heating and hot water systems, etc.

The propelling machinery consists of triple expansion engines supplied with steam by a marine type boiler at 180 lbs. under Howden's patent forced draught system. There is a large bunker capacity sufficient for steaming about 6,000 miles at about 9 knots an hour.

The Dominion Department of Public Works will receive tenders to Nov. 17 for the construction of harbor improvements at Port Hope, Ont.

Canadian Notices to Mariners.

The Department of Marine has issued the following

363. Oct. 22.—Ontario, Georgian Bay, Midland Bay, Tiffin, dredging

364. Oct 22.—Ontario, Georgian Bay, Victoria harbor, Port McNicoll, dredging

365. Oct 22.—United States of America, Lake Erie, Buffalo harbor entrance, dredging, caution.

366. Oct. 22.—British Columbia, Queen Charlotte Islands, chart of Skidegate Inlet issued.

367. Oct. 22.—Alaska, Revillagigedo Channel, Cutter Rocks, beacon rebuilt.

368. Oct. 22.—Alaska, Cross Sound, Cape Spencer, light established.

369. Oct. 27.—New Brunswick, east coast, Miramichi Bay, Grandon Flats channel, buoys established.

370. Oct. 27.—Quebec, River St. Lawrence, Montreal harbor, buoy established, position of gas buoy.

371. Oct. 29.—Ontario, Bay of Quinte, Big Bay, wharf, buoys placed.

372. Oct. 29.—Ontario, Georgian Bay, approach to Victoria harbor, Midland Point range lights, light poles replaced by towers.

373. Oct. 31.—Nova Scotia, south coast, entrance to Halifax harbor, Sambro outer bank, gas and whistling buoy to be replaced during the winter months by a lightship.

374. Oct. 31.—Prince Edward Island, south coast, Northumberland Strait, Prim Point, erratum in List of Lights.

375. Oct. 31.—Prince Edward Island, north coast, Shipwreck Point, lighthouse established.

376. Oct. 31.—Quebec, Chaleur Bay, Cascapedia Bay, New Richmond, buoy.

377. Nov. 4.—New Brunswick, south coast, Bay of Fundy, intended change in color of Beaver harbor whistling buoy.

378. Nov. 4.—New Brunswick, south coast, approach to St. John, Sheldon Point, temporary light.

379. Nov. 4.—New Brunswick, south coast, Bay of Fundy, intended change in color of Mispek bell buoy.

380. Nov. 4.—Nova Scotia, Bay of Fundy, Minas basin, Cobequid bay, entrance to Portapique River, lighthouse to be established near wharf, pole light to be discontinued.

381. Nov. 4.—Nova Scotia, south coast, approach to Sheet Harbor, intended change in color of gas and whistling buoy.

383. Nov. 4.—Newfoundland, east coast, Cape Bonavista, fog alarm to be established.

384. Nov. 6. Maritime Provinces, North Head, Shinimikas River, Shipwreck Point, names.

385. Nov. 6. Prince Edward Island, south coast, Northumberland Strait, Bedeque Bay, Summerside harbor, position of buoy.

386. Nov. 6. Quebec, River St. Lawrence, ship channel between Quebec and Montreal, Pointe aux Trembles, change in character of buoy.

387. Nov. 6. Quebec, Montreal harbor, temporary buoy removed.

388. Nov. 8. British Columbia, Strait of Georgia, Sisters rocks, intended change in character of light, temporary light.

389. Nov. 10. Ontario, Ottawa River, Deep River inlet, lighthouse rebuilt.

390. Nov. 10. Ontario, Lake Huron, Southampton, gas buoy carried away by storm.

391. Nov. 10. Ontario, Georgian Bay, Penetanguishene, light on Reformatory pier improved.

392. Nov. 12. Prince Edward Island, southeast, Cape Bear, change in character of light.

393. Nov. 14. Ontario, Lake Ontario, Cobourg harbor, extension to breakwater under construction, temporary light, caution.

394. Nov. 14. Ontario, Detroit River, Limekiln Crossing channel, north light vessel withdrawn, fog bell discontinued.

395. Nov. 15. Ontario, Lake Erie, Port Colborne, beacon light on eastern breakwater discontinued.

396. Nov. 17. Nova Scotia, North Atlantic Ocean, Sable Island east bar, position of dry bar.

397. Nov. 17. Nova Scotia, North Atlantic Ocean, eastward of Cranberry Island lighthouse, cable buoy moored temporarily.

398. Nov. 17. Prince Edward Island, south coast, Northumberland Strait, Bedeque Bay, Summerside, intended change in position of back range lighthouse.

399. Nov. 17. Newfoundland, south coast, off Burnt Islands, Bad Neighbor shoal, spar buoy replaced by bell buoy.

400. Nov. 18.—Ontario, Georgian Bay, west side, Lionhead harbor, lighthouse and outer portion of breakwater destroyed by storm, temporary light.

401. Nov. 18.—Ontario, Lake Huron, north channel, Little Current, railway swing bridge, regulations, lights.

402. Nov. 19.—Quebec, River St. Lawrence, from the Gulf to Montreal, color of gas buoys and lights.

Canada Steamship Lines, Limited.

It is announced that during the early part of December, an issue of $6,106,000 of 5% debenture stock will be made in London, Eng., which will be convertible into bonds at the option of the holder, and which will be a part of the total issue of $9,000,000, repayable at 105, in 1943. The London prospectus shows consolidated net profits of the companies concerned, for 1912, at $1,494,554, against $552,533 required to pay the interest and sinking fund on securities to be issued at present, including the amount reserved to retire underlying bonds, and to pay the balance of the cost of building the Northern Navigation Co.'s s.s. Noronic. It is estimated that on the basis of the increased gross earnings to Aug. 31, 1913, the net earnings for this year will be about $1,750,000. Interest at 5% and sinking fund at 1½% on the $8,500,517 debenture stock will require $552,533, showing a surplus of $1,197,467. In 1914, when the improvements and economies effected by the consolidation have come into full operation, it is estimated that the net earnings will approximate $2,000,000.

It is proposed to exchange six 7% preference shares of Canada Steamship Lines, Ltd., for every five common shares of Richelieu and Ontario Navigation Co., now held, with a bonus of common stock.

It is stated that the name of Canada Steamship Lines, Ltd., has been selected to replace the one previously adopted, Canada Transportation Lines, Ltd., in deference to the wishes of British investors.

Following are the names of those constituting the board of directors:—James Carruthers, President; Wm. Wainwright, D. B. Hanna, W. D. Matthews, J. P. Steedman, Sir Montagu Allan, H. B. Smith, E. Bristol, J. R. Binning, M. J. Haney, Aemilius Jarvis, Hon. J. P. B. Casgrain, C. A. Barnard and J. W. Norcross, Managing Director. A London advisory board has been appointed, consisting of Sir Stephen Furness, Sir Trevor Dawson, Sir Vincent Caillard, F. W. Lewis, A. Vickers, W. G. Morden and C. G. Bryan.

The Baffin's Bay Co., Ltd., has been incorporated under the Dominion Companies Act with $100,000 capital and office at Toronto, to carry on a general Arctic trading business, and in connection therewith to own and operate steam and other vessels for whale fishing, etc.

Welland Ship Canal Contracts.

Tenders for the construction of section [illegible] of the new Welland Ship Canal were received up to Nov. 18 by the Department of Railways and Canals. This section is 2.6 miles long, extending from the centre of Allanburgh, where the new and present canals will join, to Port Robinson, where the new canal will diverge from the present canal to follow its new course along the Welland River. This section of the canal is probably the simplest of all the nine sections into which the work is being divided, as the new canal will follow the present one along exactly the same course through this whole section. The work will consist entirely of widening and deepening the present channel, and as the rock cutting through this section is small, the work will be light. This section is on a tangent throughout nearly its full length, and will be crossed by only one bridge, no. 13, in Port Robinson. A press report from Ottawa, Nov. 24, states that this contract has been awarded to the Canadian Dredging Co. at prices which are estimated to approximate $2,000,000. The report is in error in stating that there only remains one more section of the canal to be put under contract, as sections 4, 6, 7, 8 and 9 have yet to be tendered for.

The contract for section 2 has been awarded to Baldry, Yerburgh and Hutchinson, of St. Catharines, Ont., and London, Eng., the amount involved approximating $5,500,000.

Full details of the work, as it will be when completed, appeared in Canadian Railway and Marine World for July and August.

St. Lawrence and Chicago Steam Navigation Company's New Stock Issue.

As mentioned in Canadian Railway and Marine World for November, the directors have decided to build another steamship, a duplicate of the s.s. James Carruthers, recently wrecked, to take care of its increasing business, and an order has been placed for it at Collingwood, Ont.

In order to meet the payments for this vessel, the directors decided to issue 1,400 new shares at par, in the first instance to shareholders of record on Nov. 15, in the proportion of one new share for every six shares held. The amounts subscribed are payable in two instalments, 25% on Dec. 15, and 75% on Jan. 5, 1914. In the event of any shareholders paying the first instalment and failing to pay the second instalment by the due date, their rights to such shares and all moneys paid in respect of same shall be forfeited to the company, and in the event of any shareholders failing to take up any new shares and to pay the first instalment, their rights to such shares shall be forfeited to the company. All new shares forfeited and any left over undistributed shall be disposed of by the directors as they may see fit. No allotment will be made to the holder of less than six shares, nor to the holder of more than six shares in respect of any shares held which are not a multiple of six.

Prize for Advertising or Sales Essay.—Advertising & Selling, New York, has authorized the Associated Advertising Clubs of America to announce a prize of $1,000 in cash, which it will pay at the Toronto convention next year—and every year thereafter until further notice—to the person who writes the most vital and helpful essay on a sales or advertising subject, in the opinion of the official awards committee of the Associated Clubs and of the editorial advisory board of Advertising & Selling, consisting of prominent advertising managers.

The Royal Line and St. John, N.B.

Since the inception of the Royal Line between Canada and England by Canadian Northern Steamships, Ltd., Halifax has been the Canadian winter port for the company's two steamships, Royal Edward and Royal George. On account of the new mail contract, which came into effect recently, and by which the mails were to be taken from and delivered to either Halifax or St. John, at the contractors' option, some little rearrangement of the steamship service to these two ports has been deemed advisable. The C.P.R. and Allan Line, which control the majority of the vessels engaged in the mail service, selected Halifax as their mail port, and decided to make that the terminus for the steamships Empress of Britain and Empress of Ireland, instead of St. John, as hitherto. In this connection, several representative bodies from St. John interviewed the Government, and as an outcome, the Minister of Marine announced at St. John, Nov. 12, that arrangements had been made with Canadian Northern Steamships, Ltd., that the Royal Edward and Royal George will make St. John their Canadian terminus this winter, instead of Halifax, the first sailing under the new schedule being from Bristol, Eng., Dec. 3, and from St. John, Dec. 16.

Atlantic and Pacific Ocean Marine.

Manchester Liners' s.s. Manchester Commerce, while passing through the Strait of Belle Isle, Nov. 1, struck an iceberg, necessitating a call at St. John's, Nfld., where she was drydocked for examination and repairs.

A fortnightly service between France and Halifax, N.S., calling at St. Pierre Miquelon and Sydney, has been inaugurated by the s.s. Miquelon, owned by La Morue Francaise et Secheries de Fecamp, a French firm with interests in St. Pierre Miquelon.

In connection with various statements repeated in the daily press recently, G. M. Bosworth, Vice President, C.P.R., has stated that it is not the company's intention to operate a steamship service through the Panama Canal.

Press dispatches from St. John, N.B., recently stated that Canadian Northern Steamships Ltd. had decided to change the winter terminal of the Royal Line from Halifax to St. John. We have been officially advised that Halifax is the winter port of the line, and no such change as that indicated is, or has been contemplated.

It is announced in London, Eng., that the Hudson's Bay Co. intends spending £4,000,000 on developments in Northwestern Canada, in the establishing of further trading posts, and in building specially designed steamships for the Hudson Bay route to Liverpool, Eng., and for a service between the Pacific Coast and England, via the Panama Canal.

The Hudson's Bay Co. has erected an interesting memorial in Vancouver, consisting of the mast of the company's old steamship Beaver. This vessel was built by the company at Blackwall on Thames, Eng., in 1835, and launched by King William IV. She was the first steamship to come round Cape Horn to Vancouver, and was wrecked in 1888 at Prospect Point, Stanley Park. The mast has been encased in steel and is set in a bed of concrete on a granite base.

A dispatch from London, Eng., dated Nov. 12, states on the authority of the Times that "the capital has been raised in Boston and Great Britain for necessary engineering works and the establishment of a line of steamers running direct from Blacksod Bay, County Mayo, Ireland, to Halifax and Boston. This project is in connection with the schemes for all British communication around the Empire." The inclusion of Boston in an all British scheme for communication around the Empire, makes one wonder if the writer of the dispatch ever heard of a Boston tea party.

The Allan Line announces that its two new quadruple screw turbine steamships Alsatian and Calgarian, will be in service between Halifax and Liverpool, early in the New Year, the first sailing of the Alsatian taking place from Liverpool, Jan. 17, and from Halifax, Jan. 31. These vessels are 600 ft. long, 18,000 tons, with a speed of from 18 to 20 knots an hour. They will be the largest on the Canadian route, and will be equipped with the latest wireless telegraphy, submarine signalling and other installations. The Allan Line is now announced as being operated in connection with the C.P.R.

A representative of a Mexican company was in Victoria recently with the view of arranging a steamship service between British Columbia ports and Salina Cruz, Mexico, in connection with the Tehuantepec Ry. If the scheme is carried through, it is intended to place a number of small steamships on the route, with accommodation for both passengers and freight, on a trimonthly service. The Canadian Mexican Pacific Steamship Co., now a part of the Union Steamship Co., the Harrison Direct Line, and W. R. Grace & Co., have each run vessels on this route at various times, and with the exception of the last mentioned, have abandoned the service on account of the unsettled condition of affairs in Mexico.

Maritime Provinces and Newfoundland.

The Eastern Steamship Corporation's s.s. Governor Cobb, which has been on the Yarmouth-Boston route for some time, is having her turbine engines overhauled at Bath, Me.

The C.P.R. has withdrawn the s.s. St. George from the Bay of Fundy service for the winter, during which period the run between St. John, N.B., and Digby, N.S., will be taken by the s.s. Yarmouth.

The s.s. Alcona, owned by fishing interests in Gloucester, Mass., and engaged off the Newfoundland coast, as a refrigerator vessel in attendance on the fishing fleet, took fire and sank in Curling harbor, Nfld., Nov. 6. She was valued at $100,000.

The Ship Masters Association no. 1 of Canada, which was organized at Halifax, N.S., in April, 1910, has now 60 members in good standing. The officers are:—President, Capt. N. Hall; Treasurer, Capt. D. A. Scott; Secretary, Capt. Ernest Wells. Meetings are held on the third Tuesday in each month.

The Southern Salvage Co., Liverpool, N.S., is reported to be building a steam tug for salvage purposes on the Nova Scotia coast, to be 118 ft. long and 32 ft. beam, with twin screws. The engines will be of the compound surface condensing type developing about 700 h.p., for a speed of 12 knots an hour.

The Dominion Coal Co's. s.s. Bridgeport which left Sydney, N.S., Nov. 1, for St. Lawrence ports, is believed to have been lost with her crew during a severe storm. She was a comparatively new vessel, her dimensions being, length 442 ft., breadth 58 ft., draught 28 ft. 7 ins., 3,380 registered tons. The crew numbered 40, the majority being Chinese.

The board of conciliation appointed under the Industrial Labor Disputes Act, to hear the complaints of the longshoremen at St. John, N.B., has reported to Ottawa, and it is said that a satisfactory agreement will result. The board consisted of W. E. Foster, chairman; J. E. Moore, representing the Shipping Federation of Canada, and J. E. Tighe on behalf of the men.

About the end of December, or early in January, the Department of Marine will replace the gas and whistling buoy on the Sambro outer bank at the entrance to Halifax harbor, by a light ship. The hull of the steamboat to be used, is painted red, with the word Halifax in white on each side, and with No. 15 on each side of the bow.

The Department of Railways and Canals has issued a notice to the effect that the public wharf or pier at Cape Tormentine, N.B., is closed for the remainder of the season and for two months from the reopening of navigation in 1914, in consequence of the work now in progress there in connection with the car ferry terminal.

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during October, 1913.

The schooner Gypsum Emperor, owned in the U.S., but registered at Windsor, N.S., while bound from New York to Halifax, N.S., with coal, was reported to have been dismasted during a storm at sea and to have been abandoned in a waterlogged condition. The crew was saved by the Hamburg American Line s.s. Barcelona, bound from Philadelphia to Hamburg. The schooner was built at Parrsboro, N.S., in 1892, her dimensions being: length, 179.2 ft.; breadth, 36.2 ft.; depth, 16.2 ft.; 695 tons register.

Province of Quebec Marine.

The removal of the gas buoys from the St. Lawrence ship channel commenced Nov. 22, when they were replaced by spar buoys for the remainder of the navigation season, which will close early in December.

The Quebec Harbor Commission's grain elevator is practically complete so far as the construction work is concerned. It was expected that the installation of the machinery would be commenced towards the end of November.

The Reid-Donald Steamship Co., Ltd., has been incorporated under the Dominion Companies Act, with $100,000 capital and office at Montreal, to own and operate steam and other vessels, and to carry on a general trading, navigation and salvage business.

Canadian Vickers, Ltd., announce that work will proceed on the erection of machine shops, etc., at Maisonnevue during the winter, and it is anticipated that the plant will be completed by about July 1, 1914. The foundations of the shipbuilding slipway have been laid, and the structural work is in process of construction by the Dominion Bridge Co.

Ontario and the Great Lakes.

The Canada Interlake Line's s.s. Mapleton, while passing through the Welland Canal recently, struck the wall of the Humberstone bridge, near Port Colborne, damaging some of her plates forward. She returned to Port Colborne and discharged her cargo.

The Keystone Transportation Co.'s s.s. Keyvive, which has been built at Middlesbrough, Eng., arrived at Thorold, Ont., the end of October, with a cargo of sulphide pulp from Hernosand, Norway. She is a sister vessel to the company's vessels, Keywest and Keyport.

W. H. Sullivan, Superintending Engineer, Welland Canal, has been appointed Principal Assistant Engineer, Welland ship Canal, St. Catharines, Ont., and L. D. Hara, Assistant Engineer, Welland Canal, has been appointed acting Superintending Engineer, Welland Canal, vice W. H. Sullivan.

The Merchants Mutual Line's s.s. Mapleton, while upbound, Nov. 19, ran ashore on Drummond Island, during a dense fog. It was expected that she would have to be lightered of her cargo of cement before being released. She is being operated by Canadian Interlake Line, Ltd.

The s.s. Mary C. Elphicke, owned by the Republic Transportation Co., Cleveland, Ohio, which foundered in Lake Erie recently, is reported to have broken up and, with her cargo of grain, become a total loss. She was built in 1901, her dimensions being:—length, 430 ft.; breadth, 50 ft.; depth, 29 ft.; tonnage, 4,998 gross, 3,967 register.

The Northern Navigation Co.'s s.s. Noronic, which has been built at Port Arthur, Ont., was given a number of trial runs in Thunder Bay, Nov. 24, for the adjustment of her compasses, etc. She later loaded flour at Fort William, and sailed for Sarnia, where all her furnishings will be installed during the winter.

It was announced early in November that the Northern Navigation Co.'s s.s. Noronic, which has been built at Port Arthur, would sail from that port towards the end of November for Sarnia, where all the furnishings would be installed during the winter. Prior to sailing, she was to make trial runs in the bay, after which she was to load flour for the east.

The Department of Marine has announced that the gas buoy off the north end of Chantry Island bank, near Southampton in Lake Huron, which was carried away from its moorings during a storm, and which it was stated in the Canadian Notices to Mariners, no. 390, Nov. 10, would not in all probability be replaced this season, has been replaced.

Work was commenced early in November on the wreck of the Keystone Transportation Co.'s s.s. Keystone, which sank in deep water in Chippewa Bay, St. Lawrence River, Oct. 26, 1912. The wreck has been located and the hull is being prepared preparatory to using compressed air in order to raise her. The cargo is valued at $300,000. Some interesting particulars were given in our last issue.

The Montreal Transportation Co.'s barge, Cornwall, with 40,000 bush. of wheat, while passing through the Cornwall Canal, Nov. 2, in tow of the steam tug Emmerson, broke her lines and blocked navigation. She was later secured and taken to Bergins Lake, where she sank, and is probably a total loss. She was built at Kingston in 1890, her dimensions being:—length, 178.6 ft.; breadth, 35.2 ft.; depth, 11.7 ft.; 586 tons register.

It is estimated that work involving the expenditure of $1,200,000 has been undertaken in Fort William by the Government during this year, including dredging in the channels, building slip and abutment walls, etc. Other works to be undertaken next year cover the construction of 2,646 ft. of concrete abutment walls on the Mission River, and the construction of a turning basin necessitating the removal of about 25 acres of earth.

The dredging completed and swept at Port McNicoll, in Pictoria Harbor shows a depth of 25 ft. below the zero plane of Georgian Bay, including the whole of the space in the dock between the quay walls, 600 ft. wide, and extends to deep water. A gas buoy is moored at the turn on the northern edge of the dredged channel, close round which vessels should turn, and straighten up for the middle of the dock opening.

In connection with the dredging in Midland Bay, a plan of the work completed and swept at Tiffin shows a depth of 25 ft. below the zero plane of Georgian Bay, for a width of 340 ft. in front of the G.T.R. quay wall and for 680 ft. along the face of it from the northwest corner of the elevator quay. From the quay the channel is 400 ft. wide to deep water, the northeast edge of the dredging being in the same line as the work in front of the quay.

The U.S. Lake Survey reports the levels of the Great Lakes in feet above tidewater for October as follows:—Superior, 603.03; Michigan and Huron, 580.70; Erie, 572.42; Ontario, 246.29. Compared with the average October levels of the past ten years, Superior was 0.27 ft. above, Michigan and Huron 0.04 ft. above, Erie 0.26 ft. above, and Ontario 0.35 ft. above. It was anticipated that during November, Superior would fall about 0.2 ft., and Michigan, Huron, Erie and Ontario about 0.3 ft.

Masters of vessels are warned to have great care when in the vicinity of the Buffalo harbor entrance to reduce speed promptly when signalled by dredge or drill boat whistles. Rock excavation to deepen the approach to the north entrance to the harbor, to 25 ft. at mean lake level over an area of about 2,400 ft. long and 60 ft. wide, northward of the northern end of the old breakwater, which has been in progress since September, will continue until completed in 1915. Owing to the upheaval of rock by blasting and dredging, vessels drawing more than 14 ft. should keep clear of this area and navigate only in the channel to the northward marked by gas buoys.

The Lake Superior Dry Dock and Construction Co. Ltd., has been incorporated under the Ontario Companies Act, with $1,500,000 capital, and office at Sault Ste. Marie, to build dry docks, steam and other vessels, and to carry on a general contracting business. The incorporators are all professional men in Toronto, but it is said that this is the concern which will undertake the construction of a dry dock and ship repairing and building plant at Sault Ste. Marie, some details of which were given in our last issue. It has been announced that $25,000 has been deposited in a local bank as evidence of the company's good faith, preparatory to the submission of a bylaw granting a subsidy in aid of the work.

British Columbia and Pacific Coast Marine.

The G.T. Pacific Coast Steamship Co.'s s.s. Prince John has been withdrawn from the service for overhauling and to have oil burning equipment installed.

The C.P.R. coal boat Coronado, which was acquired in Seattle, Wash., some time ago, was reported to have foundered in the Gulf of Georgia, Nov. 20, with her cargo of 1,600 tons of coal.

The United States authorities have rebuilt the beacon tower on the Cutter rocks in the Revillagigedo channel, Alaska, and have established a flashing white light on a small islet off Cape Spencer, in Cross Sound, Alaska.

The Vancouver Tugboat Co. recently commenced an action against the Grand Trunk Pacific Coast Steamship Co. on a claim for salvage of its steamship Prince Albert, which stranded near Port Simpson, May 23. The damage sustained by the Prince Albert was approximately $20,000.

Regarding the proposed dredge for the Dominion Public Works Department, for use on the inland lakes of British Columbia, plans for which were being prepared by Cartwright, Matheson and Co., Vancouver, as mentioned in our last issue, we are officially advised that its construction is not being proceeded with at present.

It was recently announced that work was to have been commenced towards the end of November on the excavation in connection with the construction of the Dominion Government dry dock at Burrard Inlet. A contract for the building of a drill scow was recently awarded, and this is under construction at North Vancouver, and will probably be ready during December. H. McFee and Co. are the general contractors.

The C.P.R. s.s. Princess Beatrice is again in service, after receiving a thorough overhaul. She has relieved the s.s. Princess Mary on the Granby Bay route, and it is said that the Princess Mary will be laid up at Victoria, where she will probably have oil burning apparatus installed. The s.s. Princess Maquinna is again in service, after repairs necessitated by striking a rock in Yakutat Bay, Alaska, in September. She has replaced the s.s. Tees, which will be held as a relief vessel during the winter.

A press report from Vancouver, published in Canadian Railway and Marine World for November, stated that the White Pass and Yukon Route would start a direct passenger steamship service between Vancouver and Skagway, Alaska, using vessels which would be built at a cost of about $1,000,000 each. The President, O. L. Dickeson, left for England in November to consult with the directors, and will probably return early in January, when a definite announcement may be expected. There appears to be no doubt that the service referred to will be established.

The two vessels under construction at Dumbarton, Scotland, for the C.P.R. British Columbia coast service, are proceeding rapidly, and it is expected that both of them will be delivered next spring and that they will arrive on the coast towards the end of the year, by way of the Panama Canal. They will be equipped with the latest Parsons geared turbines, by which it is claimed the greatest efficiency is obtained from both the turbine and the propeller. It is stated that these vessels will be the fastest in service on the coast, the contract speed being 22½ knots an hour.

The Pacific Coast Steamship Co., which operates a weekly steamship service into Vancouver has communicated with the Marine Department at Ottawa, protesting against the compulsory payment of pilotage dues. It states that the amount paid is in excess of $4,000 a year for services which are not used nor required, as all its captains are fully qualified to pilot vessels in and out of all harbors on the Pacific coast. If it is considered desirable to maintain a system of compulsory pilotage dues, it is suggested that a flat rate of $200 a vessel a year be paid, and that the Dominion Government authorize the local pilotage authority to make such flat rates in its discretion.

In our last issue a complete denial was given to the rumor that the Canadian Northern Ry. had placed orders in Glasgow, Scotland, for two steamships for a Pacific coast service, but notwithstanding this, the Victoria Colonist of Nov. 4, contained a cablegram from Glasgow, dated Nov. 3, to the effect that orders had been given to the Fairfield Shipbuilding Co. by the Canadian Northern Ry. for the construction of two turbine vessels to steam 20 knots. It also stated that the orders were given by D. B. Hanna, Vice President, Canadian Northern Ry., Toronto. On enquiry at the Canadian Northern Ry. offices, we have been informed that Mr. Hanna has placed no such orders, nor does he know of any such orders having been placed.

Raising Wrecked Atlantic Liners by Compressed Air.

The use of compressed air in raising and repairing sunken vessels has been employed very extensively, either in floating caissons, or "camels," attached to the ship, or by converting part of the ship itself into a pneumatic caisson. An exceptionally important piece of work done in the latter manner was the raising of the Canadian Northern Steamships, Ltd., Atlantic liner Royal George in the St. Lawrence River. A specially interesting feature of this work was that the hull when raised was repaired under air pressure while floating in the river (instead of going into drydock). By this means the vessel was enabled to take cargo and cross the Atlantic to have permanent repairs made at its home port.

The Royal George is 545 ft. long and 60 ft. beam, with a registered tonnage of 12,000 tons; it is driven by triple screws and steam turbines, developing a total of 18,000 h.p. and giving a speed of about 20 knots. On Nov. 6, 1912, while on its last voyage of the season to Montreal (before the closing of the river by ice) it went ashore at high tide about nine miles below Quebec. Passengers and cargo were discharged and attempts made to pump out the flooded compartments of the hull. The following description of the salvage work as finally accomplished is condensed from an article by H. G. Sperrett:

After nearly [illegible] it was recognized that the usual salvage procedure would not answer, and W. W. Wotherspoon was summoned from his work on a nearby wreck, the stranded steamer [illegible]. Upon [illegible] he was using compressed air, and the underwriters decided to have him try the same method upon the Royal George.

The pumps were removed and the hatches in the flooded compartments sealed by air tight plates. Air locks were secured to circular passageways in the hatch covers, and connections were made by pipe between the air compressors and the injured holds. In three days this work was completed.

It was necessary to provide against the pressure of a head of water of [illegible] ft., and the deck covering the compartment was not equal to a lifting stress of this magnitude. Above all, the deck planking did not rest upon a solid steel deck, and there was risk of breaking out the calking between the planks, which would mean failure. To meet the situation, hot pitch was poured into all the deck seams, the deck covered with a number of layers of tar paper, and over these placed a course of spruce flooring. Then this pressure deck was braced by shores reaching to the deck above, so as to distribute the stress when the holds should be filled with compressed air. In brief, it turned the flooded cargo spaces into caissons, and then all was in readiness for the expulsion of the water by forcing in the air under pressure. The compressors started at 10 p.m. of Nov. 22, and 15 minutes later the forward cargo space was dry.

An internal examination of the injured holds showed that nearly 40% of the ship's bottom was damaged, but it also demonstrated that the salvage method was equal to the demands to be placed upon it. The next afternoon, two hours before high tide, the water was blown out from the flooded compartments and the vessel floated clear.

Then came the question of repairing the badly damaged hull. The nearest drydock was at Montreal, 140 miles away, and the river's closed season was drawing near. Besides the liability of having the ship held for months, there was the prospect of heavy dock charges, independently of the cost of repairs. The question was how could the Royal George be made ready for sea without going into drydock? Mr. Wotherspoon answered this in a unique and satisfactory manner.

The ship was anchored in deep water, and into the damaged spaces men were sent through the air locks, the compartments being held substantially drained by reason of the compressed air within them. Beginning at the uppermost point of the rents in the hull, the men roughly sealed these openings by covering them with heavy planking calked with mud and oakum, the water [illegible] the pudge board [illegible] downward and finally covered the openings. This sealing was but temporary, and effective only so long as the air pressure was maintained. Before the vessel could proceed seaward it would be necessary to cover the damaged bottom from without with steel plates made water tight.

From within the hull, flexible templates of wood were made of each needed patch, and upon these were marked the places for bolt holes, the same positions being indicated upon the inner surface of the vessel's plating. The templates were sent up through the air locks and guided the steel workers in forming the steel patch plates and in boring the threaded bolt holes. Into these holes tap bolts were screwed. In the meantime, slightly larger holes were drilled around each wound in the hull, and made tight with wooden plugs from within.

A weighted platform was swung under the ship directly beneath the rents to be mended, and a diver took his place upon this submerged platform. When each patch was ready, with its tap bolts in place, it was lowered to the diver, who directed it into position, the men inside withdrawing the wooden plugs so that the bolts could enter their proper holes. Then nuts and washers, with plenty of red lead, were placed upon the bolts and screwed well home in order to make the patch plate snug and water tight.

With this done, the temporary inside pudge boards were removed, and the ragged edges of the damaged hull were cut away by means of oxy acetylene torches. In this manner all of the repairs were effected, and the total damage covered an area of 700 sq. ft. The Royal George left the St. Lawrence for Halifax, and on the way encountered heavy weather, but the repairs proved quite equal to the stress placed upon them. At Halifax, because of the novelty of the work and to satisfy the insurance people, the liner was docked for a brief examination. Everything being found in excellent shape, the Royal George loaded with cargo and returned to England without further mishap.

Another somewhat similar work was done by Mr. Wotherspoon early this year. The transatlantic steamship Uranium, 5,180 tons, went ashore at Chebucto Head, N.S., on Jan. 12, and after being floated was taken to Halifax for repair. The drydock, however, was occupied by another steamer, and would not be available until March. To avoid the delay, the rents in the hull were patched while the damaged compartments were filled with compressed air, the ship being practically a floating caisson. Men entered the air locks and made templates for the patch plates and bolt holes, and drilled the necessary holes. The plates (with tap bolts inserted) were lowered outside the hull, and guided into place by a diver standing on a submerged platform; the bolts were entered into the proper holes, and nuts and washers applied by the men on the inside. The ship was then able to proceed to New York.

Sight Tests in the Mercantile Marine Service.—The British Board of Trade has modified its standard of sight tests required of candidates for certificates of competency from Jan. 1, 1914. Under the new standard a candidate will only be required to possess normal vision when using both eyes together, or, at his option, either eye separately. It has also decided that a candidate who already holds a certificate of competency of any grade and who presents himself for a higher certificate shall not be required to undergo any color test, and officers who hold certificates of competency, presenting themselves voluntarily for sight tests, should be confined to the form vision tests.

The Bronson Co., Ottawa, which owns, among other properties and franchises, the charter of the Quinze and Blanche River Ry., is applying to the Dominion Parliament for authority to borrow additional sums for the development of its several undertakings.

Rules of the Road on the Great Lakes

The Dominion Government is proposing to amend the Rules of the Road for navigation on the Great Lakes. The chief amendments cover the use of lights on vessels, a new clause being proposed requiring canal boats, when in tow of steam vessels on the Great Lakes and tributary waters as far east as Montreal, to carry lights. A new rule is also proposed relating to the use of searchlights, and providing that any master or pilot of any steam vessel who shall flash or cause to be flashed, the rays of a searchlight into the pilot house of a passing vessel shall be deemed guilty of misconduct, and shall be liable to have his certificate suspended or revoked. Other rules govern the use of fog and distress signals, speed during fog, and in case of accident. Special rules are to be included, governing the navigation of motor boats, and as, in several cases recently, the navigation of such craft by inexperienced persons has caused considerable danger, and in some cases, loss of life, these rules should be well studied by all those concerned with navigation, especially when in the vicinity of harbors and small bays.

Extension of Wharves at Fort William, Ont.

The Dominion Public Works Department received tenders, Nov. 21, for harbor and river improvements, consisting of the extension of wharves at the entrance to the Mission River, Fort William. The work covers the construction of quay walls of 2,646 ft. total length, in two parts, of 1,225 ft. and 1,421 ft. respectively. The construction is to be of square timber crib work, close faced on the outer faces and open faced on the inner faces, the outer faces to have a batter of 1 in 24, and the other faces to be vertical. When fully ballasted the top of the cribwork is to be 6 ins. below low water level. The superstructure is to be of concrete and when completed to be 5.5 ft. above low water level. The site will be dredged by the Public Works Department to a depth of 26 ft. at low water.

New Atlantic Steamships for the Canadian Pacific Railway.

The two steamships which the C.P.R. has under construction at Glasgow, Scotland, and which will be in service during next year, will be of the one class cabin type. Their dimensions will be, length 520 ft., breadth 64 ft., breadth of passenger deck 41 ft. Each vessel will have passenger accommodation for 520 second class, and 1,200 third class passengers. The dead weight capacity will be 7,950 tons, with an approximate cargo capacity of 6,000 tons. The cruiser stern, which is one of the features of the new Pacific Empresses, has been adopted. There will be six decks, and the hulls will be subdivided by water-tight doors and bulkheads so as to be capable of floating when three of the compartments are open. These bulkheads will be automatically controlled from the bridge. The speed of the vessels will be 15 knots, and they will have a draught of 27.5 ft. All conveniences will be included in the passenger accommodation, and heating and ventilation will be supplied by the thermotank system, changing the air eight times an hour.

Diesel Locomotive.—A locomotive of the 4-4-4 type operated by Diesel oil engines has recently been placed in service on the Prussian-Hessian State Rys. It is 54½ ft. long, weighing in working order 95 tons. The engines are of the 4 cylinder V type, and drive a crank [illegible] to the driving axle. [illegible] pendent air comp[illegible] the power of the main [illegible] which is used for starting the locomotive. The cylinders each have a fuel valve through which the oil is injected under a pressure of from 50 to 70 [illegible] The cab encloses the entire locomotive, and the fuel and circulating water are contained in four tanks built into the corners. The reversing and other mechanism is so arranged that the locomotive can be controlled from either end. The auxiliary is started by the admission of air from the reservoir, slowly at first, and after the auxiliary has been changed to oil fuel, the pressure in the oil storage cylinders rises, and the air supply is admitted to the main engine, which consequently commences to work. When running at about 6 m. p. h., the starting valves are thrown out of action, and the engine is changed to oil fuel, and the operation is then normal. The locomotive was designed for fast passenger service, and has developed 62 m. p. h.

Transportation Conventions in 1913 and 1914

Dec. 9, 10.—Association of Transportation and Car Accounting Officers, Galveston, Texas.

Jan. 20-22.—American Wood Preservers' Association, New Orleans, La.

Mar. 17-20.—American Railway [illegible] Association, Chicago, Ill.

Apr. 21.—American Association of Freight Agents, Houston, Texas.

May.—Association of Railway Claims Agents, St. Paul, Minn.

May 17-20.—American Railway Engineering Association, Chicago, Ill.

May 18-22.—International Railway Fuel Association, Chicago, Ill.

May 19.—American Association of Demurrage Officers, St. Louis, Mo.

May 20-22.—Freight Claim Association, Galveston, Texas.

May 20-23.—Association of Railway Telegraph Superintendents, New Orleans, La.

May 21-22.—American Association of Railroad Superintendents, St. Louis, Mo.

May 28.—Association of American Railway Accounting Officers, Atlantic City, N.J.

June 10-12.—Master Car Builders' Association, Atlantic City, N.J.

June 15-17.—American Railway Master Mechanics' Association, Atlantic City, N.J.

July.—International Railway General Foremen's Association, Chicago, Ill.

Aug. 18.—International Railroad Master Blacksmiths' Association.

Sept. 8-11.—Roadmasters and Maintenance of Way Association, Chicago, Ill.

Oct. 20-22.—American Railway Bridge and Building Association, Los Angeles, Cal.

Greater Safety at Sea. An international conference of those interested in the matter of safer navigation at sea, was opened in London, Eng., Nov. 12, on the invitation of the British Government. The chief nations of the world were represented, and a number of matters were discussed, and full use was made of information and ideas gleaned from the Titanic investigation. Lord Mersey, who conducted the investigation into the Titanic disaster, was Chairman of the conference. Canada was represented by Alex. Johnston, Deputy Minister of Marine.

Harbor Improvements at Port Hope, Ont.—The Public Works Department has under consideration, tenders for harbor improvement works at Port Hope, Ont., comprising the preparation of the site by dredging and excavating material to an elevation of 227.8, or 17 ft. below zero, the construction of a reverment wall consisting of seven wooden, stone filled cribs each 16 ft. wide, and 16 ft. deep, six of which are to be 100 ft. long, and one 45 ft. long with an upper structure of concrete to an elevation of 250.8, or 6 ft. above zero, with walings, bollards, anchor rods, blocks, etc.

The Canadian Northern Telegraph Co. has opened offices at Dinsmore and Elrose, Sask.

Trade and Supply Notes.

[illegible]

Canadian General Electric Co. has issued a folder on the advance in transportation [illegible]

Canadian Steel Foundries Ltd. has issued illustrated catalogue 6 of the Jackson rigid switch stand.

Commercial Acetylene Railway Light and Signal Co.—W. H. Wood has been appointed Canadian Manager, vice J. R. Arnoldi, deceased. Office, 103 Bay St., Toronto.

Canadian Allis-Chalmers Ltd. is distributing McKiernan-Terry Drill Co.'s booklet of rotating hammer drills for sinking, stoping and drifting, for which it is selling agent in Canada.

Orenstein-Arthur Koppel Co., Koppel, Pa., has issued illustrated catalogue 900 of portable and industrial railways, narrow gauge sidings, narrow gauge public railways and general railways equipment. The company is represented in Canada by the Canadian Fairbanks Morse Co., Ltd.

United States Light and Heating Co.—J. Allen Smith, President, left New York recently for Europe for the second time this year, among other things to attend several automobile shows and to deal with the company's business in electric starters and lighters, storage batteries and electric car lighting equipment.

The Hull Iron and Steel Foundries, Ltd., has been incorporated under the Dominion Companies Act with $250,000 capital and office at Hull, Que., to carry on the business of iron smelters and brass and steel founders, and to take over the business being carried on in Ottawa, Ont., by A. H. Coplan.

C. E. A. Carr, who has occupied a number of important positions on electric railways, etc., in Canada and the United States, the last one being the General Managership of the New Orleans, Southern and Grand Isle Ry., at New Orleans, La., has established the C. E. A. Carr Co., at Toronto, to deal in railway supplies.

Ottawa Car Manufacturing Co., Ltd., which was incorporated recently under the Dominion Companies Act with an authorized capital of $3,000,000, and head office at Ottawa, was organized November 10 with the following directors. T Ahearn, President; W. Y. Soper, Vice President; Jas. D. Fraser, Secretary-Treasurer; Travers Lewis, K.C., C. MacNab, E. N. Soper, and T. F. Ahearn. The company will take over the business of the Ottawa Car Co., Ltd., builders of electric railway cars, etc.

The W. W. Butler Co., Ltd., has been incorporated under the Dominion Companies Act, with an authorized capital of $100,000 and head office in Montreal, and with extensive powers. At first the company will handle railway, marine and mining supplies. W. R. Butler, Vice President, Canadian Car and Foundry Co., is the chief man in the new company, and has appointed as one of its representatives G. T. Merwin, formerly with the Safety Car Heating and Lighting Co. and the Canada Car Co.

Armstrong, Whitworth of Canada, Ltd., has been incorporated under the Dominion Companies Act with an authorized capital of $2,000,000 and head office at Montreal, the principal persons interested being connected with Sir W. G. Armstrong, Whitworth & Co., shipbuilders, ordnance manufacturers, etc., in England. M. J. Butler, formerly General Manager, Dominion Iron and Steel Co., is one of the directors and will manage the business. The company is building a plant on the north side of the St. Lawrence, opposite Montreal, for manufacturing various steel products.

John Millen & Son, Ltd., 321 St. James St., Montreal, are distributing an illustrated booklet issued by Electric Service Supplies Co., Philadelphia, showing latest types of electric railway car equipment, among its principal features being the Keystone car signs, which are being installed on the Montreal Tramway Co.'s cars; the automotoneer, which is in use on several Canadian lines, Keystone steel gear cases, the newest development in headlights, air valves and fittings, counting and registering fare boxes. They are also distributing a folder on snow fighting and winter equipment.

Pay-as-you-Enter Car Patents.—T. W. Casey, President Prepayment Car Sales Co., New York, has issued the following circular:—"The Ross & McDonald pay-as-you-enter basic patent 800,176 has just been sustained at New York City, before Judge Holt, in the U.S. Court for the Southern District of New York, and the royalty of $100 per car established. This decision, while upholding the company's right to be compensated for the admitted benefits which its inventions have brought in car design, is of prime importance to the entire street railway industry and to the public, as it will insure the proper application of the prepayment principle based upon the widespread experience of the inventor company."

The Canadian General Electric Co., Ltd., has received a contract for the electrical equipment for the floating dry dock which the Grand Trunk Pacific Ry. is building at Prince Rupert, B.C. It includes two 200 h.p. and four 100 h.p. variable speed induction motors, with full automatic control, for operating the pumps on the dock. The power will be produced by two 1250 k.v.a. Curtis steam turbines with complete condensing apparatus. The exciters for the main turbine generators will consist of three 35 k.w. turbine driven generators and one motor generator set. The foundry, machine shops and shipyards will be equipped with motor driven tools, requiring motors ranging from 60 to 10 h.p. The contract also includes all necessary power and light transformers.

Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries.

Canadian Car Service Bureau. J. Reilly (acting), 401 St. Nicholas Building, Montreal.

Canadian Electric Railway Association, Acton Burrows, 70 Bond Street, Toronto.

Canadian Freight Association (Eastern Lines), G. C. Ransom, Canadian Express Building, Montreal.

Canadian Freight Association (Western Lines), W. E. Campbell, 502 Canada Building, Winnipeg.

Canadian Railway Club, J. Powell, St. Lambert, Que. Meetings at Montreal, 2nd Tuesday each month, 8.30 p.m., except June, July and August.

Canadian Society of Civil Engineers, C. H. McLeod, 176 Mansfield St. West, Montreal.

Canadian Ticket Agents' Association, E. de la Hooke, London, Ont.

Central Railway and Engineering Club of Canada, C. L. Worth, 409 Union Station, Toronto. Meetings at Toronto 3rd Tuesday each month, except June, July and August.

Dominion Marine Association, Counsel, F. King, Kingston, Ont.

Eastern Canadian Passenger Association, G. H. Webster, 54 Beaver Hall Hill, Montreal.

Engineers' Club of Montreal, R. W. H. Smith, 9 Beaver Hall Square, Montreal.

Engineers' Club of Toronto, R. B. Wolsey, 94 King St. West, Toronto.

Great Lakes and St. Lawrence River Rate Committee, Jas. Morrison, Montreal.

International Water Lines Passenger Association, M. R. Nelson, New York.

Niagara Frontier Summer Rate Committee, Jas. Morrison, Montreal.

Nova Scotia Society of Engineers, A. R. McCleave, Halifax, N.S.

Quebec Transportation Club, J. S. Blanchet, Quebec.

Ship Masters' Association of Canada, Capt. E. Wells, 45 John St., Halifax, N.S.

Ship Masters' Association of Canada, H. O. Jackson, 376 Huron St., Toronto.

Shipping Federation of Canada, T. Robb, 526 Board of Trade, Montreal.

Western Canada Railway Club, W. H. Rosevear, 25½ Princess St., Winnipeg. Meetings at Winnipeg 2nd Monday each month, except June, July and August.

Department of Railways and Canals.

Lachine Canal.

NOTICE TO CONTRACTORS.

Roofing St. Gabriel Shed No. 1.

SEALED TENDERS, addressed to the undersigned and endorsed "Tender for Roofing of St. Gabriel Shed No. 1, Ottawa Street, Lachine Canal," will be received at this office till 12 o'clock noon, Thursday, December 11th, 1913.

Plans, specifications and form of contract to be entered into can be seen on or after this date at the office of the Chief Engineer of the Department of Railways and Canals, Ottawa, and at the office of the Superintending Engineer of the Quebec Canals, New Birks Building, Montreal, Que.

An accepted bank cheque on a chartered bank of Canada for the sum of $500.00 made payable to the order of the Minister of Railways and Canals, must accompany each tender, which sum will be forfeited if the party tendering declines entering into contract for the work, at the rates stated in the offer submitted.

The cheque thus sent in will be returned to the respective contractors whose tenders are not accepted.

The cheque of the successful tenderer will be held as security, or part security, for the due fulfilment of the contract to be entered into.

The lowest or any tender not necessarily accepted.

By order,

L. K. JONES,
Asst. Deputy Minister and Secretary.

Department of Railways and Canals,
Ottawa, 22nd November, 1913.

Newspapers inserting this advertisement without authority from the Department will not be paid for it.—51421.

DRAUGHTSMAN.

Wanted draughtsman, architectural, having technical education and some experience of interior finish, similar to store furnishing, buffet, etc. Apply Box 158, Canadian Railway and Marine World, Toronto.

DRAUGHTSMAN.

Wanted draughtsman with experience on railway cars. Only applications giving experience and salary expected will be considered. Apply Box 158, Canadian Railway and Marine World, Toronto.

CANADIAN PACIFIC RAILWAY.

NOTICE.—The Canadian Pacific Railway Company will apply to the Parliament of Canada, at its next session, for an Act authorizing it to construct the following lines of railway:—

(a) From a point on its Swift Current Southeasterly Branch in Township 14 or 15, in a southwesterly direction to a point in Township 8 or 9, Range 17 or 18, W.3.M., Saskatchewan.

(b) From a point on said Swift Current Southeasterly Branch in Township 12, in a southerly and southwesterly direction to a point in Township 9, Range 16, or 17, W. 3.M., Saskatchewan.

Dated at Montreal, 6th November, 1913.

W. R. BAKER,
Secretary.

Pringle, Thompson & Burgess,
Ottawa agents.

CALGARY & EDMONTON RAILWAY.

NOTICE.—The Calgary & Edmonton Railway Company will apply to the Parliament of Canada, at its next session, for an Act authorizing it to construct the following lines of railway:—

(a) From a point on its McLeod Branch in Township 19, 20 or 21, in a westerly direction to a point on the south branch of Sheep Creek in Range 4, W.5.M., Alberta.

(b) From a point on the line described in paragraph (a) to a point on the north branch of Sheep Creek in Range 2, 3 or 4, W.5.M.

(c) From a point on the line described in paragraph (a) to a point on Trap Creek in Range 6, W.5.M.

Dated at Montreal, 6th November, 1913.

H. C. OSWALD,
Secretary.

Pringle, Thompson & Burgess,
Ottawa, agents.

ESQUIMALT & NANAIMO RAILWAY.

NOTICE.—The Esquimalt & Nanaimo Railway Company will apply to the Parliament of Canada, at its next session, for an Act extending the time within which it may construct the railways which it was authorized to construct by paragraph (a) of section 2 of chapter 92 of the Statutes of 1906, and by section 1 of chapter 92 of the Statutes of 1912, and for other purposes.

Dated at Vancouver, 6th November, 1913.

W. F. SALSBURY,
Secretary.

Pringle, Thompson & Burgess,
Ottawa agents.

CANADIAN PACIFIC RAILWAY COMPANY.

Dividend Notice.

At a meeting of the Board of Directors held today a Dividend of two and one-half per cent. on the Common Stock for the quarter ended 30th September last, being at the rate of seven per cent. per annum from revenue and three per cent. per annum from interest on the proceeds of land sales and from other extraneous assets, was declared payable on 2nd January next to Shareholders of record at 3 p.m. on 1st December next.

By order of the Board.

W. R. BAKER, Secretary.

Montreal, 10th November, 1913.
